

**IN THE UNITED STATES COURT OF APPEALS  
FOR THE THIRD CIRCUIT**

NATIONAL CENTER FOR PUBLIC  
POLICY RESEARCH,

*Petitioner,*

v.

SECURITIES AND EXCHANGE  
COMMISSION,

*Respondent.*

CASE NO: \_\_\_\_\_

**PETITION FOR REVIEW AND  
MOTION FOR TRANSFER**

Pursuant to 15 U.S.C. §§ 77i, 78y and Federal Rule of Appellate Procedure 15(a), Petitioner National Center for Public Policy Research petition this Court for review of the Securities and Exchange Commission’s final agency action entitled, “The Enhancement and Standardization of Climate-Related Disclosures for Investors,” Release Nos. 33-11275 and 34-99678, 89 Fed. Reg. 21,668 (Mar. 28, 2024) (attached as Exhibit A). The Commission adopted the challenged final rules on March 6, 2024, and the rules were published in the Federal Register on March 28, 2024. Jurisdiction and venue are proper because Petitioner is incorporated under the laws of Delaware. 15 U.S.C. §§ 77i(a), 78y(b)(1). This Petition is timely, being filed “within sixty days” after the challenged final agency action. *Id.*

Petitioner further moves the Court to transfer this proceeding to the United States Court of Appeals for the Eighth Circuit pursuant to 28 U.S.C. § 2112, which applies when multiple petitions for review are filed pertaining to the same orders or rules. Transfer is appropriate under Section 2112(a)(5) to the Eighth Circuit Court of Appeals because the United States Judicial Panel on Multidistrict Litigation issued a Consolidation Order (attached as Exhibit B) directing the record to be filed in that circuit.

Respectfully Submitted,

/s/ Andrew J. Morris

Andrew J. Morris

## CERTIFICATE OF SERVICE

I certify that, on April 29, 2024, I electronically filed the foregoing Petition for Review with the United States Court of Appeals for the Third Circuit through the Court's CM/ECF system.

I further certify that, on April 29, 2024, I will cause a true and correct copy of this Petition, having been stamped by the Court with the date of filing, to be served on the Secretary, Vanessa A. Countryman, and the Office of the Secretary at the Commission's Headquarters via United States Postal Service, certified mail return receipt requested, at this address:

**The Enhancement and Standardization of Climate-Related Disclosures for Investors**

**AGENCY:** Securities and Exchange Commission.

**ACTION:** Final rules.

**SUMMARY:** The Securities and Exchange Commission (“Commission”) is adopting amendments to its rules under the Securities Act of 1933 (“Securities

Act”) and Securities Exchange Act of 1934 (“Exchange Act”) that will require registrants to provide certain climate-related information in their registration statements and annual reports. The final rules will require information about a registrant’s climate-related risks that have materially impacted, or are reasonably likely to have a material impact on, its business strategy, results of operations, or financial condition. In addition, under the final rules, certain disclosures related to severe weather events and other natural conditions will be required in a registrant’s audited financial statements.

**DATES:**

*Effective date:* These final rules are effective on May 28, 2024.

*Compliance date:* See section II.O. for further information on transitioning to the final rules.

**FOR FURTHER INFORMATION CONTACT:**

Elliot Staffin, Senior Special Counsel, and Kristin Baldwin, Special Counsel, Office of Rulemaking, at (202) 551–3430, in the Division of Corporation Finance; or Erin Nelson, Senior Special Counsel, and Meagan Van Orden, Professional Accounting Fellow, in the Office of the Chief Accountant, at (202) 551–5300, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549.

**SUPPLEMENTARY INFORMATION:** We are adopting amendments to or adding the following rules and forms:

## I. Introduction

Climate-related risks, their impacts, and a public company's response to those risks can significantly affect the company's financial performance and position.<sup>3</sup> Accordingly, many investors and those acting on their behalf—including investment advisers and investment management companies—currently seek information to assess how climate-related risks affect a registrant's business and financial condition and thus the price of the registrant's securities. Investors also seek climate-related information to assess a registrant's management and board oversight of climate-related risks so as to inform their investment and voting decisions. In light of these investor needs, the Commission is adopting rules to require registrants to provide certain information about climate-related risks that have materially impacted, or are reasonably likely to have a material impact on, the registrant's business strategy, results of operations, or financial condition; the governance and management of such risks; and the financial statement effects of severe weather events and other natural conditions in their registration statements and annual reports. This information, alongside disclosures on other risks that companies face, will assist investors in making decisions to buy, hold, sell, or vote securities in their portfolio.

Many companies currently provide some information regarding climate-related risks. For example, as discussed in more detail in section IV.A.5 below, some studies show that a third of public companies disclose information about climate-related risks, mostly outside of Commission filings,<sup>4</sup> and nearly 40

percent of all annual reports contain some climate-related discussion.<sup>5</sup> In addition, Commission staff analysis found that approximately 20 percent of public companies provide some information regarding their Scope 1 and 2 greenhouse gas (“GHG”) emissions, often outside of Commission filings, with the highest rate of emissions disclosures found among large accelerated filers.<sup>6</sup> Among companies in the Russell 1000 Index, based on one analysis, these numbers are even higher, with 90 percent publicly disclosing some climate-related information<sup>7</sup> and almost 60 percent providing disclosures regarding their GHG emissions.<sup>8</sup>

The climate-related information that these companies currently provide, however, is inconsistent and often difficult for investors to find and/or compare across companies. As a result, investors have expressed the need for more detailed, reliable, and comparable disclosure of information regarding climate-related risks. The requirements adopted in this release meet that need by providing more complete and decision-useful information about the impacts of climate-related risks on registrants, improving the consistency, comparability, and reliability of climate-related information for investors. As a result, investors will be able to make more informed investment and voting decisions.

As discussed in more detail throughout this release, disclosure of certain climate-related matters is required in a number of Federal, State, and foreign jurisdictions.<sup>9</sup> Companies currently often provide much of this information outside of Commission filings, in varying levels of detail, and in different documents and formats. Additionally, because of the importance of this information to investors, a variety of third parties have developed climate-related reporting frameworks.<sup>10</sup> Use of reporting frameworks is also often voluntary. Companies may disclose certain information under one

<sup>5</sup> See *infra* notes 2638–2639 and accompanying text.

<sup>6</sup> See *infra* notes 2675–2676 and accompanying text.

<sup>7</sup> See *infra* note 2666 and accompanying text.

<sup>8</sup> See *infra* note 2683 and accompanying text.

<sup>9</sup> See, e.g., *infra* sections I.A (discussing certain international initiatives) and II.A.3 (discussing the Inflation Reduction Act and recent California laws).

<sup>10</sup> See, e.g., Task Force on Climate-related Financial Disclosures, *About*, available at <https://www.fsb-tcfd.org/about/>; CDP Worldwide (“CDP”), *About us*, available at <https://www.cdp.net/en/info/about-us>; Sustainability Accounting Standards Board (“SASB”) Standards, *About us*, available at <https://sasb.org/about/>; and Global Reporting Initiative (“GRI”), *About GRI*, available at <https://www.globalreporting.org/about-gri/>. See also *infra* notes 148–151.

<sup>3</sup> See *infra* section I.A. For purposes of this release, we use the terms “public companies,” “companies,” “registrants,” and “issuers” interchangeably and, unless explained in the text, the use of different terms in different places is not meant to connote a significant difference.

<sup>4</sup> See, e.g., Center for Capital Markets, *2021 Survey Report: Climate Change & ESG Reporting from the Public Company Perspective*, available at [https://www.centerforcapitalmarkets.com/wp-content/uploads/2021/08/CCMC\\_ESG\\_Report\\_v4.pdf](https://www.centerforcapitalmarkets.com/wp-content/uploads/2021/08/CCMC_ESG_Report_v4.pdf), discussed *infra* in Section IV.A.5.

or more frameworks, may provide only partial disclosures, or may choose not to provide consistent information year over year. As a result, reporting is fragmented and difficult for investors to compare across companies or across reporting periods. As commenters have indicated, this lack of consistency and comparability increases costs to investors in obtaining and analyzing decision-useful information and impairs investors' ability to make investment or voting decisions in line with their risk preferences.<sup>11</sup> Investors have asked for this information in Commission filings, alongside other disclosures on the business, results of operations, and financial condition of a registrant and information on the other risks companies face to their business, finances, and operations. Requiring these additional disclosures in Commission filings will allow investors to evaluate together the range of risks that a company faces, the existing and potential impacts of those risks, and the way that company management assesses and addresses those risks. Providing these disclosures in Commission filings also will subject them to enhanced liability that provides important investor protections by promoting the reliability of the disclosures.

The Commission has required disclosure of certain environmental matters for the past 50 years,<sup>12</sup> most recently issuing guidance in 2010 ("2010 Guidance") on how existing rules may require disclosure of climate-related risks and their impacts on a registrant's business or financial condition.<sup>13</sup> Since the Commission issued the 2010 Guidance, there has been growing recognition that climate-related risks affect public companies' business, results of operations, and

financial condition.<sup>14</sup> Our experience with the 2010 Guidance and current practices regarding disclosure of this information led us to conclude that, although many companies disclose some climate-related information, there was a need to both standardize and enhance the information available to investors about such matters and thus to propose an updated approach.<sup>15</sup> Since the proposal, ongoing regulatory developments and market practices with respect to disclosure of climate-related risks have only underscored the need for enhanced disclosure requirements in this area.<sup>16</sup> Although current disclosure practices elicit some useful information about climate-related risks, there remain significant deficiencies in the consistency and completeness of this information. We have therefore concluded that additional requirements are appropriate to ensure that investors have access to more complete and reliable information that will enable them to make informed investment and voting decisions.<sup>17</sup>

The rules that we are adopting respond to investors' concerns regarding the adequacy of current disclosure practices while taking into account comments received on the proposed rules. In general terms, the final rules will elicit enhanced and more

consistent and comparable disclosure about the material risks that companies face and how companies manage those risks by requiring:

- A description of any climate-related risks that have materially impacted or are reasonably likely to have a material impact on the registrant, including on its strategy, results of operations, and financial condition, as well as the actual or potential material impacts of those same risks on its strategy, business model, and outlook;
- Specified disclosures, regarding a registrant's activities, if any, to mitigate or adapt to a material climate-related risk or use of transition plans, scenario analysis or internal carbon prices to manage a material climate-related risk;
- Disclosure about any oversight by the registrant's board of directors of climate-related risks and any role by management in assessing and managing material climate-related risks;
- A description of any processes the registrant uses to assess or manage material climate-related risks; and
- Disclosure about any targets or goals that have materially affected or are reasonably likely to materially affect the registrant's business, results of operations, or financial condition.

In addition, to facilitate investors' assessment of particular types of risk, the final rules require:

- Disclosure of Scope 1 and/or Scope 2 emissions on a phased in basis by certain larger registrants when those emissions are material, and the filing of an attestation report covering the required disclosure of such registrants' Scope 1 and/or Scope 2 emissions, also on a phased in basis; and
- Disclosure of the financial statement effects of severe weather events and other natural conditions including costs and losses.

A further summary of the final rules is presented below.<sup>18</sup>

In crafting the final rules, we benefited from extensive public comments. We received over 4,500 unique comment letters on the proposed climate-related disclosure rules and over 18,000 form letters.<sup>19</sup> Commenters included academics, accounting and audit firms, individuals, industry groups, investor groups, law firms, non-governmental organizations, pension funds, professional climate advisors, professional investment advisers and investment management companies, registrants, standard-setters, state

<sup>14</sup> See, e.g., letters from AllianceBernstein; Alphabet, Autodesk, Dropbox, eBay, Hewlett Packard Enterprise, HP Inc., Intel, Meta, PayPal, and Workday (June 17, 2022) ("Alphabet *et al.*"); Amazon (June 17, 2022); CalPERS; CalSTRS; Eni SpA (June 16, 2022) ("Eni SpA"); Pacific Investment Management Company (June 17, 2022) ("PIMCO"); PricewaterhouseCoopers (June 17, 2022) ("PwC"); and Wellington Mgmt. See also *infra* note 28 (discussing the Financial Stability Oversight Council's ("FSOC's") Report on Climate-Related Financial Risk 2021).

<sup>15</sup> See *The Enhancement and Standardization of Climate-Related Disclosures for Investors*, Release No. 33-11042 (Mar. 21, 2022) [87 FR 21334 (Apr. 11, 2022)] ("Proposing Release").

<sup>16</sup> See *infra* Section II.A.3 for a discussion of recent foreign and state regulatory developments regarding the disclosure of climate-related risks, including the announcement by several countries of their intention to adopt laws or regulations implementing the International Sustainability Standards Board's ("ISSB") climate reporting standard in whole or part; and certain recent California laws requiring the disclosure of climate-related risks and greenhouse gas emissions by certain large companies.

<sup>17</sup> Even after adoption of the final rules, the 2010 Guidance will still be relevant because it discusses existing Commission rules, such as those pertaining to a registrant's description of its business and certain legal proceedings, which require disclosure regarding, among other things, compliance with environmental laws and regulations that are only tangentially mentioned in this rulemaking. Registrants should continue to consider the 2010 Guidance as they evaluate their disclosure obligations in their Description of Business, Risk Factors, Legal Proceedings, and Management's Discussion and Analysis. These disclosures should be based on the registrant's specific facts and circumstances.

<sup>19</sup> These comments are available at <https://www.sec.gov/comments/s7-10-22/s71022.htm>. Unless otherwise noted, comments referenced in this release pertain to these comments.

government officials, and U.S. Senators and Members of the House of Representatives. Many commenters generally supported the proposal to require climate-related disclosure. Others opposed the proposed rules in whole or in part. In addition, the Commission's Investor Advisory Committee offered broad support for the proposal, with recommendations for certain modifications to the proposed rules, as discussed in more detail below.<sup>20</sup> The Commission's Small Business Capital Formation Advisory Committee made several recommendations, including that the Commission exempt emerging growth companies ("EGCs")<sup>21</sup> and smaller reporting companies ("SRCs")<sup>22</sup> from the final rules or otherwise adopt scaled climate-related disclosure requirements for EGCs and SRCs.<sup>23</sup> We considered

<sup>20</sup> See U.S. Securities and Exchange Commission Investor Advisory Committee Recommendation Related to Climate-Related Disclosure Rule Proposals (Sept. 21, 2022), available at <https://www.sec.gov/spotlight/investor-advisory-committee-2012/20220921-climate-related-disclosure-recommendation.pdf> ("IAC Recommendation"). Specifically, the Investor Advisory Committee recommended the following changes to the proposed rules, as discussed in more detail in section II below: (1) adding a requirement for "Management Discussion of Climate-Related Risks & Opportunities"; (2) requiring disclosure of material facility locations; and (3) eliminating the proposed requirement around board expertise. In addition to the IAC Recommendation, in June 2022, the Investor Advisory Committee held a meeting that included a panel discussion regarding climate disclosures. See the minutes for that meeting, including the panelists that participated in the discussion, at <https://www.sec.gov/spotlight/investor-advisory-committee-2012/iac060922-minutes.pdf>. The Investor Advisory Committee was established in Apr. 2012 pursuant to section 911 of the Dodd-Frank Wall Street Reform and Consumer Protection Act [Pub. L. 111–203, sec. 911, 124 Stat. 1376, 1822 (2010)] ("Dodd-Frank Act") to advise and make recommendations to the Commission on regulatory priorities, the regulation of securities products, trading strategies, fee structures, the effectiveness of disclosure, and initiatives to protect investor interests and to promote investor confidence and the integrity of the securities marketplace.

<sup>21</sup> An EGC is a registrant that had total annual gross revenues of less than \$1.235 billion during its most recently completed fiscal year and has not met the specified conditions for no longer being considered an EGC. See 17 CFR 230.405; 17 CFR 240.12b–2; 15 U.S.C. 77b(a)(19); 15 U.S.C. 78c(a)(80); and *Inflation Adjustments under Titles I and III of the JOBS Act*, Release No. 33–11098 (Sep. 9, 2022) [87 FR 57394 (Sep. 20, 2022)].

<sup>22</sup> An SRC is an issuer that is not an investment company, an asset-backed issuer (as defined in 17 CFR 229.1101), or a majority-owned subsidiary of a parent that is not an SRC and that: (1) had a public float of less than \$250 million; or (2) had annual revenues of less than \$100 million and either: (i) no public float; or (ii) a public float of less than \$700 million. 17 CFR 229.10 (defining SRC and also providing how and when an issuer determines whether it qualifies as an SRC); 17 CFR 230.405 (same); 17 CFR 240.12–2 (same).

<sup>23</sup> See U.S. Securities and Exchange Commission Small Business Capital Formation Advisory

comments that were supportive as well as those that were critical of aspects of the proposed rules, including comments from investors as to the information they need to make informed investment or voting decisions, as well as concerns expressed by registrants, trade associations, and others with regard to compliance burdens, liability risk, and our statutory authority. After

Committee Recommendation Regarding the Enhancement and Standardization of Climate-Related Disclosures for Investors (July 13, 2022), available at <https://www.sec.gov/spotlight/sbcfac/sbcfac-climate-related-disclosures-recommendation-050622.pdf> ("SBCFAC Recommendation"). In addition, the Small Business Capital Formation Advisory Committee highlights generally in its parting perspectives letter that "exemptions, scaling, and phase-ins for new requirements where appropriate, allows smaller companies to build their businesses and balance the needs of companies and investors while promoting strong and effective U.S. public markets." See Parting Perspectives Letter, U.S. Securities and Exchange Commission Small Business Capital Formation Advisory Committee (Feb. 28, 2023), available at <https://www.sec.gov/files/committee-perspectives-letter-022823.pdf>. Finally, we note that participants in the Commission-hosted Small Business Forum in 2023 recommended that the Commission revise the proposed rules to exempt SRCs, non-accelerated filers, EGCs, and other mid-sized companies and to consider scaling and delayed compliance ("Small Business Forum Recommendation (2023)"); participants in 2022 and 2021 Small Business Forums similarly recommended the Commission provide exemptions or scaled requirements for small and medium-sized companies in connection with any new ESG disclosure requirements adopted by the Commission. See Report on the 42nd Annual Small Business Forum (April 2023), available at [https://www.sec.gov/files/2023\\_oasb\\_annual\\_forum\\_report\\_508.pdf](https://www.sec.gov/files/2023_oasb_annual_forum_report_508.pdf); Report on the 41st Annual Small Business Forum (April 2022), available at <https://www.sec.gov/files/2022-oasb-annual-forum-report.pdf>; and Report on the 40th Annual Small Business Forum (May 2021), available at [https://www.sec.gov/files/2021\\_OASB\\_Annual\\_Forum\\_Report\\_FINAL\\_508.pdf](https://www.sec.gov/files/2021_OASB_Annual_Forum_Report_FINAL_508.pdf). See also U.S. Securities and Exchange Commission Office of the Advocate for Small Business Capital Formation, Annual Report Fiscal Year 2023 ("2023 OASB Annual Report"), available at <https://www.sec.gov/files/2023-oasb-annual-report.pdf>, at 84–85 (recommending generally that in engaging in rulemaking that affects small businesses, the Commission tailor the disclosure and reporting framework to the complexity and size of operations of companies, either by scaling obligations or delaying compliance for the smallest of the public companies). The Small Business Capital Formation Advisory Committee was established in Dec. 2016 pursuant to the Small Business Advocate Act of 2016 [Public Law 114–284 (2016)] to advise the Commission on rules, regulations, and policies with regard to the Commission's mission of protecting investors, maintaining fair, orderly, and efficient markets, and facilitating capital formation, as such rules, regulations, and policies relate to: capital raising by emerging, privately held small businesses ("emerging companies") and publicly traded companies with less than \$250,000,000 in public market capitalization ("smaller public companies") through securities offerings, including private and limited offerings and initial and other public offerings; trading in the securities of emerging companies and smaller public companies; and public reporting and corporate governance requirements of emerging companies and smaller public companies.

considering all comments, we are adopting final rules with modifications from the proposal to better effectuate our goals in requiring these additional disclosures while limiting the final rules' burdens on registrants.<sup>24</sup>

As the Commission explained when proposing the climate disclosure rules,<sup>25</sup> while climate-related issues are subject to various other regulatory schemes, our objective is limited to advancing the Commission's mission to protect investors, maintain fair, orderly, and efficient markets, and promote capital formation by providing disclosure to investors of information important to their investment and voting decisions. We are adopting the final rules to advance these investor protection, market efficiency and capital formation objectives, consistent with our statutory authority, and not to address climate-related issues more generally. The final rules should be read in that context. Thus, for example, in those instances where the rules reference materiality—consistent with our existing disclosure rules and market practices—materiality refers to the importance of information to investment and voting decisions about a particular company, not to the importance of the information to climate-related issues outside of those decisions. The Commission has been and remains agnostic about whether or how registrants consider or manage climate-related risks. Investors have expressed a need for this information on risks in valuing the securities they currently hold or are considering purchasing. While we recognize that the rules will impose burdens on registrants, we note that the degree of that burden will vary depending upon the circumstances facing individual registrants, as not every registrant will be required to provide all disclosures specified under the final rules. Moreover, as discussed further throughout the release, we believe that those burdens are justified by the informational benefits of the disclosures to investors.

#### A. Need for Enhanced and Standardized Climate-Related Disclosures

The importance of climate-related disclosures for investors has grown as investors,<sup>26</sup> companies, and the markets

<sup>24</sup> See *infra* section I.B for a summary of changes from the proposed rules, including the addition of materiality qualifiers in certain rule provisions and revisions to make the final rules less prescriptive.

<sup>25</sup> See Proposing Release, section I.

<sup>26</sup> Throughout this release, we refer to investors to include retail investors, institutional investors, and other market participants (such as financial analysts, investment advisers, and portfolio

have recognized that climate-related risks<sup>27</sup> can affect a company's business and its current and longer-term financial performance and position in numerous ways.<sup>28</sup> Climate-related natural disasters can damage issuers' assets, disrupt their operations, and increase their costs.<sup>29</sup>

managers) that use disclosures in Commission filings as part of their analysis and to help investors.

<sup>27</sup> The Commission has a long history of requiring disclosures to investors of information about risks facing registrants. See *infra* notes 184–191 and accompanying text for a discussion of that history. In that time, the Commission has described those risks using differently terminology, but has largely focused on the same concepts. See, e.g., 17 CFR 229.105(a) (Where appropriate, provide under the caption "Risk Factors" a discussion of the material factors that make an investment in the registrant or offering speculative or risky.); *Disclosure of Accounting Policies for Derivative Financial Instruments and Derivative Commodity Instruments and Disclosure of Quantitative and Qualitative Information About Market Risk Inherent in Derivative Financial Instruments, Other Financial Instruments, and Derivative Commodity Instruments*, Release No. 33–7386 (Jan. 31, 1997) [62 FR 6044 at n.12 (Feb. 10, 1997)] (Requiring disclosure of qualitative and quantitative information about market risk for derivatives and other financial instruments; Market risk is the risk of loss arising from adverse changes in market rates and prices, such as interest rates, foreign currency exchange rates, commodity prices, and other relevant market rate or price changes (e.g., equity prices).); *Guides for Preparation and Filing of Registration Statements*, Release No. 33–4666 (Feb. 7, 1964) [29 FR 2490, 2492 (Feb. 15, 1964)] (In many instances the securities to be offered are of a highly speculative nature. The speculative nature may be due to such factors as an absence of operating history of the registrant, an absence of profitable operations in recent periods, the financial position of the registrant or the nature of the business in which the registrant is engaged or proposes to engage. . . . In such instances, and particularly where a lengthy prospectus cannot be avoided, there should be set forth immediately following the cover page of the prospectus a carefully organized series of short, concise paragraphs summarizing the principal factors which make the offering speculative with references to other parts of the prospectus where complete information with respect to such factors is set forth.)

