5. A process, supported by the BHC’s capital policy, to use its assessments of the impact of loss and resource estimates on capital adequacy to make key decisions regarding the current level and composition of capital, specific capital actions, and capital contingency plans as they affect capital adequacy;
6. Robust internal controls governing capital adequacy process components, including sufficient documentation, change control, model validation and independent review, and audit testing; and
7. Effective board and senior management oversight of the BHC’s capital adequacy process, including periodic review of capital goals, assessment of the appropriateness of adverse scenarios considered in capital planning, regular review of any limitations and uncertainties in the process, and approval of planned capital actions.

4061.0.2.2 Mandatory Elements of a Capital Plan

A capital plan is defined as a written presentation of a large BHC’s capital planning strategies and capital adequacy process that includes certain mandatory elements. These mandatory elements are organized into four main components with relevant subcomponents:

1. An assessment of the expected uses and sources of capital over the planning horizon (at least nine quarters, beginning with the quarter preceding the quarter in which the BHC submits its capital plan) that reflects the BHC’s size, complexity, risk profile, and scope of operations, assuming both expected and stressful conditions. The subcomponents include
   a. estimates of projected revenues, losses, reserves, and pro forma capital levels, including any minimum regulatory capital ratios (for example, leverage, tier 1 risk-based, and total risk-based capital ratios) and any additional capital measures deemed relevant by the BHC, over the planning horizon under expected conditions and under a range of scenarios, including any scenarios provided by the Federal Reserve and at least one BHC stress scenario; and
   b. a discussion of the results of any stress test required by law or regulation, and an

---

6. As part of this review, the board of directors should consider any remaining uncertainties, limitations, and assumptions associated with the BHC’s capital adequacy process.
2. A detailed description of the BHC’s process for assessing capital adequacy, including
   a. a discussion of how the BHC will, under expected and stressful conditions, maintain capital commensurate with its risks, maintain capital above the minimum regulatory capital ratios, and serve as a source of strength to its subsidiary depository institutions; and
   b. a discussion of how the BHC will, under expected and stressful conditions, maintain sufficient capital to continue its operations by maintaining ready access to funding, meeting its obligations to creditors and other counterparties, and continuing to serve as a credit intermediary.

3. The BHC’s capital policy, which is the BHC’s written assessment of the principles and guidelines used for capital planning, capital issuance, usage and distributions, including internal capital goals, the quantitative or qualitative guidelines for dividend and stock repurchases, the strategies for addressing potential capital shortfalls, and the internal governance procedures around capital policy principles and guidelines; and

4. A discussion of any expected changes to the BHC’s business plan that are likely to have a material impact on the firm’s capital adequacy or liquidity. For example, the capital plan should reflect any expected material effects of new lines of business or activities on the BHC’s capital adequacy or liquidity, including revenue and losses.

4061.0.2.3 Net Capital Distribution Limitation

The capital plan rule limits the ability of a bank holding company with $50 billion or more in total consolidated assets to make capital distributions if the bank holding company’s net capital issuances are less than the amount indicated in its capital plan.

4061.0.2.4 Data Collection

In connection with its submission of a capital plan to the Federal Reserve, a large BHC is required to provide certain data to the Federal Reserve. Data required by the Federal Reserve may include, but are not limited to, information regarding the BHC’s financial condition including its capital, the BHC’s structure, assets, risk exposure, policies and procedures, liquidity, and management.
Federal Reserve Supervisory Assessment of Capital Planning and Positions for LISCC Firms and Large and Complex Firms

Section 4063.0

The Federal Reserve issued this guidance to explain its supervisory expectations for capital planning at Large Institution Supervision Coordinating Committee (LISCC) and large and complex bank holding companies and intermediate holding companies of foreign banking organizations, consistent with the broad supervisory expectations set forth in SR-12-17/CA-12-14, “Consolidated Supervision Framework for Large Financial Institutions.” Capital is central to a firm’s ability to absorb unexpected losses and continue to lend to creditworthy businesses and consumers. Therefore, a firm’s processes for managing and allocating its capital resources are critical to its financial strength and resiliency, and also to the stability and effective functioning of the U.S. financial system. The following guidance provides the Federal Reserve’s core capital planning expectations for LISCC and large and complex firms, building upon the capital planning requirements in the Federal Reserve’s capital plan rule and stress test rules.

1. The term “capital planning process,” as used herein, which aligns with terminology in SR-12-17/CA-12-14, is equivalent to the term “capital adequacy process” used in other Federal Reserve documents.

2. For the capital plan rule, refer to section 225.8 of Regulation Y (12 C.F.R. 225.8). Regulation Q (12 C.F.R. 217) establishes minimum capital requirements and overall capital adequacy standards for Federal Reserve-regulated institutions. Regulation YY (12 C.F.R. 252) establishes capital stress testing requirements for bank holding companies with total consolidated assets of $50 billion or more, including requirements to participate in the Federal Reserve’s annual supervisory stress test and conduct their own internal capital stress tests.

7. The LISCC framework is designed to materially increase the financial and operational resiliency of systemically important financial institutions to reduce the probability of, and cost associated with, their material financial distress or failure. See www.federalreserve.gov/bankinforeg/large-institution-supervision.htm.
outlines capital planning expectations for these firms in the following areas:

- Governance
- Risk management
- Internal controls
- Capital policy
- Incorporating stressful conditions and events, and
- Estimating impact on capital positions.

Further, this guidance provides detailed supervisory expectations on a firm’s capital planning process in the following appendices:

A. Use of Models and Other Estimation Approaches
B. Model Overlays
C. Use of Benchmark Models in the Capital Planning Process
D. Sensitivity Analysis and Assumptions Management
E. Role of the Internal Audit Function in the Capital Planning Process
F. Capital Policy
G. Scenario Design
H. Risk-weighted Asset (RWA) Projections
I. Operational Loss Projections

This guidance applies to U.S. bank holding companies and intermediate holding companies of foreign banking organizations that are either (i) subject to the LISCC framework (referred to as a “LISCC Firm”) or (ii) have total consolidated assets of $250 billion or more or consolidated total on-balance sheet foreign exposure of $10 billion or more (referred to in this guidance as a “Large and Complex Firm”).

The guidance is effective immediately for bank holding companies that are subject to the capital plan rule as of January 1, 2016. The guidance will become effective for intermediate holding companies beginning on January 1, 2017, which is the date on which the capital plan rule applies to these firms.

The Federal Reserve has different expectations for sound capital planning and capital adequacy depending on the size, scope of operations, activities, and systemic importance of a firm. Concurrently with issuance of this guidance, the Federal Reserve is issuing separate guidance for U.S. bank holding companies and intermediate holding companies that have total consolidated assets of at least $50 billion but less than $250 billion, have consolidated total on-balance sheet foreign exposure of less than $10 billion, and are not otherwise subject to the LISCC framework (referred to as a “Large and Noncomplex Firm”). This separate guidance clarifies that expectations for LISCC Firms and Large and Complex Firms are higher than the expectations for Large and Noncomplex Firms.

II. Regulatory Requirements for Capital Positions and Planning

Sound capital planning for any firm begins with adherence to all applicable rules and regulations relating to capital adequacy. Three Federal Reserve regulations form the basis of the regulatory framework for capital positions and capital planning:

1. Regulation Q (12 C.F.R. 217), Capital Adequacy Requirements for Board-regulated

- Note that these expectations build upon the capital planning requirements set forth in the Board’s capital plan rule and stress test rules (12 C.F.R. 225.8, 12 C.F.R. 252, subparts E and F). Other relevant rules pertaining to the Board’s regulatory regime for capital planning and positions are described above in Section II, “Regulatory Requirements for Capital Positions and Planning.” The Federal Reserve may not conduct or sponsor, and an organization (or a person) is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for this guidance are OMB No. 7100-0341 and OMB No. 7100-0342.

9. Total consolidated assets equals the amount of total assets reported on the firm’s Consolidated Financial Statements for Holding Companies (FR Y-9C), measured as an average over the preceding four quarters. If a firm has not filed the FR Y-9C for each of the four most recent consecutive quarters, a firm’s total consolidated assets are measured as the average of its total consolidated assets, as reported on the FR Y-9C, for the most recent quarter or consecutive quarters, as applicable. Consolidated total on-balance sheet foreign exposure equals total cross-border claims less claims with head office or guarantor located in another country plus redistributed guaranteed amounts to the country of head office or guarantor plus local country claims on local residents plus revaluation gains on foreign exchange and derivative products, calculated as of the most recent year-end in accordance with the Federal Financial Institutions Examination Council (FFIEC) 009 Country Exposure Report.

10. This guidance does not apply to nonbank financial companies designated by the Financial Stability Oversight Council for supervision by the Board of Governors.
Institutions;
(2) Regulation YY (12 C.F.R. 252), Enhanced Prudential Standards; and
(3) Section 225.8 of Regulation Y (12 C.F.R. 225.8, also known as the capital plan rule).

Regulation Q establishes minimum capital requirements and overall capital adequacy standards for Federal Reserve-regulated institutions. Among other things, Regulation YY establishes capital stress testing requirements for bank holding companies with total consolidated assets of $50 billion or more, including requirements to participate in the Federal Reserve’s annual supervisory stress test and conduct their own internal capital stress tests. The capital plan rule establishes general capital planning requirements for a bank holding company with total consolidated assets of $50 billion or more and requires a bank holding company to develop an annual capital plan that is approved by its board of directors.

This guidance provides the Federal Reserve’s core capital planning expectations for firms subject to this guidance, building upon the capital planning requirements in the Federal Reserve’s capital plan rule and stress test rules.\textsuperscript{11}

\section*{III. Capital Planning Expectations}

Capital is central to a firm’s ability to absorb unexpected losses and continue to lend to creditworthy businesses and consumers. A firm’s capital planning processes are critical to its financial strength and resiliency. At LISCC Firms and Large and Complex Firms, sound capital planning is also critical to the stability and effective functioning of the U.S. financial system.

SR-12-17/CA-12-14, “Consolidated Supervision Framework for Large Financial Institutions,” outlines core expectations for sound capital planning for bank holding companies with total consolidated assets of $50 billion or more. This capital planning and positions guidance provides additional details around the Federal Reserve’s core capital planning expectations for LISCC Firms and Large and Complex Firms, building on the capital planning requirements included in the capital plan rule and the Board’s stress test rules.\textsuperscript{12} A firm should maintain a sound capital planning process on an ongoing basis, including in between submissions of its annual capital plan.\textsuperscript{13}

\subsection*{A. Governance}

The Federal Reserve expects a firm to have sound governance over its capital planning process. In general, senior management should establish the capital planning process and the board of directors should review and periodically approve that process.

\subsubsection*{1. Board of Directors}

A firm’s board of directors is ultimately responsible and accountable for the firm’s capital-related decisions and for capital planning. The firm’s capital planning should be consistent with the strategy and risk appetite set by the board and with the firm’s risk levels, including how risks at the firm may emerge and evolve under stress. The board must annually review and approve the firm’s capital plan.\textsuperscript{14}

The board should direct senior management to provide a briefing on their assessment of the firm’s capital adequacy at least quarterly, and whenever economic, financial, or firm-specific conditions warrant a more frequent update. The briefing should describe whether current capital levels and planned capital distributions remain appropriate and consistent with capital goals (see Section III.D, “Capital Policy”). In their briefing, senior management should also highlight for the board any problem areas related to capital planning identified by senior management, internal audit, or supervisors.

The board should hold senior management accountable for providing sufficient information on the firm’s material risks and exposures to inform board decisions on capital adequacy and actions, including capital distributions. Information provided to the board should be clear, accurate, and timely. The board should direct senior management to provide this information at least quarterly and whenever economic, financial, or firm-specific conditions warrant a more frequent update. The information presented to the board

\begin{itemize}
\item \textsuperscript{11} Refer to footnote 3.
\item \textsuperscript{12} The term “capital planning process” used herein, which aligns with terminology in SR-12-17/CA-12-14, is equivalent to the term “capital adequacy process” used in other Federal Reserve documents.
\item \textsuperscript{14} 12 C.F.R. 225.8(e)(1)(ii).
\end{itemize}
should include consideration of a number of factors, such as:

- macro-economic conditions and relevant market events;
- current capital levels relative to budgets and forecasts;
- post-stress capital goals and targeted real time capital levels (see section III.D, “Capital Policy”);
- enterprise-wide and line-of-business performance;
- expectations from stakeholders (including shareholders, regulators, investors, lenders, counterparties, and rating agencies);
- potential sources of stress to the firm’s operating performance; and
- risks that may emerge only under stressful conditions.

After receiving the information, the board should be in a position to understand the major drivers of the firm’s projections under a range of conditions, including baseline and stress scenarios.

The board should direct senior management to provide information about the firm’s estimation approaches, model overlays, and assessments of model performance (see Appendix A, “Use of Models and Other Estimation Approaches,” Appendix B, “Model Overlays,” and Appendix C, “Use of Benchmark Models in the Capital Planning Process”). The board should also receive information about uncertainties around projections of capital needs or limitations within the firm’s capital planning process to understand the impact of these weaknesses on the process. This information should include key assumptions and the analysis of sensitivity of a firm’s projections to changes in the assumptions (see Appendix D, “Sensitivity Analysis and Assumptions Management”). The board should incorporate uncertainties in projections and limitations in the firm’s capital planning process into its decisions on capital adequacy and capital actions. It should also review and approve mitigating steps to address capital planning process weaknesses.

The board should direct senior management to establish sound controls for the entire capital planning process. The board should approve policies related to capital planning, and review them annually. The board should also approve capital planning activities and strategies. The board of directors should maintain an accurate record of its meetings pertaining to the firm’s capital planning process.

2. Senior Management

Senior management should direct staff to implement board-approved capital policies, capital planning activities, and strategies in an effective manner. Senior management should make informed recommendations to the board regarding the firm’s capital planning and capital adequacy, including post-stress capital goals and capital distribution decisions. Senior management’s proposed capital goals and capital distributions should have analytical support and take into account the expectations of important stakeholders, including shareholders, rating agencies, counterparties, depositors, creditors, and supervisors.

Senior management should design and oversee the implementation of the firm’s capital planning process; identify and assess material risks and use appropriate firm-specific scenarios in the firm’s stress test; monitor and assess capital planning practices to identify limitations and uncertainties and develop remediation plans; understand key assumptions used throughout a firm’s capital planning process and assess the sensitivity of the firm’s projections to those assumptions (see Appendix D, “Sensitivity Analysis and Assumptions Management”); and review the capital planning process at least quarterly.

Senior management should establish a process for independent review of the firm’s capital planning process, including the elements outlined in this guidance. The independent review process should be designed to identify the weaknesses and limitations of the capital planning process and the potential impact of those weaknesses on the process. Senior management should also develop remediation plans for any identified weaknesses affecting the reliability of capital planning results. Both the specific identified weaknesses and the remediation plans should be reported to the board of directors in a timely manner.

B. Risk Management

A firm should have a risk management infrastructure that appropriately identifies, measures, and assesses material risks and provides a strong foundation for capital planning. This risk management infrastructure should be supported by comprehensive policies and procedures, clear
and well-established roles and responsibilities, and strong and independent internal controls. In addition, the risk management infrastructure should be built upon sound information technology and management information systems. The Federal Reserve’s supervisory assessment of the sufficiency of a firm’s capital planning process will depend in large part on the effectiveness of the firm’s risk management infrastructure and the strength of its process to identify unique risks under normal and stressful conditions, as well as on the strength of its overall governance and internal control processes.

1. Risk Identification and Assessment Process

A firm’s risk identification process should include a comprehensive assessment of risks stemming from its unique business activities and associated exposures. The assessment should include on-balance sheet assets and liabilities, off-balance sheet exposures, vulnerability of the firm’s earnings, and other major firm-specific determinants of capital adequacy under normal and stressful conditions. This assessment should also capture those risks that only materialize or become apparent under stressful conditions.

The specifics of the risk identification process will differ across firms given differences in organizational structure, business activities, and size and complexity of operations. However, the risk identification process at all firms subject to this guidance should be dynamic, inclusive, and comprehensive, and drive the firm’s capital adequacy analysis. A firm should

- evaluate material risks across the enterprise to ensure comprehensive risk capture on an ongoing basis;
- establish a formal risk identification process and evaluate material risks at least quarterly;
- actively monitor its material risks; and
- use identified material risks to inform key aspects of the firm’s capital planning, including the development of stress scenarios, the assessment of the adequacy of post-stress capital levels, and the appropriateness of potential capital actions in light of the firm’s capital objectives.

A firm should be able to demonstrate how material risks are accounted for in its capital planning process. For risks not well captured by scenario analysis, the firm should clearly articulate how the risks are otherwise captured and addressed in the capital planning process and factored into decisions about capital needs and distributions. The firm should also be able to identify risks that may be difficult to quantify and explain how these risks are addressed in the capital planning process. The firm should appropriately segment risks beyond generic categories such as credit risk, market risk, and operational risk.

The Federal Reserve expects a firm to seek input from multiple stakeholders across the organization (for example, senior management, finance and risk professionals, front office and line-of-business leadership) in identifying its material risks. In addition, a firm should update its risk assessment at least quarterly to reflect changes in exposures, business activities, and its broader operating environment.

2. Risk Measurement and Risk Materiality

A firm should have a sound risk measurement process that informs senior management about the size and risk characteristics of exposures and business activities under both normal and stressful operating conditions. A firm is generally expected to use quantitative approaches supported by expert judgment, as appropriate, for risk-measurement.

Identified weaknesses, limitations, biases, and assumptions in the firm’s risk measurement processes should be assessed for their potential impact on the integrity of a firm’s capital planning process (see Appendix D, “Sensitivity Analysis and Assumptions Management”). A firm should have a process in place for determining materiality in the context of material risk identification and capital planning. This process should include a sound analysis of relevant quantitative and qualitative considerations, including, but not limited to, the firm’s risk profile, size, and complexity, and their effects on the firm’s projected regulatory capital ratios in stressed scenarios.16

A firm should identify how and where its material risks are accounted for within the capital planning process. The firm should be able to specify material risks that are captured in its scenario design, the approaches used to estimate the impact on capital, and the risk drivers asso-

---

16. For simplicity, the terms “quantitative” and “qualitative” are used to describe two different types of approaches, with the recognition that all quantitative estimation approaches involve some qualitative/judgmental aspects, and qualitative estimation approaches produce quantitative output.
ciated with each material risk.

As part of its risk measurement processes, a firm should identify and measure risk that is inherent to its business practices and closely assess the reliability of assumptions about risk reduction resulting from risk transfer or risk mitigation techniques (see Appendix D, “Sensitivity Analysis and Assumptions Management”). Specifically, the firm should critically assess the enforceability and effectiveness of any guarantees, netting, and collateral agreements. Assumptions about accessibility and valuation of collateral exposures should also be closely reviewed for reliability given the likelihood that asset values will change rapidly in a stressed market.

C. Internal Controls

A firm should have a sound internal control framework that helps ensure that all aspects of the capital planning process are functioning as designed and result in sound assessments of the firm’s capital needs. The framework should include

• an independent internal audit function;
• independent review and validation practices; and
• integrated management information systems, effective reporting, and change control processes.

A firm’s internal control framework should support its entire capital planning process, including: the sufficiency of and adherence to policies and procedures; risk identification, measurement, and management practices and systems used to produce input data; and the models, management overlays, and other methods used to generate inputs to post-stress capital estimates. Any part of the capital planning process that relies on manual procedures should receive heightened attention. The internal control framework should also assess the aggregation and reporting process used to produce reports to senior management and to the board of directors and the process used to support capital adequacy recommendations to the board.

In addition, the control framework should include an evaluation of the firm’s process for integrating the separate components of the capital planning process at the enterprise-wide level.

A firm should have policies and procedures that support consistent and repeatable capital planning processes.\(^{17}\) Policies and procedures should describe the capital planning process in a manner that informs internal and external stakeholders of the firm’s expectations for internal practices, documentation, and business line controls. The firm’s documentation should be sufficient to provide relevant information to those making decisions about capital actions. The documentation should also allow parties unfamiliar with a process or model to understand generally how it operates, as well as its main limitations, key assumptions, and uncertainties.

Policies and procedures should also clearly identify roles and responsibilities of staff involved in capital planning and provide accountability for those responsible for the capital planning process. A firm should also have an established process for policy exceptions. Such exceptions should be approved by the appropriate level of management based upon the gravity of the exception. Policies and procedures should reflect the firm’s current practices, and be reviewed and updated as appropriate, but at least annually. A firm should maintain evidence that management and staff are adhering to policies and procedures in practice.

A firm’s documentation should cover key aspects of its capital planning process, including its risk-identification, measurement and management practices and infrastructure; methods to estimate inputs to post-stress capital ratios; the process used to aggregate estimates and project capital needs; the process for making capital decisions; and governance and internal control practices. A firm’s capital planning documentation should include detailed information to enable independent review of key assumptions, stress testing outputs, and capital action recommendations.

2. Model Validation and Independent Review of Estimation Approaches

Models used in the capital planning process should be reviewed for suitability for their intended uses. A firm should give particular consideration to the validity of models used for

calculating post-stress capital positions. In particular, models designed for ongoing business activities may be inappropriate for estimating losses, revenue, and expenses under stressed conditions. If a firm identifies weaknesses or uncertainties in a model, the firm should make adjustments to model output if the findings would otherwise result in the material understatement of capital needs (see Appendix B, “Model Overlays”). If the deficiencies are critical, the firm should restrict the use of the model, apply overlays, or avoid using the model entirely.

A firm should independently validate or otherwise conduct effective challenge of models used in internal capital planning, consistent with supervisory guidance on model risk management. The model review and validation process should include an evaluation of conceptual soundness of models and ongoing monitoring of the model performance. The firm’s validation staff should have the necessary technical competencies, sufficient stature within the organization, and appropriate independence from model developers and business areas to provide a critical and unbiased evaluation of the estimation approaches.

A firm should maintain an inventory of all estimation approaches used in the capital planning process, including models used to produce projections or estimates used by the models that generate final loss, revenue, expense, and capital projections. Material models should receive greater attention (see Appendix C, “Use of Benchmark Models in the Capital Planning Process”). The intensity and frequency of validation work should be a function of the importance of those models in generating estimates of post-stress capital.

Not all models can be fully validated prior to use in capital planning. However, a firm should conduct a conceptual soundness review of all models prior to their use in capital planning. If such a conceptual soundness review is not possible, the absence of that review should be made transparent to users of model output and the firm should determine whether the use of compensating controls (such as conservative adjustments) are warranted.

Further, a firm should treat output from models for which there are model risk management shortcomings with caution. In addition, a firm should have compensating controls for known model uncertainties and apply well supported conservative adjustments to model results, as appropriate.

A firm should ensure that benchmark or challenger models that contribute to post-stress capital estimates or are otherwise used explicitly in the capital planning process are identified and subject to validation (see Appendix C, “Use of Benchmark Models in the Capital Planning Process”).

3. Management Information Systems and Change Control Processes

A firm should have internal controls that ensure the integrity of reported results and that make certain the firm is identifying, documenting, reviewing, and tracking all material changes to the capital planning process and its components. The firm should ensure that such controls exist at all levels of the capital planning process.

Specific controls should ensure:

- sufficiently sound management information systems to support the firm’s capital planning process;
- comprehensive reconciliation and data integrity processes for key reports;
- the accurate and complete presentation of capital planning process results, including a description of adjustments made to compensate for identified weaknesses; and
- that information provided to senior management and the board is accurate and timely.

Many of the processes used to assess capital adequacy, including models, data, and management information systems, are tightly integrated and interdependent. As a result, a firm should ensure consistent change control oversight across the entire firm, in line with existing supervisory guidance. A firm should establish and maintain a policy describing minimum internal control.

---

18. See SR-11-7, “Supervisory Guidance on Model Risk Management.” The term “effective challenge” means critical review by objective, informed parties who have the proper incentives, competence, and influence to challenge the model and its results.

19. The definition of a model covers quantitative approaches whose inputs are partially or wholly qualitative or based on expert judgment, provided that the output is quantitative in nature.

20. Materiality of the model is a function of both the importance of the business or portfolio assessed and the impact of the model on the firm’s overall results.

trol standards for managing change in capital planning process policies and procedures, model development, information technology, and data. Control standards for these areas should address risk, testing, authorization and approval, timing of implementation, post-installation verification, and recovery, as applicable.

4. Internal Audit Function

Internal audit should play a key role in evaluating capital planning and the elements described in this guidance to ensure that the entire process is functioning in accordance with supervisory expectations and the firm’s policies and procedures. Internal audit should review the manner in which deficiencies are identified, tracked, and remediated. Furthermore, internal audit should ensure appropriate independent review and challenge is occurring at all key levels within the capital planning process.

As discussed further in Appendix E, “Role of the Internal Audit Function in the Capital Planning Process,” internal audit staff should have the appropriate competence and influence to identify and escalate key issues. All deficiencies, limitations, weaknesses and uncertainties identified by the internal audit function that relate to the firm’s capital planning process should be reported to senior management, and material deficiencies should be reported to the board of directors or the audit committee of the board in a timely manner.

D. Capital Policy

A capital policy is a firm’s written assessment of the principles and guidelines used for capital planning, issuance, usage, and distributions. This includes internal post-stress capital goals (as discussed in more detail below and in Appendix F, “Estimating Impact on Capital Positions”) and real-time targeted capital levels; guidelines for dividend payments and stock repurchases; strategies for addressing potential capital shortfalls; and internal governance responsibilities and procedures for the capital policy. The capital policy must be approved by the firm’s board of directors or a designated committee of the board.

The capital policy should be reevaluated at least annually and revised as necessary to address changes to the firm’s business strategy, risk appetite, organizational structure, governance structure, post-stress capital goals, real-time targeted capital levels, regulatory environment, and other factors potentially affecting the firm’s capital adequacy.

A capital policy should describe the firm’s capital adequacy decision-making process, including the decision-making process for common stock dividend payments or stock repurchases. The policy should incorporate actionable protocols, including governance and escalation, in the event a post-stress capital goal, real-time targeted capital level, or other early warning metric is breached. The policy should also include elements such as:

- roles and responsibilities of key parties, including those responsible for producing analytical materials, reviewing the analysis, and making capital distribution recommendations and decisions;
- factors and key metrics that influence the size, timing, and form of capital actions, and the analytical materials used in making capital action decisions; and
- the frequency with which capital adequacy will be evaluated and the analysis that will be considered in the determination of capital adequacy, including the specific circumstances that activate the contingency plan.

1. Post-Stress Capital Goals

A firm should establish post-stress capital goals that are aligned with its risk appetite and risk profile, its ability to act as a financial intermediary in times of stress, and the expectations of internal and external stakeholders. Post-stress capital goals should be calibrated based on the firm’s own internal analysis, independent of regulatory capital requirements, of the minimum level of post-stress capital the firm has

---

22. For additional information on supervisory expectations for internal audit, see SR-13-1, “Supplemental Policy Statement on the Internal Audit Function and Its Outsourcing.”
23. 12 C.F.R. 225.8(d)(7).
25. Consistent with the Board’s November 14, 1985, Policy Statement on the Payment of Cash Dividends, the principles of which are incorporated into this guidance, firms should have comprehensive policies on dividend payments that clearly articulate the firm’s objectives and approaches for maintaining a strong capital position and achieving the objectives of the policy statement. See Bank Holding Company Supervision Manual, section 2020.5.1.1. Intercompany Transactions (Dividends), available at www.federalreserve.gov/boarddocs/supmanual/bhc/bhc.pdf.
deemed necessary to remain a going concern over the planning horizon. A firm should also determine targets for real-time capital ratios and capital levels that ensure that capital ratios and levels would not fall below the firm’s internal post-stress capital goals (including regulatory minimums) under stressful conditions at any point over the planning horizon. For more details, see Appendix F, “Capital Policy.”

E. Incorporating Stressful Conditions and Events

As part of its capital planning process, a firm should incorporate appropriately stressful conditions and events that could adversely affect the firm’s capital adequacy into its capital planning. As part of its capital plan, a firm must use at least one scenario that stresses the specific vulnerabilities of the firm’s activities and associated risks, including those related to the company’s capital adequacy and financial condition. More generally, as part of its ongoing capital adequacy assessment, a firm should use multiple scenarios to assess a broad range of risks, stressful, conditions, or events that could impact the firm’s capital adequacy.

1. Scenario design

A firm should develop complete firm-specific scenarios that focus on the specific vulnerabilities of the firm’s risk profile and operations. The scenario design process should be directly linked to the firm’s risk identification process and associated risk assessment. For those aspects of risks not well captured by scenario analysis, the firm should clearly articulate how the risks are otherwise captured and addressed in the capital planning process and factored into decisions about capital needs and distributions.

In developing its scenarios, the firm should recognize that multiple stressful conditions or events can occur simultaneously or in rapid succession. The firm should also consider the cumulative effects of stressful conditions, including possible interactions among the conditions and second-order or “knock-on” effects.

When identifying and developing the specific set of stressful conditions to capture in its stress scenarios, the firm should engage a broad range of internal stakeholders, such as risk experts, business managers, and senior management, to ensure the process comprehensively takes into account the full range of vulnerabilities specific to the firm.

2. Scenario narrative

A firm’s stress scenario should be supported by a detailed narrative describing how the scenario addresses the firm’s particular material risks and vulnerabilities, and how the paths of the scenario variables relate to each other. The narrative should describe the key attributes of the scenario, including any stress events in the scenario, such as counterparty defaults, large operational risk related events, and ratings downgrades. For more details, see Appendix G, “Scenario Design.”

F. Estimating Impact on Capital Positions

A firm should employ estimation approaches that allow it to project the impact on capital positions of various types of stressful conditions and events. The firm’s stress testing practices should capture the potential increase in losses or decrease in pre-provision net revenue (PPNR) that could result from the firm’s risks, exposures, and activities under stressful scenarios. A firm should estimate losses, revenues, expenses, and capital using a sound method that relates macroeconomic and other risk drivers to its estimates. The firm should be able to identify the manner in which key variables, factors, and events in a scenario affect losses, revenue, expenses, and capital over the planning horizon. Projections of losses and PPNR should be done at a level of granularity that allows for the appropriate differentiation of risk drivers, while balancing practical constraints such as data limitations (see Appendix A, “Use of Models and Other Estimation Approaches” and Appendix D, “Sensitivity Analysis and Assumptions Management”).

The balance sheet projection process should establish and incorporate the relationships among revenue, expense, and on- and off-balance sheet exposures under stressful conditions, including new originations, purchases, sales, maturities, prepayments, defaults, and other borrower and depositor behavior considerations. A firm should also ensure that changes in its asset mix and resulting RWAs are consistent with PPNR and loss estimates. A firm should be able to identify key risk drivers, variables or factors in the sce-
narios that generate increased losses, reduced revenues, and changes to the balance sheet and RWAs over the planning horizon (see Appendix H, “Risk-weighted Asset (RWA) Projections”).

1. Loss estimation

A firm should estimate losses using a sound method that relates macroeconomic and other risk drivers to losses. A firm should empirically demonstrate that a strong relationship exists between the variables used in loss estimation and prior losses. When using supervisory scenarios, a firm should project additional scenario variables beyond those included in the supervisory scenarios if the additional variables would be more directly linked to particular portfolios or exposures. A firm should include a variety of loss types in its stress tests based on the firm’s exposures and activities. Loss types should include retail and wholesale credit risk losses, credit and fair value losses on securities, market and default risk on trading and counterparty exposures, and operational-risk losses.

a. Credit risk losses on loans and securities

A firm should develop sound methods to estimate credit losses under stress that take into account the type and size of portfolios, risk characteristics, and data availability. A firm should understand the key characteristics of its loss estimation approach. In addition, a firm’s reserves for each quarter of the planning horizon, including the last quarter, should be sufficient to cover estimated loan losses consistent with generally accepted accounting standards. A firm should account for the timing of loss recognition in setting the appropriate level of reserves at the end of each quarter of the planning horizon.

A firm should test credit-sensitive securities for potential other-than-temporary impairment (OTTI) regardless of current impairment status. The threshold for determining OTTI for structured products should be based on cash-flow analysis and credit analysis of underlying obligors.

b. Fair-value losses on loans and securities

As applicable, a firm should project changes in the fair value of loans and available-for-sale securities (and impaired held-to-maturity securities). The projections should be based on relevant risk drivers, such as changes in credit spreads and interest rates. The firm should ensure that the risk drivers appropriately capture underlying risk characteristics of the loan or security, including duration and the credit risk of the underlying collateral or issuer.

c. Market and default risks on trading and counterparty exposures

A firm should project how the stress affects mark-to-market values and the default risk of its trading and counterparty exposures. A firm should capture all of its trading positions and counterparty exposures, identify all relevant risk factors, and employ sound revaluation methods. As part of its scenario analysis, as described in greater detail in section III.E of this guidance “Incorporating Stressful Conditions,” a firm should use scenarios that severely stress the firm’s mark-to-market positions and account for the firm’s idiosyncratic risks.

d. Operational-risk losses

A firm should maintain a sound process for estimating operational risk losses in its capital planning process. Operational losses can rise from various sources, including inadequate or failed internal processes, people, and systems, or from external events (see Appendix I, “Operational Loss Projections”).

A firm should have a structured, transparent, and repeatable framework in place to develop credible loss projections under stress that takes into account the differences in loss characteristics of different types of operational loss events. The approaches used to project operational losses should be well supported and include scenario analysis.

2. PPNR

In projecting PPNR, a firm should take into account not only its current positions, but also how its activities, business strategy, and revenue drivers may evolve over time under the varying circumstances and operating environments. The firm should ensure that the various PPNR components, including net interest income, non-interest income and non-interest expense, and other key items projected by the firm such as
balance sheet positions, RWA, and losses, are projected in a manner that is internally consistent.

The ability to effectively project net interest income is dependent upon the firm’s ability to identify and aggregate current positions and their attributes; project future changes in accruing balances due to a variety of factors; and appropriately translate the impact of these factors and relevant interest rates into net interest income based on assumed conditions. Accordingly, a firm’s current portfolio of interest-bearing assets and liabilities should serve as the foundation for its forward-looking estimates of net interest income. Beginning positions, positions added during the planning horizon, and the expected behavior of those positions are critical determinants of net interest income. A firm should have the ability to capture these dynamic relationships under its stress scenarios, and should ensure all related assumptions are well supported (see Appendix D, “Sensitivity Analysis and Assumptions Management”).

Non-interest income is derived from a diverse set of sources, including fees, certain realized gains and losses, and mark-to-market income. Non-interest income generally is more susceptible to rapid changes than net interest income, especially if certain market measures move sharply. A firm’s projections should incorporate material factors that could affect the generation of non-interest income under stress, including the firm’s business strategy, the competitive landscape, and changing regulations.

Non-interest expenses include both expenses that are likely to vary with certain stressful conditions and those that are not. Projections of expenses that are closely linked to revenues or balances should vary with projected changes in revenue or balance sheet levels. Non-interest expense should be projected using either quantitative estimation methods or well-supported judgment, depending on the underlying drivers of the expense item.

3. Aggregating Estimation Results

A firm should have well-documented processes for projecting the size and composition of on- and off-balance sheet positions and RWAs over the planning horizon that feed in to the wider capital planning process (see Appendix H, “Risk-weighted Asset (RWA) Projections”).

A firm should have a consistently executed process for aggregating enterprise-wide stress test projections of losses, revenues, and expenses, including estimating on- and off-balance sheet exposures, and RWAs, and for calculating post-stress capital positions and ratios. The aggregation system should be able to bring together data and information across business lines, portfolios, and risk types and should include the data systems and sources, data reconciliation points, data quality checks, and appropriate internal control points to ensure accurate and consistent projection of financial data within enterprise-wide scenario analysis. Internal processes for aggregating projections from all relevant systems and regulatory templates should be identified and documented. In addition, the beginning points for projections and scenario variables should align with the end of the historical reference period.

Appendix A: Use of Models and Other Estimation Approaches

Projections of losses and PPNR under various scenarios are key components of enterprise-wide stress testing and capital planning. The firm should ensure that its projection approaches, including any specific processes or methodologies employed, are well supported, transparent, and repeatable over time.

A firm should generally use models or other quantitative methods, supported by expert judgment as appropriate, as the basis for generating projections. In limited instances, such as in cases of new products or businesses, or where insufficient data are available to support modeled approaches, qualitative approaches may be appropriate in lieu of quantitative methods to generate projections for those specific areas.

A firm should adhere to supervisory guidance on model risk management (SR-11-7) when using models, and should have sound internal controls around both quantitative and qualitative approaches.

I. Quantitative Approaches

Firms use a range of quantitative approaches for capital planning. The type and level of sophistication of any quantitative approach should be appropriate for the type and materiality of the portfolio or activity for which it is used and the granularity and length of available data. The firm should also ensure that the quantitative approach selected generates credible estimates.
that are consistent with assumed scenario conditions.

A firm should separately estimate losses and PPNR for portfolios or business lines that are either sensitive to different risk drivers or sensitive to risk drivers in a markedly different way, particularly during periods of stress. For instance, losses on commercial and industrial loans and commercial real estate (CRE) loans are, in part, driven by different risk factors, with the path of property values having a pronounced effect on CRE loan losses, but not necessarily on other commercial loans. Similarly, although falling property values affect both income-producing CRE loans and construction loans, the effect often differs materially due to structural differences between the two portfolios. Such differences can become more pronounced during periods of stress.

A firm should have a well-supported variable selection process that is based on economic intuition, in addition to statistical significance where applicable. The firm should provide a clear rationale for the macroeconomic variables or other risk drivers chosen for all quantitative approaches, including why certain variables or risk drivers were not selected.

A firm should estimate losses and PPNR at a sufficiently disaggregated level within a given portfolio or business line to capture observed variations in risk characteristics (for example, credit score or loan-to-value ratio ranges for loan portfolios) and performance across sub-portfolios or segments under changing conditions and environments. Loss and PPNR estimates should also be sufficiently granular to capture changing exposure levels over the planning horizon. However, in assessing the appropriate level of granularity of segments, a firm should factor in issues such as the availability of data or the costs and benefits of model complexity. For example, when projecting losses for a more diverse portfolio with a range of borrower risk characteristics and observed historical performance, firms should segment the portfolio more finely based on key risk attributes unless the segments lack sufficient data observations to produce reliable model estimates.

a. Use of Data

A firm should use internal data to estimate losses and PPNR as part of its enterprise-wide stress testing and capital planning practices. However, it may be appropriate for a firm to use external data if internal data limitations exist as a result of systems limitations, acquisitions, or new products, or other factors that may cause internal data to be less relevant for developing stressed estimates. If a firm uses external data to estimate its losses or PPNR, the firm should ensure that the external data reasonably approximate underlying risk characteristics of the firm’s portfolios or business lines. Further, the firm should make adjustments to estimation methods or outputs, as appropriate, to account for identified differences in risk characteristics and performance reflected in internal and external data. In addition, firms should relate their projections under stress scenarios to the characteristics of their assets and activities described in their internal data.

A firm should generally include all available data in its analysis, unless the firm no longer engages in a line of business or its activities have changed such that the firm is no longer exposed to a particular risk. The firm should not selectively exclude data based on the changing nature of the ongoing business or activity without strong empirical support. For example, excluding certain loans only on the basis that they were underwritten to standards that no longer apply or on the basis that the loans were acquired by the firm is not sound practice.

b. Use of Vendor Models

A firm should have processes to confirm that any vendor or other third-party models it uses are sound, appropriate for the given task, and implemented properly. A firm should clearly outline limitations and uncertainties associated with vendor models.

Vendor model management includes having an appropriate vendor selection process, assigning staff to oversee and maintain the vendor relationships, and ensuring that there is sufficient documentation of vendor models. A firm should also confirm that vendor models have been sufficiently tested and that data used by the vendor are appropriate for use at the firm. The firm should also establish key measures for

27. Firms are required to collect and report a substantial amount of risk information to the Federal Reserve on FR Y-14 schedules. These data may help to support the firms’ enterprise-wide stress test. See Capital Assessments and Stress Testing information collection, Reporting Forms FR Y-14A, Q, and M.

28. See SR-13-19/CA 13-21, “Guidance on Managing Outsourcing Risk.” (Refer to this manual’s section 2124.3)
evaluating vendor model performance and tracking those measures whenever those vendor models are used, as well as assess vendor models (including to incorporate any relevant updates or changes). Vendor models should be subject to validation processes similar to those employed for models developed internally.

2. Assessing Model Performance

A firm should use measures to assess model performance that are appropriate for the type of model being used. The firm should outline how each performance measure is evaluated and used. A firm should also assess the sensitivity of material model estimates to key assumptions and use benchmarking to assess reliability of model estimates (see Appendix C, “Use of Benchmark Models in the Capital Planning Process” and Appendix D, “Sensitivity Analysis and Assumptions Management”).

A firm should employ multiple performance measures and tests, as generally no single measure or test is sufficient to assess model performance. This is particularly the case when the models are used to project outcomes in stressful circumstances. For example, assessing model performance through out-of-sample and out-of-time back testing may be challenging due to the short length of observed data series or the paucity of realized stressed outcomes against which to measure the model performance. When using multiple approaches, the firm should have a consistent framework for evaluating the results of different approaches and supporting rationale for why it chose the methods and estimates ultimately used.

A firm should provide supporting information about models to users of the model output, including descriptions of known measurement problems, simplifying assumptions, model limitations, or other ways in which the model exhibits weaknesses in capturing the relationships being modeled. Providing such qualitative information is critical when certain quantitative criteria or tests measuring model performance are lacking.

3. Qualitative Approaches

A qualitative approach to project losses and PPNR may be appropriate in limited cases where severe data or other limitations preclude the development of reliable quantitative approaches. The firm should document why such an approach is reliable for generating projections and is justified based on business need.

When using a qualitative approach, the firm should substantiate assumptions and estimates using analysis of current and past risk drivers and performance, internal risk identification, forward-looking risk assessments, external analysis or other available information. The firm should conduct an initial and ongoing assessment of the performance and viability of the qualitative approach. The processes used in qualitative projection approaches should be transparent and repeatable. The firm should also clearly document qualitative approaches and key assumptions used.

Qualitative approaches should be subject to independent review, although the review may differ from the review of quantitative approaches or models. The level of independent review should be commensurate with the:

- materiality of the portfolio or business line for which the qualitative approach is used;
- impact of the approach’s output on the overall capital results; and
- complexity of the approach.

Firm staff conducting the independent review of the qualitative approaches should not be involved in developing, implementing or using the approach. However, this staff can be different than the staff that conducts validation of quantitative approaches or models.

Appendix B: Model Overlays

A firm may need to rely on overrides or adjustments to model output (model overlay) to compensate for model, data, or other known limitations. If well-supported, use of a model overlay can represent a sound practice.

A model overlay may be appropriate to address cases of identified weaknesses or limitations in the firm’s models that cannot be otherwise addressed, or for select portfolios that have unique risks that are not well captured by the model used for those exposures and activities. In contrast, a model overlay that functions as a
general “catch all” buffer on top of targeted capital levels to account for model weaknesses generally would not represent sound practice.31

A firm should also avoid extensive reliance on model overlays throughout its capital planning process, particularly for material portfolios or where an overlay would have a large effect on projections. Further, a firm should reduce its reliance on overlays by addressing the underlying model issue over time. Firms should evaluate the reasons for overlays and track and analyze overlay performance.

As part of its overall documentation of methodologies used in stress testing, a firm should document its use of model overlays. Firms must be able to identify the main factors necessitating the use of an overlay as well as how the selected overlay addresses those factors. Key assumptions related to the overlay should be clearly outlined and consistent with assumed scenario conditions.

1. Process for Applying Overlays

A firm should establish a consistent firm-wide process for applying model overlays and for controls around model overlays. The process can vary by model type and portfolio, but should contain some key elements, as described below. This process should be outlined in the firm’s policies and procedures and include a specific exception process for the use of overlays that do not follow the firm’s standards. As part of model development, implementation and use, overlays should be well documented, supported and communicated to senior management. Model overlays should be applied in an appropriate, systematic, and transparent manner. Model results should also be reported to senior management with and without overlay adjustments.

Model overlays (including those based solely on expert or management judgment) should be subject to validation or other type of effective challenge.32 Consistent with the materiality principle in SR-11-7, the intensity of model risk management for overlays should be a function of the materiality of the model and overlay. Effective challenge should occur before the model overlay is formally applied, not on an ex-post basis.

Validation or other type of effective challenge of model overlays may differ from quantitative model validation. Staff responsible for effective challenge should not also be setting the overlay itself or providing significant input to the level or type of overlay. For example, a committee that develops an overlay should not also be responsible for the effective challenge of the overlay. In addition, staff engaging in the effective challenge of model overlays should meet supervisory expectations relating to incentives, competence, and influence (as outlined in SR-11-7). Staff conducting effective challenge should confirm that model overlays are sufficiently conservative to compensate for model limitations and associated uncertainties in model estimates. Sensitivity analysis should be used to help quantify the overlay.

2. Governance of Overlays

Overlays and adjustments used by a firm should be reviewed and approved at a level within the organization commensurate with the materiality of that overlay or adjustment to overall pro forma results. In general, the purpose and impact of overlays should be communicated to senior management in a manner that facilitates an understanding of the issues by the firm’s senior management. Material overlays to the model—either in isolation or in combination—should receive a heightened level of support and scrutiny, up to and including review by the firm’s board of directors (or a designated committee), in instances where the impact on pro forma results is material.

Senior management should periodically receive a high-level description of the use of model overlays. This description should include the number of models having overlays, whether more material models have overlays, whether overlays on the whole result in more or less conservative projections, and the range of the effect of overlays on the model output (especially for those cases where the overlays produce less conservative outcomes).

Senior management should be able to independently assess the reasonableness of using an

---

31. Firms may choose to apply overall capital buffers as an additional conservative measure, beyond overlays applied at the model level. Overall capital buffers should be subject to the same governance processes applicable to model overlays, as described in section 2 of this appendix. However, supervisors emphasize that having such a buffer should not in any way replace sound model risk management practices for overlays at the individual model level or address the need for the overlay at the individual model level.

32. The term “effective challenge” means critical review by objective, informed parties who have the proper incentives, competence, and influence to challenge the model and its results.
overlay to capture a particular risk or compensate for a known limitation. Extensive use of overlays should trigger discussion as to whether new or improved modeling approaches are needed to reduce overlay dependency. Signs that the underlying model needs revision or redevelopment include a high rate of overrides or overides that consistently affect model performance.

Appendix C: Use of Benchmark Models in the Capital Planning Process

As noted in Appendix A, “Use of Models and Other Estimation Approaches,” a firm should use a variety of methods, including benchmarking, to assess model performance and gain comfort with model estimates. A firm should use benchmark or challenger models to assess the performance of its primary models for all material portfolios or to supplement, where appropriate, the primary models. Such models should be used in conjunction with other aspects of benchmarking, such as comparing model results to actual market data, internal firm data, data from similar firms or portfolios, or judgmental estimates by business line experts. A firm should also use benchmark models during validation as an additional check on the primary model and its results.

Use of benchmark models is particularly important when primary models have exhibited significant deficiencies or are still under development. For instance, a firm’s primary model may use a preferred methodology, but lack a rich data set to support modeled estimates. In these cases, the firm should use benchmark models based on different data and modeling approaches to provide additional checks on primary model estimates. To the extent that a benchmark model highlights that a primary model has flaws (e.g., the model is producing output that is vastly different from experience during prior periods of stress), a firm should analyze whether it would be appropriate to adjust the model specification, apply model overlays, or develop different estimation approaches.

Benchmark models that are developed and run independently of primary models can be used to more effectively calibrate the firm’s final estimates. For example, a firm can use benchmark model outputs to substantiate model overlays, given differences in risk capture between primary and benchmark models. This type of “triangulation” is especially suitable for those areas of modeling that present considerable uncertainty.

Benchmark models used to arrive at the firm’s final estimates should be subject to model risk management. The intensity and frequency of validation or other type of effective challenge of benchmark models of a firm should correspond to the importance of those models in generating estimates. For example, if the output of a benchmark model is averaged with primary model results to develop final estimates, or if the benchmark model is used to develop overlays or overrides for the primary model, that model should be subject to more intensive validation.

Benchmark models that are used only during the validation process and do not contribute directly to the firm’s estimates do not need to be validated. However, a firm should assess the rigor of all benchmark models and benchmark data used to ensure they provide reasonable comparisons.

Appendix D: Sensitivity Analysis and Assumptions Management

A firm should understand the sensitivity of its stress testing estimates used in capital planning to the various inputs and assumptions. In addition, sensitivity analysis should be used to test the robustness of quantitative approaches and models and enhance reporting to the firm’s senior management, board of directors, and supervisors. A firm should ensure that it identifies, documents, and manages the use of all key assumptions used in capital planning.

1. Sensitivity Analysis

Understanding and documenting a range of potential outcomes provides insight into the inherent uncertainty and imprecision around pro forma results. A firm should assess the sensitivity of its estimates of capital ratios, losses, revenues, and RWAs to key assumptions and uncertainty across the entire firm’s projections under stress. Through this assessment, a firm should calculate a range of potential estimates based on changes to assumptions and inputs. Examples of assumptions that generally should be subject to sensitivity analysis include projected market share, size of the market, cost and flow of deposits, utilization

33. Note that the terms “benchmark model” and “challenger model” are used interchangeably for purposes of this appendix to mean a model to support or give additional perspective to a primary model.
rate of credit lines, discount rates, or level and composition of trading assets and RWA. A firm should also evaluate the sensitivity of models to key assumptions to evaluate model performance, assess the appropriateness of assumptions, and understand uncertainty associated with model output.

Sensitivity analysis for capital planning models should be applied in a manner consistent with the expectations outlined in the Federal Reserve’s supervisory guidance on model risk management (refer to SR-11-7). Sensitivity analysis should be conducted during model development and during model validation to provide information about how models respond to changes in key inputs and assumptions, and how those models perform in stressful conditions. In addition, sensitivity analysis should be applied to understand the range of possible results from vendor-provided models and vendor-provided scenario forecasts that have opaque or proprietary elements. Sensitivity analysis should be used to provide information to help users of model output interpret results, but does not have to result in changes to models or model outputs. Changes made based on sensitivity analysis should be clearly documented and justified.

A firm should ensure that the key sensitivities are presented to senior management and the board in advance of decision-making around the firm’s capital plan and capital actions. Sensitivity analysis should also be used to inform senior management, and, as appropriate, the board of directors about the potential uncertainty associated with models employed of the firm’s projections under stress.

2. Assumptions Management

A firm should clearly document assumptions when estimating losses, PPNR, and balance sheet, and RWA components. Documentation should include the rationale and empirical support for assumptions and specifically address how those assumptions are consistent with and appropriate under the firm’s scenario conditions.

A firm’s rationale for assumptions used in capital planning should be consistent with the different effects of scenario conditions, shifts in portfolio mix, and growth or decline in balances projected over the planning horizon. For example, the firm should scrutinize and support any assumptions about sizeable loan growth during a severe economic downturn.

A firm should generally use conservative assumptions, particularly in areas of high uncertainty. The firm should provide greater support for assumptions that appear optimistic or otherwise appear to benefit the firm (such as loss reduction or revenue enhancement). A firm should not assume that senior management will be able to realize favorable strategic actions that cannot be reasonably assured in stress scenarios given the high level of uncertainty around market conditions. Further, a firm should not assume that it would have the perfect foresight that would allow it, for example, to make significant expense reductions in the first quarter of the forecast horizon in anticipation of the forthcoming economic deterioration described in the scenario.

A firm should not always assume that historical patterns will repeat. For example, a firm should not assume that if it has suffered no or minimal losses in a certain business line or product in the past, such a pattern will continue. In addition, a firm should carefully analyze effects of any structural changes in customer base, product, and financial markets on its projections, as these changes could significantly affect a firm’s performance under stress scenarios. Furthermore, the firm should explore the potential effects of changes in assumed interrelationships among variables and the behavior of exposures. The firm should also explicitly justify, document, and appropriately challenge any assumptions about diversification benefits.

A firm should confirm that key assumptions used in vendor or other third-party products are transparent and have sufficient support before using the products in stress testing. The firm should limit use of vendor products whose assumptions are not fully transparent or supported or use those products only in conjunction with another approach or compensating controls (e.g., overlays).

Appendix E: Role of the Internal Audit Function in the Capital Planning Process

A firm’s internal audit function should play a key role in evaluating the adequacy of the firm’s capital planning process and in assessing whether the risk management and internal control practices supporting that process are comprehensive and effective. A firm should establish an audit program around its capital planning process that is consistent with SR-13-1, “Supplemental Policy Statement on the Internal Audit Function and its Outsourcing.”
1. Responsibilities of Audit Function

The internal audit function should identify all auditable processes related to capital planning and develop an associated audit plan. The audit function should also perform substantive testing to ascertain the effectiveness of the control framework supporting the firm’s capital planning process, communicate identified limitations and deficiencies to senior management, and communicate material limitations and deficiencies to the board of directors (or the audit committee of the board). The audit function should comprehensively cover the firm’s capital planning process.

The internal audit function should perform periodic reviews of all aspects of the internal control framework supporting the capital planning process to ensure that all individual components as well as the entire process are functioning in accordance with supervisory expectations and the firm’s policies and procedures. The internal audit function should also review the manner in which deficiencies are identified, tracked, and remediated. Furthermore, the internal audit function should ensure appropriate independent review is occurring at various levels within the capital planning process.

A firm’s internal audit staff should have the appropriate competence and stature to identify and escalate key issues when necessary. Adequate quantitative expertise is needed to assess the effectiveness of the capital planning processes and procedures. The role of audit staff is to evaluate whether the capital planning process is comprehensive, rigorous, and effective. The internal audit function may also rely on an independent third party external to the firm to complete some of the substantive testing as long as the internal audit function can demonstrate proper independence of the third-party from the area being assessed and provide oversight over the execution and quality of the work.

Other supervisory expectations for the internal audit function relating to the capital adequacy process include:

- verifying that acceptable policies are in place and that staff comply with those policies;
- assessing accuracy and completeness of the model inventory;
- evaluating procedures for updating processes and ensuring appropriate change/version controls;
- confirming that staff are meeting documentation standards, including reporting;
- reviewing supporting operational systems and evaluating the reliability of data used in the capital planning process; and
- reviewing the quality of any work conducted by external parties.

2. Development of Audit Plan

The internal audit function should have a documented plan describing its strategy to assess the processes and controls supporting the firm’s capital planning process. When defining the annual audit universe and audit plan, the internal audit function of a firm should focus on the most significant risks relating to the capital planning process. The firm may leverage existing or regularly scheduled audits to ensure coverage of all the capital planning process components; however, the findings and conclusions of these audits should be incorporated into the overall summary of audit activities and conclusions regarding the firm’s capital planning process.

The internal audit function should also establish a process for reviewing and updating, as appropriate, its audit plan annually to account for material changes to the firm’s capital planning process, internal control systems, infrastructure, work processes, business lines, or changes to relevant laws and regulations. The firm should also ensure that the periodic assessment of the capital planning process is supported by a reliable and current assessment of the individual components.

3. Briefings to Senior Management and Board

On an annual basis, the internal audit function should report to senior management and the board of directors on the capital planning process to inform recommendations and decisions on the firm’s capital plan. The report should provide an opinion of the capital planning process, a statement of the effectiveness of the controls and processes employed, a status update on previously identified issues and remediation plans, and any open issues or uncertainties related to the firm’s capital plan. Any key processes that are not comprehensively reviewed and tested, due to timing or significant changes in processes, should be clearly documented and identified as areas with potential heightened risk. In addition, a firm’s internal audit function should brief the board of directors (or a designated committee thereof) and...
senior management at least quarterly on the status of key findings relating to the capital planning process.

The internal audit function should track responses to its findings and report to the board any cases in which senior management is not implementing required changes related to audit findings or is doing so with insufficient intensity. In addition, the internal audit function should report any identified material deficiencies, limitations, or weaknesses related to the firm’s capital planning process to the board of directors and senior management in a timely manner.

Appendix F: Capital Policy

A firm’s capital policy should describe how the firm manages, monitors, and makes decisions regarding capital planning. The policy should include internal post-stress capital goals and real-time targeted capital levels; guidelines for dividends and stock repurchases; and strategies for addressing potential capital shortfalls.

A firm’s capital policy should describe the manner in which consolidated estimates of capital positions are presented to senior management and the board of directors. The capital policy should require staff with responsibility for developing capital estimates to clearly identify and communicate to senior management and board of directors the key assumptions affecting various components that feed into the aggregate estimate of capital positions and ratios.

The capital policy should require that aggregated results be directly compared against the firm’s stated post-stress capital goals, and that those comparisons are included within the standard reporting to senior management and the board of directors.

1. Post-Stress Capital Goals

Post-stress capital goals should provide specific minimum thresholds for the level and composition of capital that the firm intends to maintain during a stress period. Post-stress capital goals should include any capital measures that are relevant to the firm. The firm should be able to demonstrate through its own internal analysis, independently of regulatory capital requirements, that remaining at or above its internal post-stress capital goals will allow the firm to continue to operate. Capital goals should take into consideration the uncertainty inherent in capital planning, as well as the economic and market outlook.

The capital policy should describe how senior management and the board concluded that the firm’s post-stress capital goals are appropriate, sustainable in different conditions and environments, and consistent with its strategic objectives, business model, and capital plan. In addition, the capital policy should describe the process by which the firm establishes its post-stress capital goals, and include the supporting analysis underpinning the goals chosen by the firm.

A firm should annually review its capital goals, evaluate whether its post-stress capital goals are still appropriate based on changes in operating environment, business mix, or other conditions, and adjust those goals as needed.

A firm should adjust its real-time capital targets (that is the amount of current capital it holds above its post-stress capital goals to ensure it does not fall below those goals under stress) more frequently than it adjusts capital goals, based on changes in the business mix, operating environment, or other current conditions and circumstances.

2. Dividends and Stock Repurchases

A firm’s capital policy should describe the processes relating to common stock dividend and repurchase decisions, including the processes to determine the timing, form, and amount of all planned distributions. The capital policy should also specify the analysis and metrics that senior management and the board use to make capital distribution decisions. The analysis should include strategic considerations such as new business initiatives, potential acquisitions, and the other relevant factors.

The capital policy should identify the types of calculations and analysis that support a firm’s proposed capital actions and determine the amount of capital available for distribution at any given time. For example, a firm should develop and use payout ratio limits in the decision making process. While payout ratio limits or targets should not be the single determining factor, the capital policy should describe how payout ratio limits or targets are considered, including how they are consistent with firm’s strategic goals, how they were derived, and what analysis was

---

34. A capital policy is a firm’s written assessment of the principles and guidelines used for capital planning, issuance, usage, and distributions. 12 C.F.R. 225.8(d)(7).
used to determine the appropriate amount of capital to distribute in a given period. Further, a firm should include in its capital policy threshold levels for payout ratios that trigger management action. Such action should include escalation to the board and potential suspension of capital distributions. Escalation protocols should be clear, credible, and actionable in the event of an actual or projected target is breached.

3. Contingency Plans for Capital Shortfalls

A firm’s capital policy should include specific capital contingency actions the firm would take to remedy any current or prospective deficiencies in its capital position. The firm’s capital contingency plan should reflect strategies for identifying and addressing potential capital shortfalls and specify circumstances under which the board of directors and senior management will revisit planned capital actions or otherwise institute contingency measures. A contingency plan should include a set of thresholds for metrics or events that provide early warning signs of capital deterioration and that trigger management action or scrutiny. Additionally, triggers for more severe levels of deterioration should be linked to escalation procedures for more immediate management action and should be consistent with triggers in the firm’s recovery plan. Triggers should reflect both point-in-time and forward-looking measures (both baseline and stress).

Capital contingency plans should include options for actions that a firm would consider taking to remedy any current or prospective deficiencies in its capital position, such as reducing or ceasing capital distributions, raising additional capital, reducing risk, or employing other means to preserve existing capital. Contingency options in the firm’s capital policy should be consequential, realistic, actionable, and comprehensive.

Capital contingency plans should include a detailed explanation of the circumstances in which the firm would consider implementing these options, including when it would reduce or suspend a dividend or repurchase program or not execute a previously planned capital action. The capital contingency plans should specify the type of information that would be provided to decision makers when the firm’s current or projected capital levels have deteriorated, including how management would present options to address the capital position and the long-term viability of the firm. Contingency options should be ranked according to ease of execution and impact and should incorporate an assessment of stakeholder reactions. All options should be evaluated for their feasibility and the reasonableness of underlying assumptions (such as whether a firm would be able to raise capital or draw on capital from another entity during a period of stressful market conditions).

Appendix G: Scenario Design

As part of its capital plan, a firm must use at least one scenario that stresses the specific vulnerabilities of the firm’s risk profile and operations, including those related to the company’s capital adequacy and financial condition. The firm’s stress scenario should be at least as severe as the Federal Reserve’s severely adverse supervisory scenario, measured in terms of its effect on net income and other elements that affect capital.

As noted in the core document, a firm should develop at least one complete firm-specific scenario that focuses on the specific vulnerabilities of the firm’s risk profile and operations. The firm’s scenario should be carefully tailored to the idiosyncratic risks of the firm, as defined through the firm’s internal material risk identification process, and should incorporate circumstances that are particularly stressful to the firm.

---

35. Capital contingency planning should be closely integrated with the broader crisis management framework, including recovery and other contingency planning efforts focused on ensuring sustainability under a broad range of internal or external stresses. See SR-14-1 “Heightened Supervisory Expectations for Recovery and Resolution Preparedness for Certain Large Bank Holding Companies,” and SR-14-8, “Consolidated Recovery Planning for Certain Large Domestic Bank Holding Companies.”

36. Capital contingency plans may include triggers for liquidity, earnings, debt and credit default swap spreads, ratings downgrades, stock performance, supervisory actions, general market stress, or other noncapital metrics.

37. 12 C.F.R. 225.8(e)(2). In addition, a firm is required to report to the Federal Reserve its projections under a baseline scenario, which captures the firm’s view of the likely operating environment over the planning horizon. A firm may use the Board’s baseline scenario for its own baseline scenario if the firm can demonstrate that the Board’s baseline scenario is appropriate for the firm’s own risks, activities, and outlook; however, a firm cannot use the Board’s severely adverse scenario for its own stress scenario.

38. For guidance on the severity of the scenarios, a firm should review the Board’s “Policy Statement on the Scenario Design Framework for Stress Testing,” which sets forth the Board’s approach to designing the severely adverse scenario. See 12 C.F.R. 252, appendix A.
given the firm’s idiosyncratic risks and key vulnerabilities. Such circumstances include those affecting the firm’s particular business model, revenue drivers, mix of assets and liabilities, geographic footprint, portfolio characteristics, and specific operational risk vulnerabilities. The firm can incorporate the idiosyncratic stress considerations in macroeconomic and financial market variables or a discrete stress event included in the scenario. A firm-specific scenario would not meet supervisory expectations if it is not tailored to the firm’s activities and risks. This is the case even if the severity is generally equivalent to the supervisory stress scenarios or if the post-stress capital ratios are lower than those under the supervisory severely adverse scenario.

The stress scenario should include stressful circumstances and events that could, on a stand-alone basis or in combination, reduce the firm’s capital levels and ratios and potentially impede the firm’s ability to operate as a going concern, and cover material risks to which the firm is exposed over the course of an annual planning cycle. A firm’s scenario should include factors that capture economy- or market-wide stresses and idiosyncratic risks that can put a strain on the firm. A firm should also take into account conditions and events that have not previously occurred, but that may pose a significant threat to the firm given its exposures, risk profile, and business strategy.

Use of Multiple Scenarios

In addition, a firm should use multiple scenarios as part of its ongoing capital adequacy assessment to assess a broad range of risks, stressful conditions, or events that could impact the firm’s capital adequacy. This assessment should inform development of the internal stress scenario(s) used in the firm’s plan, the firm’s post-stress capital goals, and its current capital targets. The firm’s scenarios should collectively address all material risks to which the firm is exposed over the course of an annual planning cycle.

In designing its stress scenarios, a firm should incorporate risks and vulnerabilities that arise from multiple factors, sources and events. Historical data may provide a starting point for scenarios, but a firm should also consider other data sources and challenge conventional assumptions when identifying the stressful conditions and events that could adversely affect the firm’s capital adequacy. In certain instances, scenarios that include economic and financial market variables that deviate from historical experience and correlations are appropriate if, for example, previously unobserved vulnerabilities exist in certain sectors of the economy or financial markets. In addition, the firm should not exclude experiences that have occurred outside its own history when designing stress scenarios, particularly if the firm has recently expanded its business to include new products, markets, or customers.

The macroeconomic variables used in a given scenario should collectively describe the general operational environment considered in the scenario. A firm should ensure that the scenario includes sufficient macroeconomic variables to support its stress testing estimation methods. While a firm should assess the internal consistency of the scenario, the firm should evaluate whether deviations from historically observed relationships among macroeconomic variables that increase the degree of stress placed on the firm may be appropriate.

Depending on the significance of market risk in a firm’s overall risk profile, the firm’s stress scenarios should include an adverse movement in financial market variables, such as asset prices, spreads, and rates, and related risk factors that impact a firm’s trading exposures. The firm should base market risk factors in the scenario on a thorough evaluation of the specific positions of the firm and the material risks coincident with those positions. A firm should limit use of past periods of financial market stress that do not sufficiently stress the firm’s current positions.

Appendix H: Risk-weighted Asset (RWA) Projections

A firm should maintain a sound process for projecting RWAs over the planning horizon. The firm’s initial RWA calculations should be consistent with applicable regulatory capital requirements. In addition, the firm’s projections of RWAs should be developed in a fashion consistent with the scenario conditions and in accordance with applicable regulatory capital requirements.

1. Initial RWA Calculations

Starting balances for both on- and off-balance sheet exposures and applicable risk weights form the foundation for estimates of post-stress capital ratios. Therefore, firms should verify carefully the accuracy of these starting balances.
Moreover, deficiencies in starting RWA calculations are generally compounded in RWA projections over the planning horizon. A firm should ensure that it has sound controls around its RWA calculation and regulatory reporting processes as part of the firm’s broader data governance program.

2. RWA Projections

A firm should ensure that RWA projections are consistent with a given scenario and incorporate the impact of projected changes in exposure amounts and risk characteristics of on- and off-balance sheet exposures under the scenario. A firm should demonstrate that assumptions associated with RWA projections are clearly conditioned on a given scenario and are consistent with stated internal and external business strategies. In addition, firms should ensure that projected market risk-weighted assets (market RWAs) are consistent with market factors (e.g., volatility levels, equity index levels, bond spreads) and assumptions around the size and composition of their trading assets.

A firm should document assumptions for projecting RWAs and their relationship to the RWA projections. If the firm’s models for projecting RWAs rely upon historical relationships, the firm should provide a description of the historical data used and clearly describe why these relationships are expected to be maintained under a given scenario. Further, a firm should analyze the appropriateness of assumptions regarding the following:

- any aggregation of balance projections by exposure type or characteristic (e.g., balances for exposures that do not distinguish between amounts that are considered past due and those that are current) for purposes of applying corresponding risk weights;
- any use of average or effective risk weights based on the firm’s as-of date portfolio composition or historical trend; and
- any exposure types for which RWAs are held constant over the projection horizon.

For purposes of projecting RWAs under the standardized approach, a firm should project balances, risk characteristics, and calculation parameters with appropriate consistency and granularity to facilitate application of appropriate regulatory risk weights for its on- and off-balance sheet exposures. In particular, RWA projections should include information sufficient to assess the impact of potential changes to the following:

- counterparty mix, collateral mix, collateral haircuts, and netting assumptions for derivatives and repo-style transactions;
- default fund assumptions for derivatives that are centrally cleared;
- simplified supervisory formula approach (SSFA) input parameters for securitization exposures;
- organization for Economic Cooperation and Development (OECD) Country Risk Classifications (CRCs) or default status relating to foreign exposures;
- the utilization rate of off-balance sheet lines of credit;
- the mix between unconditionally cancellable and conditionally cancellable off-balance sheet exposures;
- the volume of residential mortgage exposures that qualify for 50 percent risk weight, and;
- the volume of past due exposures as defined under Regulation Q.

3. Market Risk-weighted Asset Projections

The methods and processes used to project market RWAs will differ across firms, in part as a function of the combination of model and non-model based methods used to determine starting market RWAs. However, as a general matter, market RWAs are expected to be positively correlated to volatility, spreads, or other relevant market factors, holding all things equal. If a firm projects flat or declining market RWAs over the planning horizon under the stress scenarios, the firm should provide support for the reasonableness of these assumptions under stressful market conditions. In addition, the firm should demonstrate that those assumptions are applied consistently across the enterprise-wide stress testing process, including for revenue projections.

If a firm that is not currently subject to the market risk rule projects its trading assets and trading liabilities to grow over the planning horizon, it should assess whether the projected growth would require the firm to calculate market RWA under the regulatory capital rule.

---

39. 12 C.F.R. 217, subpart D.
40. 12 C.F.R. 217.32(k).
41. 12 C.F.R. 217.201.
The firm should estimate the effect of market RWAs, if applicable, on its projected capital ratios and document the process used to project market RWAs in its capital plan.

4. Independent Review of RWA Reporting and Projections

A firm should implement and document an independent review of RWA regulatory reporting by the firm’s internal audit function or another independent control function. The independent review should ensure point-in-time RWA calculation processes appropriately capture all relevant on- and off-balance sheet exposures and are consistent with applicable risk-weighting methodologies to which the firm is subject under Regulation Q. The independent review should be conducted by a party with the necessary expertise to perform such reviews but with independence from the assignment of the risk weights for regulatory reporting purposes. The review should provide reasonable assurance that the initial RWAs are accurate and that the methods used to project RWAs are sound. Documentation of the independent review should clearly describe the scope of the review, outcomes and findings of the review, and any associated remediation efforts. A firm should also ensure that the underlying data processes supporting RWA projections include appropriate controls, reconciliations and attestations, and that data integrity testing is conducted by an independent party.

Appendix I: Operational Loss Projections

A firm faces a wide range of operational risk in conducting its business operations. Operational losses can arise from various sources, including inadequate or failed internal processes, people, and systems, or from external events, and can differ in frequency and severity. For example, some operational loss events, such as credit card fraud, are often more predictable as they occur at high frequency, but generally have low loss severity. The outcome of other events, such as major litigation, are less certain and can result in outsized losses.

1. Risk Identification Process

A firm should maintain a sound process for estimating operational risk losses in its capital planning process, taking into account the differences in loss characteristics of different operational loss event types. A firm’s risk identification process should include the evaluation of the type of operational risk loss events to which the firm is exposed and the sensitivity of those events to internal and external operating environments.

The firm-specific scenario submitted in a firm’s capital plan should capture the firm’s material operational risks, be designed with the firm’s particular vulnerabilities in mind, and include potential firm-specific events such as system failures, or litigation-related losses. The firm should evaluate both the firm’s own loss history and the large loss events experienced by industry peers with similar business mix and overall operational risk profiles.

2. Approaches to Operational Loss Estimation

The firm should have transparent and well-supported estimation approaches based on both quantitative analysis and expert judgment, and should not rely on unstable or unintuitive correlations to project operational losses. Scenario analysis should be a core component of the firm’s operational loss projection approaches.

Certain operational risks, particularly those most likely to give rise to large losses, often may not have measurable relationships to the overall scenario conditions. In addition, large operational loss events are often idiosyncratic, limiting the relevance of historical data. The firm should also limit dependence on distribution-based approaches that rely on historical data and require significant assumptions when projecting large operational losses. The firm should evaluate a range of outcomes under various scenarios, and make generally conservative assumptions.

The firm should engage business line and senior management to identify operational risk vulnerabilities and assess ways an operational risk event may unfold. The estimation approaches should also be subject to an effective independent review and challenge process.

3. Use of Data

The firm’s operational loss projection approaches should make appropriate use of relevant reference data, including both internal and external data, evaluate all measurable linkages to overall scenario conditions, and include all
potential sources of material operational risk losses across the firm. A firm’s internal loss data should serve as both inputs to the firm’s operational loss estimation approaches projections and a benchmark for operational loss estimates in various scenarios. A firm should have sound and comprehensive internal data-collection processes that capture key operational elements. The firm should include all relevant operational loss data, including large operational loss events such as legal settlements and tax and compliance penalties. If a firm’s internal data lack sufficient operational loss history or granularity, the firm should use relevant external data to supplement its internal data.
The Federal Reserve is issuing this guidance to explain its supervisory expectations for capital planning at large and noncomplex bank holding companies and intermediate holding companies of foreign banking organizations, consistent with the broad supervisory expectations set forth in SR-12-17/CA-12-14, “Consolidated Supervision Framework for Large Financial Institutions.” Capital is central to a firm’s ability to absorb unexpected losses and continue to lend to credit-worthy businesses and consumers. Therefore, a firm’s processes for managing and allocating its capital resources are critical to its financial strength and resiliency, and also to the stability and effective functioning of the U.S. financial system. The following guidance provides the Federal Reserve’s core capital planning expectations for large and noncomplex firms, building upon the capital planning requirements in the Federal Reserve’s capital plan rule and stress test rules.1,2

The guidance outlines capital planning expectations for
1. Governance
2. Risk management
3. Internal controls
4. Capital policy
5. Scenario design, and
6. Projection methodologies.