<sup>28</sup> For example, FSOC's Report on Climate-Related Financial Risk 2021 found that investors and businesses may experience direct financial effects from climate-related risks and observed that the costs would likely be broadly felt as they are passed through supply chains and to customers and as they reduce firms' ability to service debt or produce returns for investors. See 2021 FSOC Report, Chapter 1: *From Climate-Related Physical Risks to Financial Risks; From Climate-related Transition Risks to Financial Risks*. In 2023 FSOC repeated its concern that climate-related risks are an emerging and increasing threat to U.S. financial stability and stated that climate-related financial risk can manifest as and amplify traditional risks, such as credit, market, liquidity, operational, compliance, reputational, and legal risks. See FSOC, Annual Report 2023; see also letters from AGs of Cal. *et al.*; Ceres; PIMCO; and Wellington Mgmt; *infra* note 99 and accompanying text.

<sup>29</sup> See, e.g., Greg Ritchie, Bloomberg, *90% of World's Biggest Firms Will Have at Least One Asset Exposed to Climate Risk, Fresh Data Show* (Sept. 15, 2022) (stating that over 90% of the world's largest companies will have at least one asset financially exposed to climate risks such as wildfires or floods by the 2050s, and more than a

Any widespread market-based transition to lower carbon products, practices, and services—triggered, for example, by recent or future changes in consumer preferences<sup>30</sup> or the availability of financing, technology, and other market forces<sup>31</sup>—can lead to material changes in a company's business model or strategy and may have a material impact on a registrant's financial condition or operations.<sup>32</sup>

In addition to these market forces, changes in law, regulation, or policy may prompt companies to transition to lower carbon products, practices, and services. For example, governments including the United States and others throughout the world have made public commitments to transition to a lower carbon economy.<sup>33</sup> Efforts towards meeting GHG reduction goals<sup>34</sup> could

third of those companies will see at least one asset lose 20% or more of its value as a result of climate-related events).

<sup>30</sup> See, e.g., McKinsey & Company, *How electric vehicles will shape the future* (Apr. 23, 2022), available at <https://www.mckinsey.com/featured-insights/themes/how-electric-vehicles-will-shape-the-future> (predicting that by 2035, the major automotive markets will be fully electric).

<sup>31</sup> See, e.g., Amrith Ramkumar, Wall Street Journal, *JPMorgan Makes One of the Biggest Bets Ever on Carbon Removal* (May 23, 2023), available at <https://www.wsj.com/articles/jpmorgan-makes-one-of-the-biggest-bets-ever-on-carbon-removal-c7d5fe63> (noting that "JPMorgan Chase has agreed to invest more than \$200 million to purchase credits from several companies in the nascent [carbon removal] industry").

<sup>32</sup> See, e.g., BlackRock, *Managing the net-zero transition* (Feb. 2022), available at <https://www.blackrock.com/corporate/literature/whitepaper/bii-managing-the-net-zero-transition-february-2022.pdf> ("On top of physical climate risks, companies and asset owners must now grapple with the transition [to a net-zero economy]. Economies will be reshaped as carbon emissions are cut. The transition will involve a massive reallocation of resources. Supply and demand will shift, with mismatches along the way. Value will be created and destroyed across companies.").

<sup>33</sup> See United Nations, *Net Zero*, available at <https://www.un.org/en/climatechange/net-zero-coalition> ("More than 140 countries, including the biggest polluters—China, the United States, India and the European Union—have set a net-zero target. . . .").

<sup>34</sup> See, e.g., Press Statement, Antony J. Blinken, Secretary of State, The United States Officially Rejoins the Paris Agreement (Feb. 19, 2021), available at <https://www.state.gov/the-united-states-officially-rejoins-the-paris-agreement/>. Over 190 countries have signed the Paris Climate Agreement, which aims to limit global temperature rise. Moreover, at the UN Climate Change Conference (COP 26), the United States committed to become net zero by 2050, China by 2060, and India by 2070. Further, over 100 countries including the U.S. formed a coalition to reduce methane emissions by 30% by 2030. See David Worford, COP26 Net Zero Commitments will Speed Energy Transition, Increase Pressure on Industries, According to Moody's Report, Environment+Energy Leader (Nov. 17, 2021), available at <https://www.environmentenergyleader.com/2021/11/cop26-net-zero-commitments-will-speed-energy-transition-increase-pressure-on-industries-according-to-moodys-report/>. At COP27, participating countries (which included

have financial effects that materially impact registrants.<sup>35</sup> Recently both the Federal Government and several State governments have adopted or proposed laws and regulations that incentivize companies to reduce their GHG emissions and transition to a lower carbon economy in a variety of ways.<sup>36</sup> How a registrant assesses and plans in response to such legislative and regulatory efforts and going forward complies with such laws and regulations, may have a significant impact on its financial performance and investors' return on their investment in the company.

Further, as reflected in comments received in response to the proposed rules and as discussed throughout this release, investors seek to assess the climate-related risks that registrants face and evaluate how registrants are measuring and responding to those risks.<sup>37</sup> Effective disclosures regarding climate-related risks can help investors better assess how registrants are measuring and responding to those

the U.S.) reaffirmed their commitment to limit global temperature rise and agreed to provide "loss and damage" funding for vulnerable countries hit hard by climate disasters. See United Nations Climate Change, *COP27 Reaches Breakthrough Agreement on New "Loss and Damage" Fund for Vulnerable Countries* (Nov. 20, 2022), available at <https://unfccc.int/news/cop27-reaches-breakthrough-agreement-on-new-loss-and-damage-fund-for-vulnerable-countries>. More recently, at COP 28, participating countries (which included the U.S.) signed an agreement that includes commitments for "deep emissions cuts and scaled-up finance." See United Nations Climate Change, *COP28 Agreement Signals "Beginning of the End" of the Fossil Fuel Era* (Dec. 13, 2023), available at <https://unfccc.int/news/cop28-agreement-signals-beginning-of-the-end-of-the-fossil-fuel-era>.

<sup>35</sup> See, e.g., letter from Eni SpA ("[C]ompanies should discuss the reference scenario in which they are acting, providing information about any emerging trends, demands, uncertainties, commitments or events that are reasonably likely to have material impacts on the company's future profitability and growth prospects in dependence of likely or possible evolution of the regulatory or competitive environment in response to the global need to achieve the goals of the Paris Agreement."); see also *infra* note 108 and accompanying text (citing comment letters that stated that, as governments and registrants have increasingly made pledges and enacted laws regarding a transition to a lower carbon economy, more consistent and reliable climate-related disclosure has become particularly important to help investors assess the reasonably likely financial impacts to a registrant's business, results of operations, and financial condition in connection with such governmental pledges or laws and the related financial and operational impacts of a registrant's progress in achieving its publicly announced, climate-related targets and goals).

<sup>36</sup> See *infra* section I.I.C for examples of Federal law and State regulation that may be sources of climate-related risk, particularly transition risk, for registrants.

<sup>37</sup> See, e.g., *infra* notes 99–106 and accompanying text.

risks. Those assessments can, in turn, inform investment and voting decisions.

We agree with the many commenters that stated that the current state of climate-related disclosure has resulted in inconsistent, difficult to compare, and frequently boilerplate disclosures, and has therefore proven inadequate to meet the growing needs of investors for more detailed, consistent, reliable, and comparable information about climate-related effects on a registrant's business and financial condition to use in making their investment and voting decisions.<sup>38</sup> Since the Commission issued the 2010 Guidance, awareness of climate-related risks to registrants has grown.<sup>39</sup> Retail and institutional investors<sup>40</sup> and investor-led initiatives<sup>41</sup> have

<sup>38</sup> See, e.g., letters from AllianceBernstein; BlackRock, Inc. (June 17, 2022) ("BlackRock"); CalPERS; CalSTRS; Calvert Research and Management (June 17, 2022) ("Calvert"); Decatur Capital Management (May 29, 2022); Domini Impact; Harvard Management Company (June 6, 2022) ("Harvard Mgmt."); Impax Asset Management (May 12, 2022) ("Impax Asset Mgmt."); Trillium; and Wellington Mgmt. *But see*, e.g., letters from the U.S. Chamber of Commerce (June 16, 2022) ("Chamber") (June 16, 2022); National Association of Manufacturers (June 6, 2022) ("NAM") (June 6, 2022); and Society for Corporate Governance (June 17, 2022) ("Soc. Corp. Gov.").

<sup>39</sup> See, e.g., *supra* notes 28–32.

<sup>40</sup> Although some commenters stated that only institutional investors have demanded that the Commission adopt climate-related disclosure requirements, *see*, e.g., letters from Chamber and Soc. Corp. Gov., most individual retail investors and firms advising such investors who submitted comments supported the proposed rules. *See*, e.g., letters from Barry Gillespie (June 8, 2022); Betterment (June 17, 2022); Helene Marsh (June 7, 2022); and Rodney Smith (June 13, 2022); *see also* letter from Investment Company Institute (June 17, 2022) ("ICI") (supporting "key components of the proposal" and noting that its "members, US regulated funds . . . serv[e] more than 100 million investors" and "clearly have a significant interest in how the nature and availability of climate-related risk information provided by public companies evolves" and "analyze this, and other, information in formulating their investment decisions on behalf of those millions of long-term individual investors").

<sup>41</sup> See Proposing Release, section I.C.1 for a discussion of some of these investor-led initiatives. Among other initiatives discussed in the Proposing Release, in 2019, more than 630 investors collectively managing more than \$37 trillion signed the Global Investor Statement to Governments on Climate Change urging governments to require climate-related financial reporting. *See* United Nations Climate Change, *631 Institutional Investors Managing More than USD 37 Trillion in Assets Urge Governments to Step up Climate Ambition* (Dec. 9, 2019), available at <https://unfccc.int/news/631-institutional-investors-managing-more-than-usd-37-trillion-in-assets-urge-governments-to-step-up>. This investor initiative continued as the Investor Agenda's 2021 Global Investor Statement to Governments on the Climate Crisis, which was signed by 733 global institutional investors, including some of the largest investors, with more than \$52 trillion in assets under management in the aggregate. This statement called for governments to implement a number of measures, including mandating climate risk disclosure. *See* The Investor Agenda, 2021 Global Investor Statement to

increasingly expressed the need for more reliable information about the effects of climate-related risks, as well as information about how registrants have considered and addressed climate-related risks and opportunities when conducting operations and developing business strategy and financial plans.<sup>42</sup> At the same time, many companies have made climate-related commitments to reduce GHG emissions or become "net zero" by a particular date.<sup>43</sup> In response, investors have expressed the need for more detailed information to aid their investment and voting decisions, including insight into the potential impacts on registrants associated with fulfilling such commitments.<sup>44</sup>

### B. Summary of the Final Rules

Having considered the comments received on the proposal, we are adopting the final amendments described in this release with modifications in response to those comments.<sup>45</sup>

Governments on the Climate Crisis (Oct. 27, 2021), available at <https://theinvestoragenda.org/wp-content/uploads/2021/09/2021-Global-Investor-Statement-to-Governments-on-the-Climate-Crisis.pdf>. *But see* letter from Lawrence Cunningham for Twenty Professors of Law and Finance, George Washington University (Feb. 29, 2024) (noting that some large institutional asset managers or investors have recently withdrawn membership from certain of the investor-led initiatives described in the Proposing Release).

<sup>42</sup> See, e.g., letters from AllianceBernstein; CalPERS; CalSTRS; Domini Impact; Harvard Mgmt; Impax Asset Mgmt; Trillium; and Wellington Mgmt.

<sup>43</sup> See Proposing Release, section I.C.1. *See also* Dieter Holger and Pierre Bertrand, *U.N. Group Recommends Stricter Rules Over Net-Zero Pledges*, *The Wall Street Journal* (Nov. 8, 2022) (stating that roughly 800 of the world's 2,000 largest public companies by revenue have committed to get to net zero emissions by 2050 or sooner); and United Nations, *Recognizing growing urgency, global leaders call for concrete commitments for clean, affordable energy for all by 2030 and net-zero emissions by 2050* (May 26, 2021).

<sup>44</sup> See, e.g., letters from Calvert; Ceres; Investment Adviser Association (June 17, 2022) ("IAA"); and PIMCO. *See also* Climate Action 100+, *As The 2023 Proxy Season Continues, Investors Are Calling On Climate Action 100+ Focus Companies For More Robust Climate Action* (May 9, 2023) (stating that in addition to more robust corporate governance on climate, investors are calling for disclosure on key issues including greenhouse gas emissions targets, transition plans (including policies to ensure a just transition for workers and communities), and reporting on methane measurements); Climate Action 100+, *Climate Action 100+ Net Zero Company Benchmark Shows Continued Progress On Ambition Contrasted By A Lack Of Detailed Plans Of Action* (Oct. 18, 2023); and Dieter Holger, *Corporate Climate Plans Fall Well Short of Targets, With A Few Bright Spots*, *The Wall Street Journal* (Feb. 13, 2023).

<sup>45</sup> As stated above, the Commission received a large number of comments on the proposal, and we considered all of those comments. Nevertheless, considering the overlapping content and themes in the comments, and for the sake of clarity, we have not cited each individual comment letter in support of or against a particular position in the discussion below.

Like the proposed rules, the final rules' reporting framework has structural elements, definitions, concepts, and, in some cases, substantive requirements that are similar to those in the Task Force on Climate-related Financial Disclosure ("TCFD"), an industry-led task force charged with promoting better-informed investment, credit, and insurance underwriting decisions.<sup>46</sup> The TCFD reporting framework was designed to elicit information to help investors better understand a registrant's climate-related risks to make more informed investment decisions.<sup>47</sup> We therefore find that it is an appropriate reference point for the final rules. Indeed, the core categories of the framework, which focus on governance, risk management, strategy, and metrics,<sup>48</sup> align with the type of information called for by existing disclosure requirements within Regulation S-K.<sup>49</sup> Accordingly, where consistent with our objectives, the authority Congress granted, and the comments received, certain provisions in the final rules are similar to the TCFD recommendations.<sup>50</sup> Similarly, we have used concepts developed by the GHG Protocol for aspects of the final rules, as it has become a leading reporting standard for GHG emissions.<sup>51</sup> Because

<sup>46</sup> See TCFD, *Recommendations of the Task Force on Climate-related Financial Disclosures* (June 2017), available at <https://assets.bbhub.io/company/sites/60/2020/10/FINAL-2017-TCFD-Report-11052018.pdf>. In Apr. 2015, the Group of 20 Finance Ministers directed the Financial Stability Board ("FSB") to evaluate ways in which the financial sector could address climate-related concerns. The FSB concluded that better information was needed to facilitate informed investment decisions and to help investors and other market participants to better understand and take into account climate-related risks. The FSB established the TCFD. Since then, the framework for climate-related disclosures developed by the TCFD has been refined and garnered global support as a reliable framework for climate-related financial reporting. For background on the TCFD and development of its recommendations, *see* Proposing Release, section I.D.1.

<sup>47</sup> See TCFD, *supra* note 46, at ii–iii.

<sup>48</sup> See TCFD, *supra* note 4646 (listing governance, strategy, risk management, and metrics and targets as core elements of the TCFD framework).

<sup>49</sup> See, e.g., 17 CFR 229.105 (Risk factors), 17 CFR 229.303 (Management's discussion and analysis of financial condition and results of operation), 17 CFR 229.401 (Directors, executive officers, promoters and control persons), and 17 CFR 229.407 (Corporate governance).

<sup>50</sup> As discussed below, a number of commenters recommended that the Commission incorporate the TCFD recommendations into the final rules. *See infra* notes 115–118 and accompanying text.

<sup>51</sup> See World Business Council for Sustainable Development and World Resources Institute, *The Greenhouse Gas Protocol, A Corporate Accounting and Reporting Standard* REVISED EDITION, available at <https://ghgprotocol.org/corporate-standard>. The GHG Protocol was created through a partnership between the World Resources Institute

many registrants have elected to follow the TCFD recommendations when voluntarily providing climate-related disclosures,<sup>52</sup> and/or have relied on the GHG Protocol when reporting their GHG emissions,<sup>53</sup> building off these reporting frameworks will mitigate those registrants' compliance burdens and help limit costs.<sup>54</sup> Building off the TCFD framework and the GHG Protocol will also benefit those investors seeking to make comparisons between Commission registrants and foreign companies not registered under the Federal securities laws that make disclosures under the TCFD framework and GHG Protocol, mitigating the challenges they experience when making investment and voting decisions.<sup>55</sup> Nevertheless, while the final rules use concepts from both TCFD and the GHG Protocol where appropriate, the rules diverge from both of those frameworks in certain respects where necessary for our markets and registrants and to achieve our specific investor protection and capital formation goals.

#### 1. Content of the Climate-Related Disclosures

The final rules will create a new subpart 1500 of Regulation S–K and Article 14 of Regulation S–X. In particular, the final rules will require a

and the World Business Council for Sustainable Development, which agreed in 1997 to collaborate with businesses and NGOs to create a standardized GHG accounting methodology. See Greenhouse Gas Protocol, *About Us*, available at <https://ghgprotocol.org/about-us>. The GHG Protocol, which is subject to updates periodically, has been broadly incorporated into various sustainability reporting frameworks, including the TCFD.

<sup>52</sup> See, e.g., *infra* note 2690 and accompanying text (describing a report finding that 50 percent of sustainability reports from Russell 1000 companies aligned with the TCFD recommendations). In addition, many registrants submit climate disclosures to the CDP, formerly known as the “Carbon Disclosure Project,” which is aligned with the TCFD framework. See CDP Worldwide (“CDP”), *How CDP is aligned to the TCFD*, available at <https://www.cdp.net/en/guidance/how-cdp-is-aligned-to-the-tcfd> (last visited Feb. 21, 2024); CDP, *How companies can take action*, available at <https://www.cdp.net/en/companies> (noting that “23,000+ companies representing two thirds of global market capitalization disclosed through CDP in 2023”); see also CDP, *About us*, available at <https://www.cdp.net/en/info/about-us> (“CDP is a not-for-profit charity that runs the global disclosure system for investors, companies, cities, states and regions to manage their environmental impacts.

... CDP was established as the ‘Carbon Disclosure Project’ in 2000, asking companies to disclose their climate impact.”). In addition, several international climate disclosure initiatives are based on the TCFD recommendations. See *infra* section II.A.3.

<sup>53</sup> See *infra* section II.A.; and Proposing Release, section I.D.2; see also *infra* note 2621 (noting that, in the U.S. and other jurisdictions, GHG emissions quantification and reporting are generally based on the GHG Protocol).

<sup>54</sup> See *infra* note 2760 and accompanying text.

<sup>55</sup> Cf. *infra* notes 2568–2570 and accompanying text.

registrant to disclose information about the following items:

- Any climate-related risks identified by the registrant that have had or are reasonably likely to have a material impact on the registrant, including on its strategy, results of operations, or financial condition in the short-term (*i.e.*, the next 12 months) and in the long-term (*i.e.*, beyond the next 12 months);<sup>56</sup>

- The actual and potential material impacts of any identified climate-related risks on the registrant’s strategy, business model, and outlook, including, as applicable, any material impacts on a non-exclusive list of items;<sup>57</sup>

- If, as part of its strategy, a registrant has undertaken activities to mitigate or adapt to a material climate-related risk, a quantitative and qualitative description of material expenditures incurred and material impacts on financial estimates and assumptions that, in management’s assessment, directly result from such mitigation or adaptation activities;<sup>58</sup>

- If a registrant has adopted a transition plan to manage a material transition risk, a description of the transition plan, and updated disclosures in the subsequent years describing the actions taken during the year under the plan, including how the actions have impacted the registrant’s business, results of operations, or financial condition, and quantitative and qualitative disclosure of material expenditures incurred and material impacts on financial estimates and assumptions as a direct result of the disclosed actions;<sup>59</sup>

- If a registrant uses scenario analysis and, in doing so, determines that a climate-related risk is reasonably likely to have a material impact on its business, results of operations, or financial condition, certain disclosures regarding such use of scenario analysis;<sup>60</sup>

- If a registrant’s use of an internal carbon price is material to how it evaluates and manages a material climate-related risk, certain disclosures about the internal carbon price;<sup>61</sup>

<sup>56</sup> See *infra* section II.D.1.

<sup>57</sup> See *infra* sections II.D.1. That non-exclusive list is comprised of the registrant’s: (1) business operations, including the types and locations of its operations, (2) products and services, (3) suppliers, purchasers, or counterparties to material contracts, to the extent known or reasonably available, (4) activities to mitigate or adapt to climate-related risks, including adoption of new technologies or processes, and (5) expenditure for research and development.

<sup>58</sup> See *infra* sections II.D.1.

<sup>59</sup> See *infra* section II.D.2.

<sup>60</sup> See *infra* section II.D.3.

<sup>61</sup> See *infra* section II.D.4.

- Any oversight by the board of directors of climate-related risks and any role by management in assessing and managing the registrant’s material climate-related risks;<sup>62</sup>

- Any processes the registrant has for identifying, assessing, and managing material climate-related risks and, if the registrant is managing those risks, whether and how any such processes are integrated into the registrant’s overall risk management system or processes;<sup>63</sup>

- If a registrant has set a climate-related target or goal that has materially affected or is reasonably likely to materially affect the registrant’s business, results of operations, or financial condition, certain disclosures about such target or goal, including material expenditures and material impacts on financial estimates and assumptions as a direct result of the target or goal or actions taken to make progress toward meeting such target or goal;<sup>64</sup>

- If a registrant is a large accelerated filer (“LAF”),<sup>65</sup> or an accelerated filer (“AF”) <sup>66</sup> that is not otherwise exempted, and its Scope 1 emissions and/or its Scope 2 emissions metrics are material, certain disclosure about those emissions;<sup>67</sup>

<sup>62</sup> See *infra* section II.E.

<sup>63</sup> See *infra* section II.F.

<sup>64</sup> See *infra* section II.G.

<sup>65</sup> An LAF is an issuer after it first meets the following conditions as of the end of its fiscal year: (i) the issuer had an aggregate worldwide market value of the voting and non-voting common equity held by its non-affiliates of \$700 million or more, as of the last business day of the issuer’s most recently completed second fiscal quarter; (ii) the issuer has been subject to the requirements of Section 13(a) or 15(d) of the Exchange Act for a period of at least twelve calendar months; (iii) the issuer has filed at least one annual report pursuant to Section 13(a) or 15(d) of the Exchange Act; and (iv) the issuer is not eligible to use the requirements for SRCs under the revenue test in paragraph (2) or (3)(iii)(B) of the SRC definition in Rule 12b–2. 17 CFR 240.12b–2 (defining LAF and providing how and when an issuer determines whether it qualifies as an LAF).

<sup>66</sup> An AF is an issuer after it first meets the following conditions as of the end of its fiscal year: (i) the issuer had an aggregate worldwide market value of the voting and non-voting common equity held by its non-affiliates of \$75 million or more, but less than \$700 million, as of the last business day of the issuer’s most recently completed second fiscal quarter; (ii) the issuer has been subject to the requirements of Section 13(a) or 15(d) of the Exchange Act for a period of at least twelve calendar months; and (iii) the issuer has filed at least one annual report pursuant to Section 13(a) or 15(d) of the Exchange Act; and (iv) the issuer is not eligible to use the requirements for SRCs under the revenue test in paragraph (2) or (3)(iii)(B) of the SRC definition in Rule 12b–2. 17 CFR 240.12b–2 (defining AF and providing how and when an issuer determines whether it qualifies as an AF).

<sup>67</sup> See *infra* section II.H. The final rules define the terms “Scope 1 emissions” (direct GHG emissions from operations that are owned or controlled by a

- The capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions, such as hurricanes, tornadoes, flooding, drought, wildfires, extreme temperatures, and sea level rise, subject to applicable one percent and de minimis disclosure thresholds;<sup>68</sup>

- The capitalized costs, expenditures expensed, and losses related to carbon offsets and renewable energy credits or certificates (“RECs”) if used as a material component of a registrant’s plans to achieve its disclosed climate-related targets or goals; and<sup>69</sup>

- If the estimates and assumptions a registrant uses to produce the financial statements were materially impacted by risks and uncertainties associated with severe weather events and other natural conditions, such as hurricanes, tornadoes, flooding, drought, wildfires, extreme temperatures, and sea level rise, or any disclosed climate-related targets or transition plans, a qualitative description of how the development of such estimates and assumptions was impacted.<sup>70</sup>

In addition, under the final rules, a registrant that is required to disclose Scopes 1 and/or 2 emissions and is an LAF or AF must file an attestation report in respect of those emissions subject to phased in compliance dates. An AF must file an attestation report at the limited assurance level beginning the third fiscal year after the compliance date for disclosure of GHG emissions. An LAF must file an attestation report at the limited assurance level beginning the third fiscal year after the compliance date for disclosure of GHG emissions, and then file an attestation report at the reasonable assurance level beginning the seventh fiscal year after the compliance date for disclosure of GHG emissions. The final rules also require a registrant that is not required to disclose its GHG emissions or to include a GHG emissions attestation report pursuant to the final rules to disclose certain information if the registrant voluntarily discloses its GHG emissions in a Commission filing and voluntarily subjects those disclosures to third-party assurance.

The final rules reflect a number of modifications to the proposed rules based on the comments we received. As discussed in more detail below, we have

registrant) and “Scope 2 emissions” (indirect GHG emissions from the generation of purchased or acquired electricity, steam, heat, or cooling that is consumed by operations owned or controlled by a registrant).

<sup>68</sup> See *infra* section I.L.K.

<sup>69</sup> See *infra* section I.L.K.

<sup>70</sup> See *infra* section I.L.K.

revised the proposed rules in several respects, including by:

- Adopting a less prescriptive approach to certain of the final rules, including, for example, the climate-related risk disclosure, board oversight disclosure, and risk management disclosure requirements;<sup>71</sup>

- Qualifying the requirements to provide certain climate-related disclosures based on materiality, including, for example, disclosures regarding impacts of climate-related risks, use of scenario analysis, and maintained internal carbon price;

- Eliminating the proposed requirement to describe board members’ climate expertise;

- Eliminating the proposed requirement for all registrants to disclose Scope 1 and Scope 2 emissions and instead requiring such disclosure only for LAFs and AFs, on a phased in basis, and only when those emissions are material and with the option to provide the disclosure on a delayed basis;

- Exempting SRCs and EGCs from the Scope 1 and Scope 2 emissions disclosure requirement;

- Modifying the proposed assurance requirement covering Scope 1 and Scope 2 emissions for AFs and LAFs by extending the reasonable assurance phase in period for LAFs and requiring only limited assurance for AFs;

- Eliminating the proposed requirement to provide Scope 3 emissions disclosure (which the proposal would have required in certain circumstances);

- Removing the requirement to disclose the impact of severe weather events and other natural conditions and transition activities on each line item of a registrant’s consolidated financial statements;

- Focusing the required disclosure of financial statement effects on capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions in the notes to the financial statements;

- Requiring disclosure of material expenditures directly related to climate-related activities as part of a registrant’s strategy, transition plan and/or targets and goals disclosure requirements under subpart 1500 of Regulation S–K rather than under Article 14 of Regulation S–X;

- Extending a safe harbor from private liability for certain disclosures,

<sup>71</sup> See *infra* sections I.L.C.1.c, I.E.1.c, and I.L.F.3 for discussions of how we made these disclosure requirements less prescriptive as compared to the proposed rules.

other than historic facts, pertaining to a registrant’s transition plan, scenario analysis, internal carbon pricing, and targets and goals;<sup>72</sup>

- Eliminating the proposal to require a private company that is a party to a business combination transaction, as defined by Securities Act Rule 165(f), registered on Form S–4 or F–4 to provide the subpart 1500 and Article 14 disclosures;

- Eliminating the proposed requirement to disclose any material change to the climate-related disclosures provided in a registration statement or annual report in a Form 10–Q (or, in certain circumstances, Form 6–K for a registrant that is a foreign private issuer that does not report on domestic forms); and

- Extending certain phase in periods.

## 2. Presentation and Submission of the Climate-Related Disclosures

The final rules provide that a registrant (both domestic and foreign private issuer<sup>73</sup>) must:

- File the climate-related disclosure in its registration statements and Exchange Act annual reports;<sup>74</sup>

- Include the climate-related disclosures required under Regulation S–K, except for any Scopes 1 and/or 2 emissions disclosures, in a separate, appropriately captioned section of its filing or in another appropriate section of the filing, such as Risk Factors, Description of Business, or Management’s Discussion and Analysis of Financial Condition and Results of Operations (“MD&A”), or, alternatively, by incorporating such disclosure by reference from another Commission filing as long as the disclosure meets the

<sup>72</sup> In addition, the existing safe harbors for forward-looking statements under the Securities Act and Exchange Act will be available for other aspects of the climate-related disclosures. See Securities Act section 27A [15 U.S.C. 77z–2], Exchange Act section 21E [15 U.S.C. 78u–5], 17 CFR 230.175 (“Securities Act Rule 175”) and 17 CFR 240.3b–6 (“Exchange Act Rule 3b–6”).

<sup>73</sup> As defined by Commission rules, a foreign private issuer is any foreign issuer other than a foreign government except an issuer meeting the following conditions as of the last business day of its most recently completed second fiscal quarter: more than 50% of the outstanding voting securities of such issuer are directly or indirectly owned of record by residents of the United States; and either the majority of its executive officers or directors are United States citizens or residents, more than 50% of the assets of the issuer are located in the United States, or the business of the issuer is administered principally in the United States. See 17 CFR 230.405 and 17 CFR 240.3b–4. See *infra* section I.L.3 for a discussion of certain types of registrants (both domestic and foreign private issuer) that are not subject to the final rules.

<sup>74</sup> See *infra* section I.L.N.3.

electronic tagging requirements of the final rules;<sup>75</sup>

- If required to disclose its Scopes 1 and 2 emissions,<sup>76</sup> provide such disclosure:

- If a registrant filing on domestic forms, in its annual report on Form 10-K, in its quarterly report on Form 10-Q for the second fiscal quarter in the fiscal year immediately following the year to which the GHG emissions metrics disclosure relates incorporated by reference into its Form 10-K, or in an amendment to its Form 10-K filed no later than the due date for the Form 10-Q for its second fiscal quarter;<sup>77</sup>

- If a foreign private issuer not filing on domestic forms, in its annual report on Form 20-F, or in an amendment to its annual report on Form 20-F, which shall be due no later than 225 days after the end of the fiscal year to which the GHG emissions metrics disclosure relates;<sup>78</sup> and

- If filing a Securities Act or Exchange Act registration statement, as of the most recently completed fiscal year that is at least 225 days prior to the date of effectiveness of the registration statement;

- If required to disclose Scopes 1 and 2 emissions, provide such disclosure for the registrant's most recently completed fiscal year and, to the extent previously disclosed, for the historical fiscal year(s) included in the filing;<sup>79</sup>

- If required to provide an attestation report over Scope 1 and Scope 2 emissions, provide such attestation report and any related disclosures in the filing that contains the GHG emissions disclosures to which the attestation report relates;<sup>80</sup>

- Provide the financial statement disclosures required under Regulation S-X for the registrant's most recently completed fiscal year, and to the extent previously disclosed or required to be disclosed, for the historical fiscal year(s) included in the filing, in a note to the registrant's audited financial statements;<sup>81</sup> and

- Electronically tag both narrative and quantitative climate-related disclosures in Inline XBRL.<sup>82</sup>

### 3. Safe Harbor for Certain Climate-Related Disclosures

The final rules provide a safe harbor for climate-related disclosures pertaining to transition plans, scenario analysis, the use of an internal carbon price, and targets and goals, provided pursuant to Regulation S-K sections 229.1502(e), 229.1502(f), 229.1502(g), and 229.1504. The safe harbor provides that all information required by the specified sections, except for historical facts, is considered a *forward-looking statement* for purposes of the Private Securities Litigation Reform Act ("PSLRA")<sup>83</sup> safe harbors for forward-looking statements provided in section 27A of the Securities Act<sup>84</sup> and section 21E of the Exchange Act<sup>85</sup> ("PSLRA safe harbors").<sup>86</sup>

### 4. Phase in Periods

As discussed in more detail below,<sup>87</sup> the final rules will be phased in for all registrants, with the compliance date dependent upon the status of the registrant as an LAF, an AF, a non-accelerated filer ("NAF"),<sup>88</sup> SRC, or EGC, and the content of the disclosure.

## II. Discussion

### A. Overview and Purpose of the Climate-Related Disclosure Rules

#### 1. Proposed Rules

##### a. Consistent, Comparable, and Reliable Disclosures for Investors

The Commission proposed the climate-related disclosure rules in order to elicit more consistent, comparable, and reliable information for investors to enable them to make informed assessments of the impact of climate-related risks on current and potential investments.<sup>89</sup> Accordingly, the Commission proposed to amend Regulation S-K to add a new subpart 1500 that would require a registrant to disclose: any material climate-related impacts on its strategy, business model, and outlook; its governance of climate-related risks; its climate-related risk management; GHG emissions metrics;

and climate-related targets and goals, if any.<sup>90</sup>

The Commission also proposed to amend Regulation S-X to add a new article (Article 14), which would have required a registrant to disclose in a note to its financial statements certain disaggregated climate-related financial statement metrics.<sup>91</sup> The proposed rules would have required disclosure falling under the following three categories of information: financial impact metrics; expenditure metrics; and financial estimates and assumptions. The Commission proposed the financial statement metrics requirement to increase transparency about how climate-related risks impact a registrant's financial statements.<sup>92</sup> Under the proposed amendments to both Regulation S-K and Regulation S-X, disclosure of climate-related opportunities would be optional.

As noted above, the proposed rules were modeled on the TCFD disclosure framework.<sup>93</sup> The TCFD framework consists of four core themes that provide a structure for the assessment, management, and disclosure of climate-related financial risks: governance, strategy, risk management, and metrics and targets.<sup>94</sup> The Commission proposed to model its climate-related disclosure rules on the TCFD framework given that many registrants and their investors are already familiar with the framework and are making disclosures voluntarily consistent with the framework. The Commission indicated that this should help to mitigate both the compliance burden for registrants and any burdens faced by investors in analyzing the new disclosures and would facilitate comparability across registrants.<sup>95</sup>

##### b. Proposed Location of the Disclosure

In proposing to include the climate-related disclosure rules in Regulation S-K and Regulation S-X, the Commission stated its belief that the proposed disclosure would be fundamental to investors' understanding of the nature of a registrant's business and its operating prospects and financial performance and, therefore, should be presented together with other disclosure about the registrant's business and financial condition.<sup>96</sup> The Commission proposed to require a registrant to include the climate-related disclosure in Securities

<sup>75</sup> See *infra* section II.A.3.

<sup>76</sup> See, e.g., *infra* section II.H.3.c (noting that unlike the proposed rules, which would have exempted SRCs from the requirement to disclose Scope 3 emissions, the final rules will exempt SRCs and EGCs from any requirement to disclose its GHG emissions, including its Scopes 1 and 2 emissions).

<sup>77</sup> See *infra* section II.H.3.d.

<sup>78</sup> See *infra* section II.H.3.d.

<sup>79</sup> See *infra* section II.H.3.d.

<sup>80</sup> See *infra* section III.

<sup>81</sup> See *infra* section II.K.

<sup>82</sup> See *infra* section II.M.3.

<sup>83</sup> Public Law 104-67, 109 Stat. 737.

<sup>84</sup> 15 U.S.C. 77z-2.

<sup>85</sup> 15 U.S.C. 78u-5.

<sup>86</sup> See *infra* sections II.D and II.J.3.

<sup>87</sup> See *infra* section II.O.

<sup>88</sup> Although Rule 12b-2 defines the terms "accelerated filer" and "large accelerated filer," see *supra* notes 65-66, it does not define the term "non-accelerated filer." If an issuer does not meet the definition of AF or LAF, it is considered a NAF. See *Accelerated Filer and Large Accelerated Filer Definitions*, Release No. 34-88365 (Mar. 12, 2020) [85 FR 17178, 17179 n.5 (Mar. 26, 2020)].

<sup>95</sup> See Proposing Release, section II.A.1.

<sup>96</sup> See Proposing Release, section II.A.2.

Act or Exchange Act registration statements and Exchange Act annual reports in a separately captioned “Climate-Related Disclosure” section and in the financial statements. The Commission stated that the proposed presentation would facilitate review of the climate-related disclosure by investors alongside other relevant company financial and non-financial information and further the comparability of the disclosure across registrants.<sup>97</sup>

The Commission also proposed to permit a registrant to incorporate by reference disclosure from other parts of the registration statement or annual report (*e.g.*, Risk Factors, MD&A, Description of Business, or the financial statements) or from other filed or submitted reports into the Climate-Related Disclosure section if it would be responsive to the topics specified in the proposed Regulation S–K items and if the registrant satisfied the incorporation by reference requirements under the Commission’s rules and forms. As the Commission explained, allowing incorporation by reference for the Regulation S–K climate-related disclosure would be consistent with the treatment of other types of business disclosure under our rules and would provide some flexibility for registrants while reducing redundancy in disclosure.<sup>98</sup>

## 2. Comments

Many commenters, including both investors and registrants, stated that climate-related risks can have material impacts on companies’ financial position or performance.<sup>99</sup> Commenters indicated that when it is available, information about climate-related risks is currently used to assess the future financial performance of public companies and inform investment decision-making.<sup>100</sup> Some commenters provided specific examples of how that type of information helps investors make investment decisions today.<sup>101</sup>

However, many commenters stated that the Commission’s current reporting requirements do not yield adequate or sufficient information regarding climate-related risks.<sup>102</sup> Many commenters also expressed the view that the current, largely voluntary reporting of climate-related information under various third-party frameworks, which differ in certain respects, has allowed registrants to selectively choose which climate-related disclosures to provide and has failed to produce complete, consistent, reliable, and comparable information with the level of detail needed by investors to assess the financial impact of climate-related risks on registrants.<sup>103</sup> Commenters stated that, despite the Commission’s issuance of the 2010 Guidance, registrants often provided climate-related disclosure that is boilerplate, with some being or bordering on “greenwashing.”<sup>104</sup> Commenters further indicated that investors, both institutional and retail,<sup>105</sup> were in need of more

<sup>102</sup> See, *e.g.*, letters from AllianceBernstein; Amer. for Fin. Reform, Sunrise Project *et al.*; As You Sow (June 21, 2022); BlackRock; Bloomberg; Boston Common Asset Mgmt.; CalPERS; CalSTRS; Calvert; Ceres; Consumer Federation of America (June 17, 2022) (“CFA”); Franklin Templeton Investments (June 17, 2022) (“Franklin Templeton”); Harvard Mgmt.; IAA; Miller/Howard; Morningstar; New York State Comptroller (June 3, 2022) (“NY St. Comptroller”); Principles for Responsible Investment (Consultation Response) (June 17, 2022) (“PRI”); Soros Fund; Union of Concerned Scientists (June 17, 2022) (“UCS”); US SIF (June 17, 2022); and Wellington Mgmt.

<sup>103</sup> See, *e.g.*, letters from BlackRock; Bloomberg; Calvert; Ceres; Franklin Templeton; Miller/Howard; PRI; and US SIF.

<sup>104</sup> See, *e.g.*, letters from Ceres; Interfaith Center on Corporate Responsibility (June 17, 2022) (“ICCR”); and Maple-Brown Abbott (May 31, 2022) (“Maple-Brown”). As the Commission stated when proposing the climate disclosure rules, there does not appear to be a universally accepted definition of “greenwashing.” See Proposing Release, section IV.C.1. The Commission did not define greenwashing in the Proposing Release and is not defining it now. As a general matter, others have defined greenwashing to mean the set of activities conducted by firms or funds to falsely convey to investors that their investment products or practices are aligned with environmental or other ESG principles. See Proposing Release, section IV.C.1. See also OICU–IOSCO Supervisory Practices to Address Greenwashing, (Dec 2023), available at <https://www.iosco.org/library/pubdocs/pdf/IOSCOPD750.pdf>.

<sup>105</sup> See, *e.g.*, letters from Americans for Financial Reform Education Fund and Public Citizen (June 16, 2022) (“Amer. for Fin. Reform and Public Citizen”) (noting that the commenters commissioned a survey of retail investors and describing the results of that survey as “show[ing] that investors care about climate-related risks and opportunities of public companies, support the SEC requiring climate-related disclosures with third-party audit, and would factor the information disclosed into their investment practices”); Ceres (Dec. 2, 2022); and PRI; see also *supra* note 40 (noting that most individual retail investors and firms advising such investors who submitted comments supported the proposed rules and citing

consistent and comparable climate-related disclosure to enable them to make fully informed decisions and ensure securities are priced to better reflect climate-related risk.<sup>106</sup> Commenters indicated that adoption of mandatory, climate-related disclosure rules would improve the timeliness, quality, and reliability of climate-related information, which would facilitate investors’ comparison of climate-related risks and lead to more accurate securities valuations.<sup>107</sup> Commenters also stated that, as governments and registrants have increasingly made pledges and enacted laws regarding a transition to a lower carbon economy, more consistent and reliable climate-related disclosure has become particularly important to help investors assess the reasonably likely financial impacts to a registrant’s business, results of operations, and financial condition in connection with such governmental pledges or laws and the related financial and operational impacts of a registrant’s progress in achieving its publicly announced, climate-related targets and goals.<sup>108</sup>

comment letters from some retail investors and investment advisers in support of that proposition); *infra* note 139 (citing several comment letters in support of the proposition that retail investors have stated that they found much of the voluntary climate-related reporting to be lacking in quality and completeness and difficult to compare and as a result have incurred costs and inefficiencies when attempting to assess climate-related risks and their effect on the valuation of a registrant’s securities). But see, *e.g.*, letter from Soc. Corp. Gov. (asserting that the retail investor survey in the letter from Amer. for Fin. Reform and Public Citizen “do[es] not support the position that retail investors demand more climate-related information in companies’ SEC filings, and certainly not the detailed disclosures that would be required under the Proposed Rule” based on its criticisms of the questions in the survey and calculation methodologies that the letter Amer. for Fin. Reform and Public Citizen used to report findings from the survey).

<sup>106</sup> See, *e.g.*, letters from Bloomberg; Ceres; and Miller/Howard.

<sup>107</sup> See, *e.g.*, letters from CalSTRS (stating that “[u]sing the TCFD framework as the basis for guiding issuers to more comparable disclosures would help [investors] more easily compare companies’ approach to climate risk management in a timelier fashion”); Ceres (stating that “the proposed rule would promote both allocative and informational efficiency” and that “[t]imely, comparable information about each company’s climate related risks and opportunities would improve informational efficiency, leading to more accurate valuation”); and PwC (stating that “[m]andatory disclosure in annual filings—including the notes to the financial statements—would enhance comparability while ensuring that the timeliness, quality, and reliability of climate information is commensurate with that of the financial data”).

<sup>108</sup> See, *e.g.*, letters from Amer. for Fin. Reform (Dec. 1, 2022) (stating that, with passage of the Inflation Reduction Act, investors will need the Commission’s proposed climate-related disclosures to determine which companies and sectors are best

<sup>101</sup> See, *e.g.*, letters from CalSTRS; Calvert; and Wellington Mgmt.

Other commenters, however, opposed adoption of the proposed rules and requested either that the Commission rescind the proposal or make significant revisions in the final rules.<sup>109</sup> Some of these commenters, while opposing specific aspects of the proposed rules, agreed with the overall intent of the proposal or otherwise stated that rules requiring climate-related information were appropriate and would be helpful to investors.<sup>110</sup> As discussed in more detail below, other commenters asserted that the Commission lacks statutory authority to adopt the proposed climate-related disclosure rules.<sup>111</sup> Other commenters asserted that current voluntary reporting practices are sufficient to serve the needs of investors and markets, and so the proposed rules are unnecessary.<sup>112</sup> Similarly, some opposing commenters stated that, because in their view the Commission's current disclosure regime already requires a registrant to disclose climate-related risks if material, adoption of the proposed rules would impose a significant burden on registrants while

positioned and ready to capitalize on the IRA's GHG reduction incentives over the coming decade, and to analyze the progress towards and profitability of companies' transition strategies in this new investment context); CalPERS; and Ceres.

<sup>109</sup> See, e.g., letters from American Bar Association, Business Law Section (June 24, 2022) ("ABA"); Chamber; David R. Burton, Senior Fellow in Economic Policy, The Heritage Foundation (June 17, 2022) ("D. Burton, Heritage Fdn."); NAM; and Soc. Corp. Gov. See also Form Letter AG.

<sup>110</sup> See letters from Bank of America (June 17, 2022) ("BOA") ("Various stakeholders, including asset owners and asset managers, will benefit from consistent, standardized disclosures addressing climate-related risks and opportunities to help them make decisions on where best to deploy capital in alignment with investor goals."); Bank Policy Institute (June 16, 2022) ("BPI"); Dominion Energy, Inc. (June 17, 2022) ("Dominion Energy") ("We believe climate-related disclosures are important to our investors and support the Commission's efforts to design rules and guidance to provide investors with the disclosures that they need in order to make informed decisions."); Long-Term Stock Exchange (June 17, 2022) ("LTSE") (stating that climate "represents an investment risk, and investors deserve to understand what public companies are doing to address this issue. . . [w]e believe the proposal represents a significant step toward standardizing, clarifying and verifying disclosures so as to enable investors to make more informed investment decisions. . ."); United Air. (June 17, 2022); and Walmart Inc. (June 17, 2022) ("Walmart") ("The Company supports the adoption of rules that can facilitate the disclosure of consistent, comparable, and reliable material climate-related information.");

<sup>111</sup> See *infra* section II.B. Some of these commenters stated that the Commission exceeded its statutory authority when issuing the proposed rules because those rules would require disclosure of information that is not financially material and is only of general or environmental interest. See, e.g., letters from Boyden Gray (June 17, 2022); D. Burton, Heritage Fdn.; and National Ocean Industries Association (June 17, 2022) ("NOIA").

<sup>112</sup> See, e.g., letters from Chamber; NAM; and Soc. Corp. Gov.

resulting in little additional benefit for investors.<sup>113</sup> Opposing commenters further stated that, because the proposed rules were overly prescriptive and not bound in every instance by materiality, their adoption would result in the disclosure of a large volume of immaterial information that would be confusing for investors.<sup>114</sup>

Many commenters supported basing the Commission's climate disclosure rules on the TCFD framework.<sup>115</sup> Commenters stated that because the TCFD framework has been widely accepted globally by both issuers and investors, its use as a model for the Commission's rules would help elicit climate-related disclosures that are consistent, comparable, and reliable.<sup>116</sup> Commenters also stated that basing the Commission's climate disclosure rules on the TCFD framework would benefit investors because of their familiarity with the framework and its usefulness in understanding the connection between climate-related risk and financial impact.<sup>117</sup> Commenters also stated that basing the Commission's climate-related disclosure rules on the TCFD framework, with which many registrants are familiar and already using, should help mitigate the compliance burden.<sup>118</sup>

One commenter expressed support for basing the rule proposal on the TCFD

framework while also stating that the Commission should consider requiring the use of the International Sustainability Standards Board's ("ISSB") climate reporting standard.<sup>119</sup> This commenter noted that, like the rule proposal, the ISSB climate reporting standard is based on the TCFD framework. This commenter, among others, stated that requiring the use of, or basing the Commission's climate disclosure rules on, the ISSB climate reporting standard would contribute substantially to the establishment of a global climate disclosure baseline, which would reduce the reporting burden on companies listed in multiple jurisdictions.<sup>120</sup> Some commenters, however, opposed basing the Commission's climate disclosure rules on the TCFD framework. One commenter stated that the Commission should not base its rules on a disclosure framework, such as the TCFD framework, that has not been developed by a U.S. regulatory agency because there is no process in place for domestic companies, such as oil and gas companies, to provide their input into potential changes to the framework.<sup>121</sup> Another commenter stated that the Commission should not base its climate disclosure rules on the TCFD because, in its view, there is currently no third-party framework, including the TCFD, capable of providing reliable and consistent metrics for climate-related risks.<sup>122</sup> A different commenter disputed that U.S. companies have widely adopted the TCFD framework and recommended instead that the Commission base its climate disclosure rules on the EPA's Greenhouse Gas Reporting Program, with which many U.S. registrants are familiar.<sup>123</sup>

Commenters expressed mixed views regarding the proposed location of the climate-related disclosure rules. Many commenters supported the proposed placement of climate-related disclosure rules in a new subpart of Regulation S-K and the placement of the proposed financial metrics in a new article of

<sup>119</sup> See letter from CalSTRS.