Further, the guidance includes several appendices that detail supervisory expectations on a firm’s capital planning process. This guidance largely consolidates the Federal Reserve’s existing capital planning guidance, including:

- Capital Planning at Large Bank Holding Companies: Supervisory Expectations and Range

1. The term “capital planning process,” as used herein, which aligns with terminology in SR-12-17/CA-12-14, is equivalent to the term “capital adequacy process” used in other Federal Reserve documents.
2. For the capital plan rule, refer to section 225.8 of Regulation Y (12 C.F.R. 225.8). Regulation Q (12 C.F.R. 217) establishes minimum capital requirements and overall capital adequacy standards for Federal Reserve-regulated institutions. Regulation Y (12 C.F.R. 252) establishes capital stress testing requirements for bank holding companies with total consolidated assets of $50 billion or more, including requirements to participate in the Federal Reserve’s annual supervisory stress test and conduct their own internal capital stress tests.
3. With the issuance of this letter, SR-99-18, “Assessing Capital Adequacy in Relation to Risk at Large Banking Organizations and Others with Complex Risk Profiles,” is superseded. In addition, SR-09-4, “Applying Supervisory Guidance and Regulations on the Payment of Dividends, Stock Repurchases, and Stock Repurchases at Bank Holding Companies,” is superseded with respect to firms subject to this guidance.
7. Note that these expectations build upon the capital planning requirements set forth in the Board’s capital plan rule and stress test rules (12 C.F.R. 225.8; 12 C.F.R. 252, subparts E and F). Other relevant rules pertaining to the Board’s regulatory regime for capital planning and positions are described above in Section II, “Regulatory Requirements for Capital Positions and Planning.” The Federal Reserve may not conduct or sponsor, and an organization (or a person) is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for this guidance are OMB No. 7100-0341 and OMB No. 7100-0342.
II. Regulatory Requirements for Capital Positions and Planning

Sound capital planning for any firm begins with adherence to all applicable rules and regulations relating to capital adequacy. Three Federal Reserve regulations form the basis of the regulatory framework for capital positions and capital planning:

1. Regulation Q (12 C.F.R. 217), Capital Adequacy Requirements for Board-regulated Institutions;
2. Regulation YY (12 C.F.R. 252), Enhanced Prudential Standards; and
3. Section 225.8 of Regulation Y (12 C.F.R. 225.8, also known as the capital plan rule).

Regulation Q establishes minimum capital requirements and overall capital adequacy standards for Federal Reserve-regulated institutions. Among other things, Regulation YY establishes capital stress testing requirements for bank holding companies with total consolidated assets of $50 billion or more, including requirements to participate in the Federal Reserve’s annual supervisory stress test and conduct their own internal

9. Total consolidated assets equals the amount of total assets reported on the firm’s Consolidated Financial Statements for Holding Companies (FR Y-9C), measured as an average over the preceding four quarters. If a firm has not filed the FR Y-9C for each of the four most recent consecutive quarters, a firm’s total consolidated assets are measured as the average of its total consolidated assets, as reported on the FR Y-9C, for the most recent quarter or consecutive quarters, as applicable. Consolidated total on-balance sheet foreign exposure equals total cross-border claims less claims with head office or guarantor located in another country plus redistributed guaranteed amounts to the country of head office or guarantor plus local country claims on local residents plus revaluation gains on foreign exchange and derivative products, calculated as of the most recent year-end in accordance with the Federal Financial Institutions Examination Council (FFIEC) 009 Country Exposure Report.

10. This guidance does not apply to nonbank financial companies designated by the Financial Stability Oversight Council for supervision by the Board of Governors.
capital stress tests. The capital plan rule establishes general capital planning requirements for a bank holding company with total consolidated assets of $50 billion or more and requires a bank holding company to develop an annual capital plan that is approved by its board of directors.

This guidance provides the Federal Reserve’s core capital planning expectations for firms subject to this guidance, building upon the capital planning requirements in the Federal Reserve’s capital plan rule and stress test rules.11

III. Capital Planning Expectations

Capital is central to a firm’s ability to absorb unexpected losses and continue to lend to creditworthy businesses and consumers. A firm’s capital planning processes are critical to its financial strength and resiliency.

SR-12-17/CA-12-14, “Consolidated Supervision Framework for Large Financial Institutions,” outlines core expectations for sound capital planning for bank holding companies with total consolidated assets of $50 billion or more. This capital planning and positions guidance provides additional details around the Federal Reserve’s core capital planning expectations for Large and Noncomplex Firms, building on the capital planning requirements included in the capital plan rule and the Board’s stress test rules.12 A firm should maintain a sound capital planning process on an ongoing basis, including in between submissions of its annual capital plan.13

A. Governance

The Federal Reserve expects a firm to have sound governance over its capital planning process. In general, senior management should establish the capital planning process and the board of directors should review and periodically approve that process.

1. Board of Directors

A firm’s board of directors is ultimately responsible and accountable for the firm’s capital-related decisions and for capital planning. The firm’s capital planning should be consistent with the strategy and risk appetite set by the board and with the firm’s risk levels, including how risks at the firm may emerge and evolve under stress. The board must annually review and approve the firm’s capital plan.14

The board should direct senior management to provide a briefing on their assessment of the firm’s capital adequacy at least quarterly, and whenever economic, financial, or firm-specific conditions warrant a more frequent update. The briefing should describe whether current capital levels and planned capital distributions remain appropriate and consistent with capital goals (see Section III.D, “Capital Policy”). In their briefing, senior management should also highlight for the board any problem areas related to capital planning identified by senior management, internal audit, or supervisors.

The board should hold senior management accountable for providing sufficient information on the firm’s material risks and exposures to inform board decisions on capital adequacy and actions, including capital distributions. Information provided to the board should be clear, accurate, and timely. The board should direct senior management to provide this information at least quarterly and whenever economic, financial, or firm-specific conditions warrant a more frequent update. The information presented to the board should include consideration of a number of factors, such as

- macro-economic conditions and relevant market events;
- current capital levels relative to budgets and forecasts;
- post-stress capital goals and targeted real time capital levels (see section III.D, “Capital Policy”);
- enterprise-wide and line-of-business performance;
- expectations from stakeholders (including shareholders, regulators, investors, lenders, counterparties, and rating agencies);
- potential sources of stress to the firm’s operating performance; and

11. Refer to footnote 3.
12. The capital planning process described in this guidance is broadly equivalent to an internal capital adequacy assessment process (ICAAP) under the Federal Reserve’s advanced approaches capital guidelines. The expectations articulated in this document are consistent with the U.S. federal banking agencies’ supervisory guidance relating to the ICAAP (see 73 FR 44620 (July 31, 2008)).
13. The term “capital planning process” used in this document, which aligns with terminology in SR-12-17/CA-12-14, is equivalent to the term “capital adequacy process” used in other Federal Reserve documents.
• risks that may emerge only under stressful conditions.

After receiving the information, the board should be in a position to understand the major drivers of the firm’s projections under a range of conditions, including baseline and stress scenarios.

The board should direct senior management to provide information about the firm’s estimation approaches, model overlays, and assessments of model performance (see Appendix A, “Use of Models and Other Estimation Approaches” and Appendix B, “Model Overlays”). The board should also receive information about uncertainties around projections of capital needs or limitations within the firm’s capital planning process to understand the impact of these weaknesses on the process. This information should include key assumptions and the analysis of sensitivity of a firm’s projections to changes in the assumptions (see Appendix D, “Sensitivity Analysis and Assumptions Management”). The board should incorporate uncertainties in projections and limitations in the firm’s capital planning process into its decisions on capital adequacy and capital actions. It should also review and approve mitigating steps to address capital planning process weaknesses.

The board should direct senior management to establish sound controls for the entire capital planning process. The board should approve policies related to capital planning, and review them annually. The board should also approve capital planning activities and strategies. The board of directors should maintain an accurate record of its meetings pertaining to the firm’s capital planning process.

2. Senior Management

Senior management should direct staff to implement board-approved capital policies, capital planning activities, and strategies in an effective manner. Senior management should make informed recommendations to the board regarding the firm’s capital planning and capital adequacy, including post-stress capital goals and capital distribution decisions. Senior management’s proposed capital goals and capital distributions should have analytical support and take into account the expectations of important stakeholders, including shareholders, rating agencies, counterparties, depositors, creditors, and supervisors.

Senior management should design and oversee the implementation of the firm’s capital planning process; identify and assess material risks and use appropriate firm-specific scenarios in the firm’s stress test; monitor and assess capital planning practices to identify limitations and uncertainties and develop remediation plans; understand key assumptions used throughout a firm’s capital planning process and assess the sensitivity of the firm’s projections to those assumptions (see Appendix D, “Sensitivity Analysis and Assumptions Management”); and review the capital planning process at least semi-annually.

Senior management should establish a process for independent review of the firm’s capital planning process, including the elements outlined in this guidance. The independent review process should be designed to identify the weaknesses and limitations of the capital planning process and the potential impact of those weaknesses on the process. Senior management should also develop remediation plans for any identified weaknesses affecting the reliability of capital planning results. Both the specific identified weaknesses and the remediation plans should be reported to the board of directors in a timely manner.

2. Risk Management

A firm should have a risk management infrastructure that appropriately identifies, measures, and assesses material risks and provides a strong foundation for capital planning. This risk management infrastructure should be supported by comprehensive policies and procedures, clear and well-established roles and responsibilities, and strong and independent internal controls. In addition, the risk management infrastructure should be built upon sound information technology and management information systems. The Federal Reserve’s supervisory assessment of the sufficiency of a firm’s capital planning process will depend in large part on the effectiveness of the firm’s risk management infrastructure and the strength of its process to identify unique risks under normal and stressful conditions, as well as on the strength of its overall governance and internal control processes.

BHC Supervision Manual January 2016
Page 4

15. 12 C.F.R. 225.8(e)(2).
1. Risk Identification and Assessment Process

A firm’s risk identification process should include a comprehensive assessment of risks stemming from its unique business activities and associated exposures. The assessment should include on-balance sheet assets and liabilities, off-balance sheet exposures, vulnerability of the firm’s earnings, and other major firm-specific determinants of capital adequacy under normal and stressed conditions. This assessment should also capture those risks that only materialize or become apparent under stressful conditions.

The specifics of the risk identification process will differ across firms given differences in organizational structure, business activities, and size and complexity of operations. However, the risk identification process at all firms subject to this guidance should be dynamic, inclusive, and comprehensive, and drive the firm’s capital adequacy analysis. A firm should

• evaluate material risks across the enterprise to ensure comprehensive risk capture on an ongoing basis;
• actively monitor its material risks; and
• use identified material risks to inform key aspects of the firm’s capital planning, including the development of stress scenarios, the assessment of the adequacy of post-stress capital levels, and the appropriateness of potential capital actions in light of the firm’s capital objectives.

A firm should be able to demonstrate how material risks are accounted for in its capital planning process. For risks not well captured by scenario analysis, the firm should clearly articulate how the risks are otherwise captured and addressed in the capital planning process and factored into decisions about capital needs and distributions.

2. Risk Measurement and Risk Materiality

A firm should have a sound risk measurement process that informs senior management about the size and risk characteristics of exposures and business activities under both normal and stressful operating conditions. A firm should employ risk measurement approaches that are appropriate for its size, complexity and risk profile.

Identified weaknesses, limitations, biases, and assumptions in the firm’s risk measurement processes should be assessed for their potential impact on the integrity of a firm’s capital planning process (see Appendix D, “Sensitivity Analysis and Assumptions Management”). A firm should have a process in place for determining materiality in the context of material risk identification and capital planning. This process should include a sound analysis of relevant quantitative and qualitative considerations, including, but not limited to, the firm’s risk profile, size, and complexity, and their effects on the firm’s projected regulatory capital ratios in stressed scenarios.

A firm should identify how and where its material risks are accounted for within the capital planning process. The firm should be able to specify material risks that are captured in its scenario design, the approaches used to estimate the impact on capital, and the risk drivers associated with each material risk.

C. Internal Controls

A firm should have a sound internal control framework that helps ensure that all aspects of the capital planning process are functioning as designed and result in sound assessments of the firm’s capital needs. The framework should include

• an independent internal audit function;
• independent review and validation practices; and
• integrated management information systems, effective reporting, and change control processes.

A firm’s internal control framework should support its entire capital planning process, including the sufficiency of and adherence to policies and procedures; risk identification, measurement, and management practices and systems used to produce input data; and the models, management overlays, and other methods used to generate inputs to post-stress capital estimates. Any part of the capital planning process that relies on manual procedures should receive heightened attention. The internal control framework should also assess the aggregation and reporting process used to produce reports to...

A firm should have policies and procedures that support consistent and repeatable capital planning processes. Policies and procedures should describe the capital planning process in a manner that informs internal and external stakeholders of the firm’s expectations for internal practices, documentation, and business line controls. The firm’s documentation should be sufficient to provide relevant information to those making decisions about capital actions. The documentation should also allow parties unfamiliar with a process or model to understand generally how it operates, as well as its main limitations, key assumptions, and uncertainties.

Policies and procedures should also clearly identify roles and responsibilities of staff involved in capital planning and provide accountability for those responsible for the capital planning process. A firm should also have an established process for policy exceptions. Such exceptions should be approved by the appropriate level of management based upon the gravity of the exception. Policies and procedures should reflect the firm’s current practices, and be reviewed and updated as appropriate, but at least annually.

2. Model Validation and Independent Review of Estimation Approaches

Models used in the capital planning process should be reviewed for suitability for their intended uses. A firm should give particular consideration to the validity of models used for calculating post-stress capital positions. In particular, models designed for ongoing business activities may be inappropriate for estimating losses, revenue, and expenses under stressed conditions. If a firm identifies weaknesses or uncertainties in a material model, the firm should make adjustments to model output if the findings would otherwise result in the material understatement of capital needs (see Appendix B, “Model Overlays”). If the deficiencies are critical, the firm should restrict the use of the model, apply overlays, or avoid using the model entirely.

A firm should independently validate or otherwise conduct effective challenge of models used in internal capital planning, consistent with supervisory guidance on model risk management, with priority given to more material models. The model review and validation process should include an evaluation of conceptual soundness of models and ongoing monitoring of the model performance. The firm’s validation staff should have the necessary technical competencies, sufficient stature within the organization, and appropriate independence from model developers and business areas to provide a critical and unbiased evaluation of the estimation approaches.

A firm should maintain an inventory of all estimation approaches used in the capital planning process, including models used to produce projections or estimates used by the models that generate final loss, revenue, expense, and capital projections. Material models should receive greater attention. The intensity and frequency of validation work should be a function of the importance of those models in generating estimates of post-stress capital.

Not all models can be fully validated prior to use in capital planning. However, a firm should make efforts to conduct a conceptual soundness review of its material models prior to their use in capital planning. If such a conceptual soundness review is not possible, the absence of that review should be made transparent to users of model output and the firm should determine whether the use of compensating controls (such as conservative adjustments) are warranted.

Further, a firm should treat output from material models for which there are model risk management shortcomings with caution.

---

19. The definition of a model covers quantitative approaches whose inputs are partially or wholly qualitative or based on expert judgment, provided that the output is quantitative in nature.

20. Materiality of the model is a function of both the importance of the business or portfolio assessed and the impact of the model on the firm’s overall results.
3. Management Information Systems and Change Control Processes

A firm should have internal controls that ensure the integrity of reported results and that make certain the firm is identifying, documenting, reviewing, and tracking all material changes to the capital planning process and its components. The firm should ensure that such controls exist at all levels of the capital planning process. Specific controls should ensure

- sufficiently sound management information systems to support the firm’s capital planning process;
- comprehensive reconciliation and data integrity processes for key reports;
- the accurate and complete presentation of capital planning process results, including a description of adjustments made to compensate for identified weaknesses; and
- that information provided to senior management and the board is accurate and timely.

Many of the processes used to assess capital adequacy, including models, data, and management information systems, are tightly integrated and interdependent. As a result, a firm should ensure consistent change control oversight across the entire firm, in line with existing supervisory guidance.21 A firm should establish and maintain a policy describing minimum internal control standards for managing change in capital planning process policies and procedures, model development, information technology, and data. Control standards for these areas should address risk, testing, authorization and approval, timing of implementation, and post-installation verification.

4. Internal Audit Function

Internal audit should play a key role in evaluating capital planning and the elements described in this guidance to ensure that the entire process is functioning in accordance with supervisory expectations and the firm’s policies and procedures. Internal audit should review the manner in which deficiencies are identified, tracked, and remediated. Furthermore, internal audit should ensure appropriate independent review and challenge is occurring at all key levels within the capital planning process.

As discussed further in Appendix E, “Role of the Internal Audit Function in the Capital Planning Process,” internal audit staff should have the appropriate competence and influence to identify and escalate key issues. All deficiencies, limitations, weaknesses and uncertainties identified by the internal audit function that relate to the firm’s capital planning process should be reported to senior management, and material deficiencies should be reported to the board of directors (or the audit committee of the board) in a timely manner.22

D. Capital Policy

A capital policy is a firm’s written assessment of the principles and guidelines used for capital planning, issuance, usage, and distributions.23 This includes internal post-stress capital goals (as discussed in more detail below and in Appendix F, “Estimating Impact on Capital Positions”) and real-time targeted capital levels; guidelines for dividend payments and stock repurchases; strategies for addressing potential capital shortfalls; and internal governance responsibilities and procedures for the capital policy. The capital policy must be approved by the firm’s board of directors or a designated committee of the board.24

The capital policy should be reevaluated at least annually and revised as necessary to address changes to the firm’s business strategy, risk appetite, organizational structure, governance structure, post-stress capital goals, real-time targeted capital levels, regulatory environment, and other factors potentially affecting the firm’s capital adequacy.

A capital policy should describe the firm’s capital adequacy decision-making process, including the decision-making process for common stock dividend payments or stock repurchases.25 The policy should incorporate action-

22. For additional information on supervisory expectations for internal audit see SR-13-1, “Supplemental Policy Statement on the Internal Audit Function and Its Outsourcing.”

23. 12 C.F.R. 225.8(d)(7).

25. Consistent with the Board’s November 14, 1985, Policy Statement on the Payment of Cash Dividends, the principles of which are incorporated into this guidance, firms should have comprehensive policies on dividend payments that clearly articulate the firm’s objectives and approaches for maintaining a strong capital position and achieving the objectives of the policy statement. See Bank Holding Company Supervision Manual, section 2020.5.1.1. Intercompany Trans-
able protocols, including governance and escalation, in the event a post-stress capital goal, real-time targeted capital level, or other early warning metric is breached.

**Post-Stress Capital Goals**

A firm should establish post-stress capital goals that are aligned with its risk appetite and risk profile, its ability to act as a financial intermediary in times of stress, and the expectations of internal and external stakeholders. Post-stress capital goals should be calibrated based on the firm’s own internal analysis, independent of regulatory capital requirements, of the minimum level of post-stress capital the firm has deemed necessary to remain a going concern over the planning horizon. A firm should also determine targets for real-time capital ratios and capital levels that ensure that capital ratios and levels would not fall below the firm’s internal post-stress capital goals (including regulatory minimums) under stressful conditions at any point over the planning horizon. For more details, see Appendix F, “Capital Policy.”

**E. Incorporating Stressful Conditions and Events**

As part of its capital planning process, a firm should incorporate appropriately stressful conditions and events that could adversely affect the firm’s capital adequacy into its capital planning. As part of its capital plan, a firm must use at least one scenario that stresses the specific vulnerabilities of the firm’s activities and associated risks, including those related to the company’s capital adequacy and financial condition.

1. **Scenario design**

A firm should either develop a complete internal scenario or adjust the Federal Reserve’s supervisory scenarios for the specific vulnerabilities of the firm’s risk profile and operations, as needed, to appropriately capture the firm’s risks (see Appendix G, “Scenario Design”).

2. **Scenario narrative**

A firm’s stress scenario should be supported by a brief narrative describing how the scenario addresses the firm’s particular material risks and vulnerabilities, and how the paths of the scenario variables relate to each other.

**F. Estimating Impact on Capital Positions**

A firm should employ estimation approaches that allow it to project the impact on capital positions of various types of stressful conditions and events. The firm’s stress testing practices should capture the potential increase in losses or decrease in pre-provision net revenue (PPNR) that could result from the firm’s risks, exposures, and activities under stressful scenarios. A firm should estimate losses, revenues, expenses, and capital using a sound method that relates macroeconomic and other risk drivers to its estimates. The firm should be able to identify the manner in which key variables, factors, and events in a scenario affect losses, revenue, expenses, and capital over the planning horizon. The firm may use simple approaches for their non-material portfolios or business lines, such as application of loss or revenue rates during the prior stress periods or other conservative assumptions.

1. **Loss estimation**

A firm should provide support for the assumed relationship between risk drivers and losses. A firm is expected to estimate losses by type of business activity.

a. **Credit risk losses on loans and securities**

A firm should develop sound methods to estimate credit losses under stress that take into account the type and size of portfolios, risk characteristics, and data availability. A firm should understand the key characteristics of its loss estimation approach. In addition, a firm’s reserves for each quarter of the planning horizon, including the last quarter, should be sufficient to cover estimated loan losses consistent with generally accepted accounting standards.

A firm should test credit-sensitive securities for potential other-than-temporary impairment (OTTI) regardless of current impairment status. The threshold for determining OTTI for structured products should be based on cash-flow...
analysis and credit analysis of underlying obligors.

b. Operational-risk losses

A firm should maintain a sound process for estimating operational risk losses in its capital planning process. Operational losses can arise from various sources, including inadequate or failed internal processes, people, and systems, or from external events (see Appendix I, “Operational Loss Projections”).

2. PPNR

In projecting PPNR, a firm should take into account not only its current positions, but also how its activities, business strategy, and revenue drivers may evolve over time under the varying circumstances and operating environments. The firm should ensure that the various PPNR components, including net interest income, non-interest income and non-interest expense, and other key items projected by the firm such as balance sheet positions, RWA, and losses, are projected in a manner that is internally consistent.

The ability to effectively project net interest income is dependent upon the firm’s ability to identify and aggregate current positions and their attributes; project future changes in accruing balances due to a variety of factors; and appropriately translate the impact of these factors and relevant interest rates into net interest income based on assumed conditions. Accordingly, a firm’s current portfolio of interest-bearing assets and liabilities should serve as the foundation for its forward-looking estimates of net interest income.

Non-interest income is derived from a diverse set of sources, including fees and certain realized gains and losses. Non-interest income generally is more susceptible to rapid changes than net interest income, especially if certain market measures move sharply. A firm’s projections should incorporate material factors that could affect the generation of non-interest income under stress, including the firm’s business strategy, the competitive landscape, and changing regulations.

Non-interest expenses include both expenses that are likely to vary with certain stressful conditions and those that are not. Projections of expenses that are closely linked to revenues or balances should vary with projected changes in revenue or balance sheet levels.

3. Aggregating Estimation Results

A firm should have well-documented processes for projecting the size and composition of on- and off-balance sheet positions and RWAs over the planning horizon that feed in to the wider capital planning process (see Appendix H, “Risk-weighted Asset (RWA) Projections”).

A firm should have a consistently executed process for aggregating enterprise-wide stress test projections of losses, revenues, and expenses, including estimating on- and off-balance sheet exposures, and RWAs, and for calculating post-stress capital positions and ratios. The aggregation system should be able to bring together data and information across business lines, portfolios, and risk types and should include the data systems and sources, data reconciliation points, data quality checks, and appropriate internal control points to ensure accurate and consistent projection of financial data within enterprise-wide scenario analysis. Internal processes for aggregating projections from all relevant systems and regulatory templates should be identified and documented. In addition, the beginning points for projections and scenario variables should align with the end of the historical reference period.

Appendix A: Use of Models and Other Estimation Approaches

Projections of losses and PPNR under various scenarios are key components of enterprise-wide stress testing and capital planning. The firm should ensure that its material projection approaches, including any specific processes or methodologies employed, are well supported, transparent, and repeatable over time.

A firm may use either quantitative methods or qualitative approaches for generating projections. A firm is not expected to employ a sophisticated modeled approach, particularly if the firm can demonstrate that a simpler approach, combined with well-supported expert judgment, produces credible and transparent output. A firm can apply simple assumptions to generate losses or PPNR for its non-material portfolios or business lines.

A firm should adhere to supervisory guidance on model risk management (SR-11-7) when using models, and should have sound internal controls around both quantitative and qualitative approaches.
1. Quantitative Approaches

If a firm decides to employ quantitative approaches, it is not expected to use any specific quantitative estimation method. Any quantitative approach should be appropriate for the type and materiality of the portfolio or activity for which it is used and the granularity and length of available data. The firm should also ensure that the quantitative approach selected generates credible estimates that are consistent with assumed scenario conditions. A firm should separately estimate losses and PPNR for portfolios or business lines that are either sensitive to different risk drivers or sensitive to risk drivers in a markedly different way, particularly during periods of stress.

a. Use of Data

A firm may use either internal or external data to estimate losses and PPNR as part of its enterprise-wide stress testing and capital planning practices. If a firm uses external data to estimate its losses or PPNR, the firm should ensure that the external data reasonably approximate underlying risk characteristics of the firm’s portfolios or business lines. Further, the firm should make adjustments to estimation methods or outputs, as appropriate, to account for identified differences in risk characteristics and performance reflected in internal and external data. If internal data are not available, a firm should strive to collect internal data over time to augment its projections.

For material portfolios and business lines, a firm should generally include all available data in its analysis, unless the firm no longer engages in a line of business or its activities have changed such that the firm is no longer exposed to a particular risk. The firm should not selectively exclude data for material portfolios and business lines based on the changing nature of the ongoing business or activity without strong empirical support. For example, excluding certain loans only on the basis that they were underwritten to standards that no longer apply or on the basis that the loans were acquired by the firm is not sound practice.

2. Assessing Model Performance

A firm should use measures to assess model performance that are appropriate for the type of model being used. The firm should outline how each performance measure is evaluated and used. A firm should also assess the sensitivity of material model estimates to key assumptions (see Appendix D, “Sensitivity Analysis and Assumptions Management”).

For models used for material portfolios and business lines, a firm should provide supporting information about the models to users of their output, including descriptions of known measurement problems, simplifying assumptions, model limitations, or other ways in which the model exhibits weaknesses in capturing the relationships being modeled. Providing such qualitative information is critical when certain quantitative criteria or tests measuring model performance are lacking.

3. Qualitative Approaches

A firm may use a qualitative approach to project losses and PPNR. When using a qualitative approach for material portfolios and business lines, the firm should substantiate assumptions and estimates using analysis of current and past risk drivers and performance, internal risk identification, forward-looking risk assessments, external analysis or other available information. The firm should conduct an initial and ongoing assessment of the performance and viability of the qualitative approach. The processes used in qualitative projection approaches should be transparent and repeatable. The firm should also clearly document material qualitative approaches and key assumptions used.

Qualitative approaches should be subject to independent review, although the review may differ from the review of quantitative approaches or models. The level of independent review should be commensurate with the

27. Firms are required to collect and report a substantial amount of risk information to the Federal Reserve on FR Y-14 schedules. These data may help to support the firms’ enterprise-wide stress test. See Capital Assessments and Stress Testing information collection, Reporting Forms FR Y-14A, Q, and M.

This process should be outlined in the firm’s documentation. Key elements include:

- Materiality of the portfolio or business line for which the qualitative approach is used;
- Impact of the approach’s output on the overall capital results; and
- Complexity of the approach.

Firm staff conducting the independent review of model overlays should not be involved in developing, implementing or using the approach. However, this staff can be different than the staff that conducts validation of quantitative approaches or models.

Appendix B: Model Overlays

A firm may need to rely on overrides or adjustments to model output (model overlay) to compensate for model, data, or other known limitations. If well-supported, use of a model overlay can represent a sound practice.

A model overlay may be appropriate to address cases of identified weaknesses or limitations in the firm’s models that cannot be otherwise addressed, or for select portfolios that have unique risks that are not well captured by the model used for those exposures and activities. In contrast, a model overlay that functions as a general “catch all” buffer on top of targeted capital levels to account for model weaknesses generally would not represent sound practice.

As part of its overall documentation of methodologies used in stress testing, a firm should document its use of model overlays.

1. Process for Applying Overlays

A firm should establish a consistent firm-wide process for applying model overlays and for controls around model overlays. The process can vary by model type and portfolio, but should contain some key elements, as described below. This process should be outlined in the firm’s policies and procedures and include a specific exception process for the use of overlays that do not follow the firm’s standards. As part of model development, implementation and use, overlays for material portfolios and business lines should be well documented, supported and communicated to senior management. Model overlays should be applied in an appropriate, systematic, and transparent manner. Model results should also be reported to senior management with and without overlay adjustments.

Model overlays (including those based solely on expert or management judgment) should be subject to validation or some other type of effective challenge. Consistent with the materiality principle in SR-11-7, the intensity of model risk management for overlays should be a function of the materiality of the model and overlay. A firm should make efforts to conduct effective challenge of its material overlays prior to their use in capital planning. If such validation or effective challenge is not possible, those instances should be made transparent to users of the model and overlay.

Validation or other type of effective challenge of model overlays may differ from quantitative model validation. Staff responsible for effective challenge should not also be setting the overlay itself or providing significant input to the level or type of overlay. For example, a committee that develops an overlay should not also be responsible for the effective challenge of the overlay. In addition, staff engaging in the effective challenge of model overlays should meet supervisory expectations relating to incentives, competence, and influence (as outlined in SR-11-7).

2. Governance of Overlays

Overlays and adjustments used by a firm should be reviewed and approved at a level within the organization commensurate with the materiality of that overlay or adjustment to overall pro forma results. In general, the purpose and impact of material overlays should be communicated to senior management in a manner that facilitates an understanding of the issues by the firm’s senior management. Material overlays to the model—either in isolation or in combination with other overlays—must be well documented, supported and communicated to senior management. Firms should follow expectations set forth in SR-11-7, “Supervisory Guidance on Model Risk Management,” relating to overlays.

Expectations for the use of judgment within model development is discussed in Appendix A, “Use of Models and Other Estimation Approaches.”

3. Firms may choose to apply overall capital buffers as an additional conservative measure, beyond overlays applied at the model level. Overall capital buffers should be subject to the same governance processes applicable to model overlays, as described in section 2 of this appendix. However, supervisory expectations relating to incentives, competence, and influence to challenge the model and its results.

32. The term “effective challenge” means critical review by objective, informed parties who have the proper incentives, competence, and influence to challenge the model and its results.
combination—should receive a heightened level of support and scrutiny, up to and including review by the firm’s board of directors (or a designated committee), in instances where the impact on pro forma results is material.

Appendix C: Use of Benchmark Models in the Capital Planning Process

As noted in Appendix A, “Use of Models and Other Estimation Approaches,” a firm should use a variety of methods to assess performance of material models and gain comfort with material model estimates. However, a firm is not expected to use benchmark models in its capital planning process.

Appendix D: Sensitivity Analysis and Assumptions Management

A firm should understand the sensitivity of its stress testing estimates used in capital planning to the various inputs and assumptions. In addition, sensitivity analysis should be used to test the robustness of material quantitative approaches and models and enhance reporting to the firm’s senior management, board of directors, and supervisors. A firm should ensure that it identifies, documents, and manages the use of all key assumptions used in capital planning.

1. Sensitivity Analysis

Understanding and documenting a range of potential outcomes provides insight into the inherent uncertainty and imprecision around pro forma results. A firm should assess the sensitivity of its estimates of capital ratios, losses, revenues, and RWAs to key assumptions and uncertainty across the entire firm’s projections under stress. Through this assessment, a firm should calculate a range of potential estimates based on changes to assumptions and inputs.

A firm should also evaluate the sensitivity of material models to key assumptions to evaluate model performance, assess the appropriateness of assumptions, and understand uncertainty associated with model output.

Sensitivity analysis for capital planning models should be applied in a manner consistent with the expectations outlined in the Federal Reserve’s supervisory guidance on model risk management (refer to SR-11-7). Sensitivity analysis should be conducted during model development and during model validation to provide information about how models respond to changes in key inputs and assumptions, and how those models perform in stressful conditions. In addition, sensitivity analysis should be applied to understand the range of possible results from material vendor-provided models and vendor-provided scenario forecasts that have opaque or proprietary elements. Sensitivity analysis should be used to provide information to help users of model output interpret results, but does not have to result in changes to models or model outputs. Changes made based on sensitivity analysis should be clearly documented and justified.

A firm should ensure that the key sensitivities are presented to senior management and the board in advance of decision-making around the firm’s capital plan and capital actions. Sensitivity analysis should also be used to inform senior management, and, as appropriate, the board of directors about the potential uncertainty associated with models employed of the firm’s projections under stress.

2. Assumptions Management

A firm should clearly document assumptions when estimating losses, PPNR, and balance sheet, and RWA components. Documentation should include the rationale and empirical support for assumptions and specifically address how those assumptions are consistent with and appropriate under the firm’s scenario conditions.

A firm’s rationale for assumptions used in capital planning should be consistent with the different effects of scenario conditions, shifts in portfolio mix, and growth or decline in balances projected over the planning horizon. For example, the firm should scrutinize and support any assumptions about sizeable loan growth during a severe economic downturn.

A firm should generally use conservative assumptions, particularly in areas of high uncertainty. The firm should provide greater support for assumptions that appear optimistic or otherwise appear to benefit the firm (such as loss reduction or revenue enhancement). A firm should not assume that senior management will be able to realize favorable strategic actions that cannot be reasonably assured in stress scenarios given the high level of uncertainty around market conditions. Further, a firm should not assume that it would have the perfect foresight that would
allow it, for example, to make significant expense reductions in the first quarter of the forecast horizon in anticipation of the forthcoming economic deterioration described in the scenario.

A firm should confirm that key assumptions used in material vendor or other third-party products are transparent and have sufficient support before using the products in stress testing. The firm should limit use of material vendor products whose assumptions are not fully transparent or supported or use those products only in conjunction with another approach or compensating controls (e.g., overlays).

Appendix E: Role of the Internal Audit Function in the Capital Planning Process

A firm’s internal audit function should play a key role in evaluating the adequacy of the firm’s capital planning process and in assessing whether the risk management and internal control practices supporting that process are comprehensive and effective. A firm should establish an audit program around its capital planning process that is consistent with SR-13-1, “Supplemental Policy Statement on the Internal Audit Function and its Outsourcing.”

1. Responsibilities of Audit Function

The internal audit function should identify all auditable processes related to capital planning and develop an associated audit plan. The audit function should also perform substantive testing to ascertain the effectiveness of the control framework supporting the firm’s capital planning process, communicate identified limitations and deficiencies to senior management, and communicate material limitations and deficiencies to the board of directors (or the audit committee of the board). The audit function should comprehensively cover the firm’s capital planning process.

The internal audit function should perform periodic reviews of all aspects of the internal control framework supporting the capital planning process to ensure that all individual components as well as the entire process are functioning in accordance with supervisory expectations and the firm’s policies and procedures. The internal audit function should also review the manner in which deficiencies are identified, tracked, and remediated. Furthermore, the internal audit function should ensure appropriate independent review is occurring at various levels within the capital planning process.

A firm’s internal audit staff should have the appropriate competence and stature to identify and escalate key issues when necessary. The internal audit function may also rely on an independent third party external to the firm to complete some of the substantive testing as long as the internal audit function can demonstrate proper independence of the third-party from the area being assessed and provide oversight over the execution and quality of the work.

2. Development of Audit Plan

The internal audit function should have a documented plan describing its strategy to assess the processes and controls supporting the firm’s capital planning process. When defining the annual audit universe and audit plan, the internal audit function of a firm should focus on the most significant risks relating to the capital planning process. The firm may leverage existing or regularly scheduled audits to ensure coverage of all the capital planning process components; however, the findings and conclusions of these audits should be incorporated into the overall summary of audit activities and conclusions regarding the firm’s capital planning process.

3. Briefings to Senior Management and Board

On an annual basis, the internal audit function should report to senior management and the board of directors on the capital planning process to inform recommendations and decisions on the firm’s capital plan. The report should provide an opinion of the capital planning process, a statement of the effectiveness of the controls and processes employed, a status update on previously identified issues and remediation plans, and any open issues or uncertainties related to the firm’s capital plan. Any key processes that are not comprehensively reviewed and tested, due to timing or significant changes in processes, should be clearly documented and identified as areas with potential heightened risk.

The internal audit function should track responses to its material findings and report to the board any cases in which senior management is not implementing required changes related to audit findings or is doing so with insufficient intensity.
Appendix F: Capital Policy

A firm’s capital policy should describe how the firm manages, monitors, and makes decisions regarding capital planning. The policy should include internal post-stress capital goals and real-time targeted capital levels; guidelines for dividends and stock repurchases; and strategies for addressing potential capital shortfalls.

A firm’s capital policy should describe the manner in which consolidated estimates of capital positions are presented to senior management and the board of directors. The capital policy should require staff with responsibility for developing capital estimates to clearly identify and communicate to senior management and board of directors the key assumptions affecting various components that feed into the aggregate estimate of capital positions and ratios. The capital policy should require that aggregated results be directly compared against the firm’s stated post-stress capital goals, and that those comparisons are included within the standard reporting to senior management and the board of directors.

1. Post-Stress Capital Goals

Post-stress capital goals should provide specific minimum thresholds for the level and composition of capital that the firm intends to maintain during a stress period. Post-stress capital goals should include any capital measures that are relevant to the firm.

The firm should be able to demonstrate through its own internal analysis, independently of regulatory capital requirements, that remaining at or above its internal post-stress capital goals will allow the firm to continue to operate.

The capital policy should describe how senior management and the board concluded that the firm’s post-stress capital goals are appropriate, sustainable in different conditions and environments, and consistent with its strategic objectives, business model, and capital plan. In addition, the capital policy should describe the process by which the firm establishes its post-stress capital goals, and include the supporting analysis underpinning the goals chosen by the firm.

2. Dividends and Stock Repurchases

A firm’s capital policy should describe the processes relating to common stock dividend and repurchase decisions, including the processes to determine the timing, form, and amount of all planned distributions. The capital policy should also specify the analysis and metrics that senior management and the board use to make capital distribution decisions. The analysis should include strategic considerations such as new business initiatives, potential acquisitions, and the other relevant factors.

3. Contingency Plans for Capital Shortfalls

A firm’s capital policy should include specific capital contingency actions the firm would take to remedy any current or prospective deficiencies in its capital position. The firm’s capital contingency plan should reflect strategies for identifying and addressing potential capital shortfalls and specify circumstances under which the board of directors and senior management will revisit planned capital actions or otherwise institute contingency measures. A contingency plan should include a set of thresholds for metrics or events that provide early warning signs of capital deterioration and that trigger management action or scrutiny. Capital contingency plans should include options for actions that a firm would consider taking to remedy any current or prospective deficiencies in its capital position, such as reducing or ceasing capital distributions, raising additional capital, or other noncapital actions.

33. A capital policy is a firm’s written assessment of the principles and guidelines used for capital planning, issuance, usage, and distributions. 12 C.F.R. 225.8(d)(7).

34. Capital contingency plans may include triggers for liquidity, earnings, debt and credit default swap spreads, ratings downgrades, stock performance, supervisory actions, general market stress, or other noncapital metrics.
tal, reducing risk, or employing other means to preserve existing capital. Contingency options in the firm’s capital policy should be consequential, realistic, actionable, and comprehensive.

Appendix G: Scenario Design

As part of its capital plan, a firm must use at least one scenario that stresses the specific vulnerabilities of the firm’s risk profile and operations, including those related to the company’s capital adequacy and financial condition. The firm’s stress scenario should be at least as severe as the Federal Reserve’s severely adverse supervisory scenario, measured in terms of its effect on net income and other elements that affect capital.

As noted in the core document, a firm should create its stress scenario, either by developing a complete internal scenario, or using the Federal Reserve’s supervisory scenarios, adjusted for the firm’s idiosyncratic risk profile.

The stress scenario should include stressful circumstances and events that could, on a stand-alone basis or in combination, reduce the firm’s capital levels and ratios and potentially impede the firm’s ability to operate as a going concern, and cover material risks to which the firm is exposed over the course of an annual planning cycle. A firm’s scenario should include factors that capture economy- or market-wide stresses and idiosyncratic risks that can put a strain on the firm. A firm should also take into account conditions and events that have not previously occurred, but that may pose a significant threat to the firm given its exposures, risk profile, and business strategy.

Appendix H: Risk-weighted Asset (RWA) Projections

A firm should maintain a sound process for projecting RWAs over the planning horizon. The firm’s initial and projected RWA calculations should be consistent with applicable regulatory capital requirements.

Starting balances for both on- and off-balance sheet exposures and applicable risk weights form the foundation for estimates of post-stress capital ratios. Therefore, firms should verify carefully the accuracy of these starting balances. Moreover, deficiencies in starting RWA calculations are generally compounded in RWA projections over the planning horizon. A firm should ensure that it has sound controls around its RWA calculation and regulatory reporting processes as part of the firm’s broader data governance program.

A firm should ensure that RWA projections are consistent with a given scenario and incorporate the impact of projected changes in exposure amounts and risk characteristics of on- and off-balance sheet exposures under the scenario. A firm should demonstrate that assumptions associated with RWA projections are clearly conditioned on a given scenario and are consistent with stated internal and external business strategies. For example, the firm should demonstrate how projected credit RWAs over the planning horizon are related to projected loan growth under the scenario. A firm should provide documented evidence for the appropriateness of key assumptions used to project RWAs.

Appendix I: Operational Loss Projections

A firm faces a wide range of operational risk in conducting its business operations. Operational losses can arise from various sources, including inadequate or failed internal processes, people, and systems, or from external events, and can differ in frequency and severity. For example, some operational loss events, such as credit card fraud, are often more predictable as they occur at high frequency, but generally have low loss severity. The outcome of other events, such as major litigation, are less certain and can result in outsized losses.

1. Risk Identification Process

A firm should maintain a sound process for estimating operational risk losses in its capital planning process, taking into account the differences in loss characteristics of different operational loss event types. A firm’s risk identifica-

---

35. 12 C.F.R. 225.8(e)(2). In addition, a firm is required to report to the Federal Reserve its projections under a baseline scenario, which captures the firm’s view of the likely operating environment over the planning horizon. A firm may use the Board’s baseline scenario for its own baseline scenario if the firm can demonstrate that the Board’s baseline scenario is appropriate for the firm’s own risks, activities, and outlook; however, a firm cannot use the Board’s severely adverse scenario for its own stress scenario.

36. For guidance on the severity of the scenarios, a firm should review the Board’s “Policy Statement on the Scenario Design Framework for Stress Testing,” which sets forth the Board’s approach to designing the severely adverse scenario. See 12 C.F.R. 252, appendix A.
tion process should include the evaluation of the type of operational risk loss events to which the firm is exposed and the sensitivity of those events to internal and external operating environments. The firm-specific scenario submitted in a firm’s capital plan should capture the firm’s material operational risks.

2. Approaches to Operational Loss Estimation

A firm can use a variety of estimation approaches to project operational losses for its enterprise-wide stress testing program, but should not rely on unstable or unintuitive correlations to project operational losses. A firm should also consider the use of scenario analysis to evaluate the effect of material operational risk events, especially those which are less certain or can result in outsized losses.

3. Use of Data

The firm’s operational loss projection approaches should make appropriate use of relevant reference data. The firm should supplement its internal data with relevant external data if the internal data lacks sufficient operational loss history or granularity.
WHAT’S NEW IN THIS REVISED SECTION

This section is being revised to include the March 1, 2016, “Interagency Guidance on Funds Transfer Pricing Related to Funding Contingency Risks.” The guidance was issued to address weaknesses observed in large financial institutions’ funds transfer pricing (FTP) practices related to funding risk (including interest rate and liquidity components) and contingent liquidity risk. The interagency guidance builds on the principles of sound liquidity risk management that are described below. FTP is an important tool for managing a firm’s balance sheet structure and measuring risk-adjusted profitability. By allocating funding and contingent liquidity risks to business lines, products, and activities within a firm, FTP influences the volume and terms of new business and ongoing portfolio composition. If done effectively, FTP promotes more resilient, sustainable business models. (Refer to SR-16-03.)

The March 17, 2010, interagency policy statement on “Funding and Liquidity Risk Management” targets funding and risk-management principles for insured depository institutions, including state member banks. The basic principles presented in this policy statement also apply to bank holding companies (BHCs). The Federal Reserve expects supervised financial institutions and BHCs to manage liquidity risk using processes and systems that are commensurate with their complexity, risk profile, and scope of operations. Liquidity risk-management processes and plans should be well documented and available for supervisory review. (See SR-10-6 and its attachment.) BHCs are expected to manage and control aggregate risk exposures on a consolidated basis, while recognizing legal distinctions and possible obstacles to cash movements among subsidiaries. Appropriate liquidity risk management is especially important for BHCs since liquidity difficulties can easily spread to both depository and non-depository subsidiaries, particularly in cases of similarly named companies where customers may not always understand the legal distinctions between the holding company and subsidiaries. For this reason, BHCs should ensure that liquidity is sufficient at all levels of the organization to fully accommodate funding needs during periods of stress.

Liquidity risk-management processes and funding programs should take into full account the institution’s lending, investment, and other activities and should ensure that adequate liquidity is maintained at the parent holding company and each of its subsidiaries. These processes and programs should fully incorporate real and potential constraints, including legal and regulatory restrictions, on the transfer of funds among subsidiaries and between subsidiaries and the parent holding company. BHC liquidity should be maintained at levels sufficient to fund holding company and affiliate operations for an extended period of time in a stressed environment when access to normal funding sources are disrupted, without having a negative impact on insured depository institution subsidiaries.

Material nonbank subsidiaries, such as broker-dealers, are expected to have liquidity-management processes and funding programs that reflect the principles outlined in the interagency policy statement guidance below (section 4066.0.1) and are consistent with the subsidiaries’ complexity, risk profile, and scope of operations. A nonbank subsidiary that directly accesses market sources of funding and/or manages specific funding programs should pay particular attention to

- maintaining sufficient liquidity, cash flow, and capital strength to service its debt obligations and cover fixed charges;
- assessing the potential that funding strategies could undermine public confidence in the liquidity or stability of subsidiary depository institutions; and
- ensuring the adequacy of policies and practices that address the stability of funding and integrity of the institution’s liquidity risk profile as evidenced by funding mismatches and the degree of dependence on potentially volatile sources of short-term funding.

For guidance on liquidity risk-measurement techniques, see section 4020.1, Appendix 1, of the Commercial Bank Examination Manual. For the supervisory plans (areas of focus) for BHCs that are designed to help ensure that the funding and liquidity practices of the parent company and its nonbank subsidiaries do not have an adverse impact on the organization’s depository institution subsidiaries, see SR-08-8 and section 1050.1.3.3.2 for large complex banking organizations. For the similar supervisory plans for regional banking organizations, see SR-08-9 and

BHC Supervision Manual

section 1050.2.3.3.2. Both manual sections are titled “Parent Company and Nonbank Funding and Liquidity.”

4066.0.1 APPENDIX A—INTERAGENCY POLICY STATEMENT ON FUNDING AND LIQUIDITY RISK MANAGEMENT

The Board of Governors of the Federal Reserve System (FRB) issued this guidance to provide consistent interagency expectations on sound practices for managing funding and liquidity risk. The guidance summarizes the principles of sound liquidity risk management that the agencies have issued in the past and, where appropriate, harmonizes these principles with the international statement recently issued by the Basel Committee on Banking Supervision titled “Principles for Sound Liquidity Risk Management and Supervision.”

Recent events illustrate that liquidity risk management at many financial institutions is in need of improvement. Deficiencies include insufficient holdings of liquid assets, funding risky or illiquid asset portfolios with potentially volatile short-term liabilities, and a lack of meaningful cash flow projections and liquidity contingency plans.

Liquidity and Liquidity Risk

Liquidity is a financial institution’s capacity to meet its cash and collateral obligations at a reasonable cost. Maintaining an adequate level of liquidity depends on the institution’s ability to efficiently meet both expected and unexpected cash flows and collateral needs without adversely affecting either daily operations or the financial condition of the institution.

Liquidity risk is the risk that an institution’s financial condition or overall safety and soundness is adversely affected by an inability (or perceived inability) to meet its obligations. An institution’s obligations, and the funding sources used to meet them, depend significantly on its business mix, balance-sheet structure, and the cash flow profiles of its on- and off-balance-sheet obligations. In managing their cash flows, institutions confront various situations that can give rise to increased liquidity risk. These include funding mismatches, market constraints on the ability to convert assets into cash or in accessing sources of funds (i.e., market liquidity), and contingent liquidity events. Changes in economic conditions or exposure to credit, market, operation, legal, and reputation risks also can affect an institution’s liquidity risk profile and should be considered in the assessment of liquidity and asset/liability management.

1. The policy statement in section 4066.0.1 is slightly amended to address those institutions supervised by the Federal Reserve. The interagency policy statement was also issued by the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC), and the National Credit Union Administration (NCUA) (collectively, the agencies)—and the depository institutions those agencies supervise—in conjunction with the Conference of State Bank Supervisors (CSBS). For the complete text of the interagency policy statement see 75 Fed. Reg. 13656. The various state banking supervisors may implement this policy statement through their individual supervisory process.

4. Unless otherwise indicated, this interagency guidance uses the term “depository financial institutions” or “institutions” to include banks and saving associations.
Sound Practices of Liquidity Risk Management

An institution’s liquidity management process should be sufficient to meet its daily funding needs and cover both expected and unexpected deviations from normal operations. Accordingly, institutions should have a comprehensive management process for identifying, measuring, monitoring, and controlling liquidity risk. Because of the critical importance to the viability of the institution, liquidity risk management should be fully integrated into the institution’s risk management processes. Critical elements of sound liquidity risk management include:

1. Effective corporate governance consisting of oversight by the board of directors and active involvement by management in an institution’s control of liquidity risk.
2. Appropriate strategies, policies, procedures, and limits used to manage and mitigate liquidity risk.
3. Comprehensive liquidity risk measurement and monitoring systems (including assessments of the current and prospective cash flows or sources and uses of funds) that are commensurate with the complexity and business activities of the institution.
4. Active management of intraday liquidity and collateral.
5. An appropriately diverse mix of existing and potential future funding sources.
6. Adequate levels of highly liquid marketable securities, which are free of legal, regulatory, or operational impediments, that can be used to meet liquidity needs in stressful situations.
7. Comprehensive contingency funding plans (CFPs) that sufficiently address potential adverse liquidity events and emergency cash flow requirements.
8. Internal controls and internal audit processes sufficient to determine the adequacy of the institution’s liquidity risk management process.

Supervisors will assess these critical elements in their reviews of an institution’s liquidity risk management process in relation to its size, complexity, and scope of operations.

Corporate Governance

The board of directors is ultimately responsible for the liquidity risk assumed by the institution. As a result, the board should ensure that the institution’s liquidity risk tolerance is established and communicated in such a manner that all levels of management clearly understand the institution’s approach to managing the trade-offs between liquidity risk and short-term profits. The board of directors or its delegated committee of board members should oversee the establishment and approval of liquidity management strategies, policies and procedures, and review them at least annually. In addition, the board should ensure that it:

- Understands the nature of the liquidity risks of its institution and periodically reviews information necessary to maintain this understanding.
- Establishes executive-level lines of authority and responsibility for managing the institution’s liquidity risk.
- Enforces management’s duties to identify, measure, monitor, and control liquidity risk.
- Understands and periodically reviews the institution’s CFPs for handling potential adverse liquidity events.
- Understands the liquidity risk profiles of important subsidiaries and affiliates as appropriate.

Senior management is responsible for ensuring that board-approved strategies, policies, and procedures for managing liquidity (on both a long-term and day-to-day basis) are appropriately executed within the lines of authority and responsibility designated for managing and controlling liquidity risk. This includes overseeing the development and implementation of appropriate risk measurement and reporting systems, liquid buffers (e.g., cash, unencumbered marketable securities, and market instruments), CFPs, and an adequate internal control infrastructure. Senior management is also responsible for regularly reporting to the board of directors on the liquidity risk profile of the institution.

Senior management should determine the structure, responsibilities, and controls for managing liquidity risk and for overseeing the liquidity positions of the institution. These elements should be clearly documented in liquidity risk policies and procedures. For institutions comprised of multiple entities, such elements should be fully specified and documented in policies for each material legal entity and subsidiary. Senior management should be able to monitor liquidity risks for each entity across the institution on an ongoing basis. Processes should be in place to ensure that the group’s senior management is actively monitoring and quickly responding to...
all material developments and reporting to the boards of directors as appropriate.

Institutions should clearly identify the individuals or committees responsible for implementing and making liquidity risk decisions. When an institution uses an asset/liability committee (ALCO) or other similar senior management committee, the committee should actively monitor the institution’s liquidity profile and should have sufficiently broad representation across major institutional functions that can directly or indirectly influence the institution’s liquidity risk profile (e.g., lending, investment securities, and wholesale and retail funding). Committee members should include senior managers with authority over the units responsible for executing liquidity-related transactions and other activities within the liquidity risk management process. In addition, the committee should ensure that the risk measurement system adequately identifies and quantifies risk exposure. The committee also should ensure that the reporting process communicates accurate, timely, and relevant information about the level and sources of risk exposure.

Strategies, Policies, Procedures, and Risk Tolerances

Institutions should have documented strategies for managing liquidity risk and clear policies and procedures for limiting and controlling risk exposures that appropriately reflect the institution’s risk tolerances. Strategies should identify primary sources of funding for meeting daily operating cash outflows, as well as seasonal and cyclical cash flow fluctuations. Strategies should also address alternative responses to various adverse business scenarios. Policies and procedures should provide for the formulation of plans and courses of actions for dealing with potential temporary, intermediate-term, and long-term liquidity disruptions. Policies, procedures, and limits also should address liquidity separately for individual currencies, legal entities, and business lines, when appropriate and material, and should allow for legal, regulatory, and operational limits for the transferability of liquidity as well. Senior management should coordinate the institution’s liquidity risk management with disaster, contingency, and strategic planning efforts, as well as with business line and risk management objectives, strategies, and tactics.

Policies should clearly articulate a liquidity risk tolerance that is appropriate for the business strategy of the institution, considering its complexity, business mix, liquidity risk profile, and its role in the financial system. Policies should also contain provisions for documenting and periodically reviewing assumptions used in liquidity projections. Policy guidelines should employ both quantitative targets and qualitative guidelines. For example, these measurements, limits, and guidelines may be specified in terms of the following measures and conditions, as applicable:

5. In formulating liquidity management strategies, members of complex banking groups should take into consideration their legal structures (e.g., branches versus separate legal entities and operating subsidiaries), key business lines, markets, products, and jurisdictions in which they operate.

6. Financial instruments that are illiquid, difficult to value, or marked by the presence of cash flows that are irregular, uncertain, or difficult to model.
ance on concentrations for currencies and geographical markets.

7. Contingent liability exposures such as unfunded loan commitments, lines of credit supporting asset sales or securitizations, and collateral requirements for derivatives transactions and various types of secured lending.

8. Exposures of material activities, such as securitization, derivatives, trading, transaction processing, and international activities, to broad systemic and adverse financial market events. This is most applicable to institutions with complex and sophisticated liquidity risk profiles.

9. Alternative measures and conditions that may be appropriate for certain institutions.

Policies also should specify the nature and frequency of management reporting. In normal business environments, senior managers should receive liquidity risk reports at least monthly, while the board of directors should receive liquidity risk reports at least quarterly. Depending upon the complexity of the institution’s business mix and liquidity risk profile, management reporting may need to be more frequent. Regardless of an institution’s complexity, it should have the ability to increase the frequency of reporting on short notice, if the need arises. Liquidity risk reports should impart to senior management and the board a clear understanding of the institution’s liquidity risk exposure, compliance with risk limits, consistency between management’s strategies and tactics, and consistency between these strategies and the board’s expressed risk tolerance.

Institutions should consider liquidity costs, benefits, and risks in strategic planning and budgeting processes. Significant business activities should be evaluated for both liquidity risk exposure and profitability. More complex and sophisticated institutions should incorporate liquidity costs, benefits, and risks in the internal product pricing, performance measurement, and new product approval process for all material business lines, products, and activities. Incorporating the cost of liquidity into these functions should align the risk-taking incentives of individual business lines with the liquidity risk exposure their activities create for the institution as a whole. The quantification and attribution of liquidity risks should be explicit and transparent at the line management level and should include consideration of how liquidity would be affected under stressed conditions.

Liquidity Risk Measurement, Monitoring, and Reporting

The process of measuring liquidity risk should include robust methods for comprehensively projecting cash flows arising from assets, liabilities, and off-balance-sheet items over an appropriate set of time horizons. For example, time buckets may be daily for very short timeframes or extend out to weekly, monthly, and quarterly for longer time frames. Pro forma cash flow statements are a critical tool for adequately managing liquidity risk. Cash flow projections can range from simple spreadsheets to very detailed reports depending upon the complexity and sophistication of the institution and its liquidity risk profile under alternative scenarios. Given the critical importance that assumptions play in constructing measures of liquidity risk and projections of cash flows, institutions should ensure that the assumptions used are reasonable, appropriate, and adequately documented. Institutions should periodically review and formally approve these assumptions. Institutions should focus particular attention on the assumptions used in assessing the liquidity risk of complex assets, liabilities, and off-balance-sheet positions. Assumptions applied to positions with uncertain cash flows, including the stability of retail and brokered deposits and secondary market issuances and borrowings, are especially important when they are used to evaluate the availability of alternative sources of funds under adverse contingent liquidity scenarios. Such scenarios include, but are not limited to, deterioration in the institution’s asset quality or capital adequacy.

Institutions should ensure that assets are properly valued according to relevant financial reporting and supervisory standards. An institution should fully factor into its risk management practices the consideration that valuations may deteriorate under market stress and take this into account in assessing the feasibility and impact of asset sales on its liquidity position during stress events.

Institutions should ensure that their vulnerabilities to changing liquidity needs and liquidity capacities are appropriately assessed within meaningful time horizons, including intraday, day-to-day, short-term weekly and monthly horizons, medium-term horizons of up to one year, and longer-term liquidity needs of one year or more. These assessments should include vulnerabilities to events, activities, and strate-
gies that can significantly strain the capability to generate internal cash.

**Stress Testing**

Institutions should conduct stress tests regularly for a variety of institution-specific and marketwide events across multiple time horizons. The magnitude and frequency of stress testing should be commensurate with the complexity of the financial institution and the level of its risk exposures. Stress test outcomes should be used to identify and quantify sources of potential liquidity strain and to analyze possible impacts on the institution’s cash flows, liquidity position, profitability, and solvency. Stress tests should also be used to ensure that current exposures are consistent with the financial institution’s established liquidity risk tolerance. Management’s active involvement and support is critical to the effectiveness of the stress testing process. Management should discuss the results of stress tests and take remedial or mitigating actions to limit the institution’s exposures, build up a liquidity cushion, and adjust its liquidity profile to fit its risk tolerance. The results of stress tests should also play a key role in shaping the institution’s contingency planning. As such, stress testing and contingency planning are closely intertwined.

**Collateral Position Management**

An institution should have the ability to calculate all of its collateral positions in a timely manner, including the value of assets currently pledged relative to the amount of security required and unencumbered assets available to be pledged. An institution’s level of available collateral should be monitored by legal entity, jurisdiction, and currency exposure, and systems should be capable of monitoring shifts between intraday and overnight or term collateral usage. An institution should be aware of the operational and timing requirements associated with accessing the collateral given its physical location (i.e., the custodian institution or securities settlement system with which the collateral is held). Institutions should also fully understand the potential demand on required and available collateral arising from various types of contractual contingencies during periods of both marketwide and institution-specific stress.

**Management Reporting**

Liquidity risk reports should provide aggregate information with sufficient supporting detail to enable management to assess the sensitivity of the institution to changes in market conditions, its own financial performance, and other important risk factors. The types of reports or information and their timing will vary according to the complexity of the institution’s operations and risk profile. Reportable items may include but are not limited to cash flow gaps, cash flow projections, asset and funding concentrations, critical assumptions used in cash flow projections, key early warning or risk indicators, funding availability, status of contingent funding sources, or collateral usage. Institutions should also report on the use of and availability of government support, such as lending and guarantee programs, and implications on liquidity positions, particularly since these programs are generally temporary or reserved as a source for contingent funding.

**Liquidity across Currencies, Legal Entities, and Business Lines**

A depository institution should actively monitor and control liquidity risk exposures and funding needs within and across currencies, legal entities, and business lines. Also, depository institutions should take into account operational limitations to the transferability of liquidity, and should maintain sufficient liquidity to ensure compliance during economically stressed periods with applicable legal and regulatory restrictions on the transfer of liquidity among regulated entities. The degree of centralization in managing liquidity should be appropriate for the depository institution’s business mix and liquidity risk profile. The agencies expect depository institutions to maintain adequate liquidity both at the consolidated level and at significant legal entities.

Regardless of its organizational structure, it is important that an institution actively monitor and control liquidity risks at the level of individual legal entities, and the group as a whole, incorporating processes that aggregate data across multiple systems in order to develop a groupwide view of liquidity risk exposures. It is also important that the institution identify constraints on the transfer of liquidity within the group.

---

7. Institutions subject to multiple regulatory jurisdictions should have management strategies and processes that recognize the potential limitations of liquidity transferability, as well as the need to meet the liquidity requirements of foreign jurisdictions.
Assumptions regarding the transferability of funds and collateral should be described in liquidity risk management plans.

Intraday Liquidity Position Management

Intraday liquidity monitoring is an important component of the liquidity risk management process for institutions engaged in significant payment, settlement, and clearing activities. An institution’s failure to manage intraday liquidity effectively, under normal and stressed conditions, could leave it unable to meet payment and settlement obligations in a timely manner, adversely affecting its own liquidity position and that of its counterparties. Among large, complex organizations, the interdependencies that exist among payment systems and the inability to meet certain critical payments has the potential to lead to systemic disruptions that can prevent the smooth functioning of all payment systems and money markets. Therefore, institutions with material payment, settlement and clearing activities should actively manage their intraday liquidity positions and risks to meet payment and settlement obligations on a timely basis under both normal and stressed conditions. Senior management should develop and adopt an intraday liquidity strategy that allows the institution to:

1. Monitor and measure expected daily gross liquidity inflows and outflows.
2. Manage and mobilize collateral when necessary to obtain intraday credit.
3. Identify and prioritize time-specific and other critical obligations in order to meet them when expected.
4. Settle other less critical obligations as soon as possible.
5. Control credit to customers when necessary.
6. Ensure that liquidity planners understand the amounts of collateral and liquidity needed to perform payment-system obligations when assessing the organization’s overall liquidity needs.

Diversified Funding

An institution should establish a funding strategy that provides effective diversification in the sources and tenor of funding. It should maintain an ongoing presence in its chosen funding markets and strong relationships with funds providers to promote effective diversification of funding sources. An institution should regularly gauge its capacity to raise funds quickly from each source. It should identify the main factors that affect its ability to raise funds and monitor those factors closely to ensure that estimates of fund raising capacity remain valid.

An institution should diversify available funding sources in the short-, medium-, and long-term. Diversification targets should be part of the medium- to long-term funding plans and should be aligned with the budgeting and business planning process. Funding plans should take into account correlations between sources of funds and market conditions. Funding should also be diversified across a full range of retail as well as secured and unsecured wholesale sources of funds, consistent with the institution’s sophistication and complexity. Management should also consider the funding implications of any government programs or guarantees it uses. As with wholesale funding, the potential unavailability of government programs over the intermediate- and long-term should be fully considered in the development of liquidity risk management strategies, tactics, and risk tolerances. Funding diversification should be implemented using limits addressing counterparties, secured versus unsecured market funding, instrument type, securitization vehicle, and geographic market. In general, funding concentrations should be avoided. Undue over-reliance on any one source of funding is considered an unsafe and unsound practice.

An essential component of ensuring funding diversity is maintaining market access. Market access is critical for effective liquidity risk management as it affects both the ability to raise new funds and to liquidate assets. Senior management should ensure that market access is being actively managed, monitored, and tested by the appropriate staff. Such efforts should be consistent with the institution’s liquidity risk profile and sources of funding. For example, access to the capital markets is an important consideration for most large complex institutions, whereas the availability of correspondent lines of credit and other sources of wholesale funds are critical for smaller, less complex institutions.

An institution should identify alternative sources of funding that strengthen its capacity to withstand a variety of severe institution-specific and marketwide liquidity shocks. Depending upon the nature, severity, and duration of the liquidity shock, potential sources of funding include, but are not limited to, the following.
1. Deposit growth.
2. Lengthening maturities of liabilities.
3. Issuance of debt instruments.
4. Sale of subsidiaries or lines of business.
5. Asset securitization.
6. Sale (either outright or through repurchase agreements) or pledging of liquid assets.
7. Drawing down committed facilities.

Cushion of Liquid Assets

Liquid assets are an important source of both primary (operating liquidity) and secondary (contingent liquidity) funding at many institutions. Indeed, a critical component of an institution’s ability to effectively respond to potential liquidity stress is the availability of a cushion of highly liquid assets without legal, regulatory, or operational impediments (i.e., unencumbered) that can be sold or pledged to obtain funds in a range of stress scenarios. These assets should be held as insurance against a range of liquidity stress scenarios including those that involve the loss or impairment of typically available unsecured and/or secured funding sources. The size of the cushion of such high-quality liquid assets should be supported by estimates of liquidity needs performed under an institution’s stress testing as well as aligned with the risk tolerance and risk profile of the institution. Management estimates of liquidity needs during periods of stress should incorporate both contractual and noncontractual cash flows, including the possibility of funds being withdrawn. Such estimates should also assume the inability to obtain unsecured and uninsured funding as well as the loss or impairment of access to funds secured by assets other than the safest, most liquid assets.

Management should ensure that unencumbered, highly liquid assets are readily available and are not pledged to payment systems or clearing houses. The quality of unencumbered liquid assets is important as it will ensure accessibility during the time of most need. An institution could use its holdings of high-quality securities, for example, U.S. Treasury securities, securities issued by U.S. government-sponsored agencies, excess reserves at the central bank or similar instruments, and enter into repurchase agreements in response to the most severe stress scenarios.

Contingency Funding Plan

All financial institutions, regardless of size and complexity, should have a formal CFP that clearly sets out the strategies for addressing liquidity shortfalls in emergency situations. A CFP should delineate policies to manage a range of stress environments, establish clear lines of responsibility, and articulate clear implementation and escalation procedures. It should be regularly tested and updated to ensure that it is operationally sound. For certain components of the CFP, affirmative testing (e.g., liquidation of assets) may be impractical. In these instances, institutions should be sure to test operational components of the CFP. For example, ensuring that roles and responsibilities are up-to-date and appropriate; ensuring that legal and operational documents are up-to-date and appropriate; ensuring that cash and collateral can be moved where and when needed; and ensuring that contingent liquidity lines can be drawn when needed.

Contingent liquidity events are unexpected situations or business conditions that may increase liquidity risk. The events may be institution-specific or arise from external factors and may include:

1. The institution’s inability to fund asset growth.
2. The institution’s inability to renew or replace maturing funding liabilities.
3. Customers unexpectedly exercising options to withdraw deposits or exercise off-balance-sheet commitments.
4. Changes in market value and price volatility of various asset types.
5. Changes in economic conditions, market perception, or dislocations in the financial markets.
6. Disturbances in payment and settlement systems due to operational or local disasters.

Insured institutions should be prepared for the specific contingencies that will be applicable to them if they become less than Well Capitalized pursuant to Prompt Correction Action (PCA) provisions under the Federal Deposit Insurance Corporation Improvement Act. Contingencies may include restricted rates paid for deposits, the need to seek approval from the FDIC/NCUA to accept brokered deposits, and the inability to

---

8. Financial institutions that have had their liquidity supported by temporary government programs administered by the Department of the Treasury, Federal Reserve, and/or FDIC should not base their liquidity strategies on the belief that such programs will remain in place indefinitely.
A CFP provides a documented framework for managing unexpected liquidity situations. The objective of the CFP is to ensure that the institution’s sources of liquidity are sufficient to fund normal operating requirements under contingent events. A CFP also identifies alternative contingent liquidity resources\textsuperscript{10} that can be employed under adverse liquidity circumstances. An institution’s CFP should be commensurate with its complexity, risk profile, and scope of operations. As macroeconomic and institution-specific conditions change, CFPs should be revised to reflect these changes.

Contingent liquidity events can range from high-probability/low-impact events to low-probability/high-impact events. Institutions should incorporate planning for high-probability/low-impact liquidity risks into the day-to-day management of sources and uses of funds. Institutions can generally accomplish this by assessing possible variations around expected cash flow projections and providing for adequate liquidity reserves and other means of raising funds in the normal course of business. In contrast, all financial institution CFPs will typically focus on events that, while relatively infrequent, could significantly impact the institution’s operations. A CFP should:

1. **Identify Stress Events.** Stress events are those that may have a significant impact on the institution’s liquidity given its specific balance-sheet structure, business lines, organizational structure, and other characteristics. Possible stress events may include deterioration in asset quality, changes in agency credit ratings, PCA capital categories and CAMELS ratings downgrades, widening of credit default spreads, operating losses, declining financial institution equity prices, negative press coverage, or other events that may call into question an institution’s ability to meet its obligations.

2. **Assess Levels of Severity and Timing.** The CFP should delineate the various levels of stress severity that can occur during a contingent liquidity event and identify the different stages for each type of event. The events, stages, and severity levels identified should include temporary disruptions as well as those that might be more intermediate term or longer-term. Institutions can use the different stages or levels of severity identified to design early-warning indicators, assess potential funding needs at various points in a developing crisis, and specify comprehensive action plans. The length of the scenario will be determined by the type of stress event being modeled and should encompass the duration of the event.

3. **Assess Funding Sources and Needs.** A critical element of the CFP is the quantitative projection and evaluation of expected funding needs and funding capacity during the stress event. This entails an analysis of the potential erosion in funding at alternative stages or severity levels of the stress event and the potential cash flow mismatches that may occur during the various stress levels. Management should base such analysis on realistic assessments of the behavior of funds providers during the event and incorporate alternative contingency funding sources. The analysis also should include all material on-and off-balance-sheet cash flows and their related effects. The result should be a realistic analysis of cash inflows, outflows, and funds availability at different time intervals during the potential liquidity stress event in order to measure the institution’s ability to fund operations. Common tools to assess funding mismatches include:
   a. **Liquidity gap analysis**—A cash flow report that essentially represents a base case estimate of where funding surpluses and shortfalls will occur over various future time frames.
   b. **Stress tests**—A pro forma cash flow report with the ability to estimate future funding surpluses and shortfalls under various liquidity stress scenarios and the institution’s ability to fund expected asset growth projections or sustain an orderly liquidation of assets under various stress events.

4. **Identify Potential Funding Sources.** Because liquidity pressures may spread from one funding source to another during a significant liquidity event, institutions should identify alternative sources of liquidity, and ensure ready access to contingent funding sources. In some cases, these funding sources may rarely be used in the normal course of business.

---

\textsuperscript{10} Section 38 of the FDI Act (12 USC 1831o) requires insured depository institutions that are not well capitalized to receive approval prior to engaging in certain activities. Section 38 restricts or prohibits certain activities and requires an insured depository institution to submit a capital restoration plan when it becomes undercapitalized.

\textsuperscript{11} There may be time constraints, sometimes lasting weeks, encountered in initially establishing lines with FRB and/or FHLB. As a result, financial institutions should plan to have these lines set up well in advance.
ness. Therefore, institutions should conduct advance planning and periodic testing to ensure that contingent funding sources are readily available when needed.

5. Establish Liquidity Event Management Processes. The CFP should provide for a reliable crisis management team and administrative structure, including realistic action plans used to execute the various elements of the plan for given levels of stress. Frequent communication and reporting among team members, the board of directors, and other affected managers optimize the effectiveness of a contingency plan during an adverse liquidity event by ensuring that business decisions are coordinated to minimize further disruptions to liquidity. Such events may also require the daily computation of regular liquidity risk reports and supplemental information. The CFP should provide for more frequent and more detailed reporting as the stress situation intensifies.

6. Establish a Monitoring Framework for Contingent Events. Institution management should monitor for potential liquidity stress events by using early-warning indicators and event triggers. The institution should tailor these indicators to its specific liquidity risk profile. The early recognition of potential events allows the institution to position itself into progressive states of readiness as the event evolves, while providing a framework to report or communicate within the institution and to outside parties. Early-warning signals may include, but are not limited to, negative publicity concerning an asset class owned by the institution, increased potential for deterioration in the institution’s financial condition, widening debt or credit default swap spreads, and increased concerns over the funding of off-balance-sheet items.

To mitigate the potential for reputation contagion, effective communication with counterparties, credit-rating agencies, and other stakeholders when liquidity problems arise is of vital importance. Smaller institutions that rarely interact with the media should have plans in place for how they will manage press inquiries that may arise during a liquidity event. In addition, groupwide contingency funding plans, liquidity cushions, and multiple sources of funding are mechanisms that may mitigate reputation concerns.

In addition to early-warning indicators, institutions that issue public debt, use warehouse financing, securitize assets, or engage in material over-the-counter derivative transactions typically have exposure to event triggers embedded in the legal documentation governing these transactions. Institutions that rely upon brokered deposits should also incorporate PCA-related downgrade triggers into their CFPs since a change in PCA status could have a material bearing on the availability of this funding source. Contingent event triggers should be an integral part of the liquidity risk monitoring system.

Institutions that originate and/or purchase loans for asset securitization programs pose heightened liquidity risk concerns due to the unexpected funding needs associated with an early amortization event or disruption of warehouse funding. Institutions that securitize assets should have liquidity contingency plans that address these risks.

Institutions that rely upon secured funding sources also are subject to potentially higher margin or collateral requirements that may be triggered upon the deterioration of a specific portfolio of exposures or the overall financial condition of the institution. The ability of a financially stressed institution to meet calls for additional collateral should be considered in the CFP. Potential collateral values also should be subject to stress tests since devaluations or market uncertainty could reduce the amount of contingent funding that can be obtained from pledging a given asset. Additionally, triggering events should be understood and monitored by liquidity managers.

Institutions should test various elements of the CFP to assess their reliability under times of stress. Institutions that rarely use the type of funds they identify as standby sources of liquidity in a stress situation, such as the sale or securitization of loans, securities repurchase agreements, Federal Reserve discount window borrowing, or other sources of funds, should periodically test the operational elements of these sources to ensure that they work as anticipated. However, institutions should be aware that during real stress events, prior market access testing does not guarantee that these funding sources will remain available within the same time frames and/or on the same terms.

Larger, more complex institutions can benefit by employing operational simulations to test communications, coordination, and decision making involving managers with different responsibilities, in different geographic locations, or at different operating subsidiaries. Simulations or tests run late in the day can highlight specific
problems, such as difficulty in selling assets or borrowing new funds at a time when business in the capital markets may be less active.

Internal Controls

An institution’s internal controls consist of procedures, approval processes, reconciliations, reviews, and other mechanisms designed to provide assurance that the institution manages liquidity risk consistent with board-approved policy. Appropriate internal controls should address relevant elements of the risk management process, including adherence to policies and procedures, the adequacy of risk identification, risk measurement, reporting, and compliance with applicable rules and regulations.

Management should ensure that an independent party regularly reviews and evaluates the various components of the institution’s liquidity risk management process. These reviews should assess the extent to which the institution’s liquidity risk management complies with both supervisory guidance and industry sound practices, taking into account the level of sophistication and complexity of the institution’s liquidity risk profile. Smaller, less-complex institutions may achieve independence by assigning this responsibility to the audit function or other qualified individuals independent of the risk management process. The independent review process should report key issues requiring attention, including instances of noncompliance, to the appropriate level of management for prompt corrective action consistent with approved policy.

4066.0.2 APPENDIX B—INTERAGENCY GUIDANCE ON FUNDS TRANSFER PRICING RELATED TO FUNDING AND CONTINGENT LIQUIDITY RISKS

The Board of Governors of the Federal Reserve System (FRB), the Federal Deposit Insurance Corporation (FDIC), and the Office of the Comptroller of the Currency (OCC) issued this guidance on funds transfer pricing (FTP) practices related to funding risk (including interest rate and liquidity components) and contingent liquidity risk at large financial institutions (hereafter referred to as “firms”) to address weaknesses observed in some firms’ FTP practices. The guidance builds on the principles of FTP practices incorporated in the “Interagency Policy Statement on Funding and Liquidity Risk Management,” and incorporates elements of the international statement issued by the Basel Committee on Banking Supervision titled “Principles for Sound Liquidity Risk Management and Supervision.” Refer to SR-16-03.

Background

For purposes of this guidance, FTP refers to a process performed by a firm’s central management function that allocates costs and benefits associated with funding and contingent liquidity risks (FTP costs and benefits), as measured at transaction or trade inception, to a firm’s business lines, products, and activities. While this guidance specifically addresses FTP practices related to funding and contingent liquidity risks, firms may incorporate other risks in their overall FTP frameworks.

FTP is an important tool for managing a firm’s balance sheet structure and measuring risk-adjusted profitability. By allocating funding and contingent liquidity risks to business lines, products, and activities within a firm, FTP influences the volume and terms of new business and ongoing portfolio composition. This process helps align a firm’s funding and contingent liquidity risk profile and risk appetite and complements, but does not replace, broader liquidity and interest rate risk management programs (for example, stress testing) that a firm uses to capture certain risks (for example, basis risk).

12. This includes the standards established in this interagency guidance as well as the supporting material each agency provides in its examination manuals and handbooks directed at their supervised institutions. Industry standards include those advanced by recognized industry associations and groups.

13. For purposes of this guidance, large financial institutions include: national banks, federal savings associations and state-chartered banks with consolidated assets of $250 billion or more, domestic bank and savings and loan holding companies with consolidated assets of $250 billion or more, or foreign exposure of $10 billion or more, and foreign banking organizations with combined U.S. assets of $250 billion or more.

15. The Basel Committee on Banking Supervision statement on “Principles for Sound Liquidity Risk Management and Supervision” (September 2008) is available at www.bis.org/publ/bcbs144.htm.

BHC Supervision Manual July 2016
done effectively, FTP promotes more resilient, sustainable business models. FTP is also an important tool for centralizing the management of funding and contingent liquidity risks for all exposures. Through FTP, a firm can transfer these risks to a central management function that can take advantage of natural offsets, centralized hedging activities, and a broader view of the firm.

Failure to consistently and effectively apply FTP can misalign the risk-taking incentives of individual business lines with the firm’s risk appetite, resulting in a misallocation of financial resources. This misallocation can arise in new business and ongoing portfolio composition where the business metrics do not reflect risks taken, thereby undermining the business model. Examples include entering into excessive off-balance sheet commitments and on-balance sheet asset growth because of mispriced funding and contingent liquidity risks.

The 2008 financial crisis exposed weak risk management practices for allocating liquidity costs and benefits across business lines. Several firms “acknowledged that if robust FTP practices had been in place earlier, and if the systems had charged not just for funding but for liquidity risks, they would not have carried the significant levels of illiquid assets and the significant risks that were held off-balance sheet that ultimately led to sizable losses.”

Funds Transfer Pricing Principles

A firm should have an FTP framework to support its broader risk management and governance processes that incorporates the general principles described in this section and is commensurate with its size, complexity, business activities, and overall risk profile. The framework should incorporate FTP costs and benefits into product pricing, business metrics, and new product approval for all material business lines, products, and activities to align risk-taking incentives with the firm’s risk appetite.

**Principle 1: A firm should allocate FTP costs and benefits based on funding risk and contingent liquidity risk.**

- Funding risk, measured as the cost or benefit (including liquidity and interest rate components) of raising funds to finance ongoing business operations, should be allocated based on the characteristics of the business lines, products, and activities that give rise to those costs or benefits (for example, higher costs allocated to assets that will be held over a longer time horizon and greater benefits allocated to stable sources of funding).
- Contingent liquidity risk, measured as the cost of holding standby liquidity composed of unencumbered, highly liquid assets, should be allocated to the business lines, products, and activities that pose risk of contingent funding needs during a stress event (for example, draws on credit commitments, collateral calls, deposit run-off, and increasing haircuts on secured funding).

Firm costs and benefits should be allocated based on methodologies that are set forth by a firm’s FTP framework. The methodologies should be transparent, repeatable, and sufficiently granular such that they align business decisions with the firm’s desired funding and contingent liquidity risk appetite. To the extent a firm applies FTP at an aggregated level to similar products and activities, the firm should include the aggregating criteria in the report on FTP. Additionally, the senior management group that oversees FTP should review the basis for the FTP methodologies. The attachment to this interagency guidance describes illustrative FTP methodologies that a firm may consider when implementing its FTP framework.

**Principle 2: A firm should have a consistent and transparent FTP framework for identifying and allocating FTP costs and benefits on a timely basis and at a sufficiently granular level, commensurate with the firm’s size, complexity, business activities, and overall risk profile.**

A firm should allocate FTP costs and benefits, as measured at transaction or trade inception, to the appropriate business line, product, or activity. If a firm retains any FTP costs or benefits in a centrally managed pool pursuant to its FTP framework, it should analyze the implications of

---

17. See Principle 3 for a discussion of the report on FTP.

18. The FRB, the FDIC, and the OCC will monitor evolving FTP practices in the market and may update or add to the illustrative methodologies in the interagency guidance attachment.
such decisions on business line incentives and the firm’s overall risk profile. The firm customarily would include its findings in the report on FTP.

The FTP framework should be implemented consistently across the firm to appropriately align risk-taking incentives. While it is possible to apply different FTP methodologies within a firm due to, among other things, legal entity type or specific jurisdictional circumstances, a firm should generally implement the FTP framework in a consistent manner across its corporate structure to reduce the likelihood of misaligned incentives. If there are implementation differences across the firm, management should analyze the implications of such differences on business line incentives and the firm’s overall funding and contingent liquidty risk profile. The firm customarily would include its findings in the report on FTP.

A firm should allocate, report, and update data on FTP costs and benefits at a frequency that is appropriate for the business line, product, or activity. Allocating, reporting, and updating of data should occur more frequently for trading exposures (for example, on a daily basis). Infrequent allocation, reporting, or updating of data for trading exposures (for example, based on month-end positions) may not fully capture a firm’s day-to-day funding and contingent liquidity risks. For example, a firm should monitor the age of its trading exposures, and those held longer than originally intended should be reassessed and FTP costs and benefits should be reallocated based on the modified holding period.

A firm’s FTP framework should address derivative activities commensurate with the size and complexity of those activities. The FTP framework may consider the fair value of current positions, the rights of rehypothecation for collateral received, and contingent outflows that may occur during a stress event.

To avoid a misalignment of risk-taking incentives, a firm should adjust its FTP costs and benefits as appropriate based on both market-wide and idiosyncratic conditions, such as trapped liquidity, reserve requirements, regulatory requirements, illiquid currencies, and settlement or clearing costs. These idiosyncratic conditions should be contemplated in the FTP framework, and the firm customarily would include a discussion of the implications in the report on FTP.

**Principle 3:** A firm should have a robust governance structure for FTP, including the production of a report on FTP and oversight from a senior management group and central management function.

A firm should have a senior management group that oversees FTP, which should include a broad range of stakeholders, such as representatives from the firm’s asset-liability committee (if separate from the senior management group), the treasury function, and business line and risk management functions. This group should develop the policy underlying the FTP framework, which should identify assumptions, responsibilities, procedures, and authorities for FTP. The policy should be reviewed and updated on a regular basis or when the firm’s asset-liability structure or scope of activities undergoes a material change. Further, senior management with oversight responsibility for FTP should periodically, but no less frequently than quarterly, review the report on FTP to ensure that the established FTP framework is being properly implemented.

A firm should also establish a central management function tasked with implementing the FTP framework. The central management function should have visibility over the entire firm’s on- and off-balance sheet exposures. Among its responsibilities, the central management function should regularly produce and analyze a report on FTP generated from accurate and reliable management information systems. The report on FTP should be at a sufficiently granular level to enable the senior management group and central management function to effectively monitor the FTP framework (for example, at the business line, product, or activity level, as appropriate). Among other items, all material approvals, such as those related to any exception to the FTP framework, including the reason for the exception, would customarily be documented in the report on FTP. The report on FTP may be standalone or included within a broader risk management report.

Independent risk and control functions and internal audit should provide oversight of the FTP process and assess the report on FTP, which should be reviewed as appropriate to reflect changing business and financial market conditions and to maintain the appropriate alignment of incentives. Lastly, consistent with existing supervisory guidance on model risk management, models used in FTP implementation should be independently validated and regularly reviewed to ensure that the models continue to

---

**BHC Supervision Manual**

July 2016

Page 13
perform as expected, that all assumptions remain appropriate, and that limitations are understood and appropriately mitigated.

**Principle 4:** A firm should align business incentives with risk management and strategic objectives by incorporating FTP costs and benefits into product pricing, business metrics, and new product approval.

Through its FTP framework, a firm should incorporate FTP costs and benefits into product pricing, business metrics, and new product approval for all material business lines, products, and activities (both on- and off-balance sheet). The framework, the report on FTP, and any associated management information systems should be designed to provide decision makers sufficient and timely information about FTP costs and benefits so that risk-taking incentives align with the firm’s strategic objectives.

The information may be either at the transaction level or, if the transactions have homogenous funding and contingent liquidity risk characteristics, at an aggregated level. In deciding whether to allocate FTP costs and benefits at the transaction or aggregated level, firms should consider advantages and disadvantages of both approaches when developing the FTP framework. Although transaction-level FTP allocations may add complexity and involve higher implementation and maintenance costs, such allocations may provide a more accurate measure of risk-adjusted profitability. A firm assigning FTP allocations at an aggregated level should have aggregation criteria based on funding and contingent liquidity risk characteristics that are transparent.

There should be ongoing dialogue between the business lines and the central function responsible for allocating FTP costs and benefits to ensure that funding and contingent liquidity risks are being captured and are well-understood for product pricing, business metrics, and new product approval. The business lines should understand the rationale for the FTP costs and benefits, and the central function should understand the funding and contingent liquidity risks implicated by the business lines’ transactions. Decisions by senior management to incentivize certain behaviors through FTP costs and benefits customarily would be documented and included in the report on FTP.

**Conclusion**

A firm should use the principles laid out in this guidance to develop, implement, and maintain an effective FTP framework. In doing so, a firm’s risk-taking incentives should better align with its risk management and strategic objectives. The framework should be adequately tailored to a firm’s size, complexity, business activities, and overall risk profile.

**Interagency Guidance Attachment**

**Illustrative Funds Transfer Pricing Methodologies**

**March 1, 2016**

The Funds Transfer Pricing (FTP) methodologies described below are intended for illustrative purposes only and provide examples for addressing principles set forth in the guidance. A firm’s FTP framework should be commensurate with its size, complexity, business activities, and overall risk profile. In designing its FTP framework, a firm may utilize other methodologies that are consistent with the principles set forth in the guidance. Therefore, these illustrative methodologies should not be interpreted as directives for implementing any particular FTP methodology.

**Non-Trading Exposures**

For non-trading exposures, a firm’s FTP methodology may vary based on its business activities and specific exposures. For example, certain firms may have higher concentrations of exposures that have less predictable time horizons, such as non-maturity loans and non-maturity deposits.

**Matched-Maturity Marginal Cost of Funding**

Matched-maturity marginal cost of funding is a commonly used methodology for non-trading exposures. Under this methodology, FTP costs and benefits are based on a firm’s market cost of funds across the term structure (for example, wholesale long-term debt curve adjusted based on the composition of the firm’s alternate sources of funding such as Federal Home Loan Bank advances and customer deposits). This methodology incentivizes business lines to generate stable funding (for example, core deposits) by
crediting them the benefit or premium associated with such funding. It also ensures that business lines are appropriately charged the cost of funding for the life of longer-dated assets (for example, a five-year commercial loan). Given that funding costs can change over time, the market cost of funds across the term structure should be derived from reliable and readily available data sources and be well understood by FTP users.

FTP rates should, as closely as possible, match the characteristics of the transaction or the aggregated transactions to which they are applied. In determining the appropriate point on the derived FTP curve for a transaction or pool of transactions, a firm could consider a variety of characteristics, including the holding period, cash flow, re-pricing, prepayments, and expected life of the transaction or pool. For example, for a five-year commercial loan that has a rate that resets every three months and will be held to maturity, the interest rate component of the funding risk could be based on a three-month horizon for determining the FTP cost, and the liquidity component of the funding risk could be based on a five-year horizon for determining the FTP cost. Thus, the total FTP cost for holding the five-year commercial loan would be the combination of these two components.

**Contingent Liquidity Risk**

A firm may calculate the FTP cost related to non-trading exposure contingent liquidity risk using models based on behavioral assumptions. For example, charges for contingent commitment could be based on their modeled likelihood of drawdown, considering customer drawdown history, credit quality, and other factors; whereas, credits applied to deposits could be based on volatility and modeled behavioral maturity. A firm should document and include all modeling analyses and assumptions in the report on FTP. If behavioral assumptions used in a firm’s FTP framework do not align with behavioral assumptions used in its internal stress test for similar types of non-trading exposures, the firm should document and include in the report on FTP these inconsistencies.

**Trading Exposures**

For trading exposures, a firm could consider a variety of factors, including the type of funding source (for example, secured or unsecured), the market liquidity of the exposure (for example, the size of the haircut relative to the overall exposure), the holding period of the position, the prevailing market conditions, and any potential impact the chosen approach could have on firm incentives and overall risk profile. If a firm’s trading activities are not material, its FTP framework may require a less complex methodology for trading exposures. The following FTP methodologies have been observed for allocating FTP costs for trading exposures.

**Weighted Average Cost of Debt (WACD)**

WACD is the weighted average cost of outstanding firm debt, usually expressed as a spread over an index. Some firms’ practices apply this rate to the amount of an asset expected to be funded unsecured (repurchase agreement market haircuts may be used to delineate between the amount being funded secured and the amount being funded unsecured). A firm using WACD should analyze whether the methodology misaligns risk-taking incentives and document such analyses in the report on FTP.

**Marginal Cost of Funding**

Marginal cost of funding sets the FTP costs at the appropriate incremental borrowing rate of a firm. Some firms’ practices apply a marginal secured borrowing rate to the amount of an asset expected to be funded secured and a marginal unsecured borrowing rate to the amount of an asset expected to be funded unsecured (repurchase agreement market haircuts may be used to delineate between the amount being funded secured and the amount being funded unsecured). A firm using marginal cost of funding should analyze whether the methodology misaligns risk-taking incentives, considering current market rates compared to historical rates, and document such analyses in the report on FTP.

**Contingent Liquidity Risk**

A firm may calculate the FTP costs related to contingent liquidity risk from trading exposures by considering the unencumbered liquid assets that are held to cover the potential for widening haircuts of trading exposures that are funded secured. If haircuts used in a firm’s FTP frame-
work do not align with haircuts used in its internal stress test for similar types of trading exposures, the firm should document and include in the report on FTP these inconsistencies. Haircuts should be updated at a frequency that is appropriate for a firm’s trading activities and market conditions.

A firm may also include the FTP costs related to contingent liquidity risk from potential derivative outflows in stressed market conditions, which may be due to, for example, credit rating downgrades, additional termination rights, or market shocks and volatility.
The federal banking agencies issued Supervisory Guidance on Implementing Dodd-Frank Act Company-Run Stress Tests for Banking Organizations with Total Consolidated Assets of $10–50 Billion (see the Fed. Reg. 14153, March 13, 2014) ($10-50 billion companies) and offers additional details about methodologies that should be employed by these companies. The term “company” refers to state member banks, bank holding companies, and savings and loan holding companies. This guidance builds upon the inter-agency stress testing guidance that was issued in May 2012 for companies with more than $10 billion in total consolidated assets that set forth general principles for a satisfactory stress testing framework. This guidance discusses supervisory expectations for the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) stress test practices for these companies. The agencies determined that providing the supervisory guidance would be helpful to the $10–50 billion companies in carrying out their tests that are appropriate for their risk profile, size, complexity, business mix, and market footprint.

The Dodd-Frank Act stress tests may not necessarily capture a company’s full range of risks, exposures, activities, and vulnerabilities that have a potential effect on capital adequacy. Additionally, the Dodd-Frank Act stress tests assess the impact of stressful outcomes on capital adequacy and are not intended to measure the adequacy of a company’s liquidity in the stress scenarios. Companies to which this guidance applies are not subject to the Federal Reserve’s capital plan rule, the Federal Reserve’s annual Comprehensive Capital Analysis and Review (CCAR), supervisory stress tests for capital adequacy, or the related data collections supporting the supervisory stress test. Refer to SR-14-3 and its attachments 1 and 2.

4069.0.1 Expectations for Dodd-Frank Act Stress Tests

The supervisory expectations contained in the guidance follow the specific rule requirements contained in the final Dodd-Frank Act stress test rules for $10–50 billion companies and are organized in a similar manner. The guidance covers several categories, outlined below.

4069.0.1.1 Dodd-Frank Act Stress Test Timelines

Under the Dodd-Frank Act stress test rules, stress test projections are based on exposures with the as-of-date of September 30 and extend over a nine-quarter planning horizon that begins in the quarter ending December 31 of the same year and ends December 31 two years later.

4069.0.1.2 Scenarios for Dodd-Frank Act Stress Tests

Under the stress test rules implementing the Dodd-Frank Act requirements, $10–50 billion companies must assess the potential impact on capital of a minimum of three macroeconomic scenarios (that is, baseline, adverse, and severely adverse scenarios) provided by their primary supervisor on their consolidated losses, revenues, balance sheet (including risk-weighted assets), and capital. A company is not required to use all of the variables provided in the scenario, if those variables are not relevant or appropriate to the company’s line of business. In addition, a company may, but is not required to, use additional variables beyond those provided by the agencies. When using additional variables, companies should ensure that the paths of such variables (including their timing) are consistent with the general economic environment assumed in the supervisory scenarios.

4069.0.1.3 Dodd-Frank Act Stress Test Methodologies and Practices

The agencies expect that the specific methodological practices used by companies to produce the estimates of the impact on capital and that...
other measures may vary across organizations.\textsuperscript{5} In addition, Dodd-Frank Act stress testing practices for $10–50 billion companies should be commensurate with each company’s size, complexity, and sophistication. This means that, generally, larger or more sophisticated companies should consider employing not just the minimum expectations, but the more advanced practices described in the supervisory guidance. In addition, $10–50 billion companies should consider using more than just the minimum expectations for the exposures and activities of highest impact and that present the highest risk.

- \textbf{Data sources.} Companies are expected to have appropriate management information systems and data processes that enable them to collect, sort, aggregate, and update data and other information efficiently and reliably within business lines and across the company for use in Dodd-Frank Act stress tests. In some cases, proxy data may be used. Companies should challenge conventional assumptions to ensure that a company’s stress test is not constrained by its own past experience.

- \textbf{Data segmentation.} To account for differences in risk profiles across various exposures and activities, companies should segment their portfolios and business activities into categories based on common or related risk characteristics. The company should select the appropriate level of segmentation based on the size, materiality, and risk of a given portfolio, provided there are sufficiently granular historical data available to allow for the desired segmentation. The minimum expectation is that companies will segment their portfolios and business activities using the categories listed in the $10–50 billion reporting form.\textsuperscript{6}

- \textbf{Model risk management.} Companies should have in place effective model risk-management practices, including validation, for all models used in Dodd-Frank Act stress tests, consistent with existing supervisory guidance.\textsuperscript{7} Companies should ensure an effective challenge process by unbiased, competent, and qualified parties is in place for all models. There should also be sufficient documentation of all models, including model assumptions, limitations, and uncertainties. Companies should ensure that their model risk-management policies and practices generally apply to the use of vendor and third-party products as well. Qualitative elements of models should also be subject to model risk management.

- \textbf{Loss estimation.} For their Dodd-Frank Act stress tests, companies are expected to have credible loss estimation practices that capture the risks associated with their portfolios, business lines, and activities. Credit losses associated with loan portfolios and securities holdings should be estimated directly and separately, whereas other types of losses should be incorporated into estimated pre-provision net revenue (PPNR).\textsuperscript{8} Each company’s loss estimation practices should be commensurate with the materiality of the risks measured and well supported by sound, empirical analysis. Loss estimates should include projections of other-than-temporary impairments (OTTI) for securities both held for sale and held to maturity.

- \textbf{Pre-provision net revenue estimation.} For the Dodd-Frank Act stress test, companies are required to project PPNR over the planning horizon for each supervisory scenario. Companies should estimate PPNR at a level at least as granular as the components outlined in the $10–50 billion reporting form. Companies should ensure that PPNR projections are generally consistent with projections of losses, the balance sheet, and risk-weighted assets. A company may estimate the stressed components of PPNR based on its own or industry-wide historical income and expense experience. Other types of losses that could arise under the supervisory scenarios should be included in projections of PPNR to the extent they would arise under the specified scenario conditions.

- \textbf{Balance sheet and risk-weighted asset projections.} A company is expected to project its balance sheet and risk-weighted assets for

---

\textsuperscript{5} In making projections, companies should make conservative assumptions about management responses in the stress tests, and should include only those responses for which there is substantial support. For example, companies may account for hedges that are already in place as potential mitigating factors against losses, but should be conservative in making assumptions about potential future hedging activities and not necessarily anticipate that actions taken in the past could be taken under the supervisory scenarios.

\textsuperscript{6} For purposes of the supervisory guidance, the term “$10–50 billion reporting form” generally refers to the FR Y-16. However, for subsidiary banks and thrifts of $10–50 billion holding companies, it could be the relevant reporting form the subsidiary will use to report the results of its Dodd-Frank Act stress tests to its primary federal financial regulatory agency.

\textsuperscript{7} Refer to SR-11-7, “Guidance on Model Risk Management.”

\textsuperscript{8} The Dodd-Frank Act stress test rules define PPNR as net interest income plus non-interest income less non-interest expense. Non-operational or non-recurring income and expense items should be excluded.
each of the supervisory scenarios. In doing so, these projections should be consistent with scenario conditions and the company’s prior history of managing through the different business environments, especially stressful ones. The projections of the balance sheet and risk-weighted assets should be consistent with other aspects of stress test projections, such as losses and PPNR.

- **Projections for quarterly provisions and allowance for loan and lease losses (ALLL).** The Dodd-Frank Act stress test rules require companies to project quarterly provisions for loan and lease losses (PLLL). Companies are expected to project PLLL for each scenario based on projections of quarterly loan and lease losses and while maintaining an appropriate ALLL balance at the end of each quarter of the planning horizon, including the last quarter.

- **Projections for quarterly net income.** Under the Dodd-Frank Act stress test rules, companies must estimate projected quarterly net income for each scenario. Net income projections should be based on loss, revenue, and expense projections.

4069.0.1.4 Estimating the Potential Impact on Regulatory Capital Levels and Capital Ratios

Companies must estimate projected quarterly regulatory capital levels and regulatory capital ratios for each scenario. Any rare cases in which ratios are higher under the adverse and severely adverse scenarios should be very well supported by analysis and documentation. Projected capital levels and ratios should reflect applicable regulations and accounting standards for each quarter of the planning horizon. In their Dodd-Frank Act stress tests, bank holding companies and savings and loan holding companies are required to calculate pro forma capital ratios using a set of capital action assumptions based on historical distributions, contracted payments, and a general assumption of no redemptions, repurchases, or issuances of capital instruments. There are no specified capital actions for state member banks.

4069.0.1.5 Controls, Oversight, and Documentation

A company must establish and maintain a system of controls, oversight, and documentation, including policies and procedures that apply to all of its Dodd-Frank Act stress test components. Senior management and the board of directors have specific responsibilities relating to Dodd-Frank Act stress testing. The board of directors should ensure it remains informed about critical reviews of elements of the Dodd-Frank Act stress tests, especially regarding key assumptions, uncertainties, and limitations. In addition, the board of directors and senior management of a $10–50 billion company must consider the role of stress testing results in normal business, including in the company’s capital planning, assessment of capital adequacy, and risk-management practices. A company should appropriately document the manner in which Dodd-Frank Act stress tests are used for key decisions about capital adequacy, including capital actions and capital contingency plans. The company should indicate the extent to which Dodd-Frank Act stress tests are used in conjunction with other capital assessment tools.

4069.0.1.6 Report to Supervisors

A $10–50 billion company must report the results of its Dodd-Frank Act company-run stress tests on the $10–50 billion annual reporting form (FR Y-16). This report will include a company’s quantitative projections of losses, PPNR, balance sheet, risk-weighted assets, ALLL, and capital on a quarterly basis over the duration of the scenario and planning horizon. In addition to the quantitative projections, companies are required to submit qualitative information supporting their projections.9

4069.0.1.7 Public Disclosure of Dodd-Frank Act Test Results

Under the Dodd-Frank Act stress test rules, a $10–50 billion company must publicly disclose Dodd-Frank Act stress test results between June 15 and June 30, with the first disclosure in 2015. The summary of the results of the stress test, including both quantitative and qualitative information, should be included in a single release on

---

9. These companies should look to the $10–50 billion consolidated assets reporting instructions for the supervisory expectations as to what information should be included in the report on the company’s Dodd-Frank Act stress test. See the FR Y-16 instructions: www.federalreserve.gov/apps/reportforms/reportdetail.aspx?OoYJ+5BzdHzoK200R3zNjw==
a company’s website, or in any other forum that is reasonably accessible to the public. A company is required to publish results for the severely adverse scenario only.
Bank Holding Company Rating System

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2015, footnote 5 of this section was revised to delete a reference to SR-99-15, which was superseded by SR-12-17/CA-12-14, “Consolidated Supervision Framework for Large Financial Institutions.”

On December 1, 2004, the Board of Governors approved for System-wide implementation a revised bank holding company (BHC) rating system to more closely align the supervisory rating system for BHCs, including financial holding companies, with the Federal Reserve’s current supervisory practices.1 The revised rating system became effective January 1, 2005, and is to be used for all inspections commencing after that date.

Each BHC is assigned a composite rating “C” based on an evaluation and rating of its managerial and financial condition and an assessment of future potential risk to its subsidiary depository institution(s). The main components of the rating system represent Risk management (R); Financial condition (F); and potential Impact (I) of the parent company and nondepository subsidiaries (collectively nondepository entities) on the subsidiary depository institution(s). While all BHCs are required to act as sources of strength to their subsidiary depository institutions, pursuant to the Board’s rules and policies, the impact rating (I) focuses on downside risk—that is, on the likelihood of significant negative Impact on the subsidiary depository institutions. A fourth component rating, Depository institution (D), will generally mirror the primary regulator’s assessment of the subsidiary depository institution(s). Thus, the primary component and composite ratings are displayed:

RFI/C(D)

To provide a consistent framework for assessing risk management, the R component is supported by four subcomponents that reflect the effectiveness of the banking organization’s risk management and controls. The subcomponents are board and senior management oversight; policies, procedures, and limits; risk monitoring and MIS; and internal controls. The F component is similarly supported by four subcomponents reflecting an assessment of the quality of the banking organization’s capital, asset quality, earnings, and liquidity. A simplified version of the rating system that requires only the assignment of the risk-management component rating and composite rating will be applied to noncomplex BHCs with assets below $1 billion.

Composite, component, and subcomponent ratings are assigned based on a 1 to 5 numeric scale. A 1 indicates the highest rating, strongest performance and practices, and least degree of supervisory concern; a 5 indicates the lowest rating, weakest performance, and highest degree of supervisory concern.

The Federal Reserve recognizes the interrelationship between the risk-management and financial-performance components of the revised rating system, an interrelationship that is inherent in all supervisory rating systems. Accordingly, examiners are expected to consider that a risk-management factor may have a bearing on the assessment of a financial subcomponent or component rating and vice versa. In general, however, the risk-management component and subcomponents should be viewed as the more forward-looking aspect of the rating system, and the financial-condition component and subcomponents should be viewed as the current aspect of the rating system. For example, a BHC’s ability to monitor and manage market risk (or sensitivity to market risk) should be evaluated together with the organization’s ability to monitor and manage all risks under the R component of the rating system. However, poor market-risk management may also be reflected in the F component if it impacts earnings or capital. (See SR-04-18 and its attachment.)

All of the BHC numeric ratings, including the composite, component, and subcomponent ratings, should be presented in the report of inspection, in accordance with the Federal Reserve’s supervisory practices. The management of each BHC under inspection should be made aware of the fact that this rating is furnished solely for its confidential use and under no circumstances should the BHC or any of its directors, officers, or employees disclose or make public any of the ratings.

1. The Federal Reserve System’s previous BHC rating system was the BOPEC rating system. The components of the name represented the Bank, Other nonbank subsidiaries, Parent company, Earnings, and Capital.
4070.0.1 THE BANK HOLDING COMPANY RFI/C(D) RATING SYSTEM

The bank holding company (BHC) rating system provides an assessment of certain risk-management and financial-condition factors that are common to all BHCs, as well as an assessment of the potential impact of the parent BHC and its nondepository subsidiaries (collectively nondepository entities) on the BHC’s subsidiary depository institutions. Under this system, the Federal Reserve endeavors to ensure that all BHCs, including financial holding companies (FHCs), are evaluated in a comprehensive and uniform manner, and that supervisory attention is appropriately focused on the BHCs that exhibit financial and operational weaknesses or adverse trends. The rating system serves as a useful vehicle for identifying problem or deteriorating BHCs, as well as for categorizing BHCs with deficiencies in particular areas. Further, the rating system assists the Federal Reserve in following safety-and-soundness trends and in assessing the aggregate strength and soundness of the financial industry.

Each BHC is assigned a composite rating “C” based on an overall evaluation and rating of its managerial and financial condition and an assessment of future potential risk to its subsidiary depository institution(s). The main components of the rating system represent Risk management (R); Financial condition (F); and potential Impact (I) of the nondepository entities on the subsidiary depository institutions. While the Federal Reserve expects all BHCs to act as a source of strength to their subsidiary depository institutions, the Impact (I) rating focuses on downside risk—that is, on the likelihood of significant negative impact by the nondepository entities on the subsidiary depository institution(s). A fourth rating, Depository institution(s) (D), will generally mirror the primary regulator’s assessment of the subsidiary depository institution(s). Thus, the primary component and composite ratings are displayed:

RFI/C(D)

To provide a consistent framework for assessing risk management, the R component is supported by four subcomponents that reflect the effectiveness of the banking organization’s risk management and controls. The subcomponents are board and senior management oversight; policies, procedures, and limits; risk monitoring and MIS; and internal controls. The F component is also supported by four subcomponents reflecting an assessment of the quality of the consolidated banking organization’s capital, asset quality, earnings, and liquidity.

Composite, component, and subcomponent ratings are assigned based on a 1 to 5 numeric scale. A 1 numeric rating indicates the highest rating, strongest performance and practices, and least degree of supervisory concern, whereas a 5 numeric rating indicates the lowest rating, weakest performance, and the highest degree of supervisory concern.

The following three sections contain detailed descriptions of the composite, component, and subcomponent ratings; implementation guidance by BHC type; and definitions of the ratings.

4070.0.2 DESCRIPTION OF THE RATING-SYSTEM ELEMENTS

4070.0.2.1 The Composite (C) Rating

“C” is the overall composite assessment of the BHC as reflected by consolidated risk management, consolidated financial strength, and the potential impact of the nondepository entities on the subsidiary depository institutions. The composite rating encompasses both a forward-looking and static assessment of the consolidated organization, as well as an assessment of the relationship between the depository and nondepository entities. Consistent with current Federal Reserve practice, the C rating is not derived as a simple numeric average of the R, F, and I components; rather, it reflects examiner judgment with respect to the relative importance of each component to the safe and sound operation of the BHC.

2. A simplified version of the rating system that includes only the R and C components will be applied to noncomplex bank holding companies with assets at or below $1 billion.

4070.0.2.2 The Risk-Management (R) Component

“R” represents an evaluation of the ability of the BHC’s board of directors and senior management, as appropriate for their respective positions, to identify, measure, monitor, and control risk. The R rating underscores the importance of the control environment, taking into consideration the complexity of the organization and the risk inherent in its activities.
The R rating is supported by four subcomponents that are each assigned a separate rating. The four subcomponents are as follows: (1) board and senior management oversight; (2) policies, procedures, and limits; (3) risk monitoring and MIS; and (4) internal controls. The subcomponents are evaluated in the context of the risks undertaken by and inherent in a banking organization and the overall level of complexity of the firm’s operations. They provide the Federal Reserve System with a consistent framework for evaluating risk management and the control environment. Moreover, the subcomponents provide a clear structure and basis for discussion of the R rating with BHC management, reflect the principles of SR-95-51, are familiar to examiners, and parallel the existing risk-assessment process. SR-95-51 contains a detailed description of the four risk-management subcomponents.

4070.0.2.2.1 Risk-Management Subcomponents

4070.0.2.2.1.1 Board and Senior Management Oversight

This subcomponent evaluates the adequacy and effectiveness of board and senior management’s understanding and management of risk inherent in the BHC’s activities, as well as the general capabilities of management. It also includes consideration of management’s ability to identify, understand, and control the risks undertaken by the institution, to hire competent staff, and to respond to changes in the institution’s risk profile or innovations in the banking sector.

4070.0.2.2.1.2 Policies, Procedures, and Limits

This subcomponent evaluates the adequacy of a BHC’s policies, procedures, and limits given the risks inherent in the activities of the consolidated BHC and the organization’s stated goals and objectives. This analysis will include consideration of the adequacy of the institution’s accounting and risk-disclosure policies and procedures.

4070.0.2.2.1.3 Risk Monitoring and Management Information Systems

This subcomponent assesses the adequacy of a BHC’s risk measurement and monitoring, and the adequacy of its management reports and information systems. This analysis will include a review of the assumptions, data, and procedures used to measure risk and the consistency of these tools with the level of complexity of the organization’s activities.

4070.0.2.2.1.4 Internal Controls

This subcomponent evaluates the adequacy of a BHC’s internal controls and internal audit procedures, including the accuracy of financial reporting and disclosure and the strength and influence of the internal audit team within the organization. This analysis will also include a review of the independence of control areas from management and the consistency of the scope coverage of the internal audit team with the complexity of the organization.

4070.0.2.3 The Financial-Condition (F) Component

“F” represents an evaluation of the consolidated organization’s financial strength. The F rating focuses on the ability of the BHC’s resources to support the level of risk associated with its activities. The F rating is supported by four subcomponents: capital (C), asset quality (A), earnings (E), and liquidity (L). The CAEL subcomponents can be evaluated along individual business lines, product lines, or on a legal-entity basis, depending on what is most appropriate given the structure of the organization. The assessment of the CAEL components should use benchmarks and metrics appropriate to the business activity being evaluated.

Consistent with current supervisory practices, examination staff should continue to review relevant market indicators, such as external debt ratings, credit spreads, debt and equity prices, and qualitative rating-agency assessments as a source of information complementary to examination findings.

4070.0.2.3.1 Financial-Condition Subcomponents (CAEL)

4070.0.2.3.1.1 Capital Adequacy

“C” reflects the adequacy of an organization’s consolidated capital position, from a regulatory capital perspective and an economic capital per-
spective, as appropriate to the BHC. The evaluation of capital adequacy should consider the risk inherent in an organization’s activities and the ability of capital to absorb unanticipated losses, to provide a base for growth, and to support the level and composition of the parent company and subsidiaries’ debt.

4070.0.2.3.1.2 Asset Quality

“A” reflects the quality of an organization’s consolidated assets. The evaluation should include, as appropriate, both on-balance-sheet and off-balance-sheet exposures and the level of criticized and nonperforming assets. Forward-looking indicators of asset quality, such as the adequacy of underwriting standards, the level of concentration risk, the adequacy of credit-administration policies and procedures, and the adequacy of MIS for credit risk, may also form the Federal Reserve’s view of asset quality.

4070.0.2.3.1.3 Earnings

“E” reflects the quality of consolidated earnings. The evaluation considers the level, trend, and sources of earnings, as well as the ability of earnings to augment capital as necessary to provide ongoing support for a BHC’s activities.

4070.0.2.3.1.4 Liquidity

“L” reflects the consolidated organization’s ability to attract and maintain the sources of funds necessary to support its operations and meet its obligations. The funding conditions for each of the material legal entities in the holding company structure should be evaluated to determine if any weaknesses exist that could affect the funding profile of the consolidated organization.

4070.0.2.4 The Impact (I) Component

Like the other components and subcomponents, the I component is rated on a five-point numerical scale. However, the descriptive definitions of the numerical ratings for I are different than those of the other components and subcomponents. The I ratings are defined as follows:

1 — low likelihood of significant negative impact
2 — limited likelihood of significant negative impact
3 — moderate likelihood of significant negative impact
4 — considerable likelihood of significant negative impact
5 — high likelihood of significant negative impact

The I component is an assessment of the potential impact of the nondepository entities on the subsidiary depository institution(s). The I assessment will evaluate both the risk-management practices and financial condition of the nondepository entities—an analysis that will borrow heavily from the analysis conducted for the R and F components. Consistent with current practices, nondepository entities will be evaluated using benchmarks and analysis appropriate for those businesses. In addition, for functionally regulated nondepository subsidiaries, examination staff will continue to rely, to the extent possible, on the work of those functional regulators to assess the risk management practices and financial condition of those entities. In rating the I component, examination staff is required to evaluate the degree to which current or potential issues within the nondepository entities present a threat to the safety and soundness of the subsidiary depository institution(s). This approach is consistent with the Federal Reserve’s objective not to extend bank-like supervision to nondepository entities.

3. The regulatory minimum capital ratios for BHCs are 8 percent for total risk-based capital, 4 percent for tier 1 risk-based capital, 3 percent for tier 1 leverage for BHCs rated strong, and 4 percent for tier 1 leverage for all other BHCs. See 12 C.F.R. 225, appendices A and D.

4. As a general rule, nondepository subsidiaries should be included in the I analysis whenever their assets exceed 5 percent of the BHC’s consolidated capital or $10 million, whichever is lower.
The analysis of the parent company for the purpose of assigning an I rating should emphasize weaknesses that could directly impact the risk-management or financial condition of the subsidiary depository institution(s). Similarly, the analysis of the nondepository subsidiaries for the purpose of assigning an I rating should emphasize weaknesses that could negatively impact the parent company’s relationship with its subsidiary depository institution(s) and weaknesses that could have a direct impact on the risk-management practices or financial condition of the subsidiary depository institution(s). The analysis under the I component should consider existing as well as potential issues and risks that may impact the subsidiary depository institution(s) now or in the future. Particular attention should be paid to the following risk-management and financial factors in assigning the I rating:

4070.0.2.4.1 Risk-Management Factors

- **Strategic considerations.** The potential risks posed to the subsidiary depository institution(s) by the nondepository entities’ strategic plans for growth in existing activities and expansion into new products and services.
- **Operational considerations.** The spillover impact on the subsidiary depository institution(s) from actual losses, a poor control environment, or an operational loss history in the nondepository entities.
- **Legal and reputational considerations.** The spillover effect on the subsidiary depository institution(s) of complaints and litigation that name one or more of the nondepository entities as defendants, or involve violations of laws or regulations, especially pertaining to intercompany transactions where the subsidiary depository institution(s) is involved.
- **Concentration considerations.** The potential risks posed to the subsidiary depository institution(s) by concentrations within the nondepository entities in business lines, geographic areas, industries, customers, or other factors.

4070.0.2.4.2 Financial Factors

- **Capital distribution.** The distribution and transferability of capital across the legal entities.
- **Intra-group exposures.** The extent to which intra-group exposures, including servicing agreements, have the potential to undermine the condition of subsidiary depository institution(s).
- **Parent company cash flow and leverage.** The extent to which the parent company is dependent on dividend payments, from both the nondepository subsidiaries and the subsidiary depository institution(s), to service debt and cover fixed charges. Also, the effect that these upstreamed cash flows have had, or can be expected to have, on the financial condition of the BHC’s nondepository subsidiaries and subsidiary depository institution(s).

4070.0.2.5 The Depository Institutions (D) Component

The (D) component will reflect generally the composite CAMELS rating assigned by the subsidiary depository institution’s primary supervisor. In a multibank BHC, the (D) rating will reflect a weighted average of the CAMELS composite ratings of the individual subsidiary depository institutions, weighted by both asset size and the relative importance of each depository institution within the holding company structure. In this regard, the CAMELS composite rating for a subsidiary depository institution that dominates the corporate culture may figure more prominently in the assignment of the (D) rating than would be dictated by asset size, particularly when problems exist within that depository institution.

The (D) component conveys important supervisory information, reflecting the primary supervisor’s assessment of the legal entity. The (D) component stands outside of the composite rating, although significant risk-management and financial-condition considerations at the depository institution level are incorporated in the consolidated R and F ratings, which are then factored into the C rating.

Consistent with current practice, if, in the process of analyzing the financial condition and risk-management programs of the consolidated organization, a major difference of opinion regarding the safety and soundness of the subsidiary depository institution(s) emerges between the Federal Reserve and the depository institution’s primary regulator, then the (D) rating should reflect the Federal Reserve’s evaluation.

To highlight the presence of one or more problem depository institution(s) in a multibank BHC whose depository institution component, based on weighted averages, might not otherwise reveal their presence (i.e., depository institution ratings of 1, 2, or 3), a problem modifier, P, would be attached to the depository institut...
tion rating (e.g., 1P, 2P, or 3P). Thus, 2P would indicate that, while on balance the depository subsidiaries are rated Satisfactory, there exists a problem depository institution (composite 4 or 5) among the subsidiary depository institutions. The problem identifier is unnecessary when the depository institution component is rated 4 or 5.

4070.0.3 IMPLEMENTATION OF THE BHC RATING SYSTEM BY BHC TYPE

The Federal Reserve’s BHC rating system aligns the rating system with current Federal Reserve supervisory practices. The rating system requires analysis and support for BHCs of all sizes. As such, the level of analysis and support will vary based upon whether a BHC has been determined to be “complex” or “noncomplex.” In addition, the resources dedicated to the inspection of each BHC will continue to be determined by the risk posed by the subsidiary depository institution(s) to the federal safety net and the risk posed by the BHC to the subsidiary depository institution(s).

4070.0.3.1 Noncomplex BHCs with Assets of $1 Billion or Less (Shell Holding Companies)

Rating: R and C

Consistent with SR-13-21, examination staff will assign only an R and a C rating for all companies in the shell BHC program (noncomplex BHCs with assets under $1 billion). The R rating is the M rating from the subsidiary depository institution’s CAMELS rating. To provide consistent rating terminology across BHCs of all sizes, the terminology is changed to R from the former M. The C rating is the subsidiary depository institution’s composite CAMELS rating.

4070.0.3.2 Noncomplex BHCs with Assets Greater Than $1 Billion

4070.0.3.2.1 One-Bank Holding Companies

Rating: RFI/C(D)

For all noncomplex one-bank holding companies with assets of greater than $1 billion, examination staff will assign all component and sub-component ratings; however, examination staff should continue to rely heavily on information and analysis contained in the primary regulator’s report of examination for the subsidiary depository institution to assign the R and F ratings. If examination staff have reviewed the primary regulator’s examination report and are comfortable with the analysis and conclusions contained in that report, then the BHC ratings should be supported with concise language that indicates that the conclusions are based on the analysis of the primary regulator. No additional analysis will be required.

In cases where the analysis and conclusions of the primary regulator are insufficient to assign the ratings, the primary regulator should be contacted to ascertain whether additional analysis and support may be available. Further, if discussions with the primary regulator do not provide sufficient information to assign the ratings, discussions with BHC management may be warranted to obtain adequate information to assign the ratings. In most cases, additional information or support obtained through these steps will be sufficient to permit the assignment of the R and F ratings. To the extent that additional analysis is deemed necessary, the level of analysis and resources spent on this assessment should be in line with the level of risk the subsidiary depository institution poses to the federal safety net. In addition, any activities that involve information gathering with respect to the subsidiary depository institution should be coordinated with and, if possible, conducted by, the primary regulator of that institution.

Examination staff are required to make an independent assessment in order to assign the
I rating, which provides an evaluation of the impact of the BHC on the subsidiary depository institution. Analysis for the I rating in noncomplex one-bank holding companies should place particular emphasis on issues related to parent company cash flow and compliance with sections 23A and 23B of the Federal Reserve Act and the Board’s Regulation W.

**4070.0.3.2.2 Multibank Holding Companies**

**Rating: RFI/C(D)**

For all noncomplex BHCs with assets of greater than $1 billion and more than one subsidiary depository institution, examination staff will assign all component and subcomponent ratings of the new system. Examiners should rely, to the extent possible, on the work conducted by the primary regulators of the subsidiary depository institutions to assign the R and F ratings. However, any risk-management or other important functions conducted by the nondepository entities of the BHC, or conducted across legal-entity lines, should be subject to review by Federal Reserve examination staff. These reviews should be conducted in coordination with the primary regulator(s). The assessment for the I rating requires an independent assessment by Federal Reserve examination staff.

**4070.0.3.3 Complex BHCs**

**Rating: RFI/C(D)**

For complex BHCs, examination staff will assign all component and subcomponent ratings of the new rating system. The ratings analysis should be based on the primary and functional regulators’ assessment of the subsidiary entities, as well as on the examiners’ assessment of the consolidated organization as determined through off-site review and the BHC inspection process, as appropriate. The resources needed for the inspection and the level of support needed for developing a full rating will depend on the complexity of the organization, including structure and activities (see footnote 5), and should be commensurate with the level of risk posed by the subsidiary depository institution(s) to the federal safety net and the level of risk posed by the BHC to the subsidiary depository institution(s). Examination staff are required to make an independent assessment of the impact of the nondepository entities on the subsidiary depository institution(s) in order to assign the I rating.

**4070.0.4 RATING DEFINITIONS FOR THE RFI/C(D) RATING SYSTEM**

All component and subcomponent ratings are rated on a five-point numeric scale. With the exception of the I component, ratings will be assigned in ascending order of supervisory concern as follows:

1 — Strong
2 — Satisfactory
3 — Fair
4 — Marginal
5 — Unsatisfactory

---

*Bank Holding Company Rating System 4070.0*  
BHC Supervision Manual  
January 2015  
Page 7
A description of the I component ratings is in the I section (see section 4070.0.4.4).

As is current Federal Reserve practice, the component ratings are not derived as a simple numeric average of the subcomponent ratings; rather, weight afforded to each subcomponent in the overall component rating will depend on the severity of the condition of that subcomponent and the relative importance of that subcomponent to the consolidated organization. Similarly, some components may be given more weight than others in determining the composite rating, depending on the situation of the BHC. Assignment of a composite rating may incorporate any factor that bears significantly on the overall condition and soundness of the BHC, although generally the composite rating bears a close relationship to the component ratings assigned.

4070.0.4.1 Composite Rating

Rating 1 (Strong). BHCs in this group are sound in almost every respect; any negative findings are basically of a minor nature and can be handled in a routine manner. Risk-management practices and financial condition provide resistance to external economic and financial disturbances. Cash flow is more than adequate to service debt and other fixed obligations, and the nondepository entities pose little risk to the subsidiary depository institution(s).

Rating 2 (Satisfactory). BHCs in this group are fundamentally sound but may have modest weaknesses in risk-management practices or financial condition. The weaknesses could develop into conditions of greater concern but are believed correctable in the normal course of business. As such, the supervisory response is limited. Cash flow is adequate to service obligations, and the nondepository entities are unlikely to have a significant negative impact on the subsidiary depository institution(s).

Rating 3 (Fair). BHCs in this group exhibit a combination of weaknesses in risk-management practices and financial condition that range from fair to moderately severe. These companies are less resistant to the onset of adverse business conditions and would likely deteriorate if concerted action is not effective in correcting the areas of weakness. Consequently, these companies are vulnerable and require more-than-normal supervisory attention and financial surveillance. However, the risk-management and financial capacity of the company, including the potential negative impact of the nondepository entities on the subsidiary depository institution(s), pose only a remote threat to its continued viability.

Rating 4 (Marginal). BHCs in this group have significant risk-management and financial weaknesses, which may pose a heightened risk of significant negative impact on the subsidiary depository institution(s). The holding company’s cash-flow needs may be being met only by upstreaming imprudent dividends and/or fees from its subsidiaries. Unless prompt action is taken to correct these conditions, the organization’s future viability could be impaired. These companies require close supervisory attention and substantially increased financial surveillance.

Rating 5 (Unsatisfactory). The magnitude and character of the risk-management and financial weaknesses of BHCs in this category, and concerns about the nondepository entities negatively impacting the subsidiary depository institution(s), could lead to insolvency without urgent aid from shareholders or other sources. The imminent inability to prevent liquidity and/or capital depletion places the BHC’s continued viability in serious doubt. These companies require immediate corrective action and constant supervisory attention.

4070.0.4.2 Risk-Management Component

Rating 1 (Strong). A rating of 1 indicates that management effectively identifies and controls all major types of risk posed by the BHC’s activities. Management is fully prepared to address risks emanating from new products and changing market conditions. The board and management are forward-looking and active participants in managing risk. Management ensures that appropriate policies and limits exist and are understood, reviewed, and approved by the board. Policies and limits are supported by risk-monitoring procedures, reports, and MIS that provide management and the board with the information and analysis that is necessary to make timely and appropriate decisions in response to changing conditions. Risk-management practices and the organization’s infrastructure are flexible and highly responsive to changing industry practices and current regulatory guidance. Staff has sufficient experience, expertise, and depth to manage the risks assumed by the institution.
Internal controls and audit procedures are sufficiently comprehensive and appropriate to the size and activities of the institution. There are few noted exceptions to the institution’s established policies and procedures, and none is material. Management effectively and accurately monitors the condition of the institution consistent with the standards of safety and soundness, and in accordance with internal and supervisory policies and practices. Risk-management processes are fully effective in identifying, monitoring, and controlling the risks to the institution.

**Rating 2 (Satisfactory).** A rating of 2 indicates that the institution’s management of risk is largely effective, but lacking in some modest degree. Management demonstrates a responsiveness and ability to cope successfully with existing and foreseeable risks that may arise in carrying out the institution’s business plan. Although the institution may have some minor risk-management weaknesses, these problems have been recognized and are in the process of being resolved. Overall, board and senior management oversight, policies and limits, risk-monitoring procedures, reports, and MIS are considered satisfactory and effective in maintaining a safe and sound institution. Risks are controlled in a manner that does not require more-than-normal supervisory attention.

The BHC’s risk-management practices and infrastructure are satisfactory and generally are adjusted appropriately in response to changing industry practices and current regulatory guidance. Staff experience, expertise, and depth are generally appropriate to manage the risks assumed by the institution.

Internal controls may display modest weaknesses or deficiencies, but they are correctable in the normal course of business. The examiner may have recommendations for improvement, but the weaknesses noted should not have a significant effect on the safety and soundness of the institution.

**Rating 3 (Fair).** A rating of 3 signifies that risk-management practices are lacking in some important ways and, therefore, are a cause for more-than-normal supervisory attention. One or more of the four elements of sound risk management\(^8\) (active board and senior management oversight; adequate policies, procedures, and limits; adequate risk-management monitoring and MIS; comprehensive internal controls) are considered less than acceptable, and has precluded the institution from fully addressing one or more significant risks to its operations. Certain risk-management practices are in need of improvement to ensure that management and the board are able to identify, monitor, and control all significant risks to the institution. Also, the risk-management structure may need to be improved in areas of significant business activity, or staff expertise may not be commensurate with the scope and complexity of business activities. In addition, management’s response to changing industry practices and regulatory guidance may need to improve.

The internal control system may be lacking in some important aspects, particularly as indicated by continued control exceptions or by a failure to adhere to written policies and procedures. The risk-management weaknesses could have adverse effects on the safety and soundness of the institution if corrective action is not taken by management.

**Rating 4 (Marginal).** A rating of 4 represents deficient risk-management practices that fail to identify, monitor, and control significant risk exposures in many material respects. Generally, such a situation reflects a lack of adequate guidance and supervision by management and the board. One or more of the four elements of sound risk management are deficient and requires immediate and concerted corrective action by the board and management.

The institution may have serious identified weaknesses, such as an inadequate separation of duties, that require substantial improvement in internal control or accounting procedures, or improved adherence to supervisory standards or requirements. The risk-management deficiencies warrant a high degree of supervisory attention because, unless properly addressed, they could seriously affect the safety and soundness of the institution.

**Rating 5 (Unsatisfactory).** A rating of 5 indicates a critical absence of effective risk-management practices with respect to the identification, monitoring, or control over significant risk exposures. One or more of the four elements of sound risk management are considered wholly deficient, and management and the board have not demonstrated the capability to address these deficiencies.

---

\(^8\) See the Federal Reserve System handbook Framework for Risk-Focused Supervision of Large Complex Institutions, August 1997, and SR-95-51, “Rating the Adequacy of Risk Management Processes and Internal Controls at State Member Banks and Bank Holding Companies.”
Internal controls are critically weak and, as such, could seriously jeopardize the continued viability of the institution. If not already evident, there is an immediate concern as to the reliability of accounting records and regulatory reports and the potential for losses if corrective measures are not taken immediately. Deficiencies in the institution’s risk-management procedures and internal controls require immediate and close supervisory attention.

4070.0.4.2.1 Risk-Management Subcomponents

4070.0.4.2.1.1 Board and Senior Management Oversight

Rating 1 (Strong). An assessment of Strong signifies that the board and senior management are forward-looking, fully understand the types of risk inherent in the BHC’s activities, and actively participate in managing those risks. The board has approved overall business strategies and significant policies, and ensures that senior management is fully capable of managing the activities that the BHC conducts. Consistent with the standards of safety and soundness, oversight of risk-management practices is strong and the organization’s overall business strategy is effective.

Senior management ensures that risk-management practices are rapidly adjusted in accordance with enhancements to industry practices and regulatory guidance, and exposure limits as necessary to reflect the institution’s changing risk profile. Policies, limits, and tracking reports are generally appropriate, understood, and regularly reviewed.

Management provides effective supervision of the day-to-day activities of all officers and employees, including the supervision of the senior officers and the heads of business lines. It hires staff that possess experience and expertise consistent with the scope and complexity of the organization’s business activities. There is a sufficient depth of staff to ensure sound operations. Management ensures compliance with laws and regulations and that employees have the integrity, ethical values, and competence consistent with a prudent management philosophy and operating style.

Management responds appropriately to changes in the marketplace. It identifies all risks associated with new activities or products before they are launched and ensures that the appropriate infrastructure and internal controls are established.

Rating 2 (Satisfactory). An assessment of Satisfactory indicates that board and senior management have an adequate understanding of the organization’s risk profile and provide largely effective oversight of risk-management practices. In this regard, the board has approved all major business strategies and significant policies and ensures that senior management is capable of managing the activities that the BHC conducts. Oversight of risk-management practices is satisfactory, and the organization’s overall business strategy is generally sound.

Senior management generally adjusts risk-management practices appropriately in accordance with enhancements to industry practices and regulatory guidance, and adjusts exposure limits as necessary to reflect the institution’s changing risk profile, although these practices may be lacking in some modest degree. Policies, limits, and tracking reports are generally appropriate, understood, and regularly reviewed, and the new-product approval process adequately identifies the associated risks and necessary controls.

Senior management’s day-to-day supervision of management and staff at all levels is generally effective. The level of staffing, and its experience, expertise, and depth, is sufficient to operate the business lines in a safe and sound manner. Minor weaknesses may exist in the staffing, infrastructure, and risk-management processes for individual business lines or products, but these weaknesses have been identified by management, are correctable in the normal course of business, and are in the process of being addressed. Weaknesses noted should not have a significant effect on the safety and soundness of the institution.

Rating 3 (Fair). An assessment of Fair signifies that board and senior management oversight is lacking in some important way and, therefore, is a cause for more-than-normal supervisory attention. The weaknesses may involve a broad range of activities or be material to a major business line or activity. Weaknesses in one or more aspect of board and senior management oversight have precluded the institution from fully addressing one or more significant risks to the institution. The deficiencies may include a lack of knowledge with respect to the organization’s risk profile, insufficient oversight of risk-management practices, ineffective policies or limits, inadequate or under-utilized management reporting, an inability to respond to indus-
try enhancements and changes in regulatory guidance, or a failure to execute appropriate business strategies. Staffing may not be adequate or staff may not possess the experience and expertise needed for the scope and complexity of the organization’s business activities. The day-to-day supervision of officer and staff activities, including the management of senior officers or heads of business lines, may be lacking. Certain risk-management practices are in need of improvement to ensure that management and the board are able to identify, monitor, and control all significant risks to the institution. Weaknesses noted could have adverse effects on the safety and soundness of the institution if corrective action is not taken by management.

Rating 4 (Marginal). An assessment of Marginal represents deficient oversight practices that reflect a lack of adequate guidance and supervision by management and the board. A number of significant risks to the institution have not been adequately addressed, and the board and senior management function warrants a high degree of supervisory attention. Multiple board and senior management weaknesses are in need of immediate improvement. They may include a significant lack of knowledge with respect to the organization’s risk profile, largely insufficient oversight of risk-management practices, ineffective policies or limits, inadequate or considerably under-utilized management reporting, an inability to respond to industry enhancements and changes in regulatory guidance, or a failure to execute appropriate business strategies. Staffing may not be adequate or possess the experience and expertise needed for the scope and complexity of the organization’s business activities, and the day-to-day supervision of officer and staff activities, including the management of senior officers or heads of business lines, may be considerably lacking. These conditions warrant a high degree of supervisory attention because, unless properly addressed, they could seriously affect the safety and soundness of the institution.

Rating 5 (Unsatisfactory). An assessment of Unsatisfactory indicates a critical absence of effective board and senior management oversight practices. Problems may include a severe lack of knowledge with respect to the organization’s risk profile, insufficient oversight of risk-management practices, wholly ineffective policies or limits, critically inadequate or under-utilized management reporting, a complete inability to respond to industry enhancements and changes in regulatory guidance, or failure to execute appropriate business strategies. Staffing may be inadequate, inexpert, and/or inadequately supervised. The deficiencies require immediate and close supervisory attention, as management and the board have not demonstrated the capability to address them. Weaknesses could seriously jeopardize the continued viability of the institution.

4070.0.4.2.1.2 Policies, Procedures, and Limits

Rating 1 (Strong). An assessment of Strong indicates that the policies, procedures, and limits provide for effective identification, measurement, monitoring, and control of the risks posed by all significant activities, including lending, investing, trading, trust, and fiduciary activities. Policies, procedures, and limits are consistent with the institution’s goals and objectives and its overall financial strength. The policies clearly delineate accountability and lines of authority across the institution’s activities. The policies also provide for the review of new activities to ensure that the infrastructure necessary to identify, monitor, and control the associated risks is in place before the activities are initiated.

Rating 2 (Satisfactory). An assessment of Satisfactory indicates that the policies, procedures, and limits cover all major business areas, are thorough and substantially up-to-date, and provide a clear delineation of accountability and lines of authority across the institution’s activities. Policies, procedures, and limits are generally consistent with the institution’s goals and objectives and its overall financial strength. Also, the policies provide for adequate due diligence before engaging in new activities or products. Any deficiencies or gaps that have been identified are minor in nature and in the process of being addressed. Weaknesses should not have a significant effect on the safety and soundness of the institution.

Rating 3 (Fair). An assessment of Fair signifies that deficiencies exist in policies, procedures, and limits that require more-than-normal supervisory attention. The deficiencies may involve a broad range of activities or be material to a major business line or activity. The deficiencies may include policies, procedures, or limits (or the lack thereof) that do not adequately identify, measure, monitor, or control the risks posed by
significant activities; are not consistent with the experience of staff, the organization’s strategic goals and objectives, or the financial strength of the institution; or do not clearly delineate accountability or lines of authority. Also, the policies may not provide for adequate due diligence before engaging in new activities or products. Weaknesses noted could have adverse effects on the safety and soundness of the institution unless corrective action is taken by management.

**Rating 4 (Marginal).** An assessment of Marginal indicates deficient policies, procedures, and limits that do not address a number of significant risks to the institution. Multiple practices are in need of immediate improvement, which may include policies, procedures, or limits (or the lack thereof) that ineffectively identify, measure, monitor, or control the risks posed by significant activities; are not commensurate with the experience of staff, the organization’s strategic goals and objectives, or the financial strength of the institution; or do not delineate accountability or lines of authority. Moreover, policies may be considerably lacking with regard to providing for effective due diligence before engaging in new activities or products. These conditions warrant a high degree of supervisory attention because, unless properly addressed, they could seriously affect the safety and soundness of the institution.

**Rating 5 (Unsatisfactory).** An assessment of Unsatisfactory indicates a critical absence of effective policies, procedures, and limits. Policies, procedures, or limits (or the lack thereof) are largely or entirely ineffective with regard to identifying, measuring, monitoring, or controlling the risks posed by significant activities; are completely inconsistent with the experience of staff, the organization’s strategic goals and objectives, or the financial strength of the institution; or do not delineate accountability or lines of authority. Also, policies may be completely lacking with regard to providing for effective due diligence before engaging in new activities or products. Critical weaknesses could seriously jeopardize the continued viability of the institution and require immediate and close supervisory attention.

4070.0.4.2.1.3 Risk Monitoring and Management Information Systems

**Rating 1 (Strong).** An assessment of Strong indicates that risk-monitoring practices and MIS reports address all material risks. The key assumptions, data sources, and procedures used in measuring and monitoring risk are appropriate, thoroughly documented, and frequently tested for reliability. Reports and other forms of communication are consistent with activities; are structured to monitor exposures and compliance with established limits, goals, or objectives; and compare actual versus expected performance when appropriate. Management and board reports are accurate and timely and contain sufficient information to identify adverse trends and to thoroughly evaluate the level of risk faced by the institution.

**Rating 2 (Satisfactory).** An assessment of Satisfactory indicates that risk-monitoring practices and MIS reports cover major risks and business areas, although they may be lacking in some modest degree. In general, the reports contain valid assumptions that are periodically tested for accuracy and reliability and are adequately documented and distributed to the appropriate decisionmakers. Reports and other forms of communication generally are consistent with activities; are structured to monitor exposures and compliance with established limits, goals, or objectives; and compare actual versus expected performance when appropriate. Management and board reports are generally accurate and timely, and broadly identify adverse trends and the level of risk faced by the institution. Any weaknesses or deficiencies that have been identified are in the process of being addressed.

**Rating 3 (Fair).** An assessment of Fair signifies that weaknesses exist in the institution’s risk-monitoring practices or MIS reports that require more-than-normal supervisory attention. The weaknesses may involve a broad range of activities or be material to a major business line or activity. They may contribute to ineffective risk identification or monitoring through inappropriate assumptions, incorrect data, poor documentation, or the lack of timely testing. In addition, MIS reports may not be distributed to the appropriate decisionmakers, adequately monitor significant risks, or properly identify adverse trends and the level of risk faced by the institution. Weaknesses noted could have adverse effects on the safety and soundness of the institution if corrective action is not taken by management.
Rating 4 (Marginal). An assessment of Marginal represents deficient risk-monitoring practices or MIS reports that, unless properly addressed, could seriously affect the safety and soundness of the institution. A number of significant risks to the institution are not adequately monitored or reported. Ineffective risk identification may result from notably inappropriate assumptions, incorrect data, poor documentation, or the lack of timely testing. In addition, MIS reports may not be distributed to the appropriate decisionmakers, may inadequately monitor significant risks, or fail to identify adverse trends and the level of risk faced by the institution. The risk-monitoring and MIS deficiencies warrant a high degree of supervisory attention because, unless properly addressed, they could seriously affect the safety and soundness of the institution.

Rating 5 (Unsatisfactory). An assessment of Unsatisfactory indicates a critical absence of risk monitoring and MIS. They are wholly deficient due to inappropriate assumptions, incorrect data, poor documentation, or the lack of timely testing. Moreover, MIS reports may not be distributed to the appropriate decisionmakers, fail to monitor significant risks, or fail to identify adverse trends and the level of risk faced by the institution. These critical weaknesses require immediate and close supervisory attention, as they could seriously jeopardize the continued viability of the institution.

Rating 2 (Satisfactory). An assessment of Satisfactory indicates that the system of internal controls adequately covers major risks and business areas, with some modest weaknesses. In general, the control functions are independent from the business lines, and there is appropriate separation of duties. The control system supports accuracy in recordkeeping practices and reporting systems, is adequately documented, and verifies compliance with laws and regulations, including consumer laws and regulations. Internal controls and information systems are adequately tested and reviewed, and the coverage, procedures, findings, and responses to audits and review tests are documented. Identified material weaknesses are given appropriate attention, and management’s actions to address material weaknesses are objectively reviewed and verified. The board or its audit committee reviews the effectiveness of internal audits and other control review activities. Any weaknesses or deficiencies that have been identified are modest in nature and in the process of being addressed.

Rating 3 (Fair). An assessment of Fair signifies that weaknesses exist in the system of internal controls that require more-than-normal supervisory attention. The weaknesses may involve a broad range of activities or be material to a major business line or activity. The weaknesses may include insufficient oversight of internal controls and audit by the board or its audit committee; unclear or conflicting lines of authority and responsibility; a lack of independence between control areas and business activities; or ineffective separation of duties. The internal control system may produce inadequate or untimely risk coverage and verification, including monitoring compliance with both safety- and-soundness and consumer laws and regulations; inaccurate records or financial, operational, or regulatory reporting; a lack of documentation for work performed; or a lack of timeliness in management review and correction of identified weaknesses. Weaknesses noted could have adverse effects on the safety and soundness of
the institution if corrective action is not taken by management.

Rating 4 (Marginal). An assessment of Marginal represents a deficient internal control system that does not adequately address a number of significant risks to the institution. The deficiencies may include neglect of internal controls and audit by the board or its audit committee, conflicting lines of authority and responsibility, a lack of independence between control areas and business activities, or no separation of duties in critical areas. The internal control system may produce inadequate, untimely, or nonexistent risk coverage and verification in certain areas, including monitoring compliance with both safety-and-soundness and consumer laws and regulations; inaccurate records or financial, operational, or regulatory reporting; a lack of documentation for work performed; or infrequent management review and correction of identified weaknesses. The internal control deficiencies warrant a high degree of supervisory attention because, unless properly addressed, they could seriously affect the safety and soundness of the institution.

Rating 5 (Unsatisfactory). An assessment of Unsatisfactory indicates a critical absence of an internal control system. There may be no oversight by the board or its audit committee, conflicting lines of authority and responsibility, no distinction between control areas and business activities, or no separation of duties. The internal control system may produce totally inadequate or untimely risk coverage and verification, including monitoring compliance with both safety-and-soundness and consumer laws and regulations; completely inaccurate records or regulatory reporting; a severe lack of documentation for work performed; or no management review and correction of identified weaknesses. Such deficiencies require immediate and close supervisory attention, as they could seriously jeopardize the continued viability of the institution.

4070.0.4.3 Financial-Condition Component

Rating 1 (Strong). A rating of 1 indicates that the consolidated BHC is financially sound in almost every respect; any negative findings are basically of a minor nature and can be handled in a routine manner. The capital adequacy, asset quality, earnings, and liquidity of the consolidated BHC are more than adequate to protect the company from reasonably foreseeable external economic and financial disturbances. The company generates more-than-sufficient cash flow to service its debt and fixed obligations with no harm to subsidiaries of the organization.

Rating 2 (Satisfactory). A rating of 2 indicates that the consolidated BHC is fundamentally financially sound, but may have modest weaknesses correctable in the normal course of business. The capital adequacy, asset quality, earnings, and liquidity of the consolidated BHC are adequate to protect the company from external economic and financial disturbances. The company also generates sufficient cash flow to service its obligations; however, areas of weakness could develop into areas of greater concern. To the extent minor adjustments are handled in the normal course of business, the supervisory response is limited.

Rating 3 (Fair). A rating of 3 indicates that the consolidated BHC exhibits a combination of weaknesses ranging from fair to moderately severe. The company has less-than-adequate financial strength stemming from one or more of the following: modest capital deficiencies, substandard asset quality, weak earnings, or liquidity problems. As a result, the BHC and its subsidiaries are less resistant to adverse business conditions. The financial condition of the BHC will likely deteriorate if concerted action is not taken to correct areas of weakness. The company’s cash flow is sufficient to meet immediate obligations, but may not remain adequate if action is not taken to correct weaknesses. Consequently, the BHC is vulnerable and requires more-than-normal supervision. Overall financial strength and capacity are still such as to pose only a remote threat to the viability of the company.

Rating 4 (Marginal). A rating of 4 indicates that the consolidated BHC has either inadequate capital, an immoderate volume of problem assets, very weak earnings, serious liquidity issues, or a combination of factors that are less than satisfactory. An additional weakness may be that the BHC’s cash flow needs are met only by upstreaming imprudent dividends and/or fees from subsidiaries. Unless prompt action is taken to correct these conditions, they could impair future viability. BHCs in this category require close supervisory attention and increased financial surveillance.
Rating 5 (Unsatisfactory). A rating of 5 indicates that the volume and character of financial weaknesses of the BHC are so critical as to require urgent aid from shareholders or other sources to prevent insolvency. The imminent inability of such a company to service its fixed obligations and/or prevent capital depletion due to severe operating losses places its viability in serious doubt. Such companies require immediate corrective action and constant supervisory attention.