<sup>120</sup> See *id.*; see also letters from Douglas Hileman Consulting LLC (May 2, 2022) ("D. Hileman Consulting"); T Rowe Price (June 16, 2022); and Vodafone Group Plc (June 17, 2022) ("Vodafone") (stating that the Commission should allow the use of the ISSB climate reporting standard as an alternative reporting regime to the Commission's climate disclosure rules).

<sup>121</sup> See letter from Petroleum Alliance of Oklahoma (June 16, 2022) ("Petrol. OK").

<sup>122</sup> See letter from Reason Foundation (June 17, 2022) ("Reason Fnd.");

<sup>123</sup> See letter from Western Midstream Partners, LP (June 15, 2022) ("Western Midstream").

Regulation S–X.<sup>124</sup> Commenters stated that amending Regulation S–K and Regulation S–X to include climate-related disclosure requirements would facilitate the presentation of climate-related business and financial information as part of a registrant’s regular business reporting<sup>125</sup> and appropriately reflect the fact that information about climate-related risks is essential to investors’ decision-making and fundamental to understanding the nature of a company’s operating prospects and financial performance.<sup>126</sup> Commenters further stated that requiring climate-related disclosures in annual filings, including the notes to the financial statements, would enhance the accessibility, comparability, and reliability of such disclosures for investors.<sup>127</sup>

Many other commenters, however, opposed adoption of the proposed financial metrics under Regulation S–X because of various concerns relating to implementation and interpretation of the proposed financial metrics.<sup>128</sup> A number of these commenters recommended instead requiring disclosure of the financial impact of climate-related events as part of a registrant’s MD&A pursuant to 17 CFR 229.303 (“Item 303 of Regulation S–K”).<sup>129</sup>

Commenters also had mixed views on the proposed placement of the climate-related disclosures in a separately captioned section of a registration statement or annual report. Several

commenters supported the proposed placement because it would facilitate access to and comparability of the climate-related disclosures for investors.<sup>130</sup> Commenters also supported the proposed alternative to permit registrants to incorporate by reference climate-related disclosures from other sections of a filing or from other filings because it would avoid duplication in the filing, would add flexibility regarding the presentation of the disclosures, and would be consistent with the Commission’s incorporation by reference rules regarding other types of disclosure.<sup>131</sup> Some of the commenters specifically recommended allowing registrants to include climate-related governance disclosure in their proxy statements, which could then be incorporated by reference into their annual reports.<sup>132</sup>

Some commenters opposed placing climate-related disclosures in a separate section of a filing, asserting that existing sections, such as MD&A and Risk Factors, are more appropriate places to provide the climate-related disclosures and stating that it should be up to each registrant to determine the most suitable place for such disclosure.<sup>133</sup> Some commenters recommended that the Commission require some or all of the climate-related disclosures to be included in a new, separate report to be furnished to the Commission following the filing of the annual report because of concerns about the timing and liability for disclosures related to GHG emissions, financial metrics, and certain other aspects of the climate-related disclosures.<sup>134</sup>

### 3. Final Rules

As discussed in greater detail below, we are adopting climate-related disclosure rules because, as many commenters have indicated, despite an

increase in climate-related information being provided by some companies since the Commission issued its 2010 Guidance, there is a need to improve the consistency, comparability, and reliability of climate-related disclosures for investors.<sup>135</sup> As climate-related risks have become more prevalent,<sup>136</sup> investors have increasingly sought information from registrants about the actual and potential impacts of climate-related risks on their financial performance or position.<sup>137</sup> Both

<sup>135</sup> See *supra* notes 102 and 103 and accompanying text. The Commission also stated in the Proposing Release that, as part of its filing review process, Commission staff had assessed the extent to which registrants currently disclose climate-related risks in their filings. Proposing Release at 21339. The staff noted that, since 2010, disclosures climate-related disclosures have generally increased, but there is considerable variation in the content, detail, and location (*i.e.*, in reports filed with the Commission, in sustainability reports posted on registrant websites, or elsewhere) of climate-related disclosures. *Id.* The staff also observed significant inconsistency in the depth and specificity of disclosures by registrants across industries and within the same industry. *Id.* The staff found significantly more extensive information in registrants’ sustainability reports and other locations such as their websites as compared with their reports filed with the Commission. *Id.* In addition, the disclosures in registrants’ Forms 10–K frequently contained general, boilerplate discussions that provide limited information as to the registrants’ assessment of their climate-related risks or their impact on the companies’ business. *Id.*

<sup>136</sup> See, *e.g.*, US Global Change Research Program, *The Fifth National Climate Assessment* (2023) (stating that extreme weather events cause direct economic losses through infrastructure damage, disruptions in labor and public services, and losses in property values, and that the United States currently experiences an extreme weather event causing a billion dollars or more in costs and losses every three weeks compared to one such event every four months in the 1980s).

institutional<sup>138</sup> and retail investors<sup>139</sup> have stated that they found much of the voluntary climate-related reporting to be lacking in quality and completeness and difficult to compare and as a result have incurred costs and inefficiencies when attempting to assess climate-related risks and their effect on the valuation of a registrant's securities. Moreover, although the 2010 Guidance reflects that climate-related information may be called for by current Commission disclosure requirements, climate-related information has often been provided outside of Commission filings, such as in sustainability reports or other documents posted on registrants' websites, which are not subject to standardized disclosure rules, and, as noted by some commenters, are not necessarily prepared with the informational needs of investors in mind.<sup>140</sup> Such information also may not

be prepared with the same level of rigor that results from the disclosure controls and procedures ("DCP") required for disclosure in Commission filings,<sup>141</sup> and as a result may not be as reliable.<sup>142</sup>

Consistent with and as authorized by our enabling statutes, we are adopting the climate-related disclosure requirements discussed herein, so that investors will have the information they need to make informed investment and voting decisions by evaluating a registrant's exposure to material climate-related risks. We modeled the proposed disclosure requirements in large part on the TCFD framework. As discussed in the Proposing Release and as many commenters noted, that framework has been widely accepted by issuers and investors.<sup>143</sup> The TCFD framework focuses on matters that are material to an investment or voting decision and is grounded in concepts that tie climate-related risk disclosure considerations to matters that may affect the results of operations, financial condition, or business strategy of a registrant. Because the TCFD framework is intended to elicit disclosure of climate-related risks that have materially affected or are reasonably likely to materially affect the business, results of operations, or financial condition of a company, it served as an appropriate model for the Commission's proposed climate-related disclosure rules. We therefore disagree with commenters that stated that the Commission's proposed rules would require disclosure of information that is primarily of general or environmental

prepared using a basis of presentation designed for a stakeholder group with different information needs than investors and other providers of capital<sup>144</sup>.

<sup>141</sup> See Rule 13a-15 and Rule 15d-15 [17 CFR 240.13a-15 and 17 CFR 240.15d-15]. Pursuant to Exchange Act Rules 13a-15 and 15d-15, a company's principal executive officer and principal financial officer must make certifications regarding the maintenance and effectiveness of disclosure controls and procedures. These rules define "disclosure controls and procedures" as those controls and procedures designed to ensure that information required to be disclosed by the company in the reports that it files or submits under the Exchange Act is (1) "recorded, processed, summarized and reported, within the time periods specified in the Commission's rules and forms," and (2) "accumulated and communicated to the company's management . . . as appropriate to allow timely decisions regarding required disclosure."

<sup>142</sup> See, e.g., letter from Ceres; see also letter from Calvert (stating that "we believe the disclosures mandated by the SEC in the proposed rule should be filed in annual reports, as well as quarterly reports where appropriate" because "it is supported by disclosure controls, CEO/CFO certification, audit requirements and a level of scrutiny by management appropriate for climate risks").

<sup>143</sup> See *supra* notes 115 and 116 and accompanying text.

interest and not of financial interest.<sup>144</sup> The final rules continue to reflect many of the TCFD's recommendations, modified based on the input of commenters, which will enhance the usefulness and comparability of the required climate-related disclosures for investors and better serve their informational needs when making investment and voting decisions.<sup>145</sup>

At the same time, in consideration of some commenters' concerns,<sup>146</sup> we have revised the proposed climate-related disclosure requirements in certain respects to reduce the likelihood that the final rules result in disclosures that could be less useful for investors and costly for registrants to produce and to provide added flexibility for registrants regarding the content and presentation of the disclosure. Modeling the climate-related disclosure requirements on the TCFD framework while also adopting these revisions will help mitigate the compliance burden of the final rules, particularly for registrants that are already providing climate-related disclosures based on the TCFD framework or soon will be doing so pursuant to other laws or regulations.<sup>147</sup>

In this regard, we note certain ongoing developments related to climate-risk reporting:

- The formation of the ISSB by the IFRS Foundation<sup>148</sup> in November 2021, which consolidated several sustainability disclosure organizations into a single organization.<sup>149</sup> In June

<sup>144</sup> See *supra* note 111 and accompanying text.

<sup>145</sup> See *supra* note 107 and accompanying text.

<sup>146</sup> See, e.g., *supra* note 109 and accompanying text.

<sup>147</sup> See *supra* sections I.B. In this regard, we note that some commenters recommended that the Commission require or allow the use of the ISSB's climate-related disclosure standards as an alternative to the Commission's climate disclosure rules. See *supra* note 120 and accompanying text. While we acknowledge that there are similarities between the ISSB's climate-related disclosure standards and the final rules, and that registrants may operate or be listed in jurisdictions that will adopt or apply the ISSB standards in whole or in part, those jurisdictions have not yet integrated the ISSB standards into their climate-related disclosure rules. Accordingly, at this time we decline to recognize the use of the ISSB standards as an alternative reporting regime.

<sup>148</sup> The IFRS Foundation refers to the International Financial Reporting Standards Foundation, whose mission is to develop high-quality IFRS Standards that bring transparency, accountability, and efficiency to financial markets around the world. See IFRS—Who we are, available at <https://www.ifrs.org/about-us/who-we-are/>.

<sup>149</sup> See IFRS Foundation, IFRS Foundation announces International Sustainability Standards Board, consolidation with CDSB and VRF, and publication of prototype disclosure requirements (Nov. 3, 2021), available at <https://www.ifrs.org/news-and-events/news/2021/11/ifrs-foundation-announces-issb-consolidation-with-cdsb-vrf-publication-of-prototypes/>. See also Proposing Release, section I.C.2.

2023, the ISSB issued General Requirements for Disclosure of Sustainability-related Financial Information (“IFRS S1”) and Climate-related Disclosures (“IFRS S2”).<sup>150</sup> Notably, IFRS S1 and S2 integrate the recommendations of the TCFD.<sup>151</sup>

- Several jurisdictions have announced plans to adopt, apply, or otherwise be informed by the ISSB standards, including Australia, Brazil, Canada, Hong Kong, Japan, Malaysia, Nigeria, Singapore, and the United Kingdom (“UK”), although it is not yet clear how specifically the ISSB standards may be incorporated into certain foreign legal frameworks.<sup>152</sup>

- Other jurisdictions were already well advanced in the process of adopting climate disclosure rules when the ISSB standards were announced. For example, in 2022, the European Union (“EU”) adopted the Corporate Sustainability Reporting Directive (“CSRD”),<sup>153</sup> which requires certain

<sup>150</sup> IFRS S1 sets out the general requirements for a company to disclose information about its sustainability related risks and opportunities. IFRS S2 sets out the requirements for companies to disclose information about their climate-related risks and opportunities, building on the requirements in IFRS S1. See IFRS—Project Summary IFRS Sustainability Disclosure Standards, IFRS S1 General Requirements for Disclosure of Sustainability-related Financial Information and IFRS S2 Climate-related Disclosures (June 2023), available at <https://www.ifrs.org/content/dam/ifrs/project/general-sustainability-related-disclosures/project-summary.pdf>.

<sup>151</sup> Concurrent with the release of its 2023 status report, the TCFD fulfilled its remit and transferred to the ISSB its responsibility for tracking company activities on climate-related disclosure. Fin. Stability Bd., *FSB Roadmap for Addressing Financial Risks from Climate Change Progress Report* (July 13, 2023), available at <https://www.fsb.org/wp-content/uploads/P130723.pdf>. As discussed *infra*, the TCFD recommendations are incorporated into the ISSB standards. Although the TCFD has disbanded, in this release we continue to refer to “TCFD recommendations” as distinct from ISSB standards, both for clarity and because not all jurisdictions that implemented TCFD-aligned disclosure requirements have implemented the broader and more recent ISSB standards.

<sup>152</sup> For example, the UK has announced that its Sustainability Disclosure Standards (“SDS”) will be based on the ISSB Standards. See Dep’t of Bus. & Trade, UK Sustainability Disclosure Standards, Gov.UK (Aug. 2, 2023), available at <https://www.gov.uk/guidance/uk-sustainability-disclosure-standards>. Australia recently published draft legislation mandating comprehensive climate-related reporting and assurance for large and medium-sized companies that is aligned with the ISSB Standards. See Australian Government—the Treasury, *Climate-related financial disclosure: exposure draft legislation* (Jan. 12, 2024), available at <https://treasury.gov.au/consultation/c2024-466491>.

<sup>153</sup> See Directive (EU) 2022/2464 of the European Parliament and of the Council of 14 December 2022 amending Regulation (EU) No 537/2014, Directive 2004/109/EC, Directive 2006/43/EC and Directive 2013/34/EU, as regards corporate sustainability reporting (Text with EEA relevance), available at [https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=uriserv%3AOJ.L\\_.2022.322.01.0015.01.ENG.In](https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=uriserv%3AOJ.L_.2022.322.01.0015.01.ENG.In)

large and listed companies and other entities, including non-EU entities, to report on sustainability-related issues in line with the European Sustainability Reporting Standards (“ESRS”).<sup>154</sup>

- California recently adopted the Climate-Related Financial Risk Act (Senate Bill 261), which will require certain public and private U.S. companies that do business in California and have over \$500 million in annual revenues to disclose their climate-related financial risks and measures based on the TCFD recommendations or a comparable disclosure regime in a report published biennially on the company’s website commencing no later than January 2026.<sup>155</sup>

- In addition, California recently adopted the Climate Corporate Data Accountability Act (Senate Bill 253), which will require certain public and private U.S. companies that do business in California and have over \$1 billion in annual revenues to disclose their GHG emissions (Scopes 1 and 2 emissions by 2026 and Scope 3 emissions by 2027).<sup>156</sup>

adopting the CSRD, the EU explained that there exists a widening gap between the sustainability information, including climate-related data, companies report and the needs of the intended users of that information, which may mean that investors are unable to take sufficient account of climate-related risks in their investment decisions.

<sup>154</sup> See *id.* The CSRD requires large companies and listed companies to publish regular reports on the social and environmental risks they face, and how their activities impact people and the environment. In July 2023, the European Commission (“EC”) adopted the delegated act containing the first set of ESRS under the CSRD and the ESRS became effective on Jan. 1, 2024, for companies within scope of the first phase of reporting under the CSRD. See EC, *Corporate sustainability reporting*, available at [https://finance.ec.europa.eu/capital-markets-union-and-financial-markets/company-reporting-and-auditing/company-reporting/corporate-sustainability-reporting\\_en](https://finance.ec.europa.eu/capital-markets-union-and-financial-markets/company-reporting-and-auditing/company-reporting/corporate-sustainability-reporting_en) (last visited Feb. 6, 2024). See also EC Press Release, *The Commission Adopts the European Sustainability Reporting Standards* (July 31, 2023), available at [https://finance.ec.europa.eu/news/commission-adopts-european-sustainability-reporting-standards-2023-07-31\\_en](https://finance.ec.europa.eu/news/commission-adopts-european-sustainability-reporting-standards-2023-07-31_en). Separate reporting standards will be developed for SMEs and certain non-EU companies operating in the EU. See EC, *Questions and Answers on the Adoption of European Sustainability Reporting Standards* (July 31, 2023), [https://ec.europa.eu/commission/presscorner/detail/en/qanda\\_23\\_4043](https://ec.europa.eu/commission/presscorner/detail/en/qanda_23_4043).

<sup>155</sup> See SB–261, *Greenhouse gases: climate-related financial risk* (Oct. 7, 2023), available at [https://leginfo.ca.gov/faces/billNavClient.xhtml?bill\\_id=202320240SB261](https://leginfo.ca.gov/faces/billNavClient.xhtml?bill_id=202320240SB261).

<sup>156</sup> See SB–253, *Climate Corporate Data Accountability Act* (Oct. 7, 2023), available at [https://leginfo.ca.gov/faces/billNavClient.xhtml?bill\\_id=202320240SB253](https://leginfo.ca.gov/faces/billNavClient.xhtml?bill_id=202320240SB253). The Act directs the California Air Resources Board (CARB) to adopt regulations to implement the requirements of the Act, with disclosures being required as early as 2026, subject to the CARB’s finalization of the rules. The Act further requires the disclosure of Scope 1 and Scope 2 emissions to be subject to assurance, which must be performed at a limited

These laws may reduce the compliance burden of the final rules to the extent they impose similar requirements for registrants that are subject to them. However, the disclosure required by these laws will appear in documents outside of Commission filings and therefore will not be subject to the same liability, DCPs, and other investor protections as the climate-related disclosures required under the final rules. In addition, these laws may serve different purposes than the final rules or apply different materiality or other standards. For example, the California laws were adopted to protect the health and safety of California residents,<sup>157</sup> among other reasons, whereas we are adopting the final rules to enhance disclosures of emergent risks companies face so that investors can have the information they need to make informed investment and voting decisions. Regardless of the extent of overlap with other jurisdictions’ reporting requirements and consistent with the Commission’s mission, the final rules are tailored to the particular needs of investors and the specific situations of Commission registrants, as documented in the comment file, and are designed to work within the existing framework of U.S. securities laws that call for disclosure about the material risks that companies face. Integrating the required disclosures into the existing framework of U.S. securities laws will provide investors with more complete information about a company, the risks it faces, and its business, finances, and results of operations while affording investors the protections of the securities laws for this information.

We acknowledge the concerns expressed by some commenters about relying on a third-party framework, such as the TCFD, that may not afford affected parties the ability to provide input on potential future changes.<sup>158</sup> While we considered the TCFD framework in both proposing and now adopting the Commission’s own climate-related disclosure rules, the final rules do not incorporate the TCFD recommendations or its procedures. Any future updates to the TCFD framework or any successor framework will have no bearing or impact on the

assurance level beginning in 2026 and at a reasonable assurance level beginning in 2030. See SB–253, section Il.c.1.F.ii. The statute is currently subject to litigation. See Compl., Chamber of Commerce v. California Air Resources Board, No. 2:24–cv–00801 (D. C.D. Cal. Jan. 30, 2024).

<sup>157</sup> See SB–253, *supra* note 156, at section 1 (stating that “Californians are already facing devastating wildfires, sea level rise, drought, and other impacts associated with climate change that threaten the health and safety of Californians. . .”).

<sup>158</sup> See letter from Petrol. OK.

final rules without future action by the Commission. Any consideration of such updates by the Commission will be subject to the Commission's own procedures, and any subsequent rulemaking to reflect those updates will be subject to the Administrative Procedure Act's requirements, including notice and comment, as well as requirements under other relevant laws. The final rules also do not follow every TCFD recommendation. For example, unlike the TCFD, which recommends the disclosure of executive compensation that is linked to climate-related risk management considerations, we have elected not to include such a requirement in the final rules, as discussed below.<sup>159</sup>

Like the proposed rules, the final rules amend Regulation S-K by adding a new section (subpart 1500) composed of the climate-related disclosure rules, other than for the financial statement disclosures, and Regulation S-X by adding a new article (Article 14) to govern the financial statement disclosures. We continue to believe that it is appropriate to amend Regulation S-K and Regulation S-X to require climate-related disclosures in Securities Act or Exchange Act registration statements and Exchange Act reports. Information about climate-related risks and their financial impacts is fundamental in many cases to understanding a company's financial condition and operating results and prospects and therefore should be treated like other business and financial information, including information on risks to the company.<sup>160</sup>

The proposed rules would have required a registrant to include its climate-related disclosures, other than its financial statement disclosures, either in a separately captioned "Climate-Related Disclosure" section in the registration statement or Exchange Act annual report or in other parts of the Commission filing that would then be incorporated by reference into the separately captioned section. While some commenters supported this proposal because it would facilitate the comparability of the disclosures among registrants,<sup>161</sup> other commenters stated that existing parts of the registration statement or annual report could be more appropriate for placement of the

climate-related disclosures, and indicated that it should be up to each registrant to determine the most suitable place for the disclosures according to the context of the disclosures and structure of the filing.<sup>162</sup>

While enhancing the comparability of climate-related disclosures remains an important objective of the rulemaking, we also recognize the benefits of granting each registrant sufficient flexibility to determine the most appropriate location within a filing for the disclosures based on its particular facts and circumstances. Therefore, the final rules leave the placement of the climate-related disclosures, other than the financial statement disclosures, largely up to each registrant. Further, we are adopting as proposed structured data requirements that will enable automated extraction and analysis of the information required by the final rules, further facilitating investors' ability to identify and compare climate-related disclosures, regardless of where they are presented.<sup>163</sup> A registrant may elect to place most of the subpart 1500 disclosures in a separately captioned "Climate-Related Disclosure" section. Alternatively, a registrant may elect to include these climate-related disclosures in applicable, currently existing parts of the registration statement or annual report (e.g., Risk Factors, Description of Business, or MD&A). If it chooses the latter alternative, then the registrant should consider whether cross-referencing the other disclosures in the separately captioned section would enhance the presentation of the climate-related disclosures for investors.