4070.0.4.3.1 The Financial-Condition Subcomponents

The financial-condition subcomponents can be evaluated along business lines, product lines, or legal-entity lines—depending on which type of review is most appropriate for the holding company structure.

4070.0.4.3.1.1 Capital Adequacy

Rating 1 (Strong). A rating of 1 indicates that the consolidated BHC maintains more-than-adequate capital to support the volume and risk characteristics of all parent and subsidiary business lines and products, provide a sufficient cushion to absorb unanticipated losses arising from the parent and subsidiary activities, and support the level and composition of parent and subsidiary borrowing. In addition, a company assigned a rating of 1 has more-than-sufficient capital to provide a base for the growth of risk assets and the entry into capital markets as the need arises for the parent company and subsidiaries.

Rating 2 (Satisfactory). A rating of 2 indicates that the consolidated BHC maintains adequate capital to support the volume and risk characteristics of all parent and subsidiary business lines and products, provide a sufficient cushion to absorb unanticipated losses arising from the parent and subsidiary activities, and support the level and composition of parent and subsidiary borrowing. In addition, a company assigned a rating of 2 has sufficient capital to provide a base for the growth of risk assets and the entry into capital markets as the need arises for the parent company and subsidiaries.

Rating 3 (Fair). A rating of 3 indicates that the consolidated BHC may not maintain sufficient capital to ensure support for the volume and risk characteristics of all parent and subsidiary business lines and products, the unanticipated losses arising from the parent and subsidiary activities, or the level and composition of parent and subsidiary borrowing. In addition, a company assigned a rating of 3 may not maintain a sufficient capital position to provide a base for the growth of risk assets and the entry into capital markets as the need arises for the parent company and subsidiaries. The capital position of the consolidated BHC could quickly become inadequate in the event of asset deterioration or other negative factors and therefore requires more-than-normal supervisory attention.

Rating 4 (Marginal). A rating of 4 indicates that the capital level of the consolidated BHC is significantly below the amount needed to ensure support for the volume and risk characteristics of all parent and subsidiary business lines and products, the unanticipated losses arising from the parent and subsidiary activities, and the level and composition of parent and subsidiary borrowing. In addition, a company assigned a rating of 4 does not maintain a sufficient capital position to provide a base for the growth of risk assets and the entry into capital markets as the need arises for the parent company and subsidiaries. If left unchecked, the consolidated capital position of the company might evolve into weaknesses or conditions that could threaten the viability of the institution. The capital position of the consolidated BHC requires immediate supervisory attention.

Rating 5 (Unsatisfactory). A rating of 5 indicates that the level of capital of the consolidated BHC is critically deficient and in need of immediate corrective action. The consolidated capital position threatens the viability of the institution and requires constant supervisory attention.

Rating 4 (Marginal). A rating of 4 indicates that the capital level of the consolidated BHC is significantly below the amount needed to ensure support for the volume and risk characteristics of all parent and subsidiary business lines and products, the unanticipated losses arising from the parent and subsidiary activities, and the level and composition of parent and subsidiary borrowing. In addition, a company assigned a rating of 4 does not maintain a sufficient capital position to provide a base for the growth of risk assets and the entry into capital markets as the need arises for the parent company and subsidiaries. If left unchecked, the consolidated capital position of the company might evolve into weaknesses or conditions that could threaten the viability of the institution. The capital position of the consolidated BHC requires immediate supervisory attention.

Rating 5 (Unsatisfactory). A rating of 5 indicates that the level of capital of the consolidated BHC is critically deficient and in need of immediate corrective action. The consolidated capital position threatens the viability of the institution and requires constant supervisory attention.

4070.0.4.3.1.2 Asset Quality

Rating 1 (Strong). A rating of 1 indicates that the BHC maintains strong asset quality across all parts of the organization, with a very low level of criticized and nonperforming assets. Credit risk across the organization is commensurate with management’s abilities and modest in relation to credit-risk management practices.

Rating 2 (Satisfactory). A rating of 2 indicates that the BHC maintains satisfactory asset qual-
ity across all parts of the organization, with a manageable level of criticized and nonperforming assets. Any identified weaknesses in asset quality are correctable in the normal course of business. Credit risk across the organization is commensurate with management’s abilities and generally modest in relation to credit-risk management practices.

**Rating 3 (Fair).** A rating of 3 indicates that the asset quality across all or a material part of the consolidated BHC is less than satisfactory. The BHC may be facing a decrease in the overall quality of assets currently maintained on- and off-balance-sheet. The BHC may also be experiencing an increase in credit-risk exposure that has not been met with an appropriate improvement in risk-management practices. BHCs assigned a rating of 3 require more-than-normal supervisory attention.

**Rating 4 (Marginal).** A rating of 4 indicates that the BHC’s asset quality is deficient. The level of problem assets and/or unmitigated credit risk subjects the holding company to potential losses that, if left unchecked, may threaten its viability. BHCs assigned a rating of 4 require immediate supervisory attention.

**Rating 5 (Unsatisfactory).** A rating of 5 indicates that the BHC’s asset quality is critically deficient and presents an imminent threat to the institution’s viability. BHCs assigned a rating of 5 require immediate remedial action and constant supervisory attention.

4070.0.4.3.1.3 Earnings

**Rating 1 (Strong).** A rating of 1 indicates that the quantity and quality of the BHC’s consolidated earnings over time are more than sufficient to make full provision for the absorption of losses and/or accretion of capital when due consideration is given to asset quality and BHC growth. Generally, BHCs with a 1 rating have earnings well above peer-group averages.

**Rating 2 (Satisfactory).** A rating of 2 indicates that the quantity and quality of the BHC’s consolidated earnings over time are generally adequate to make provision for the absorption of losses and/or accretion of capital when due consideration is given to asset quality and BHC growth. Generally, BHCs with a 2 earnings rating have earnings that are in line with or slightly above peer-group averages.

**Rating 3 (Fair).** A rating of 3 indicates that the BHC’s consolidated earnings are not fully adequate to make provisions for the absorption of losses and the accretion of capital in relation to company growth. The consolidated earnings of companies rated 3 may be further clouded by static or inconsistent earnings trends, chronically insufficient earnings, or less-than-satisfactory asset quality. BHCs with a 3 rating for earnings generally have earnings below peer-group averages. Such BHCs require more-than-normal supervisory attention.

**Rating 4 (Marginal).** A rating of 4 indicates that the BHC’s consolidated earnings, while generally positive, are clearly not sufficient to make full provision for losses and the necessary accretion of capital. BHCs with earnings rated 4 may be characterized by erratic fluctuations in net income, poor earnings (and the likelihood of the development of a further downward trend), intermittent losses, chronically depressed earnings, or a substantial drop from the previous year. The earnings of such companies are generally substantially below peer-group averages. Such BHCs require immediate supervisory attention.

**Rating 5 (Unsatisfactory).** A rating of 5 indicates that the BHC is experiencing losses or a level of earnings that is worse than that described for the 4 rating. Such losses, if not reversed, represent a distinct threat to the BHC’s solvency through erosion of capital. Such BHCs require immediate and constant supervisory attention.

4070.0.4.3.1.4 Liquidity

**Rating 1 (Strong).** A rating of 1 indicates that the BHC maintains strong liquidity levels and well-developed funds-management practices. The parent company and subsidiaries have reliable access to sufficient sources of funds on favorable terms to meet present and anticipated liquidity needs.

**Rating 2 (Satisfactory).** A rating of 2 indicates that the BHC maintains satisfactory liquidity levels and funds-management practices. The parent company and subsidiaries have access to sufficient sources of funds on acceptable terms to meet present and anticipated liquidity needs. Modest weaknesses in funds-management practices may be evident, but those weaknesses are correctable in the normal course of business.
Rating 3 (Fair). A rating of 3 indicates that the BHC’s liquidity levels or funds-management practices are in need of improvement. BHCs rated 3 may lack ready access to funds on reasonable terms or may evidence significant weaknesses in funds-management practices at the parent company or subsidiary levels. However, these deficiencies are considered correctable in the normal course of business. Such BHCs require more-than-normal supervisory attention.

Rating 4 (Marginal). A rating of 4 indicates that the BHC’s liquidity levels or funds-management practices are deficient. Institutions rated 4 may not have or be able to obtain a sufficient volume of funds on reasonable terms to meet liquidity needs at the parent company or subsidiary levels and require immediate supervisory attention.

Rating 5 (Unsatisfactory). A rating of 5 indicates that the BHC’s liquidity levels or funds-management practices are critically deficient and may threaten the continued viability of the institution. Institutions rated 5 require constant supervisory attention and immediate external financial assistance to meet maturing obligations or other liquidity needs.

4070.0.4.4 Impact Component

The I component rating reflects the aggregate potential impact of the nondepository entities on the subsidiary depository institution(s). It is rated on a five-point numerical scale. Ratings will be assigned in ascending order of supervisory concern as follows:

1 — low likelihood of significant negative impact
2 — limited likelihood of significant negative impact
3 — moderate likelihood of significant negative impact
4 — considerable likelihood of significant negative impact
5 — high likelihood of significant negative impact

Rating 3 (limited likelihood of significant negative impact). A rating of 3 indicates a limited likelihood that the nondepository entities of the BHC will have a significant negative impact on the subsidiary depository institution(s) due to the adequate financial condition of the nondepository entities, the satisfactory risk-management practices within the parent nondepository entities, or the corporate structure of the BHC. The BHC maintains adequate capital allocation across the organization commensurate with associated risks. Intra-group exposures, including servicing agreements, are unlikely to undermine the financial condition of the subsidiary depository institution(s). Parent company cash flow is satisfactory and generally does not require excessive dividend payments from subsidiaries. The potential risks posed to the subsidiary depository institution(s) by strategic plans, the control environment, risk concentrations, or legal or reputational issues within or facing the nondepository entities are minor in nature and can be addressed in the normal course of business.

Rating 1 (low likelihood of significant negative impact). A rating of 1 indicates that the nondepository entities of the BHC are highly unlikely to have a significant negative impact on the subsidiary depository institution(s) due to the sound financial condition of the nondepository entities, the strong risk-management practices within the nondepository entities, or the corporate structure of the BHC. The BHC maintains an appropriate capital allocation across the organization commensurate with associated risks.
risk concentrations, or legal or reputational issues within the nondepository entities may pose significant risks to the subsidiary depository institution(s). A BHC assigned a 3 impact rating requires more-than-normal supervisory attention, as there could be adverse effects on the safety and soundness of the subsidiary depository institution(s) if corrective action is not taken by management.

**Rating 4 (considerable likelihood of significant negative impact).** A rating of 4 indicates that there is a considerable likelihood that the nondepository entities of the BHC will have a significant negative impact on the subsidiary depository institution(s) due to weaknesses in the financial condition and/or risk-management practices of the nondepository entities. A 4-rated BHC may have insufficient capital within the nondepository entities to support their risks and activities. Intra-group exposures, including servicing agreements, may also have the immediate potential to undermine the financial condition of the subsidiary depository institution(s). Parent company cash flow may be dependent on excessive dividend payments from subsidiaries. Strategic-growth plans, weaknesses in the control environment, risk concentrations, or legal or reputational issues within the nondepository entities may pose considerable risks to the subsidiary depository institution(s). A BHC assigned a 4 impact rating requires immediate remedial action and close supervisory attention because the nondepository entities could seriously affect the safety and soundness of the subsidiary depository institution(s).

**Rating 5 (high likelihood of significant negative impact).** A rating of 5 indicates a high likelihood that the aggregate impact of the nondepository entities of the BHC on the subsidiary depository institution(s) is or will become significantly negative due to substantial weaknesses in the financial condition and/or risk-management practices of the nondepository entities. Strategic-growth plans, a deficient control environment, risk concentrations, or legal or reputational issues within the nondepository entities may pose critical risks to the subsidiary depository institution(s). The parent company also may be unable to meet its obligations without excessive support from the subsidiary depository institution(s). The BHC requires immediate and close supervisory attention, as the nondepository entities seriously jeopardize the continued viability of the subsidiary depository institution(s).

4070.0.4.5 (D) Depository Institutions Component

The (D) component identifies the overall condition of the subsidiary depository institution(s) of the BHC. For BHCs with only one subsidiary depository institution, the (D) component rating generally will mirror the CAMELS composite rating for that depository institution. To arrive at a (D) component rating for BHCs with multiple subsidiary depository institutions, the CAMELS composite ratings for each of the depository institutions should be weighted, giving consideration to asset size and the relative importance of each depository institution within the overall structure of the organization. In general, it is expected that the resulting (D) component rating will reflect the lead depository institution’s CAMELS composite rating.

If, in the process of analyzing the financial condition and risk-management programs of the consolidated organization, a major difference of opinion regarding the safety and soundness of the subsidiary depository institution(s) emerges between the Federal Reserve and the depository institution’s primary regulator, then the (D) rating should reflect the Federal Reserve’s evaluation.
Rating Risk-Management Processes and Internal Controls of BHCs Having $50 Billion or More in Total Assets

Section 4070.1

WHAT’S NEW IN THIS REVISED SECTION

Effective July 2016, this section is amended to acknowledge the issuance of SR-16-11, “Supervisory Guidance for Assessing Risk Management at Supervised Institutions with Total Consolidated Assets Less than $50 Billion.” With the issuance of SR-16-11, SR-95-51 is applicable to only state member banks and bank holding companies having $50 billion or more in total assets.

The guidance within this section pertains to SR-95-51 and applies to the rating of risk management, processes, and internal controls of state member banks and bank holding companies that have $50 billion or more in total assets.

The Federal Reserve places significant supervisory emphasis on the importance of sound risk-management processes and strong internal controls when evaluating the activities of banking organizations it supervises. Properly managing risks is always critical to the conduct of safe and sound banking activities, and it is even more important as new technologies, product innovation, and the size and speed of financial transactions change the nature of banking markets.

A bank holding company’s failure to establish a management structure that adequately identifies, measures, monitors, and controls the risks involved in its various products and lines of business has long been considered unsafe and unsound conduct. Accordingly, while a bank holding company’s financial performance is an important indicator of the adequacy of management, it is essential that examiners give significant weight to the quality of risk-management practices and internal controls when they evaluate the management and overall financial condition of banking organizations.

Consistent with the greater supervisory emphasis given to risk management in Federal Reserve examination and supervisory policy statements, System examiners are to assign a formal supervisory rating to the adequacy of a bank holding company’s risk-management processes, including its internal controls. This step is a natural extension of current procedures that incorporate an assessment of risk management and internal controls during each on-site full-scope inspection. The specific rating of risk management and internal controls should be given significant weight when evaluating management under the bank holding company RFI/C(D) rating system. Like the other components of this system, the risk-management rating should be based on a five-point numerical scale.

The rating of the risk-management process is designed to bring together and summarize much of the analysis of and many of the findings about a bank holding company’s process for managing and controlling risks, which are an important part of the examiner’s review of these individual areas. The formal rating is intended to highlight and incorporate both the quantitative and qualitative aspects of an examiner’s review of an organization’s overall process for identifying, measuring, monitoring, and controlling risk and to facilitate appropriate follow-up action.

The overall profitability, asset quality, and capital adequacy of a bank or bank holding company should continue to influence the examiner’s assessment of management, but these indicators can to some extent be affected, either favorably or adversely, by factors outside management’s control. For this reason, the specific evaluation of the risk-management process should be a primary factor when rating management, especially in the case of larger banking organizations whose activities and structures require more-formal and extensive procedures.

Examiners should apply the guidance in this section flexibly to appropriately reflect the banking organization’s circumstances and the nature, scope, and complexity of its operations. Risk-management ratings should be assigned to all bank holding companies, regardless of their size.

In the appropriate open sections of the inspection report, examiners should discuss in a clear and straightforward manner the nature and severity of any problems or deficiencies found and the steps required to correct them, particularly if the risk-management rating is less than satisfactory. Serious lapses or deficiencies in internal controls, including inadequate separation of duties, can constitute an unsafe and unsound practice and possibly lead to significant losses or otherwise compromise the financial integrity of the organization. If appropriate, the bank holding company’s directors and officers should be advised that the Federal Reserve will initiate supervisory actions if its failure to separate critical operational duties creates the potential for serious losses or if material deficiencies or situations that threaten the safe and

BHC Supervision Manual
July 2016
Page 1
sound conduct of its activities are not adequately addressed in a timely manner. Such supervisory actions may include formal enforcement actions against the bank holding company, its responsible officers and directors, or both; supervisory actions would also require the immediate implementation of all necessary corrective measures. (See SR-95-51, as amended by SR-04-18 and SR-16-11.)

4070.1.1 ELEMENTS OF RISK MANAGEMENT

When rating the quality of risk management at bank holding companies as part of the evaluation of the overall quality of management, examiners should place primary consideration on findings relating to the following elements of a sound risk-management system:

1. active board and senior management oversight
2. adequate policies, procedures, and limits
3. adequate risk measurement, risk monitoring, and management information systems
4. comprehensive internal controls

Examiners should recognize that the considerations specified in SR-04-18 and SR-95-51 are intended only to assist in the evaluation of risk-management practices. They are not a checklist of requirements for an individual organization. Moreover, while all bank holding companies should be able to assess the major risks of the consolidated organization, examiners should expect parent companies that centrally manage the operations and functions of their subsidiary banks to have more-comprehensive, detailed, and developed risk-management systems than companies that delegate the management of risks to relatively autonomous banking subsidiaries.

4070.1.1.1 Active Board and Senior Management Oversight

In assessing the quality of oversight by boards of directors and senior management, examiners should consider whether the bank holding company follows policies and practices such as those described below:

1. The board and senior management have identified and have a clear understanding and working knowledge of the types of risks inherent in the bank holding company’s activities, and they make appropriate efforts to remain informed about these risks as financial markets, risk-management practices, and the bank holding company’s activities evolve.
2. The board has reviewed and approved appropriate policies to limit risks inherent in the bank holding company’s lending, investing, trading, trust, fiduciary, and other significant activities or products.
3. The board and management are sufficiently familiar with and are using adequate record-keeping and reporting systems to measure and monitor the major sources of risk to the organization.
4. The board periodically (1) reviews and approves risk-exposure limits to conform with any changes in the bank holding company’s strategies, (2) addresses new products, and (3) reacts to changes in market conditions.
5. Management ensures that its lines of business are managed and staffed by personnel whose knowledge, experience, and expertise are consistent with the nature and scope of the bank holding company’s activities.
6. Management ensures that the depth of staff resources is sufficient to operate and soundly manage the bank holding company’s activities and that its employees have the integrity, ethics, and competence that are consistent with a prudent management philosophy and operating style.
7. All levels of management adequately supervise the day-to-day activities of officers and employees, including management supervision of senior officers or heads of business lines.
8. Management is able to respond to risks that may arise from changes in the competitive environment or from innovations in markets in which the organization is active.
9. Before embarking on new activities or introducing new products, management identifies and reviews all risks associated with the activity or product and ensures that the infrastructure and internal controls necessary to manage the related risks are in place.

4070.1.1.2 Adequate Policies, Procedures, and Limits

A bank holding company’s board of directors and senior management should tailor their risk-management policies and procedures to the types of risks that arise from the organization’s
activities. The following guidelines should assist examiners in evaluating the adequacy of a bank holding company’s policies, procedures, and limits:

1. The bank holding company’s policies, procedures, and limits provide for adequate identification, measurement, monitoring, and control of the risks posed by its lending, investing, trading, trust, fiduciary, and other significant activities.

2. The policies, procedures, and limits are consistent with management’s experience level, the organization’s stated goals and objectives, and its overall financial strength.

3. Policies clearly delineate accountability and lines of authority across the organization’s activities.

4. Policies provide for the review of new activities of the organization to ensure that the infrastructures necessary to identify, monitor, and control risks associated with an activity are in place before the activity is initiated.

4070.1.1.3 Adequate Risk Monitoring and Management Information Systems

Effective risk monitoring requires banking organizations to identify and measure all material risk exposures. Consequently, risk-monitoring activities must be supported by information systems that provide senior managers and directors with timely reports on the financial condition, operating performance, and risk exposure of the consolidated organization, as well as provide regular and sufficiently detailed reports for line managers engaged in the day-to-day management of the organization’s activities.

In assessing the adequacy of a bank holding company’s risk measurement and monitoring of risk and the adequacy of its management reports and information systems, examiners should consider whether the following conditions exist:

1. The bank holding company’s risk-monitoring practices and reports address all of its material risks.

2. Key assumptions, data sources, and procedures used in measuring and monitoring risk are appropriate and adequately documented and tested for reliability on an ongoing basis.

3. Reports and other forms of communication are consistent with the bank holding company’s activities; are structured to monitor exposures and compliance with established limits, goals, or objectives; and, as appropriate, compare actual versus expected performance.

4. Reports to management or the directors are accurate and timely and contain sufficient information for decision makers to identify any adverse trends and to adequately evaluate the level of risk the bank holding company faces.

4070.1.1.4 Adequate Internal Controls

A bank holding company’s internal control structure is critical to its safe and sound functioning in general and to its risk-management system, in particular. Establishing and maintaining an effective system of controls, including the enforcement of official lines of authority and the appropriate separation of duties—such as trading, custodial, and back-office—is one of management’s more important responsibilities.

Appropriate segregation of duties is a fundamental and essential element of a sound risk-management and internal control system. Failure to implement and maintain an adequate separation of duties can constitute an unsafe and unsound practice and possibly lead to serious losses or otherwise compromise the financial integrity of the bank holding company. Serious lapses or deficiencies in internal controls, including inadequate segregation of duties, may warrant supervisory action, including formal enforcement action.

When properly structured, a system of internal controls promotes effective operations and reliable financial and regulatory reporting; safeguards assets; and helps to ensure compliance with relevant laws, regulations, and bank holding company policies. Ideally, internal controls are tested by an independent internal auditor who reports directly to either the bank holding company’s board of directors or a designated board committee, typically the audit committee. Personnel who perform these reviews should generally be independent of the function they are assigned to review. Given the importance of appropriate internal controls to banking organizations of all sizes and risk profiles, the results of audits or reviews, whether conducted by an internal auditor or other personnel, should be adequately documented, as should management’s responses to them. In addition, communication channels should exist that allow negative or sensitive findings to be reported directly to the board of directors or the relevant board committee.

In evaluating the adequacy of a bank holding
company’s internal controls and audit procedures, examiners should consider whether the following conditions are met:

1. The system of internal controls is appropriate to the type and level of risks posed by the nature and scope of the organization’s activities.
2. The bank holding company’s organizational structure establishes clear lines of authority and responsibility for monitoring adherence to policies, procedures, and limits.
3. Reporting lines ensure that control areas are sufficiently independent from the business lines, and the reporting lines adequately separate duties throughout the organization, such as those duties relating to trading, custodial, and back-office activities.
4. Official organizational structures reflect actual operating practices.
5. Financial, operational, and regulatory reports are reliable, accurate, and timely. When applicable, exceptions are noted and promptly investigated.
6. Adequate procedures exist for ensuring compliance with applicable laws and regulations.
7. Internal audit or other control review practices ensure independence and objectivity.
8. Internal controls and information systems are adequately tested and reviewed; the coverage, procedures, findings, and responses to audits and review tests are adequately documented; identified material weaknesses are given appropriate and timely high-level attention; and management’s actions to address material weaknesses are objectively verified and reviewed.
9. The audit committee or the board of directors regularly reviews the effectiveness of internal audits and other control review activities.

### 4070.1.2 RATING DEFINITIONS

The rating for risk management is based on a scale of one through five, in ascending order of supervisory concern. Examiners should assign this rating to reflect their findings in all four of the elements of sound risk management described above. The risk-management rating should be reflected in the overall “Risk-Management” rating of the bank holding company and should be consistent with the following criteria:

#### Rating 1 (Strong)

A rating of 1 indicates that management effectively identifies and controls all major types of risk posed by the BHC’s activities. Management is fully prepared to address risks emanating from new products and changing market conditions. The board and management are forward looking and active participants in managing risk. Management ensures that appropriate policies and limits exist and are understood, reviewed, and approved by the board. Policies and limits are supported by risk-monitoring procedures, reports, and management information systems that provide management and the board with the information and analysis necessary to make timely and appropriate decisions in response to changing conditions. Risk-management practices and the organization’s infrastructure are flexible and highly responsive to changing industry practices and current regulatory guidance. Staff has sufficient experience, expertise, and depth to manage the risks assumed by the institution.

Internal controls and audit procedures are sufficiently comprehensive and appropriate to the size and activities of the institution. There are few noted exceptions to the institution’s established policies and procedures, and none is material. Management effectively and accurately monitors the condition of the institution consistent with the standards of safety and soundness and in accordance with internal and supervisory policies and practices. Risk-management processes are fully effective in identifying, monitoring, and controlling the risks to the institution.

#### Rating 2 (Satisfactory)

A rating of 2 indicates that the institution’s management of risk is largely effective but lacking in some modest degree. Management demonstrates a responsiveness and ability to cope successfully with existing and foreseeable risks that may arise in carrying out the institution’s business plan. While the institution may have some minor risk-management weaknesses, these problems have been recognized and are in the process of being resolved. Overall, board and senior management oversight, policies and limits, risk-monitoring procedures, reports, and management information systems are considered satisfactory and effective in maintaining a safe and sound institution. Risks are controlled in a manner that does not require more-than-normal supervisory attention.

The BHC’s risk-management practices and infrastructure are satisfactory and generally are adjusted appropriately in response to changing industry practices and current regulatory guidance. Staff experience, expertise, and depth are
generally appropriate to manage the risks assumed by the institution.

Internal controls may display modest weaknesses or deficiencies, but they are correctable in the normal course of business. The examiner may have recommendations for improvement, but the weaknesses noted should not have a significant effect on the safety and soundness of the institution.

Rating 3 (Fair). A rating of 3 signifies that risk-management practices are lacking in some important ways and, therefore, are a cause for more-than-normal supervisory attention. One or more of the four elements of sound risk management1 (active board and senior management oversight; adequate policies, procedures, and limits; adequate risk-management monitoring and management information systems; comprehensive internal controls) are considered less than acceptable and have precluded the institution from fully addressing one or more significant risks to its operations. Certain risk-management practices are in need of improvement to ensure that management and the board are able to identify, monitor, and control all significant risks to the institution. Also, the risk-management structure may need to be improved in areas of significant business activity, or staff expertise may not be commensurate with the scope and complexity of business activities. In addition, management’s response to changing industry practices and regulatory guidance may need to improve.

The internal control system may be lacking in some important aspects, particularly as indicated by continued control exceptions or by a failure to adhere to written policies and procedures. The risk-management weaknesses could have adverse effects on the safety and soundness of the institution if corrective action is not taken by management.

Rating 4 (Marginal). A rating of 4 represents deficient risk-management practices that fail to identify, monitor, and control significant risk exposures in many material respects. Generally, such a situation reflects a lack of adequate guidance and supervision by management and the board. One or more of the four elements of sound risk management are deficient and require immediate and concerted corrective action by the board and management.

The institution may have serious identified weaknesses, such as an inadequate separation of duties, that require substantial improvement in internal control or accounting procedures or that require improved adherence to supervisory standards or requirements. The risk-management deficiencies warrant a high degree of supervisory attention because, unless properly addressed, they could seriously affect the safety and soundness of the institution.

Rating 5 (Unsatisfactory). A rating of 5 indicates a critical absence of effective risk-management practices with respect to the identification, monitoring, or control over significant risk exposures. One or more of the four elements of sound risk management are considered wholly deficient, and management and the board have not demonstrated the capability to address these deficiencies.

Internal controls are critically weak and, as such, could seriously jeopardize the continued viability of the institution. If not already evident, there is an immediate concern as to the reliability of accounting records and regulatory reports and the potential for losses if corrective measures are not immediately taken. Deficiencies in the institution’s risk-management procedures and internal controls require immediate and close supervisory attention.

4070.1.3 REPORTING CONCLUSIONS

For bank holding companies, the separate numerical rating for the risk-management component and the rationale for the rating assigned should be included as the “Risk-Management Rating: (numerical rating)” and discussed on confidential page B, “Condition of Bank Holding Company,” of the bank holding company inspection report. Comments, conclusions, and criticisms relating to a bank holding company’s risk-management process should be brought to the attention of management and included on the “Policies and Supervision” page2 of the bank holding company inspection report, as well as

---

2. If a problem area is cited within the core section, the respective supporting report pages (the “Policies and Supervision” page) are to be included in the report to support the critical comments. See section 5010.1.3.
on core page 1, “Examiner’s Comments and Matters Requiring Special Board Attention,” if considered appropriate and particularly if the rating is less than satisfactory.

Inspection reports and transmittal letters to boards of directors of bank holding companies should specifically describe the types and nature of corrective actions that bank holding companies need to take to address noted risk-management and internal control deficiencies. When appropriate, bank holding companies should also be advised that the Federal Reserve will initiate supervisory actions if the failure to separate critical operational duties creates the potential for serious losses or if material deficiencies or situations that threaten the safe and sound conduct of a BHC’s activities are not adequately addressed in a timely manner. Such supervisory actions may include formal enforcement actions against the bank holding company (or a state member bank), its responsible officers and directors, or both; supervisory actions would also require the immediate implementation of all necessary corrective measures.
Revising Supervisory Ratings

Supervisory ratings should be revised whenever there is strong evidence that the financial condition or risk profile of an institution has significantly changed. In a risk-focused and continuous-supervision environment, supervisory ratings should be viewed as a continuum, rather than as a point-in-time assessment of an institution’s financial condition. It is important that supervisory ratings reflect a current assessment of an institution’s financial condition and risk profile. The ratings can affect risk-based deposit insurance premiums; statutory and regulatory requirements, including applications and the prompt-corrective-action provisions of the Federal Deposit Insurance Act; supervisory reporting and inspection or examination requirements; and other factors. While supervisory ratings are most frequently revised as a result of on-site supervisory activities, other sources of information reviewed off-site may also indicate the need for a rating change.

1. SR-99-17 supersedes SR-92-31, which suspended the practice of revising CAMELS ratings for state member banks between examinations.

2. The procedures in SR-99-17 pertain to supervisory rating systems for bank holding companies (RFI/CD); state member banks (CAMELS); U.S. branches and agencies of foreign banking organizations (ROCA); and Edge and agreement corporations, overseas subsidiaries of U.S. banks, and U.S. nonbank subsidiaries of foreign banking organizations (CAMEO).

3. For example, a significant change in financial condition may be evident from some combination of the following: reports of examinations conducted by other agencies, meetings or other communications with management of the institution, published financial reports or press releases, status reports submitted by the institution as required by an enforcement action, and information generated by ongoing surveillance activities.

4. Pursuant to the guidelines set forth in SR-04-18, the assignment of a risk-management (R) rating and a composite (C) rating is required for noncomplex shell bank holding companies.
Nondisclosure of Supervisory Ratings

Section 4070.5

WHAT’S NEW IN THIS REVISED SECTION

Effective July 2008, this section was revised to include the Federal Reserve’s statement and clarification on its expectations regarding confidentiality provisions that are contained in agreements between a banking organization and its counterparties (for example, mutual funds, hedge funds, and other trading counterparties) or other third parties. See section 4070.5.3. (See also SR-07-19 and SR-97-17.)

4070.5.1 LIMITED DISCLOSURE OF CONFIDENTIAL COMPOSITE AND COMPONENT RATINGS IN INSPECTIONS AND EXAMINATIONS

The Federal Reserve’s long-standing policy is to discuss fully and clearly in examination and inspection reports, and during meetings with senior management and boards of directors, supervisory issues, problems, or concerns relating to banking organizations that are under System supervision. Beginning on December 16, 1988, the Board authorized examiners to disclose to the senior officials and boards of directors of inspected bank holding companies the composite numeric rating assigned in an inspection, as part of the inspection report process. (See SR-88-37.) Generally, the Federal Reserve has also provided senior management and directors with the corresponding word descriptions (consisting of a single word or a few words) for the numeric component ratings assigned.

Beginning on January 1, 1997, in an effort to further strengthen communication with supervised banking organizations, the Federal Reserve has provided senior management and directors with the numeric and alphabetic component ratings assigned under various supervisory rating systems.1 (See SR-96-26 and section 5010.4). This disclosure includes the alphabetic component ratings assigned to management under the bank holding company RFI/C(D) rating system. Building on existing practice, this step is intended to better focus management’s attention on possible areas of weakness and the need for timely corrective actions.

The disclosure of the rating and its components should be made in the “Examiner’s Comments and Matters Requiring Special Board Attention” page of inspection reports, in the summary reports prepared for boards of directors of inspected institutions, and in meetings with senior management and directors. In conjunction with disclosing the ratings and their components, examiners or supervisory officials should clearly explain what they mean. During the exit meeting, the examiner should discuss key overall inspection findings, including preliminary composite and component numeric ratings. Examiner-assigned ratings are subject to a review by Reserve Bank supervisory officials, and final ratings are to be included in the inspection report. In disclosing composite and component ratings, the examiner-in-charge should remind the board of directors and management that the ratings assigned are part of the findings of the inspection and are privileged and confidential under applicable law. If composite and component ratings need to be changed between inspections as a result of off-site analysis, the board of directors and management should be informed of the change. Ratings should not be disclosed to the bank holding company’s directors and management until preliminary approval has been received from the appropriate senior Reserve Bank supervisory officials.

4070.5.2 INTERAGENCY ADVISORY ON THE CONFIDENTIALITY OF THE SUPERVISORY RATING AND OTHER NONPUBLIC SUPERVISORY INFORMATION

A February 28, 2005, interagency advisory reminds all banking organizations of the statutory prohibitions on the disclosure of supervisory ratings and other confidential supervisory information to third parties. The agencies2 learned that some insurers had

---

1. The composite rating and the supporting component rating are disclosed for the following rating systems:
   - CAMELS (state member banks)
   - RFI/C(D) (bank holding companies, including financial holding companies)
   - CAMEO (Edge and agreement corporations and overseas subsidiaries of U.S. banks)
   - ROCA (U.S. branches and agencies of foreign banking organizations)
   - Uniform Interagency Trust Rating System (UITRS)
   - the interagency Uniform Rating System for Information Technology (URSIT)

2. The Board of Governors of the Federal Reserve System (FRB), the Office of the Comptroller of the Currency (OCC), the

---

BHC Supervision Manual

July 2008

Page 1
requested or required banks and other savings associations (financial institutions) to disclose their CAMELS rating during the underwriting process when those institutions had sought directors’ and officers’ liability (D&O) coverage. The agencies responded by issuing the advisory to remind all banking organizations that, except in very limited circumstances, they are prohibited by law from disclosing their bank holding company’s RFI/C(D) rating or their financial institution’s CAMELS rating, or other nonpublic rating, and other supervisory information to insurers as well as other nonrelated third parties without permission from their appropriate federal banking agency. (See SR-05-4, SR-04-18 and its attachment, SR-96-26, and SR-88-37.)

Federal banking regulations provide that the bank holding company inspection report, which contains the RFI/C(D) rating, or the financial institution examination report, which contains its CAMELS rating, is nonpublic information and the property of the agency issuing the report. These regulations specifically provide that, except in very limited circumstances, bank holding companies, banks, and other financial institutions may not disclose their inspection or examination report findings or any portion of the report, nor make any representations concerning the report or the report’s findings, without the prior written permission of the appropriate federal banking agency. The circumstances for release of nonpublic supervisory information may include disclosure to a parent holding company, a director, an officer, an attorney, an auditor, or another specified third party, as indicated in the regulations of the appropriate federal banking agency. Any person who discloses or uses nonpublic information except as expressly permitted by one of the appropriate federal banking agencies or as provided by the agency’s regulations may be subject to the criminal penalties provided in 18 U.S.C. 641.

The legal prohibition on the release of nonpublic supervisory information applies to all financial institutions supervised by the agencies, including bank and thrift holding companies, Edge corporations, and the U.S. branches or agencies of foreign banking organizations, that receive confidential supervisory ratings, including the RFI/C(D) rating, ROCA rating, CORE rating, and CAMELS rating. As with the CAMELS rating, these ratings are transmitted to the regulated institutions in inspection or examination reports, which are the property of the agencies.

Financial institutions that receive requests for confidential supervisory ratings should refer all requesters to the following publicly available information in lieu of disclosing any confidential regulatory information, including the CAMELS rating. (See the National Information Center on the Federal Financial Institutions Examination Council [FFIEC] website: www.ffiec.gov.)

- for banks, an institution’s quarterly reports of condition (Call Reports) (see 12 U.S.C. 1817)
- for holding companies or foreign banks with U.S. operations, an institution’s quarterly and annual FR Y or H-(b)11 reports (see 12 U.S.C. 1844, 3106, 3108, 601–604a, and 611–631)

6. See 12 U.S.C. 326, and 12 C.F.R. 261.20(b) (exceptions). 7. RFI/C(D), ROCA, and CAMEO ratings are assigned by the Federal Reserve Board as a result of an examination or inspection. As of January 1, 2005, the Federal Reserve Board adopted a new rating system, RFI/C(D) ratings, for bank holding companies that replaces the former BOPEC rating system. RFI/C(D) ratings components are Risk management, Financial condition, potential Impact of the parent and nondepository subsidiaries on the BHC’s subsidiary depository institutions. See section 4070.0 for a complete description of the RFI/C(D) rating system. Financial institution examinations, a confidential supervisory rating called a CAMELS rating is assigned to each depository institution regulated by the agencies. (A CAMELS rating is based on an evaluation of the financial institution’s Capital, Assets, Management, Earnings, Liquidity, and Sensitivity to market risk; the rating may range from 1 to 5, with 1 being the highest rating.) See the appendix of the Commercial Bank Examination Manual, section A.5020.1, for a complete description of the CAMELS rating system. 4. See 12 C.F.R. 261.2(c)(1), 261.20(g), and 261.22(e). 5. See 12 C.F.R. 261.22.

BHC Supervision Manual July 2008 Page 2
• for national banks, the annual disclosure statement (see 12 C.F.R. 18.3)
• for banks, an institution’s Uniform Bank Performance Report (UBPR), which is available to all interested parties at www.ffiec.gov and is designed for summary and in-depth analysis of banks; for savings associations, the Uniform Thrift Performance Report (UTPR) is available from the Office of Thrift Supervision upon request
• an institution’s publicly available filings, if any, filed with the appropriate federal banking agency (15 U.S.C. 78(I)(i)) or with the U.S. Securities and Exchange Commission
• any reports or ratings on the institution compiled by private companies that track the performance of financial institutions
• any reports or ratings issued by private rating services on public debt issued by an institution
• any publicly available cease-and-desist order or enforcement proceeding against an institution
• any reports or other sources of information on institution performance or internal matters created by the institution that do not contain information prohibited from release by law or regulation

The National Association of Insurance Commissioners (NAIC) was advised by the agencies that some insurers were inappropriately requesting or requiring disclosure of CAMELS ratings as a part of the underwriting process. The agencies requested NAIC’s assistance in notifying insurance companies that this practice should be discontinued because of the confidential nature of the CAMELS rating.

4070.5.3 CONFIDENTIALITY PROVISIONS IN THIRD-PARTY AGREEMENTS

Reports of BHC inspections and their ratings are strictly confidential and cannot be disclosed without the approval of the Board, or in the case of a subsidiary bank, the bank’s primary regulator. Under the Board’s rules regarding the availability of information, Board-supervised banking organizations are prohibited from disclosing confidential supervisory information without prior written permission of the Board’s General Counsel. Confidential supervisory information includes information related to the supervision or inspection of a banking organization. Board staff has taken the position that identification of information requested by, or provided to, supervisory staff—including the fact that an inspection has taken or will take place—is related to an inspection and falls within the definition of confidential supervisory information. It is contrary to Federal Reserve regulation and policy for agreements to contain confidentiality provisions that (1) restrict the banking organization from providing information to Federal Reserve supervisory staff; (2) require or permit, without the prior approval of the Federal Reserve, the banking organization to disclose to a counterparty that any information will be or was provided to Federal Reserve supervisory staff; or (3) require or permit, without the prior approval of the Federal Reserve, the banking organization to inform a counterparty of a current or upcoming Federal Reserve inspection or any nonpublic Federal Reserve supervisory initiative or action. Banking organizations that have entered into agreements containing such confidentiality provisions are subject to legal risk. (See SR-07-19, SR-97-17, and section 1040.0.)
Managing risks is fundamental to the business of banking. Accordingly, the Federal Reserve places significant supervisory emphasis on an institution’s management of risk, including its system of internal controls, when evaluating the overall effectiveness of an institution’s risk management. An institution’s failure to establish a management structure that adequately identifies, measures, monitors, and controls the risks of its activities has long been considered unsafe-and-unsound conduct. Principles of sound management apply to the entire spectrum of risks facing an institution including, but not limited to, credit, market, liquidity, operational, compliance, and legal risk:

- **Credit risk** arises from the potential that a borrower or counterparty will fail to perform on an obligation.
- **Market risk** is the risk to a financial institution’s condition resulting from adverse movements in market rates or prices, including, but not limited to, interest rates, foreign exchange rates, commodity prices, or equity prices.
- **Liquidity risk** is the potential that a financial institution will be unable to meet its obligations as they come due because of an inability to liquidate assets or obtain adequate funding (referred to as “funding liquidity risk”) or that it cannot easily unwind or offset specific exposures without significantly lowering market prices because of inadequate market depth or market disruptions (referred to as “market liquidity risk”).
- **Operational risk** is the risk resulting from inadequate or failed internal processes, people, and systems or from external events.1
- **Compliance risk** is the risk of regulatory sanctions, fines, penalties or losses resulting from failure to comply with laws, rules, regulations, or other supervisory requirements applicable to a financial institution.
- **Legal risk** is the potential that actions against the institution that result in unenforceable contracts, lawsuits, legal sanctions, or adverse judgments can disrupt or otherwise negatively affect the operations or condition of a financial institution.

The risk-management expectations outlined in this guidance are applicable to all supervised institutions with total consolidated assets less than $50 billion, including state member banks, bank holding companies, savings and loan holding companies, and foreign banking organizations with combined total U.S. assets of less than $50 billion. This guidance also applies to insurance and commercial savings and loan holding companies with total consolidated assets less than $50 billion by providing core risk-management guidance. Reserve Bank staff may further consult with Board staff on appropriately tailoring this guidance for these institutions. These risks and the activities associated with them are addressed in greater detail in the Federal Reserve’s supervision manuals and other guidance documents.2 In practice, an institution’s business activities present various combinations, concentrations, and interrelationships of these risks depending on the nature and scope of the particular activity. The following discussion provides guidelines for the supervisory assessment of the overall effectiveness of an institution’s risk management and its formal or informal systems for identifying, measuring, monitoring, and controlling these risks. Refer to SR-16-11 and its attachment.

### 4071.0.1 ELEMENTS OF RISK MANAGEMENT

When evaluating the risk management at an institution as part of the evaluation of the overall effectiveness of management, examiners should place primary consideration on findings relating to the following elements of a sound risk-management system:

- board3 and senior management oversight
- policies, procedures, and limits

---

3. For the purpose of this guidance, for foreign banking organizations, “board of directors” refers to the equivalent governing body of the U.S. operations of the FBO.
• risk monitoring and management information systems
• internal controls

Each of these elements is described further below, along with a list of considerations relevant to assessing each element. Examiners should recognize that the considerations specified in these guidelines are intended only to assist in the evaluation of risk-management practices and are not a checklist of requirements for each institution.

An institution’s risk-management processes are expected to evolve in sophistication, commensurate with the institution’s asset growth, complexity, and risk. At a larger or more complex organization, the institution should have more sophisticated risk-management processes that address the full range of risks regardless of where the activity is conducted in the organization. Moreover, while a holding company should be able to assess the major risks of the consolidated organization, examiners should expect a parent company that centrally manages the operations and functions of its subsidiary banks to have more comprehensive, detailed, and developed risk-management systems than a parent company that delegates the management of risks to relatively autonomous subsidiaries.

For a small community banking organization (CBO) engaged solely in traditional banking activities and whose senior management is actively involved in the details of day-to-day operations, relatively basic risk-management systems may be adequate. In accordance with the Interagency Guidelines Establishing Standards for Safety and Soundness, a CBO is expected, at a minimum, to have internal controls, information systems, and internal audits that are appropriate for the size of the institution and the nature, scope, and risk of its activities.

The risk-management processes of a regional banking organization (RBO) would typically contain detailed guidelines that set specific prudent limits on the principal types of risks relevant to a RBO’s consolidated activities. Furthermore, because of the diversity and the geographic dispersion of their activities, these institutions will require relatively more sophisticated information systems that provide management with timely information that supports the management of risks. The information systems, in turn, should provide management with information that present a consolidated and integrated view of risks that are relevant to the duties and responsibilities of individual managers, senior management, and the board of directors.

Consistent with the principle of national treatment, the Federal Reserve has the same supervisory goals and standards for the U.S. operations of FBOs as for domestic organizations of similar size, scope, and complexity. Given the added element of foreign ownership, an FBO’s risk-management processes and control functions for the U.S. operations may be implemented domestically or outside of the United States. In cases where these functions are performed outside of the United States, the FBO’s oversight function, policies and procedures, and information systems need to be sufficiently transparent to allow U.S. supervisors to assess their adequacy. Additionally, the FBO’s U.S. senior management need to demonstrate and maintain a thorough understanding of all relevant risks affecting the U.S. operations and the associated management information systems, used to manage and monitor these risks within the U.S. operations.

The information systems at a larger institution will naturally require frequent monitoring and testing by independent control areas and by both internal and external auditors, to ensure the integrity of the information used by the board of directors and senior management in overseeing compliance with policies and limits. Therefore, an institution’s risk oversight function needs to be sufficiently independent of the business lines to achieve an adequate separation of duties and the avoidance of conflicts of interest.

4. If these subsidiaries are regulated by another federal banking agency, Federal Reserve examiners should rely to the fullest extent possible on the conclusions drawn by relevant regulators regarding risk management. See also, SR-16-4, “Relying on the Work of the Regulators of the Subsidiary Insured Depository Institution(s) of Bank. Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of Less than $50 Billion.”

5. Refer to 12 CFR 208, Appendix D-1, the Interagency Guidelines Establishing Standards for Safety and Soundness.

6. The Federal Reserve considers an RBO to be a midsize financial institution with total consolidated assets between $10 and $50 billion.

7. Additionally, the Federal Reserve’s Regulation YY includes specific and enhanced prudential standard requirements regarding risk management for RBOs.

8. National treatment requires nondiscrimination between domestic and foreign firms, or treatment of foreign entities that is no less favorable than that accorded to domestic enterprises in like circumstances. The International Banking Act of 1978 generally gives foreign banks operating in the United States the same powers as domestic banking organizations and subjects them to the same restrictions and obligations.
4071.0.1.1 Board and Senior Management Oversight

The board of directors has the responsibility for establishing the level of risk that the institution should take. Accordingly, the board of directors should approve the institution’s overall business strategies and significant policies, including those related to managing risks. Further, the board of directors should also ensure that senior management is fully capable of implementing the institution’s business strategies and risk limits. In evaluating senior management, the board of directors should consider whether management is taking the steps necessary to identify, measure, monitor, and control these risks.

The board of directors should collectively have a balance of skills, knowledge, and experience to clearly understand the activities and risks to which the institution is exposed. The board of directors should take steps to develop an appropriate understanding of the risks the institution faces, through briefings from experts internal to their organization and potentially from external experts. The institution’s management information systems should provide the board of directors with sufficient information to identify the size and significance of the risks. Using this knowledge and information, the board of directors should provide clear guidance regarding the level of exposures acceptable to the institution and oversee senior management’s implementation of the procedures and controls necessary to comply with approved policies.

Senior management is responsible for implementing strategies set by the board of directors in a manner that controls risks and that complies with laws, rules, regulations, or other supervisory requirements on both a long-term and day-to-day basis. Accordingly, senior management should be fully involved in and possess sufficient knowledge of all activities to ensure that appropriate policies, controls, and risk monitoring systems are in place and that accountability and lines of authority are clearly delineated. Senior management is also responsible for establishing and communicating a strong awareness of the need for effective risk management, internal controls, and high ethical business practices. To fulfill these responsibilities, senior management needs to have a thorough understanding of banking and financial market activities and detailed knowledge of the institution’s activities, including the internal controls that are necessary to limit the related risks.

In assessing the quality of the oversight provided by the board of directors and senior management, examiners should consider the following:

- The board of directors has approved significant policies to establish risk tolerances for the institution’s activities and periodically reviews risk exposure limits to align with changes in the institution’s strategies, address new activities and products, and react to changes in the industry and market conditions.
- Senior management has identified and has a clear understanding and working knowledge of the risks inherent in the institution’s activities. Senior management also remains informed about these risks as the institution’s business activities evolve or expand and as changes and innovations occur in financial markets and risk-management practices.
- Senior management has identified and reviewed risks associated with engaging in new activities or introducing new products to ensure that the necessary infrastructure and internal controls are in place to manage the related risks.
- Senior management has ensured that the institution’s activities are managed and staffed by personnel with the knowledge, experience, and expertise consistent with the nature and scope of the institution’s activities and risks.
- All levels of senior management provide appropriate management of the day-to-day activities of officers and employees, including oversight of senior officers or heads of business lines.
- Senior management has established and maintains effective information systems to identify, measure, monitor, and control the sources of risks to the institution.

4071.0.1.2 Policies, Procedures, and Limits

Although an institution’s board of directors approves an institution’s overall business strategy and policy framework, senior management develops and implements the institution’s risk-management policies and procedures that address the types of risks arising from its activities. Once the risks are properly identified, the institution’s policies and procedures should provide guidance for the day-to-day implementation of business strategies, including limits designed to prevent excessive and imprudent risks. An institution should have policies and procedures that...
address its significant activities and risks with the appropriate level of detail to address the type and complexity of the institution’s operations. A smaller, less complex institution that has effective senior management directly involved in day-to-day operations would generally not be expected to have policies as sophisticated as larger institutions. In a larger institution, where senior managers rely on widely-dispersed staffs to implement strategies for more varied and complex businesses, far more detailed policies and procedures would generally be expected. In either case, senior management is expected to ensure that policies and procedures address the institution’s material areas of risk and that policies and procedures are modified when necessary to respond to significant changes in the institution’s activities or business conditions.

The following guidelines should assist examiners in evaluating an institution’s policies, procedures, and limits

- The institution’s policies, procedures, and limits provide for adequate identification, measurement, monitoring, and control of the risks posed by its significant risk-taking activities.
- The institution’s policies, procedures, and limits are consistent with its stated strategy and risk profile.
- The policies and procedures establish accountability and lines of authority across the institution’s activities.
- The policies and procedures provide for the review and approval of new business lines, products, and activities, as well as material modifications to existing activities, services, and products, to ensure that the institution has the infrastructure necessary to identify, measure, monitor, and control associated risks before engaging in a new or modified business line, product, or activity.

4071.0.1.3 Risk Monitoring and Management Information Systems

Institutions of all sizes are expected to have risk monitoring and management information systems in place that provide the board of directors and senior management with timely information and a clear understanding of the institution’s business activities and risk exposures. The sophistication of risk monitoring and management information systems should be commensurate with the complexity and diversity of the institution’s operations. Accordingly, a smaller and less complex institution may require less frequent management and board reports to support risk monitoring activities. For example, these reports may include, daily or weekly balance sheets and income statements, a watch list for potentially troubled loans, a report on past due loans, an interest rate risk report, and similar items. In contrast, a larger, more complex institution would be expected to have much more comprehensive reporting and monitoring systems, which includes more frequent reporting to board and senior management, tighter monitoring of high-risk activities, and the ability to aggregate risks on a fully consolidated basis across all business lines, legal entities, and activities.

In assessing an institution’s measurement and monitoring of risk and its management reports and information systems, examiners should consider whether these conditions exist:

- The institution’s risk monitoring practices and reports address all of its material risks.
- Key assumptions, data sources, models, and procedures used in measuring and monitoring risks are appropriate and adequately documented and tested for reliability on an ongoing basis.9
- Reports and other forms of communication address the complexity and range of an institution’s activities, monitor key exposures and compliance with established limits and strategy, and as appropriate, compare actual versus expected performance.
- Reports to the board of directors and senior management are accurate, and provide timely and sufficient information to identify any adverse trends and to evaluate the level of risks faced by the institution.

4071.0.1.4 Internal Controls

An effective internal control structure is critical to the safe and sound operation of an institution. Effective internal controls promote reliable financial and regulatory reporting, safeguard assets, and help to ensure compliance with relevant laws, rules, regulations, supervisory requirements, and institutional policies. Therefore, an institution’s senior management is responsible for establishing and maintaining an effective system of controls, including the enforcement of official lines of authority and the appropriate

---

segregation of duties.

Adequate segregation of duties is a fundamental and essential element of a sound risk management and internal control system. Failure to implement and maintain an adequate segregation of duties can constitute an unsafe-and-unsound practice and possibly lead to serious losses or otherwise compromise the integrity of the institution’s internal controls. Serious lapses or deficiencies in internal controls, including inadequate segregation of duties, may warrant supervisory action, including formal enforcement action.

Internal controls should be tested by an independent party who reports either directly to the institution’s board of directors or its designated committee, which is typically the audit committee. However, small CBOs whose size and complexity do not warrant a full scale internal audit function may rely on regular reviews of essential internal controls conducted by other institution personnel. Given the importance of appropriate internal controls to institutions of all sizes and risk profiles, the results of audits or reviews, whether conducted by an internal auditor or by other personnel, should be adequately documented, as should management’s responses to the findings. In addition, communication channels should allow for adverse or sensitive findings to be reported directly to the board of directors or to the relevant board committee.

In evaluating internal controls, examiners should consider whether these conditions are met:

- The system of internal controls is appropriate to the type and level of risks posed by the nature and scope of the institution’s activities.
- The institution’s organizational structure establishes clear lines of authority and responsibility for risk management and for monitoring adherence to policies, procedures, and limits.
- Internal audit or other control functions, such as loan review and compliance, provide for independence and objectivity.
- The official organizational structures reflect actual operating practices and management responsibilities and authority over a particular business line or activity.
- Financial, operational, risk management, and regulatory reports are reliable, accurate, and timely; and wherever applicable, material exceptions are noted and promptly investigated or remediated.
- Policies and procedures for control functions support compliance with applicable laws, rules, regulations, or other supervisory requirements.
- Internal controls and information systems are adequately tested and reviewed; the coverage, procedures, findings, and responses to audits, regulatory examinations, and other review tests are adequately documented; identified material weaknesses are given appropriate and timely, high-level attention; and management’s actions to address material weaknesses are objectively verified and reviewed.
- The institution’s board of directors, or audit committee, and senior management are responsible for developing and implementing an effective system of internal controls and that the internal controls are operating effectively.

4071.0.1.5 Conclusions

Examiners are expected to assess risk management for an institution and assign formal ratings of “risk management” as described in the Commercial Bank Examination Manual for state member banks, the Bank Holding Company Manual for bank holding companies, and the Examination Manual for U.S. Branches and Agencies of Foreign Banking Organizations.

In reports of examination or inspection, and in transmittal letters to the boards of directors of state member banks, holding companies, and to the FBO officer of the U.S. operations, examination staff should specifically reference the types and nature of corrective actions that need
to be taken by an institution to address noted risk management and internal control deficiencies. Where appropriate, the Federal Reserve will advise an institution that supervisory action will be initiated, if the institution fails to timely remediate risk-management weaknesses when such failures create the potential for serious losses or if material deficiencies or situations threaten its safety and soundness. Such supervisory actions may include formal enforcement actions against the institution, or its responsible officers and directors, or both, and would require the immediate implementation of all necessary corrective measures.

If bank or holding company subsidiaries are regulated by another federal banking agency, Federal Reserve examiners should rely to the fullest extent possible on the conclusions drawn by relevant regulators regarding risk management. See also, SR-16-4, “Relying on the Work of the Regulators of the Subsidiary Insured Depository Institution(s) of Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of Less than $50 Billion.”
Federal Reserve System BHC Surveillance Program

Section 4080.0

WHAT’S NEW IN THIS REVISED SECTION

The BHC Surveillance Program is incorporating a new early-warning model (Holding Company Statistical Assessment of Bank Risk) and other risk identification algorithms (“Outlier Metrics”), while extending its coverage to savings and loan holding companies.

The Federal Reserve’s Holding Company (HC) Surveillance Program covers top-tier bank and savings and loan holding companies. It deploys risk identification algorithms and other surveillance products to process financial and economic data and generate forward-looking, actionable intelligence on HCs. Results are used to assess exposures, outlooks, and possible compliance shortcomings, with the goal of calibrating supervisory resources to risk. (Refer to SR-15-16 and its attachment.)

Objectives fall under these headings: (1) HC monitoring, (2) industry analysis, and (3) metric distribution. In HC monitoring, forward-looking metrics target high-risk HCs and those with emerging financial difficulties for enhanced supervisory attention, while identifying low-risk HCs for more streamlined approaches. The metrics also detect possible regulatory violations or departures from supervisory guidance and feed into financial reports on individual HCs. In industry analysis, aggregate data views and accompanying financial analyses inform Federal Reserve leaders of broad financial institution conditions and trends. In metric distribution, web applications deliver surveillance results to examiners and other supervisory staff.

As fully integrated into the supervisory process, the HC Surveillance Program involves three distinct phases. First, data are processed by the risk identification algorithms, ranging from simple rules to financial models, machine learning, and signal processing. The algorithmic system’s main components are the Outlier List, Watch List, HC Monitoring Screen, and Intercompany Transactions Exception List, all described below. When the algorithms detect departures from expected patterns involving HCs, the results are transmitted via Performance Report Information and Surveillance Monitoring (PRISM), a web application available to Federal Reserve examiners and other supervisory staff for interactive data analysis.

The second phase begins as supervisory staff use additional surveillance products to solidify the initial impressions presented by first-phase surveillance results. Key examples of these additional products are the BHC Performance Report (BHCPR), a quarterly financial report on individual HCs, described below, and the Focus Report, a web application available to Federal Reserve examiners and other supervisory staff for interactive risk assessment. In addition, aggregate data views and reports of financial condition at the supervisory portfolio and industry levels can help place a particular HC’s status in context.

The third phase involves the development of supervisory responses to the information generated in the first two. A primary goal is to focus supervisory resources on excessive risk-taking, the risk of emerging financial difficulties, and possible compliance shortcomings. When problems are identified, follow-up by examiners promotes correction and resolution. By also identifying low-risk situations, the HC Surveillance Program promotes the application of more streamlined supervisory approaches for such cases.

4080.0.1 OUTLIER LIST

An Outlier List highlights HCs with elevated risk-taking and identifies those with expanded or new areas of risk-taking. It is supported by “Outlier Metrics” in the form of algorithms generating risk classifications of Low, Moderate, or High for individual risk or performance dimensions. The Outlier List includes HCs (FR Y-9C filers only) categorized as High risk within at least one risk or performance dimension. The risk identification algorithms can be based on a broad range of approaches and may evolve over time.

Examiners and other supervisory staff use the Outlier List to monitor risk-taking and promote adequate risk management and mitigation, with the goal of bolstering HCs’ capacity to prevent or buffer financial losses. The Outlier List and its metrics also assist supervisory staff in scoping HC inspections. No regular write-up or documentation requirement is tied to the Outlier List.

4080.0.2 WATCH LIST

The Watch List identifies the risk of emerging financial weaknesses among HCs. It includes...
HCs (FR Y-9C filers only) with composite safety-and-soundness ratings consistent with financial viability, but surveillance grades of ‘D’ or ‘F,’ pointing to the possibility of deterioration in inspection findings going forward.

To generate the surveillance grades, the Holding Company Statistical Assessment of Bank Risk (HC-SABR) early-warning model is applied to financial and supervisory information for each HC filing consolidated financial statements on the FR Y-9C. The HC-SABR rating consists of the composite rating most recently assigned to an HC via the inspection process, coupled with a surveillance letter grade (A, B, C, D, or F) reflecting the HC’s estimated financial condition relative to others in the same rating class.

HC-SABR ratings are designed for use both in monitoring and in determining the scope of an inspection. An accompanying Schedule of Risk Factors (SRF) highlights specific indicators leading the model to flag a particular HC as strong or weak. Through ongoing monitoring, examiners and other supervisory staff review each Watch List HC to assess its financial condition and discern whether substantial deterioration is evident or impending. In such cases, they determine whether an inspection or other supervisory initiative might be needed. The Watch List, much like the Outlier List and its metrics, can also be used in scoping HC inspections to target potentially deteriorating situations for the most extensive reviews.

At times, Reserve Bank staff may need to produce supporting documentation to explain the reasons for an HC’s placement on the Watch List and outline the appropriate supervisory response. For HCs other than community banking organizations (CBOs), this type of information is often already contained in quarterly supervisory write-ups outside of the Watch List process. Separate surveillance write-ups are required for CBO HCs on the Watch List when any of the following criteria are met:

1. The current HC-SABR rating is worse than the prior quarter; or
2. The HC-SABR rating is the same as the prior quarter, but the SRF identifies one or more new contributing factors; or
3. The most recent requirement for a write-up occurred four quarters earlier.

The assessments and conclusions comprising a write-up should be brief and supported by analysis. A Watch List write-up should accomplish the following:

1. summarize the factors leading to Watch List placement;
2. describe any response from the HC to those factors;
3. assess the likelihood of further financial deterioration;
4. judge whether assigned safety-and-soundness ratings are accurate; and
5. determine whether the timing of the next inspection should be accelerated.

Corrective action associated with newly identified problems must be initiated promptly by Reserve Banks. Follow-up action may include correspondence or meetings with an HC’s management or an on-site inspection. Problem situations should be closely monitored by supervisory staff until they have been corrected or otherwise resolved.

4080.0.3 HC MONITORING SCREEN

The HC Monitoring Screen includes a focus on the parent company and non-depository subsidiaries; addresses issues such as cash flow, leverage, and complexity; identifies risks to depository institution subsidiaries; and helps monitor compliance with regulations and supervisory guidance. It provides examiners and other supervisory staff with additional perspective on the risk position and financial condition of HCs by supplementing the Outlier List and Watch List. The FR Y-9SP is utilized, among other reports, allowing the HC Monitoring Screen to provide a surveillance view of smaller HCs. Those HCs that fail screening criteria are identified, with the criteria themselves updated periodically.

Examiners and other supervisory staff review HC Monitoring Screen results quarterly and follow up with supervisory initiatives when appropriate. Detailed instructions may accompany parts of the screen linked to specific supervisory programs, as for example, the guidance discussed in this manual’s section 4080.1, “Surveillance Program for Small Holding Companies,” and further described in SR-13-21. Unless otherwise instructed as part of a specific supervisory program, staff are not generally required to produce surveillance write-ups or maintain surveillance documentation for HCs on the HC Monitoring Screen.
4080.0.4 INTERCOMPANY TRANSACTIONS EXCEPTION LIST

The Intercompany Transactions Exception List (ITEL) helps track compliance with section 23A of the Federal Reserve Act; it is a specialized monitoring process utilizing data from the FR Y-8, together with information from the bank Call report.

For each depository institution possibly exceeding section 23A limits, supervisory staff perform the following: (1) follow up with the HC submitting the FR Y-8 to verify the data are accurate; (2) if an error caused the exception, require an amended report; and (3) if the data are correct, and a depository institution appears to have had covered transactions exceeding section 23A limits, determine the nature and extent of the apparent violation. Reserve Bank staff produce a written review of their findings for each depository institution on the list. The review addresses any apparent violations or reporting errors, along with any corrective action taken.

4080.0.5 THE SURVEILLANCE PROGRAM’S BHC PERFORMANCE REPORT

The HC Surveillance Program generates quarterly financial reports on individual HCs, including a publically available BHCPR consisting of consolidated and parent-only financial information and peer-group percentiles for HCs filing the FR Y-9C. The information is useful in analyzing HCs on the Outlier List, Watch List, or HC Monitoring Screen. By reviewing the performance reports, examiners and other supervisory staff gain insight into potential HC weaknesses. Parent leverage, cash-flow, and coverage ratios can indicate problems at the parent level that could adversely affect depository institution subsidiaries. Information on the parent’s income from subsidiaries can help illuminate problems at non-depository subsidiaries that could negatively affect depository institution subsidiaries.

The financial indicators produced by the BHCPR are leveraged in surveillance models such as HC-SABR and used in the financial analysis of HCs. Some documentation is required to help support the report. Specifically, the BHCPR’s peer group analysis involves the identification of HCs that for a variety of reasons could be considered atypical.

To support this process, Reserve Bank staff annually produce a list of atypical HCs. The list provides (1) the name, location, and ID RSSD of a company; and (2) the reason why the HC is considered atypical. HCs removed from the atypical list relative to the previous year are also identified and discussed.

4080.0.6 ROLE IN INSPECTION PROCESS

HCs identified through the surveillance process as (1) taking on positions or pursuing strategies that could lead to problem situations, (2) having a weak or declining financial condition, or (3) failing to comply with regulations or supervisory guidance should, in general, be inspected more intensely and frequently than companies without such deficiencies.

Regarding the positions and strategies of HCs, the Outlier List is designed to identify excessive risk-taking, as are parts of the HC Monitoring Screen. Similarly, the Watch List is intended to identify companies having a weak or declining financial condition, as are parts of the HC Monitoring Screen. Also, the HC Monitoring Screen and the Intercompany Transactions Exception List help detect possible compliance problems among HCs and their subsidiaries.

The full array of risk identification algorithms and products deployed in the HC Surveillance Program can be used in the scheduling and scoping of HC inspections, so as to target, in a timely manner, the riskiest situations for the most extensive reviews, while conserving supervisory resources when risk is low. The examiner-in-charge should exercise prudent supervisory judgment and consider an HC’s status on each surveillance list and screen, together with all other available information sources, including the BHCPR and Focus Report, when determining the scope and nature of the inspection work required.
WHAT’S NEW IN THIS REVISED SECTION

This section has been modified to reflect changes to the small holding company surveillance program. (See SR-13-21.) The surveillance program for holding companies under $1 billion in total consolidated assets currently includes both bank holding companies and savings and loan holding companies.

The surveillance program for holding companies having total consolidated assets of less than $1 billion is described below. (See SR-13-21.) The surveillance program is a primary tool for identifying potentially significant changes in the condition of these organizations between reviews and for targeting the work of any on-site reviews. Quarterly surveillance screens identify potential parent-company and nonbank issues that may adversely affect affiliated insured depository institutions. In particular, the screens address parent-company cash flow; intercompany transactions; parent-company leverage; and consolidated capital ratios, where applicable. The surveillance screens are periodically updated to reflect industry trends and issues as well as changes in regulatory reporting requirements.

Upon receipt and finalization of Y-9 data, Board surveillance staff provide each Reserve Bank with the results of the small holding company surveillance screens on a quarterly basis, which identify companies that fail key screening criteria. Reserve Banks should evaluate this information and make a determination as to any appropriate supervisory actions within 45 days of receipt. In doing so, Reserve Banks should determine whether the screen results reveal that the holding company or its affiliates could pose or exacerbate a material risk to a depository institution subsidiary. If the screen results reveal no basis for a significant concern, a short note to examination files documenting this conclusion should be prepared and filed, and no further action is required.

If a Reserve Bank determines that the screen results reveal the potential for material risk to a depository institution, the Reserve Bank should take appropriate follow-up action within 90 days after initially receiving the surveillance results from the Board. Follow-up actions may include:

- contacting the holding company to obtain more information,
- requesting from the holding company a corrective action plan,
- implementing heightened monitoring procedures, or
- commencing an on-site review.

In most cases, follow-up action can be completed off-site. If an on-site review is recommended, the review is to commence within 90 days of the Reserve Bank’s initial notification of the surveillance results from the Board. The ratings assigned as a result of the on-site review should be promptly entered into the National Examination Data System (NED) and communicated to the company, Board staff, and appropriate state and federal regulatory authorities within 120 days of that notification.

In addition to the surveillance monitoring screens, Board staff will provide Reserve Banks with program support screens that provide additional information to assist in the supervision of small bank holding companies. One set of support screens identifies companies that are classified as noncomplex, but which exhibit characteristics of complex organizations. Reserve Banks are to evaluate any of these companies to determine whether their designation as noncomplex should be changed and their supervision program modified accordingly. A second set of support screens monitors compliance of financial holding companies with the capital, managerial, and Community Reinvestment Act standards set forth in the Gramm-Leach-Bliley Act.

Surveillance information is crucial to identifying potential issues between reviews and for ensuring that on-site work is risk-focused. Accordingly, Reserve Banks are to continue taking steps to ensure the accuracy of the regulatory reports that are the basis for the surveillance program. In particular, System staff is to follow up promptly on identified inaccuracies.
WHAT’S NEW IN THIS REVISED SECTION

Effective January 2009, this section has been revised to recognize the supervisory guidance contained in SR-08-12 and its interagency attachment, “Changes to the Interagency Country Exposure Review Committee (ICERC) Process.” A significant change was made to the ICERC rating process—ICERC will only rate countries that are in default.¹

4090.0.05 DEFINITION, COMPOSITION, AND EXPOSURES OF COUNTRY RISK AND EVALUATING THE ADEQUACY OF COUNTRY-RISK MANAGEMENT

Apart from the consideration of the creditworthiness of individual borrowers, holding companies engaged in international activities are subject to elements of country risk. Country risk encompasses the entire spectrum of risks arising from the economic, social, and political environments of a foreign country, as well as the governmental policies structured to respond to these conditions. These factors may have potentially favorable or adverse consequences for foreign investors’ debt and equity investments in a particular country. The Federal Reserve, along with the Office of the Comptroller of the Currency and Federal Deposit Insurance Corporation, have issued supervisory guidance concerning the elements of an effective country-risk management process for banking organizations. (See SR-02-05 and SR-08-12, including their attachments.)

Country risk is the risk that economic, social, or political conditions in a foreign country might adversely affect an organization’s financial condition, primarily through impaired credit quality or transfer risk.² Country risk is also an important consideration when evaluating the level of credit risk associated with individual counterparties in a country. Regardless of the availability of foreign exchange, macroeconomic conditions and events that are beyond the control of individual borrowers can strain or impair the financial capacity of otherwise sound borrowers. Significant depreciation of a country’s exchange rate, for example, increases the cost of servicing external debt and can adversely affect not only transfer risk for the country, but also the credit risk associated with even the strongest counterparties in the country.

Country risk can occur in many different forms, and the nature of specific risks can change over time. It is essential that a U.S. banking organization with significant direct or indirect international exposure have in place an effective country-risk management process that is commensurate with the volume and complexity of its international activities. More specifically, country risk focuses on a borrower’s capacity to obtain the foreign exchange required to service cross-currency debt. A borrower’s debt-service capacity may also be affected by the risks of political and social upheaval, nationalization and expropriation, governmental repudiation of external indebtedness, exchange controls, and devaluation. Events such as these may materially affect the condition of investments and the profitability of lending activities overseas; examiners must alert management to those risks that may be difficult for the holding company and its subsidiaries to absorb.

Using uniform examination procedures and techniques for evaluating country-risk exposures for domestic banks, examiners segregate country-risk factors from the evaluation of other lending risks. The procedures emphasize diversification of exposure to individual countries as the primary method of moderating country risk in international portfolios. The approach generally consists of three parts:

1. measuring exposure in each country where a business relationship exists
2. analyzing exposure in relation to the bank’s capital resources and the economic and financial conditions of each country in which the bank has outstanding credits
3. evaluating the risk-management system used by the bank in relation to the size and nature of its foreign lending activities

Examiners should evaluate the adequacy of the country-risk management process at internationally active bank holding companies. This risk-assessment process should include, at a

¹. With the adoption of revised ICERC procedures in November 2008, the Federal Reserve and the other banking agencies eliminated the rating categories of Other Transfer Risk Problems, Weak, Moderately Strong, and Strong.
². Transfer risk is the possibility that an asset cannot be serviced in the currency of payment because of a lack of, or restraints on the availability of, needed foreign exchange in the country of the obligor. For more information, see the “Guide to the Interagency Country Exposure Review Committee Process” (SR-08-12’s attachment).
minimum, effective oversight by the board of
directors, adequate risk-management policies
and procedures, an accurate country-exposure
reporting system, an effective country-risk analy-
sis process, a country-risk rating system, country-
exposure limits, ongoing monitoring of country
conditions, periodic stress testing of foreign
exposures, and adequate internal controls and an
audit function. A bank holding company’s
country-risk management process should give
particular attention to any concentrations of
country risk, first at the consolidated level and
then within the parent company and nonbank
subsidiaries, as well as to any concentrations
reported by supervisors at the bank subsidiaries.

4090.0.1 COUNTRY RISKS AND
FACTORS

Country or sovereign risk encompasses the entire
spectrum of risks and factors that arise from the
economic, social, and political environments of
a foreign country that may have potential conse-
quences for foreigners’ debt and equity invest-
ments in that country. A detailed description of
these factors is described below.

4090.0.1.1 Macroeconomic Factors

The first factor affecting country risk is the size
and structure of a country’s external debt in
relation to its economy, more specifically—

1. the current level of short-term debt and the
   potential effect that a liquidity crisis would
   have on the ability of otherwise creditworthy
   borrowers in the country to continue servic-
ing their obligations, and
2. to the extent the external debt is owed by the
   public sector, the ability of the government
to generate sufficient revenues, from taxes
and other sources, to service its obligations.

The condition and vulnerability of the country’s
current account is also an important consid-
eration, including—

1. the level of international reserves, including
   forward market positions of the country’s
   monetary authority (especially when the
   exchange rate is fixed);
2. the level of import coverage provided by the
country’s international reserves;
3. the importance of commodity exports as a
   source of revenue, the existence of any price-
   stabilization mechanisms, and the country’s
   vulnerability to a downturn in either its export
   markets or the price of an exported commod-
   ity; and
4. the potential for sharp movements in exchange
   rates and the effect on the relative price of
   the country’s imports and exports.

The role of foreign sources of capital in meeting
the country’s financing needs is another impor-
tant consideration in the analysis of country
risk, including—

1. the country’s access to international financial
   markets and the potential effects of a loss of
   market liquidity;
2. the country’s relationships with private-
   sector creditors, including the existence of
   loan commitments and the attitude among
   bankers toward further lending to borrowers
   in the country;
3. the country’s current standing with multilat-
eral and official creditors, including the abil-
ity of the country to qualify for and sustain
an International Monetary Fund or other suit-
able economic adjustment program;
4. the trend in foreign investments and the
   country’s ability to attract foreign invest-
   ments in the future; and
5. the opportunities for privatization of
government-owned entities.

Past experience has highlighted the importance
of a number of other important macroeconomic
considerations, including—

1. the degree to which the country’s economy
   may be adversely affected through the conta-
gion of problems in other countries;
2. the size and condition of the country’s bank-
ing system, including the adequacy of the
   country’s system for bank supervision and
   any potential burden of contingent liabilities
   that a weak banking system might place on
   the government;
3. the extent to which state-directed lending or
   other government intervention may have
   adversely affected the soundness of the coun-
   try’s banking system, or the structure and
   competitiveness of the favored industries or
   companies; and
4. for both in-country and cross-border expo-
sures, the degree to which macroeconomic
   conditions and trends may have adversely
   affected the credit risk associated with coun-
   terparties in the country.
4090.0.1.2 Social, Political, and Legal Climate

The analysis of country risk should also consider the country’s social, political, and legal climate, including—

1. the country’s natural- and human-resource potential;
2. the willingness and ability of the government to recognize economic or budgetary problems and implement appropriate remedial action;
3. the degree to which political or regional factionalism or armed conflicts are adversely affecting the government of the country;
4. any trends toward government-imposed price, interest-rate, or exchange controls;
5. the degree to which the country’s legal system can be relied on to fairly protect the interests of foreign creditors and investors;
6. the accounting standards in the country and the reliability and transparency of financial information;
7. the extent to which the country’s laws and government policies protect parties in electronic transactions and promote the development of technology in a safe and sound manner;
8. the extent to which government policies promote the effective management of the bank holding company’s exposures; and
9. the level of adherence to international legal and business-practice standards.

4090.0.1.3 Factors Specific to Banking Organizations

Finally, a bank holding company’s analysis of country risk should consider factors relating to the nature of its actual (or approved) exposures in the country, including, for example—

1. the bank holding company’s business strategy and its exposure-management plans for the country;
2. the mix of exposures and commitments, including the types of investments and borrowers, the distribution of maturities, the types and quality of collateral, the existence of guarantees, whether exposures are held for trading or investment, and any other distinguishing characteristics of the portfolio;
3. the economic outlook for any specifically targeted industries within the country;
4. the degree to which political or economic developments in a country are likely to affect

the bank holding company’s chosen lines of business in the country (for instance, the unemployment rate or changes in local bankruptcy laws may affect certain activities more than others);
5. for a bank holding company involved in capital markets, its susceptibility to changes in value based on market movements (As the market value of claims against a foreign counterparty rise, the counterparty may become less financially sound, thus increasing the risk of nonpayment (this is especially true for over-the-counter derivative instruments));
6. the degree to which political or economic developments are likely to affect the credit risk of individual counterparties in the country (for example, foreign counterparties with healthy export markets or whose business is tied closely to supplying manufacturing entities in developed countries may have significantly less exposure to the local country’s economic disruptions than do other counterparties in the country); and
7. the bank holding company’s ability to effectively manage its exposures in a country through in-country or regional representation, or by some other arrangement that ensures the timely reporting of, and response to, any problems.

4090.0.2 RISK-MANAGEMENT PROCESS FOR COUNTRY RISK

Country risk has an overarching effect on a bank holding company’s international activities and should explicitly be taken into account in the risk assessment of all exposures (including off-balance-sheet) to all public- and private-sector foreign-domiciled counterparties. The risk associated with even the strongest counterparties in a country will increase if, for example, political or macroeconomic conditions cause the exchange rate to depreciate and the cost of servicing external debt to rise. Country risk can occur in many different forms, and the nature of specific risks can change over time. A U.S. banking organization with significant direct or indirect international exposure should have in place an effective country-risk management process that is commensurate with the volume and complexity of its international activities. Examiners should be continually evaluating the adequacy of the country-risk management process at internation-
ally active bank holding companies, and they should regularly update their assessments. A bank holding company’s country-risk management process should give particular attention to any concentrations of country risk at the parent level or within its bank and nonbank subsidiaries.

Country risk is not necessarily limited to banking organizations with direct international exposures. Domestic counterparties with significant economic dependence on a foreign country or region (for example, through export dependence) can pose an indirect country risk to banking organizations that do not have direct international activity. While banking organizations are not required to incorporate indirect country risk into a formal country-risk management process, they should, nevertheless, take these country-risk factors into account, where appropriate, when assessing the creditworthiness of domestic counterparties. Examiners should ensure that the overall credit-risk management process takes into account indirect country risk where applicable in all Federal Reserve–supervised banking organizations.

To effectively control the risk associated with international activities, bank holding companies must have a risk-management process that focuses on the broadly defined concept of country risk. The elements of a sound country-risk management process are discussed in further detail below.

4090.0.2.1 Oversight by the Board of Directors

If country risk is to be managed properly, the board of directors must oversee the process effectively. The board is responsible for periodically reviewing and approving policies governing its international activities to ensure that they are consistent with the bank holding company’s strategic plans and goals. The board is also responsible for reviewing and approving limits on country exposure and ensuring that management is effectively controlling the risk. When evaluating the adequacy of the bank holding company’s capital and allowance for loan and lease losses (ALLL), the board should take into account the volume of foreign exposures and the ratings of the countries to which it is exposed.

4090.0.2.2 Policies and Procedures for Managing Country Risk

Bank management is responsible for implementing sound, well-defined policies and procedures for managing country risk that—

1. establish risk-tolerance limits;
2. delineate clear lines of responsibility and accountability for country-risk management decisions;
3. specify authorized activities, investments, and instruments; and
4. identify both desirable and undesirable types of business.

Management should also ensure that country-risk management policies, standards, and practices are clearly communicated to the affected offices and staff.

4090.0.2.3 Country-Exposure Reporting System

To effectively manage country risk, the bank holding company must have a reliable system for capturing and categorizing the volume and nature of foreign exposures. The reporting system should cover all aspects of the bank holding company’s operations, whether conducted through paper transactions or electronically. An accurate country-exposure reporting system is also necessary to support the regulatory reporting of foreign exposures on the quarterly Country Exposure Report, FFIEC 009, and the supplemental Country Exposure Information Report, FFIEC 009a.

The board of directors should regularly receive reports on the level of foreign exposures. If the level of foreign exposures in a bank holding company is significant, or if a country to which the bank holding company is exposed is considered to be high risk, exposures should be reported to the board at least quarterly. More frequent reporting is appropriate when a deterioration in foreign exposures would threaten the soundness of the bank holding company.

3. For purposes of this guidance, concentrations of exposures to individual countries that exceed 25 percent of the bank holding company’s or bank’s tier 1 capital plus the ALLL are considered significant. However, in the case of particularly troubled countries, lesser degrees of exposure may also be considered to be significant.
4090.0.2.4 Country-Risk Analysis Process

Although the nature of the country-risk analysis process and the level of resources devoted to it will vary, depending on the size and sophistication of the banking organization’s international operations, a number of considerations are relevant to evaluating the process in all banking organizations:

1. Is there a quantitative and qualitative assessment of the risk associated with each country in which the banking organization is conducting or planning to conduct business?
2. Is a formal analysis of country risk conducted at least annually, and does the banking organization have an effective system for monitoring developments in the interim?
3. Does the analysis take into account all aspects of the broadly defined concept of country risk, as well as any unique risks associated with specific groups of counterparties the banking organization may have targeted in its business strategy?
4. Is the analysis adequately documented, and are conclusions concerning the level of risk communicated in a way that provides decision makers with a reasonable basis for determining the nature and level of the banking organization’s exposures in a country?
5. Given the size and sophistication of the banking organization’s international activities, are the resources devoted to the analysis of country risk adequate?
6. As a final check of the process, are the banking organization’s conclusions concerning a country reasonable in light of information available from other sources, including external research and rating services and the Interagency Country Exposure Review Committee (ICERC)?

4090.0.2.5 Country-Risk Ratings

Country-risk ratings summarize the conclusions of the country-risk analysis process. The ratings are an important component of country-risk management because they provide a framework for establishing country-exposure limits that reflect the bank holding company’s tolerance for risk.

Because some counterparties may be more exposed to local country conditions than others, it is a common and acceptable practice for banking organizations to distinguish between different types of exposures when assigning their country-risk ratings. For example, trade-related and banking-sector exposures typically receive better risk ratings than other categories of exposure because the importance of these types of transactions to a country’s economy has usually moved governments to give them preferential treatment for repayment.

The risk-rating systems of some banking organizations differentiate between public-sector and private-sector exposures. In some banking organizations, a country’s private-sector credits cannot be rated less severely than its public-sector credits (that is, the banking organization imposes a “sovereign ceiling” on the rating for all exposures in a country). Both are acceptable practices.

A banking organization’s country-risk ratings may differ from the ICERC-assigned transfer-risk ratings because the two ratings differ in purpose and scope. A banking organization’s internally assigned ratings help it to decide whether to extend additional credit, as well as how it should manage existing exposures. Such ratings should, therefore, have a forward-looking and broad country-risk focus. The ICERC’s more narrowly focused transfer-risk ratings are primarily a supervisory tool to identify countries where concentrations of transfer risk might warrant greater scrutiny and to determine whether some minimum level of reserves against transfer risk should be established. The ICERC rating process only rates countries in default. Default occurs when a country is not complying with its external debt-service obligations or is unable to service the existing loan according to its terms, as evidenced by failure to pay principal and interest fully and on time, arrearages, forced restructuring, or rollovers.

For more information on ICERC ratings, see section 7040.3 of the Commercial Bank Examination Manual and SR-08-12.

4090.0.2.6 Country-Exposure Limits

As part of their country-risk management process, internationally active bank holding companies should adopt a system of country-exposure limits. Because the limit-setting process often involves divergent interests within the banking organization (such as the country managers, the bank holding company’s overall country-risk manager, and the country-risk committee), country-risk limits will usually
reflect a balancing of several considerations, including—

1. the overall strategy guiding the bank holding company’s international activities,
2. the country’s risk rating and the bank holding company’s appetite for risk,
3. perceived business opportunities in the country, and
4. the desire to support the international business needs of domestic customers.

Country-exposure limits should be approved by the board of directors, or a committee thereof, and communicated to all affected departments and staff. Exposure limits should be reviewed and approved at least annually—and more frequently when concerns about a particular country arise.

A bank holding company’s board of directors and senior management should consider whether its international operations are such that it should supplement its aggregate exposure limits with more discrete controls. Such controls might take the form of limits on the different lines of business in the country, limits by type of counterparty, or limits by type or tenor of exposure. A bank holding company might also limit its exposure to local currencies. Bank holding companies that have both substantial capital-market exposures and credit-related exposures typically set separate aggregate exposure limits for each because exposures to the two lines of business are usually measured differently.

Although country-by-country exposure limits are customary, bank holding companies should also consider limiting (or at least monitoring) exposures on a broader (for example, regional) basis. A troubled country’s problems often affect its neighbors, and the adverse effects may also extend to geographically distant countries with close ties through trade or investment. By monitoring and controlling exposures on a regional basis, bank holding companies are in a better position to respond if the adverse effects of a country’s problems begin to spread.

For bank holding companies that are engaged primarily in direct lending activities, monthly monitoring of compliance with country-exposure limits is adequate. However, bank holding companies with more volatile portfolios, including those with significant trading accounts, should monitor compliance with approved limits more frequently. Exceptions to approved country-exposure limits should be reported to an appropriate level of management or the board of directors so that it can consider corrective measures.

4090.0.2.7 Monitoring Country Conditions

The bank holding company should have a system in place to monitor current conditions in each of the countries where it is significantly exposed. The level of resources devoted to monitoring conditions within a country should be proportionate to the bank holding company’s level of exposure and the perceived level of risk. If the bank holding company maintains an in-country office, reports from the local staff are an obviously valuable resource for monitoring country conditions. In addition, periodic country visits by the regional or country manager are important to properly monitor individual exposures and conditions in a country. The bank holding company may also draw on information from rating agencies and other external sources.

Communication between senior management and the responsible country managers should be regular and ongoing. The bank holding company should not rely solely on informal lines of communication and ad hoc decision making in times of crisis. Established procedures should be in place for dealing with exposures in troubled countries, including contingency plans for reducing risk and, if necessary, exiting the country.

4090.0.2.8 Stress Testing

Bank holding companies should periodically stress-test their foreign exposures and report the results to the board of directors and senior management. As used here, stress testing does not necessarily refer to the use of sophisticated financial modeling tools, but rather to the need for all bank holding companies to evaluate in some way the potential impact different scenarios may have on their country-risk profiles. The level of resources devoted to this effort should be commensurate with the significance of foreign exposures in the bank holding company’s overall operations.

4090.0.2.9 Internal Controls and Audit

Bank holding companies should ensure that their country-risk management process includes adequate internal controls and that an audit
mechanism ensures the integrity of the information used by senior management and the board to monitor compliance with country-risk policies and exposure limits. The system of internal controls should, for example, ensure that the responsibilities of marketing and lending personnel are properly segregated from the responsibilities of personnel who analyze country risk, rate country risk, and set country limits.

4090.0.3 REPORTING REQUIREMENTS

4090.0.3.1 Country Exposure Report (FFIEC 009)

Banks and bank holding companies required to file the Country Exposure Report (Form FFIEC 009, formerly Form FR 2036) when the bank or banks have a foreign branch, a foreign subsidiary, or an Edge corporation, and when they have, on a consolidated basis, total outstanding claims on residents of foreign countries of $30 million or more. The report is to be filed quarterly within 45 days of the end of March, June, September, and December.

The report measures lending to residents of foreign countries by U.S. banking organizations. It is used to provide information on the distribution, by country, of foreign claims held by such banking organizations to (1) determine the degree of risk in bank portfolios and how adverse developments in particular countries affect the U.S. banking system; (2) assess country risk for supervisory purposes, and (3) assist the Bank for International Settlements in compiling worldwide data on cross-border claims. The report also includes information on revaluation gains for off-balance-sheet items and for securities held in trading accounts.

4090.0.3.2 Country Exposure Information Report (FFIEC 009a)

The Country Exposure Information Report (Form FFIEC 009a) supplements the Country Exposure Report. The purpose of FFIEC 009a is to provide public disclosure of significant country exposures of U.S. banking institutions. Every institution that submits the FFIEC 009 and that has exposures to a country that exceed 1 percent of total assets or 20 percent of capital submits the FFIEC 009a. FFIEC 009a respondents also furnish a list of countries in which exposures were between $30 million and 1 percent of total assets or between 15 and 20 percent of capital. Filing of the report is required.

4090.0.3.3 Country Exposure Report for U.S. Branches and Agencies of Foreign Banks (FFIEC 019)

The Country Exposure Report for U.S. Branches and Agencies of Foreign Banks (Form FFIEC 019) is similar to the FFIEC 009 report that is filed by U.S. banks. The FFIEC 019 report collects information, by country, on the direct claims, indirect claims, and total adjusted claims on foreign residents; information on direct claims on related non-U.S. offices domiciled in countries other than the home country of the parent bank that are ultimately guaranteed in the home country that are included in total adjusted claims on the home country; and information on the breakdown of adjusted claims on unrelated foreign residents. The data are used by the supervisory agencies to monitor significant foreign-country exposures of U.S. branches and agencies of foreign banks. The reports are also used to evaluate the financial condition of these branches and agencies.

Respondents to the FFIEC 019 must prepare the data as of the close of each calendar quarter and submit the forms to the appropriate Reserve Bank no later than 45 days following the report date. Data are due at the Board 60 days following the report date. Bank holding companies should obtain, from the management of their respective foreign bank subsidiaries, written confirmation that the FFIEC 019 and all other Federal Reserve and FFIEC reports have been filed, as required.

4090.0.4 INSPECTION OBJECTIVES

1. If the bank holding company is internationally active, to determine the nature and extent of its direct and indirect country-risk exposures.

2. If the bank holding company has significant
direct or indirect international exposure, to evaluate and determine whether it has in place an effective country-risk management process that is commensurate with the volume and complexity of its international activities.

3. To review and determine if the bank holding company’s system of policies, procedures, internal controls, rating system, and stress testing for country-risk management are adequate and reliable.

4. To determine if the bank holding company’s board of directors oversees and regularly reviews its country-risk management process, approves limits on country exposure, provides for adequate capital that is commensurate with its direct and indirect country-risk exposures, and ensures that management is effectively controlling the risk.

5. To determine if management clearly communicates the bank holding company’s country-risk management policies, standards, and practices to the affected offices and staff.

6. To (1) determine if the scope of the bank holding company’s audit function is adequate and if the function is sufficiently comprehensive to ensure the integrity of the information senior management and the board use to monitor the bank holding company’s country-risk management process, and (2) ensure that the board of directors or its audit committee has provided for adequate audit coverage of country-risk management functions.

7. To recommend corrective action if a bank holding company’s country-risk management process and controls are deficient in relation to the level of country-risk exposure.

8. To determine if the bank holding company is properly preparing the Country Exposure Report, FFIEC 009, and the supplemental Country Exposure Information Report, FFIEC 009a, both of which are required to be filed quarterly with the respective Reserve Banks, as applicable.

9. To identify and report individual exposures considered significant in relation to the bank holding company’s capital and the economic performance of the country.

10. To prepare a report on the bank holding company’s country-exposure management system and on any noted deficiencies.

4090.0.5 INSPECTION PROCEDURES

When performing and updating the bank holding company’s risk assessment, the central point of contact for the bank holding company should include an analysis of its direct and indirect country-risk exposures (including any significant country-risk concentrations) and of the adequacy and reliability of its country-risk management. The analysis of the bank holding company’s country-risk management systems should consist of three important components.

One component is the provision for evaluation of economic trends, political developments, and the social fabric within countries where the bank holding company’s funds are at risk. These so-called country studies are derived from economic data supplied by the borrower or published by institutional lenders; sociopolitical commentaries; on-site reports from bank branches, subsidiaries, or affiliates; or bank-officer visits to the country.

In the second component, the board of directors and senior management define the level of country exposure the bank is willing to assume. This undertaking normally includes the establishment of limits on aggregate outstanding, maturities, and categories of risk exposures by country, which serve as a guide to operating management in the development and servicing of the bank holding company’s international credit portfolio.

The third component is the bank holding company’s internal reporting system, which should be designed to monitor and control country exposure. A comprehensive reporting system is required to accurately assign risk exposures to the country of risk, ensure adherence to the directives of the board of directors, provide for at least an annual review of portfolio composition in individual countries, and establish a clear-cut methodology for reporting exceptions to established limits.

A summary of the country-risk management system should be prepared. Set forth below are guidelines and procedures for examiners to use in evaluating the systems banks use to monitor and control country-risk elements in their international loan portfolios. In assessing the quality of the country-risk management system, examiners should, as a matter of course, spot-check the accuracy of the data submitted on the Country Exposure Report, FFIEC 009, and the supplemental Country Exposure Information Report, FFIEC 009a, as applicable. The review should include a review of the exposures for at least several countries. The report page, Examiners’ Comments and Matters Requiring Special Board
Attention, should be used to comment on material exceptions.

1. Obtain any written policies, procedures, or summaries of the bank holding company’s country-risk management system. Determine whether the bank holding company’s country-risk management system includes—
   a. effective oversight by the board of directors,
   b. adequate risk-management policies and procedures,
   c. an accurate country-exposure reporting system,
   d. an effective country-risk analysis process,
   e. a country-risk rating system,
   f. country-exposure limits,
   g. ongoing monitoring of country conditions,
   h. periodic stress testing of foreign exposures, and
   i. adequate internal controls and an audit function. (See SR-02-05.)

2. Review international-lending policies and determine—
   a. if the board of directors regularly reviews and gives final approval to the limits on country exposure at least annually (or quarterly, if the foreign exposures are high risk or the concentrations are significant);
   b. who initiates the country ratings and country limits;
   c. how frequently and by whom country ratings and limits are reviewed and changed;
   d. how the bank holding company defines the ratings assigned to the various countries;
   e. how country limits are determined;
   f. who is responsible for monitoring compliance with country limits;
   g. if country-risk limits consider—
      (1) the overall strategy guiding the institution’s international activities,
      (2) the country’s risk rating and the institution’s appetite for risk,
      (3) perceived business opportunities in the country, and
      (4) the desire to support the international business needs of domestic customers;
   h. to what extent country limits are viewed as guidelines that may be exceeded;
   i. if the bank holding company has different sublimits for private- and public-sector credits;
   j. if separate limits are established for private- and public-sector credits;
   k. if the board of directors or a committee thereof periodically reviews country ratings and limits, and evaluates the bank holding company’s performance against those standards;
   l. to what extent comments or classifications of bank supervisors are considered in establishing, increasing, or decreasing country limits;
   m. how the system has been changed since the last examination;
   n. if the bank holding company has a reliable system for capturing and categorizing the volume and nature of foreign exposures;
   o. whether the bank holding company has a system to monitor current conditions in each of the countries where it is significantly exposed;
   p. if there is regular, ongoing communication between senior management and the responsible country managers;
   q. if established procedures are in place for dealing with exposures in troubled countries, including contingency plans for reducing risk and, if necessary, exiting the country; and
   r. whether the bank holding company periodically conducts stress tests (financial modeling or measuring the impact of various scenarios on its country-risk profiles) of its foreign exposures, and if the results are reported to senior management and the board of directors.

3. Review reports furnished to the board or the appropriate committee to ensure that comprehensive and accurate information is being submitted on a timely basis.

4. Obtain the bank holding company’s report on the general distribution and characteristics of the international loan portfolio and compare loan-category distributions for adherence to guidelines.

5. During a discussion with senior management, direct inquiries to—
   a. gain insight into general management’s international-lending philosophy, and
   b. elicit management’s responses for correction of deficiencies.

6. When reporting on the bank holding company’s country-risk management system, consider factors such as—
   a. the quality of internal policies, practices, procedures, and controls over the international-lending functions;
   b. the scope and adequacy of the internal

BHC Supervision Manual
January 2009
Page 9
loan-review system as it pertains to country risk;
c. causes of existing problems;
d. commitments from management for correction of deficiencies;
e. expectations for continued sound international lending or correction of existing deficiencies;
f. the ability of management to monitor and control transfer risk;
g. the general level of adherence to internal policies, practices, procedures, and controls; and
h. the scope and adequacy of the bank holding company’s analysis of country conditions.

WHAT’S NEW IN THIS REVISED SECTION

Effective July 2016, this section is revised to provide additional guidance on the supervisory approach to the supervision of holding companies with total consolidated assets of $10 billion or less. The section includes guidance pertaining to relying on the work of insured depository institution (IDI) regulators for community banking organizations (CBOs). Examiners are to rely substantially on the findings of the IDI regulator in evaluating the overall condition of the holding company. Reserve Bank reviews are to evaluate the condition, performance, and prospects of a subsidiary IDI based on the conclusion of the IDI regulator and are not to duplicate the IDI regulator’s work. (Refer to SR-16-4.)

Effective July 2014, this section was revised to include supervisory guidance on the periodic on- and off-site inspections for assessing the safety and soundness of supervised bank holding companies and savings and loan holding companies (referred to as holding companies). (Refer to SR-13-21.) The guidance updates the minimum inspection frequency and scope requirements for supervised holding companies with total consolidated assets of $10 billion or less to

- conform inspection frequency and scope requirements for savings and loan holding companies (SLHCs) with total consolidated assets of $10 billion or less to those applicable to bank holding companies of the same size;
- clarify the scoping requirements for targeted inspections conducted at bank holding companies and SLHCs with total consolidated assets between $1 billion and $10 billion; and
- modify the requirement for targeted inspections for “3,” “4,” and “5”-rated bank holding companies with total consolidated assets between $1 billion and $10 billion.

Except for the addition of SLHCs, the inspection scope and frequency expectations for holding companies with less than $1 billion in total consolidated assets have not changed.

These frequency and scope requirements vary depending on whether a holding company has been designated "complex,” with more complicated holding companies subject to more frequent and in-depth review. If needed for supervisory purposes, Reserve Banks may inspect a holding company with greater frequency and scope than described in this guidance.

The BHC inspection report is intended to effectively communicate the result of inspections without compromising the integrity of inspection and reporting procedures. The inspection report serves the needs of several distinct audiences: the BHC (its directors, executive management, and line management), the Federal Reserve Board, the Federal Reserve Bank, and other banking organization regulators (state banking agencies, the OCC, and the FDIC). The inspection report should serve as an effective and efficient vehicle for communicating conclusions, concerns, and recommendations to the principal audience—the BHC’s board of directors—without sacrificing to any great extent the needs of the other users. The inspection reporting program operates on the condition that inspection workpapers can be obtained for immediate review by Federal Reserve Bank or Federal Reserve Board staff, when requested.

The presentation within the inspection report is intended to be concise and direct, with the information needed by all audiences found in the core section. The core section contains the report pages, which consist of the “Examiner’s Comments and Other Matters Requiring Special Board Attention,” “Scope,” “Structure and Abbreviations,” and “Analysis of Financial Factors,” as well as an analysis of asset quality and off-balance-sheet risk and certain other required financial statements and schedules. Supporting schedules are required and added to the core section when an area of concern or a problem is addressed in the report.

One standardized BHC inspection report format, FR 1225, has been designed to meet the desired objectives of the full-scope report for all organizations, regardless of the structure and complexity of the BHC under inspection. A few report pages, designated FR 1241, may be used for BHCs that have less than $150 million in assets. These pages are “Parent Company and Nonbank Assets Subject to Classification,” “Bank Subsidiary,” “Capital Structure,” and “Other Supervisory Issues.” The latter two report pages are for the lead bank or other comparable bank subsidiary.

This part of the manual presents policy and procedures for the inspection process, the collection and presentation of data, and the prepara-
tion of the resulting analyses in the inspection report. Section 5010.0 corresponds directly to each page of the report (FR 1225). Sections 5020.0 and 5030.0 provide instructions for limited and targeted inspections.

On each report page, instructions are generally organized to state what information is to be presented on the page, the objectives for the information to be presented, the potential source of the information, and how the information is to be presented in the report. Also, the instructions mention other report areas that are affected by information reported on the page.

The examiner is reminded that the instructions in sections 5010, 5020, and 5030 are only a starting point. As such, the instructions focus principally on the collection of information and the presentation in the report of inspection findings. When working on specific functional aspects of the inspection, the examiner should also refer to the appropriate subject heading in this manual.

5000.0.2 POLICY FOR FREQUENCY AND SCOPE OF INSPECTIONS FOR BHCs

On October 7, 1985, the Board announced its policy, effective January 1, 1986, to increase the frequency of inspections of BHCs.1 The policy objectives are to (1) help prevent the development of problems at banking institutions and (2) make more effective the Federal Reserve’s ability to identify and resolve problems that develop nonetheless. In general, the policy provides that—

1. the largest and most complex BHCs will be inspected at least annually,
2. the largest BHCs, and those with significant problems, will be inspected semiannually, and
3. as an exception to the general rule, small holding companies with no known problems will be reviewed on a more limited basis.

Federal Reserve Banks are to intensify their involvement in the inspection of large organizations and those with significant problems. In the case of smaller organizations, greater reliance is to be placed on state examinations or inspections. If a state lacks the resources to conduct inspections in accordance with the specifications of the policy or is unwilling to do so, or, in the case of holding companies, lacks authority, the Federal Reserve will conduct the examinations or inspections to the extent needed to meet the specifications. In addition, if a BHC or its state member bank subsidiary indicates its wish to be examined or inspected by its Federal Reserve Bank, that wish should be honored.

Source: Board policy statement, October 7, 1985.

Special Characteristics:

1. BHCs formed to acquire going concerns: inspection to be conducted between the 6th and 18th months of operation, or within 36 months under specific condition, or waived if under $50 mm with specific conditions.

Notes:

1. A full-scope inspection covers all areas of interest to the Federal Reserve in depth.

2. A limited-scope inspection will review all areas of activity covered by a full-scope inspection, but less intensively.

3. Targeted inspections will focus intensively on one or two activities.

4. A complex BHC is defined as one with material credit-extending nonbank subsidiaries or debt outstanding to the general public.

5. A noncomplex BHC is without credit-extending subsidiaries and without public debt.
5000.0.4 INSPECTION-FREQUENCY REQUIREMENTS

5000.0.4.1 BHCs with No Identified Problems or Special Characteristics

Multinational bank holding companies and all others with consolidated assets over $10 billion are to receive a full-scope inspection annually, which should be coordinated with the examination of the lead bank to the extent possible. Although the inspection of the holding company and the examination of the lead bank need not be commenced simultaneously, they should overlap and rely on financial statements as of the same date, if possible, to facilitate the analysis and presentation of findings to management and directors. A limited-scope or targeted inspection of these companies is also to be conducted between the annual full-scope inspections; the precise timing will be determined by off-site surveillance reports and opportunities to coordinate with the examination of the lead bank. The requirement for a limited-scope or targeted inspection may be waived by the Reserve Bank if, on the basis of the findings of the last full-scope inspection and of the surveillance system, the institution is judged to be in satisfactory condition.

Complex BHCs (defined as companies with nonbank subsidiaries that extend a material amount of credit or companies whose parent has a material amount of debt outstanding to the general public) with consolidated assets of $15 billion or more receive a full-scope inspection annually. These inspections should be conducted, to the extent possible, in coordination with the examination of the lead bank. All BHCs in this size group should be subject to additional limited-scope or targeted inspections when the Reserve Bank has information that suggests the institution may be developing significant problems.

5000.0.4.2 BHCs Requiring Special Supervisory Attention

The inspection frequency of BHCs requiring special supervisory attention is to be determined by both the size and complexity of the organization. The most intensive frequency requirements are directed at BHCs rated RFI/C(D) composite 3, 4, or 5, or whose lead bank subsidiary has been rated CAMELS composite 3, 4, or 5. All BHCs so rated and with consolidated assets of more than $10 billion are to receive an annual full-scope inspection and a limited-scope or targeted inspection during the interval between full-scope inspections.

5000.0.4.3 Supervision Procedures for BHCs and SLHCs with Total Consolidated Assets of $10 Billion or Less

The Federal Reserve relies on periodic on- and off-site inspections to assess the safety and soundness of supervised bank holding companies and savings and loan holding companies (hereafter referred to as holding companies). The minimum inspection frequency and scope requirements for supervised holding companies with total consolidated assets of $10 billion or less are designed to

- conform inspection frequency and scope requirements for savings and loan holding companies (SLHCs) with total consolidated assets of $10 billion or less to those applicable to bank holding companies of the same size;
- clarify the scoping requirements for targeted inspections conducted at bank holding companies and SLHCs with total consolidated assets between $1 billion and $10 billion; and
- modify the requirement for targeted inspections for “3,” “4,” and “5”-rated bank holding companies with total consolidated assets between $1 billion and $10 billion.

With the exception of the addition of SLHCs, the inspection scope and frequency expectations for holding companies with less than $1 billion in total consolidated assets have not changed. These frequency and scope requirements vary depending on whether a holding company has been designated “complex,” with more complicated holding companies subject to more frequent and in-depth review. If needed for supervisory purposes, Reserve Banks may inspect a holding company with greater frequency and scope than described in this guidance. Refer to SR-13-21, “Inspection Frequency and Scope Requirements for Bank Holding Companies and Savings and Loan Holding Companies with Total Consolidated Assets of $10 Billion or Less.”

Definition of “Complex” Holding Companies. The determination of whether a holding company is “complex” should be made at least annually by the responsible Reserve Bank.
Utilizing surveillance screens and other information obtained through supervisory or application processes, Reserve Banks should update the complexity designation of a company as its activities or condition changes. The determination of a holding company’s complexity should take into account a number of factors. These factors include the size and structure of the company; the extent of intercompany transactions between insured depository institution subsidiaries and the holding company or uninsured subsidiaries of the holding company; the risk, scale, and complexity of activities of any nondepository subsidiaries; and the degree of leverage at the holding company, including the extent of its debt outstanding to the public. Companies should also be designated “complex” if material risk-management processes for the holding company and its affiliates are consolidated at the parent company.

**Supervision and Surveillance Approach.** The frequency and scope of on- and off-site inspections should be adjusted based on the results of examinations of a company’s depository institution subsidiaries and off-site quarterly surveillance. Whether the inspection is conducted on- or off-site will depend on the level and nature of the risks involved, the holding company’s ability to manage those risks, and the Reserve Bank’s ability to acquire the necessary information to analyze the activity off-site. If information obtained off-site is not sufficient for the Reserve Bank to determine the condition or assess the activity of the company to assign a rating, the Reserve Bank should conduct an on-site inspection (full-scope or targeted, as appropriate).

To facilitate prompt follow-up on changes in a company’s performance and condition, the Federal Reserve maintains distinct surveillance programs for small holding companies (less than $1 billion in total consolidated assets) and all other holding companies. Surveillance screens for holding companies with $1 billion or more in total consolidated assets focus on identifying those companies reporting financial results that seem to be inconsistent with their current supervisory ratings, as well as activities conducted outside of depository institution subsidiaries. For small holding companies, quarterly surveillance screens focus on the identification of potential parent company and nondepository subsidiary issues that may adversely affect affiliated depository institutions. In particular, these screens address parent company cash flow, intercompany transactions, parent company leverage, and consolidated capital ratios, when applicable. Screens also assist in maintaining up-to-date complexity designations and are updated periodically to reflect industry trends and conditions as well as changes in regulatory reporting requirements.

**5000.0.4.3.05 Relying on the Work of IDI Regulators for Community Banking Organizations (CBOs)**

The Federal Reserve’s approach to the supervision of holding companies with total consolidated assets of $10 billion or less is primarily described in SR-13-21. Reserve Banks, in the vast majority of cases, conduct abbreviated off-site reviews of small, noncomplex holding companies with total consolidated assets of up to $1 billion upon receipt of examination reports from the IDI regulator of the lead subsidiary IDI. These Reserve Bank reviews assess activities conducted outside of the subsidiary IDI and rely substantially on the findings of the IDI regulator to evaluate the overall condition of the holding company.

For larger CBO holding companies, Reserve Banks conduct point-in-time on- or off-site reviews that are coordinated with, or closely follow, on-site examinations of the lead subsidiary IDI by its IDI regulator. The Reserve Bank reviews of larger CBO holding companies are targeted toward assessing parent company and nonbank activities and their potential effect on the safety and soundness of the subsidiary IDI. The Reserve Bank evaluates the condition, performance, and prospects of the subsidiary IDI based on the conclusions of the IDI regulator and does not duplicate the work of the other regulator. (Refer to SR-16-4.)

**5000.0.4.3.1 Frequency and Scope of Inspections of Holding Companies with Total Consolidated Assets between $1 Billion and $10 Billion**

Complex holding companies in satisfactory condition are inspected at least once per calendar year, while noncomplex holding companies may be inspected every other year. The Reserve Banks should attempt to conduct inspections of holding companies between $1 billion and $10 billion in total consolidated assets shortly

---

2. For SLHC, consideration should be given to whether the holding company is a grandfathered unitary savings and loan holding company, and if so, the type and extent of the activities in which the company engages.
after the examination of the lead depository institution subsidiary is completed. Holding companies between $1 billion and $10 billion in total consolidated assets are assigned a complete RFI/CD rating (component ratings, subcomponent ratings, and a composite rating) regardless of their complexity.

Depending on their condition and complexity, holding companies in this category will receive full-scope inspections or targeted inspections. At a minimum, a full-scope inspection should include sufficient procedures to reach an informed judgment regarding the assigned ratings for the factors addressed by the RFI/CD rating system, evaluating the organization’s methods of managing and controlling its risk exposures, and ascertaining whether management and directors fully understand and are actively monitoring the organization’s exposure to those risks.

A targeted inspection is designed to focus intensively on one or more specific areas, activities, or problems relating to a holding company. Targeted inspections of holding companies with total consolidated assets between $1 billion and $10 billion should focus primarily on parent company leverage, parent company cash flow, nondepository subsidiaries, consolidated capital (when applicable), and intercompany transactions. Targeted inspections may also cover other applicable areas, such as deficient risk-management practices at the holding company.

In addition, because compliance with laws and regulations is a statutory factor that must be considered as part of any supervisory review of an application or notice by the holding company, it is important that Reserve Bank staff ensure that compliance with relevant laws and regulations, including any commitments provided by a holding company in connection with an application or notice, is evaluated and addressed in written inspection reports.

5000.0.4.3.2 Complex Holding Companies

• If a complex holding company is rated composite “1” or “2,” a full-scope, on-site inspection is required annually.
• The following apply for a complex holding company rated composite “3,” “4,” or “5”:
  — A full-scope, on-site inspection is required annually.
  — If the primary supervisor has conducted an interim examination or changed the rating at the lead depository institution, Reserve Bank staff should conduct an additional targeted inspection and update the rating if necessary. The targeted inspection may be conducted off-site and should start within 60 days of receiving the examination report for the lead depository institution.
  • Additional follow-up, including interim inspections between regular full-scope, on-site inspections, may be required in response to off-site surveillance program results.

5000.0.4.3.3 Noncomplex Holding Companies

• If a noncomplex holding company is rated composite “1” or “2,” an off-site targeted inspection is required every two years.
• The following apply for a noncomplex holding company rated composite “3,” “4,” or “5”:
  — A full-scope, off-site inspection is required annually.
  — If the primary supervisor has conducted an interim examination or changed the rating at the lead depository institution, Reserve Bank staff should conduct an additional targeted inspection and update the rating if necessary. This targeted inspection may be conducted off-site and should start within 60 days of receiving the examination report for the lead depository institution.
  • Additional follow-up, including interim inspections between regular full-scope inspections, may be required in response to off-site surveillance program results.

5000.0.4.3.4 Frequency and Scope of Review of Holding Companies with Less Than $1 Billion in Total Consolidated Assets

The supervisory cycle for these holding companies is determined by the examination frequency of the lead depository institution. Complex companies...
panies in this size category are assigned a complete RFI/CD rating; others are assigned only a risk-management rating and a composite rating. All ratings assigned should be promptly entered into the National Examination Database (NED) and communicated to the company, Board staff, and appropriate state and federal regulatory authorities as soon as possible, but generally no later than 90 days after receipt of the lead depository institution examination report.

Although off-site review of small holding companies will be appropriate in many cases, in some instances it may be necessary to conduct an on-site review, as discussed below. In those cases when an on-site review is required, the findings of that review and the assigned ratings should be communicated to the company no later than 120 days after receipt of the lead depository institution examination report. Documentation for the ratings and off-site or on-site reviews will generally consist of the examination reports for the depository institution subsidiaries, a copy of the transmittal letter communicating the ratings to the company, information related to relevant System surveillance results, and memoranda supporting any on-site review conducted. A meeting between Reserve Bank staff and the company’s board of directors to communicate findings is not required, but should be conducted when warranted by supervisory concerns.

5000.0.4.3.4.1 Complex Holding Companies

- An off-site review should be conducted upon receipt of the lead depository institution examination report or an updated rating from the primary supervisor using surveillance results and relevant supervisory and financial information. If the information obtained off site is not sufficient for the Reserve Bank to determine the overall condition of the company and to assign a complete RFI/CD rating, the Reserve Bank should conduct an on-site review of the company.
- Any on-site review should be targeted at those areas where additional information or analysis is needed to assign a complete supervisory rating.

5000.0.4.3.4.2 Noncomplex Holding Companies

- If all subsidiary depository institutions have a management component rating and a composite supervisory rating of “1” or “2” and no material holding company issues are otherwise indicated, the Reserve Bank should assign only a composite rating and risk management rating to the holding company based on the ratings of the lead depository institution.
- If one or more subsidiary depository institutions have a management component rating or a composite supervisory rating of “3,” “4,” or “5” or a material holding company issue is otherwise indicated, an off-site review is required upon receipt of the lead depository institution examination report or an updated rating from the primary supervisor using surveillance results and relevant supervisory and financial information. If the information obtained off-site is not sufficient for the Reserve Bank to determine the overall condition of the company and to assign a risk-management rating and a composite rating, an on-site review should be conducted.
- Any on-site review should be targeted, as appropriate, at those areas where additional information or analysis is needed to develop the risk-management and composite ratings.

</tr>
</tbody>
</table>

1. The scope and frequency guidelines listed above are applicable to bank holding companies and savings and loan holding companies.
2. Complexity factors include the size and structure of the company; the extent of intercompany transactions between insured depository institution subsidiaries and the holding company or uninsured subsidiaries of the holding company; the risk, scale and complexity of activities of any nondepository subsidiaries; and the degree of leverage at the holding company, including the extent of its debt outstanding to the public. For other factors, see SR-13-21.
3. Full-scope inspection covers all areas of interest to the Federal Reserve in depth; targeted inspections will focus intensely on one or two activities. See the Bank Holding Company Supervision Manual Section 5050.0, “Procedures for ‘Targeted’ Inspection Report Preparation,” for more information.
5000.0.4.4 BHCs with Special Characteristics

BHCs formed to acquire an existing bank are to be inspected to determine their compliance with Federal Reserve regulations and the extent to which they have fulfilled commitments the Board of Governors required of the organization in approving its application. Such inspections should be conducted between the 6th and 18th month after the acquisition; their scope is to be determined by the Reserve Bank. If information available to the Reserve Bank (the most recent examination of the bank, the most recent FR Y-6 and FR Y-9 reports from the holding company, and other pertinent information) indicates that (1) the condition of the bank and BHC is satisfactory, (2) the BHC is fulfilling its commitments to the Board of Governors, and (3) the ratio of the parent’s debt to its proportionate interest in the book value of the subsidiary bank (or banks) is less than 75 percent, then, at the Reserve Bank’s discretion, the inspection may be delayed as long as 36 months after the formation. Moreover, the requirement for an inspection may be waived in the case of a BHC whose bank subsidiary has less than $50 million in total assets if, in the Reserve Bank’s judgment, (1) the holding company’s financial condition is satisfactory and its commitments to the Board of Governors are being fulfilled and (2) the ratio of the holding company’s debt to its proportionate interest in the book value of the subsidiary bank (or banks) is less than 75 percent.

BHCs that have undergone a change in control and de novo BHCs organized to acquire de novo banks are to receive a full-scope inspection within 12 months following the change in control or formation. A limited-scope or targeted inspection may be conducted in lieu of the full-scope inspection if, in the Reserve Bank’s judgment, the financial condition of the holding company appears satisfactory.

When BHCs fail the surveillance screen or when other information suggests the company has experienced an adverse development, an in-depth, off-site review will be made to determine the need for a limited-scope or targeted inspection.

5000.0.4.5 Inspection of Nonbank Subsidiaries of BHCs

The instructions in this subsection are intended to supplement the guidance in the Board’s policy statement regarding the frequency and scope of inspections for BHCs, as set forth above and included with SR-85-28 (October 7, 1985). (See sections 4030.0.2, 5010.6.3, and 5010.31; and SR-93-19 (April 13, 1993).

5000.0.4.5.1 On-Site Reviews of Nonbank Subsidiaries

Notwithstanding the risk assessment that is to be performed for each nonbank subsidiary (see section 4030.2), an on-site review is required for the following nonbank subsidiaries:

1. Any individual subsidiary that meets either of the following two significance criteria or that is otherwise deemed by the Reserve Bank to have a significant impact on the BHC’s condition or performance:
   - The subsidiary has total assets equal to 10 percent or more of the bank holding company’s consolidated tier 1 capital.
   - The subsidiary’s total operating revenue equals 10 percent or more of the BHC’s consolidated total operating revenue.

2. Nonbank subsidiaries that are issuing debt to unaffiliated parties or relying to a significant degree on affiliated banks for funding. “Significant” is defined as debt that exceeds the lesser of $10 million or 5 percent of the BHC’s consolidated tier 1 capital.

3. Those mortgage banking subsidiaries and other nonbank subsidiaries involved in asset securitization, and all nonbank subsidiaries that generate assets and sell them to affiliated parties. Examiners involved in the on-site review of these subsidiaries should consider

---

5. The on-site review for these nonbank subsidiaries should be performed with the same frequency as required for a full-scope inspection but may be performed as a targeted review that is not concurrent with the full-scope inspection.

6. Generally, examiners would not be required to conduct an on-site review of those nonbank subsidiaries that hold premises that are necessary for the operation of the banks or other affiliates. Furthermore, these criteria are not intended to include nonbank subsidiaries that have been subject to recent on-site review by another federal or state banking agency in accordance with interagency agreements or Reserve Bank agreements with state banking supervisors (for example, the Interagency EDP Examination, Scheduling, and Distribution Policy). These criteria also should not limit Reserve Bank flexibility in coordinating supervisory efforts with functional regulators at the federal or state level.

7. For BHCs, "total operating revenue" is the sum of total interest income and total noninterest income (before extraordinary items).
the appropriate examination guidelines for asset securitization, for example, those set forth in SR-90-16 (May 25, 1990). (See section 2128.02.)

4. All nonbank subsidiaries that broker or deal in derivative instruments, as a principal or agent, to unaffiliated parties.

Furthermore, for each credit-extending nonbank subsidiary that meets the above on-site review criteria, examiners are to review sufficient credit files through either judgmental or attribute sampling to assess the adequacy and accuracy of internal risk-identification systems.

5000.0.4.5.2 Off-Site Review of Nonbank Activities

Reserve Banks should review reports submitted to the Federal Reserve to monitor the condition and performance of significant nonbank subsidiaries between inspections. FR Y-series reports on individual and combined nonbank subsidiaries should be used for this purpose and, when available, financial statements on nonbank activities that are included with the FR Y-6 annual reports of BHCs should also be reviewed.8 When warranted by (1) a deterioration in the condition and performance of nonbank subsidiaries, (2) the significance of the nonbank subsidiaries (including those selected for on-site review as discussed above), or (3) other reasons, Reserve Banks should require BHCs to submit additional information (for example, balance sheets, income statements, and schedules on nonperforming assets and off-balance-sheet activities) obtained from a company’s internal systems. Furthermore, on an exception basis, Reserve Banks will be expected to obtain, from a BHC’s internal systems, information on the off-balance-sheet exposures of nonbank subsidiaries. When exposures are considered significant, Reserve Banks will be expected to monitor the risks posed by these exposures. If the Reserve Bank determines that a situation warrants material departure from these procedures, it should be discussed with Board staff.

5000.0.4.6 Rating Assignments for Complex and Noncomplex Holding Companies with Total Consolidated Assets of Less Than $1 Billion

The documentation for the ratings and the off-site or on-site review for both complex and noncomplex companies with total consolidated assets of less than $1 billion should be commensurate with the risk of the company and the nature and scope of issues. At a minimum, this documentation will generally consist of the examination reports for the insured depository institution subsidiaries, a copy of the transmittal letter communicating the ratings to the company, information related to relevant surveillance results, and memoranda supporting any on-site review conducted. All ratings assigned should be communicated to the company, Board staff, and appropriate state and federal regulatory authorities as soon as possible, but generally no later than 90 days after receipt of the lead depository institution examination report. If an on-site review is required to assign the ratings, the findings of that review and the assigned ratings should be communicated no later than 120 days after receipt of the lead depository institution examination report. The ratings should be entered into the National Examination Data (NED) system.

5000.0.4.6.1 Rating Assignments for Complex Holding Companies with Total Consolidated Assets of Less Than $1 Billion

The Reserve Bank will assign a complete holding company rating, using surveillance results and relevant supervisory, financial, and other information, including correspondence or other communication with bank management and the primary bank supervisor or functional or other regulator.9 If the information obtained off-site from these sources is not sufficient for the

---

8. Top-tier BHCs file the FR Y-11 report quarterly for each individual nonbank subsidiary that is owned or controlled by a BHC that files the FR Y-9C and if the nonbank subsidiary has (1) total assets of $1 billion or more, or (2) total off-balance sheet activity of $5 billion or more, or (3) equity capital of at least 5 percent of the consolidated equity capital of the top-tier BHC, or (4) operating revenue of at least 5 percent of consolidated operating revenue of the top-tier BHC. Top-tier BHCs file the FR Y-11 annually for each individual nonbank subsidiary (that does not meet the criteria for filing quarterly) with total assets of $500 million or more but less than $1 billion. Top-tier BHCs file the FR Y-11S report annually for each individual nonbank subsidiary (that does not meet the criteria for filing quarterly) with assets of at least $250 million but less than $500 million, or with total assets greater than 1 percent of the total consolidated assets of the top-tier organization. Participation is mandatory. Section 20 subsidiaries submit quarterly financial statements to the Board on the FR Y-20 report.

9. The complete holding company rating would include a composite rating as well as all of the component ratings.
Reserve Bank to determine the overall condition of the company and assign a complete holding company rating, the information must be derived from an on-site review.

5000.0.4.6.2 Rating Assignments for Noncomplex Holding Companies with Total Consolidated Assets of Less Than $1 Billion

For noncomplex holding companies with total consolidated assets of less than $1 billion, where all subsidiary depository institutions have satisfactory composite and risk-management ratings and no material outstanding holding company or consolidated issues are otherwise indicated, the Reserve Bank should assign only a composite rating and a risk-management rating to the company on the basis of the ratings of the lead depository institution. For those holding companies in this asset group that have a subsidiary depository institution in less-than-satisfactory condition, or with a less than satisfactory risk-management rating, or where a material supervisory issue is otherwise indicated, the Reserve Bank will conduct its off-site review of the organization using surveillance results and relevant financial, supervisory, and other information, including correspondence or other communications with bank management and the primary bank supervisor. Any on-site review should be targeted, as appropriate, to those areas where additional information is needed to develop the management and composite ratings.

5000.0.4.6.3 Rating Assignments for Holding Companies with Total Consolidated Assets Between $1 Billion and $10 Billion

All companies with total consolidated assets between $1 billion and $10 billion (whether deemed complex or noncomplex) must be assigned a complete holding company rating. The complete holding company rating would include a composite rating as well as all of the component ratings.

5000.0.5 BHCs EXEMPT FROM THE PROHIBITIONS OF SECTION 4 OF THE BHC ACT

BHCs exempt from the prohibitions of section 4 of the Bank Holding Company Act of 1956, as amended, as a result of any of the following exemptions will not be subject to any required periodic inspection:

1. section 4(a)(2)—permanent grandfather rights
2. section 4(c)(i)—labor, agricultural, or horticultural organization
3. section 4(c)(ii)—85 percent family-owned
4. section 4(c)(12)—irrevocable declaration to cease to be a BHC
5. section 4(d)—hardship exemption

However, the Reserve Bank should continue to monitor the financial condition of such holding companies and should conduct inspections whenever there is any indication of a potential problem in a subsidiary bank.

5000.0.6 MULTI-TIER BHC INSPECTIONS

The Federal Reserve has had longstanding supervisory guidance addressing the coordination of supervisory activities among the Reserve Banks. For banking organizations that operate in more than one district, it is particularly important that (1) all relevant and significant supervisory findings are assessed and weighed when the consolidated banking organization is being evaluated and (2) a consistent and coordinated supervisory message is communicated to the organization.

Many multi-tier BHC structures exist in which the top-tier and second-tier institutions (as well as other lower-level tiers) are in different Federal Reserve Districts. The System has long operated under the principle that there is one responsible Reserve Bank for each fully consolidated banking organization (i.e., each top-tier consolidated banking organization). For domestic banking organizations, the responsible Reserve Bank typically will be the district where the head office of the top-tier organization is located and its overall strategic direction is established and overseen. For foreign banking organizations, the RRB typically will be the district where the Federal Reserve has the most direct involvement in the conduct of day-to-day supervision of the U.S. banking operations of the organization. The RRB is accountable for all aspects of supervision of the fully consolidated banking organization, including all subsidiaries.
and affiliates (domestic, foreign, and Edge corporations) of the organization for which the Federal Reserve has supervisory oversight responsibility. (See SR-05-27/CA-05-11 and section 2124.01.2)

5000.0.6.1 Population of Second-Tiers Suitable for On-Site Inspection

A second-tier holding company (and other lower tiers) that (1) has assets greater than $5 billion, (2) irrespective of size, has a financial condition deemed in need of special supervisory attention (BHC or lead bank rated 3, 4, or 5), or (3) is prone to insider or abusive practices would usually warrant an on-site inspection, the preparation of an inspection report, the assignment of a rating, and a presentation of findings to management, as well as the board of directors if the board includes any “outside directors.” To the extent possible, the inspection should be coordinated with that of the top-tier parent holding company.

5000.0.6.2 Frequency Guidelines for Second-Tier BHCs over $5 Billion

It is assumed that a second-tier BHC will be subject to inspection-frequency guidelines that pertain to the top-tier on a consolidated basis. Although top-tier companies greater than $10 billion in assets may be subject to a second on-site presence annually, these guidelines are not intended to require a second annual presence for the second-tier company.

5000.0.6.3 Frequency Guidelines for Second-Tier BHCs Rated 3, 4, or 5

When a second-tier holding company requires special supervisory attention or is prone to insider or abusive practices, the responsible Reserve Bank may conclude that the second-tier holding company warrants inspection at least as frequently or more frequently than the top-tier holding company. Under such circumstances, it would be appropriate for the second-tier holding company to receive a second presence annually, despite the fact that the top-tier holding company may be inspected less frequently. Problem BHCs acquired as “debts previously contracted” need not be inspected any more frequently than the top-tier company.

5000.0.6.4 Second-Tier Shell BHCs

To the extent that the second-tier holding company is strictly a shell without outside directors and no substantive policymaking authority, and to the extent that the records necessary to review its operations and condition are available at the location of the top-tier holding company, the inspection of the second-tier need not be done on-site, but may be done at the top-tier parent location. In either case, if an inspection is conducted, a rating should be assigned to the second-tier holding company.

5000.0.7 CLASSIFICATION OF ASSETS INVOLVING OUT-OF-DISTRICT NONBANK SUBSIDIARIES

The classification of assets involving out-of-District nonbank subsidiaries should be performed at the office of the parent company by the RRB when sufficient information is available or could be made available upon request. In adopting the inspection-frequency requirements for selected BHCs (see above), the Board recognized that inspection of nonbank subsidiaries and classification of nonbank assets were an essential part of the inspection process. However, an on-site inspection of out-of-District nonbank subsidiaries should not be done routinely by the RRB. If the RRB concludes that information necessary to classify assets is available only on-site, or if problems or other material circumstances lead to the conclusion that an on-site inspection is required, the RRB is encouraged to arrange for the local Reserve Bank to undertake on its behalf the inspection or other supervisory activities to take advantage of opportunities to enhance supervisory effectiveness or efficiency. When other Reserve Bank Districts conduct supervisory activities for the RRB, substantial reliance should be placed on the conclusions and ratings recommended by the participating Reserve Bank Districts.

5000.0.8 INTERAGENCY INSPECTION OR EXAMINATION AGREEMENTS

To ensure continuing close coordination and consistency in the examination and supervision of banking organizations, the three federal bank regulatory agencies (that is, the Federal Reserve System, OCC, and FDIC) have adopted two
policies intended to enhance the interagency supervision of BHCs and their bank and non-bank subsidiaries.

5000.0.8.1 Interagency Coordination of BHC Inspections and Subsidiary Bank Examinations

The first policy was adopted in conjunction with the Federal Financial Institutions Examination Council (FFIEC) and addresses large and problem holding companies and holding companies with deteriorating financial conditions. The policy requires the agencies to coordinate the BHC inspection and the examination of the lead bank subsidiary for—

1. any BHC with consolidated assets in excess of $10 billion;
2. any BHC or BHC subsidiary lead bank rated composite 4 or 5 (the two lowest rating categories) under the RFI/C(D) bank holding company rating system or the Uniform Rating System for banks; and
3. any BHC or BHC subsidiary lead bank rated composite 3 (the middle of the rating categories) whose financial condition appears to have worsened significantly since the last inspection or examination.

It is recognized that substantial problems could develop for a holding company as a result of serious difficulties in significant subsidiary banks other than its largest bank, and the policy as adopted affords the agencies the flexibility to conduct coordinated examinations when any bank, regardless of size, has problems warranting supervisory concern. In implementing this aspect of the policy, the agencies will conduct coordinated examinations when any significant bank subsidiary is rated 4 or 5, or when the financial condition of any other subsidiary causes serious concern about that subsidiary’s impact on the condition of the holding company or any other banking affiliate.

5000.0.8.2 Interagency Agreement to Conduct Concurrent Examinations of Certain BHCs and Their Lead Bank Subsidiaries

The second policy implements a program to conduct an annual concurrent examination by the Federal Reserve and the OCC or FDIC of holding companies with consolidated assets greater than $1 billion and their lead bank subsidiaries. The major provisions of this program are as follows:

1. The agencies will conduct concurrent examinations of certain BHCs and their lead bank subsidiaries, as well as any other subsidiary or subsidiaries as appropriate. Concurrent examinations are defined as the performance of certain on-site examination activities by examiners from the agencies on a simultaneous or coordinated basis to enhance cooperation, minimize potential duplication, and reduce burden on banking institutions. Concurrence does not necessarily require coincidence of beginning and closing dates of bank and holding company examinations. The geographical location of the lead bank shall determine the district bank and regional office responsible for coordination of examination logistics of all involved subsidiaries.
2. The banking organizations to which this program will apply will be mutually agreed upon by the director of the Division of Banking Supervision and Regulation (FRS) and the senior deputy comptroller for bank supervision (OCC) for holding companies with lead national bank subsidiaries, and by the director of the Division of Banking Supervision and Regulation (FRS) and the director of the Division of Bank Supervision (FDIC) for holding companies with lead state-chartered nonmember bank subsidiaries. These banking organizations will be specified in a list prepared jointly by the FRS and OCC for holding companies with lead national bank subsidiaries, and by the FRS and FDIC for holding companies with lead state-chartered nonmember banks.
3. In general, this program will apply to holding companies whose lead bank subsidiaries are national or state-chartered nonmember banks and whose consolidated holding company assets are equal to or exceed $1 billion. However, the program may be applied to other holding companies upon the agreement of the FRS, OCC, and FDIC.
4. In general, banking organizations included in the program will be examined annually, although each agency reserves the right not to participate in an examination due to resource constraints or other supervisory imperatives.
5. The agencies will mutually agree on the
division and sharing of work assignments and routines for concurrently examining the holding company and the bank, with the goal of minimizing unnecessary overlap, duplication, and burden on the banking organization. In general, the division of examination duties will be based on the locus of primary statutory examination and supervisory responsibility but will recognize that in some areas the agencies have common supervisory interests and needs for information.

6. Findings, conclusions, recommendations, reports, and transmittal letters pertaining to examinations of the holding company or subsidiaries included in the program should be provided to or discussed with the district bank and regional office of the other agency responsible for coordination of the concurrent examinations before being forwarded to management or directors of the holding company or bank (or banks).

7. Each district bank and regional office receiving examination information from the other agency should promptly inform the other agency of any major findings, conclusions, or recommendations with respect to which the receiving agency substantially disagrees.

8. Before forwarding examination results to management or directors, every effort should be made to resolve significant differences between the district bank and regional office concerning major examination findings, conclusions, and recommendations.

9. Significant differences that cannot be resolved by examiners or officials at the regional office-district level should be referred to the director of the Division of Banking Supervision and Regulation (FRS) and the senior deputy comptroller for bank supervision (OCC) for ultimate resolution, in the case of a holding company and its lead national bank. Cases that involve significant differences at the regional office-district level with regard to a holding company and its lead state-chartered nonmember bank will be referred to the director of the Division of Banking Supervision and Regulation (FRS) and the Director of the Division of Bank Supervision (FDIC) for ultimate resolution. If major differences cannot be resolved, the agencies may proceed with the transmission of examination findings and conclusions to management, according to each agency’s existing procedures.

10. Reasonable efforts should be made by the agencies to hold joint or combined final interviews and meetings with the management or directors of the holding company and the bank subsidiaries to discuss significant supervisory issues involving examination results. In the ordinary course, the district bank (FRS) would initiate meetings with the holding company, and the regional offices (OCC and FDIC) would initiate meetings with the national or state-chartered nonmember bank subsidiaries, respectively. If such meetings are not appropriate or feasible, each agency should inform the other agency in advance of any plans to meet with management or directors of the holding company or bank to discuss significant supervisory matters, and the other agency should be given the opportunity to attend such meetings or send a representative. If the other agency does not attend or send a representative, significant results of the meetings should be transmitted to that agency.

11. This agreement is intended to foster cooperation and is not meant by the exclusion of other arrangements to preclude other reasonable efforts or cooperative arrangements to strengthen interagency coordination and consistency.

12. Nothing in this agreement precludes or prohibits the agencies from examining any entity for which the agency has statutory examination authority, or from taking timely supervisory action against any entity for which the agency has statutory supervisory authority.

5000.0.8.3 Interagency Policy Statement on Examination Coordination

On June 10, 1993, an interagency policy statement was developed to strengthen coordination and cooperation among the federal banking agencies responsible for examining and supervising depository institutions and their holding companies, thus minimizing the disruptions and burdens associated with the examination process. The policy expands on existing interagency agreements. (See SR-93-30.)

5000.0.8.3.1 Primary Supervisory and Coordination Responsibility

Examinations or inspections of a particular legal entity are to be conducted by the federal regulatory agency that has primary supervisory
authority for that entity. In carrying out its supervisory responsibilities for a particular entity within a banking organization, each regulatory agency, to the extent possible, is to rely on examinations or inspections conducted by the primary regulator of the affiliate, thereby avoiding unnecessary duplication and unnecessary disruption of the banking organization. In certain situations, however, it may be necessary for a regulatory agency other than the entity’s primary supervisory authority to participate in the examination or inspection in order to fulfill its regulatory responsibilities.

Primary supervisory authority and coordination responsibilities are organized as follows:

- **OCC**: national banks, federal savings associations
- **FDIC**: state nonmember banks, state savings associations
- **FRB**: parent BHCs, nonbank subsidiaries of BHCs, the consolidated BHC, FHCs, SLHCs, and state member banks

The primary federal regulator is responsible for scheduling, staffing, and setting the scope of supervisory activities, including coordinating formal and informal administrative actions, as necessary. In fulfilling these responsibilities, the primary regulatory agency is to consult closely with the other appropriate agencies when there is need for coordination.

**5000.0.8.3.2 Overview of Examination Coordination and Implementation Guidelines**

The agencies are to make every effort to coordinate the examinations and the inspections of banking organizations. Coordinated examinations and inspections may not be practical in all cases because of resource constraints, serious scheduling conflicts, or geographic considerations; however, particular emphasis will be placed on coordinating examinations and inspections of banking organizations with over $10 billion in consolidated assets and those banking organizations (generally, with assets in excess of $1 billion) that exhibit financial weaknesses.

**5000.0.8.3.3 Coordinating the Planning, Timing, and Scope of Examinations and Inspections**

When multiple regulators have authority over a legal entity, representatives from the appropriate supervisory offices should, if necessary, meet quarterly to discuss supervisory strategies for specific banking organizations. They should meet at least annually to review and establish examination and inspection schedules, to plan for the next year, and to consider the need for coordination in the following areas:

1. sharing the strategy and scope of each examination or inspection
2. determining if agencies other than the primary regulator of a particular entity should participate in the examination or inspection of that entity
3. determining whether a consolidated request letter should be prepared to avoid duplicative information requests
4. sharing workpapers and resultant findings and conclusions from prior examinations and inspections
5. other areas as necessary

**5000.0.8.3.4 Interagency Review of Bank, Nonbank, and Parent-Company Activities**

Certain functions and procedures—such as internal audit, credit review, and the procedures for determining the allowance for loan and lease losses—transcend the boundaries that distinguish legal entities. Such functions and procedures may be located at the bank or holding company level. The primary regulator of the depository institution and the holding company both may have supervisory responsibility to assess such functions. In these cases, coordinated and concurrent examinations or inspections should be conducted to avoid duplicative reviews and unnecessary disruption.

The primary regulator of the entity being examined or inspected should take the lead in a coordinated examination or inspection, unless there is an agreement that another agency will serve as the lead agency. The responsibilities of the lead agency, in consultation with other appropriate agencies, include developing the scope of the examination or inspection and determining the staff requirements. The lead agency will also coordinate scheduling of the examination or inspection and the presentation of examination or inspection findings to the appropriate management.
5000.0.8.3.5 Joint Meetings Between Regulators and Bank or BHC Management

At the conclusion of examinations or inspections conducted under the guidelines, the agencies should coordinate and plan joint meetings with the board of directors to discuss the findings and conclusions. The agencies will coordinate responsibility as outlined in the guidelines.

5000.0.8.3.6 Significant Differences in Agencies’ Findings, Conclusions, and Recommendations

Before examination or inspection results are forwarded to management or boards of directors, every effort should be made to resolve any significant differences in major findings, conclusions, and recommendations. These differences should be resolved by examiners or officials at the regional level within 10 business days of identification. If the regional offices cannot resolve the matter, it should be referred to the national level, where it will be resolved within a reasonable time frame.

5000.0.8.3.7 Inspection and Examination Reports

The primary regulator should prepare the formal report of examination or inspection covering the entity for which it is the primary federal regulator. The primary regulator will also prepare the report when it serves as the lead agency. The report should be addressed and transmitted to the directors of the entity for which the regulator is the primary federal supervisory authority. The report may also be sent to the directors of other entities that have a need for the information. The agencies may agree, if necessary and appropriate, to prepare a joint report.

5000.0.8.3.8 Coordinating Information Requests

Any request for information to be obtained from an entity for supervisory purposes should normally be made through the entity’s primary regulator. The primary regulator should also share relevant supervisory information with the other appropriate regulatory agencies.

5000.0.8.3.9 Coordinating Enforcement Actions

When one or more regulatory agencies are contemplating an enforcement action, the agencies should consider initiating a joint enforcement action to address and correct deficiencies within a banking organization. At a minimum, each agency considering enforcement action should inform the other agencies. This provision reaffirms the existing interagency enforcement agreement.

5000.0.8.3.10 State Banking Departments

The agencies will endeavor to coordinate with state banking departments, when appropriate and feasible.

5000.0.9 POLICY FOR COMMUNICATING PROBLEMS OF SUPERVISORY CONCERN TO MANAGEMENT AND BOARDS OF DIRECTORS

5000.0.9.1 Introduction

On October 7, 1985, the Board announced a second policy to strengthen and formalize practices for communicating the findings of examinations or inspections to management and boards of directors and to set out guidelines for such meetings. The policy—

1. establishes specific criteria for determining which examination findings require follow-up meetings with boards of directors and sets out guidelines for such meetings,
2. requires that, in addition to providing a complete examination or inspection report to the bank or BHC, a written summary of findings be sent to the bank or BHC for distribution to each director, and
3. requires that senior Reserve Bank officials become more involved in presenting examination findings to boards of directors.

The policy was effective immediately, with initial implementation on January 1, 1986.
5000.0.9.2 Meetings with Directors

The decision to hold a meeting with the board of directors at the conclusion of a state member bank examination or a BHC inspection is to be determined on the basis of the organization’s financial condition, its size, the type of examination or inspection conducted, and other factors that, in the judgment of the Reserve Bank, indicate the need for a meeting. To the extent possible, meetings with the boards of directors of state member banks should include representatives of the state banking department. When appropriate, meetings with the boards of BHCs may be held jointly with the meeting of the lead bank subsidiary’s board of directors and the bank’s primary federal or state bank supervisor.

5000.0.9.2.1 Criteria for Conducting Meetings

5000.0.9.2.1.1 Condition

For those BHCs with consolidated assets of $1 billion or more, a meeting with the board of directors is to be held at the conclusion of any full-scope inspection in which a BHC is rated composite 4 or 5. A meeting between Reserve Bank staff and the board of directors to communicate findings is not required for—

1. complex holding companies with consolidated assets of less than $1 billion; and
2. noncomplex holding companies with consolidated assets of less than $1 billion that have a subsidiary depository institution in less-than-satisfactory condition, or with a less-than-satisfactory risk-management rating, or where a material supervisory issue is otherwise indicated.

However, a meeting should be conducted between Reserve Bank staff and the board of directors to communicate findings when supervisory concerns warrant such action.

Except for the above situation, meetings are required if an organization is rated composite 3 and its condition appears to be deteriorating or has shown little improvement since the previous examination or inspection in which it received a composite 3 rating. A meeting should also be held with all these organizations following a limited-scope or targeted examination or inspection, if deemed appropriate and desirable by the Reserve Bank. (See SR-95-19.)

5000.0.9.2.1.2 Size

A meeting will be required at the conclusion of a full-scope examination or inspection of all multinational organizations and major regional organizations with assets in excess of $5 billion. Reserve Banks are also encouraged to conduct such meetings at the conclusion of a full-scope examination or inspection of regional institutions with assets of $1 billion or more.

5000.0.9.2.1.3 Guidelines for Meetings

Meetings with boards of directors will have to be tailored to meet the needs of each specific situation. In general, meetings with the full board are preferred, but in certain cases the Reserve Bank may determine that a meeting with a committee of the board of directors, such as the executive or audit committee, will serve adequately. In all cases, however, the written summary of examination or inspection findings is to be provided to each member of an organization’s board of directors.

For BHCs with consolidated assets of $1 billion or more, the Reserve Bank’s presentation to the board should ordinarily be chaired by a Reserve Bank official, with the examination staff in attendance. The larger the organization or the more serious its problem, the more senior the Federal Reserve official should be.

Reserve Bank presidents are expected to become directly involved in the supervision of multinational organizations and regional institutions with more than $5 billion in assets that have been rated composite 3, 4, or 5. Reserve Banks have the discretion to determine the circumstances under which the participation of Reserve Bank presidents is appropriate and necessary. It may be necessary for the Reserve Bank president to meet with the board of directors and become involved in other ways; the precise nature of involvement will depend on the situation.

A meeting with the board of directors should include a formal, structured presentation containing a clear statement that an institution is

---

10. Reserve Banks also are encouraged to hold a meeting at the conclusion of a full-scope inspection (1) for an organization with assets of $1 billion or more rated composite 2 if its condition appears to be deteriorating and (2) for an organization rated composite 3, even if showing some improvement.
considered a “problem” institution 11 or is about to become a problem institution if existing conditions deteriorate. The use of slides, other visual aids, and hard-copy handouts is encouraged. Information should also be presented on financial trends and peer-group comparisons. The presentation should make clear the nature of problems uncovered, such as—

1. deficiencies in capital, asset quality, earnings, or liquidity;
2. violations of law;
3. inadequacies in policies, practices, and reporting systems necessary for the proper administration of the organization;
4. the lack of well-documented lending, collection, investment, and liability-management policies;
5. the failure of management to address previously discussed deficiencies;
6. the lack of reporting systems sufficient to keep senior management and the board of directors fully informed; and
7. the failure of the board of directors to participate in the active management of the organization.

For BHCs with consolidated assets of less than $500 million, the Reserve Banks, effective March 30, 1995 (SR-95-19), were provided the discretion to have senior supervision or examination staff represent the Reserve Bank in meetings with the directors of banks and BHCs. Conference calls with directors may be made in place of on-site meetings for these BHCs when considered appropriate and if an on-site meeting was held following the previous inspection.