A registrant may also incorporate by reference some of the climate-related disclosures from other filed registration statements or Exchange Act reports if the incorporated disclosure is responsive to the topics specified in the Regulation S-K climate-related disclosure items and if the registrant satisfies the incorporation by reference requirements under the Commission's rules and forms.<sup>164</sup> In addition, any climate-related disclosure that is being incorporated by reference must include electronic tags that meet the final rules' structured data requirement.<sup>165</sup> As commenters noted, allowing incorporation by reference of climate-related disclosures will avoid duplication in the filing, add flexibility regarding the presentation of the

disclosures, and be consistent with the Commission's incorporation by reference rules regarding other types of disclosure.<sup>166</sup>

Some commenters recommended that we permit a registrant to include disclosure regarding its climate-related corporate governance in its proxy statement, together with its discussion of other corporate governance matters, which would then be incorporated by reference into the registrant's Form 10-K.<sup>167</sup> Form 10-K currently permits the incorporation by reference pursuant to General Instruction G.3 of certain corporate governance matters from a proxy statement involving the election of directors.<sup>168</sup> While disclosure pursuant to Item 401 of Regulation S-K, which pertains to the identification and business experience of directors and executive officers, is permitted to be incorporated by reference from the proxy statement, disclosure pursuant to Item 407(h) of Regulation S-K, which pertains to the board's leadership structure and its role in risk oversight, is not one of the enumerated matters permitted to be incorporated by reference from the proxy statement. As discussed below, the final rules do not include the proposed provisions that would have most likely elicited disclosure drawn from the information required by Item 401 (i.e., the proposed requirements to identify the board members responsible for the oversight of climate-related risks and to disclose whether any board member has expertise in climate-related risks).<sup>169</sup> Additionally, the retained governance provisions of the final rules require disclosure that is relevant to understanding more generally the board's oversight of climate-related risks and management's role in assessing and managing such risks, and do not necessarily pertain to the election of directors. For these reasons, while the final rules do not preclude incorporation by reference from a registrant's proxy statement to the extent allowed by existing rules,<sup>170</sup> we decline to expressly permit the disclosure to be incorporated by reference from a registrant's proxy statement pursuant to General Instruction G.3 of Form 10-K.

Placement of the new disclosures required by the final rules in Commission filings further serves our

investor protection goals because it will subject these disclosures to DCPs. These controls and procedures will enhance not only the reliability of the climate-related disclosures themselves, including both qualitative climate-related information and quantitative climate-related data, but also their accuracy and consistency.<sup>171</sup>

### B. Commission Authority To Adopt Disclosure Rules

Some commenters<sup>172</sup> asserted that the Commission lacks authority to promulgate the proposed rules. We disagree. The rules we are adopting fall within the statutory authority conferred

<sup>171</sup> See *supra* notes 141–142 and accompanying text. As we have stated before, a company's disclosure controls and procedures should not be limited to disclosure specifically required, but should also ensure timely collection and evaluation of "information potentially subject to [required] disclosure," "information that is relevant to an assessment of the need to disclose developments and risks that pertain to the [company's] businesses," and "information that must be evaluated in the context of the disclosure requirement of Exchange Act Rule 12b–20." *Certification of Disclosure in Companies' Quarterly and Annual Reports*, Release No. 33–8124 (Aug. 28, 2002) [67 FR 57275 (Sept. 9, 2002)].

<sup>172</sup> See, e.g., letter from Soc. Corp. Gov. (stating that the "subject of the Proposed Rule is clearly of great economic and political significance," and that "[a]bsent express authorization by Congress, we believe that the SEC fundamentally lacks the authority to promulgate the Proposed Rule"); see also letters from Bernard S. Sharfman (Feb. 6, 2024) (stating that the SEC "has exceeded its delegated authority in promulgating its proposed rule on climate-related disclosures by not adhering to the ascertainable standards found in the 33 and 34 Acts: 'for the protection of investors,' promoting 'efficiency, competition, and capital formation,' and 'materiality'"); Lawrence A. Cunningham and 21 other signatories (Apr. 25, 2022) ("Cunningham *et al.*") (stating that the "EPA's empowerment over this topic probably preempts any statutory authority the SEC might claim," that "the SEC's mission does not include adopting positions intended to promote particular conceptions of acceptable corporate behavior," and that "[c]limate change is a politically-charged issue" and the "Proposal would compel corporations and officials to regularly speak on those issues"); Patrick Morrissey, Attorney General of West Virginia, and the Attorneys General of 23 other states ("Morrissey *et al.*") (June 15, 2022) (stating that the proposed rule "sidesteps the materiality requirement," "offends the major questions doctrine," would "upend the balance between federal and state powers in the corporate sphere," and that "if the SEC's understanding of its powers were right, then the statutes providing it that authority would offend the non-delegation doctrine"); and Andrew N. Vollmer (May 9, 2022) (stating that adopting the proposal would "determine significant national environmental policies without direction from Congress, creating a high risk of proving to be a futile gesture because of the likelihood that a court will overturn final rules"); and Andrew N. Vollmer (Apr. 12, 2022) (stating that "[c]limate-change information is outside the scope of the subjects Congress has allowed the SEC to cover in disclosure rules, and adopting the Proposal would have a subject and objective different from the disclosure provisions in the federal securities laws"); Jones Day; Chamber; Bernard S. Sharfman & James R. Copland (June 16, 2022) ("Sharfman *et al.*").

by Congress through the Securities Act and the Exchange Act.

In section 7(a)(1) of the Securities Act,<sup>173</sup> Congress authorized the Commission to require, in a publicly filed registration statement, that issuers offering and selling securities in the U.S. public capital markets include information—such as the general character of the issuer's business, the remuneration paid to its officers and directors, details of its material contracts, and certain financial information—specified in Schedule A to that Act, as well as "such other information . . . as the Commission may by rules or regulations require as being necessary or appropriate in the public interest or for the protection of investors."<sup>174</sup> In addition, under sections 12(b) and (g) of the Exchange Act,<sup>175</sup> issuers of securities traded on a national securities exchange or that otherwise have total assets and shareholders of record that exceed certain thresholds must register those securities with the Commission by filing a registration statement. That registration statement must contain "[s]uch information, in such detail, as to the issuer" regarding, among other things, "the organization, financial structure and nature of the [issuer's] business" as the Commission by rule or regulation determines to be in the public interest or for the protection of investors.<sup>176</sup> These same issuers must also provide, as the Commission may prescribe "as necessary or appropriate for the proper protection of investors and to insure fair dealing in the security," (1) "such information and documents . . . as the Commission shall require to keep reasonably current the information and documents required to be included in or filed with [a] . . . registration statement," and (2) such annual and quarterly reports as the Commission may prescribe.<sup>177</sup>

As the text of each of these provisions demonstrates, Congress not only

<sup>173</sup> 15 U.S.C. 77g(a)(1).

<sup>174</sup> Securities Act section 7(a)(1) and Schedule A; see also Securities Act section 10(a) and (c) [15 U.S.C. 77j(a) and (c)] (generally requiring a prospectus to contain much of the same the information contained in a registration statement and granting the Commission the authority to require additional information in a prospectus as "necessary or appropriate in the public interest or for the protection of investors").

<sup>175</sup> 15 U.S.C. 78l(b) and (g).

<sup>176</sup> Exchange Act sections 12(b) and 12(g).

<sup>177</sup> Exchange Act section 13(a) [15 U.S.C. 78m(a)]. Other issuers that are required to comply with the reporting requirements of section 13(a) include those that voluntarily register a class of equity securities under section 12(g)(1), and issuers that file a registration statement under the Securities Act that becomes effective, pursuant to section 15(d) [15 U.S.C. 78o].

specified certain enumerated disclosures, but also authorized the Commission to update and build on that framework by requiring additional disclosures of information that the Commission finds "necessary or appropriate in the public interest or for the protection of investors."<sup>178</sup> When read in the context of these enumerated disclosures and the broader context of the Securities Act and Exchange Act, these provisions authorize the Commission to ensure that public company disclosures provide investors with information important to making informed investment and voting decisions.<sup>179</sup> Such disclosure facilitates the securities laws' core objectives of protecting investors, facilitating capital formation, and promoting market efficiency.<sup>180</sup>

Both courts and the Commission have long recognized as much.<sup>181</sup> The Commission has amended its disclosure requirements dozens of times over the last 90 years based on the determination

<sup>178</sup> Securities Act section 7 [15 U.S.C. 77g]; see Exchange Act section 13(a) [15 U.S.C. 78m(a)] ("necessary or appropriate for the proper protection of investors and to insure fair dealing in the security"); see also Exchange Act sections 12, 13, and 15 [15 U.S.C. 78l, 78m, and 78o].

<sup>179</sup> See *NAACP v. Fed. Power Comm'n*, 425 U.S. 662, 669–70 (1976) ("[T]he use of the words 'public interest' in a regulatory statute . . . take meaning from the purposes of the regulatory legislation.>").

<sup>180</sup> See, e.g., Securities Act of 1933, Pub. L. 73–22, 48 Stat. 74, 74 (preamble) ("An Act to provide full and fair disclosure of the character of securities sold in interstate and foreign commerce and through the mails, and to prevent frauds in the sale thereof."); 15 U.S.C. 78b ("Necessity for regulation"); 15 U.S.C. 77b(b), 78c(f) (protection of investors, efficiency, competition, and capital formation); *Omnicare, Inc. v. Laborers Dist. Council Const. Indus. Pension Fund*, 575 U.S. 175, 178 (2015) ("The Securities Act of 1933 . . . protects investors by ensuring that companies issuing securities (known as 'issuers') make a full and fair disclosure of information relevant to a public offering." (quotation omitted)); *Basic Inc. v. Levinson*, 485 U.S. 224, 230 (1988) ("The [Exchange] Act was designed to protect investors against manipulation of stock prices. Underlying the adoption of extensive disclosure requirements was a legislative philosophy: There cannot be honest markets without honest publicity . . . . This Court repeatedly has described the fundamental purpose of the [Exchange] Act as implementing a philosophy of full disclosure." (quotation omitted)); see also *Lorenzo v. SEC*, 139 S. Ct. 1094, 1103 (2019) ("The fundamental purpose" of the securities laws is substituting "a philosophy of full disclosure for the philosophy of caveat emptor.").

<sup>181</sup> See *supra* note 180; see also *Nat'l Res. Def. Council, Inc. v. SEC*, 606 F.2d 1031, 1050 (D.C. Cir. 1979) ("The SEC . . . was necessarily given very broad discretion to promulgate rules governing corporate disclosure. The degree of discretion accorded the Commission is evident from the language in the various statutory grants of rulemaking authority."); *id.* at 1045 ("Rather than casting disclosure rules in stone, Congress opted to rely on the discretion and expertise of the SEC for a determination of what types of additional disclosure would be desirable."); H.R. Rep. No. 73–1383, at 6–7 (1934).

that the required information would be important to investment and voting decisions. And courts have routinely applied and interpreted the Commission's disclosure provisions without suggesting that the Commission lacked the authority to promulgate them.<sup>182</sup> When determining that additional "information" is "necessary or appropriate" to protect investors, the Commission has responded to marketplace developments, investors' need for information important to their decision-making, and advances in economic, financial, and investment analysis and analytical frameworks, as well as the costs of such disclosures. In addition, the Commission has eliminated existing disclosure requirements, or updated and tailored existing disclosures for similar reasons.<sup>183</sup>

For example, the Commission's predecessor agency,<sup>184</sup> immediately upon enactment of the Securities Act, relied upon Section 7 of that Act as authority to adopt Form A-1, the precursor to today's Form S-1 registration statement, to require disclosure of information important to investor decision-making but not specifically enumerated in Schedule A of the Securities Act. This information included a list of states where the issuer owned property and was qualified to do business, the length of time the registrant had been engaged in its

business,<sup>185</sup> and a statement of all litigation that may materially affect the value of the security to be offered.<sup>186</sup>

The Commission has further exercised its statutory authority to require disclosures that provide investors with information on risks facing registrants. These specific disclosure items are consistent with the Commission's longstanding view that understanding the material risks faced by a registrant and how the registrant manages those risks can be just as important to assessing its business operations and financial condition as knowledge about its physical assets or material contracts. These disclosures also reflect investors' increased demand for, and growing ability to use, information regarding the risks faced by registrants through the application of increasingly sophisticated and specialized measurement and analysis frameworks to make investment and voting decisions.<sup>187</sup>

For instance, the Commission in 1982 adopted a rule requiring registrants to disclose "Risk Factors," *i.e.*, a "discussion of the material factors that make an investment in the registrant or offering speculative or risky."<sup>188</sup> Also, in 1997, the Commission first required registrants to disclose quantitative information about market risk.<sup>189</sup> Those

<sup>185</sup> Items 3 through 5 of Form A-1; *see* Release No. 33-5 (July 6, 1933) [not published in the **Federal Register**]. The Commission's disclosure requirements no longer explicitly call for this information.

<sup>186</sup> This early requirement called for certain information related to those legal proceedings, including a description of the origin, nature, and names of parties to the litigation. Item 17 of Form A-1. The Commission has retained a disclosure requirement related to legal proceedings in both Securities Act registration statements and in Exchange Act registration statements and periodic reports. *See* 17 CFR 229.103.

<sup>187</sup> *See infra* notes 200, 206-207 and accompanying text.

<sup>188</sup> 17 CFR 229.105(a); *see also* *Adoption of Integrated Disclosure System*, Release No. 33-6383 [47 FR 11380 (Mar. 16, 1982)] ("1982 Release"). Prior to 1982, the Commission stated in guidance that, if the securities to be offered are of a highly speculative nature, the registrant should provide "a carefully organized series of short, concise paragraphs summarizing the principal factors that make the offering speculative." *See Guides for Preparation and Filing of Registration Statements*, Release No. 33-4666 (Feb. 7, 1964) [29 FR 2490 (Feb. 15, 1964)]. A guideline to disclose a summary of risk factors relating to an offering was first set forth by the Commission in 1968 and included consideration of five factors that may make an offering speculative or risky, including with respect to risks involving "a registrant's business or proposed business." *See* Guide 6, in *Guides for the Preparation and Filing of Registration Statements*, Release No. 33-4936 (Dec. 9, 1968) [33 FR 18617 (Dec. 17, 1968)].

<sup>189</sup> *See* 17 CFR 229.305; and Disclosure of Accounting Policies for Derivative Financial Instruments and Derivative Commodity Instruments and Disclosure of Quantitative and Qualitative Information About Market Risk Inherent in Derivative Financial Instruments, Other Financial

rules included requirements to present "separate quantitative information . . . to the extent material" for different categories of market risk, such as "interest rate risk, foreign currency exchange rate risk, commodity price risk, and other relevant market risks, such as equity price risk."<sup>190</sup> Under these market risk disclosure requirements, registrants must also disclose various metrics such as "value at risk" and "sensitivity analysis disclosures." In addition, registrants must provide certain qualitative disclosures about market risk, to the extent material.<sup>191</sup>

Commission rules have also required disclosures regarding specific elements of the risks facing registrants, such as a registrant's material legal proceedings,<sup>192</sup> as part of its description of business, the material effects that compliance with government regulations, including environmental regulations, may have upon a registrant's capital expenditures, earnings, and competitive position,<sup>193</sup> compensation discussion and analysis,<sup>194</sup> and the extent of the board's role in the risk oversight of the registrant.<sup>195</sup> In addition, the Commission has adopted comprehensive disclosure regimes related to particular industries,<sup>196</sup> offering structures,<sup>197</sup> and types of transactions, when it has determined

Instruments, and Derivative Commodity Instruments, Release No. 33-7386 (Jan. 31, 1997) [62 FR 6044 (Feb. 10, 1997)].

Ikanos Commun., Inc.*, 681 F.3d 114 (2d Cir. 2012) (applying Item 303 of Regulation S-K, which requires disclosure of management's discussion and analysis of financial condition); *SEC v. Goldfield Deep Mines Co.*, 758 F.2d 459 (9th Cir. 1985) (applying disclosure requirement for certain legal proceedings).

<sup>183</sup> *See, e.g., FAST Act Modernization and Simplification of Regulation S-K*, Release No. 33-10618 (Mar. 20, 2019) [84 FR 12674, 12676 (Apr. 2, 2019)] (stating that the amendments "are intended to improve the quality and accessibility of disclosure in filings by simplifying and modernizing our requirements" and "also clarify ambiguous disclosure requirements, remove redundancies, and further leverage the use of technology" which, the Commission expected, "will increase investor access to information without reducing the availability of material information"); *Disclosure Update and Simplification*, Release No. 33-10532 (Aug. 17, 2018) [83 FR 50148, 50176-79 (Oct. 4, 2018)] (discussing amendments to, among other things, eliminate certain disclosure requirements that "have become obsolete as the regulatory, business, or technological environments have changed over time").

<sup>184</sup> Prior to enactment of the Exchange Act, the Federal Trade Commission was empowered with administration of the Securities Act.

that disclosure in those particular areas was justified.<sup>198</sup>

Relatedly, the Commission has exercised its statutory authority to require registrants to include in registration statements and annual reports a narrative explanation of a number of aspects of the issuer's business, most prominently in the MD&A.<sup>199</sup> These requirements are "intended to give the investor an opportunity to look at the company through the eyes of management by providing both a short and long-term analysis of the business of the company," and they reflected increased investor need for this type of information as an important tool to make investment and voting decisions.<sup>200</sup>

Finally, the Commission for the last fifty years has also required disclosure about various environmental matters.<sup>201</sup> In adopting those requirements, the Commission recognized the number of ways that environmental issues can impact a company's business and its financial performance and determined that these requirements would provide information important to investment and voting decisions. Throughout the 1970s and early 1980s, the need for specific rules mandating disclosure of information relating to litigation and other business costs arising out of compliance with Federal, State, and local laws relating to environmental

protection were the subject of several rulemaking efforts, extensive litigation, and public hearings.<sup>202</sup> As a result of this process, in 1982, the Commission adopted rules that address disclosure of certain environmental issues.<sup>203</sup>

More recently, the Commission published the 2010 Guidance, explaining how the Commission's existing disclosure rules may require disclosure of the impacts of climate change on a registrant's business or financial condition.<sup>204</sup> And in 2020, the Commission amended its disclosure rules to require, to the extent material to an understanding of the business taken as a whole, disclosure of the material effects that compliance with government regulations, including environmental regulations, may have upon the capital expenditures, earnings, and competitive position of the registrant and its subsidiaries.<sup>205</sup>

Similarly, the Commission is adopting the final rules based on its determination that the required disclosures will elicit information that investors have indicated is important to their investment and voting

decisions.<sup>206</sup> As explained throughout this release, climate-related risks can affect a company's business and its financial performance and position in a number of ways. A growing number of investors across a broad swath of the market consider information about climate-related risks to be important to their decision-making. These investors have expressed the need for more reliable information about the effects of climate-related and other severe weather events or other natural conditions on issuers' businesses, as well as information about how registrants have considered and addressed climate-related risks when conducting operations and developing business strategy and financial plans. These rules respond to this need by providing investors more reliable and decision-useful disclosure of strategies and risks that a registrant has determined will likely materially impact its business, results of operations, or financial condition. The disclosure of such information—whether climate-related or otherwise—falls within the authority conferred by Congress in the Securities Act and the Exchange Act.<sup>207</sup>

The Regulation S-X provisions of the final rules are also within the Commission's authority. In addition to the statutory provisions discussed above, the Federal securities laws provide the Commission with extensive and specific authority to prescribe financial statement disclosures, set accounting standards, and establish accounting principles for entities that file financial statements with the Commission.

As noted above, Section 7(a)(1) of the Securities Act specifies that a registration statement shall contain, among other things, the information specified in Schedule A. Schedule A in turn requires disclosure of balance sheet and profit and loss statement (*i.e.*, comprehensive income statement) information "in such detail and in such form as the Commission shall prescribe."<sup>208</sup> In addition, Section 12(b)

<sup>198</sup> See 17 CFR Subpart 900 (Roll-Up Transactions); and 17 CFR Subpart 1000 (Mergers and Acquisitions).

<sup>199</sup> See *Amendments to Annual Report Form, Related Forms, Rules, Regulations and Guides; Integration of Securities Acts Disclosure Systems*, Release No. 33-6231 (Sept. 2, 1980) [45 FR 63630 (Sept. 25, 1980)]. Item 303 of Regulation S-K requires a registrant to discuss its financial condition, changes in its financial condition, and results of operations, 17 CFR 229.303(a), other disclosure items, see, *e.g.*, 17 CFR 229.303(b)(1)(i), (1)(ii)(B), and (2)(ii), and requires registrants to "provide such other information that the registrant believes to be necessary to an understanding of its financial condition, changes in financial condition, and results of operation." 17 CFR 229.303(b).

<sup>200</sup> *Concept Release on Management's Discussion and Analysis of Financial Condition and Operations*, Release No. 33-6711 (Apr. 17, 1987) [52 FR 13715 (Apr. 24, 1987)]. The Commission also has stated that it is important that investors understand the extent to which accounting changes and changes in business activity have affected the comparability of year-to-year data and they should be in a position to assess the source and probability of recurrence of net income (or loss). *Id.* (quoting *Guidelines for Registration and Reporting*, Release No. 33-5520 (Aug. 14, 1974) [39 FR 31894 (Sept. 3, 1974)]).

<sup>201</sup> In addition to Commission rules requiring disclosures regarding specific elements of the risks facing registrants that are discussed *supra* notes 192-198 and accompanying text, the Commission has adopted disclosure requirements that are similarly subject to substantive regulation under other statutes and by other agencies, as discussed *infra* note 207.

<sup>202</sup> See *Environmental Disclosure*, Interpretive Release No. 33-6130 (Sept. 27, 1979) [44 FR 56924 (Oct. 3, 1979)] (discussing this history); *Proposed Amendments to Item 5 of Regulation S-K Regarding Disclosure of Certain Environmental Proceedings*, Release No. 33-6315 (May 4, 1981) [46 FR 25638]; *NRDC v. SEC*, 606 F.2d 1031, 1036-42 (D.C. Cir. 1979) (same).

<sup>203</sup> See 1982 Release (adopting 17 CFR 229.103, which requires a registrant to describe its material pending legal proceedings, other than ordinary routine litigation incidental to the business, and indicating that administrative or judicial proceedings arising under Federal, state, or local law regulating the discharge of materials into the environment or primarily for the purpose of protecting the environment, shall not be deemed "ordinary routine litigation incidental to the business" and must be described if meeting certain conditions). The 1982 Release also moved the requirement to disclose information regarding the material effects of compliance with Federal, State and local provisions regulating the discharge of materials into the environment, or otherwise relating to the protection of the environment, on the registrant's capital expenditures, earnings and competitive position, as well as the disclosure of its material estimated capital expenditures for environmental control facilities, to 17 CFR 229.101(c)(1)(xii).

<sup>204</sup> See 2010 Guidance. As the Commission discussed in the guidance, the agency reviewed its full disclosure program relating to environmental disclosures in SEC filings in connection with a Government Accountability Office review. Among other things, the 2010 Guidance emphasized that climate change disclosure might, depending on the circumstances, be required in a company's Description of Business, Risk Factors, Legal Proceedings, and MD&A; identified certain climate-related issues that companies may need to consider in making their disclosures; and stated that registrants should consider any financial statement implications of climate change issues in accordance with applicable accounting standards.

<sup>205</sup> See *Modernization of Regulation S-K Items 101, 103, and 105*, Release No. 33-10825 (Aug. 26, 2020) [85 FR 63726 (Oct. 8, 2020)].

<sup>206</sup> See *supra* section I.A.

<sup>207</sup> The final rules are also consistent with other disclosure items that are similarly subject to substantive regulation under other statutes and by other agencies. For example, banks, bank holding companies, savings and loan associations, and savings and loan holding companies are subject to subpart 1400 of Regulation S-K despite the substantive jurisdiction and regulation of other state and Federal prudential regulators. Similarly, here, the importance of climate-related risks to investor decision-making makes them appropriate for disclosure regardless of other regimes that substantively regulate those issues.

<sup>208</sup> See Schedule A, paras. 25 and 26. The "form" required by the Commission includes both financial statements and notes to those statements. See 17

of the Exchange Act provides the Commission with specific authority to require not only balance sheet and income statement disclosure, but also “any further financial statements which the Commission may deem necessary or appropriate for the protection of investors.”<sup>209</sup>

Section 19(a) of the Securities Act also grants the Commission extensive authority to “make, amend, and rescind such rules and regulations as may be necessary to carry out the provisions of,” the Securities Act, which includes “defining accounting, technical, and trade terms used in” the Securities Act. “Among other things,” this section grants the Commission the authority to “prescribe . . . the items or details to be shown in the balance sheet and earning statement, and the methods to be followed in the preparation of accounts, in the appraisal or valuation of assets and liabilities, in the determination of depreciation and depletion, in the differentiation of recurring and nonrecurring income, in the differentiation of investment and operating income, and in the preparation, where the Commission deems it necessary or desirable, of consolidated balance sheets or income accounts of any person directly or indirectly controlling or controlled by the issuer, or any person under direct or indirect common control with the issuer.”<sup>210</sup> Sections 13 and 23 of the Exchange Act grant the Commission similar authority with respect to reports filed under that Act.<sup>211</sup>

CFR 210.1–01(b) (specifying the term “financial statements” includes all notes to the statements and related schedules).

<sup>209</sup> 15 U.S.C. 78l(b)(1)(I) through (L).

<sup>210</sup> 15 U.S.C. 77s(a).

<sup>211</sup> 15 U.S.C. 78m(b)(1); see 15 U.S.C. 78w(a)(1) (“The Commission . . . shall . . . have the power to make such rules and regulations as may be necessary or appropriate to implement the provisions of [the Exchange Act] for which [it is] responsible or for the execution of the functions vested in [it] by [the Exchange Act], and may for such purposes classify persons, securities, transactions, statements, applications, reports, and other matters within their respective jurisdictions, and prescribe greater, lesser, or different requirements for different classes thereof.”); see also 15 U.S.C. 7218(c) (“Nothing in the [Sarbanes-Oxley Act of 2002] . . . shall be construed to impair or limit the authority of the Commission to establish accounting principles or standards for purposes of enforcement of the securities laws.”); *Policy Statement: Reaffirming the Status of the FASB as a Designated Private-Sector Standard Setter*, Release No. 33–8221 (Apr. 25, 2003) [68 FR 23333, 23334 (May 1, 2003)] (“While the Commission consistently has looked to the private sector in the past to set accounting standards, the securities laws, including the Sarbanes-Oxley Act, clearly provide the Commission with authority to set accounting standards for public companies and other entities that file financial statements with the Commission.”).

Relying on these provisions, the Commission has prescribed the form and content of the financial statements to ensure that investors have access to information necessary for investment and voting decisions. The Commission adopted Regulation S–X in 1940, which governs the form and content of the financial statements, pursuant to its authority under, among other provisions, Sections 7 and 19(a) of the Securities Act and Sections 12 and 23(a) of the Exchange Act.<sup>212</sup> Over time, the Commission has amended Regulation S–X to add, modify, and eliminate requirements, as appropriate, with respect to the form and content of the financial statements, taking into consideration the development of accounting practices in the marketplace, investors’ need for information important to their decision-making, as well of the costs of such disclosures.

For example, the Commission has on numerous occasions amended Regulation S–X to require the disclosure of particular items of information in the balance sheet or in the income statement.<sup>213</sup> The Commission has similarly amended Regulation S–X to require additional information in the financial statements with respect to particular issuers or types of transactions, when it has determined that action in those specific areas was responsive to the information needs of investors.<sup>214</sup>

<sup>212</sup> See *Adoption of Regulation S–X*, 5 FR 949, 954 (Mar. 6, 1940).

<sup>213</sup> See *Improved Disclosures of Leases*, Release No. 33–5401 (June 6, 1973) [38 FR 16085, 16085 (June 20, 1973)] (proposing amendments to Rule 3–16 of Regulation S–X to require disclosure of, among other things, total rental expenses and minimum rental commitments, explaining that for many years corporate disclosure of leased assets “has not been sufficient to enable investors to determine the nature and magnitude of such assets, the size of financial commitments undertaken and the impact upon net income of this kind of financing”); *Improved Disclosures of Leases*, Release No. 33–5428 (Oct. 23, 1973) [38 FR 29215 (Oct. 23, 1973)] (adopting amendments to Rule 3–16); *General Revision of Regulation S–X*, Release No. 6233 (Sept. 25, 1980) [45 FR 63660, 63664 (Sept. 25, 1980)] (requiring separate disclosure of domestic and foreign pre-tax income, in part because the Commission had “seen substantial voluntary inclusion by registrants of this tax information in their annual reports to shareholders”).

<sup>214</sup> See *Amendments to Financial Disclosures About Acquired and Disposed Businesses*, Release No. 33–10786 (May 20, 2020) [85 FR 54002 (Aug. 31, 2020)] (amending Regulation S–X as part of “an ongoing, comprehensive evaluation of our disclosure requirements” to improve for investors the financial information about acquired and disposed businesses); *Financial Statements and Periodic Reports for Related Issuers and Guarantors*, Release No. 33–7878 (Aug. 4, 2000) [65 FR 51692 (Aug. 24, 2000)] (amending Regulation S–X to require additional disclosures relating to guaranteed securities, and explaining that the amendments codified Commission staff practices

Similarly, the Commission is adopting the final rules based on its determination that the required financial statement disclosures will provide investors with information that is important to their investment and voting decisions. Specifically, the Commission is exercising its authority to prescribe the content and form of the financial statements to require registrants to disclose certain information about costs and expenditures related to: (1) severe weather events and other natural conditions; and (2) in connection with the purchase and use of carbon offsets and RECs, as well as certain information about financial estimates and assumptions, in the notes to the financial statements. As explained in greater detail below, investors have expressed a need for this information,<sup>215</sup> and we believe the final rules will allow investors to make better informed investment or voting decisions by eliciting more complete disclosure of financial statement effects and by improving the consistency, comparability, and reliability of the disclosures.

For similar reasons, we disagree with objections by commenters based on the non-delegation and major-questions doctrines.<sup>216</sup> The non-delegation objection is misplaced because the long-standing statutory authority that we rely on provides intelligible principles to which the Commission must conform in its rulemaking.<sup>217</sup> Indeed, the Supreme Court early in the Commission’s history rejected a non-delegation challenge to one of the securities laws that the Commission administered, and the well-tested delegation of rulemaking authority that we exercise here likewise falls comfortably within the Court’s holding that a delegation poses no constitutional difficulty when it provides standards that derive “meaningful content from the purpose of the Act, its factual background and the statutory context in which they appear.”<sup>218</sup> Also, the major-questions objection is misplaced because the Commission is not claiming to “discover in a long-extant statute an unheralded power representing a

over the years and would eliminate uncertainty regarding financial statement requirements and ongoing reporting).

<sup>215</sup> See *infra* notes 1741 and 2133. See also *infra* note 1961 (commenters generally supportive of the proposed expenditure disclosures).

<sup>216</sup> See, e.g., letter from Morrisey *et al.* (June 15, 2022); see also note 172.

<sup>217</sup> See *Gundy v. United States*, 139 S. Ct. 2116, 2123 (plurality op.); see also note 182 and accompanying text.

<sup>218</sup> *Am. Power & Light Co. v. SEC*, 329 U.S. 90, 104 (1946).

transformative expansion in [its] regulatory authority.”<sup>219</sup> Nor is it seeking to determine national environmental policy or dictate corporate policy, as commenters suggest.<sup>220</sup> Rather, it is adopting the final rules based on its long standing authority to require disclosures that provide investors with information that is important to their investment and voting decisions, as discussed above. Consistent with this authority and its traditional role, the Commission is agnostic as to whether and how issuers manage climate-related risks so long as they appropriately inform investors of material risks.

Finally, we disagree with commenters who raised objections to the proposed rules on First Amendment grounds.<sup>221</sup> The required disclosures are factual information about certain risks companies face to their businesses, finances, and operations—the type of information that companies routinely disclose when seeking investments from the public. And as discussed throughout this release, these required disclosures also advance crucial interests: the final rules respond to the growing investor need for more reliable information regarding climate-related risks by providing investors with information that is important to their investment and voting decisions. Further, the final rules have been appropriately tailored to serve those interests, including with a number of significant changes having been made from the proposal to take account of the burdens imposed by requiring such disclosures.

### C. Disclosure of Climate-Related Risks

#### 1. Definitions of Climate-Related Risks and Climate-Related Opportunities (Items 1500 and 1502(a))

##### a. Proposed Rule

The Commission proposed to require a registrant to disclose any climate-related risks reasonably likely to have a material impact on the registrant’s business or consolidated financial statements.<sup>222</sup> As proposed, a registrant could also optionally disclose the actual

and potential impacts of any climate-related opportunities it is pursuing.<sup>223</sup> The Commission proposed definitions of “climate-related risks” and “climate-related opportunities” that were substantially similar to the TCFD’s corresponding definitions of those terms<sup>224</sup> to provide a common terminology that would allow registrants to disclose climate-related risks and opportunities in a consistent and comparable way. In the Proposing Release, the Commission expressed its belief that grounding the definitions in a framework that is already widely accepted could help limit the burden on registrants to identify and describe climate-related risks while improving the comparability and usefulness of the disclosures for investors.<sup>225</sup>

The Commission proposed to define “climate-related risks” to mean the actual or potential negative impacts of climate-related conditions and events on a registrant’s consolidated financial statements, business operations, or value chains, as a whole.<sup>226</sup> The Commission proposed to define “value chain” to mean the upstream and downstream activities related to a registrant’s operations.<sup>227</sup> Under the proposed definition, upstream activities would include activities by a party other than the registrant that relate to the initial stages of a registrant’s production of a good or service (e.g., materials sourcing, materials processing, and supplier activities). Downstream activities would include activities by a party other than the registrant that relate to processing materials into a finished product and delivering it or providing a service to the end user (e.g., transportation and distribution, processing of sold products, use of sold products, end of life treatment of sold products, and investments).<sup>228</sup> The Commission proposed including a registrant’s value chain within the definition of climate-related risks to capture the full extent of a registrant’s potential exposure to climate-related risks.<sup>229</sup>

Climate-related conditions and events can present risks related to the physical impacts of the climate (“physical risks”) and risks related to a potential transition to a lower carbon economy (“transition

risks”). The Commission proposed to define “physical risks” to include both acute and chronic risks to a registrant’s business operations or the operations of those with whom it does business.<sup>230</sup> The Commission proposed to define “acute risks” to mean event-driven risks related to shorter-term extreme weather events, such as hurricanes, floods, and tornadoes.<sup>231</sup> Under the proposed rule, “chronic risks” would be defined to mean those risks that a business may face as a result of longer term weather patterns and related effects, such as sustained higher temperatures, sea level rise, drought, and increased wildfires, as well as related effects such as decreased arability of farmland, decreased habitability of land, and decreased availability of fresh water.<sup>232</sup> The Commission proposed to define transition risks to mean the actual or potential negative impacts on a registrant’s consolidated financial statements, business operations, or value chains attributable to regulatory, technological, and market changes to address the mitigation of, or adaptation to, climate-related risks.<sup>233</sup> Transition risks would include, but not be limited to, increased costs attributable to climate-related changes in law or policy, reduced market demand for carbon-intensive products leading to decreased sales, prices, or profits for such products, the devaluation or abandonment of assets, risk of legal liability and litigation defense costs, competitive pressures associated with the adoption of new technologies, reputational impacts (including those stemming from a registrant’s customers or business counterparties) that might trigger changes to market behavior, changes in consumer preferences or behavior, or changes in a registrant’s behavior.<sup>234</sup>

The Commission proposed to require a registrant to specify whether an identified climate-related risk is a physical or transition risk so that investors can better understand the nature of the risk.<sup>235</sup> If a physical risk, the rule proposal would require a registrant to describe the nature of the risk, including whether it may be categorized as an acute or chronic risk.<sup>236</sup> A registrant would also be required to describe the location and nature of the properties, processes, or operations subject to the physical

<sup>236</sup> See *id.*

risk.<sup>237</sup> The rule proposal defined “location” to mean a ZIP code or, in a jurisdiction that does not use ZIP codes, a similar subnational postal zone or geographic location.

The Commission proposed to require additional disclosure from a registrant that has identified a climate-related risk related to flooding or high water stress. As proposed, if a risk concerns the flooding of buildings, plants, or properties located in flood hazard areas, the registrant would be required to disclose the percentage of those assets that are located in flood hazard areas in addition to their location.<sup>238</sup> If a risk concerns the location of assets in regions of high or extremely high water stress, as proposed, the registrant would be required to disclose the amount of assets (e.g., book value and as a percentage of total assets) located in those regions in addition to their location. The registrant would also be required to disclose the percentage of the registrant’s total water usage from water withdrawn in those regions.<sup>239</sup>

The Commission proposed to require a registrant to describe the nature of an identified transition risk, including whether it relates to regulatory, technological, market (including changing consumer, business counterparty, and investor preferences), liability, reputational, or other transition-related factors, and how those factors impact the registrant.<sup>240</sup> In this regard, the proposed rule stated that a registrant that has significant operations in a jurisdiction that has made a GHG emissions reduction commitment may be exposed to transition risks related to the implementation of the commitment.<sup>241</sup>

As the Commission noted in the Proposing Release, climate-related conditions and any transition to a lower carbon economy may also present opportunities for registrants and investors.<sup>242</sup> The rule proposal defined “climate-related opportunities” to mean the actual or potential positive impacts of climate-related conditions and events on a registrant’s consolidated financial statements, business operations, or value chains, as a whole.<sup>243</sup>

#### b. Comments

Many commenters supported the proposal to require a registrant to disclose any climate-related risks that

are reasonably likely to have a material impact on its business or consolidated financial statements.<sup>244</sup> These commenters provided various reasons for supporting the proposal. For example, one commenter noted that it views material climate-related risks and opportunities as fundamental financial factors that impact company cash flows and the valuation investors attribute to those cash flows and stated that the proposed rules will lead to “more consistent, comparable, and reliable disclosures that will enable investors to make better decisions on how and where to allocate capital.”<sup>245</sup> Another commenter stated that the proposed requirements would provide a thorough foundation for disclosure of climate risks, including future risks.<sup>246</sup> A different commenter stated that the proposed disclosure requirement would ensure that investors receive specific, comparable details about registrants’ climate-related risks, which are currently lacking from many registrants.<sup>247</sup> One other commenter stated that, based on its own research, most registrants are exposed to climate-related risks, and without sufficient information regarding transition risks and physical risks facing a registrant, investors may be unable to correctly value a registrant’s securities, thus potentially paying too high or too low a price.<sup>248</sup> One commenter stated that, because long-term climate-related risks can quickly become financially impactful, the proposed requirement would elicit disclosure that, at a minimum, would indicate the quality of a company’s governance and risk management.<sup>249</sup>

Many commenters supported the proposed definition of climate-related risk, including that the definition encompass both physical and transition risks, and further supported the proposed requirement to specify

<sup>249</sup> See letter from SKY Harbor.

whether an identified climate-related risk is a physical or transition risk.<sup>250</sup> One commenter stated that the proposed definition of climate-related risk is comprehensive and would help ensure that registrants consider a broad spectrum of climate-related risks.<sup>251</sup> Another commenter expressed approval of the proposed definition of climate-related risk because it is substantially similar to the TCFD’s definition of climate-related risk, which is familiar terminology for investors and companies alike and therefore should promote consistent and comparable disclosure across companies.<sup>252</sup> A different commenter stated that the definition of climate-related risk should include only the actual negative impacts of climate-related conditions and events, and not potential negative impacts, as proposed, but agreed that the definition should include both physical and transition risks because that would be consistent with the TCFD framework.<sup>253</sup> One other commenter stated that the proposed definition of climate-related risk is generally “correct” because it is similar to the TCFD definition and would facilitate comparability of climate-related disclosure, but recommended that the Commission address in the definition the intersection of climate-related risks and adverse consequences to local communities.<sup>254</sup>

A number of commenters supported including in the proposed definition of physical risk both acute and chronic risks, and further supported specifying whether an identified physical risk is acute or chronic.<sup>255</sup> One commenter stated that it supported the proposed disclosure of a physical risk, including whether the physical risk is acute or chronic, in addition to any transition risk, and noted that all these risk categories can have “financial materiality.”<sup>256</sup> This commenter did not, however, support requiring the disclosure of whether or how an acute risk and chronic risk may affect each other because of the complex interaction between the two types of risks.<sup>257</sup>

<sup>250</sup> See, e.g., letters from Beller *et al.*; BHP; CalSTRS; D. Hileman Consulting; Eni SpA; IAA; ICI; Impax Asset Mgmt.; KPMG; Moody’s; Morningstar; TotalEnergies; Unilever; and Wellington Mgmt.

<sup>243</sup> See *id.*

Another commenter similarly stated that, while it supported the disclosure of acute and chronic risks, because such risks are complex and may overlap, the Commission should clarify that companies can decide how to categorize acute and chronic risks and, where there may be overlap (*e.g.*, wildfires can be both an acute and chronic risk to a company), the risk only needs to be identified once.<sup>258</sup> A different commenter stated that it supported the proposed definition of climate-related risk, which includes acute and chronic risks within physical risk, because it aligned with the TCFD framework, and such alignment would be of significant benefit because it will help elicit comparable disclosures and help reduce the reporting burden.<sup>259</sup> One other commenter, while acknowledging that the proposed definition of physical risk aligned with the TCFD framework, recommended that the Commission include, in the definition of chronic risk, systemic threats to public health and safety.<sup>260</sup>

Several commenters supported the proposed requirement to describe the location and nature of the properties, processes, or operations subject to the physical risk.<sup>261</sup> Commenters stated that the proposed location disclosure would enable investors to more fully assess a registrant's exposure to physical risks, such as extreme storm events, flooding, water shortages, and drought, which may be geographically specific, and whether the registrant is adequately taking steps (*e.g.*, through adopting a transition plan) to mitigate or adapt to the physical risks.<sup>262</sup> One commenter stated that "[i]nvestors and investment analysts are often tasked with understanding the risk that climate change poses to physical assets that are critical to the company's overall business model," including both facilities owned by the company and those owned by key suppliers, and recommended that the Commission "require the disclosure of the locations of all material facilities *i.e.*, geographical concentrations that pose material risks

of loss."<sup>263</sup> Some of these commenters also supported defining location by the ZIP code or other subnational postal zone if the ZIP code is not available.<sup>264</sup> One commenter recommended using geographic coordinates to describe the location of assets subject to a material physical risk because they would better fit climate models.<sup>265</sup> Another commenter recommended requiring the disclosure of specific addresses, and not just ZIP codes, to identify the location of assets subject to a material physical risk to enable investors to fully assess the registrant's exposure to the physical risk.<sup>266</sup> This commenter also urged the Commission to require the proposed disclosure with respect to all of a registrant's locations that are material to its businesses rather than only the locations subject to a physical climate risk, stating that physical climate risk potentially impacts a registrant at all of its locations.<sup>267</sup>

Several commenters supported the proposed requirement to disclose the percentage of assets that are located in flood hazard areas if a registrant has determined that flooding is a material physical risk.<sup>268</sup> Several commenters also supported the proposed requirement to disclose the amount of assets (*e.g.*, book value and as a percentage of total assets) located in regions of high or extremely high water stress, and the percentage of the registrant's total water usage from water withdrawn in those regions, if a registrant has determined that high or extremely high water stress is a material physical risk.<sup>269</sup> Commenters stated that the proposed disclosure requirements would help investors understand the extent of the water-related risk to which a registrant is exposed.<sup>270</sup> Some commenters generally stressed the importance to investors of obtaining quantitative data from registrants about the physical risks to which they are subject and recommended that the Commission require registrants to similarly provide the percentage of

assets or other quantitative data relevant to assessing a registrant's exposure to other material physical risks, such as heatwaves, droughts, and wildfires.<sup>271</sup>

With regard to flooding risk disclosure, some commenters recommended that the Commission require the use of Federal Emergency Management Agency's ("FEMA's") flood hazard terminology and maps to help further the comparability of the disclosure.<sup>272</sup> One commenter recommended the use of a different flood model that it believed was more up-to-date and more comprehensive than FEMA's flood mapping.<sup>273</sup> Another commenter supported an approach that would allow for different definitions of "flood hazard area" or "water-stressed area" to be used as long as the registrant disclosed the source of the definitions together with the methodologies and assumptions used in disclosing the water-based physical risk.<sup>274</sup>

Several commenters supported the proposed provision requiring a registrant to describe the nature of an identified transition risk, including whether it relates to regulatory, technological, market (including changing consumer, business counterparty, and investor preferences), liability, reputational, or other transition-related factors, and how those factors impact the registrant.<sup>275</sup> Some commenters also supported the proposed definition of transition risk.<sup>276</sup> Several commenters stated that the Commission should include additional examples within the definition of transition risk, including the risk of impacts on local and indigenous communities and workers caused by a transition to a lower carbon economy.<sup>277</sup>

Several commenters supported including the negative impacts on a registrant's value chain in the definition of climate-related risk, as proposed.<sup>278</sup>

One commenter stated that because information concerning climate-related risks involving a registrant's value chain may be more important to investors than such risks involving a registrant's own operations, disclosure of climate-related risks in the value chain should be an integrated part of the broader disclosures about the material climate-related risks management is assessing, managing, and reporting to the board, despite the difficulty of providing such value chain information.<sup>279</sup> Another commenter stated that it supported including value chain impacts in the definition of climate-related risk as long as such impacts relate to direct impacts on a registrant's operations.<sup>280</sup> Some commenters also supported the proposed definition of value chain to mean the upstream and downstream activities related to a registrant's operations.<sup>281</sup> One commenter stated that the definition of value chain should be consistent with the definition provided by the GHG Protocol.<sup>282</sup>

Many other commenters opposed the proposed climate-related risk disclosure requirement.<sup>283</sup> Some of these commenters contended that the Commission's rules already require a registrant to disclose material climate risks, and that therefore there is no need for the proposed climate-related risk disclosure requirement.<sup>284</sup> Several other commenters stated that the proposed climate-related risk disclosure requirement would inundate investors

with an extensive amount of granular information that is largely immaterial.<sup>285</sup> Commenters provided as an example of such immaterial disclosure the proposed requirement to disclose the ZIP codes of assets located in flood hazard areas or other regions in which a registrant's assets are subject to a material climate-related risk.<sup>286</sup> Some commenters stated that the highly detailed disclosure required by the proposed climate risk disclosure rule would confuse investors by causing them to believe that a climate-related risk is more important than other disclosed risks that are presented in less detail.<sup>287</sup> Some commenters also stated that the overly granular disclosure elicited by the proposed rule would potentially require registrants to disclose competitively sensitive information.<sup>288</sup> Other commenters stated that, due to uncertainties in climate science, and uncertainties regarding some of the underlying concepts upon which the proposed climate risk disclosure requirement is based, the disclosure of material climate-related risks would be unduly burdensome for many registrants.<sup>289</sup> Another commenter stated that a registrant should only be required to disclose a climate-related risk that management is assessing, managing, and reporting to the board, rather than disclosing information regarding any climate risk.<sup>290</sup>

Several commenters also opposed the proposed disclosure requirements concerning the percentage of assets located in flood zones and similar quantitative data for assets located in high water-stressed areas.<sup>291</sup> One commenter stated that flood risks and high water-stress risks are not

comparable within a firm, across sectors, and across regions of the country, so investors are unlikely to make investment decisions based on this information.<sup>292</sup> This commenter further stated that the Commission has not justified singling out risks relating to flooding and high water stress for detailed prescriptive disclosures, which dilutes the importance of other material information.<sup>293</sup> One other commenter stated that the proposed flood risk requirement is not necessary because the majority of companies are not subject to such physical risk.<sup>294</sup> Other commenters stated that such granular disclosure for water-related physical risks would impose a heavy reporting burden for registrants and could raise competitive and security risk concerns.<sup>295</sup>

Several commenters also opposed the proposed transition risk disclosure requirement, including the proposed definition of transition risk.<sup>296</sup> Some commenters stated that the proposed requirement would result in overly granular disclosure that would not be decision-useful for investors and would be burdensome for registrants to produce.<sup>297</sup> One commenter stated that the proposed definition was overly broad and would require a registrant to make the difficult determination of whether a particular activity was undertaken to address a transition risk or was part of a registrant's normal business strategy.<sup>298</sup> Another commenter stated that it would be challenging for companies doing business in multiple markets to provide comparable, consistent, and reliable

Group to TC207 (June 17, 2022) ("US TAG TC207"); and Wellington Mgmt.