5000.0.9.3 Communication of Supervisory Findings

Communication of supervisory findings to the organization’s board of directors is an important part of the supervision of a banking organization. While the board itself may not directly undertake the work to remediate supervisory findings as senior management is responsible for the organization’s day-to-day operations, it is nevertheless important that the board be made aware of significant supervisory issues and ultimately be accountable for the safety and soundness and assurance of compliance with applicable laws and regulations of the organization.

Depending upon the size and complexity of the organization, supervisory findings are communicated in writing through formal examination or inspection reports, reports summarizing the results of targeted reviews, a roll-up of those reviews into a comprehensive report, any other supervisory communication, or some combination thereof. These written communications (referred to collectively as “reports”) are generally directed to the board of directors, or an executive-level committee of the board, 12 as appropriate. In turn, the board of directors (or executive-level committee of the board) typically will direct the organization’s management to take corrective action and will provide management with appropriate oversight, including approvals of proposed management actions as necessary. (Refer to SR-13-13/CA-13-10)

To be effective, the communication of supervisory findings must be (1) written in clear and concise language, (2) prioritized based upon degree of importance, and (3) focused on any significant matters that require attention.

Reserve Banks must formally communicate MRIAs and MRAs resulting from any supervisory activity to the organization in these written reports. In order to promote an understanding of these terms, examiners should include definitions of MRIAs and MRAs in all supervisory documents communicating supervisory findings. 13 When included in a safety-and-soundness examination or inspection report, MRIAs and MRAs should be listed in the “Matters Requiring Attention” section. In the case of findings from consumer compliance examinations, MRIAs and MRAs should be reflected in the “Executive Summary and Examination Ratings” section of the consumer affairs report of examination. Only outstanding MRIAs and MRAs are required to be discussed in the report; however, examiners have discretion to discuss closed MRIAs and MRAs in the report if such discussion would be meaningful.

For large banking organizations, an annual roll-up report summarizes the significant find-

11. As has been long-standing Federal Reserve practice, the exact composite or component ratings assigned in the examination or inspection are not to be disclosed to persons other than the directors or senior management. (See section 4070.0.9.)

12. An executive-level committee of the board (such as, the audit committee or risk committee) typically meets regularly, keeps minutes of those meetings, and is accountable to and routinely reports to the board of directors.

13. In a safety-and-soundness report, these definitions could be included on the “Scope” page, in an appendix, or as a footnote on the “Matters Requiring Attention” section. In a consumer compliance report, these definitions could be included on the “Executive Summary and Examination Ratings” section.
ings, based on outstanding MRIAs or MRAs, included in the reports of targeted reviews or other supervisory activities conducted during the supervisory cycle. These findings may be grouped by major supervisory issues, rating components, risks, or themes. This information should enable the banking organization’s board of directors and any executive-level committee of the board to understand the substance and status of outstanding MRIAs or MRAs and focus their attention on the most critical and time-sensitive issues.

Communications to banking organizations concerning safety-and-soundness or consumer compliance MRIAs or MRAs must specify a timeframe within which the banking organization must complete the corrective actions. In certain circumstances, examiners may require the banking organization to submit an action plan that identifies remedial actions to be completed within specified timeframes. Action plans with intermediate- and long-term timeframes that span more than one supervisory or examination cycle with regard to safety-and-soundness matters, or a 12-month period with regard to consumer compliance issues, should include interim progress targets. Both safety-and-soundness and consumer protection or compliance considerations will remain a priority in determining whether the organization’s timeframes to correct the matter are reasonable.

**Matters Requiring Immediate Attention**

MRIAs arising from an examination, inspection, or any other supervisory activity are matters of significant importance and urgency that the Federal Reserve requires banking organizations to address immediately and include (1) matters that have the potential to pose significant risk to the safety and soundness of the banking organization; (2) matters that represent significant non-compliance with applicable laws or regulations; (3) repeat criticisms that have escalated in importance due to insufficient attention or inaction by the banking organization; and (4) in the case of consumer compliance examinations, matters that have the potential to cause significant consumer harm. An MRIA will remain an open issue until resolution and examiners confirm the banking organization’s corrective actions.

**Required Language.** Federal Reserve examiners are expected to use the standardized language below to communicate MRIAs to the board of directors (or executive-level committee of the board):

- “The board of directors (or executive-level committee of the board), or banking organization is required to immediately . . . .”

**Timeframe.** The expected timeframe for a banking organization to address MRIAs is generally short, and may be “immediate,” in the case of heightened safety-and-soundness or consumer compliance risk. For MRIAs that are necessary to preserve or restore the viability of a banking organization, the timeframe should take into account any potential losses to the Federal Deposit Insurance Corporation’s Deposit Insurance Fund, including the possibility that a delay in action will increase the potential for loss or the cost of resolution.

**Organization Response.** Following its review of MRIAs discussed in the report, the banking organization’s board of directors is required to respond to the Reserve Bank in writing regarding corrective action taken or planned along with a commitment to corresponding timeframes.

**Supervisory Follow-up.** The Reserve Bank must follow up on MRIAs to assess progress and verify satisfactory completion. The timeframe for follow-up should correspond with the timeframe specified for the action being required, and should be appropriate for the severity of the matter requiring the corrective action. The means of follow-up may vary depending upon the nature and severity of the matter requiring the action. Follow-up may take the form of a subsequent examination, a targeted review, or any other supervisory activity deemed suitable for evaluating the issue at hand.

In some cases, when follow-up indicates the organization’s corrective action has not been satisfactory, the initiation of additional formal or informal investigation or enforcement action may be necessary. In such cases, examiners should consult with enforcement staff. In all instances, examiners are expected to exercise judgment as to the supervisory activities best suited for evaluating a particular issue. Once follow-up is completed, examiners are expected

---

14. Such consultation should be made in accordance with existing guidance to Reserve Bank supervisory staff on the processing of enforcement actions, which provides that recommendations concerning formal enforcement actions should be submitted simultaneously to both the Board’s Legal Division and Division of Banking Supervision and Regulation.
to clearly and fully document the rationale for their decision to close any issue. Examiners are also expected to communicate in writing the results of their work and findings to the banking organization.

**Matters Requiring Attention (MRAs)**

MRAs constitute matters that are important and that the Federal Reserve is expecting a banking organization to address over a reasonable period of time, but when the timing need not be “immediate.” While issues giving rise to MRAs must be addressed to ensure the banking organization operates in a safe-and-sound and compliant manner, the threat to safety and soundness is less immediate than with issues giving rise to MRIAs. Likewise, consumer compliance concerns that require less immediate resolution should be communicated as an MRA. An MRA typically will remain an open issue until resolution and confirmation by examiners that the banking organization has taken corrective action. If a banking organization does not adequately address an MRA in a timely manner, examiners may elevate an MRA to an MRIA. Similarly, a change in circumstances, environment, or strategy can also lead to an MRA becoming an MRIA. The key distinction between MRA and MRAs is the nature and severity of matters requiring corrective action, as well as the immediacy with which the banking organization must begin and complete corrective actions.

**Required Language.** Federal Reserve examiners are expected to use the standardized language below to communicate MRAs to the board of directors (or executive-level committee of the board):

- “The board of directors (or executive-level committee of the board), or banking organization is required to . . . .”

**Timeframe.** Communications to banking organizations about MRAs must specify a timeframe within which the corrective action is expected to be completed. The timeframe, at least initially, may require estimation because the banking organization may first need to complete preliminary planning to establish the timeframe for initiating and completing the corrective action. The timeframes for MRAs are likely to become more precise over time as planning evolves and circumstances make the completion of the MRAs more urgent. Timeframes that span more than one examination cycle for safety-and-soundness issues or that exceed 12 months for consumer compliance issues should include appropriate interim progress reports.

**Organization Response.** Following its review of the report, the banking organization’s board of directors is required to provide a written response to the Reserve Bank regarding its plan, progress, and resolution of the MRA.

**Supervisory Follow-up.** The Reserve Bank must follow-up on MRAs to assess progress and verify satisfactory completion. The timeframe for follow-up should correspond with the timeframe during which actions are to be completed. For intermediate- or long-term corrective actions for MRAs, Reserve Bank follow-up may consist of assessing the organization’s progress to address the MRAs, whether satisfactory or unsatisfactory, and noting whether the initial estimated timeframe continues to be reasonable or warrants adjustment.

The means of supervisory follow-up may vary based upon the nature and severity of the matter for which corrective action is expected. Follow-up may take the form of a subsequent examination, targeted review, continuous monitoring, reliance on validation work conducted by an internal audit function,15 reliance on the results of examinations conducted by other supervisors, or any other supervisory activity deemed suitable for evaluating the issue at hand.

In some cases, when follow-up indicates the organization’s corrective action has not been satisfactory, the initiation of additional formal or informal investigation or enforcement action may be necessary. In all instances, examiners are expected to exercise judgment regarding the supervisory activities best suited for evaluating a particular issue. Once follow-up is complete, examiners are expected to clearly and fully document the rationale for their decision to close any issue. Examiners also are expected to communicate in writing the results of their work and findings to the organization.

---

15. Examiners may choose to rely on the work of internal audit when internal audit’s overall function and related processes are effective, as discussed in SR-13-1/CA-13-1, “Supplemental Policy Statement on the Internal Audit Function and Its Outsourcing.” When relying on internal audit to follow-up on MRAs, examiners are expected to review the relevant work papers and, when necessary, meet with internal audit staff who documented the resolution of the issue.
Supervisory Considerations

The volume of MRIAs and MRAs should be one of the many considerations in assigning a supervisory rating to a banking organization. The presence of a large number of MRIAs or MRAs may indicate that additional formal or informal investigation may be necessary or that the initiation of a formal or informal enforcement action may be warranted.

Irrespective of the number of MRIAs or MRAs, in some cases, additional formal or informal investigation may be necessary or the initiation of a formal or informal enforcement action may be warranted based on the severity of the issues, the repeat nature of issues, lack of responsiveness of management, violations of law, insider abuse, fraud, or other material deficiency. In any of these cases, examiners should consult with the Board’s enforcement staff in the Legal Division and the Division of Banking Supervision and Regulation.

5000.0.9.4 Summary of BHC Inspection Findings

In the following situations, the Federal Reserve Banks will provide special written reports summarizing the results of the inspection findings to BHCs (see SR-85-28):

1. An organization is rated composite 3, 4, or 5 (except for organizations rated composite 3 or 4 when a written summary report was provided on a preceding inspection (see SR-95-12); when the organization has been taking actions to comply fully with the provisions of that report; and when, in the examiner’s judgment, no good purpose would be served by issuing another summary report).
2. An organization is rated composite 1 or 2 but is showing signs of a significant deterioration in condition or an apparent violation of law.

Examiners in these and other cases may decide to issue summaries to board members when the summaries will prove constructive in resolving potential or actual problems.

The inspection report page, “Examiner’s Comments and Other Matters Requiring Special Board Attention,” may serve as the full text of the summary report to directors and should be written with that purpose in mind. The discussion on the page (and thus in the summary report) should focus on identified problems of the organization rather than its strengths. Problems should be presented in a succinct and unmistakably clear manner. The types of actions to be taken by the directors and management to address these problems should be specifically noted. Institutions rated 4 or 5 are to be told they are “problem” institutions that warrant “special supervisory attention.” Institutions rated 3 are to be informed that their condition is not satisfactory, that they are subject to more-than-normal supervision, and that they may become “problems” if their weaknesses are not addressed adequately.

The summary report will be sent directly to the banking organization’s management for their distribution to each director. The transmittal letter to the banking organization is to state that the report is a summary of identified problems and contemplated supervisory actions and is to request that management distribute the report to each director. The letter is to state further that each director should read the report, sign the introductory statement attesting to having read the report, and return the report to management. Management is to keep on file copies of the statements signed by the directors but is to destroy all but a file copy of the summaries themselves.

To provide the directors with prior notice of the deficiencies to be discussed, the directors’ summary report is to be completed and distributed before any Reserve Bank meeting with the board of directors. Reserve Banks should also make every effort to distribute the complete examination or inspection report to management before meeting with directors.
SUMMARY TO DIRECTORS
OF INSPECTION FINDINGS

Prepared by the
Federal Reserve Bank

For the Board of Directors of

Inspection Conducted As of

This summary is the property of the Board of Governors of the Federal Reserve System and is furnished to members of the board of directors of the bank holding company inspected for their confidential use. The report is strictly privileged and confidential under applicable law, and the Board of Governors has forbidden its disclosure in any manner without its permission. Under no circumstances should the holding company, or any of its directors, officers, or employees disclose or make public in any manner the report or any portion thereof. In reviewing this summary, it should be kept in mind that an inspection is not the same as an audit report.

THIS SUMMARY SHOULD BE HELD IN STRICTEST CONFIDENCE
The attached summary of an inspection of _______ completed on ________, has been prepared to assist members of the board of directors of the bank holding company in fulfilling their fiduciary responsibilities. As a member of the board you are urged to review this summary and the inspection report as soon as possible.

As an elected member of the holding company’s board of directors, you have a duty to ensure that the organization is operated in a safe and sound manner. You may be held liable for losses caused by your failure to supervise properly the affairs of the holding company. It is suggested that you review one or more of the publications that explain the functional and legal responsibilities of a director.

Congress has placed great emphasis on the role of holding company directors and officers by passing legislation allowing regulatory authorities to use “cease and desist” actions against individuals, to assess civil money penalties, and even to remove an officer or director demonstrating willful or continuing disregard for safety and soundness considerations.

This summary is the property of the Board of Governors of the Federal Reserve System and is furnished to members of the board of directors of the bank holding company inspected for their confidential use. The report is strictly privileged and confidential under applicable law, and the Board of Governors has forbidden its disclosure in any manner without its permission. Under no circumstances should the holding company, or any of its directors, officers, or employees disclose or make public in any manner the report or any portion thereof. In reviewing this summary, it should be kept in mind that an inspection is not the same as an audit report. After reviewing this summary, please sign below and return this entire document to the bank holding company.

I have received and read the attached summary of the inspection of _______ by the Federal Reserve Bank of _______ conducted as of ________.

S/director

Date
SUMMARY TO DIRECTORS OF INSPECTION FINDINGS—Continued

Summary of Inspection Findings
5000.0.11 COMPLETION STANDARD FOR EXAMINATION AND INSPECTION REPORTS

Safety and soundness examination and inspection reports for community banking organizations issued by the Federal Reserve should be completed and sent to the supervised institution within a maximum of 60 calendar days following the “close date” of the examination. These standards apply to formal examination and inspection reports for institutions supervised by the Federal Reserve with $10 billion or less in total consolidated assets including state member banks, bank holding companies, savings and loan holding companies, Edge Act and agreement corporations, U.S. branches and agencies of foreign banks, and foreign subsidiaries and branches of U.S. banks. For institutions rated composite “3,” “4,” or “5,” Reserve Banks are encouraged to adopt an internal target of 45 calendar days from the close date for sending the reports.

The “close date” of an on-site examination and inspection is defined as the last date that the examination team is physically on-site at the institution. For examinations and inspections for which all or a portion of the work is performed off-site, the “close date” is defined as the earlier of the following dates: (1) the date when the analysis (including loan file review) is completed and ready for the examiner-in-charge’s review or (2) the date when the preliminary exit meeting is held with management, which can be conducted either on-site or off-site by conference call.

Further, to ensure that findings are communicated to a supervised institution in a timely manner, Reserve Banks should ensure that the duration between the start of an examination/inspection to the completion and delivery of an examination/inspection report does not exceed 90 days. In cases when reports are subject to statutory requirements for other state or federal agency review, such as by the Consumer Financial Protection Bureau (CFPB), Reserve Banks may exceed the guidelines included in SR-13-14 at the discretion of senior management. However, deviations from these guidelines are expected to be rare. At the discretion of senior Reserve Bank management, additional exemptions from this 90-day guideline may be considered for examinations that are conducted simultaneously on multiple affiliated banks or examinations of larger complex community banking organizations, such as those that have total assets in excess of $2 billion that require additional time on-site to review specialized or complex business lines.

In addition, as stated in SR-13-14, findings and conclusions delivered to a supervised institution at the close date and exit meetings for examinations and inspections must be consistently documented in workpapers. At a minimum, documentation should include:

1. a list of attendees at the meetings;
2. a description of significant examination and inspection findings discussed, including preliminary ratings; and
3. a summary of the bank management’s views on the findings and, if applicable, the views of the board of directors.

To the extent conclusions in the final report differ from those discussed at the close date and exit meetings, Reserve Bank examiners and supervisory staff should communicate the reasons for the differences to the supervised institution and document these discussions in their workpapers. (See SR-13-14.)

16. This completion standard gives recognition to the continuous monitoring and roll-up supervisory process for larger organizations having consolidated assets in excess of $10 billion.
17. Bank and savings and loan holding companies with total consolidated assets of $1 billion or less are subject to a separate program that has different requirements for the issuance of reports of inspection.
18. The start date is the date that Reserve Bank examiners and supervisory staff commence the examination and inspection work, excluding pre-exam visitations and preparation.
20. In some cases, Reserve Bank examiners or supervisory staff may conduct a pre-exit meeting with the institution’s management at the close date of the examination or inspection. Representatives from the on-site examination or inspection team may also hold a final exit meeting with the institution after vetting examination or inspection findings with the responsible Reserve Bank officer(s). An “exit meeting” is defined as an examiner’s meeting with the institution’s management or management and board of directors to communicate preliminary supervisory findings and conclusions.
5000.0.12 COMBINED EXAMINATION/INSPECTION REPORT FOR BHCs WITH LEAD STATE MEMBER BANKS

Reserve Banks are permitted, under the circumstances and procedures specified in SR-94-46, to issue a combined report for a BHC and its lead state member bank subsidiary. A letter should be sent to the qualified holding companies that explains their option of receiving a combined report. The combined report may be issued when—

1. a BHC’s lead bank subsidiary is a state member bank, and
2. the holding company’s board of directors formally approves, by board resolution, a combined report being released to its lead state member bank subsidiary.

A combined examination/inspection report format is attached to SR-94-46. At a minimum, a combined report will contain all examination report pages required by the interagency bank examination report instructions as well as information on the parent holding company, its bank and nonbank subsidiaries, and the consolidated BHC organization. For detailed information on required and optional report pages, see section 6000 of the Commercial Bank Examination Manual and sections 5010.0 to 5010.43 of this manual.

Separate examination and inspection Supervisory Information System (SIS) entries are required for each combined report. The combined report’s cover page is to be green, must provide BHC and Bank RSSD numbers, and must clearly indicate that the report is a combined report.

21. In cases in which the company has more than one state member bank, separate examination reports should be prepared for all other state member bank subsidiaries.

22. Research, Statistics, Supervision and Regulation, and Discount and Credit (RSSD)

WHAT’S NEW IN THIS REVISED SECTION

This section was revised to include a new subsection regarding community holding companies rated composite ‘4’ or ‘5,’ which discusses the Federal Reserve’s adoption of a flexible, letter-format report in lieu of the standard, longer-form report. (Refer to SR-13-10.)

The full-scope report is designed to be used as a minimum standard in reporting the results of a bank holding company inspection. The report to be provided to the bank holding company consists of a core section and an appendix section, the latter consisting of certain required financial statements. Supporting schedules are added to the core or appendix sections when an area of concern or problem is addressed. Such schedules provide detailed information relevant to a particular activity area.

The core section contains a table of contents, a summary of the scope of the inspection, and a page that presents the examiner’s comments and matters requiring special Board attention. The core section should also contain an analysis of financial factors, including an assessment of the quality of assets and a complete analysis of the bank holding company’s RFI/C(D) components. Specifically, the core section is made up of the pages described in the following subsections.

5010.1.1 CORE SECTION

The inspection report format contains the following pages in the core section:

<table>
<thead>
<tr>
<th>Page no.</th>
<th>Page title</th>
</tr>
</thead>
<tbody>
<tr>
<td>i.</td>
<td>Table of Contents</td>
</tr>
<tr>
<td>1.</td>
<td>Examiner’s Comments and Matters Requiring Special Board Attention</td>
</tr>
<tr>
<td>2.</td>
<td>Scope of Inspection and Abbreviations</td>
</tr>
<tr>
<td>3.</td>
<td>Analysis of Financial Factors</td>
</tr>
<tr>
<td>4.</td>
<td>Audit Program</td>
</tr>
</tbody>
</table>

5010.1.2 APPENDIX SECTION

The appendix section will consist of a mandatory section that presents the following financial statements for the organization:

1. Parent Company Comparative Balance Sheet
2. Parent Company Comparative Statement of Income and Expenses
3. Consolidated Comparative Balance Sheet
4. Consolidated Comparative Statement of Income and Expenses

Bank holding company inspections should be conducted as of the latest fiscal quarter. All financial statements should be presented as of the most recent calendar quarter. The dollar amounts are reported in thousands.

Financial statements prepared by the bank holding company may be used to meet the appendix requirements, provided the statements are prepared in accordance with generally accepted accounting principles and are, in the examiner’s judgment, suitably detailed, clear, and accurate. Any adjustments to any financial statements made by the examiner should be footnoted. Any other supporting schedules or visual aids (for example, graphs or charts) can be included in the core section to communicate or support the examiner’s findings. Percentages should be rounded to the nearest tenth of 1 percent, unless finer detail is necessary.

5010.1.3 OPTIONAL PAGES TO BE INCLUDED IN THE CORE OR APPENDIX SECTIONS

Supporting Report Pages for All Inspections

The listed optional supporting report pages are to provide support to the core or appendix section of the report. They will normally be

1. “Supporting report pages” refers to information gathered in essentially the same format as when the page is being prepared by the examiner for inclusion in the report. However, certain supporting information may not provide sufficient value to address an area of concern in the report but should be retained in workpaper form to provide evidential matter for the inspection report. For example, the Statement of Changes in Stockholders’ Equity may be summarized in an audit report or may be included with the company’s audited annual financial statements. The examiner would review the...
sequenced as listed below. If a problem area is cited within the core section, the respective typed supporting report pages need to be included to support the critical comments. The optional supporting pages listed are to be included by the examiner in the report when they convey significant findings in the core section or when they support the discussion in the core section with an appendix page. If appropriate standardized report pages do not exist to address a particular area of concern, the relevant analytical support can be included on the “Other Matters” page as part of the inspection report. Any or all supporting report pages and workpapers should be available to be forwarded immediately to Board staff, if requested.

The designated optional supporting report pages are—

Policies and Supervision
Summary of Consolidated-Classified and Special-Mention Assets, and Other Transfer-Risk Problems
Consolidated Capital Structure
Capital Structure (lead bank subsidiary)
Treasury Activities/Capital Markets Violations
Other Matters
Classified Assets and Capital Ratios of Subsidiary Banks2
Organization Chart
History and Structure
Investment in and Advances to Subsidiaries
Commercial Paper (Parent)
Lines of Credit (Parent)
Commercial Paper/Lines of Credit (Parent) (including questions)
Contingent Liabilities and Schedule of Balance-Sheet Accounts Not Detailed Elsewhere (Parent)
Statement of Changes in Stockholders’ Equity Income from Subsidiaries (Fiscal and Interim)
Cash Flow Statement (Parent) (including questions)3

Parent Company Liquidity Position
Parent Company and Nonbank Assets Subject to Classification
Bank Subsidiaries
Nonbank Subsidiaries
Nonbank Subsidiary Financial Statements
Fidelity and Other Indemnity Insurance
Other Supervisory Issues
Extensions of Credit to Bank Holding Company Officials and Their Related Interests and Investments in and Loans on Stock or Obligations of Their Related Interests
Interest Rate Sensitivity—Assets and Liabilities

In addition to the FR 1225 report pages, a few replacement report pages are designated as FR 1241 pages. The following pages were designed to be used for smaller bank holding companies having less than $150 million in assets:

Capital Structure (lead bank subsidiary)
Bank Subsidiary
Other Supervisory Issues

5010.1.4 CONFIDENTIAL SECTION FOR ALL INSPECTION REPORTS

The confidential section for bank holding company inspection reports is reserved for confidential comments that will be limited to staff of the Federal Reserve System. The confidential section of the inspection report will consist of the following pages:

<table>
<thead>
<tr>
<th>Page title</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. Principal Officers and Directors</td>
</tr>
<tr>
<td>B. Condition of the Bank Holding Company</td>
</tr>
<tr>
<td>C. Liquidity and Debt Information</td>
</tr>
<tr>
<td>D. Administrative and Other Matters</td>
</tr>
</tbody>
</table>

Discussion in the confidential section should be kept to a minimum. As much information as possible should be incorporated in other sections of the report that are available to the bank holding company. The complete analysis of the holding company organization (that is, bank holding company RFI/C(D) components) is to appear in the front of the report on the “Analysis of Financial Factors” page. The information reported on the confidential pages should be printed on yellow paper.
5010.1.5 GENERAL COMMENTS FOR ALL REPORT PAGES

The specified format of the report pages should be used whenever possible, but when flexibility is necessary, additions and limited deletions can be made. Examiners are required to include in the core section only a relatively small number of report pages and, in the appendix section, only financial statements for the organization. These pages will normally be sequenced as listed previously. At the same time, examiners have the discretion to decide whether to include other standard pages in a report and whether to include them in the core or the appendix sections. This choice should be made on the basis of whether the content of the page will highlight a significant inspection finding (in which case, the finding should be included in the core section) or whether the content will provide support for comments offered in the core section (in which case, the finding should ordinarily be placed in the appendix section).4 Given the discretion being accorded examiners to tailor reports to accurately convey inspection findings, reports prepared for large and small companies alike should be prepared to achieve that objective.

Another important objective is to avoid excessive length in the report, particularly in the open section. Including comments that may provide directors and management with information of marginal importance or including information that repeats findings and conclusions from different pages of the report diverts the reader’s attention from the areas of concern that must be corrected.5 In addition, reports should be understandable and readable. A further objective is for examiners to determine precisely what should be conveyed in their reports to boards of directors and management and then to present that information in clear and concise language.

All reports are to be on 8½-by 11-inch paper and bound on the left margin. Responses to questions should be provided below the last question in the section or, if necessary, on an additional page. Do not repeat the question in the response. Indicate the question number in the response.

All credit-extending nonbank subsidiaries will be subject to asset classification. The examiner should recommend that management maintain a loan-loss reserve that is adequate to offset 100 percent of assets classified loss and still have a balance sufficient to absorb normal unidentified, unanticipated future losses from operations. The examiner and BHC management should consider the guidance provided in section 2065.2 on the determination of an adequate level for the allowance for loan and lease losses. Examiners should also review the organization’s loan-loss history to determine trends and to help evaluate the adequacy of the existing reserve.

5010.1.6 FORMAT FOR SAFETY-AND-SOUNDNESS REPORTS OF INSPECTION FOR COMMUNITY HOLDING COMPANIES RATED COMPOSITE “4” OR “5”

The Federal Reserve has adopted a flexible, letter-format report in lieu of the standard, longer-form report for communicating the findings of on-site inspections of community banking organizations that result in composite supervisory ratings of “4” or “5.” Examiners may use a letter-format report for inspections of community banking organizations rated “4” or “5,” provided all mandatory and any applicable optional information is in the report. Refer to SR-13-10.

Examiners are to continue to follow the report guidance provided in SR-01-19, “Reports of Examination of Community Banking Organizations,” for full-scope examinations of community banking organizations rated “1,” “2,” or “3.” That guidance provides for some flexibility in the structuring of the examination reports so long as all mandatory and applicable optional content is covered. Examiners have flexibility in writing the narrative portion of reports.

5010.1.6.1 Letter-Format Report of Inspection Content

Similarly, a letter-format report of inspection prepared in support of on-site bank and savings and loan holding company inspections that

4. If a problem area is cited within the core section, inclusion of the listed and typed supporting report pages will be necessary to support the critical comments.

5. While brevity is an important goal, examiners should note that, when an enforcement action is contemplated, the inspection report must fully support the proposed provisions of the enforcement document.

6. Community banking organizations are those bank holding companies and savings and loan holding companies with assets of $10 billion or less.

7. The flexible letter-format may also be used on target examinations of 3-rated community banking organizations, as applicable.

result in a rating of “4” or “5” should be tailored to each company and should fully address the areas typically covered in the core section of the standard inspection report format. These areas include

- scope of the inspection,
- matters requiring board attention,
- analysis of consolidated, parent company, non-bank and bank subsidiary financial factors, and
- conclusions regarding the internal and external audit program.

In addition, any applicable areas that are described as optional pages in the standard report of inspection instructions and are necessary to support examiners’ findings should be included.

5010.1.6.2 Communication of Supervisory Findings

The letter-format reports must notify a banking organization and its board of the organization’s supervisory rating and the confidential nature of the letter. The letter-format report should also set forth the deadline by which the organization must reply to the Reserve Bank, including the organization’s plans to address any matters requiring immediate attention or matters requiring attention that are noted in the report.

9. See section 5010.0, “Procedures for Inspection Report Preparation (Inspection Report References),” which is a listing of report pages and instructions available for inclusion in a report.
Procedures for Inspection Report Preparation

(Cover) Section 5010.2

The official name, location, and the RSSD ID number of the bank holding company being inspected is to be provided. Also provide the dates the inspection commenced and concluded as well as the inspection date. The cover includes a notice that its content is strictly confidential.

The cover must include the official seal of the Board of Governors of the Federal Reserve System. It may also include the names and seals of the Reserve Bank and the state bank supervisory agency that participated in the inspection as part of a cooperative inspection agreement. The cover must also include a reference to the Board’s rule pertaining to confidential supervisory information made available to supervised financial institutions and financial institution supervisory agencies, which is 12 C.F.R. 261.20.
REPORT OF BANK HOLDING COMPANY INSPECTION

Name: ____________________________  Inspection Commenced: ____________________________

Location: __________________________  Inspection Concluded: ____________________________

RSSD ID Number: ____________________  Inspection Date: ____________________________

THIS REPORT OF INSPECTION IS STRICTLY CONFIDENTIAL.

This report has been prepared by an examiner selected or approved by the Board of Governors of the Federal Reserve System. The report is the property of the Board of Governors and is furnished to directors and management for their confidential use. The report is strictly privileged and confidential under applicable law, and the Board of Governors has forbidden its disclosure in any manner without its permission, except in limited circumstances specified in the law (12 USC 1817(a) and 1831m) and in the regulations of the Board of Governors (12 CFR 261.20). Under no circumstances should the directors, officers, employees, trustees or independent auditors disclose or make public this report or any portion thereof except in accordance with applicable law and the regulations of the Board of Governors. Any unauthorized disclosure of the report may subject the person or persons disclosing or receiving such information to the penalties of Section 641 of the U.S. Criminal Code (18 USC 641). Each director or trustee, in keeping with his or her responsibilities, should become fully informed regarding the contents of this report. In making this review, it should be noted that this report is not an audit, and should not be considered as such.

FEDERAL RESERVE BANK OF
The table of contents indicates the report pages included in the report and the sequential numbering of pages within the report. All pre-numbered Core Section inspection report pages are included in each table of contents along with any other supporting report pages. Supporting report pages will be numbered sequentially in FR 1225, starting with page number “11”.

If included, individual subsidiaries may be listed with their respective page numbers, or they may be grouped such as “Nonbank Subsidiaries” with a page reference such as “26–26c” to indicate the number of such subsidiaries. At the bottom of the page, insert the commencement date of the previous inspection followed by the date of the financial statements in parentheses.
WHAT’S NEW IN THIS REVISED SECTION

Effective July 2013, this section was revised to incorporate and reference the revised guidance found in SR-13-13/CA-13-10, “Supervisory Considerations for the Communication of Supervisory Findings,” which may involve the preparation of this inspection report page or section (continuous flow reporting). To improve the consistency and clarity of written communications, Federal Reserve staff is to use the prescribed standardized terminology and definitions, to differentiate among (1) Matters Requiring Immediate Attention, and (2) Matters Requiring Attention.

5010.4.1 SUMMARY OF EXAMINER’S FINDINGS

The report page or section (continuous flow reporting) is to include a summary of the examiner’s findings relating to—

1. violations,
2. criticisms,
3. special comments,
4. matters requiring special board attention, and
5. recommendations.

In addition, it will include the RFI/C(D) component ratings (see SR-04-18 and section 4070.0.2.3). Component ratings for the current inspection and the two prior inspections will be reported at the top of the page, as illustrated below (see SR-96-26).

This listing should be followed by the uniform definition of the assigned ratings. The uniform definitions of the component and subcomponent ratings assigned need not be included in reports; however, they should be made available to management and directors upon request.

When a combined examination/inspection report format is used, similar matrices for each component and subcomponent rating assigned should be included in the report. Numeric ratings should also be included on the pages of reports that discuss findings related to the components and subcomponents.

The purpose of the report page or section is to communicate to the holding company’s board of directors and its management the examiner’s views on the overall condition of the company, significant problems that have been identified in the inspection, and actions the company’s board of directors and management need to take to correct the company’s problems and strengthen its condition. The comments should summarize only material concerns, criticisms, analyses, or violations, referring the reader to an appropriate optional report page for additional detail. The use of subcaptions to identify and separate the areas subject to comment is encouraged.

The comments are generally written on an exception basis. Avoid laudatory comments. The examiner may, however, comment on improvements initiated by management.

Items suitable for discussion within the
“Examiner’s Comments and Matters Requiring Special Board Attention” report page include, but are not limited to—

1. policies and supervision of subsidiaries,
2. earnings,
3. cash flow or liquidity,
4. level of classified assets,
5. adequacy of capital,
6. borrowings,
7. condition of subsidiaries,
8. violations of the Bank Holding Company Act and Regulation Y,
9. violations of section 23A or section 23B of the Federal Reserve Act and the Board’s Regulation W and other statutes,
10. fees and dividends being paid to the parent by subsidiaries,
11. audit function, and
12. information that serves as an alternative to issuing a separate Summary to Directors of Inspection Findings.

Any substantive recommendations contained elsewhere in the inspection report should be presented briefly in the core page “Examiner’s Comments and Matters Requiring Special Board Attention.” A summary comment relative to the adequacy of the BHC’s oversight of its subsidiaries may be provided. Any comments that refer specifically or indirectly to details presented elsewhere in the report should be consistent with that information. All inspection report pages entitled “Examiner’s Comments and Matters Requiring Special Board Attention” will be written to accomplish these objectives: give an overall assessment of the condition of the company, discuss significant problems, and specify needed corrective action. See the subsection 5000.0.9.3 on the “Communication of Supervisory Findings.” To achieve consistency and clarity in written communications, Federal Reserve staff is to use prescribed standardized terminology and definitions, to differentiate among (1) Matters Requiring Immediate Attention (MRIAs), and (2) Matters Requiring Attention (MRAs). (See also SR-13-13/CA-13-10.)

The Matters Requiring Board Attention report page or section should label the comments therein as being either MRIAs or MRAs. As a general rule, examiners should expect fewer MRIAs or MRAs in stronger organizations than in weaker ones. However, the presence of MRIAs or MRAs does not preclude a strong or satisfactory rating. For example, while correction of any violation of law is essential, the presence of inadvertent violations that do not expose the organization to significant risk (such as insufficient Federal Reserve stock shortly after a capital injection or a technical exception) would not preclude a strong rating if all other factors supported that rating. Conversely, the presence of a large number of inspection findings that give rise to MRIAs or MRAs that represent a threat to the safety and soundness of the organization or that signify an elevated consumer compliance risk exposure would generally preclude a satisfactory rating and may require consideration of an enforcement action. For institutions between these extremes, examiners should determine the impact of MRIAs and MRAs on ratings and assess the need for an enforcement action by considering the severity of these weaknesses and their relative importance in light of all the factors influencing the assessment of the organization. The Federal Reserve examiner’s use of this common terminology is designed to enhance the focus and efficiency of communicating supervisory expectations and overseeing their implementation.

In cases of composite ratings of 3, 4, and 5, the text of this page will also be used for the summary report. The signature of the examiner-in-charge should appear below the comments.
The scope of the inspection describes generally the coverage parameters of the inspection. When determining the scope of the inspection, the examiner must consider the Board’s policy statement on the examination and inspection of state member banks and bank holding companies (October 7, 1985, S-2493). See sections 5000.0.7 to 5000.0.9.

The scope generally includes a presentation of the following:

- the purpose for the inspection
- which subsidiaries were inspected on-site and which were done from the parent’s location
- the depth of inspection coverage
- an identification of the peer group(s) and the bank holding companies used for comparison with the bank holding company being inspected
- the source of information regarding the administration of policies and the supervision over subsidiaries
- comments as to the extent examiners relied on internal classification systems or classifications of other bank regulatory agencies
- the senior officers with whom the overall inspection findings were discussed
- the sources upon which the examiner based his conclusions and/or recommendations

The opening paragraph of the scope should include authority under which the inspection was conducted (section 5(c) of the Bank Holding Company Act of 1956, as amended), and may include the dates the inspection commenced and closed, and the date(s) of financial statements used as the basis for the inspection.

In brief paragraphs, the examiner should also indicate what minute books were read, which nonbank subsidiaries were examined, what size loans were reviewed in credit-extending subsidiaries, with whom corporate policies were discussed, and to what extent banking subsidiaries were reviewed.

The report page will also include explanations of abbreviations used in the report. Generally, abbreviations familiar to the BHC should be used. However, efforts should be made to incorporate at least a part of the name into the abbreviation as opposed to relying strictly on initials which tend to become confusing. Also, it is desirable that abbreviations of bank subsidiaries include the word “bank” to distinguish them from the parent company and/or nonbank subsidiaries with similar names.

---

1. This includes a statement as to the percentage of loans reviewed in each credit-extending nonbank subsidiary, without consideration to statistical sampling or any form of extrapolation. The ratio will include loans actually reviewed by Federal Reserve examiners divided by total loans in each nonbank subsidiary. When different categories of loans are housed in a nonbank subsidiary, it may be relevant to provide a breakdown by percentage of loans reviewed for each category of loans, further segregated by current and delinquent categories. See SR-90-26.
Procedures for Inspection Report Preparation
(Core Page 3—Analysis of Financial Factors) Section 5010.6

The “Analysis of Financial Factors” page presents a complete financial analysis of the components (nonconfidential bank holding company RFI(C)(D) comments) of the holding company—parent, bank subsidiaries, nonbank subsidiaries, and consolidated (as applicable). The page is supported and followed by parent and consolidated financial statements, information on consolidated asset quality, and consolidated capital ratios. See the 4000 sections for specific information on analyzing financial factors.

The analysis serves the informational needs of both senior management of the holding company and the supervisory authorities by presenting positive and negative factors affecting the condition of the major components and the consolidated company. The analysis helps to identify problems or potential problems and measures the holding company’s ability to be a source of financial strength to its subsidiaries. Therefore, the “Analysis of Financial Factors” page is considered one of the most important parts of the report.

The information for the analysis is available from discussions with management; financial-statement data within the report; published statements, such as the SEC Form 10-K; and unpublished information that is sometimes available from the officer in charge of finance, the treasurer, or the comptroller.

5010.6.1 PARENT COMPANY

For the parent company, present an analysis of each of the financial factors in narrative form. Tables may be used to support the narrative analysis.

The analysis of the parent should include a discussion of the following: debt structure (with indications of how debt proceeds are used), debt/equity ratios (with comparisons to previous years), sufficiency of cash flow, sources and stability of income, interest coverage, dividend-payout ratios, classifications of parent company assets, changes in dividend policy, comparisons of the actual levels and results to the respective peer group, and a conclusion about whether the holding company is considered to be a source of financial strength to its subsidiaries.

Within the analysis of the parent, the examiner should also include comments on whether dividend payments to stockholders have been reasonable, considering the parent’s leveraged position, debt servicing, cash flow, and capital needs. The examiner should describe how dividend policy is formulated and what the policy is. See the Board’s policy on cash-dividend payments in section 2020.5.1.

Dividends paid by subsidiaries, both bank and nonbank, to the parent company are the means by which a cash return is realized on the investment in subsidiaries, thus enabling the parent to pay dividends to its shareholders and to meet its debt-service requirements and other obligations. The examiner will need to conclude and discuss in the report whether dividend assessments of any subsidiary are excessive. The examiner can draw conclusions about excessive dividends from discussions with management about dividend policies and from information that may be contained elsewhere in the report, such as—

1. peer-group averages,
2. the condition and capitalization of each subsidiary,
3. the type of subsidiary (credit-extending subsidiaries need more capitalization than service subsidiaries),
4. the bank holding company’s reasons for extracting proportionately more or less from each subsidiary,
5. past policy and payments, and
6. compliance with regulatory policy and guidelines.

5010.6.2 BANK SUBSIDIARIES

A summary write-up should be prepared for each bank subsidiary comprising 10 or more percent of the bank holding company’s consolidated assets or for bank subsidiaries evidencing material financial deficiencies or other characteristics that should be brought to the attention of the bank holding company’s board of directors.1 These write-ups should summarize noteworthy examiner comments from the open section of the latest reports of examination of the subsidiary bank(s) and should comment on any actions taken to correct significant weaknesses or violations. The summary should also include an analysis of the level and trend of earnings.

1. In determining the subsidiary banks that require write-ups, examiners should be mindful of the effect that the cross-guarantee provisions of FIRREA can have on nontroubled bank subsidiaries.
and classified assets and of the adequacy of capital (for example, tier 1, total capital, and leverage ratios).

For the other bank subsidiaries, the examiner should provide an overall summary that includes the number of subsidiaries, by composite rating; an overall analysis of the level and trend of earnings; classified assets; capital (that is, capital adequacy); and any other financial-analysis indicators.

5010.6.3 NONBANK SUBSIDIARIES

The examiner should present an analysis of the condition and an analysis of the risk assessment of nonbank subsidiaries. The analyses presented within this report page should support the I component of the RFI/C(D) rating without making the reader refer to other report pages.

Because of the number of nonbank subsidiaries a bank holding company may have, it may not be possible or reasonable to discuss the condition, risk assessment, and impact of each nonbank subsidiary on the BHC’s banking and other depository institution subsidiaries. The analysis presented on this page should, therefore, be based on the combined performance of the nonbanking activities. However, if the company has significant or troubled credit-extending nonbank subsidiaries, individual analyses of each of these subsidiaries should be included.

The analysis of nonbank subsidiaries should include information on these subsidiaries’ financial condition, including the level, trend, and quality of earnings; composition of the loan portfolio; level and trend of classified, past-due, and nonperforming assets; and adequacy of the loan-loss reserve, capital, financial management of debt-to-equity ratios, and funds management. The combined risk assessment should address the funding risk, earnings exposure, operational risks, asset quality, capital adequacy, contingent liabilities and other off-balance-sheet exposures, management information systems and controls, transactions with affiliates, growth in assets, and the quality of oversight provided by the management of the bank holding company and nonbank subsidiary. (See SR-93-19.) Conclude with a general statement on the condition and overall risk assessment of the nonbank subsidiaries.

5010.6.4 CONSOLIDATED

Present an analysis of the consolidated balance sheet, including levels and trends of debt; the adequacy of capital (tier 1, total capital, and leverage ratios); growth in loans, assets, and liabilities; and peer-group comparisons. Also present an analysis of the consolidated earnings trends, asset quality, and the adequacy of valuation reserves. Such analysis should include comments on performance results based on net interest margins, return on average assets, return on average equity, factors influencing earnings, and peer-group comparisons. Include a statement on the condition of the company, including its reliance on interest-sensitive funds and its ability to borrow additional short- or long-term funds or to issue new capital stock.

5010.6.5 GENERAL INSTRUCTIONS

The examiner should make certain that—

1. the figures and comments related to the parent are consistent with the various parent company financial statements;
2. the analysis of bank subsidiaries is consistent with data included on the “Bank Subsidiary” and the “Classified Assets and Capital Ratios of Subsidiary Banks” pages;
3. the analysis of nonbank subsidiaries is consistent with data on the “Nonbank Subsidiary, Nonbank Subsidiary Financial Statements,” and “Nonbank Company Assets Subject to Classification” report pages;
4. the consolidated analysis is consistent with information presented throughout the report, primarily with the consolidated financial statements and the unaffiliated borrowings on the “Liquidity and Debt Information” confidential page C;
5. all names are the same as those on the “Scope and Abbreviations” core page 2, the “Organization Chart” page, and other report pages and tables; and
6. all debt figures agree with the unaffiliated borrowings of the “Liquidity and Debt Information” confidential page C.
This page presents the adequacy of the internal audit program, the effectiveness and quality of the overall audit program, and the BHC’s relationship with its external auditor. See section 2060.1 for related information.

The examiner’s review of the BHC’s internal audit program will establish whether the program is adequate to effectively audit the BHC’s operations regularly. It will also help determine whether the audit function provides the directors with sufficient information on the corporation’s conditions and operations. The review will allow the examiner to determine the external auditor’s role and relationship with the internal auditor.

The information on the audit program is available from the auditor, audit committee, the audit staff, and the internal audit reports. Information on the external auditor should be available from the management letter, the internal auditor, and the audit committee minutes.

Comments on the internal audit program may include an appraisal of the effectiveness of the program at meeting the frequency guidelines for auditing subsidiaries, information on the recipients of audit reports, and the party to whom the auditor is responsible. The examiner’s comments on the external auditor may include the name of the firm, the scope of the audit, the degree of interface with the internal auditors, any “qualified opinion” submitted by the independent auditors in certifying the most recent years’ financial statements, and any pertinent comments regarding relations with the directors’ audit committee. The comments should conclude with an appraisal of the quality and effectiveness of the overall audit program.

The following is a list of suggested questions for the internal auditor in developing comments for this section:

5010.7.1 INTERNAL AUDITOR

1. How is the audit staff organized? To whom do they report?
2. What are the educational backgrounds and experience of the staff?
3. What is the size of the staff and the length of time that most of the staff have been in audit? Is the staff large enough to meet the functional requirements of the job under the guidance and leadership of the auditor? Is the department used as a training ground for other departments?
4. What is the schedule for the audit of banking and nonbanking subsidiaries and for particular departments therein?

5. Are copies of audit programs and reports available for the Federal Reserve’s review?
6. Are audit programs coordinated with and workpapers reviewed by outside accountants?
7. Are qualified EDP auditors on the staff?

Although more information is obtained through interviews with the auditor, as opposed to receiving responses to written questions, these questions represent a general framework on which the conversation may develop.

5010.7.2 EXTERNAL AUDITORS

1. Have independent public accountants audited the bank holding company’s consolidated financial statements for the FR Y-6 annual report if the BHC’s consolidated assets exceed $500 million or more?
2. Does the external auditor work with the internal auditor in establishing the scope and frequency of audits?
3. In addition to performing some of the basic functions of the internal auditor, did the external auditor review the internal auditing program to assess its scope and adequacy?
4. When the BHC does not have sufficient earnings to employ an internal audit staff, yet the complexities of the organization necessitate the need for an audit, has an external auditor been engaged for this purpose?
5. Does the external auditor have the ability to conduct surprise audits and sufficient flexibility for establishing the scope of the audits and in making recommendations on internal control changes?
6. Have the BHC’s insured depository institutions furnished their independent auditors with the required call reports, memorandums of understanding, written agreements, and other designated supervisory information required by section 7(a) of the FDIC Act (see section 2060.1.1)?

The comments detailed on this report must be consistent with summarized comments on the Policies and Supervision page and the Other Supervisory Issues page (item 8). Any noteworthy deficiencies in the audit program may be included on the Examiner’s Comments and Matters Requiring Special Board Attention, core page 1, at the examiner’s discretion.
The comparative balance sheet presents the composition of the parent company’s balance sheet as to assets, liabilities, and capital and should be representative of the functions and activities of the company. The comparative balance sheet allows the reader to compare changes in accounts on a line-by-line basis from one period to another. It aids and gives written support to the financial analysis.

The parent company balance sheets may be requested in the officer’s questionnaire or may be obtained from the accounting department. Fiscal statements can also be found in the most recent SEC Form 10-K and the FR Y-6 and Y-9 LP.

The detail on the most recent balance sheet accounts should be reconciled to subsidiary ledgers or a detailed trial balance. The statements should be adjusted to reflect generally accepted accounting principles. Adjustments should be footnoted. The statements should be presented in four columns with two interims and two fiscals except for year-end inspections when only two fiscals are required. The presentation should be (from left to right) current interim period, prior interim period, current fiscal, and prior fiscal. The statement may be formatted like the FR Y-9 LP.

The parent company comparative balance sheet should have specific detail or schedules supporting balance-sheet accounts and amounts as follows.

1. Show investments in and advances to subsidiaries as separate accounts, with separate subtotals for banks and nonbanks.
2. Provide supplementary schedules on the “Contingent Liabilities and Schedule of Balance-Sheet Accounts Not Detailed Elsewhere (Parent)” page showing a breakdown of accounts not detailed in the report, such as marketable securities, CDs, and other investments when considered appropriate or when the account exceeds 25 percent of total footings.
3. Break out goodwill and other intangibles from “Other Assets” or “Investments in Subsidiaries,” and detail on the “Contingent Liabilities and Schedule of Balance-Sheet Accounts Not Detailed Elsewhere (Parent)” page.
4. “Other Assets” and “Other Liabilities” should be broken down and detailed on the “Contingent Liabilities and Schedule of Balance-Sheet Accounts Not Detailed Elsewhere (Parent)” page if any item in the account is considered significant.
5. Mandatory convertible debt instruments should be shown separate from subordinated capital notes and debentures and detailed on the unaffiliated borrowings on the “Liquidity and Debt Information” confidential page “C.”
6. Stockholder’s equity should contain the following categories, as applicable: common stock, perpetual preferred stock, limited life preferred stock, capital surplus, retained earnings (undivided profits), reserves for contingencies and other capital reserves. Limited life preferred stock should be shown separate from stockholders’ equity. For all capital stock issues indicate in a footnote the par value and the number of shares authorized and outstanding for each period. If there is more than one type of stock, indicate the voting rights, preferential dividend rights, and conversion rights, where applicable.

The examiner should make certain that the—

1. investments in subsidiaries equals the investments detailed on the “Investment in and Advances to Subsidiaries” page,
2. advances to subsidiaries equals advances detailed on the “Investment in and Advances to Subsidiaries” page,
3. commercial paper total equals the commercial paper totals detailed on the Commercial Paper (Parent) page and the “Liquidity and Debt Information” confidential page “C,”
4. total of short-term and long-term debt equals the same totals for unaffiliated borrowings on the “Liquidity and Debt Information” confidential page “C,”
5. “Other Assets” and any other accounts detailed on the “Contingent Liabilities and Schedule of Balance-Sheet Accounts Not Detailed Elsewhere (Parent)” page reconciles to the corresponding items on the page (the “Contingent Liabilities and Schedule of Balance-Sheet Accounts Not Detailed Elsewhere (Parent)” page may show only significant items in the categories without totals), and
6. parent’s equity accounts equal those on the “Statement of Changes in Stockholder’s Equity” and on the “Consolidated Comparative Balance Sheet” page.
The comparative income statement presents income of the parent available to satisfy expense requirements. It also can be an indicator of the structure of services and activities provided at the parent level.

The purpose of the statement is to determine—

- the levels and types of intercompany income,
- that the sources of external income are consistent with authorized activities,
- the changes in corporate policy via changes in intercompany income, and
- that the types and levels of the parent’s expenses are appropriate for the parent’s activities.

All statements of income and expenses should be requested in the officer’s questionnaire. Fiscal information can be found in the holding company’s annual report to shareholders, FR Y-6, and/or SEC Form 10-K. Interim results are generally requested from the corporation’s accounting or comptroller department.

Two interims and two fiscals should be presented unless the inspection is as of fiscal year-end, when only two fiscals are required. The report page should show all significant categories of operating income and expense. A supplementary schedule should be provided breaking down any category of other income or expense that equals or exceeds 25 percent of its respective total.

If possible, insurance commission income is to be shown net of premiums collected, and, when available, commissions should be broken down to show those directly related to credit extended within the bank holding company organization. The various income components from internal and external sources need to be detailed separately to allow cross checking with the “Income from Subsidiaries” pages.

Equity in undistributed earnings of subsidiaries should be listed below net operating income to derive “net income.” Where applicable, show separately the equity in undistributed earnings of subsidiary banks and nonbanks.

The examiner should make certain that—

- dividends, interest, management, and service fees and equity in undistributed earnings of subsidiaries equal the totals on the “Income from Subsidiaries” pages and
- net income equals the amounts reported on the “Statement of Changes in Stockholders’ Equity (Parent)” and “Comparative Statement of Income and Expense (Consolidated)” pages. In those cases where the figures do not agree, the difference should be footnoted and detail should be provided for the difference.
Inspection Report Preparation (Appendix Page 7—Consolidated Classified & Special-Mention Assets) Section 5010.10

Classified assets and off-balance-sheet transactions are summarized by organizational level, whether at the parent company, banking subsidiaries, or nonbank subsidiaries, and compared with valuation reserves established to absorb known and potential losses. For banking subsidiaries, the classified items are derived from the most recent federal and state examinations for the individual bank subsidiaries.

Report the classification, reserve, noncurrent, and loan/lease-level ratios as detailed on the report page. The ratio of consolidated classified assets to tier 1 capital should be included. The “continued” page should contain comments regarding the sources of information and methods used by the examiner for determining consolidated asset quality.

For the parent company, the classification totals should be broken down into the major asset categories (for example, “Loans,” “Other Real Estate,” and “Other Assets”). The lead bank subsidiary’s classification should be broken out along with any other bank that has classified assets representing 20 percent or more of total consolidated classified assets. The assets of a nonbank credit-extending subsidiary should be broken out if the nonbank subsidiary had classifications greater than 5 percent of consolidated classified assets or other large problem credits or classified assets.

There may be occasions when one or more subsidiary banks may not have been subject to an asset-quality review by a bank supervisory agency within the last two years, which impedes the bank holding company examiner from making an accurate judgment on the company’s asset quality. The examiner may accept the internal criticized assets of the bank holding company only if the internal system was tested by the examiner and deemed to be valid. Generally, such testings should be conducted as necessary in order to make an informed judgment on consolidated asset quality. Comments should be provided about whether the examiner was able to rely on information depicting asset quality or that such information was not available.

Classification totals of off-balance-sheet transactions, if any, should be broken out separately and summarized for each level of the organization (parent company, bank subsidiaries, and nonbank subsidiaries).

The source for reporting classified asset totals should be stated (FRB, OCC, FDIC, internal operations, or internal audit review) along with the respective as-of date. As an alternative, classified asset totals may be listed for individual bank and nonbank subsidiaries. The purpose of preparing this summary is to—

1. determine the amount and degree of risk and potential loss associated with on- and off-balance-sheet transactions and activities (This is accomplished by summarizing the amount of classified assets and losses and other potential losses that may result from on- and off-balance-sheet activities, including off-balance-sheet risk at the consolidated organizational level, as well as the general composition of such potential losses at the parent company, bank subsidiaries, or nonbank subsidiaries);
2. analyze ratio trends in consolidated asset quality for the current and previous two inspections;
3. determine the extent to which such classified assets and off-balance-sheet risk influence the overall financial condition of the consolidated organization;
4. determine the adequacy of reserves (The page alerts management about the need for increasing the valuation reserve accounts);
5. disclose problem assets and off-balance-sheet transactions requiring management’s attention;
6. show in summary form all classifications and criticisms assigned by examiners in determining asset quality and the adequacy of respective reserves; and
7. aid in the identification of existing and potential problems in the banks that may have an overall effect on the bank holding company.

The information for the report page is derived from two other completed pages or workpapers, “Parent Company and Nonbank Assets Subject to Classification” and “Classified Assets and Capital Ratios of Subsidiary Banks.” The information is obtained by determining the collectibility or forced-sale value of assets or potential losses that may arise from certain on- and off-balance-sheet transactions. For banks, the information is to be generated from bank examination reports that are available at the Reserve Bank. (The holding company may have copies of the open sections of the reports.)

Investments in and advances to bank and nonbank credit-extending subsidiaries by the
parent are not to be classified. The examiner may, however, classify the parent’s investments in and advances to non-credit-extending non-bank subsidiaries. For additional information on classifying an investment to a non-credit-extending subsidiary, see section 4070.0.

The use of abbreviations for the subsidiaries within narrative comments, as presented on the “Scope and Abbreviations” core page 2, is permissible. The examiner may comment on and analyze lending policies, documentation, collection procedures, and past-due volume in the aggregate. Such comments should be consistent with comments in other report pages and workpapers.

The examiner should provide comments on the adequacy of the valuation reserves and any recommendations to management to provide for additional loan-loss provisions. The examiner should also recommend that management maintain a level of loan-loss reserves that is adequate to offset 100 percent of assets classified loss and still have a balance sufficient to absorb normal unidentified, unanticipated future losses from operations.

Weighted classified assets includes 100 percent of loss, 50 percent of doubtful, 20 percent of substandard, and, when applicable, value impaired (net of adjusted transfer-risk reserve). It is appropriate to comment on weighted classified assets on the “Analysis of Financial Factors” core page 3.

Noncurrent loans and leases refers to the end-of-period dollar amount of loans and lease-financing receivables past due 90 days or more and still accruing, plus those carried in nonaccrual status, as reported for each loan category. This report page should not be included in the core section of the report for one-bank holding companies. For those bank holding companies, the examiner will include the classifications on the “Parent Company and Nonbank Assets Subject to Classification” and the “Bank Subsidiaries” report pages when assets are classified or written up as required.

The examiner should make certain that the aggregate classifications and reserve amounts agree with those reported for the parent, the banking subsidiaries, and the nonbank subsidiaries on the “Parent Company and Nonbank Assets Subject to Classification” and the “Classified Assets and Capital Ratios of Subsidiary Banks” pages or workpapers. If classifications are discussed on the “Examiner’s Comments and Matters Requiring Special Board Attention” page, the totals should be confirmed.

5010.10.1 CLASSIFICATION OF ASSETS

The Uniform Agreement on the Classification of Assets and Appraisal of Securities Held by Banks and Thrifts\(^1\) (the uniform agreement), as revised June 15, 2004, sets forth the definitions of the classification categories and the specific examination procedures and information that are to be used for classifying bank assets, including securities. (See SR-04-9.) The revised uniform agreement amends the examination procedures that were established in 1938 and then revised and issued on July 15, 1949, and May 7, 1979. The uniform agreement’s classification of loans remains unchanged from the 1979 revision. The classification categories are designated as Substandard, Doubtful, and Loss. The June 15, 2004, uniform agreement changes the classification standards applied to banks\(^2\) (and bank holding companies’) holdings of debt securities by—

1. eliminating the automatic classification of sub-investment-grade debt securities when a banking organization has developed an accurate, robust, and documented credit-risk management framework to analyze its securities holdings;
2. conforming the uniform agreement to current generally accepted accounting principles by basing the recognition of depreciation on all available-for-sale securities on the bank’s determination as to whether the impairment of the underlying securities is “temporary” or “other than temporary”;
3. eliminating the preferential treatment given to defaulted municipal securities;
4. clarifying how examiners should address securities that have two or more different ratings, split or partially rated securities, and nonrated debt securities;
5. identifying when examiners may diverge from conforming their ratings to those of the rating agencies; and
6. addressing the treatment of Interagency Country Exposure Review Committee ratings.

The uniform agreement’s classification categories also apply to the classification of assets held

\(^1\) The statement was issued by the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Office of Thrift Supervision (the agencies).
by the subsidiaries of banks and bank holding companies. Although the classification categories for bank and bank holding company assets and assets held by their subsidiaries are the same, the classification standards may be difficult to apply to the classification of certain subsidiary assets because of differences in the nature and risk characteristics of the assets. Despite the differences that may exist between assets held directly by a bank or bank holding company and those held by its subsidiaries, the standards for classifying investment securities are to be applied directly to securities held by a bank or bank holding company and its subsidiaries.

5010.10.1.1 Substandard Assets

A substandard asset is inadequately protected by the current sound worth and paying capacity of the obligor or the collateral pledged, if any. Assets so classified must have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the bank will sustain some loss if the deficiencies are not corrected.

5010.10.1.1.1 Substandard Classification—Guidelines for an Asset When a Substantial Portion Has Been Charged Off

In some cases, credit-extending subsidiaries with loans to financially troubled borrowers have charged off substantial portions of these credits. Consistent with long-standing supervisory practice, the evaluation of each extension of credit should be based on the fundamentals of the particular credit. That is, the evaluation of each credit should be based on the borrower’s (or the collateral’s) current and stabilized cash flow, earning and debt-service capacity, financial performance, net worth, guarantees, and future prospects and on other factors relevant to the borrower’s ability to service and retire its debt.

Based on the consideration of all relevant financial factors, the evaluation may indicate that a credit has well-defined weaknesses that jeopardize repayment in full but that a portion of the loan may be reasonably assured of repayment. When a charge-off has been taken in a sufficient amount so that the remaining recorded balance of the loan is being serviced (based on reliable sources of cash flow) and is reasonably assured of repayment, this remaining recorded balance would generally be classified no more severely than substandard.2 Consistent with long-standing classification guidelines, a Substandard classification of the remaining recorded balance would only be appropriate when well-defined weaknesses continue to be present in the credit. For example, when the remaining recorded balance of an asset is secured by readily marketable collateral, the portion that is secured by this collateral would generally not be classified. (See SR-91-18.) This approach would generally be appropriate when an organization maintains sufficient controls over its lending function and maintains adequate current documentation to support the credit analysis of the loan. This classification approach could not be used for loans for which the loss exposure cannot be reasonably determined, for example, loans collateralized by properties subject to environmental hazards. This approach would also not be justified when sources of repayment are considered unreliable.

5010.10.1.2 Doubtful Assets

An asset classified Doubtful has all the weaknesses inherent in one classified Substandard. However, it has the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable.

5010.10.1.3 Loss Assets

Assets classified Loss are considered uncollectible and of such little value that their continuance as bankable assets is not warranted. This classification does not mean that the asset has absolutely no recovery or salvage value, but rather that it is not practical or desirable to defer writing off this basically worthless asset even though partial recovery may be effected in the future. Amounts classified Loss should be promptly charged off.

2. The accrual/nonaccrual status of the loan must continue to be determined in accordance with the glossary to the current Call Report or bank holding company reporting instructions. Thus, while these partially charged-off loans may qualify for nonaccrual treatment, cash-basis recognition of income will be appropriate when the criteria specified in the report guidance are met.
5010.10.2 APPRAISAL OF SECURITIES IN BANK EXAMINATIONS

In an effort to streamline the examination process and achieve as much consistency as possible, examiners can use the published ratings provided by nationally recognized statistical ratings organizations (NRSROs) and other credit quality assessment information as a proxy for the supervisory classification definitions. Examiners may, however, assign a more- or less-severe classification for an individual security, depending on a review of applicable facts and circumstances.

5010.10.2.1 Investment-Quality Debt Securities

Investment-quality debt securities are marketable obligations in which the investment characteristics are not distinctly or predominantly speculative. This group generally includes investment securities in the four highest rating categories provided by NRSROs and includes unrated debt securities of equivalent quality.

Because investment-quality debt securities do not exhibit weaknesses that justify an adverse classification rating, examiners will generally not classify them. However, published credit ratings occasionally lag demonstrated changes in credit quality and examiners may, in limited cases, classify a security notwithstanding an investment-grade rating. Examiners may use such discretion, when justified by credit information the examiner believes is not reflected in the rating, to properly reflect the security’s credit risk.

5010.10.2.2 Sub-Investment-Quality Debt Securities

Sub-investment-quality debt securities are those in which the investment characteristics are distinctly or predominantly speculative. This group generally includes debt securities, including hybrid equity instruments (for example, trust preferred securities), in grades below the four highest rating categories; unrated debt securities of equivalent quality; and defaulted debt securities.

To reflect asset quality properly, an examiner may in limited cases “pass” a debt security that is rated below investment quality. Examiners may use such discretion when, for example, the institution has an accurate and robust credit-risk-management framework and has demonstrated, based on recent, materially positive credit information, that the security is the credit equivalent of investment grade.

5010.10.2.3 Rating Differences

Some debt securities may have investment-quality ratings by one (or more) rating agencies and sub-investment-quality ratings by others. Examiners will generally classify such securities, particularly when the most recently assigned rating is not investment quality. However, an examiner has discretion to “pass” a debt security with both investment-quality and sub-investment-quality ratings. The examiner may use that discretion if, for example, the institution has demonstrated through its documented credit analysis that the security is the credit equivalent of investment grade.

5010.10.2.4 Split or Partially Rated Securities

Some individual debt securities have ratings for principal but not interest. The absence of a rating for interest typically reflects uncertainty regarding the source and amount of interest the investor will receive. Because of the speculative nature of the interest component, examiners will generally classify such securities, regardless of the rating for the principal.

5010.10.2.5 Nonrated Debt Securities

The agencies expect institutions holding individually large nonrated debt security exposures, or having significant aggregate exposures from small individual holdings, to demonstrate that they have made prudent pre-acquisition credit decisions and have effective, risk-based standards for the ongoing assessment of credit risk. Examiners will review the institution’s program for monitoring and measuring the credit risk of such holdings and, if the assessment process is considered acceptable, generally will rely on those assessments during the examination process. If an institution has not established independent risk-based standards and a satisfactory process to assess the quality of such exposures, examiners may classify such securities, including those of a credit quality deemed to be the equivalent of subinvestment grade, as appropriate.
Some nonrated debt securities held in investment portfolios represent small exposures relative to capital, both individually and in aggregate. While institutions generally have the same supervisory requirements (as applicable to large holdings) to show that these holdings are the credit equivalent of investment grade at purchase, comprehensive credit analysis subsequent to purchase may be impractical and not cost effective. For such small individual exposures, institutions should continue to obtain and review available financial information, and assign risk ratings. Examiners may rely on the bank’s internal ratings when evaluating such holdings.

5010.10.2.6 Foreign Debt Securities

The Interagency Country Exposure Review Committee (ICERC) assigns transfer-risk ratings for cross-border exposures. Examiners should use the guidelines in this uniform agreement rather than ICERC transfer-risk ratings in assigning security classifications, except when the ICERC ratings result in a more severe classification.

5010.10.2.7 Treatment of Declines in Fair Value Below Amortized Cost on Debt Securities

Under generally accepted accounting principles (GAAP), an institution must assess whether a decline in fair value below the amortized cost of a security is a “temporary” or an “other-than-temporary” impairment. When the decline in fair value on an individual security represents “other-than-temporary” impairment, the cost basis of the security must be written down to fair value, thereby establishing a new cost basis for the security, and the amount of the write-down must be reflected in current-period earnings. If an institution’s process for assessing impairment is considered acceptable, examiners may use those assessments in determining the appropriate classification of declines in fair value below amortized cost on individual debt securities.

Any decline in fair value below amortized cost on defaulted debt securities will be classified as indicated in the table below (section 5010.10.3). Apart from classification, for impairment write-downs or charge-offs on adversely classified debt securities, the existence of a payment default will generally be considered a presumptive indicator of “other-than-temporary” impairment.

5010.10.2.8 Classification of Other Types of Securities

Some investments, such as certain equity holdings or securities with equity-like risk and return profiles, have highly speculative performance characteristics. Examiners should generally classify such holdings based on an assessment of the applicable facts and circumstances.

---

3. As currently defined under GAAP, the fair value of an asset is the amount at which that asset could be bought or sold in a current transaction between willing parties, that is, other than in a forced or liquidation sale. Quoted market prices are the best evidence of fair value and must be used as the basis for measuring fair value, if available.
### 5010.10.3 SUMMARY TABLE OF GENERAL DEBT SECURITY CLASSIFICATION GUIDELINES

The following table outlines the uniform classification approach the agencies will generally use when assessing credit quality in debt securities portfolios:

<table>
<thead>
<tr>
<th>Type of security</th>
<th>Classification</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Substandard</strong></td>
<td><strong>Doubtful</strong></td>
</tr>
<tr>
<td>Investment-quality debt securities with &quot;temporary&quot; impairment</td>
<td>—</td>
</tr>
<tr>
<td>Investment-quality debt securities with &quot;other-than-temporary&quot; impairment</td>
<td>—</td>
</tr>
<tr>
<td>Sub-investment-quality debt securities with &quot;temporary&quot; impairment¹</td>
<td>Amortized cost</td>
</tr>
<tr>
<td>Sub-investment-quality debt securities with &quot;other-than-temporary&quot; impairment, including defaulted debt securities</td>
<td>Fair value</td>
</tr>
</tbody>
</table>

Note. Impairment is the amount by which amortized cost exceeds fair value.

¹. For sub-investment-quality available-for-sale (AFS) debt securities with "temporary" impairment, amortized cost rather than the lower amount at which these securities are carried on the balance sheet, i.e., fair value, is classified Substandard. This classification is consistent with the regulatory capital treatment of AFS debt securities. Under GAAP, unrealized gains and losses on AFS debt securities are excluded from earnings and reported in a separate component of equity capital. In contrast, these unrealized gains and losses are excluded from regulatory capital. Accordingly, the amount classified Substandard on these AFS debt securities, i.e., amortized cost, also excludes the balance-sheet adjustment for unrealized losses.

The general debt security classification guidelines do not apply to private debt and equity holdings in a small business investment company or an Edge Act corporation. The uniform agreement does not apply to securities held in trading accounts, provided the institution demonstrates through its trading activity a short-term holding period or holds the security as a hedge for a customer’s valid derivative contract.

### 5010.10.4 CREDIT-RISK-MANAGEMENT FRAMEWORK FOR SECURITIES

When an institution has developed an accurate, robust, and documented credit-risk-management framework to analyze its securities holdings, examiners may choose to depart from the above general debt security classification guidelines in favor of individual asset review in determining whether to classify those holdings. A robust credit-risk-management framework entails appropriate pre-acquisition credit due diligence by qualified staff that grades a security’s credit risk based on an analysis of the repayment capacity of the issuer and the structure and features of the security. It also involves the ongoing monitoring of holdings to ensure that risk ratings are reviewed regularly and updated in a timely fashion when significant new information is received.

The credit analysis of securities should vary based on the structural complexity of the security, the type of collateral, and external ratings. The credit-risk-management framework should reflect the size, complexity, quality, and risk characteristics of the securities portfolio; the risk appetite and policies of the institution; and the quality of its credit-risk-management staff, and should reflect changes to these factors over time. Policies and procedures should identify the extent of credit analysis and documentation required to satisfy sound credit-risk-management standards.
This Core report page is to present the consolidated balance sheet as of the financial statement date, the comparable date for the previous year, and the last two fiscal year-end statements. When the inspection is conducted at fiscal year-end, only two fiscal year-end statements need be presented. The comparative statement allows the reader to analyze any changes in asset, liability, and capital structure and to determine the condition of the consolidated organization on the specified dates.

The financial statements should be requested in the officer’s questionnaire. Fiscal financial statements can also be obtained from the FR Y-6, FR Y-9, the SEC Form 10-K, and published reports to shareholders.

The balance sheets should be presented in columnar form with the current interim first, prior interim period, current fiscal and prior fiscal. They may be formatted like the FR Y-9.

In preparing the comparative balance sheet, the following should be done.

1. Gross loans should be shown and then netted of unearned discount and reserve for loan losses.

2. Federal funds sold and securities purchased under resale agreements may be shown as one amount or separately, depending on how the company prepares its statements. Similar treatment should be given to federal funds purchased and securities sold under repurchase agreements on the liability side.

3. Total deposits should be broken down or footnoted to show interest-bearing and noninterest-bearing deposits in domestic and foreign offices.

4. Mandatory convertible debt instruments should be shown separate from subordinated capital notes and debentures and detailed on the “Liquidity and Debt Information” Confidential Page “C.”

5. Stockholder’s equity should be detailed using the following categories, as applicable: common stock, perpetual preferred stock, capital surplus, retained earnings (undivided profits), and reserves for contingencies and other capital reserves.

The amount of total consolidated debt should agree with unaffiliated debt for the current period on the “Liquidity and Debt Information” Confidential page “C.” Any exceptions should be footnoted.

Equity capital should agree with the individual components shown on the “Statement of Changes in Stockholders’ Equity (Parent)” page for the respective periods and with stockholders’ equity on the “Parent Company Comparative Balance Sheet” Core page 5. Any exceptions should be footnoted.

Figures used in the analysis on the “Analysis of Financial Factors” Core page 3 and the “Capital Structure (Consolidated)” pages should agree with this statement.
This report page is to present a consolidated statement of income and expense as of the financial statement date, the comparable date for the previous year, and the last two fiscal year-end statements. When the inspection is conducted at fiscal year-end, only two fiscal year-end income and expense statements need be presented. The statement aids the reader in an analysis of corporate earnings performance on a consolidated basis and provides the ability to further analyze changes in income and expense accounts from one period to another.

Statements of income and expenses should be requested in the officer’s questionnaire. Statements for fiscal periods can also be obtained from the FR Y-6, FR Y-9, the SEC Form 10-K and published reports to stockholders.

The statement of income and expenses should be presented in columnar form with the current interim first, prior interim period, current fiscal, and prior fiscal. They may be formatted like the FR Y-9.