<sup>279</sup> See letter from PwC. This commenter provided the following examples of when climate-related risks involving a registrant's value chain may be more important to investors than such risks involving the registrant's own operations: the manufacturer of "a product reliant on a rare mineral for which mining may be limited due to emissions created in extraction, precursor manufacturing, and transport, or, alternatively, a lender whose primary business is financing emissions-intensive operations."

disclosure about transition risks given complex, dynamic, and varied global factors.<sup>299</sup> Other commenters stated that because the proposed definition of transition risk would require a registrant to consider impacts on its value chain, the resulting disclosures are likely to be overly detailed and could obscure more important information.<sup>300</sup> One other commenter stated that the proposed transition risk disclosure requirement would be difficult to comply with because of the speculative nature of certain transition risks.<sup>301</sup> A different commenter stated that because of the broad definition of transition risk, the Commission should provide additional guidance regarding the scope of the transition risk disclosure requirement.<sup>302</sup>

Many commenters opposed including the negative impacts on a registrant's value chain in the definition of, and related disclosure requirement concerning, its climate-related risks.<sup>303</sup> Commenters stated that the proposed definition would impose impractical burdens on registrants by forcing them to obtain and assess climate risk information about their third-party suppliers and customers over which they have little to no control.<sup>304</sup> Commenters in the agricultural sector were particularly opposed to the proposed definition because it would impose costs and burdens on farmer and rancher suppliers, many of whom are private entities, to produce the information needed by registrants to comply with the proposed climate-related risk requirement.<sup>305</sup> Other commenters stated that, due to the inability to obtain such third-party information, the proposed disclosure requirement is likely to elicit boilerplate disclosure about the climate-related risks of a registrant's value chain.<sup>306</sup>

Because of these concerns, several commenters requested that the Commission remove the concept of value chain from the scope of the climate risk disclosure requirement.<sup>307</sup> More generally, several commenters stated that any Commission climate risk disclosure requirement should be more principles-based and grounded on traditional notions of materiality.<sup>308</sup>

Many commenters supported the proposed definition of climate-related opportunities because it is consistent with the TCFD definition.<sup>309</sup> Many commenters also supported keeping the disclosure of climate-related opportunities optional, as proposed.<sup>310</sup> Some of these commenters expressed the view that, while disclosure of climate-related opportunities can provide insight into a registrant's management of climate-related risks and its related strategy, mandatory disclosure of climate-related opportunities could lead to greenwashing.<sup>311</sup> Some commenters, however, stated that disclosure of climate-related opportunities should be mandatory because such opportunities are frequently related to the reduction of climate-related risks and would provide investors with a more balanced perspective of the overall impacts of climate on a company's business and operating performance.<sup>312</sup>

### c. Final Rules

We are adopting final rules (Item 1502(a)) to require the disclosure of any climate-related risks that have materially impacted or are reasonably likely to have a material impact on the registrant, including on its business strategy, results of operations, or financial condition, with several modifications in response to commenter

concerns.<sup>313</sup> We disagree with those commenters who stated that a climate-related risk disclosure provision was not necessary because the Commission's general risk factors disclosure rule already requires such disclosure.<sup>314</sup> In our view, a separate disclosure provision specifically focused on climate-related risks will help investors better understand a registrant's assessment of whether its business is, or is reasonably likely to be, exposed to a material climate-related risk, and thereby enhance investor protection. Many commenters indicated that the Commission's current disclosure rules, including the general risk factor provision, has not provided investors with disclosure of climate-related risks and their financial impacts at the level of detail sought by investors that would make the disclosure useful for their investment or voting decisions.<sup>315</sup> The final rules, by contrast, are responsive to investors' need for decision-useful information regarding registrants' material climate-related risks and will help ensure investors receive more consistent, comparable, and reliable disclosures about such risks.<sup>316</sup>

Furthermore, adopting a climate-related risk disclosure rule that uses similar definitions (set forth in Item 1500) and is based on the climate-related disclosure framework of the TCFD, with which many registrants and investors are already familiar, will assist in standardizing climate-related risk disclosure and help elicit more consistent, comparable, and useful information for investors and limit the reporting burden for those registrants that are already providing some climate-related disclosure based on the TCFD framework.

At the same time, we recognize that many commenters expressed significant concerns about the scope of the proposed rules, indicating that they may elicit too much detail, may be costly or burdensome, could result in competitive harm, or may obscure other material information.<sup>317</sup> We have sought to address these concerns by modifying the definition of climate-related risks, by making the climate-related risk disclosure requirements less prescriptive, and by specifying the time frames during which a registrant should describe whether any such material

<sup>299</sup> See, e.g., letters from CEMEX; GPA Midstream; HP; NAA; United Air; Western Midstream; and Williams Cos.; see also letter from Soc. Corp. Gov. (stating that "the required disclosure should be limited to climate-related risks, including value chain-related risks, reasonably likely to materially impact the registrant's financial statements and operations").

<sup>306</sup> See, e.g., letters from Energy Transfer; HP; and Western Midstream.

risks are reasonably likely to manifest, as discussed below.<sup>318</sup>

The proposed rule would have required a registrant to describe any climate-related risks reasonably likely to have a material impact on the registrant, including on its business or consolidated financial statements. We have substituted “results of operations” and “financial condition” for “consolidated financial statements” here and in several of the final rule provisions to be more consistent with other Commission rules relevant to risk assessment, such as Item 303 of Regulation S-K regarding MD&A. We have used the term “business strategy” in the final rules to more closely align the final rules with the TCFD recommendation regarding the disclosure of the impacts of climate-related risks on strategy. These revisions do not create any substantive differences compared to the proposed rules but should facilitate compliance because many registrants should be familiar with the terminology used.

Similar to the rule proposal, the final rules define *climate-related risks* to mean the actual or potential negative impacts of climate-related conditions and events on a registrant’s business, results of operations, or financial condition.<sup>319</sup> To make a registrant’s determination of whether it is exposed to a material climate-related risk less burdensome, in response to commenters’ concerns,<sup>320</sup> we have eliminated the reference to negative climate-related impacts on a registrant’s value chain from the definition of climate-related risks. This change means that a climate-related risk involving a registrant’s value chain would generally not need to be disclosed except where such risk has materially impacted or is reasonably likely to materially impact the registrant’s business, results of operations, or financial condition. In addition, because a registrant may be able to assess the material risks posed by its value chain without having to request input from third parties in its value chain, this change will also limit the burdens of climate risk assessment on parties in a registrant’s value chain that might have occurred under the rule proposal.<sup>321</sup>

Similar to the rule proposal, the definition of climate-related risks includes both physical risks and transition risks. Also similar to the

proposed definition, the final rules define “physical risks” to include both acute and chronic risks to a registrant’s business operations.<sup>322</sup> However, we are not including in the definition acute or chronic risks to the operations of those with whom a registrant does business, as proposed. This change addresses the concerns of commenters regarding burdens associated with obtaining climate risk information about their counterparties over which they lack control.<sup>323</sup>

Similar to the rule proposal, “acute risks” is defined as event-driven risks and may relate to shorter-term severe weather events, such as hurricanes, floods, tornadoes, and wildfires.<sup>324</sup> “Chronic risks” is defined as those risks that the business may face as a result of longer term weather patterns, such as sustained higher temperatures, sea level rise, and drought, as well as related effects such as decreased arability of farmland, decreased habitability of land, and decreased availability of fresh water.<sup>325</sup> These enumerated risks are provided as examples of the types of physical risks to be disclosed and many represent physical risks that have already impacted and may continue to impact registrants across a wide range of economic sectors.<sup>326</sup>

The final rules define “transition risks” largely as proposed to mean the actual or potential negative impacts on a registrant’s business, results of operations, or financial condition attributable to regulatory, technological, and market changes to address the mitigation of, or adaptation to, climate-related risks.<sup>327</sup> For reasons discussed above in relation to the definition of “climate-related risks,” we are no longer including value chain impacts in the definition of “transition risks.”<sup>328</sup> The final rules’ definition of “transition risks” includes the same non-exclusive list of examples of transition risks as the rule proposal. Transition risks include,

<sup>322</sup> See 17 CFR 229.1500.

<sup>323</sup> See, e.g., letter from Chamber.

<sup>324</sup> See 17 CFR 229.1500. See *infra* section II.K.3.c.v for a discussion of the phrase “severe weather events” as used in subpart 1500 of Regulation S-K and Article 14 of Regulation S-X.

<sup>325</sup> See *id.*

<sup>326</sup> As discussed in more detail in section II.K.3.c.v, although Article 14 of Regulation S-X requires a registrant to disclose certain financial effects of severe weather events and other natural conditions, which may include weather events that are not climate-related, subpart 1500 of Regulation S-K does not require the disclosure of material impacts from non-climate-related weather events.

<sup>327</sup> See 17 CFR 229.1500.

<sup>328</sup> As noted above, a registrant would only need to disclose the transition risk of a party in its value chain when such transition risk has materially impacted or is reasonably likely to materially impact the registrant itself.

but are not limited to, increased costs attributable to climate-related changes in law or policy, reduced market demand for carbon-intensive products leading to decreased sales, prices, or profits for such products, the devaluation or abandonment of assets, risk of legal liability and litigation defense costs, competitive pressures associated with the adoption of new technologies, reputational impacts (including those stemming from a registrant’s customers or business counterparties) that might trigger changes to market behavior, changes in consumer preferences or behavior, or changes in a registrant’s behavior.<sup>329</sup>

Although some commenters asked the Commission to provide additional examples of transition risks in the definition,<sup>330</sup> we decline to do so. The final rules’ examples are non-exclusive<sup>331</sup> and, consistent with the TCFD framework, a registrant’s description of its material transition risks should include any type of transition risk that is applicable based on its particular facts and circumstances.<sup>332</sup> The particular type of material transition risk disclosed may be one that is not included or only partially included in the definition. Not every manifestation of transition risk, however, may apply or be material to every registrant and transition risks are dynamic and may change over time.

The proposed rules would have required a registrant to disclose certain items of information about any material climate-related risk that a registrant has identified.<sup>333</sup> In order to help address commenters’ concerns that the rule proposal was too burdensome and could result in the disclosure of immaterial information, we have revised Item 1502, as adopted, to be less prescriptive. In doing so, we have sought to strike an

<sup>329</sup> See 17 CFR 229.1500. For example, one source of transition risk may be the IRA, Public Law 117-169, which was signed into Federal law on Aug. 16, 2022, and includes various initiatives meant to encourage companies, states, and consumers to invest in and adopt renewable energy and other “clean energy” technologies. See The White House, *Building A Clean Energy Economy: A Guidebook To The Inflation Reduction Act’s Investments In Clean Energy And Climate Action* (Dec. 2022) (“Inflation Reduction Act Guidebook”). If, as a result of the IRA, consumers, small businesses, and other entities switch to more energy efficient products and services, a registrant that produces or uses less energy efficient products could face material impacts to its business, results of operations, or financial condition.

<sup>330</sup> See *supra* note 277 and accompanying text.

<sup>331</sup> See 17 CFR 229.1500 (definition of transition risk).

<sup>332</sup> See, e.g., TCFD, *Guidance on Metrics, Targets, and Transition Plans* section E (Oct. 2021), available at [https://assets.bbhub.io/company/sites/60/2021/07/2021-Metrics\\_Targets\\_Guidance-1.pdf](https://assets.bbhub.io/company/sites/60/2021/07/2021-Metrics_Targets_Guidance-1.pdf).

<sup>333</sup> See Proposing Release, section II.B.1.

<sup>318</sup> See *infra* section II.C.2.

<sup>319</sup> See 17 CFR 229.1500.

<sup>320</sup> See *supra* notes 303 and 304 and accompanying text.

<sup>321</sup> See *supra* notes 292303 and 293304 and accompanying text.

appropriate balance between providing investors with more consistent and decision-useful information about material climate-related risks while being conscious of the costs to registrants and investors of requiring specified disclosures that may not be relevant in every circumstance. The final rules provide that a registrant that has identified a climate-related risk pursuant to Item 1502 must disclose whether the risk is a physical or transition risk, providing information necessary to an understanding of the nature of the risk presented and the extent of the registrant's exposure to the risk.<sup>334</sup> The final rules then provide a non-exclusive list of disclosures that a registrant must disclose as applicable:

- If a physical risk, whether it may be categorized as an acute or chronic risk, and the geographic location and nature of the properties, processes, or operations subject to the physical risk;<sup>335</sup> and
- If a transition risk, whether it relates to regulatory, technological, market (including changing consumer, business counterparty, and investor preferences), or other transition-related factors, and how those factors impact the registrant.<sup>336</sup>

When proposing the climate-related disclosure rules, the Commission stated that in some instances, chronic risks might give rise to acute risks. For example, a drought (a chronic risk) might contribute to wildfires (an acute risk), or increased temperatures (a chronic risk) might contribute to severe storms (an acute risk). In such instances, the Commission indicated that a registrant should provide a clear and consistent description of the nature of the risk and how it may affect a related risk, as well as how those risks have evolved or are expected to evolve over time.<sup>337</sup>

The final rules require a registrant to provide information necessary to an understanding of the nature of the risk presented and the extent of the registrant's exposure to the risk. We agree, however, with commenters that indicated that requiring a discussion about the interaction of two related physical risks may, due to its complexity, increase the burden on the registrant without yielding a corresponding benefit for investors.<sup>338</sup> While a registrant may opt to provide such discussion, it is not a mandatory

disclosure item under the final rules. We also agree with commenters that stated that, for complex and overlapping physical risks, registrants can determine how best to categorize the physical risk as either acute or chronic.<sup>339</sup> What is important is that a registrant describe the climate-related physical risks it faces clearly and consistently, including regarding the particular categories of physical risk. As a disclosed risk develops over time, for example where the category of physical risk has changed and/or the nature of the impact to the registrant has evolved, depending on the facts and circumstances, the registrant may need to describe the changed risk in order for an investor to understand the impact or reasonably likely impact of the risk on the registrant, including on its business strategy, results of operations, or financial condition.

Some commenters opposed proposed Item 1502 because in their view it would be difficult for a registrant to distinguish between a climate-related physical risk and an ordinary weather risk,<sup>340</sup> or between a business activity in response to a transition risk and one that is part of a routine business strategy.<sup>341</sup> While we recognize that application of some of the Commission's climate disclosure rules may initially be difficult for certain registrants, we expect that compliance will become easier as registrants grow more familiar with disclosing how climate-related factors may impact their business strategies.<sup>342</sup> In this regard, we note that many registrants are already providing some of the TCFD-recommended disclosures, although in a piecemeal fashion and largely outside of the registrant's Commission filings. In addition, we have modified the proposed rules in several places to require disclosure only if a registrant is already undertaking a particular analysis or practice or has already made a judgment that a particular risk is climate-related.<sup>343</sup> Further, the lengthy phase in periods for the final rules will provide registrants additional time to

develop, modify, and implement any processes and controls necessary to the assessment and reporting of any material climate-related risk.<sup>344</sup>

The final rules include several changes from the proposal that mitigate some of the burdens of Item 1502(a), as it was proposed. For example, the rule proposal would have required a registrant to disclose the location and nature of the properties, processes, or operations subject to the physical risk, and to provide the ZIP code or other subnational postal zone.<sup>345</sup> The final rules we are adopting no longer require such disclosure and instead include, as one of the physical risk items that a registrant must disclose, as applicable, the geographic location and nature of the properties, processes, or operations subject to the identified physical risk.<sup>346</sup> This revision is intended to address the concern of many commenters that the proposed ZIP code disclosure requirement would be burdensome to produce and would likely not provide useful information for many investors.<sup>347</sup> This revision will give registrants the flexibility to determine the granularity of any location disclosures based on their particular facts and circumstances as long as they provide information necessary to understand the extent of the registrant's exposure to the material risk.

The proposal would have called for specific information about physical risks, such as disclosures relating to flooding and the location of assets in regions of high or extremely high water stress. In particular, the rule proposal would have required a registrant that faces a material physical risk due to flooding or water stress to disclose the percentage of buildings, plants, or properties that are located in flood hazard areas or the amount and percentage of assets located in water-stressed areas. In a change from the rule proposal, we have eliminated this proposed requirement in order to make the final rules less burdensome and permit the registrant to determine the particular metrics that it should disclose, if any, based on its particular facts and circumstances. Instead, the physical risk disclosure provision we are adopting is less prescriptive and subject to the general condition applicable to both physical and transition risk disclosure that, when describing a material climate-related risk, a registrant must provide information necessary to an

<sup>339</sup> See letter from IAA.

<sup>340</sup> In this regard, according to the National Oceanic and Atmospheric Administration ("NOAA"), weather refers to short-term changes in the atmosphere whereas climate describes what the weather is like over a long period of time in a specific area. See NOAA, *What's the Difference Between Weather and Climate?*, available at <https://www.ncei.noaa.gov/news/weather-vs-climate>.

<sup>341</sup> See *supra* notes 289 and 298.

<sup>342</sup> We also expect that compliance with the final rules will become easier as registrants commence disclosing climate-related information pursuant to other jurisdictions' climate disclosure requirements, to the extent those requirements are similar to the final rules.

<sup>343</sup> See, e.g., *infra* section II.D.

<sup>344</sup> See *infra* section II.O.

<sup>345</sup> See Proposing Release, section II.B.1.

<sup>346</sup> See 17 CFR 229.1502(a)(1).

<sup>347</sup> See *supra* note 286 and accompanying text.

<sup>334</sup> See 17 CFR 229.1502(a).

<sup>335</sup> See 17 CFR 229.1502(a)(1)(i).

<sup>336</sup> See 17 CFR 229.1502(a)(1)(ii).

<sup>337</sup> See Proposing Release, section II.B.1.

<sup>338</sup> See, e.g., letters from CEMEX; Eni SpA; and ERM CVS.

understanding of the nature of the risk presented and the extent of the registrant's exposure to the risk.<sup>348</sup>

These revisions help address the concern of some commenters that the proposed disclosure requirements were too prescriptive and could result in overly granular and immaterial disclosure.<sup>349</sup> The less prescriptive approach of the final rules also addresses the concern of some commenters that the resulting disclosure could cause investor confusion by obscuring other disclosed risks that are presented in less detail.<sup>350</sup> We expect that the final rules will elicit disclosures more reflective of a registrant's particular business practices.

With respect to those commenters who stated that the required metrics disclosure should cover more than just water-related physical risks, the less prescriptive approach in the final rules eliminates any potential overemphasis on water-related physical risks and gives registrants flexibility to describe any physical risks they may be facing.<sup>351</sup> Finally, the revised approach in the final rules will allow a registrant's disclosures to adapt to changing circumstances over time, while still providing sufficient information for investors to understand and assess any such changes.

Similar to the physical risk rule provision, the final rule requires registrants to disclose the nature of any transition risk presented and the extent of the registrant's exposure to the risk. It also includes a non-exclusive list of disclosures the registrant must provide, as applicable, including whether the transition risk relates to regulatory, technological, market, or other transition-related factors, and how those factors impact the registrant.<sup>352</sup>

<sup>348</sup> See 17 CFR 229.1502(a).

<sup>349</sup> See, e.g., letters from ABA; CEMEX; NAM; and SIFMA.

<sup>350</sup> See *supra* note 287 and accompanying text. As described below, the addition of materiality qualifiers to certain of the final rule's climate risk disclosure requirements will also help address this concern by eliciting detailed disclosure only when it is material. See *infra* section II.D.

<sup>351</sup> See, e.g., letters from CalPERS (recommending that the Commission should also require information on areas subject to droughts, heatwaves, and wildfires); IAA (recommending that the Commission require registrants to provide quantitative details of the volume or revenue (percentage) contribution for facilities located in areas subject to water scarcity, flood risk, wildfires, and other climate-related natural disasters); and Morningstar (recommending that the Commission go further in mandating quantitative disclosures related to a registrant's assets exposed to physical climate risk, as such data is important across economic sectors).

<sup>352</sup> See 17 CFR 229.1502(a) and 1502(a)(2). In a change from the proposal, the final rules omit a

Describing the nature of an identified transition risk in this manner will help investors understand the realized or potential material impacts of the identified transition risk and whether and how a registrant intends to mitigate or adapt to such risk.

Consistent with the rule proposal, the final rule provision states that a registrant that has significant operations in a jurisdiction that has made a GHG emissions reduction commitment should consider whether it may be exposed to a material transition risk related to the implementation of the commitment.<sup>353</sup> Including this guidance within the rule text will serve to remind registrants operating in such a jurisdiction that they may need to provide disclosure to investors about this specific type of transition risk.

The proposed rule provisions pertaining to governance, strategy, and risk management would have permitted a registrant, at its option, to describe any climate-related opportunities it was pursuing when responding to those provisions.<sup>354</sup> In this regard, the Commission proposed a definition of "climate-related opportunities" that was similar to the corresponding definition provided by the TCFD.<sup>355</sup> While we are retaining the optional approach to disclosure related to climate-related opportunities, unlike the proposed

specific reference to liability and reputational factors from the transition risk disclosure required pursuant to Item 1502(a)(2). This change was made in order to conform more closely to the definition of "transition risks" in Item 1500, which refers to "regulatory, technological, and market changes." Although this definition refers to impacts to a registrant's liability or reputation as non-exclusive examples of negative impacts resulting from such changes, the definition of transition risks also refers to other examples of negative impacts that are not specifically mentioned in Item 1502(a)(2). To streamline the Item 1502(a)(2) disclosure requirement, and to avoid giving undue emphasis to impacts to a registrant's liability or reputation over other transition risk-related impacts, we have removed the specific reference to liability and reputational factors and have retained the more general reference to "other transition-related factors." A registrant that, due to regulatory, technological, or market changes, has incurred or is reasonably likely to incur a material negative impact to its reputation or liability will be required to include a description of such impact, together with any other material transition-related impact, in its disclosure pursuant to Item 1502(a)(2).

<sup>353</sup> See 17 CFR 229.1502(a)(2).

<sup>354</sup> See Proposing Release, sections II.B through II.E.

<sup>355</sup> Compare Proposing Release, section II.B (proposing to define "climate-related opportunities to mean the actual or potential positive impacts of climate-related conditions and events on a registrant's consolidated financial statements, business operations, or value chains, as a whole) with TCFD, *Recommendations of the Task Force on Climate-related Financial Disclosures*, Appendix 5 (defining "climate-related opportunity" to mean "the potential positive impacts related to climate change on an organization").

rules, the final rules do not refer to climate-related opportunities and therefore do not include a corresponding definition. We are treating the disclosure of climate-related opportunities the same as other voluntary disclosure. Accordingly, despite the absence of a corresponding provision, a registrant may elect to also include disclosure regarding any material climate-related opportunities it is pursuing or is reasonably likely to pursue in addition to disclosure regarding material climate-related risks.<sup>356</sup>

## 2. Time Horizons and the Materiality Determination (Item 1502(a))

### a. Proposed Rule

The rule proposal would have required a registrant to describe any climate-related risks reasonably likely to have a material impact, which may manifest over the short, medium, and long term. The rule proposal also would have required the registrant to describe how it defines short-, medium-, and long-term time horizons, including how it takes into account or reassesses the expected useful life of the registrant's assets and the time horizons for its climate-related planning processes and goals.<sup>357</sup>

### b. Comments

Many commenters supported the proposed requirement to describe any material climate-related risk that may manifest over the short, medium, and long term.<sup>358</sup> Commenters stated that the proposed time horizons are consistent with the time horizons recommended by the TCFD.<sup>359</sup> Commenters also stated that it is important to assess climate-related risks over multiple time periods because of the changing frequency and severity of climate-related events.<sup>360</sup>

Some commenters supported leaving the time periods undefined while requiring a registrant to specify how it defines short-, medium-, and long-term

<sup>356</sup> Registrants have a fundamental obligation not to make materially misleading statements or omissions in their disclosures and may need to provide such additional information as is necessary to keep their disclosures from being misleading. See 17 CFR 230.408 and 17 CFR 240.12b-20.