Any detail available that breaks down “interest income” for the most recent fiscal year into components should be presented either on the statement as a footnote or on a supplemental page, the “Comparative Statement of Income and Expenses (Consolidated)” page, if considered appropriate by the examiner.

Provisions for loan losses should be shown as a line item and not grouped in “other expenses.” “Other income” and “other expenses” should be broken down to provide additional detail at the discretion of the examiner.

Net income should normally agree with net income of the parent on the “Comparative Statement of Income and Expenses (Parent)” page and the “Statement of Changes in Stockholders’ Equity (Parent)” page. Footnote differences.
The risk-based capital guidelines apply on a consolidated basis to bank holding companies with consolidated assets of $150 million or more. For these BHCs, the designated FR 1225 report page will be used. For BHCs with consolidated assets of less than $150 million, the risk-based capital guidelines apply on a bank-only basis unless (a) the parent holding company is engaged in nonbank activity involving significant leverage (e.g., engaged in significant off-balance sheet activity); or (b) the parent company has a significant amount of outstanding debt that is held by the general public. For BHC with total assets of less than $150 million the Capital Structure (FR 1241) report page is used.

5010.13.1 BHCS WITH CONSOLIDATED ASSETS OF $150 MILLION OR MORE—[CORE PAGE 10—CONSOLIDATED CAPITAL STRUCTURE (FR 1225)]

The consolidated capital structure report page summarizes the various components of the BHC risk-based capital ratios. Two report pages are provided to allow for risk-based capital computations during transition and at year-end 1992 for final implementation. The pages provide the various limitations for the respective components of Tier 1 and Tier 2 capital. For both report pages, the first page summarizes “Total Qualifying Capital” comprised of Tier 1 and Tier 2 capital, adjusted for investments in unconsolidated financing subsidiaries and reciprocal holdings of capital.

Tier 1 capital consists of permanent core capital elements (common equity, noncumulative perpetual preferred stock, a limited amount of cumulative perpetual preferred stock, and minority interest in the equity of consolidated subsidiaries). Tier 1 capital is derived by subtracting goodwill from the sum of Tier 1 capital elements.

Tier 2 capital consists of: (a) a limited amount of the allowance for loan and lease losses; (b) auction rate perpetual preferred stock plus any cumulative perpetual preferred stock exceeding its Tier 1 limitation; (c) perpetual debt, mandatory convertible securities, and other hybrid capital instruments; (d) long-term perpetual preferred stock; and (e) limited amounts of term subordinated debt, intermediate-term preferred stock, and unsecured long-term debt issued prior to March 12, 1988.

For Tier 2 capital, the amount of mandatory convertible securities that have the proceeds of common or perpetual preferred stock dedicated to retire or redeem them should be treated as term subordinated debt subject to the established limit of 50 percent of Tier 1 capital. Mandatory convertible securities, net of the perpetual preferred or common stock dedicated to redeem or retire the issues, are included within Tier 2 on an unlimited basis. Tier 2 capital may not exceed Tier 1 capital.

Investments in unconsolidated financial subsidiaries and reciprocal holdings of capital are subtracted from the combined total of Tier 1 and Tier 2 capital to determine the amount of total qualifying capital.

Core page 10–1 provides a summary of risk weighted on- and off-balance sheet assets, adjusted (reduced) for the excess of the allowance for loan and lease losses not included in Tier 2 capital and the allocated transfer risk reserve (ATRR). In addition, it provides a comparative peer and historical summary of risk-based capital ratios, growth rates, and dividend payout ratios.

Core page 10–2 provides a summary comments section to discuss any pertinent aspects of the institution’s capital structure not evident from the schedule.

The information on the capital structure page will give support to the examiner’s evaluation of the bank holding company’s capital adequacy. The most convenient method to obtain the information is to request it in the officer’s questionnaire, or through direct contact with the accounting department.

The amounts on the risk-based capital schedules should be shown as of the same date as the “Consolidated Comparative Balance Sheet” of the inspection report. Refer to the Risk-based Capital Guidelines in Appendix A of Regulation Y and Manual sections 4060.3 and 4060.4 for a discussion of the Capital Adequacy Guidelines and the minimum risk-based capital and leverage ratios for BHCs.

Use the instructions and guidance found on the report page and worksheets. When completing the supplementary capital section, insert the aggregate amount of each component in the space provided. If more than one issue of a particular Tier 2 capital component is outstanding, a range of rates should be shown in the appropriate space, giving the lowest and the highest rates paid.
Comments under the Risk-based Capital schedule should include:

- Any unusual terms and conditions relating to issues of supplementary capital that the examiner feels should be mentioned;
- An indication of whether a subsidiary bank’s equity represents the proceeds from the issuance of parent debt (double leverage);
- A presentation or description of risk-based capital components for statutory purposes if there is a violation for which the statutory definition is relevant.
- A situation whereby the levels of risk warrant significantly higher risk-based capital ratios than the minimums.

The amounts of Tier 1 and Tier 2 used in this analysis of consolidated risk-based capital on the “Analysis of Financial Factors” page should be consistent with the amounts on this page.

5010.13.2 WORKSHEETS

In addition to the report pages, BHC Risk-Based Capital Calculation Worksheets have been developed for examiner use with year-end 1992 final implementation. The worksheets are to be retained with the examiner’s workpapers. If the bhc generated data was validated by the examiner and accepted to support or partially substitute for the computation of the elements, it should also be retained with the worksheets. The worksheets provide more detail as to the composition of core capital elements and supplementary capital elements. In addition, the footnotes provide more detailed explanations of the various components than are found on the actual report pages.

5010.13.3 BHCS WITH LESS THAN $150 MILLION IN CONSOLIDATED ASSETS—[PAGE—CAPITAL STRUCTURE (LEAD BANK OR OTHER BANK SUBSIDIARY (FR 1241))]

The FR 1241 report page is used primarily for the lead bank. Report pages have been developed for year-end 1992 final implementation. The report pages are nearly identical to those used for state member bank examinations (FR 1460). If there is no one lead bank, the report pages should be prepared for each comparable lead bank.
Procedures for Inspection Report Preparation
(Page—Policies and Supervision)  Section 5010.14

This report page provides a summary of the policies formulated by the board of directors by which active management supervises holding company operations. The objective is to determine whether there are adequate formal policies developed and supervised, either directly through the board of directors, or by a delegation of the authority, for the parent company and its subsidiaries. Another objective is to evaluate management’s performance in carrying out those policies for the entire organization. These policies aid in giving insight into the operations of the holding company. The policies should ensure that all statutory and regulatory requirements are met and that proper controls (management information systems) are in place to minimize risk. Examiners should encourage BHCs to develop formal written policies on all items presented.

The report page is to provide an analysis of the adequacy of supervision exercised by the holding company over its subsidiaries, and policies concerning intercompany relationships. Also included is a discussion of deficiencies in the policy-making process, any noncompliance with existing policies, and the plans for correcting any deficiencies.

In the officer’s questionnaire, the examiner may request some of the information pertaining to policies. Insight into policies may also be gained by reviewing the holding company’s annual reports to stockholders and through discussions with management. If the holding company does not have any formal written policies, the organization’s operating procedures should be discussed with officers responsible for the various areas.

Compliance with policies may be determined by reviewing recent internal and external audit reports, recent bank examinations, and discussions with management at the subsidiary level, and by conducting tests to determine the extent of compliance with policies. Discussions with management are necessary to obtain a thorough understanding of management and supervisory practices, policy-development techniques, the degree to which management information is utilized to monitor subsidiaries, and overall management philosophy.

The policies should be summarized as succinctly as possible in narrative form. If the holding company has no formal policies the examiner may use an introductory statement indicating that comments were derived from discussions with senior management. Absence of any formal policies may require the examiner to make a recommendation on the “Examiner’s Comments” Core page 1 that the holding company strongly consider the establishment of formal written policies in order to supervise its subsidiaries more effectively.

This report page should address existing policies and the level of control and supervision exercised over subsidiaries. How effectively policies are carried out should be shown in the respective sections of the report. Where policies result in violations of law or regulation, comments should be made on the “Examiner’s Comments” Core page 1 and detailed on the “Violations” page. If any policy is considered inconsistent with safe and sound banking practices, the matter should be presented on Core page 1 and detailed elsewhere in the report.

Comments on policies that are on other pages in the report should be consistent with this report page. Those comments and report pages are:

4. Internal audit—on the “Audit Program” page.
5. Insider transactions—on the “Extensions of Credit to BHC Officials” page.

5010.14.1 QUESTIONS TO BE ADDRESSED ON THE POLICIES AND SUPERVISION REPORT PAGE

5010.14.1.1 Level of Control and Supervision Exercised over Subsidiaries

1. Do subsidiaries operate autonomously? What is the degree of overlap between BHC and bank management?
2. Who sets major policies of the corporation?
3. How does the holding company monitor the operations of its subsidiaries (reports, directors, etc.?)
4. Are the subsidiaries involved in formulating the holding company’s budget and tax plan-
ning? How is the holding company’s budget developed and at what corporate level is income tax planning coordinated?

5. Describe the intermediate and long-term strategic planning process and whether the subsidiaries are integrated into a consolidated planning process. Does the consolidated plan include the minimum elements discussed in section 2010.4 of this manual? Is the plan effective and is it consistently applied?

6. How is the internal audit of subsidiaries performed?
   - Does an audit team audit each subsidiary on a periodic basis?
   - What is the frequency of the audit cycle?
   - To whom does the audit department report?
   - Is there an audit committee of directors?

7. Is the control and supervision of subsidiaries deficient?

5010.14.1.2 Loans and Investments of Subsidiaries (See sections 2010.2 and 2010.3.)

1. Does the parent company’s policies address the minimum elements of a lending policy as listed and described in section 2010.2 of this manual?

2. Does each subsidiary have its own loan policy or does the holding company establish policy for all subsidiaries? Are lending policies considered adequate and is there general compliance?

3. Does each subsidiary handle its own investment portfolio or are investments managed at the holding company level? Are investment policies adequate and is there general compliance? Are investment-authorization procedures adequately detailed to prevent circumvention of investment-policy directives?

4. Does the holding company have a credit review team or is credit review handled by each subsidiary?

5. Does the BHC have a policy establishing limits on consolidated concentrations of credit?

5010.14.1.3 Funds Management and the Adequacy of Existing Policies (See section 2010.1.)

1. Does the parent-company management have policies in place to prevent funding prac-
5010.14.1.5 Dividends and Fees From Subsidiaries

1. What is the policy for assessing dividends from subsidiaries?
2. Does the policy take into account statutory and regulatory restrictions on bank dividends as well as subsidiary asset quality, earnings, the ability to service debt and growth prospects?
3. What is the policy for determining fees charged to subsidiaries in relation to management and other services rendered?
4. Are service fee arrangements supported by contracts and are the subsidiaries actually receiving the services?
5. Are the fees charged to subsidiaries reasonable and justifiable in relation to the fair market value of the services provided? If no market exists for the services provided, are fees based on their cost plus a reasonable profit? Has the BHC directly or indirectly through other subsidiaries burdened its banking subsidiaries with excessive fees or unreimbursed charges to fund its debt service, dividend payments or support of other subsidiaries?

5010.14.1.6 Risk Evaluation and Control

1. Has the bank holding company formalized policies and procedures in identifying, evaluating, and controlling risk?
2. What has management done to limit its risk exposure in relationship to the amount of the organization’s capital, or earnings?
3. Do audit procedures include a determination as to whether management’s risk evaluation and control procedures are being followed as prescribed?
4. Has the bank holding company taken steps to identify and control its exposure to losses resulting from contingent liabilities and off-balance sheet activities such as standby letters of credit, interest rate swaps, foreign exchange contracts, currency swaps, options, securities lending and borrowing, insider transactions, and commitments to lend?
5. Is an internal loan review program in existence for bank and/or nonbank subsidiaries? If no program exists, does the size and complexity of the organization warrant implementation of a formal process?
6. Will the internal loan review procedures adequately identify deteriorations in credits, loans that do not comply with written loan policies and loans with technical exceptions in a timely manner?
7. Is the loan review function independent of the loan approval function, with written findings reported to a board committee or senior management committee not directly involved in lending?
8. Are the quality and size of the internal loan review staff sufficient in relation to the organization’s size and complexity?
9. Are the scope and frequency of the loan review procedures adequate?

5010.14.2 DISCUSSION AND APPRAISAL OF OTHER PARENT COMPANY POLICIES

Another parent company policy that should be discussed and appraised, in addition to those listed on the “Policies and Supervision” page is the Consolidated Planning Process whereby the subsidiaries are integrated into a consolidated plan. See Manual section 2010.4.
WHAT’S NEW IN THIS REVISED SECTION

This section has been revised to provide clarifying instructions on the reporting of violations or apparent violations in the inspection report. The “Violations” section or page should include all BHC and nonbank subsidiary violations of the Federal Reserve Act (the act), Regulation Y, and other applicable statutes and regulations. Section 23A and 23B violations of the act should only be included if they have been cited by the primary regulator of the subsidiary banks. If the bank’s primary regulator has not cited a violation of Section 23A and 23B of the act, apparent violations should be noted in the “Other Matters” page of the inspection report.

This report page or section is used to present information on all violations discussed in the inspection report. The objective of the report page is to bring violations to the attention of the board of directors for corrective action and to alert the supervisory agencies to the need for supervisory attention.

The information reported should center on violations by the holding company uncovered during the course of the inspection and those that are discovered through a review of reports filed with supervisory authorities. Information on violations by the subsidiary bank(s) in its dealings with the holding company or affiliates may be obtained from the most recent bank examination reports or uncovered during the holding company inspection.

This page should include all BHC and nonbank subsidiary violations of the Act, Regulation Y, and other applicable statutes and regulations. Section 23A and 23B violations of the Federal Reserve Act should only be included if they have been cited by the primary regulator of the subsidiary banks. If the bank’s primary regulator has not cited a violation of Section 23A and 23B of the Federal Reserve Act, apparent violations should be noted in the “Other Matters” page of the inspection report. A complete write-up is necessary if the violation is not detailed on another page (including the date of the violation or transaction, a description of the transaction or act, the reason for the violation, the amount of the transaction, and the amount of any potential or actual loss). When the information is presented elsewhere, a brief summary and a reference to that page is sufficient.

Violations of the holding company should be presented first, followed by the nonbank subsidiaries and then bank subsidiaries. Bank violations not involving the holding company or nonbank subsidiaries should not be detailed here.

If violations of sections 23A and 23B of the Federal Reserve Act (transactions with holding company affiliates) are disclosed in a subsidiary bank’s examination report, comments should be limited to a brief summary on the “Violations” page with a reference to the intercompany transaction(s) under “Other Supervisory Issues.” This latter page will contain additional detail on the violation. (Note: only bank subsidiaries can be cited for the violations of sections 23A and 23B of the Federal Reserve Act, with the BHC being cited if the violation has been cited by the bank’s primary regulator and resulted from holding company or nonbank subsidiary actions).

The examiner may also criticize management in the “Examiner’s Comments and Matters Requiring Special Board Attention” page of the inspection report for causing the bank to be in violation of sections 23A and 23B provisions.

Apparent violations should be presented on the “Other Matters” page, and may be presented on the “Examiner’s Comments and Matters Requiring Special Board Attention” page if considered appropriate by the examiner. Violations will be reviewed on a case by case basis for possible follow-up administrative action(s).

Violations must be presented in brief on the “Examiner’s Comments and Matters Requiring Special Board Attention” page referring the reader elsewhere for detail. The examiner should ensure that information contained on these related pages is consistent.
This page presents nonconfidential information or issues which would not be suitable for presentation on any other page in the report. BHC plans may be discussed here in order to anticipate any regulatory or supervisory considerations. *Apparent* violations are also presented here and may be referred to on “Examiner’s Comments” page or on other report pages at the examiner’s discretion. BHC plans for future activities may be presented.

The information might be derived from minutes of the corporation and/or subsidiaries, discussions with management, and examiner observations during the inspection.

Other information that may be summarized can include:

1. Corporate plans (debt or equity issues, acquisitions, sale of assets). Be certain management has no objection to the reference to these plans. Otherwise, present such information on page C;
2. Any unfunded pension liabilities;
3. Overall condition of corporate records; and
4. Any other comments deemed appropriate by the examiner and not noted elsewhere in the report.

Any reference that involves dollar amounts, ratios, or other information contained in schedules or comments elsewhere in the report should be cross-checked.
This report page provides a summary of asset classifications and capital ratios as of the most recent federal and state examinations for the individual bank subsidiaries. The objective of the page is to aid in the identification of existing or potential problems in the banks which may have an overall effect on the holding company.

The information is to be derived from bank examination reports which are available at the Reserve Bank. (The holding company may have copies of the open sections of the reports.)

The banks are to be listed in the same order as they appear on the Organization Chart or Investments in and Advances to Subsidiaries report pages. Total assets or total average assets should be shown as presented in the examination report. Do not adjust total assets by adding back valuation reserves.

For bank holding companies, tier 1 capital includes common equity and qualifying cumulative and noncumulative perpetual preferred stock, less goodwill and other designated intangible assets. Common stockholders equity includes common stock; related surplus; and retained earnings, including capital reserves and adjustments for the cumulative effect of foreign-currency translation, net of any treasury stock, less net unrealized holding losses on available-for-sale equity securities with readily determinable fair values.

Qualifying cumulative perpetual preferred stock is limited within tier 1 to 25 percent of the common stockholders equity and minority interest. Total capital includes tier 1 plus tier 2 capital.

Weighted classified assets includes 100 percent of loss, 50 percent of doubtful, and 20 percent of substandard and value-impaired (when applicable), net of allocated transfer risk reserves (ATRR).1 It is appropriate to comment on weighted classified assets on the Analysis of Financial Factors page.

When determining supervisory asset-quality ratings (the [A]sset rating in “CAMELS”) for the BHC’s subsidiary banks, an asset-quality ratio is used based on a comparison of weighted classified assets to tier 1 capital (as defined for leverage purposes) plus the allowance for loan and lease losses. Examiners should use this ratio and the accompanying benchmarks in conjunction with all the other factors normally evaluated when assessing asset quality for each institution.

The allowance for loan and lease losses is defined as the bank’s total ALLL. The ALLL is not subject to the 1.25 percent limitation on supplementary capital elements for this calculation (that is, all of the ALLL is included in the denominator of the ratio).

The ratio of these assets to tier 1 capital plus the allowance for loan and lease losses is then compared to the existing asset-quality benchmark table to determine the asset-quality rating.

### Asset-Quality Table

<table>
<thead>
<tr>
<th>Asset-Rating Ranges</th>
<th>Asset-Quality Ratio</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>under 5%</td>
</tr>
<tr>
<td>2</td>
<td>5% to 15%</td>
</tr>
<tr>
<td>3</td>
<td>15% to 30%</td>
</tr>
<tr>
<td>4</td>
<td>30% to 50%</td>
</tr>
<tr>
<td>5</td>
<td>over 50%</td>
</tr>
</tbody>
</table>

Examiners should use the asset-quality table and other pertinent factors, including loan policies, credit administration, portfolio concentrations, and past-due levels, to determine the final asset-quality rating. While individual bank ratios may change slightly, depending on the amount of cumulative preferred stock, mandatory convertible debt, and other supplementary elements, the change in the ratio itself should not result in a change in the bank’s asset-quality rating.

This page should not be prepared for one-bank holding companies. The examiner may show this data on the Bank Subsidiaries page. However, the examiner may use this page to reflect successive examination data for several years to indicate trends. The examination dates should be cross-checked to those shown on the Bank Subsidiaries page.

---

This report page presents an organization chart, giving a schematic description of the structure of the organization, the intercompany relationships and the degree of control of subsidiaries.

An organization chart provided by the holding company for various regulatory filings may be used, with revisions made for new or divested subsidiaries. The information required below may simply be added to the existing chart.

The organization chart may be pictorial (box format) or linear (listing format). The parent should be presented at the head of the page. Banks should be presented individually in the same area. Nonbanks should be presented individually in the same area (if possible).

Each subsidiary should be shown by its official name; however, there is no need to indicate the address unless necessary to distinguish identity. Subsidiaries of banks and second tier nonbank subsidiaries may be omitted or shown at the examiner’s discretion. Abbreviated charts should be so footnoted.

Abbreviations used throughout the report should be presented on the “Structure and Abbreviations” Report page and also on the bottom of this page or following the chart. Generally, abbreviations familiar to the BHC should be used. However, efforts should be made to incorporate at least a part of the name into the abbreviation as opposed to relying strictly on initials which tend to become confusing. Also, it is desirable that abbreviations of bank subsidiaries include the word “Bank” to distinguish them from the parent company and/or nonbank subsidiaries with similar names.

Indicate the percentage of ownership to the nearest tenth of one percent and include directors’ qualifying shares. Where all, or nearly all of the subsidiaries are wholly-owned, detail the exceptions and provide a footnote to the effect that unless shown, ownership is 100 percent.

The names and/or abbreviations shown on the organization chart are to be consistently used throughout the report (for example, the “Income from Subsidiaries,” “Investment in and Advances to Subsidiaries,” and the “Nonbank Subsidiary” and the “Bank Subsidiary” pages).

Where applicable, the order established on this page should be used in all tables of the report.
The report page provides an abbreviated history of the organization including name changes, acquisitions, mergers, reorganizations and divestitures. The objective is:

1. To present the chronological development of the bank holding company.
2. To list nonbank activities engaged in by the parent company and its subsidiaries.
3. To provide a measure of size relative to competing institutions.

The information that is included in this report page may be obtained from documents filed with the Federal Reserve System. For lines 1 through 3, refer to reports filed with the FRB such as the registration statement and FR Y–6.

In response to item 3, one bank holding companies formed before December 31, 1970, first became subject to the Act on December 31, 1970, with the passage of the 1970 Amendments to the Act. A multibank company formed between 1956 and December 31, 1970, became subject to the Act on the date of controlling its second subsidiary bank. All BHCs formed after December 31, 1970, became subject to the Act on the date of controlling their first bank subsidiary. For response to item 4, history is available in applications to FRB and in public documents such as annual reports to stockholders and SEC Form 10-K. For additional information contact the corporate secretary.

Comments responding to item 4 are to be in narrative and/or list form and should include:

1. The present number of banking subsidiaries, the percent of State deposits on an aggregate basis and size ranking in the State. For a money-center holding company, also provide its ranking on a national basis.
2. The date and outline of any acquisitions, mergers, reorganizations, or name changes.
3. A list and brief description of activities in which the nonbanking subsidiaries are engaged.
4. A discussion of any permanent or limited grandfather rights, and any plans for divestment of shares or termination of nonbank activities.

The activities shown on this page should be consistent with those shown on the nonbank subsidiary pages.
5010.20.1 INVESTMENT IN AND ADVANCES TO SUBSIDIARIES

This schedule details the parent’s financial relationships with its subsidiaries. It will be used to support comments or analyses in other sections of the report, or to clarify answers to the questions on the continued page, “Investment In etc.—continued.”

The objectives of the report page are:
1. To determine the percent of the parent’s assets comprised of investments in and advances to each subsidiary.
2. To help determine the dependency of subsidiaries on advances from parent.

The parent’s investments in and advances to each subsidiary are usually detailed in ledgers maintained by the accounting department. Each subsidiary is listed individually beginning with banks, providing subtotals for banks and non-banking subsidiaries.

The investment in each subsidiary is to include any related unamortized goodwill. Provide a “total” in the “investment” column. From this total subtract the aggregate unamortized goodwill in all subsidiaries and detail the “goodwill” on the “Contingent Liabilities” page.

Totals for investments and advances should agree with the “Comparative Balance Sheet” page. The Parent’s investment should be equal to its proportionate interest in each subsidiary’s equity as presented in financial statements on the “Nonbank Subsidiary Financial Statement and Condition” and the “Bank Subsidiaries” pages plus any unamortized goodwill. Parent’s advances should also equal “loans from parent” as detailed on the “Nonbank Subsidiary Financial Statement and Condition” and the “Bank Subsidiaries” pages.

5010.20.2 INVESTMENT IN AND ADVANCES TO SUBSIDIARIES (continued)

For this continuation page, the answers to questions 1 through 6 provide information on the funding of subsidiaries.

The objectives of each question are as follows:

Question 1—To determine the amount of goodwill in the investment in each subsidiary.
Question 2—To determine if the parent “forgave” the indebtedness of any of its subsidiaries which might indicate an inability to service its debt properly or other financial difficulties in the subsidiary.
Question 3—To determine the extent of the parent’s borrowings invested as equity since the last inspection. The subsidiary’s enlarged capital base might provide additional debt capacity.
Question 4—To determine if the advances are on a preferential rate basis, to help in analyzing the subsidiary’s earnings proficiency.
Question 5—To determine if there is any difficulty in the subsidiary regarding its ability to service its debt properly.
Question 6—To determine if the parent lends its credit and debt capacity to its subsidiary and to aid in the analysis of the parent’s contingent liabilities.

The answers to all questions should be verified against company records and discussed with the comptroller, the treasurer or the finance officer. Details on some questions can come from company’s latest SEC Form 10-K or the annual report to stockholders. All questions should be answered; if not applicable, so state. It is not necessary to repeat the question when answering.

Any guarantees should also be included as contingent liabilities.
Commercial paper is a source of funds for the parent and its subsidiaries. This schedule presents the maturity and placement of commercial paper in use in the parent’s operations and/or for back-up to the commercial paper. The page is required if the parent issues commercial paper.

The objectives of this report page are:

1. To summarize the extent of the parent’s use of commercial paper and its ability to continue the use of this funding tool.
2. To help determine the overall liquidity position of the parent company.
3. To determine the volatility of commercial paper issued, including average turnover rate.
4. To determine whether any subsidiary bank is providing compensating balances for the benefit of the parent or nonbank affiliate.

The information required in the schedule should be requested in the officer’s questionnaire or can be obtained from the accounting or treasurer’s departments and verified with the general ledger. If at all possible, the data should be as of the financial statement date. (An alternate date is acceptable for the Maturity Schedule but should be specified.) The schedule should also be prepared for each nonbanking subsidiary which issues its own commercial paper.

The total commercial paper should equal amounts on “Parent Company Comparative Balance Sheet” (Core Page 5) and the confidential “Liquidity and Debt Information” page C, unless an alternate date is used.
Procedures for Inspection Report Preparation  
(Page—Lines of Credit (Parent))  
Section 5010.22

Lines of credit are a source of funds for the parent and its subsidiaries. This schedule presents the lines of credit available for the parent’s operations and/or for back-up to commercial paper.

The purpose of the report page is to be able to determine the degree of use of the lines of credit and the availability of these lines to back-up commercial paper borrowings. It is also intended to help determine the overall liquidity position of the parent company.

The information required in the schedule should be requested in the officer’s questionnaire or can be obtained from the accounting or treasurer’s departments and verified with the general ledger. If at all possible, the data should be as of the financial statement date.

The exact names and locations of line banks should be shown in the “Lines of Credit” section and totals calculated for the dollar amount columns. If a BHC has an extensive number of line banks, the detail for each line of credit may be eliminated at the discretion of the examiner with aggregate amounts and ranges included in the appropriate columns. In this instance, the total number of line banks involved and a general comment as to geographic distribution should be included.

If any subsidiary bank maintains compensating balances on behalf of the parent, the examiner should place an asterisk in the column and determine that the bank is compensated so that it does not incur a loss of income. Any resulting loss of income should be commented upon. See Manual sections 2020.4 and 2080.1.

The total lines of credit in use should equal amounts reported on “Parent Company Comparative Balance Sheet” (Core page 5) and the confidential “Liquidity and Debt Information” page C.
The answers to questions 1 through 13 should provide information about the quality of the commercial paper and the procedures for its issuance. They should also discuss funding involving the issuance of commercial paper backed by lines of credit. Examiners should refer to sections 2080.05 and 2080.1 before completing this report page.

The purpose of the report page is—

1. to determine the quality of commercial paper and to appraise the company’s ability to raise additional funds in the marketplace;
2. to determine how the proceeds from commercial paper sales will be used;
3. to decide whether the use of commercial paper is in keeping with statutory requirements and regulatory requirements such as those of the Securities and Exchange Commission (SEC);
4. to determine whether the use of commercial paper satisfies liquidity needs (see section 2080.1);
5. to determine if policies in the commercial-paper funding system are safe and sound;
6. to determine if backup sources of funds are available and adequate to meet the liquidity needs of the parent; and
7. to address the examiner’s concerns about commercial paper policies, controls, and marketing methods.

The information needed to complete this report page is usually available from the holding company’s investment or funds-management department. It may also be obtained through discussions held with management responsible for the holding company’s funding program. The information may also be available from rating agencies and in contractual agreements with lending banks.

Question 1 asks for any changes in the commercial paper rating that may show a changing financial condition. See appendix A of this section, which lists rating indicators used by commercial paper rating companies. Determine the cause for any change in the rating.

Bank holding companies with lower credit ratings may issue commercial paper by obtaining credit enhancements. Such credit support may be obtained from letters of credit (LOC paper) or a surety bond issued by an insurance company having a high credit rating (called credit-supported commercial paper). Bank holding company commercial paper with a lower credit rating can also be backed by other high-quality assets serving as collateral (called asset-backed commercial paper), thus allowing the bank holding company to enter the market as an issuer. (See section 2128.03 for inspection guidance about such commercial paper enhancements.)

Question 1 further instructs the examiner to report the range of current rates paid on all commercial paper. By presenting the range of current rates paid on different maturities of commercial paper, the examiner can compare rates paid with those of the bank holding company’s peers. This will aid in determining the “marketplace’s” impression of the company’s condition, as reflected by the rates the company must pay to attract funds.

The yields on commercial paper track those of other money market instruments. Like U.S. Treasury bills, a commercial paper instrument is a discount instrument. Because of exposure to credit risk, the yields on commercial paper are usually higher than those of U.S. Treasury bills. As in the case of Treasury bills, interest on commercial paper is computed on a 360-day year. Treasury bills, in contrast to commercial paper, are exempt from state and local taxes and are more liquid than commercial paper.

When responding to question 2, if any subsidiary sells commercial paper for its own use or for the parent, indicate why the bank holding company chooses to structure its funding in this way. For example, a commercial finance non-bank subsidiary of a bank holding company was authorized by the Board to underwrite (purchase) and deal in (resell or place with institutional investors) commercial paper as agent for the issuers (see section 3600.21.1). A section 20 subsidiary also can underwrite and deal in, or act as riskless principal in the placement of, commercial paper, if authorized by the Board by order.

A parent company could issue commercial paper directly or through a broker. The examiner therefore needs to be aware of the difference between direct paper and dealer paper. Direct paper is sold by the issuing firm directly to investors without using a securities dealer or an intermediary. Direct-paper issuers generally require continuous funds and therefore find it more cost-effective to establish their own sales force to sell their commercial paper directly to investors. In the case of dealer-placed commer-
cial paper, the issuer uses the services of a securities firm to sell its commercial paper.

If the subsidiary’s name is similar to the parent’s, note whether an investor can tell, by its name or through other means, that the issue is associated with the parent.

With regard to question 3, the commercial paper specimen should clearly state that it is not an FDIC-insured obligation of any bank subsidiary. (See section 2080.1.)

The minimum round lot in commercial paper transactions is usually $100,000, although some issuers sell commercial paper in denominations as low as $25,000. With regard to question 4, bank holding companies generally should not sell commercial paper in denominations of less than $25,000. This is to ensure that the commercial paper instrument is suitable for investment by sophisticated investors as opposed to the general public. Commercial paper investors are typically institutional investors.

Rollover of commercial paper proceeds on maturity is common. The SEC has stated that obligations that are payable on demand or have provisions for automatic rollover do not satisfy the nine-month (270 days) maturity standard. SEC staff, however, has issued no-action letters for commercial paper master-note agreements.1 These agreements allow eligible investors to make daily purchases and withdrawals (subject to a $25,000 minimum) as long as the maturity of the note and each investor’s interest therein do not exceed nine months. Such master-note agreements may allow prepayment by the issuer any time, or upon demand of the investor.

Commercial paper and commercial paper master-note agreements can result in a potential source of funding mismatch from the use of what is commonly called “deposit sweeps.” This practice is based upon an agreement with a subsidiary bank’s deposit customers (typically corporate accounts). Such agreements allow these customers to reinvest amounts in their deposit accounts above a designated level in overnight obligations of the parent bank holding company.

In view of the extremely short-term maturity of these sweep arrangements, banking organizations should be advised to exercise great care when investing the proceeds. Appropriate uses of the proceeds of such deposit-sweep arrangements are limited to short-term bank obligations, short-term U.S. government securities, or other highly liquid, readily marketable, investment-grade assets that can be disposed of with minimal loss of principal. (See also sections 2080.05 and 2080.1 when reviewing commercial paper activities.)

Concerning question 5, investing in the bank holding company’s commercial paper by a subsidiary bank’s trust department is generally regarded as self-dealing and a violation of trust regulations, absent express written authority and the consent of all of the trust’s beneficiaries. Bank holding company examiners finding such trust department holdings should discuss the matter in detail with Reserve Bank trust examiners or the Board’s Trust Activities Section, Division of Banking Supervision and Regulation.

In response to question 6, the examiner should indicate the use of the proceeds and whether such use is considered long-term or short-term. (See also sections 2080.05 and 2080.1.)

Question 7, on concentration of holdings, is intended to aid in determining if any party can exert influence on the bank holding company due to its commercial paper holdings. If any individual, organization, or industry holds more than 10 percent of the commercial paper, indicate if the holder(s) exerts any influence on the bank holding company’s management.

In response to question 8, if there is any indication of difficulty in refinancing commercial paper at maturity, discuss this in significant detail. Indicate the reasons for the difficulty, the problems it poses for management, and management’s plans to rectify those problems. This is a particularly sensitive issue because of the financial exposure that could be created by an inability to refinance.

1. A master note is a negotiated agreement or contract (negotiated as to size, maturity, and price) between a borrower and investor that permits the investor to place cash, up to a stated amount, with the borrower over a designated period of time. Such unsecured credit agreements (no note is actually issued, only an agreement is signed at the beginning of the arrangement) are limited to borrowers with the highest credit ratings and large investment institutions. Master notes have characteristics similar to those of a revolving-credit arrangement. The outstanding amount allowed may vary daily but is limited by a stated cap imposed by the issuer. Investors in such agreements control the amount invested in the note on the basis of the amount of surplus cash that is on hand. Either party can terminate the agreement with only 24 hours’ notice. In reality, it is a longer-term funding vehicle because the parties generally are interested in maintaining a long-term relationship.

Unlike commercial paper, master notes are indirectly accessible to a wider array of investors. Investment firms group investments from small investors with investments made by a few large institutional investors and place the funds in master notes. The master note, unlike commercial paper, avoids the task of writing daily individual tickets for each customer. Disadvantages of the master note are the potential for daily variation in the amount invested and the potential for sudden redemption.
Question 9 is intended to aid in determining the degree to which the bank holding company can rely on its line banks. Lines that have not been confirmed in writing or for which no contractual obligation exists are less certain to be available than those that are confirmed and contractual.

As question 10 implies, lines of credit are often specifically established solely to back up commercial paper borrowings. Such lines impart a measure of security to the bank holding company. Evaluate the adequacy of the total amount of these lines in relation to the volume of outstanding commercial paper.

In asking about systematic rotation, question 11 is intended to help the examiner determine if the bank holding company routinely uses the proceeds from a line of credit to pay off another, and whether the bank holding company has ever been in an aggregate nonborrowing position during a given year. If the bank holding company routinely and continuously relies on its ability to repay its lines with other line borrowings, discuss the potential effects on the bank holding company’s ability to service its debt properly.

Question 12 asks for information on reciprocal lines that reveals the relationship between the lender and the bank holding company. A line’s reciprocity may have a bearing on the degree to which the borrower may rely on the lender.

Question 13 is intended to help the examiner evaluate the relationship between the parent and its nonbank subsidiary. In those cases in which a subsidiary is authorized to borrow directly on the parent’s lines, the examiner should evaluate the parent’s internal controls and management information systems for supervising the subsidiary’s borrowings.

*The definition of ratings varies by rating agency.
†This list of rating companies is for the examiner’s information only. The list is not an endorsement of these companies by the Federal Reserve.
Listed on this page are any material assets and liabilities (actual and contingent) not detailed on the parent company’s balance sheet or other schedules in the report. Contingencies include guarantees, lease or loan commitments, letters of credit, interest rate swaps, futures and forwards transactions and pending litigation.

The purpose of this report page is:

1. To determine the extent of the parent’s potential obligations and the related strain on its financial capacity resulting from contingencies.
2. To determine the quality of “Other Assets.” These assets are subject to evaluation and classification, if appropriate. “Other Assets” is sometimes found to include assets acquired in violation of section 4 of the Act (particularly section 4(c)(2)).
3. To detail “Other Liabilities” which may indicate external funding relationships otherwise not presented.

The information should be derived directly from the BHC’s financial statements and the board of directors’ and executive committee’s minutes. Management should be asked to verify and explain any contingent liabilities. A review of all “Other Assets” and “Other Liabilities” in the general ledger and subsidiary ledgers should be conducted and analyzed for appropriate types and amounts of accounts. Suspense accounts should be aged, particularly if shown as a net amount.

If there are no contingent liabilities state “None reported.” Normally only items appearing on the balance sheet as of inspection date will be listed. If prior periods’ items are listed, columns with dates corresponding to those on the balance sheet should be used.

Refer to Manual section 5010.8 for guidelines on presentation of details of “Other Assets” or “Other Liabilities.”

The parent’s guarantees on the “Investment In and Advances To Subsidiaries” page should be included as contingent liabilities. “Other Assets” and “Other Liabilities” totals should reconcile to the line items on the “Parent Company Comparative Balance Sheet” page.
The reconciliation of capital accounts provides a summary of transactions which have caused changes in each of the equity accounts for the periods indicated. There should be no charges against paid-in capital that are properly chargeable to income.

The report page is used to record and analyze changes in stockholders’ equity and to determine the effects on the financial condition of the holding company.

The information should be requested in the officer’s questionnaire. Sources for prior periods include the FR Y–6, FR Y–9 LP, the annual and quarterly reports to stockholders, previous reports of inspection and the SEC Form 10-K. Current period changes can be obtained from the corporation’s accounting or comptroller’s department.

The presentation should begin with the last two fiscal years and include the most recent year-to-date interim. The column heading “Capital Stock” can include common and preferred stock. However, it is necessary to distinguish the type and amount which can be accomplished by using (C) and (P), for common and preferred, beside the amounts. An appropriate legend can be inserted in the column heading.

Net income reported should agree with that reported on the “Comparative Statement of Income and Expenses (Parent)” and the “Comparative Statement of Income and Expenses (Consolidated)” pages. If net income reported on this page does not agree with the income on a consolidated basis (i.e. differences caused by minority interests), include a footnote to explain the reason for the differences.

Balances at year-end and interim period should agree with accounts on the “Parent Company Comparative Balance Sheet” and the “Comparative Statement of Income and Expense (Consolidated)” pages. Footnote and explain any differences.
These “Interim” and “Fiscal” pages can be used when the parent receives income from more than one subsidiary, or where it is needed to support comments or analyses in other sections of the report. Both the “Interim” and “Fiscal” pages should be included in the report when this situation is applicable. From the data on these two pages, the examiner is able to analyze the contribution to overall earnings made by each of the subsidiaries. The schedule also reflects the extent of the parent’s upstreaming income from its subsidiaries.

The purpose of these report pages is:

1. To determine the relative share of the individual subsidiary’s contribution to the holding company operation;
2. To analyze the dividend payout ratio and to compare payouts between subsidiaries;
3. To determine the proportion of each subsidiary’s income paid to the parent as fees; and
4. To determine the degree of interest coverage on advances to subsidiaries.

For the interim and fiscal periods, some items can be obtained from the parent’s income statement and from the BHC’s workpapers showing eliminations on the consolidating income statement. Additional information can be obtained from the holding company’s accounting department or comptroller.

The banks should be presented first, then nonbanks. Subtotals should be provided.

The dividend payout ratio is calculated by dividing total dividends by net income after taxes and securities transactions. Show an average payout ratio for banks and nonbanks, respectively, and an overall payout ratio. Do not show negative percentages.

5. Fees as a percentage of the subsidiary’s operating income is calculated using total operating income before expenses. No subtotals for banks and nonbanks are required.

Equity in undistributed earnings, dividends, interest and total fees should equal that reported for each period on the “Comparative Statement of Income and Expenses (Parent)” page. For wholly-owned subsidiaries, the sum of the “Equity in Undistributed Earnings” and “Dividends” columns should equal its net income for the related period.
The analysis is performed and the statement is completed for BHCs with consolidated assets in excess of $1 billion, or when substantial fixed charges exist or debt is outstanding, when required by the Reserve Bank. This statement indicates the results of the parent’s management of its cash position and identifies major sources of working capital and areas of disbursement. The statement also presents the cash earnings of the parent company. The cited ratios measure the parent company’s ability to meet its fixed obligations and the ability of the residual earnings to cover common stock dividends. When combined with an analysis of the parent company’s cash income sources from subsidiaries, it serves as a partial basis for determining the parent company’s debt servicing capacity, and thus an assessment of its leverage. In addition, projected cash flow information aids in the analysis of the BHC’s ability to properly service its debt.

Only items affecting cash should be shown. The “Next Fiscal Year” column completion is optional at the examiner’s discretion if the inspection occurs early in the current year (i.e. the inspection is in January 19X6 and thus would require the data through the end of 19x7).

The objective of the report page is:
1. To determine the ability of the parent to manage its cash position and operate within debt service and funding requirements;
2. To measure the parent’s ability to meet its fixed obligations and its dependency on borrowed funds to meet its cash needs;
3. To determine if the parent company’s dividends to stockholders are covered by residual earnings;
4. To analyze any cash flow transactions which may adversely affect the financial stability of the parent;
5. To discuss parent company deficit cash flows provided by its own operations;
6. To discuss any parent company borrowings needed to sustain dividend payments to shareholders;
7. To discuss the scope for increasing cash flow to the parent company; and
8. To discuss steps management has taken, or plans to take, to restore adequate cash earnings coverage for fixed charges and dividend payments, and whether such plans should be commensurate with the maintenance of adequate loan loss reserves and Tier 1 capital levels in the bank and major nonbank subsidiaries.

The information may be requested in the officer’s questionnaire and a copy of the “Cash Flow Statement (Parent)” page may be included with the questionnaire.

To complete the page refer to the holding company’s cash receipts and disbursements journal and its general ledger and income statement(s). Also refer to any cash flow and income projections prepared by the organization.

The statement should be verified and reconciled, to the extent possible, to the BHC’s published statements. Any additional items not provided for in the preprinted statement can be separately listed in an appropriate space.

Any dividends considered unreasonable should be discussed in the comments section. Dividends paid with funds derived from new borrowings should be discussed in detail.

Any significant cash flow transactions should be discussed. Refer to section 4010 for examples of such transactions.

If shortfalls exist, discuss on the “Cash Flow Statement (Parent)” page. For example, if the parent has a deficit cash flow provided by its own operations (as is often the case), discuss how the parent offsets (or plans to offset) the deficit. If the question is not applicable, state “NA.”

If the BHC must incur additional debt in order to sustain its dividend payments to shareholders, discuss this in detail on the “Cash Flow Statement (Parent)” page.

To the extent that the accrual method of accounting is used, income and expense items should agree with the figures on the “Comparative Statement of Income and Expenses (Parent),” and between balance sheet periods, the “Statement of Changes in Stockholder’s Equity (Parent)” pages and the “Income from Subsidiaries” for the fiscal year are as follows:
1. Dividends, and management and service fees from subsidiaries should agree with those on the “Comparative Statement of Income and Expenses (Parent)” and the “Income from Subsidiaries” pages;
2. Interest income should agree with the amounts reported on the “Comparative Statement of Income and Expenses (Parent)” and the “Income from Subsidiaries” pages;
3. Interest expense should agree with the amounts reported on the “Comparative Statement of Income and Expenses (Parent)” page;
4. Salaries and employee benefits should be the same as those reported on the “Comparative...
Statement of Income and Expenses (Parent) page; and
5. Dividend payments made by the parent should agree with those reported on the “Statement of Changes in Stockholder’s Equity (Parent)” page.

Other increases and decreases in cash which should agree with changes in balance sheet items on the “Parent Company Comparative Balance Sheet” page are:

1. Increases in borrowed funds;
2. Decreases or increases in advances to subsidiaries; and
3. Debt retirement or reductions.
The Parent Company Liquidity Position page is prepared for bank holding companies with consolidated assets in excess of $1 billion and those with substantial debt outstanding, as well as select others at the option of the Reserve Bank. The report schedule provides a structured analysis of all assets and liabilities within predetermined remaining maturity categories. The schedule is designed to place emphasis on remaining maturing assets and liabilities of less than one year.

When the schedule is initially completed, the examiner is provided with an indication of whether the parent company has an adequate cushion of short-term liquid assets within the 0 to 30 days and the 0 to 90 days categories to cover short-term liabilities, or whether a pattern of short-term funding gaps exist. Following adjustments, if any, to maturing assets or liabilities, the resulting schedule sets forth a framework for observing funding mismatches, thus serving as a tool for assessing the parent company’s overall liquidity position.

A net positive gap is expected in the 0 to 30 days category to show the parent’s ability to ride out a temporary market disarray. Similarly, a cumulative positive position is expected in the 0 to 90 days categories, despite any deficiency within the first 0 to 30 days category. A failure to satisfy those conditions requires the examiner to address the deficiency within the “Examiner’s Comments” page. Results of the analysis are to be discussed in the parent company section on the “Analysis of Financial Factors” page in the inspection report.

The report schedule is prepared:
1. To determine whether the bank holding company is avoiding funding strategies that could undermine public confidence in the liquidity or stability of their banks; and
2. To evaluate the holding company’s ability to meet its maturing obligations, covert its assets with minimal loss, obtain cash from other sources, or roll over or issue new debt obligations;
3. To determine whether the level of the parent’s liquid assets is sufficient to cover its short-term obligations;
4. To analyze the contractual maturity structure of its assets and liabilities and to estimate the underlying liquidity of the parent company’s liabilities and assets, giving particular attention to interest bearing deposits in and advances to subsidiaries (Note: Parent company advances to subsidiaries should be considered a reliable source of liquidity only to the extent that they fund assets of high quality that can be readily converted to cash);
5. To identify funding surpluses or deficits for specific maturity intervals;
6. To provide an analytical framework for observing funding mismatches in assessing the parent company’s overall liquidity position;
7. To provide an analytical tool and a basis for discussion of parent company liquidity with management; and
8. To provide a basis for developing or evaluating existing parent company contingency plans, including any reliable unused back-up lines of credit. (Note: In the event that maturing liquid assets are not sufficient to satisfy short-term obligations, primarily in the 0 to 90 days categories, and the parent company has no contingency plan to cover mismatches (shortfalls) in the under 1 year categories, the parent company must be requested to develop such contingency plans that must include standby facilities that will be reliable during times of financial stress. For those BHCs with less than satisfactory parent or consolidated supervisory ratings (3 or worse), or any BHC subject to serious liquidity or funding pressures, those BHC’s must include in their contingency plan specific plans to reduce or eliminate entirely their outstanding short-term obligations.)

The information for the schedule should be obtained from the parent company’s balance sheet for the contractual maturing amounts of assets and liabilities, and slot the amounts into the five maturity categories depicted.

While analyzing the contractual maturities of the assets and liabilities, the examiner must consider the underlying liquidity of the parent’s intercompany advances and deposits and the extent to which they fund high quality assets that can be readily converted into cash.

The examiner should refer to the Manual’s funding sections 2080.0 to 2080.6 and sections 4010.0 to 4010.2 that address parent company cash flow and liquidity.

The report page data should be entered as of the inspection report financial statement date. The examiner may, at his or her option, incorporate the schedule into the inspection report to substantiate or clarify particular judgements. Assets should be recorded net of any allowance (contra asset) accounts.

The examiner should assess the contractual maturity structure of the parent company’s balance sheet by preparing the schedule according
to the parent’s maturing assets and liabilities. The scheduled can be adjusted to better appraise the parent company’s liquidity position by analyzing interest bearing deposits with bank subsidiaries and advances to subsidiaries. The “Other Assets” may be sub-categorized within the additional space provided. The completed schedule may be used as a basis of discussing parent company liquidity with management. The examiner should comment on the findings on the “Analysis of Financial Factors” page in the inspection report (whether or not the schedule is included in the report).

The total of each asset account should equal the respective assets as listed on the “Parent Company Comparative Balance Sheet” for the inspection report financial statement date, net of any separately listed allowance or contra asset account balances or any adjustments for market valuations. The total of each liability account should equal the respective liabilities as listed on the “Parent Company Comparative Balance Sheet” as of the inspection report financial statement date.
This report page is included in all reports when assets are classified and written up. For inspections of bank holding companies with less than $150 million in total assets, it is to be included in the Core section of the report. The information reported represents analyses and conclusions for the classification of the parent’s assets and identifies all of the nonbank subsidiary’s classified assets. Refer to the instructions for the “Summary of Consolidated Classified and Special Mention Assets,” Core page 7, for a discussion of classification standards.

The purpose of the report page is to—

• determine the risk involved in the parent’s activities,
• determine the adequacy of reserves,
• disclose problem assets requiring management’s attention, and
• aid in the analysis of the condition of the nonbank subsidiary(ies).

The information is obtained by an evaluation of the parent’s assets and the assets of nonbank subsidiaries. For nonbank company assets, the information is obtained through examining the loan and lease portfolios, and reviewing credit files, loan reviews, past-due lists, credit analyses, and watch lists prepared by the holding company.

Any asset classified doubtful or loss requires a write-up unless the amount is insignificant to the company’s operations. Where asset reviews are undertaken, the examiner should note at which entities the asset reviews were performed, and their level of coverage. Any classified asset that is challenged by management also requires a write-up.

Loan write-ups may extend across the entire page. At a minimum, show the total amount of extension of credit booked by the parent, name of debtor, name of guarantors, collateral, amount of classification in appropriate category, date originated, maturity, purpose, and where deemed necessary, a short write-up giving the reason for the classification. Also identify any participation with a subsidiary, including the subsidiary’s name and amount held by the subsidiary.

Nonbank loans classified substandard may be listed alphabetically with no write-up required, unless the holding company management disagrees with the classification. For other nonbank assets classified substandard, some minimum comment is necessary. For example, the examiner may make one general comment concerning the deficiencies of several credits or other assets listed.

Any nonbank subsidiary loan classified doubtful or loss, where the amount classified exceeds the lesser of $100,000 or 5 percent of the subsidiary’s total assets, should include a brief write-up stating the reason(s) for classification. However, at the discretion of the examiner, any doubtful or loss classification may be the subject of a write-up.

In the case of nonbank subsidiaries such as consumer finance companies where there are relatively small amounts and a large volume of accounts involved, the use of “bulk classification” by degree of delinquency may be more desirable than listing each loan individually. The examiner may provide write-ups on any classified nonbank subsidiary asset deemed appropriate.

The classification totals should agree with “Examiner’s Comments,” and/or “Analysis of Financial Factors” pages. Any major asset problems may be discussed on the “Examiner’s Comments” or “Analysis of Financial Factors” pages and should be cross checked.
Procedures for Inspection Report Preparation
(Page—Bank Subsidiaries) Section 5010.30

This FR 1225 report page or section (continuous flow reporting basis) presents consolidated financial statement data (a condensed balance sheet and income data) for the lead bank and any other subsidiary bank or banks (that is, subsidiary banks that have consolidated assets of $500 million or more) or for those bank subsidiaries that exhibit conditions warranting special supervisory attention (that is, rated composite 3, 4, or 5 under the Uniform Interagency Bank Rating System). The summary of the examiner’s comments and other important data extracted from the latest report of examination are incorporated into the analysis of the bank component of the RFI/C(D) rating (see section 4070.0) on the “Analysis of Financial Factors” page or section. The summary is incorporated when a bank subsidiary comprises 10 or more percent of consolidated assets and/or when a bank subsidiary evidences material financial deficiencies or other characteristics that should be brought to the attention of the bank holding company’s board of directors, including noted bank violations.1 As banking assets make up the majority of the assets of the holding company, the condition of the larger banks and special supervisory attention banks may have a significant impact on the condition of the consolidated organization.

The financial statements should be requested in the officer’s questionnaire. Balance-sheet and income data can be obtained from the reports of condition, income, and dividends of the subsidiary banks.

Provide a condensed balance sheet as of the inspection date and a statement of income. The income data should be presented in a comparative columnar format and should include total operating revenue, total operating expenses, net operating income, applicable income taxes, net securities gains or losses, and net income. The balance-sheet and income data, while condensed, should provide detail to permit analysis of earnings and capital. Where any past or potential problems exist, the examiner may include more detailed statements to support comments presented.

All pages should bear the same “Bank Subsidiaries” page number, except that the number should be suffixed with a −1, −2, −3, etc., to reflect the subsequent “Bank Subsidiaries” pages.

The following items should be checked to make certain that—

1. advances from the parent company agree with the “Investment in and Advances to Subsidiaries” page;
2. the holding company’s proportionate share of the capital accounts reconciles with the investment shown on the “Investment in and Advances to Subsidiaries” page;
3. external (unaffiliated) debt shown agrees with that on the “Unaffiliated Borrowings” page;
4. net income reconciles with the sum of equity in undistributed earnings and dividends on the “Income from Subsidiaries” pages, in proportion to the holding company’s percentage of ownership; and
5. any relevant comments made on the “Bank Subsidiaries” pages agree with Core page 1, “Examiner’s Comments and Matters Requiring Special Board Attention.”

---

1. In determining the subsidiary banks that require write-ups, examiners should be mindful of the effect that cross-guarantee provisions of can have on nontroubled bank subsidiaries.
Procedures for Inspection Report Preparation
(Page—Nonbank Subsidiary) Section 5010.31

For each direct nonbank subsidiary (and its significant subsidiaries not consolidated in its statements), a summary is to be provided of its history, activities, classifications, and risk exposure. Nonbank subsidiary pages consist of “Nonbank Subsidiary,” “Nonbank Subsidiary Financial Statements,” and “Nonbank Assets Subject to Classification.” Each subsidiary should be presented as a “unit.” Successive subsidiaries should be sequentially presented (for example, 18a, 18b, etc.). The information provided on the report page should aid in the determination of permissibility of activities and locations, and the evaluation of the subsidiary’s asset quality.

1. Provide the proper name of the organization, location, date of approval, date of acquisition or establishment, date activity commenced, statutory authority, and approved branch office locations should be obtained from Reserve Bank records, presented, and verified with the holding company’s records. Note the date of approval for each activity and office, if applicable.

2. For going concerns acquired by the bank holding company, state the date acquired. For de novo subsidiaries, state the date established.

3. For de novo subsidiaries, state the date activity commenced. Indicate if the BHC has received approval for any de novo activity that has not yet been commenced. Identify any approved activity for which authority has expired.

4. Number 6 refers to the exemptive provision (statutory authority) of the Bank Holding Company Act relied upon to continue to engage in the activity. If section 4(c)(8) of the act is indicated, also provide the corresponding reference to section 225.25(b) of Regulation Y to indicate the specific activities.

5. Provide the city and state location for each branch; however, if the subsidiary has a great number of branches (for example, a consumer finance subsidiary), the examiner may present only the number of offices located in each state or foreign location.

6. For the history and description section, summarize the activities in which the company is engaged and discuss how it has expanded its operations (de novo or by acquisition). Discuss any violations that may have been uncovered.

7. Prepare a written risk assessment of each active nonbank subsidiary, addressing the financial and managerial concerns outlined below. This assessment is to identify subsidiaries with a risk profile that warrants an on-site presence. In formulating this assessment, the examiner should consider all available sources of information including, but not limited to—

- findings, scope, and recency of previous inspections;
- ongoing monitoring efforts of surveillance and financial-analysis units;
- information received through first-day letters or other pre-inspection communications;
- regulatory reports and published financial information; and
- reports of internal and external auditors.

The risk assessment should address each nonbank subsidiary’s funding risk, earnings exposure, operational risks, asset quality, capital adequacy, contingent liabilities and other off-balance-sheet exposures, management information systems and controls, transactions with affiliates, growth in assets, and the quality of oversight provided by the management of the bank holding company and nonbank subsidiary. Examiners are expected to document their assessment of the overall risk posed by each nonbank subsidiary on this report page or equivalent inspection workpaper. See SR-93-19.

The examiner should make certain that the classifications and valuation reserves summarized for the nonbank subsidiaries agree with totals on either the “Summary of Consolidated Classified and Special Mention Assets” page or the “Parent Company and Nonbank Assets Subject to Classification” page.

---

1. The assessment of nonbank activities in large, complex organizations may be focused on an intermediate-tier company with oversight responsibility for multiple nonbank subsidiaries.

BHC Supervision Manual January 2013 Page 1
Procedures for Inspection Report Preparation (Page—Nonbank Subsidiary Financial Statements)  Section 5010.32

This page presents a condensed statement of condition for credit extending and special supervisory attention nonbank subsidiaries (and others at the examiner’s discretion) as of the inspection date, and income data for the latest fiscal year and the year-to-date. The purpose of the report page is to aid in the analysis of the condition of each nonbank subsidiary and in the analysis of its effect on the consolidated company. The page is completed for all credit extending subsidiaries and may be completed for any other subsidiary deemed appropriate.

Financial statements should be requested in the officer’s questionnaire. In the case of larger subsidiaries other financial information may be obtained from the F.R. Y–6, the SEC Form 10-K, published reports to stockholders and reports filed with professional associations. Details relevant to the financial statements can be found by reviewing various accounting records.

The balance sheet should be structured to provide sufficient detail for meaningful analysis, including specifics on valuation reserves and stockholders’ equity. Income data should also be provided for the latest fiscal year plus the year to date (i.e., total revenue, net operating income, net income, rates of return). Provide a condensed income statement for the year to date if considered necessary.

The examiner should ascertain that:
1. Advances from the parent agree with the “Investment in and Advances to Subsidiaries” page;
2. The holding company’s proportionate share of the capital accounts reconcile to the investment shown on the “Investment in and Advances to Subsidiaries” page;
3. External debt reported agrees with the information reported on the “Liquidity and Debt” Confidential page “C”; and that
4. Net income reconciles with equity in undistributed earnings and dividends paid on the “Income from Subsidiaries” pages, in proportion to the holding company’s percentage of ownership.
This page presents the fidelity and other indemnity insurance coverage of the holding company and its subsidiaries. Refer to section 2060.5 for related information. The report page is used to provide a summary as to whether:

1. The parent and nonbank subsidiaries have been insured against the potential for significant losses by maintaining proper and sufficient insurance;

2. A comprehensive review of the insurance program is conducted periodically by management and at least annually by the board of directors and entered into the minutes;

3. A determination can be made as to which entity(ies) is responsible for paying the premiums and if the manner in which such payments are allocated is equitable among the affiliates that receive the coverage benefits; and

4. Procedures are in place to assure that claims are filed promptly.

The information on insurance coverage is usually available from an “insurance officer” and from a review of insurance policies during the inspection. The examiner should conduct a review of insurance coverage with the “insurance officer.” In summarizing results, the examiner should indicate if any nonbank subsidiary is covered under a separate policy or if it is not covered. Also, it should be stated whether the policy is maintained by the bank and whether the BHC and nonbanks are covered by the bank’s policy. The method used to allocate the cost of insurance to the subsidiaries should also be provided.

The comments detailed on the report page should be consistent with summarized comments on the “Policies and Supervision” page and the “Other Supervisory Issues” page, item 7, if included in the report. Any noteworthy deficiencies in the insurance program may be included on the “Examiner’s Comments” page at the examiner’s discretion.
Procedures for Inspection Report Preparation  
(Page—Other Supervisory Issues)  
Section 5010.35

This report page consists of topics dealing with litigation and commitments, the supervisory reports, intercompany transactions and other topics of supervisory concern.

The report page includes questions that are worded to evoke a “yes” response, or if there are no problems in a particular area, a “no” response. If there are any deviations therefrom, responses are required. Positive responses as to either the adequacy of the insurance or audit programs should only be accompanied by a reference to the appropriate inspection report page that addresses the topic. For additional guidance on answering the questions on this inspection report page refer to the “Other Supervisory Issues” FR 1241 report page instructions.

5010.35.1 INTERCOMPANY TRANSACTIONS (QUESTIONS 1)

This question inquires as to the existence of significant intercompany transactions or divergences of bank income subject to adverse comments. This question guides the examiner when documenting the review of compliance with Board policy, statutes and regulations regarding various kinds of intercompany transactions.

For information on diversion of bank income, review management and service fees charged the bank and any compensating balances maintained by the bank on behalf of affiliates indicated on the “Comparative Statement of Income and Expenses (Parent)” and the “Commercial Paper (Parent)” pages, respectively. Comments on section 23A considerations may be found by a review of bank examination reports. The examiner may refer to Manual section 2020.6 (management and service fees) for instructions on examining for diversions of bank income. For information on examining for 23A and 23B violations, see Manual section 2020.1 (transactions between affiliates) and the other Manual intercompany transactions sections 2020.2–2020.7.

Violations of section 23A and 23B of the Federal Reserve Act and section 106(b) of the 1970 Amendments to the Bank Holding Company Act may be summarized as “Examiner’s Comments,” the information should be cross-checked.

5010.35.2 COMPENSATING BALANCES (QUESTION 2)

If a subsidiary bank is not adequately compensated for maintaining compensating balances at another institution for debt advances to the holding company, provide:

1. The average collected and book balance or the range of the balance;
2. Any arrangement whereby the loan or line of credit agreement between the creditor bank and parent contains a requirement to maintain a correspondent account; and
3. Comments as to whether the subsidiary bank is reimbursed for maintaining the compensating balance.

5010.35.3 INTERCORPORATE INCOME TAX PRACTICES (QUESTION 3)

Information on intercorporate tax practices may be obtained from the accounting or comptroller’s department. Manual section 2070.0 (taxes) may be referred to for information on examining intercorporate tax transactions which includes the Board’s intercorporate tax policy statement of September 20, 1978.

In addition to the above references, examiners should be aware that whenever there is a consolidated income tax return filed, it is important that a formal tax agreement exists between the parent and each subsidiary (approved by each board of directors). Examiners should encourage management to prepare such an agreement if not already in place.

Board policy states that taxes paid by a subsidiary bank to its parent should not be in excess of what the bank would pay if it filed on a separate entity basis. However, certain adjustments, in particular the allocation of tax benefits in a consolidated return, may result in higher payments than would have been made had the bank been unaffiliated (i.e., the surtax exemption must be allocated between organizations filing a consolidated return whereas an entity...
The Board normally would regard such adjustments (that result in amounts in excess of filing alone) as acceptable. The Board does not wish to prescribe the tax accounting methods to be used by BHCs. However, the Board does require that those methods employed give bank subsidiaries equitable treatment.

The examiner should comment whenever any of the following has occurred:

1. A subsidiary has been required to make tax payments to its parent that significantly preceded the date the consolidated tax payments are paid to IRS. (In general, “significantly” means not in excess of five business days.)

2. A subsidiary bank is due a tax refund due to a fiscal net loss on a taxable basis (or due to other tax credits) and the parent has not refunded to the bank taxes paid by the bank to the parent in previous tax periods.

3. The subsidiary bank has passed up deferred income tax liabilities to the parent along with an equivalent amount of cash or earning asset. Such transactions must be reversed by a reinstatement of the deferred tax on the books of the bank, along with the transfer by the parent of an equivalent amount of cash or appropriate earning asset.

5010.35.4 TIE-IN ARRANGEMENTS (QUESTION 4)

As for tie-in arrangements, see Manual section 3500.0 (tie-in considerations). This Manual section provides information on examining for impermissible tie-in arrangements. Information on tie-in arrangements is available from BHC and nonbank subsidiary management and may also be found by reviewing standard lending agreements and manuals.

5010.35.5 INSIDER TRANSACTIONS (QUESTION 5)

Consider:

1. The policy in regard to extensions of credit by a bank holding company or its nonbank subsidiaries to the BHC officials (executive officers, directors or “more than 10 percent” shareholders) or the BHC officials’ interests in the organization;

2. Prohibitions on bank extensions of credit contained in the Financial Institutions Regula-

tory and Interest Rate Control Act of 1978; and

3. Whether the bank holding company has a conflict of interest statement or business ethics policy that has been distributed to employees.

If there are insider transactions subject to comment, list the parent and nonbank subsidiary extensions of credit to BHC officials. Also, comment on the compensation to the officials. See Manual sections 2050.0, 2110.0, and 5010.36.

5010.35.6 LITIGATION (QUESTION 6)

A “yes” response to this question would require a summary of any litigation involving the parent bank holding company and the bank and nonbank subsidiaries, which could have a significant effect on the holding company. The purpose of this question is to aid the examiner in the analysis of the financial condition of the holding company by determining if any pending litigation poses a threat to the financial condition of the BHC.

Any information on law suits should be requested in the officer’s questionnaire. Information on litigation which may have a significant impact on the company is often included in the published annual report to stockholders or in the SEC Form 10-K.

Comments on litigation should be presented in narrative form summarizing the details of the lawsuit, including, if possible, the opinion of the holding company’s counsel as to the possible outcome of the suit. Generally, include only suits representing more than 10 percent of the holding company’s stockholders’ equity capital. Discussion of immaterial litigation should be avoided.

Any litigation which may have a significant effect on the bank holding company may be summarized on the Examiner’s Comments, Core page 1, at the discretion of the examiner. Also, any litigation which, in the opinion of management or counsel, is expected to result in a significant liability should be noted on the “Contingent Liabilities (Parent)” page.

5010.35.7 INSURANCE PROGRAM (QUESTION 7)

See Manual sections 2060.5 and 5010.33.
5010.35.8 AUDIT PROGRAM (QUESTION 8)

A negative response to this question will result from application of the inspection instructions found in Manual sections 2060.1 and 5010.34. Comments responding to this question should be confined to briefly summarizing any audit program deficiencies and should reference any detailed information provided on other report pages.

5010.35.9 CREDIT QUALITY REVIEW PROGRAM (QUESTION 9)

This question refers to the examiner's review of the BHC’s internal loan review program. A negative response would result from the examiner’s use of the inspection instructions and procedures found in Manual section 2060.6.

5010.35.10 SUPERVISORY REPORTS (QUESTION 10)

A “yes” response with regard to this topic would result in providing information on the timeliness and accuracy of the bank holding company’s submittal of required reports, such as the FR Y–6, Y–8 and the Y–9’s to the Reserve Banks. If the bank holding company is consistently late in filing its reports or if there are repeated discrepancies that need correction, it could be indicative of operational deficiencies or a lack of managerial direction within the bank holding company.

Information on the timeliness and accuracy of reports must be obtained from the Reserve Bank unit handling the reports and by verifying selected items to corporate records. If reports are routinely filed late or inaccurately, the reason and the measures the bank holding company may be taking to eliminate the problem should be stated on this inspection report page.

5010.35.11 OUTSTANDING COMMITMENTS TO THE BOARD OF GOVERNORS (QUESTION 12)

This question reminds the examiner to appraise the bank holding company’s compliance in fulfilling commitments made to the Board or the Reserve Bank. Thus, if there are any commitments outstanding which the holding company has made to the Board or the Reserve Bank, appropriate comments should be provided on the page.

Each Federal Reserve Bank is required to report to the Board’s Division of Banking Supervision and Regulation on a semi-annual basis the status of unfulfilled commitments. The examiner should review this Reserve Bank report before beginning the inspection.

Commitments should be summarized presenting the nature of the commitment, the date the commitment was made, and, if applicable, the time frame in which it must be fulfilled. If the time frame has expired, or if an extension is deemed necessary to fulfill the commitment, details must be presented. The examiner may choose to make a reference to the unfulfilled commitment on the “Examiner’s Comments” Core page 1, if considered appropriate.
The Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA), as amended by FDICIA, accompanied by the Board’s complimentary Regulation O, governs bank extensions of credit to insiders. With the passage of FDICIA and the complementary revision of Regulation O, there is the possibility that there will be an increase in the volume of parent company and nonbank subsidiary extensions of credit to BHC officials and their related interests. The report page presents information on parent company and nonbank extensions of credit to insiders, as well as parent company and nonbank subsidiary investments in and loans on stock or obligations of BHC officials’ related interests. Examiners must reference Manual section 2050.0 to complete this page.

This report page is intended to identify extensions of credit to BHC officials so that those credits may be reviewed for propriety and compliance with the policies of the BHC and Manual section 2050.0. Although Regulation O applies only to bank extensions of credit, for BHC inspection purposes, definitions contained in Regulation O shall be used by System examiners in order to provide a uniform, comparable approach to reviewing extensions of credit to BHC officials.

The information requested on the report page should be requested in the officer’s questionnaire. Other sources may include the annual report to shareholders, the FR Y–6 and filings with the Securities and Exchange Commission.

BHC examiners should review Manual section 2050.0 and Regulation O, and should be familiar with the definitions contained in the regulation. Examiners are asked to identify such credits for in-depth review and analysis. Although Regulation O applies specifically to extensions of credit by banks, and not the parent or nonbank subsidiaries, examiners may criticize a BHC’s or nonbank subsidiary’s direct extensions of credit to BHC officials or their related interests as an unsound practice or may criticize a specific loan for credit reasons. Such extensions of credit are not to be cited as violations of Regulation O.

During a BHC inspection, BHC officials should be made aware that information necessary for the completion of this page is being collected to evaluate practices, policies, or particular credits, but that FIRA and Regulation O apply exclusively to bank extensions of credit.

Section 215.4 of Regulation O entitled “General Prohibitions” sets forth various restrictions on bank extensions of credit to BHC officials. In general, if the BHC examiner reviewing BHC and nonbank subsidiary direct extensions of credit to BHC officials and their related interests concludes, after consultation with counsel for the Reserve Bank, that the extension of credit would not have been in compliance with section 215.4 had it been a bank extension of credit, the examiner may conclude that it is appropriate to criticize the practice or the loan. If it is concluded that the BHC or nonbank subsidiary extended the loan in order to circumvent the restrictions on bank extensions of credit, comments to that effect should be incorporated onto the “Other Supervisory Issues” page or a “Continued” page. Such comments may be also summarized on page 1, “Examiner’s Comments”, at the discretion of the examiner based on the degree of materiality, severity and impact.

Specifically, section 215.4 of Regulation O (in part) requires bank extensions of credit to BHC officials not to be on preferential terms, not to have more than the normal risk of repayment, and over certain dollar amounts to be approved by the bank’s directors. In addition, it requires bank extensions of credit to executive officers, principal shareholders, and their related interests not to exceed the bank’s legal lending limit to any such individual and his/her related interests.

In reviewing BHC and nonbank extensions of credit to “related interests,” note that a related interest is defined in section 215.2(k) of Regulation O as “a company that is controlled by a person . . . .” The definition of “company” for purposes of Regulation O specifically excludes any “insured bank.” However, for purposes of completing these report pages, and evaluating the propriety of BHC and nonbank extensions of credit to (and investments in) “related interests” of BHC officials, “related interests” shall include “banks.” Therefore, a BHC or nonbank direct extension of credit to (or investment in) a BHC official’s “related interest” that is itself a bank (other than a subsidiary bank of the subject BHC), should be reported.

For purposes of this page, “direct” extensions of credit represent obligations of the BHC official or related interest, alone or as co-maker while an “indirect” extension of credit includes a BHC official’s or a related interest’s endorsement or guarantee of an extension of credit to a third party, and obligation’s to the BHC official’s immediate family (spouse, all minor chil-
In listing “Terms” within the “Schedule,” include at a minimum interest rate and date of maturity. “Comments” are intended to include a brief description of any collateral, endorsements, the purpose of the loan, the nature of the borrower’s relationship to the lender if not self-evident, and status of repayment if delinquent or classified.

Identify the source and cost of funds used by the BHC to extend the loan. Any adverse affect to the BHCs net income should be commented on.

Extensions of credit should be consistent with policies summarized on the “Policies and Supervision” page. Otherwise, additional comments might be warranted.
Procedures of Inspection Report Preparation (Page—Interest Rate Sensitivity—Assets and Liabilities) Section 5010.37

The purpose of this report page is to present a brief analysis of the interest sensitivity of assets and liabilities on the inspection date and to further support the analysis in the form of ratios similar to a current ratio and a net working capital to total assets ratio. Positive or negative gaps within maturity buckets are gathered in the form of cumulative gap totals. The analysis can be prepared for each level of the organization.

Such an analysis is designed to determine whether maturing interest sensitive assets match maturing interest sensitive liabilities on a 1 to 1 basis within specified maturity ranges and on a cumulative basis over time.

The information for the report page can be gathered from financial management maturity analyses and interest sensitivity reports prepared by the bank holding company’s management. A limited amount of maturity information on interest sensitive assets and liabilities may be obtained from Bank Call Reports, Bank Holding Company Y reports, Bank Performance Reports, and BHC Performance Reports, and can be used if the inspection “as of” date is the same as the date of these reports.

From information collected, list interest sensitive asset totals and liability totals within the maturity buckets provided for the consolidated entity. The maturity ranges may be adjusted to or expanded to coincide with interest rate sensitivity reports generated by the bank holding company management.

Next, subtract the liability totals from the asset totals to get the “Gap” totals. For each maturity range beyond 91 days, add the next repricing interval “Gap” total to the previous “Cumulative Gap” totals to obtain the repricing interval’s cumulative gap.

To determine the ratio of interest sensitive assets to interest-sensitive liabilities, use the cumulative gap for the denominator. Extend the percent out to at least two decimal places.

Provide narrative analysis for any maturity period or cumulative negative or positive gap positions, stating what measures will be taken by management to address any adverse gap positions.
Procedures for Inspection Report Preparation
(Page—Treasury Activities/Capital Markets) Section 5010.38

This report page presents generalized questions for the examiner to answer on treasury activities and capital markets. This page must be included in inspection reports prepared for bank holding companies that have significant exposure in the capital markets. Specific guidance can be found in section 2125.0, in the Federal Reserve System’s Trading Activities Manual, and in SR-93-69, December 20, 1993. Procedures for inspecting and preparing the written analysis should be based on this supervisory guidance. In banking organizations with national or state nonmember lead banks and where capital markets activities are conducted exclusively at the subsidiary bank, examiners should coordinate the collection of the information included on this page with the lead bank supervisory agency.
The purpose of this report page is to identify directors and principal officers and determine the level of participation and responsibility in the affairs of the holding company, and to identify outside relationships in order to determine conflicts of interest. The page contains the names of the principal officers of the company and their position with other subsidiaries. This page also presents the names of directors, the number of years they have served in that capacity, their year of birth (to possibly assess management’s plans for succession), regularity of their attendance at directors’ meetings, and principal outside employment. Note if any director is also a director of a Federal Reserve Bank or branch.

The directors and principal officers’ fees, compensation and other benefits information is also to be obtained and retained in the workpapers. If desired by the Reserve Bank, such salary, bonus, benefits, and other remuneration information may be included on this page. Criticism of directors’ fees should be carefully considered.

The directors’ ownership information (i.e. address of each director and the number of shares owned) is also to be obtained and may also be reported or retained in the workpapers. If the holding company has an advisory board or honorary directors, the data on these persons may be included on the report page at the examiner’s discretion.

All information on principal officers and directors such as year of birth, responsibility and compensation, etc. should be requested in the officer’s questionnaire. Attendance data should be available from the board of directors’ minutes. Such information may also be contained in reports to shareholders, FR Y–6, proxy statements and SEC filings.

The directors and principal officers should be listed alphabetically with their city and State of residence indented immediately below their names. If appropriate for mailing purposes, show each director’s mailing address.

The principal officers and directors are to be listed in order of rank, and alphabetically where officers have identical titles. For directors and principal officers, membership on principal committees of the board should be coded and placed immediately after the name on the same line (i.e., E = Executive, A = Audit). If a director has been elected since the last inspection, the date of election should be shown immediately after his name. For example:

John Smith elected 4-1-x1

The officer and director positions held with subsidiaries should be kept as brief as possible, utilizing abbreviations established on the “Structure and Abbreviations” Core Page 3. List only major positions if routinely assigned to staff of all subsidiaries.

A brief summary of benefits provided to officers and employees (i.e., pension plans, life and health insurance) may be presented at the bottom. Such information can assist in determining whether the principal officers appear to be adequately or overly compensated.

Special financial arrangements for specific officers may also be noted. Such arrangements would include salary contracts, unusual bonuses, fees or expense allowances, stock options, deferred compensation, and exclusive use of real estate, automobiles and airplanes.

When indicating occupation or principal business affiliation of directors, use concise, descriptive designations instead of general notations such as “merchant” or “industrialist.” If the director is an officer or principal in a firm, show also the nature of the business in parentheses (e.g., law firm, CPA, pharmaceutical manufacturer, etc.).

The examiner should verify that the directorship is in compliance with Regulation L or R and that the number of directors is consistent with the corporations’ bylaws. The examiner should also indicate the regular schedule of directors’ meetings at the bottom of the report page to provide the Reserve Bank with information needed to plan attendance at board meetings.

Examiners should be careful to use the same names and titles of officers when referring to the individuals elsewhere in the report.
Procedures for Inspection Report Preparation (Confidential
Page B—Condition of Bank Holding Company)  Section 5010.41

In general, this report page or section (continuous flow reporting basis) presents pertinent information that is deemed confidential by the Reserve Bank and available to regulatory authorities. The report page or section is used to discuss and assess, confidentially, the going-concern operating results and the prospects for resolving any problems or areas of concern. The report page or section should be also used to discuss compliance problems relating to statutory, regulatory, or administrative provisions cited within the core or other open sections of the report. The potential for any improvement or weakening in economic conditions should also be discussed to the extent they have a bearing on earnings potential.

The specific information to be provided on the report page or section is—

1. information on the organization’s near-future financial prospects, giving particular consideration to debt servicing and the likelihood of improving any current problems;
2. an assessment of holding company management as to the experience and qualifications of principal personnel when relative to the assessment, and a listing of subsidiary bank ratings, effective examination dates, and type and scope of examinations;
3. the examiner’s concise assessment of management’s oversight of the BHC’s policies and supervision of subsidiaries with respect to the level of control and supervision exercised over subsidiaries (see sections 2010.0 to 2010.13) should be discussed. (An evaluation of the bank holding company’s recognition and control of exposure to risk should also be provided (see section 2160.0) as well as an evaluation of management information systems (MIS) based on the guidance found in sections 2060.01 through 2060.4);
4. a discussion of the reasons for the component ratings and overall RFI/C(D) rating assigned (see section 4070.0);
5. an analysis of chain banking organizational structure (The examiner must determine whether the BHC is a member of a chain banking organization. A chain banking organization may be defined generally as a collection of independent banking organizations that are controlled by the same individual, family, or a group of individuals closely associated in their business dealings);
6. a listing of individuals or groups that control more than 5 percent of the BHC’s outstanding stock (Discuss any significant changes in ownership. A review of ownership is to include a determination as to whether an individual or group of shareholders exercise significant influence over the BHC. It should also include a discussion of fiduciary holdings of the parent company’s stock and convertible debt of the BHC’s subsidiaries);
7. a presentation of confidential information relating to the components of the BHC rating system, avoiding repetition by cross-referencing report pages in the open section; and
8. examiners’ comments on any other supervisory concerns or aspects of the BHC’s condition warranting confidential treatment. Comments on any violation and/or a BHC’s unsafe and unsound practice should be included with any recommendations for Federal Reserve administrative action. Any plans of the holding company that are considered to be of a confidential nature should also be discussed.

Financial-analysis comments on the bank holding company organization (that is, RFI/C(D) components, not the ratings) that are not of a confidential nature are to be discussed on the Analysis of Financial Factors core page 3.

The examiner is expected to review and use the examination ratings of the other federal agencies where appropriate; however, if substantive differences of opinion exist as to the bank’s composite rating, adjustments to the rating may be made and footnoted accordingly.

The examiner should make certain that the bank names or abbreviations are consistent with the organization chart and other tables in the inspection report. Any ratios or comments used in the rating analysis should be checked to corresponding areas in the open section.

BHC Supervision Manual  July 2008
Page 1
This page provides a “snapshot” picture of the parent company’s short-term gap position as it relates to the amount of commercial paper compared to net short-term GAP within repricing maturity categories and also the cumulative GAP position within the maturity buckets. The page provides summary information of aggregate data from the “Commercial Paper (Parent),” “Parent Company Liquidity Position” and the “Unaffiliated Borrowings” pages or workpapers.

The lower portion of the schedule provides details on unaffiliated borrowings such as the amount and types of external indebtedness of the parent and its subsidiaries. Information regarding various debt covenants such as cross default clauses, collateral information and negative covenants can be included.

The purpose of the page is to aid in evaluating the company’s ability to service its debt and to operate within the constraints of debt restrictive covenants. It also aids in evaluating the appropriateness of the uses of the proceeds of the organization’s borrowings.

Information for the source report pages or workpapers required for an analysis of parent company liquidity, commercial paper and other short-term debt, and long-term unaffiliated borrowings should be requested in the officer’s questionnaire or can be obtained from the BHC’s accounting department. Totals should be brought forth from the “Commercial Paper (Parent)” and the “Parent Company Liquidity Position” pages or workpapers, or reconciled to the general ledger. Footnotes to financial statements in published reports contain much of this information.

For the commercial paper information, derive the totals from the total column on the “Commercial Paper (Parent)” report page, combining the totals for over 91 days maturity. Commercial paper maturity totals should be presented as a line item showing the aggregate outstanding balance netted by any amount held by subsidiaries.

For the “Long-term Debt” portion of the report page, present unaffiliated long-term borrowings in tabular form for (a) the parent, (b) each nonbank subsidiary, and (c) the bank subsidiaries (combined).

For the parent company and each nonbank subsidiary, show the borrower, lender, description of the debt, original amount, origination date, interest rate, maturity date, present outstanding balance, any significant repayment provisions, collateral, use of proceeds, major restrictive covenants and any requirements for compensating balances. In addition, mandatory convertible debt instruments of the parent should be identified and the conversion provisions detailed. In the case of large bank holding companies that have an extensive number of debt issues, detail for each issue may be eliminated at the discretion of the examiner so long as aggregates for similar issues are shown along with ranges for rates and maturities and summary information regarding the other terms of the debt.

For the “Net GAP” and “Net Cumulative GAP” use the respective total amounts (“Net Position” and “Cumulative Excess Deficiency”) on the “Parent Company Liquidity Position” report page. Bank mortgage indebtedness may be aggregated at the discretion of the examiner, showing amounts only without other detail. Capitalized lease obligations may be included in that total. For all other bank borrowings, including debentures issued to unaffiliated sources, provide complete detail.

Debt amounts on this page should agree with those shown for the “Parent Company Comparative Balance Sheet” for Core Page 5, the “Bank Subsidiaries”, the “Nonbank Subsidiary Financial Statements” pages or workpapers, and the “Consolidated Comparative Balance Sheet” Core page 8 (when adjusted to net intercompany borrowings).
This report page summarizes the examiner participants and their total workdays devoted to the inspection and provides clarification on checklist items where appropriate. Other comments should be directed to planning arrangements affecting the scope of the inspection. When non-bank subsidiaries are inspected, describe the extent of the review of the records. The examiner should cite any special problems encountered which would aid future inspections. Recommendations, suggestions, and information needed to conduct the next inspection should also be included for the next Examiner-in-Charge.

Information regarding planning is limited to the on-site planning of the work to be performed. Comments should be of a professional nature and should be strictly devoted to providing information that can be used in planning and performing an inspection (location and access to specific BHC records, inspection control problems, availability of facilities for staff, key officer and director contacts, information pertaining to the Internal Audit Committee members, internal and external auditors, and etc.) Information pertaining to the access to, and the storage of, workpapers and any personal information such as lodging, travel arrangements and geographical directions should be confined to the workpapers. Comments not directly related to the on-site conducting of the inspection should be avoided.

The purpose of the confidential report page is to present pertinent information to be used only by regulatory authorities. The page is reserved to summarize internal information derived from Reserve Bank inspection staff that would not be addressed in other confidential report pages. The information reported on this page may also be derived from discussions with senior bank management, workpapers, accounting records, board of directors’ minutes, and etc. Bank names or abbreviations should be consistent with the organization chart and other tables in the inspection report.
This report page presents financial statement data (a condensed balance sheet and income data) for one-bank holdings companies and other bank holding companies that may have assets of less than $150 million. Place the name of the bank at the top on the line provided. For multi-bank companies, the page may be completed for the lead bank or comparable lead banks and each bank requiring special supervisory attention. The balance sheet and income data should be obtained from the last two calendar year ends and the most recent report of condition, while the examination data should be obtained from the last three examination reports. Refer to 5010.30.
This inspection report page incorporates onto one page a comprehensive list of questions covering many areas of supervisory concern. The questions can be answered with a “yes” or “no,” or a not applicable response (“N/A”). Detail is required on an exception basis. Provided below are some guidelines to consider for several of the listed questions. Many of the questions are self-explanatory. Some questions (e.g. questions addressing audit and insurance activities) duplicate topics covered by other work papers. The purpose of the duplication and format of the report page is to provide a cross-check within the inspection report to make certain that all relevant areas have been included in the report. If relevant comments have been provided on other report pages in the “open” section, the comments need not be duplicated on this report page. Only a reference to the other report page is needed.

5020.2.1 LEVEL OF CONTROL AND SUPERVISION EXERCISED OVER SUBSIDIARIES (QUESTION 1)
Consider:
1. Whether the subsidiaries operate autonomously;
2. The degree of overlap between BHC and bank management;
3. Who sets major policies of the corporation;
4. How the holding company monitors the operation of its subsidiaries;
5. The role of supervision by the parent over the subsidiary banks in formulating the holding company’s budget, tax planning, investment policies, internal controls and audits;
6. The extent of control resulting from directors having dual roles and responsibilities at the parent and subsidiary levels; and
7. Whether problems resulting from unqualified directors carry over from the parent to the subsidiaries.

5020.2.2 DIVIDENDS FROM SUBSIDIARIES (QUESTION 2)
Consider:
1. The policy for paying dividends in relation to the earnings and capital needs of the subsidiary. For banks the examiner should rely on the most recent examination report of the federal supervisor; however an independent conclusion must be made.
2. The reasonableness of the parent company’s policy for assessing dividends from the subsidiary banks and whether it is being complied with.

5020.2.3 REPRESENTATIONS MADE IN APPLICATIONS TO THE BOARD (QUESTION 3)
Consider:
1. Whether the holding company has complied with all representations and agreements made with the Board. If no such agreements or representations have been made, state not applicable (N/A). The examiner should review transmittal letters for commitments associated with approved applications since the last full scope inspection. The supervisory file maintained by management at each bank holding company should also be reviewed for such agreements or representations.
2. Whether correspondence has been initiated with the appropriate Reserve Bank that provides an appropriate explanation as to why those representations and agreements have not been adhered to.
3. Whether the holding company is complying with any Reserve Bank reply to the holding company’s notification.

5020.2.4 COMPENSATING BALANCES (QUESTION 4)
1. If a subsidiary bank is not adequately compensated for maintaining compensating balances at another institution for debt advances to the holding company, provide:
   a. The average collected and book balance or the range of the balance;
   b. Any arrangement whereby the loan or line of credit agreement between the creditor bank and parent contains a requirement to maintain a correspondent account; and
   c. Comments as to whether the subsidiary bank is reimbursed for maintaining the compensating balance.
5020.2.5 MANAGEMENT AND OTHER SERVICES PERFORMED FOR SUBSIDIARIES (QUESTION 5)

If applicable, describe the holding company’s policy on assessing management and services fees for work performed for the subsidiary bank. Provide comments as to whether the policies and fees are reasonable, and if not, why not. When answering this question, refer to Manual section 2020.6.

The examiner’s comments should cover the following: (a) terms of the management or other service agreement or contract, if any, including the basis for charging fees, and the dates of adoption and expiration; (b) whether the boards of directors of each company have approved the agreement or contract; (c) description of the service, personnel providing the service, and whether the personnel are on the subsidiary bank’s payroll; (d) conclusion on whether the services are actually being performed as stated and reasonableness of fees charged.

For multi-bank holding companies, the examiner should expand his comments to cover the role of supervision by the parent over the subsidiary banks, their lending and investment policies, budgeting and tax planning, and internal controls and audits.

5020.2.6 INTERCOMPANY TRANSACTIONS (QUESTION 6)

Review parent and nonbank subsidiary borrowings, including overdrafts from the subsidiary bank(s), for the past year and comment on significant transactions. If any extension of credit to affiliates by a bank or other transaction appears to violate section 23A or 23B of the Federal Reserve Act, so state. See Manual section 2020.1.

Describe any arrangement whereby the parent or nonbank subsidiary has purchased/sold significant participations or any other assets from/to a subsidiary bank. Also, discuss material transactions not discussed elsewhere in the report.

5020.2.7 INSIDER TRANSACTIONS (QUESTION 7)

Consider:

1. The policy in regard to extensions of credit by a bank holding company or its nonbank subsidiaries to the BHC officials (executive officers, directors or “more than 10 percent” shareholders) or the BHC officials’ interests in the organization;
2. Prohibitions on bank extensions of credit contained in the Financial Institutions Regulatory and Interest Rate Control Act of 1978; and
3. Whether the bank holding company has a conflict of interest statement or business ethics policy that has been distributed to employees.

If there are insider transactions subject to comment, list the parent and nonbank subsidiary extensions of credit to BHC officials. Also, comment on the compensation to the officials. See Manual sections 2050.0, 2110.0, and 5010.36.

5020.2.8 TAX ALLOCATION (QUESTION 8)

See Manual sections 2070.0.

5020.2.9 USE OF SUBSIDIARY BANK PERSONNEL, OR ASSETS TO SELL CREDIT RELATED LIFE INSURANCE TO THE BANK’S CUSTOMERS (QUESTION 9)

This question refers to the Board’s May 1981 policy statement on the disposition of income from the sale of credit life, health and accident, and mortgage life insurance (credit life insurance) related to loans made by state member banks. A reasonable amount of compensation must be paid to the state member bank in recognition of the role played by its personnel, premises, and goodwill in credit life insurance sales. As a general rule “reasonable compensation” means an amount equivalent to at least 20 percent of the affiliate’s net income attributable to the financial institution’s credit life insurance sales.

At the time of the Board’s adoption, the policy was recommended for adoption by the other federal bank regulatory agencies thru the Federal Financial Institutions Examination Council. Therefore, the question is applicable to all banking subsidiaries, not just state member banks. If reasonable compensation is not being received by any or all subsidiary banks. Comment on this subject only when the parent or nonbank subsidiary receives income from the sale of insurance directly related to extensions of credit by a bank subsidiary. Describe any arrangement between the subsidiary bank(s) and the parent or nonbank affiliate concerning the sale of insurance directly related to extensions of credit. Note
whether and/or when such arrangement was formally approved by the subsidiary bank’s board of directors. Describe the manner of disposition of such insurance income. In situations where the subsidiary bank provides personnel and/or facilities for the sale of credit-related insurance but receives no income, the bank, as a minimum, must be reimbursed for out-of-pocket costs.

5020.2.10 TIE-IN ARRANGEMENTS (QUESTION 10)
See Manual section 3500.0.

5020.2.11 LITIGATION (QUESTION 11)
If the holding company or its subsidiary(ies) is a defendant in any litigation, the results of which could have a significant adverse effect on the overall organization, provide details of the lawsuit, including, if possible, the opinion of the holding company’s counsel as to the possible outcome of the suit. As a general guideline, include only suits representing more than 10 percent of the holding company’s stockholder’s equity capital.

5020.2.12 INSURANCE PROGRAM (QUESTION 12)
See Manual section 2060.5.

5020.2.13 AUDIT PROGRAM (QUESTION 13)
See Manual section 2060.1.

5020.2.14 INTERNAL LOAN REVIEW (QUESTION 14)
See Manual section 2060.6.

5020.2.15 ACCURACY AND TIMELINESS OF REPORTS (QUESTION 15)
If reports filed with the Federal Reserve (e.g., the FR Y–6 Annual Report) are not filed accurately and/or on time, provide comments as to the holding company’s plans for correcting the problem. Any changes in accounting to conform with generally accepted accounting principles, as required by FR Y–6, should be discussed here.

5020.2.16 OUTSTANDING COMMITMENTS TO THE BOARD OF GOVERNORS (QUESTION 17)
If the holding company has outstanding commitments to the Board, summarize the commitments by describing the nature of the commitment, the date the commitment was made, and if applicable, the time frame in which it must be fulfilled. If the time frame has expired, or if an extension is deemed necessary to fulfill the commitment, details must be presented. The examiner may choose to make a reference to the unfulfilled commitment on the “Examiner’s Comments” page 1, if considered appropriate.

5020.2.17 OTHER MATTERS HAVING A DETRIMENTAL IMPACT (QUESTION 18)
Discuss here any other matter having a detrimental impact upon the subsidiary bank(s) not discussed elsewhere in this report, and deemed pertinent by the examiner. Examples of some subject areas to be considered might be:

1. Public debt issues and commercial paper liabilities of the parent or nonbank subsidiary.
   Comment on the following items where appropriate:
   (1) Describe the debt instrument, including amount, interest rate, maturity, purchasers, and use of proceeds; (2) agency ratings; (3) determine whether any subsidiary (particularly a bank) sells the debt issue for its own use or on behalf of the parent and make critical comments whenever the issue does not clearly state that the issue is not an insured obligation of a bank subsidiary; (4) discuss any difficulties experienced in refinancing the debt; and (5) if a line of credit is used to back up a short term issue, indicate the lending bank, credit line, amount in use, expiration date, and required fee or compensating balance maintained by a subsidiary bank, if any, and whether the bank is being remunerated by the parent or nonbank affiliate. (See Manual section 5010.23.)
   2. Adequacy of recordkeeping of the holding company, including nonbank subsidiaries. If
included, recommendations concerning the adoption of minimum recordkeeping standards should be presented and justified.

3. Contingent liabilities or violations not addressed elsewhere in the report (such as treasury stock purchased in violation of Regulation Y).

4. Payment of cash dividends in excess of net earnings available for common shareholders over the past year and the rate of earnings retention is not consistent with the organization’s capital needs, asset quality, and overall financial condition.

5. Adverse relationships not elsewhere mentioned, such as inappropriate allocation of income and expenses of a nonbank activity performed by subsidiary bank employees.

ANALYSIS OF FINANCIAL FACTORS
(In thousands)
AUDIT PROGRAM

Comment on the adequacy and the effectiveness of the holding company’s audit program, including scope and frequency of audits of subsidiaries, and the relationship with the holding company’s accounting firm. Identify to whom the auditor is responsible and who receives the audit reports. Describe the nature of any “qualified opinion” submitted by the independent auditors in certifying the most recent year’s financial statements and any pertinent comments regarding relations with the directors’ audit committee. If the holding company does not have its own audit staff, describe the role of the internal audit staffs of the subsidiaries, and the role of the independent accounting firm of the holding company, and state if such arrangements are adequate.

1. Weighted classifications equal the aggregate of 20 percent of assets classified substandard and value impaired (net of allocated transfer risk reserve), 50 percent of doubtful, and 100 percent of loss.
2. For this ratio, tier 1 capital is to be calculated using risk-based capital guidelines effective December 31, 1992. Also, the allowance for loan and lease losses is included without limit.

</tbody>
</table>

1. Risk-weighted balance sheet assets excludes all goodwill, net unrealized loss in marketable equity securities, investments in unconsolidated banking or financial subsidiaries, and reciprocal holdings of capital.

2. The Tier 1 capital ratio is calculated by deducting $ of all investments in unconsolidated banking or financial subsidiaries from Tier 1 capital and dividing the remaining amount by risk-weighted assets. If there is insufficient Tier 2 capital from which the other half of the investments in unconsolidated banking or financial subsidiaries would be deducted, then also deduct the deficient amount from Tier 1 capital.

3. The Tier 1 leverage ratio is calculated by dividing Tier 1 capital (as defined by the final capital guidelines, effective December 31, 1992) by average total assets (for the most recent quarter) less all goodwill.

4. The tangible leverage ratio is calculated by deducting all intangibles from Tier 1 capital and dividing by average total assets (for the most recent quarter) less all intangibles.
Discuss and appraise the parent company’s policies with respect to:
- The level of control and supervision exercised over subsidiaries.
- Dividends and fees from subsidiaries.
- Loans and investments of subsidiaries.
- Risk evaluation and control.
- Funds management and the adequacy of existing policies.
- Management information systems.
- Loan participations by and between subsidiaries.
- Internal loan review.

INVESTMENT IN AND ADVANCES TO SUBSIDIARIES

1. If the parent’s investment in a subsidiary differs from its proportionate interest in the stockholders’ equity of the subsidiary, provide detail.

2. Provide details if any advance to a subsidiary has been reclassified as equity by the parent company since the last inspection.

3. Provide details if the proceeds of any parent company borrowings have been injected into its subsidiaries as Tier 1 and/or Tier 2 capital since the last inspection.

4. How does the parent determine the interest rate charged to the subsidiaries?

5. Does the parent company require timely payment of interest charged to subsidiaries?

6. Does the parent guarantee any liabilities of the subsidiaries?

**FIXED CHARGE COVERAGE RATIO:**

\[
\frac{(1)+(2)+(3)}{(2)+(3)+(4)+(5)}
\]

**COMMON STOCK CASH DIVIDEND COVERAGE RATIO:**

\[
\frac{(1)-[(4)+(5)]}{(6)}
\]

1. Are the parent company’s fixed charges covered by its cash earnings? What is the amount of excess or deficiency?
2. Are the parent company’s dividend payments to stockholders covered by its residual cash earnings? What is the amount of excess or deficiency?
3. Giving full consideration to the requirements for loan loss reserves and capital structure of the bank and the major nonbank subsidiaries:
   (a) Is the present level of dividends paid by the bank and the major nonbank subsidiaries to the parent company sustainable?
   (b) What is the scope for increasing the cash flow to the parent company?
4. If cash flow is insufficient to cover fixed charges and cash dividend payments, discuss the steps management has taken, or plans to take, to restore adequate cash earnings coverage. Include comments on whether such plans would be commensurate with the maintenance of adequate loan loss reserves and capital levels in the bank and the major nonbank subsidiaries.
5. If cash flow is insufficient to cover cash dividend payments, should the parent company revise its dividend policy to conform to the Board’s guidelines on the payment of cash dividends?
6. Discuss significant cash flow transactions as deemed appropriate by the examiner.

1. Bankers blanket and fidelity bonds:
   a. Blanket bonds
   b. Excess fidelity bonds

2. Are all officers and employees covered by bankers blanket or fidelity bonds? __________

3. Date of last recorded directors’ approval of bankers blanket and fidelity bonds: __________

4. Indicate if any of the above coverage applies to any subsidiary of the holding company.

5. Indicate if any subsidiary of the holding company maintains the above coverage and extends the coverage to the holding company.

Examiner’s Comments:
1. Are there any intercompany transactions subject to comment? If so, discuss.

2. Does the subsidiary bank(s) maintain compensating balances at another institution for debt advanced to the holding company? If the bank is not adequately compensated, discuss.

3. Do the holding company’s intercorporate income tax accounting policies and practices conform with the Board of Governor’s September 1978 policy statement? If not, discuss.

4. Is the holding company in compliance with the tie-in prohibitions contained in Section 106(b) of the BHC Act Amendments of 1970? If not, discuss.

5. Are there any insider transactions subject to comment? If so, discuss.

6. Is the holding company or its subsidiary(ies) a defendant in any litigation the results of which could have a significantly adverse effect on the overall organization? If so, discuss.

7. Is the insurance program for the holding company considered adequate? If not, discuss.

8. Is the holding company’s audit program considered adequate? If not, discuss.

9. Is the holding company’s quality review program considered effective? If not, discuss.

10. Are reports filed with the Federal Reserve System prepared accurately and submitted on a timely basis? If not, discuss.

11. Has the holding company complied with all representations made in application(s) to the Board of Governors? If not, discuss.

12. Does the holding company have any outstanding commitments to the Board of Governors? If so, discuss.

1. Risk-weighted balance sheet assets excludes all goodwill, net unrealized loss in marketable equity securities, investments in unconsolidated banking or financial subsidiaries, and reciprocal holdings of capital.
2. If the bank’s risk-based capital ratios exceed the December 31, 1992 minimum requirements and detailed risk-weighted asset information is not readily available, then write ‘NA’ here and on Tier 1 capital ratio and total capital ratio lines below.
3. The Tier 1 capital ratio is calculated by deducting ½ of all investments in unconsolidated banking or financial subsidiaries from Tier 1 capital and dividing the remaining amount by risk-weighted assets. If there is insufficient Tier 2 capital from which the other half of the investments in unconsolidated banking or financial subsidiaries would be deducted, then also deduct the deficient amount from Tier 1 capital.
4. The Tier 1 leverage ratio is calculated by dividing Tier 1 capital (as defined by the final capital guidelines, effective December 31, 1992) by average total assets (for the most recent quarter) less all goodwill.
5. The tangible leverage ratio is calculated by deducting all intangibles from Tier 1 capital and dividing by average total assets (for the most recent quarter) less all intangibles.

1. Twenty percent of substandard and value impaired (when applicable), plus 50 percent of doubtful, plus 100 percent of loss classification.
2. For this ratio, Tier 1 capital is to be calculated using risk-based capital guidelines effective December 31, 1992. Also the allowance for loan and leases losses is included without limit.
1. Comment on the extent of control the holding company exercises over the policies of the subsidiary bank.

2. Is the holding company’s policy on assessing dividends from the subsidiary bank(s) reasonable and is it being complied with?

3. Has the holding company complied with all representations made in application(s) to the Board of Governors?

4. Does the subsidiary bank(s) maintain compensating balances at another institution for debt advanced to the holding company?

5. If applicable, describe the holding company’s policy on assessing management and service fees for work performed for the subsidiary bank. Are policies and fees reasonable?

6. Are there any intercompany transactions subject to comment?

7. Are there any insider transactions subject to comment?

8. Do the holding company’s intercorporate income tax accounting policies and practices conform with the Board of Governors’ September, 1978 policy statement?

9. If the holding company uses a subsidiary bank’s personnel, or assets to sell credit related life insurance to the bank’s customers, does the holding company give the bank reasonable compensation for its services in compliance with the Board of Governors’ policy statement of May, 1981?

10. Is the holding company in compliance with the tie-in prohibitions contained in Section 106(b) of the BHC Act Amendments of 1970?

11. Is the holding company or its subsidiary(ies) a defendant in any litigation the results of which could have a significantly adverse effect on the overall organization?

12. Is the insurance program for the holding company organization considered adequate?

13. Is the holding company’s audit program considered adequate?

14. Is the holding company’s credit quality review program considered effective?

15. Are reports filed with the Federal Reserve System prepared accurately and submitted on a timely basis?

16. Did the inspection uncover any violation of law, regulation or Federal Reserve policy statement not cited above?

17. Does the holding company have any outstanding commitments to the Board of Governors?

18. Is there any other matter having a detrimental impact on the subsidiary bank(s) not discussed elsewhere in this report?
Procedures for “Limited-Scope” Inspection Report Preparation
(General Instructions)

Section 5040.0

5040.0.1 OBJECTIVES

The limited-scope inspection will review all areas of activity covered by a full-scope inspection report but less intensively.

5040.0.2 IMPLEMENTATION GUIDELINES

The ultimate responsibility for determining the appropriateness of the limited scope, and the actual elements of the scope of the inspection beyond the guidelines, rests with the Reserve Bank.

Certain report pages are required to be included in the limited-scope inspection. Other pages are required when certain events trigger their applicability, “exception (E)” pages. Pages not required may be included at the Reserve Bank’s option. These are labeled as “optional” pages.

5040.0.2.1 Required Report Pages

As in the full-scope inspection report,1 the limited-scope inspection report is divided into three parts: a core section, a section consisting of report pages that provide support to the core section, and a confidential section.

Core section. The core section of the report serves as the main vehicle for communicating the results of the inspection to management. The core pages contain the scope of the inspection, comments on administration of policies and supervision over subsidiaries, and an analysis of the RFI/C(D) rating components (see section 4070.0), any or all of which could be used to support supervisory action, when necessary.

Support section. The supporting report pages contain narrative and financial and other data to support the analyses in the core section. The required pages provide the primary statistical support when addressing important supervisory problems or issues, and as appropriate, the RFI/C(D) rating, or supervisory action, when needed.

Confidential section. The pages in this section are also required since they address matters of supervisory importance and other matters not deemed appropriate in the open section.

For a limited-scope inspection, the following report pages are required:

<table>
<thead>
<tr>
<th>Manual Section No.</th>
<th>Page Location</th>
<th>Page Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>5010.2</td>
<td>Page i</td>
<td>Cover (FR 1427)</td>
</tr>
<tr>
<td>5010.3</td>
<td></td>
<td>Table of Contents</td>
</tr>
<tr>
<td>5010.4</td>
<td>Core Page 1</td>
<td>Examiner’s Comments</td>
</tr>
<tr>
<td>5010.5</td>
<td>Core Page 2</td>
<td>Scope of Inspection</td>
</tr>
<tr>
<td>5010.41</td>
<td>Confidential Page B</td>
<td>Condition of the BHC</td>
</tr>
</tbody>
</table>

The Directors’ Summary Report will be required as in the full-scope inspection. Appropriate information provided by other reporting vehicles, inspection/examination activities, or other financial institution regulatory agencies should be considered. Refer to footnote 3 for further guidance as to the need for a Directors’ Summary Report.

---

1. The basis for the limited-scope inspection report will be the “large” report, FR 1225.
5040.0.2.2 Exception Limited-Scope Report Pages

The following “exception (E)” pages should be included in the report as indicated below:

<table>
<thead>
<tr>
<th>Manual Section No.</th>
<th>Page Location</th>
<th>Page Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>5010.6</td>
<td>Core Page 3</td>

<td>Administrative Matters</td>
</tr>
</tbody>
</table>

Pages with an (*) are optional if the limited-scope inspection is preceded by a full-scope inspection within the same annual period.

5040.0.2.2.1 Reasoning for Including “E” Pages

The “E” pages are included when the activities are present, or have been disclosed through the inspection process, or when significant findings or issues must be reported and communicated to management or to the appropriate supervising agency(ies). The limited-scope inspection report may include, at the discretion of the appropriate Reserve Bank, copies of the Bank Holding Company Financial Statements (FR Y-9) and Reports of Condition of Subsidiary Banks in place of pages containing required or optional financial statements. The FR Y-9 statements or the Reports of Condition should only be included when the financial statements accurately represent the condition of the bank holding company as determined during the inspection.

5040.0.2.3 Optional Limited-Scope Report Pages

In the limited-scope inspection, several pages have been labeled as optional because of the nonexistence of an activity or the absence of a problem in that area. Any inspection report page may be included in the report at the option of the Reserve Bank or the examiner-in-charge. Note that the “Commercial Paper” and related pages (5010.21 through 5010.23) are optional since the existence of this activity would be a “complex” organization, requiring a full-scope inspection within the same annual period.

The optional pages are:
5040.0.3 LIMITED-SCOPE INSPECTION PROCEDURES

Procedure: Complete FR 1417 and indicate that the scope was limited (‘L’).

Nature of Inspection: Disclose on the “Scope of Inspection” page that the scope is limited, including any additional procedures utilized for a certain area or activity during the inspection that might be comparable to a full-scope inspection.

Directors’ Summary: Required under the same conditions as in the full scope.³

Rating: Assign RFI/C(D) rating (see section 4070.0) as appropriate. Indicate under what circumstances the rating was assigned and what components were changed, including the reasons why they were changed.

Inspection Cover: Cover will designate “limited” scope (FR 1427) and will be a designated color other than the full-scope reports.

³ Should generally be prepared in accordance with the requirement for the preparation of written reports to directors summarizing the inspection finding following a full-scope inspection. Reserve Banks that have previously identified the problems and provided a report to the directors are not required to prepare the summary for the limited-scope inspection.
Report of Bank Holding Company Inspection (Limited Scope)

Name: ___________________________  Inspected Commenced: ___________________________

Location: ___________________________  Inspection Concluded: ___________________________

RSSD ID Number: ___________________________  Inspection Date: ___________________________

This report has been prepared by an examiner selected or approved by the Board of Governors of the Federal Reserve System. The report is the property of the Board of Governors and is furnished to directors and management for their confidential use. The report is strictly privileged and confidential under applicable law, and the Board of Governors has forbidden its disclosure in any manner without its permission, except in limited circumstances specified in the law (12 USC 1817(a) and 1831m) and in the regulations of the Board of Governors (12 CFR 261.20). Under no circumstances should the directors, officers, employees, trustees or independent auditors disclose or make public this report or any portion thereof except in accordance with applicable law and the regulations of the Board of Governors. Any unauthorized disclosure of the report may subject the person or persons disclosing or receiving such information to the penalties of Section 641 of the U.S. Criminal Code (18 USC 641). Each director or trustee, in keeping with his or her responsibilities, should become fully informed regarding the contents of this report. In making this review, it should be noted that this report is not an audit, and should not be considered as such.

Federal Reserve Bank of
5050.0.1 OBJECTIVES OF A TARGETED INSPECTION

A targeted inspection is designed to focus intensively on one or more specific areas, activities, or problems relating to a bank holding company. Such inspections may be conducted for various reasons, including serving as a complement to an annual full-scope inspection. Targeted inspections are conducted as directed by the System or at the discretion of the individual Reserve Banks. As a minimum, the inspection procedures used are comparable to a full-scope inspection.

1. FR 1225 will serve as the basis for a targeted inspection.

Report Pages Included: Cover (FR 1428)
- Table of Contents for included pages and a key for abbreviations used in the report
- Examiner’s Comments
- Scope of Inspection
- Other report pages supporting the scope, and the nature of the targeted inspection, as deemed appropriate by the Reserve Bank and the examiner-in-charge.

Nature of Inspection: Disclose on the “Scope of Inspection” that the scope is targeted and describe the procedures utilized for the targeted areas or activities.

Directors’ Summary: Required as prescribed in the full scope.

Rating: A new RFI/C(D) composite rating of 1 through 5 would only be assigned if the bank holding company inspection results provide sufficient information to either reaffirm or modify the most recently assigned RFI/C(D) composite rating. At least one component area must be rated between 1 and 5 in order to assign a new composite rating; otherwise, a composite rating of 0 should be assigned.

2. Should generally be prepared in accordance with the requirement for the preparation of written reports to directors summarizing the inspection’s findings following a full-scope inspection. Reserve Banks that have previously identified the problems and provided a summary report to the directors are not required to prepare the summary for the targeted inspection.
REPORT OF
BANK HOLDING COMPANY
INSPECTION
(Targeted Scope)

Name: ___________________________ Inspection Commenced: ___________________________

Location: ___________________________ Inspection Concluded: ___________________________

RSSD ID Number: _____________________ Inspection Date: ________________________________

THIS REPORT OF INSPECTION IS STRICTLY CONFIDENTIAL

This report has been prepared by an examiner selected or approved by the Board of Governors of the Federal Reserve System. The report is the property of the Board of Governors and is furnished to directors and management for their confidential use. The report is strictly privileged and confidential under applicable law, and the Board of Governors has forbidden its disclosure in any manner without its permission, except in limited circumstances specified in the law (12 USC 1817(a) and 1831m) and in the regulations of the Board of Governors (12 CFR 261.20). Under no circumstances should the directors, officers, employees, trustees or independent auditors disclose or make public this report or any portion thereof except in accordance with applicable law and the regulations of the Board of Governors. Any unauthorized disclosure of the report may subject the person or persons disclosing or receiving such information to the penalties of Section 641 of the U.S. Criminal Code (18 USC 641). Each director or trustee, in keeping with his or her responsibilities, should become fully informed regarding the contents of this report. In making this review, it should be noted that this report is not an audit, and should not be considered as such.

FEDERAL RESERVE BANK OF
A management information system (MIS) can be described as an automatic data processing system designed to aid in the performance of management functions. The MIS system is used in the decision-making process, which facilitates the collection and presentation of information to plan, organize, and control activities within the confines of the organizational culture. MIS encompasses the policies, procedures, and internal controls pertaining to management reporting which provide the information needed by the board to monitor and ensure control of operations and activities. MIS supports all levels of the organization in the execution of their duties—from the board of directors down to the lowest level of management within the company. A successful MIS will support the strategic direction of the company and promote the process by which decisions are made.

The objective of a targeted MIS inspection is to determine if the corporation has in place a management information system which is capable of providing its board of directors and senior management committees with sufficient, reliable, and timely data from which informed decisions can be made to monitor and manage risks.

As a result, the targeted inspection uses a "top-down" approach, which focuses on the information used by the board and senior management committees and on the overall MIS architecture. For further inspection guidance, see the MIS sections 2060.0 to 2060.5 and SR-95-45 and its exhibits. The MIS supporting other levels of management should be reviewed during subsequent bank holding company inspections.

A targeted MIS inspection should be performed in companies in which there has been a notable alteration in the risk profile or aggressive expansion, or in which significant changes in information systems have occurred. This will ensure that executive management and the board have taken into consideration MIS and its ability to keep up with the changes in the organization. It should be noted that there is no one management reporting system. Depending on the structure of the organization, the activities that it engages in, the risk profile that results, and the technological environment that it operates under, MIS will be different in each bank holding company.

A key element of a successful MIS is the creation of the necessary technological support system. Since MIS is the primary tool for executive management and the board to monitor risk and measure performance, it is vital that the generated reports are accurate, provide sufficient information, and address all areas of the organization. Thus, data integrity is a key factor in analyzing the MIS process; inaccurate data can lead to faulty conclusions by management and the board. In addition, information flows to the top level of the organization should be comprehensive enough to allow for informed decisions. An overload of trivial information can cause confusion and slow the decision-making process.

The MIS inspection process focuses on three broad areas:

1. Relevance and Use of MIS
   - overall risk assessment of the corporation
   - identification of risk responsibilities and reporting lines within the organization
   - evaluation of the quality and relevancy of MIS reports

2. Internal Controls over MIS Integrity
   - identification of information flows and internal control points
   - evaluation of internal controls over information flows
   - evaluation of the report-development process and contingency plans

3. MIS Architecture and Planning
   - analysis of corporate strategic and technology plans, and the effect of their interrelationship on MIS
   - identification of the system architecture, including planned enhancements, and its effect on MIS
   - evaluation of the capability of system architecture to assimilate acquired organizations and the subsequent effect on MIS

The targeted MIS inspection evaluates the information flows to senior management and the computer or manual systems which support them. Bank holding company inspections place emphasis on reports generated by MIS rather than on the process by which they are created.

Management information systems are made up of various subsystems and will generally be unique to the organization. MIS will be influenced by the structure of the organization, its activities, its risk profile, and its technological capabilities. The targeted MIS inspection guidelines and procedures focus on the three broad areas outlined above and provide examiners...
with guidance on how to evaluate a bank holding company’s MIS process.

5052.0.1 RELEVANCY AND USE OF MIS

Management information requirements will be determined by the size and complexity of an organization’s operations. As an organization grows in size and its operations become more complex, management must recognize that information needs change. In addition, strategic goals may dictate a change in the focus of the company, requiring revisions in data collection and presentation. Guidelines and requirements for reports that flow to executive management and the board should be established, recognizing, however, that different levels of the organization have different informational needs.

The effectiveness of MIS has to be analyzed in terms of its ability to assist executive management and the board in identifying, monitoring, and controlling risks throughout the organization. Reports should be analyzed for quality, timeliness, and consistency. They should provide coverage of the major areas in the institution and communicate information clearly and concisely. An organization might have a comprehensive MIS, but if pertinent information is not flowing to executive management and the board of directors, the system is not effective.

Information must be presented in a summarized form, which is easy to read and understand. Procedures must be in place to allow for rapid collection and assimilation of data allowing for timely presentation to executive management and the board. The presentation of data should be consistent from one period to another to avoid any undue confusion. Changes in format need to be agreed on by all users of the report before implementation. Data should cover all areas of risk within the organization and provide comparisons to enable executive management and the board to measure performance.

An assessment of the executive management committee and board members should be performed. A review of reporting lines should also be performed. (See section 2060.4.)

5052.0.2 INTERNAL CONTROLS OVER MIS INTEGRITY

The review of data integrity of reports to the board of directors and executive management committee is essential to ensure that information flows are accurate and that reports are consistently prepared. For each report reviewed, the flow of information through MIS must be identified, including computer platforms, applications software, and interrelationships with other computer systems. Controls such as data entry and modification, data security, disaster recovery, back-up, and program changes should be assessed. Any points in the system where manual intervention occurs should be identified, and information on the flexibility of the system should be obtained.

The procedures used to assess the data integrity controls will vary depending on the nature of the computer platform and application software and on the amount of manual intervention required to produce the report. However, in all cases, the assessment of MIS data integrity controls should begin with a review of the results of prior inspections and the result of internal and external audit reports. Previously identified deficiencies that have not been corrected can affect the integrity of current data.

Reports produced by a mainframe application system should have controls within the mainframe environment and in the application system used to produce the report. These controls are reviewed during EDP examinations and periodic EDP audits. These examination and audit reports should be used as leverage during the MIS inspection, and the current status of deficiencies noted should be ascertained through discussions with internal auditors and management.

Reports may also be produced by personal computers using spreadsheet and other office-product software in a distributed processing environment. Reviews of distributed processing systems require interviews with the persons responsible for preparing the reports. Any instances of manual intervention in such an environment must be identified and evaluated. The most recent EDP examination report should also be reviewed for any deficiencies noted in the bank holding company’s microcomputer policies and procedures. A review of internal audit reports for the applicable business area and discussions with audit personnel will reveal whether this PC/spreadsheet application has been audited recently.

5052.0.3 MIS ARCHITECTURE AND PLANNING

The business plan and the computer system’s architecture plan should be designed to comple-
ment each other and must support the strategic plan. The business plan identifies the goals, target markets, and areas of risk of the organization. The architecture plan describes the corporate technological plans for implementing the systems that will achieve the strategic and business goals, and it should include MIS.

Information is a valuable corporate asset. In a competitive banking environment, the ability to effectively manage this asset is crucial to a bank holding company’s ability to remain competitive, introduce new products and services, and achieve desired goals. Therefore, the computer system’s architecture plan should be developed in conjunction with its business plan. The architecture plan should ensure that mainframe processing and MIS are appropriately integrated and in place for the banking organization to achieve its strategic goals.

The dynamic and competitive banking and technology environments make effective planning critical. Reconciliation of the business and computer system’s architecture plans is necessary to determine the effectiveness of the banking organization’s planning process. With the proliferation of mergers and acquisitions in the financial industry, this process becomes more complicated. It is essential that management have a clear vision of its strategic and business goals and the technology required to achieve them if it is to effectively manage the divergent technologies that may be inherited through mergers and acquisitions. Bank holding companies in this situation should decide which acquired systems will survive. Documentation should support management’s decision, and formal conversion plans should be documented. Telecommunications, compatibility of systems, data integrity, capacity, contingency planning, and data security are especially critical in this situation and should be evaluated in the planning and conversion process.

Ultimately, the business and the computer system’s architecture plans should support the strategic plan. If these plans do not complement one another, the ability of management to achieve its goals may be difficult.

5052.0.4 INSPECTION OBJECTIVES

1. To review the organizational structure to determine the various levels of decision-making and reporting lines, risk assessment, and controls, including board and executive management committees.
2. To assess the adequacy of the management reports generated for their timeliness, quality, accuracy, and coverage of crucial areas.
3. To evaluate reports in terms of their ability to measure the company’s progress in meeting its financial and business goals, including the capability to produce forecasts using various scenarios.
4. To evaluate management procedures for reacting to elevated risk, weaknesses, or deficiencies disclosed by the MIS, and the system’s ability to adapt to change caused by regulatory and accounting issues or by other market conditions.
5. To determine if the policies, practices, procedures, and internal controls regarding management information systems and management reporting are adequate.
6. To evaluate the controls in place to ensure the integrity of the information within MIS, including data security, disaster recovery, and the system’s development life cycle.
7. To determine if the functions of automated systems, reconciliation procedures, and reporting processes are completely understood by staff and that these functions are fully documented.
8. To ensure that an architecture plan exists that includes MIS and that it supports the business and strategic plans.
9. To determine if a management process exists for MIS planning, including organizational responsibility, development, and implementation.
10. To determine if a strategy exists for an effective consolidation of systems in the event of a merger or acquisition.
11. To recommend enhancements and/or corrective action when policies, practices, procedures, internal controls, or MIS are deficient.

5052.0.5 INSPECTION PROCEDURES

5052.0.5.1 General

1. Present the first-day request letter to executive management well in advance of the targeted inspection commencement date, allowing sufficient time for data collection (e.g., at least two weeks before). (See SR-95-45, exhibit A, for a sample first-day letter.) The examiner-in-charge should review the responses well in advance of the start of the inspection.
2. Solicit the cooperation of key senior officials...
in organizing and conducting a meeting to discuss with them the identification, control, and reporting of identified risks within the various key operating areas of the bank holding company. Request that key senior management officials make or arrange for presentations during this meeting that will identify the major departments, functions, and activities within the organization and how MIS is used to identify and manage risk. (See SR-95-45, exhibit B.)

3. Draft the inspection report for participating examiners to review before the close of the on-site phase of the inspection, ensuring the inclusion of all relevant findings.

5052.0.5.2 Relevancy and Use of MIS

1. Review the organizational structure to determine reporting lines and the various levels of decision making, risk assessment, and controls. Determine if there are any corporate policies specific to risk management or internal reporting requirements.

2. Review the board and executive management committee structure, including its membership, mission, and authority and the experience levels of the members.

3. Read board and committee minutes and obtain sample copies of the board and committee packets.

4. Obtain a listing of internal reports that are submitted to corporate executive management and the board of directors. Ask that copies of each of these top-level reports be attached to the listing.
   a. Review each listed report for timeliness, clarity, completeness, relevancy, and measurability.
   b. Analyze the management reports for information sufficient to measure the company’s progress in meeting its financial and business goals, including the ability to produce various forecasting scenarios.

5. Identify management procedures for reacting to elevated risk, weaknesses, or deficiencies disclosed by MIS. Evaluate the system’s ability to handle regulatory and accounting issues and to adapt to change.

6. Discuss the examiners’ perceptions of MIS reports with executive management as to their timeliness, clarity, completeness, relevancy, and measurability.

5052.0.5.3 MIS Integrity and Internal Controls

1. Review and analyze any policies, procedures, and practices governing the corporation’s MIS, including descriptions of existing controls to ensure data integrity throughout the system, disaster-recovery plans, and standardized procedures for the development and use of systems and applications.

2. Review the architecture of MIS. Determine whether there is a single MIS system or a number of related systems. Ascertain if MIS is produced by the mainframe, distributed processors, personal computers, or a combination of these systems. Identify the databases in use for MIS reporting.

3. For each board and executive management report identified, review and verify the flow of data through MIS to the reports, include all computer platforms and application software used. Identify risk points and the controls in place to ensure data integrity. (See SR-95-45, exhibit C for a suggested format.)

4. For each report, verify the controls over data input and the report-distribution process. Determine that sufficient controls are in place to reasonably ensure the accuracy and confidentiality of the data.

5. Review all internal and external audit, regulatory examination, and outside consultant reports concerning MIS since the previous inspection. Note any deficiencies and/or recommendations, and determine whether management has taken appropriate corrective action. Perform follow-up action on any unresolved issues.

6. Through discussions with management and other personnel, determine if any significant changes to MIS are planned. If so, obtain and document the details and analyze their potential effect on MIS integrity.

5052.0.5.4 MIS Architecture and Planning

1. Review the corporate strategic, business, and computer architecture plans, if applicable, to determine if the architecture plan supports the strategic and business goals. The business plan should reflect goals in support of the strategic plan, and any differences between these plans should be reconciled. If a reconcilement has not been performed, request that management complete one during the inspection. Otherwise, complete the reconcilement.
2. Request (or create) a conceptual overview model to identify the flow of information through the organization. (See SR-95-45, exhibit D.)

3. Evaluate management’s conversion planning process by selecting a recently converted or consolidated MIS application for review. This application will be emphasized when completing other sections of the work program.

4. After determining the extent of merger and acquisition activity at the institution, review conversion plans and the methodology for consolidating systems and ascertain their effectiveness.

5. Review a copy of development plans for any significant MIS-related projects. Determine if they address cited MIS weaknesses, meet strategic and business goals of the organization, and are in compliance with established policies.

6. Discuss with executive management any inconsistencies among the business, system architecture, and strategic plans.
Portions of Bank Holding Company Inspections Conducted in Federal Reserve Bank Offices

Examiners’ access to automated databases that include supervisory data on state member banks (SMBs) and bank holding companies (BHCs) has been significantly enhanced. In addition, the increased availability of copiers, fax machines, and personal computers has made it possible for SMBs and BHCs to more easily transfer data to Reserve Banks. As a result, the volume of information on SMBs and BHCs available to examiners in Reserve Bank offices has been greatly augmented, and many inspection activities that have traditionally been conducted in the field can now be completed in Reserve Bank offices.

The option to complete certain inspection activities in Reserve Bank offices has various advantages. For example, examiners’ ability to access automation resources, reference materials, and senior staff is much better in the office than on-site. In addition, in completing more activities off-site, Reserve Banks can reduce the burdens of on-site evaluations of SMBs and BHCs. Further, greater reliance on off-site work can allow Reserve Banks to reduce travel-related expenses.

5060.0.1 CONDUCTING INSPECTION ACTIVITIES IN RESERVE BANK OFFICES

Examiners should conduct in Reserve Bank offices all inspection activities that can be efficiently and effectively completed off-site. Activities that may be completed off-site include planning the inspection, reviewing historical information, completing preliminary financial analyses, and preparing certain report pages using data maintained at Reserve Bank offices. For additional information, see SR-95-13 (SUP) and SR 02-1.

When using this approach, examiners should contact BHCs by letter and ask them to forward to Reserve Bank offices financial and other information to be used in the off-site portion of the inspection. Most information that has traditionally been requested in first day letters and made available to examiners at the start of an inspection should be requested, with the exception of documents such as minute books or bulky printouts that would be inappropriate or impractical to have sent. While it is anticipated that this approach will be preferred to approaches that require a longer on-site examiner presence, BHCs are not required to be inspected under this approach and should be given the option to be inspected using traditional on-site approaches. Given the burdens imposed on BHCs to prepare and mail materials to Reserve Bank offices, Reserve Banks should also offer to pay the shipping costs and give adequate lead time in requesting materials.

In the cases of certain shell BHCs, Reserve Banks are authorized to complete all inspection activities off-site on an every-other-inspection basis. As noted above, however, these BHCs should be given the option to be inspected using the traditional on-site approach. Noncomplex shell bank holding companies (NCSBHCs) with consolidated assets of less than $1 billion and that on their last inspection were rated RFI/C(D) 3 or better may be inspected off-site, subject to the following restrictions.

• If information becomes available to the Reserve Bank in the period between inspections suggesting that the condition of an organization is deteriorating significantly, an on-site inspection should be scheduled or commenced immediately if warranted.
• Deteriorating 3-rated BHCs are excluded and must be inspected on-site.
• When a BHC’s lead bank subsidiary is an SMB, the inspection of the BHC should be carried out in the field concurrently with the examination of its lead bank.
• NCSBHCs in the same metropolitan statistical area as the Reserve Bank or its bank supervision staff should be inspected on-site unless there is good reason to do otherwise. Newly formed NCSBHCs or those that have recently undergone a change in control should also be inspected on-site.
• If a BHC is unable to forward the information necessary to conduct an off-site inspection, or if the company is assigned a RFI/C(D) rating of 4 or 5 or is determined to be a deteriorating 3-rated organization as a result of an off-site inspection, an on-site inspection should be scheduled or commenced immediately if warranted.
• Information requested from the NCSBHC should include all information typically requested in a first day letter, as well as copies from the company’s general and subsidiary

1. Noncomplex shell bank holding companies are those companies with less than $1 billion in consolidated assets without credit-extending nonbank subsidiaries or debt held by the general public whose condition is predicated almost entirely on the condition of subsidiary banks.
ledger entries since the last on-site inspection, copies of the BHC’s notes payable and receivable, copies of all agreements between the BHC and its bank subsidiaries, and any other information considered necessary to complete an off-site inspection of the institution. 

• Findings on the BHC’s condition and compliance with laws and regulations should be conveyed to management by telephone or, if the situation requires, in person at company or Reserve Bank offices. The examiner-in-charge should then complete an inspection report for transmission to the company.

5060.0.2 OFF- AND ON-SITE BHC INSPECTION PROCEDURES—APPENDIX 1

This appendix includes inspection procedures that can be completed in the Reserve Bank’s offices and those procedures that should be conducted on-site. A sample first day letter information request form is included.

5060.0.2.1 Activities That Can Be Completed in the Office

Work to be performed in the office in preparation for a bank holding company inspection should include the—

• determination of the scope of inspection,
• completion of financial schedules and certain other pages, and
• review of historical financial and supervisory data leading to preparation of draft financial analyses (for example, parent, subsidiary banks, consolidated entity).

In addition, if centralized management functions (for example, investments, asset/liability management, internal audit, or loan review) are performed by the bank holding company, a preliminary understanding of these functions can be obtained in the office by reviewing policies, reports, and other relevant materials. Further, if the bank holding company has nonbank subsidiaries, the preliminary risk assessment mandated by SR-93-19 (see sections 5010.6.3 and 5010.31) can be performed in the office, based on information submitted by the institution.

5060.0.2.2 BHC Inspection Activities That Should Be Conducted On-Site

The following inspection activities are recommended and should continue to be performed at the bank holding company:

• review of credit and investment files at holding company and nonbank subsidiaries for quality, documentation, and compliance with policy, laws, and regulations;
• in-depth discussions with management;
• verification of selected financial information;
• review of selected tax workpapers, including the review of intercompany tax allocations;
• observation of operations and internal controls;
• collection of follow-up documentation to complete the financial analysis;
• review of documents such as minute books for the holding company and nonbank subsidiaries and bulky printouts that would be inappropriate or impractical to have sent to the Reserve Bank’s office;
• exit meetings with management.

5060.0.2.3 Sample Information Request for a Bank Holding Company

Information To Be Sent to the Federal Reserve Bank

1. Exhibits A through N (See attachment #2, SR-95-13). Also, please assemble applicable workpapers that correspond to reported information for verification on-site.
2. The corporation’s current legal-entity and management organization charts, detailing line and staff authority from the chairman of the board through the various division heads.
4. A copy of the most recent information package provided to the directors in connection with regular board meetings.
5. A copy of any other management reports that summarize the performance of the subsidiary banks.
6. Schedules of internal audits and internal loan reviews for the prior and current year. In addition, please furnish a copy of the most recent management letter provided to the corporation by its external auditing firm and management’s formal response.
7. List of consolidated past-due, restructured, and nonaccrual loans and overdrafts; watch-list
report; and any results of internal loan-grading systems.

8. Loan-loss reserve adequacy evaluation (consolidated and lead bank). Include the most recent calculation for assessing the adequacy of the loan-loss reserve based on the organization’s internal methodology.

9. Risk-based capital analysis (consolidated and lead bank) for the most recent quarter-end and two prior year-ends, including workpapers. Break out guaranteed loans and loans secured by certificates of deposit. Also include the total amount and proportionate guarantee of each loan guaranteed by such entities as the FmHA, SBA, and VA.

10. Current and upcoming year’s budgets (consolidated and lead bank).

11. A copy of any capital, dividend, or cash-flow plans or projections.

12. Most recent internal consolidated interest-rate-sensitivity analysis and liquidity analysis.

13. Parent-company consolidating entries and consolidated comparative financial statements as of the most recent quarter-end.

14. Parent-company-only comparative financial statements as of the most recent quarter-end.

15. The parent company’s trial balance as of the most recent quarter-end.

16. Details of any items included in parent-company “other” assets, liabilities, income, or expense, which cannot be readily identified from the most recent quarter-end trial balance.

17. A summary of insurance coverage for the parent company and its subsidiaries. Please include a copy of the cover pages of each policy, along with the amount of coverage and expiration date. In addition, also indicate the most recent board approval of such coverage.

18. A detailed schedule of all consolidated borrowings as of the most recent quarter-end. Include the average interest rate paid on each type of borrowing.

19. For the parent company only, please provide the following information on all outstanding obligations: (a) amount outstanding, (b) lender (if publicly held, only note holders of greater than 10 percent), (c) origination and maturity dates, (d) interest rate and payable dates, (e) principal repayment schedule, and (f) reason for incurring debt.

20. A schedule of the fiduciary holdings of the parent company’s stock and convertible debt by the parent’s subsidiaries. Indicate the degree of investment authority the respective trust departments have over these shares.

21. Copies of all intercompany management and service agreements along with (1) the names of the staff members responsible for the administration of these activities and (2) documentation showing the basis of the assessments.

22. Litigation letter from the holding company’s attorneys relating to the status of all lawsuits in which the holding company or its subsidiaries is named defendant. If none, please submit a letter from an officer of the holding company indicating such.

23. A complete copy of all written policies that have been amended or adopted since the previous FRB inspection.

24. A copy of the bank’s most recent Report of Condition and Income (call report), including the corresponding internal balance sheet and income statement (daily statement) for the lead bank.

25. Daily statement for the lead bank as of the inspection date.

26. Copies of any “key man” or “split-dollar” life insurance policies held at the holding company or the subsidiaries.

27. Copy of compensation agreements with subsidiary bank personnel who sell credit-related life insurance for the holding company, along with any tie-in policies, if applicable.

28. Copy of any other compensation arrangement either at the holding company or between the holding company and the subsidiary banks.

29. Most recent market-rate survey for local deposits at the lead bank.

30. For all nonbank subsidiaries, please provide (a) financial statements for the most recent quarter-end; (b) strategic plans; (c) directors’ monthly reports; (d) internal audit reports; and (e) a trial balance of all credits, delinquency reports, nonperforming reports, and watch-listed loans for credit-extending subsidiaries.

Information To Be Provided at the Holding Company

31. Access to all written policies pertaining to specific operational areas (for example, due diligence/acquisitions, lending, funds management, tax allocation, and dividends).

32. Access to internal audit and internal loan review reports and workpapers.

33. Minutes of meetings of the board of directors, shareholders, and any committees. Please include a list of committees and their members, and fees paid to directors.

34. Holding company articles of incorporation and by-laws.
35. Stock register.
36. Access to federal tax returns filed since the most recent FRB inspection, along with workpapers. In addition, provide schedules of intercompany tax allocations for the corresponding periods, including projected allocations.
37. Access to parent company accounting records such as ledgers, journals, and check registers.
38. Access to monthly account-analysis statements for any parent company transaction accounts held at a subsidiary bank.
39. For all nonbank subsidiaries, please provide (a) directors’ minutes; (b) annual budgets and cash flow projections; (c) checking account statements and check registers and/or cash receipts and disbursements registers; (d) a listing of directors and officers; and (e) access to credit policies and credit files for all nonbank credit-extending subsidiaries.
40. Access to due-diligence reports and workpapers and assimilation plans.
41. Any available information on local economic conditions.

5060.0.3 PROCEDURES FOR IMPLEMENTING OFF-SITE INSPECTIONS FOR CERTAIN SHELL BHCS—APPENDIX 2

This appendix includes procedures for implementing the program authorizing off-site inspections for certain shell BHCs. Listed below are general procedures that can be followed in implementing the program for off-site inspections of certain noncomplex shell bank holding companies (NCSBHCS). Sample documents are included that can be used in implementing the program, including examples of correspondence with eligible bank holding companies and a sample first day letter information request form.

5060.0.3.1 General Procedures for Off-Site Inspections

In implementing the program, Reserve banks should conform to the following procedures:

1. Senior management of bank holding companies should be notified before or early in the calendar year if their company qualifies for a full off-site inspection. They should also be informed that they may opt out of the off-site process and that, even if they choose to participate, the Reserve Bank may conduct the inspection on-site if conditions change or if, at some point during the year, examiners will be traveling to the company’s vicinity to carry out other activities.

2. When the Reserve Bank is ready to conduct the off-site inspection, the holding company should be contacted by telephone, as well as by letter. An information request form should be attached to the letter.

3. After assigned examiners have reviewed information forwarded by the company, additional information may be requested by telephone or other means if deemed necessary. Once all necessary information has been received, the designated examiners should commence the off-site inspection.

4. Findings of the inspection should be conveyed to company management by telephone or, if the situation requires, at company or Reserve Bank offices.

5. The examiner-in-charge should then complete an inspection report for transmission to the company.
BHC Official
BHC Name
Address

Dear BHC Official:

This year, the Federal Reserve Bank of New York will conduct off-site inspections of certain bank holding companies. Your company will be inspected during 19X0 and presently qualifies for an off-site review by our office.

As part of our off-site program, you will receive an information request form which must be completed and returned to the Reserve Bank. The Reserve Bank will reimburse you for postage expenses. The form requires responses to several questions, as well as submission of copies of certain holding company financial documents. Our examiners will review the information, complete their analysis, and discuss their findings with management, either by telephone conference or, if necessary, at the offices of your bank holding company. Following the off-site review, holding company management will receive a written report which will include the following:

• a description of the scope of the inspection;

• the examiner’s presentation of the financial condition and performance of the parent company and the subsidiary bank;

• an evaluation of the company’s compliance with laws and regulations; and

• the examiner’s comments, conclusions, and recommendations.

We have found that the off-site inspection program has proved attractive to many banking organizations. However, participation is not mandatory. Therefore, if you do not wish to participate, please sign and mail the enclosed form by DATE. We do want to make it clear, however, that while we plan to conduct an off-site review of your company if you accept this proposal, we still may conduct an on-site inspection if conditions change or if examiners are otherwise in your vicinity.

Should you have any questions concerning the off-site inspection program, please contact OFFICE STAFF MEMBER at (800) ______, extension _____.

Sincerely,

Officer

SAMPLE RESPONSE FORM

OFF-SITE INSPECTION PROGRAM
FEDERAL RESERVE BANK OF NEW YORK
RESPONSE FORM

We do not wish to participate in the off-site inspection program in 19X0.

Name of Company: ________________________________
City: __________________________________________
State: __________________________________________

Signed: __________________
Title: ____________________
SAMPLE LETTER

Date:

BHC Official
BHC Name
Address

Dear BHC Official:

Pursuant to our telephone conversation of (Date), an off-site inspection of (BHC Name), will be conducted by our office. Please respond to each item of the information request form attached and complete the enclosed schedules. Please be aware that all items submitted for review will be retained by our office and not returned to the company. Therefore, it is advisable to submit copies of records rather than originals. Upon receipt of the items requested, we will reimburse your bank holding company for the postage expense.

In order for us to use the off-site program, you must submit a complete response to this information request no later than (Date). If we are unable to satisfactorily resolve any issues arising from your response to this request, or if the information contained in your response is substantially incomplete, we will schedule the company for an on-site inspection.

Upon review of the information submitted, we will contact you to schedule a meeting with our examiners. If you have any questions concerning the inspection process or the preparation of your responses, please contact (Office Staff Member) at (800) _____, extension _____.

Sincerely,

Name
Examiner

Enclosures
SAMPLE INFORMATION REQUEST FORM

 Please submit or provide responses to the following (if non-applicable, answer N/A):

1. Statements for the most recent quarter and the two latest fiscal years:
   A. Parent Company -- Balance Sheet
   B. Parent Company -- Income Statement
   C. Parent Company -- Statement of Changes in Stockholders' Equity
   D. Bank -- Reports of Condition and Income (most recent quarter only)
   E. Reconciliation of the parent company's "Investment in Bank" account to the subsidiary bank's "Stockholders' Equity" as reported in the Reports of Condition

2. The bank’s daily statement and income and expense statement dated __/__/X0.

3. Projected cash flow worksheet for the year 19X1 (see attached form).

4. Excerpts from the company’s general ledger and subsidiary ledgers containing all significant accounting entries since __/__/.

5. Detail of any "other assets" or "other liabilities" accounts for the company, as well as "other income" or "other expense" items, presented in financial statements requested above IF the amounts exceed $500.

6. Details on any liabilities, contingent or otherwise, not appearing in the financial statements.

7. A copy of the company’s bank statements and its check register and/or cancelled checks issued since __/__/.

8. A copy of any notes payable and/or receivable of the bank holding company (including a copy of any related loan agreements) if they have been put in place or amended since the last inspection.*

*The last inspection of [(BHC Name)] was conducted on [(Date)].
9. A copy of any agreements originating since the last inspection between the company and the bank, between stockholders, or between the bank holding company and the stockholders.

10. A list of changes of specific services performed by the holding company for the bank or for any other company since the last inspection. Also indicate the method for computing fees, provide copies of any relevant agreements, and provide documentation supporting any management/service fee assessments.

11. For any changes to the parent company’s investments in stocks of companies OTHER THAN subsidiaries, a list of the (1) date of acquisition/sale, (2) number of shares acquired/sold, (3) resulting percentage ownership, and (4) nature of business engaged in by the subject company.

12. A copy of any internally prepared reports of problem loans and nonperforming assets for the banking organization.

13. A list of any stock issuances or redemptions by the company since the last inspection, including the issue/redemption date and price. Also, list all stockholders and their percentage interest in the holding company as of ___/___/___.

14. A statement of the date and amount of any capital injections into the bank since the last inspection.

15. A copy of the minutes of all shareholders’/directors’ meetings held since the last inspection.

16. For each director of the holding company, provide his or her (1) date of birth, (2) date first elected to the board, (3) position in the bank holding company, (4) position in the bank, (5) principal occupation if different than bank or bank holding company officer, (6) ownership percentage in other financial institutions, and (7) positions in other financial institutions.

17. A statement of any material litigation affecting the company or the bank.

18. A list of all tax transactions since ___/___/___. These transactions would include those between the bank and the holding company as well as any transactions with the tax authorities. (See attached example.)

19. A copy of the last two years’ federal and state income tax returns, including any amendments.

20. A copy of your accountant’s workpapers showing the calculation of the holding company tax benefit or liability for the last two years.
21. If the parent company filed for a tax loss carryback in the last two years, provide documents filed with the IRS and related prior-year tax returns.

22. A copy of the tax sharing agreement between the bank holding company and its bank subsidiary if amended or redated since the last inspection.

23. The date of the last IRS audit of the bank holding company’s tax returns, an identification of the tax periods covered in the audit, and an indication of whether any assessments or refunds remain unsettled.

24. A copy of the bank’s current year budget and operating projections, if available.

25. If the subsidiary bank maintains a correspondent balance at any creditor bank of the holding company, copies of (1) the monthly analysis of the account provided by the correspondent for the last 12 months, (2) any agreement whereby the loan to the holding company is contingent on the subsidiary bank maintaining such a balance, and (3) an explanation if the balances maintained by the subsidiary bank exceed the level required for services received.

26. If any Employee Stock Ownership Plan (ESOP) owns stock in the holding company, provide copies of (1) the ESOP plan and trustee agreement; (2) the ESOP’s current balance sheet; (3) the independent appraisal used to determine the value of the holding company stock purchased by the ESOP; (4) any note payable, security agreement, loan agreement, and guarantees. Also provide (1) the date the plan was accepted by the IRS; (2) a description of the ESOP’s current investments, including the date they were purchased and their cost; (3) the names of the individuals who have the power to vote the ESOP’s stock; (4) a list of individuals having the power to make investments for the ESOP; and (5) a list of the beneficiaries of the ESOP.

27. Copies of the articles of incorporation and by-laws for the bank holding company, if amended since the last inspection.

28. If the holding company is selling insurance, list the (1) licensed agents employed by the company; (2) compensation received by each agent; (3) method for determining compensation; (4) a description of how customers of the bank are informed that they are not obligated to purchase insurance from the holding company in order to obtain credit; and (5) a breakdown of insurance accounts receivable, past due more than 90 days.
29. If the subsidiary bank is providing the holding company with either personnel or facilities for the sale of insurance or any noninsured investment products, a statement indicating whether the subsidiary bank is reimbursed for its expenses. If the bank is reimbursed, a description of the method used to determine such amounts. Indicate when this reimbursement method was approved by the respective boards of directors.

30. If the holding company is involved in the sale of any non-insured investment products such as annuities or mutual funds, describe the program including any arrangements that involve the use of third-party brokers. If the holding company receives any share of the related commissions or lease income or if employees of the holding company or a nonbank subsidiary of the holding company are involved in the program, please describe.

31. Copies of the dividend policies of the holding company and the subsidiary bank. If no written policy exists, provide a description of the methods used to determine the amount of dividends paid by the bank holding company or any of its subsidiaries.

32. The dates and amounts of dividends paid by the subsidiary bank since the last quarter-end.

33. A description of any changes made to the holding company’s audit and/or credit review programs.

34. Details of any directors and officers liability insurance maintained by the organization or indemnification provisions adopted by the bank or bank holding company.

35. For banker’s blanket bond and excess fidelity bond coverage, please provide (1) name of surety; (2) form number; (3) primary and excess amount of coverage; (4) expiration date; (5) name of insured; (6) an indication of whether all officers and employees of the holding company, bank, and any nonbank subsidiaries are covered; (7) the date the insurance coverage was last approved by the bank holding company’s board of directors and the bank’s board of directors; and (8) a description of how insurance premiums are allocated among the entities of the organization.

36. Details of any significant transactions since __/__/____ not already described in responses to the above questions.