<sup>357</sup> See Proposing Release, section II.B.

<sup>358</sup> See, e.g., letters from Anthesis; Bloomberg; BNP Paribas; CalPERS; CalSTRS; CEMEX; CFA; Center for Climate and Energy Solutions (June 17, 2022) ("C2ES"); Dell; D. Hileman Consulting; Eni SpA; ERM CVS; Harvard Mgmt.; IAA; ICGN; ICI; Moody's; Morningstar; PRI; PwC; SKY Harbor; TotalEnergies; US TAG TC207; and Wellington Mgmt.

<sup>359</sup> See, e.g., letters from Anthesis; and PRI.

<sup>360</sup> See, e.g., letters from PRI; and Wellington Mgmt.

horizons, as proposed.<sup>361</sup> Commenters stated that the proposed approach aligns with the TCFD framework and would provide flexibility for registrants by allowing them to choose time periods that best fit their particular facts and circumstances.<sup>362</sup> Other commenters stated that the Commission should define short-, medium-, and long-term horizons to enhance the comparability of climate risk disclosure.<sup>363</sup> Commenters recommended various definitions for such time periods. For example, one commenter stated that the Commission should define short-term as 5 years, medium-term as 6 to 15 years, and long-term as 16 to 30 years.<sup>364</sup> Other commenters recommended defining short-term as one year, medium-term as 5 years, and long-term as 10 years.<sup>365</sup> Another commenter recommended defining short-term as 1 to 5 years, medium-term as 5 to 20 years, and long-term as 20 to 30 years.<sup>366</sup> One other commenter recommended defining medium-term as 5 to 10 years and long-term as 10 to 30 years.<sup>367</sup>

Many other commenters opposed the proposed requirement to disclose material climate-related risks as manifested over the short, medium, and long term.<sup>368</sup> Commenters stated that the proposed requirement ran counter to the traditional materiality standard by which a registrant determines if a risk is material to itself as a general matter rather than applying that standard over multiple different timeframes, and indicated that such an approach could require the registrant to engage in multiple different materiality analyses.<sup>369</sup> Commenters also stated that the proposed requirement, which could compel a registrant to consider circumstances many years into the future, would elicit risk disclosure that is highly speculative.<sup>370</sup> Some commenters stated that, instead of the

proposed disclosure requirement, the Commission should impose the same temporal standard that registrants use in practice when preparing a registrant's MD&A (*i.e.*, when assessing the risks that are reasonably likely to have a material impact on future operations "over whatever time period is relevant to a registrant's particular facts and circumstances").<sup>371</sup> Some commenters recommended bifurcating the climate risk disclosures into short-term and long-term timeframes, without a medium-term timeframe, similar to certain MD&A disclosures.<sup>372</sup> One of those commenters stated that imposing a different temporal standard for climate risk disclosure would pose meaningful challenges to management as they seek to adapt their strategies and could result in misalignment of climate-related disclosures with "other, potentially more critical, strategically relevant disclosure issues, including the financial statements and MD&A."<sup>373</sup>

#### c. Final Rule

In a change from the rule proposal, the final rule (Item 1502(a)) provides that in describing any climate-related risks that have materially impacted or are reasonably likely to have a material impact, a registrant should describe whether such risks are reasonably likely to manifest in the short-term (*i.e.*, the next 12 months) and separately in the long-term (*i.e.*, beyond the next 12 months).<sup>374</sup> This temporal standard is generally consistent with an existing standard in MD&A, which was recommended by some commenters.<sup>375</sup> That MD&A standard specifically requires a registrant to analyze its ability to generate and obtain adequate amounts of cash to meet its requirements and plans for cash in the short-term (*i.e.*, the next 12 months from the most recent fiscal period end required to be presented) and separately in the long-term (*i.e.*, beyond the next 12 months).<sup>376</sup> The existing MD&A standard also generally requires that a registrant "provide insight into material opportunities, challenges and risks, such as those presented by known material trends and uncertainties, on which the company's executives are most focused for both the short and long term, as well as the actions they are

taking to address these opportunities, challenges and risks."<sup>377</sup> We are adopting this temporal standard to address the concern of commenters that imposition of a different temporal standard (and, in particular, one that includes a "medium term" period) for climate risk disclosure would pose challenges and potentially conflict with a registrant's assessment of other risks and events that are reasonably likely to have a material impact on its future operations.<sup>378</sup> We note, however, that a registrant is not precluded from breaking down its description of risks reasonably likely to manifest beyond the next 12 months into components that may include more medium- and longer-term risks, if that is consistent with the registrant's assessment and management of the climate-related risk.

We are modeling the temporal standard in Item 1502(a) on this MD&A standard as recommended by commenters because the materiality determination that a registrant will be required to make regarding climate-related risks under the final rules is the same as what is generally required when preparing the MD&A section in a registration statement or annual report. MD&A requires a registrant to disclose material events and uncertainties known to management that are reasonably likely to cause reported financial information not to be necessarily indicative of future operating results or of future financial condition.<sup>379</sup> MD&A further requires the inclusion of descriptions and amounts of matters that have had a material impact on reported operations as well as matters that are reasonably likely to have a material impact on future operations.<sup>380</sup>

When evaluating whether any climate-related risks have materially impacted or are reasonably likely to have a material impact on the registrant, including on its business strategy,

results of operations, or financial condition, registrants should rely on traditional notions of materiality. As defined by the Commission and consistent with Supreme Court precedent, a matter is material if there is a substantial likelihood that a reasonable investor would consider it important when determining whether to buy or sell securities or how to vote or such a reasonable investor would view omission of the disclosure as having significantly altered the total mix of information made available.<sup>381</sup> The materiality determination is fact specific and one that requires both quantitative and qualitative considerations.<sup>382</sup>

The “reasonably likely” component of the rules we are adopting, as with the same standard in MD&A regarding known trends, events, and uncertainties, is grounded in whether disclosure of the climate-related risk would be material to investors and requires that management evaluate the consequences of the risk as it would any known trend, demand, commitment, event, or uncertainty. Accordingly, management should make an objective evaluation, based on materiality, including where the fruition of future events is unknown.<sup>383</sup>

<sup>381</sup> See 17 CFR 230.405 (definition of “material”); 17 CFR 240.12b-2 (definition of “material”). See also *Basic Inc. v. Levinson*, 485 U.S. 224, 231, 232, and 240 (1988) (holding that information is material if there is a substantial likelihood that a reasonable investor would consider the information important in deciding how to vote or make an investment decision; and quoting *TSC Industries, Inc. v. Northway, Inc.*, 426 U.S. 438, 449 (1977) to further explain that an omitted fact is material if there is “a substantial likelihood that the disclosure of the omitted fact would have been viewed by the reasonable investor as having significantly altered the ‘total mix’ of information made available.”).

<sup>382</sup> See *Litwin v. Blackstone Group, L.P.*, 634 F.3d 706, 720 (2d Cir. 2011) (“[A] court must consider ‘both quantitative and qualitative factors in assessing an item’s materiality,’ and that consideration should be undertaken in an integrative manner.”). See also Staff Accounting Bulletin No. 99 (Aug. 12, 1999), available at <https://www.sec.gov/interp/account/sab99.htm> (emphasizing that a registrant or an auditor may not substitute a percentage threshold for a materiality determination that is required by applicable accounting principles). Staff accounting bulletins are not rules or interpretations of the Commission, nor are they published as bearing the Commission’s official approval. They represent interpretations and practices followed by the Division of Corporation Finance and the Office of the Chief Accountant in administering the disclosure requirements of the Federal securities laws. Staff accounting bulletins and any other staff statements discussed in this release have no legal force or effect: they do not alter or amend applicable law, and they create no new or additional obligations for any person.

<sup>383</sup> See, e.g., 2020 MD&A Adopting Release. As noted above, the materiality determination that a

#### *D. Disclosure Regarding Impacts of Climate-Related Risks on Strategy, Business Model, and Outlook*

##### 1. Disclosure of Material Impacts (Item 1502(b), (c), and (d))

###### a. Proposed Rules

The Commission proposed to require a registrant to describe the actual and potential impacts on its strategy, business model, and outlook of those climate-related risks that it must disclose pursuant to proposed Item 1502(a).<sup>384</sup> The Commission further proposed to require a registrant to include in such description any impacts on its:

- Business operations, including the types and locations of its operations;
- Products or services;
- Suppliers and other parties in its value chain;
- Activities to mitigate or adapt to climate-related risks, including adoption of new technologies or processes;
- Expenditure for research and development; and
- Any other significant changes or impacts.

The proposed rules would have required a registrant to disclose the time horizon for each described impact (*i.e.*, as manifested in the short, medium, or long term, as defined by the registrant when determining its material climate-related risks).<sup>385</sup>

When proposing these disclosure requirements, the Commission stated that information about how climate-related risks have impacted or are likely to impact a registrant’s strategy, business model, and outlook can be important for purposes of making an investment or voting decision about the registrant.<sup>386</sup> The Commission further noted that, in response to a request for public input,<sup>387</sup> several commenters had stated that many registrants included

registrar will be required to make regarding climate-related risks under the final rules is the same as what is generally required when preparing the MD&A section of a registration statement or annual report. Accordingly, registrants can look to the guidance in the 2020 MD&A Adopting Release regarding application of the “reasonably likely” standard when considering their disclosure obligations under the various components of Item 1502. According to this guidance, the reasonably likely standard “is not intended to, nor does it require, registrants to affirm the non-existence or non-occurrence of a material future event.” Rather, “it requires management to make a thoughtful and objective evaluation, based on materiality, including where the fruition of future events is unknown.” 2020 MD&A Adopting Release, 86 FR at 2093.

<sup>384</sup> See Proposing Release, section I.I.C.1.

<sup>385</sup> See *id.*

<sup>386</sup> See *id.*

<sup>387</sup> See Proposing Release, section I.B.

largely boilerplate discussions about climate-related risks and failed to provide a meaningful analysis of the impacts of those risks on their businesses.<sup>388</sup> The Commission proposed the disclosure requirements about climate-related impacts to elicit more robust and company-specific disclosure on this topic.<sup>389</sup>

The proposed rules also would have required a registrant to discuss whether and how it has considered the identified impacts as part of its business strategy, financial planning, and capital allocation.<sup>390</sup> In this regard, the proposed rules would have required a registrant to provide both current and forward-looking disclosures that facilitate an understanding of whether the implications of the identified climate-related risks have been integrated into the registrant’s business model or strategy, including how resources are being used to mitigate climate-related risks. The proposed rules would have required the discussion to include how any of the climate-related financial metrics referenced in proposed Article 14 of Regulation S–X, the metrics referenced in the GHG emissions section of proposed subpart 1500 of Regulation S–K, or any of the targets referenced in the targets and goals section of proposed subpart 1500, relate to the registrant’s business model or business strategy.<sup>391</sup>

In addition, the proposed rules would have required a registrant to provide a narrative discussion of whether and how any of its identified climate-related risks have affected or are reasonably likely to affect the registrant’s consolidated financial statements.<sup>392</sup> The proposed rules would have required this discussion to include any of the climate-related financial metrics referenced in proposed Article 14 of Regulation S–X that demonstrate that the identified climate-related risks have had a material impact on the registrant’s reported financial condition or operations.<sup>393</sup> This proposed provision was intended to provide climate-related disclosure that is similar to MD&A, and, as noted in the discussion above, the proposed rules would allow a registrant to provide such disclosure as part of its MD&A.

###### b. Comments

Many commenters supported the Commission’s proposal to require a

<sup>388</sup> See Proposing Release, section I.I.C.1.

<sup>389</sup> See *id.*

<sup>390</sup> See *id.*

<sup>391</sup> See *id.*

<sup>392</sup> See *id.*

<sup>393</sup> See *id.*

registrant to describe the actual and potential impacts on its strategy, business model, and outlook of those climate-related risks that it has determined are reasonably likely to have a material impact on its business or consolidated financial statements.<sup>394</sup> Commenters indicated that detailed information about the actual and potential impacts of a registrant's identified climate-related risks is central to helping investors do the following: understand the extent to which a registrant's business strategy or business model may need to change to address those impacts; evaluate management's response to the impacts and the resiliency of the registrant's strategy to climate-related factors; and assess whether a registrant's securities have been correctly valued.<sup>395</sup> One commenter indicated that investors need more detailed information about the effects of climate-related risks because such risks can affect a company's operations and financials in a wide range of ways, including impacts on revenues, the useful life of assets, loan qualification, and insurance costs.<sup>396</sup> Other commenters stated that, despite the importance for investors of information about climate-related financial impacts, such information is currently underreported.<sup>397</sup>

Several commenters also supported the proposed requirement to include in the impacts description any impacts on, or any significant changes made to, a registrant's business operations, products or services, suppliers and other parties in its value chain, activities to mitigate or adapt to climate-related risks, including adoption of new technologies or processes and expenditure for research and development, and any other significant changes or impacts.<sup>398</sup> Commenters stated that the proposed enumerated disclosure items, including impacts related to a registrant's supply or value chain, are necessary to provide a comprehensive description of a registrant's identified climate-related risks, and are consistent with the types

of impacts that a registrant may face and that are recommended for disclosure by the TCFD.<sup>399</sup> Commenters further stated that the proposed disclosure items would help investors understand the extent to which a registrant has taken actions to mitigate or adapt to a material climate-related risk.<sup>400</sup> One commenter, however, recommended that the final rules should clarify that the list of impacts are examples of impacts, to be disclosed if applicable, and not required items of disclosure.<sup>401</sup>

A number of commenters also supported the proposed requirement to disclose whether and how a registrant has considered any identified impacts as part of its business strategy, financial planning, and capital allocation because it would help investors assess a registrant's likely resiliency to climate-related impacts and because, due to its consistency with the TCFD's recommendations, the proposed disclosure requirement would lead to more consistent, comparable, and reliable climate-related disclosure.<sup>402</sup> Several commenters further supported the proposed provision requiring a registrant to provide a narrative discussion of whether and how any of its identified climate-related risks have affected or are reasonably likely to affect its consolidated financial statements.<sup>403</sup> Some of those commenters recommended that this narrative discussion should be part of a registrant's MD&A.<sup>404</sup> One commenter stated that the proposed provision would help investors understand how management views the realized or likely impacts of identified climate-related risks on a company's consolidated financial statements, which would then assist investors in their assessment of a registrant's climate risk management.<sup>405</sup> One commenter recommended adopting a climate disclosure framework, similar to MD&A, that focuses on providing investors with material climate-related information that management uses to make strategic decisions while allowing registrants to tailor the disclosure to fit their particular circumstances.<sup>406</sup> This commenter stated that requiring a discussion of climate-related impacts

from management's perspective and encompassing impacts to the registrant, its suppliers, and other parties in its value chain would provide investors with what has primarily been missing from current Commission filings.<sup>407</sup> The Commission's Investor Advisory Committee similarly recommended requiring a separate "Management Discussion of Climate-Related Risks and Opportunities" in Form 10-K, similar to the disclosure required by Item 303 of Regulation S-K (MD&A), which would enhance investor understanding of management's views of climate-related risks and opportunities.<sup>408</sup>

Several commenters stated that, instead of requiring the disclosure of financial metrics concerning climate-related impacts in the financial statements, as proposed, the Commission should require registrants to consider material climate-related impacts when discussing the results of operations, capital resources, and liquidity under MD&A.<sup>409</sup> One commenter, responding to the Commission's proposed amendments to Regulation S-X, recommended requiring the disclosure of a registrant's actual discrete and separable climate-related expenditures, both expensed and capitalized, made during each fiscal year, which would be linked to and aligned with the risks, goals, and strategies companies would disclose under proposed Item 1502 of Regulation S-K.<sup>410</sup> The commenter's recommended expenditures disclosure would be included in the financial statements but would take the place of the proposed "financial impacts" disclosure under Regulation S-X and would be presented in tabular format and cover three distinct categories: climate-related events; transition activities for publicly disclosed climate-related targets and goals, such as those included in a company's sustainability report; and all other transition activities.<sup>411</sup> Another

<sup>406</sup> See letter from PwC.

commenter stated that if a registrant's financial estimates and assumptions are impacted by exposures to uncertainties associated with transition risks, the registrant should be required to provide qualitative disclosure about such impacts to its financial estimates and assumptions in its climate-related disclosure or in its MD&A instead of in the financial statements.<sup>412</sup>

Many other commenters, however, broadly opposed the proposed disclosure requirement regarding impacts from climate-related risks.<sup>413</sup> Some commenters stated that the proposed disclosure requirement was unnecessary because the Commission's existing rules already require a registrant to disclose material impacts from climate-related risks.<sup>414</sup> Some commenters expressed concern that the proposed disclosure requirement would result in disclosure of a large volume of information that is immaterial to investors and burdensome for registrants to produce.<sup>415</sup> Some commenters stated that the proposed requirement to disclose impacts on participants in a registrant's value chain was particularly onerous for registrants because of difficulties in collecting relevant and reliable information from third parties.<sup>416</sup> In this regard, some commenters stated that suppliers and other parties in a registrant's value chain may resist pressure to provide the data necessary to assess their climate risk exposure because they are private companies concerned about incurring increased costs or competitive harm.<sup>417</sup> Other commenters stated that the proposed disclosure requirement was too prescriptive and would not allow a registrant to tailor its disclosures according to its particular business or industry.<sup>418</sup> One commenter recommended that we delete the term "business model" because it is not otherwise used in Regulation S-K and might be interpreted by some registrants

that do not have a business model as implying that they must adopt one.<sup>419</sup>

Some commenters generally supported the proposed impact disclosure provision but recommended that the Commission add a materiality qualifier to elicit disclosure of only the most likely and significant impacts, which they asserted would provide more useful information for investors and reduce a registrant's compliance burden.<sup>420</sup> Similarly, some commenters generally supported some form of climate disclosure while recommending that the Commission make the final rules more principles-based so that registrants could better tailor their disclosures to reflect their own particular facts and circumstances.<sup>421</sup>

### c. Final Rules

The final rule provision (Item 1502(b)) will require a registrant to describe the actual and potential material impacts of any climate-related risk identified in response to Item 1502(a) on the registrant's strategy, business model, and outlook.<sup>422</sup> Information about the actual and potential material impacts of climate-related risks on a registrant's strategy, business model, and outlook is central to understanding the extent to which a registrant's business strategy or business model has changed, is changing, or is expected to change to address those impacts. This information is also central to evaluating management's response to the impacts and the resiliency of the registrant's strategy to climate-related factors as it pertains to the registrant's results of operations and financial condition. Numerous commenters on the proposal shared some or all of these views.<sup>423</sup>

The proposed rule did not specifically include a materiality qualifier when requiring a registrant to describe the actual and potential impacts of any identified climate-related risk in response to proposed Item 1502(a). In practice, however, proposed Item 1502(b) would have elicited disclosure focused on material impacts because proposed Item 1502(a) would have required a registrant to describe only

those climate-related risks that the registrant had identified as having materially impacted or being reasonably likely to have a material impact on the registrant.<sup>424</sup> Nevertheless, we recognize that, as proposed, Item 1502(b) may have caused some confusion regarding the scope of the proposed disclosure requirement.<sup>425</sup> Some commenters misinterpreted the rule proposal as requiring the disclosure of actual or potential impacts of climate-related risks, regardless of their materiality.<sup>426</sup> We have, therefore, added an explicit materiality qualifier to Item 1502(b) to clarify that a registrant is only required to disclose material impacts of climate-related risks that it has identified in response to Item 1502(a). This clarifying amendment will help address commenters' concerns that the proposed rule could result in the disclosure of large amounts of immaterial information and thus be unduly burdensome for registrants.

Some commenters asserted that the proposed rule provision was not necessary because the Commission's existing rules generally require a registrant to disclose the effects of material risks, including climate-related risks.<sup>427</sup> However, as other commenters have stated, many companies do not discuss any climate-related risks in response to existing disclosure requirements.<sup>428</sup> Accordingly, a rule provision that specifically requires the disclosure of material impacts of climate-related risks, and lists the types of potential material impacts that must be described, if applicable, will provide investors access to this information on a more consistent and comparable basis.<sup>429</sup>

The final rule provision largely lists the same types of potential material impacts of climate-related risks as under the rule proposal. The list, which is intended to be non-exclusive, includes, as applicable, material impacts on the registrant's:

- Business operations, including the types and locations of its operations;
- Products or services;
- Suppliers, purchasers, or counterparties to material contracts, to the extent known or reasonably available;
- Activities to mitigate or adapt to climate-related risks, including adoption of new technologies or processes; and

- Expenditure for research and development.

If none of the listed types of impacts or any other impacts are material, a registrant need not disclose them. Similarly, if a registrant has identified a climate-related risk that has materially impacted or is reasonably likely to impact its business strategy, results of operations, or financial condition, but the actual and potential material impact on its strategy, business model, and outlook is not specifically listed in the final rule, the impact will need to be disclosed. By providing a non-exclusive list of material impacts of climate risks in the rule text, but not mandating that all or only these impacts be disclosed, the final rule will help elicit more meaningful and relevant disclosure without overburdening registrants or investors with the presentation of irrelevant information.

We have revised one of the types of potential material impacts listed in the proposal that referenced “suppliers and other parties in [a registrant’s] value chain,” by replacing this phrase with “[s]uppliers, purchasers, or counterparties to material contracts, to the extent known or reasonably available.” This revision is intended to address the concern of some commenters that requiring a registrant to include material impacts to a registrant’s value chain would be overly burdensome to both the registrant and to entities in the registrant’s value chain.<sup>430</sup> Thus the final rule limits the scope of this specific topic to include only material impacts to the registrant’s suppliers, purchasers, or counterparties to material contracts and further limits the information that should be disclosed about those impacts to information that is known or is reasonably available.<sup>431</sup> The adopted provision is consistent with the Commission’s general rules regarding the disclosure of information that is difficult to obtain, which will apply to the final rules if their conditions are met.<sup>432</sup> Accordingly, as modified, this provision will help limit the compliance burden of the final rules by eliminating any potential need for registrants to undertake unreasonable searches or requests for information from their value chains.

Final Item 1502(c) will require a registrant to discuss whether and how the registrant considers any material impacts described in response to Item 1502(b) as part of its strategy, financial

planning, and capital allocation.<sup>433</sup> Similar to the rule proposal, but modified to make Item 1502(c) less prescriptive, the final rule provision will require a registrant to include in its disclosure responsive to this provision, as applicable:

- Whether the impacts of the climate-related risks described in response to Item 1502(b) have been integrated into the registrant’s business model or strategy, including whether and how resources are being used to mitigate climate-related risks; and
- How any of the targets referenced in Item 1504<sup>434</sup> or in a described transition plan<sup>435</sup> relate to the registrant’s business model or strategy.

As noted by several commenters, this provision will help investors assess a registrant’s resiliency to impacts of climate-related risks, by providing information about how management considers the realized or likely impacts of identified material climate-related risks on a company’s business model or strategy.<sup>436</sup>

In further response to commenters’ concern that the proposed rules were overly prescriptive and could result in a volume of information that could be confusing for investors,<sup>437</sup> we have streamlined the Item 1502(c) disclosure requirement. For example, we have omitted from the final Item 1502(c) provision the proposed requirement to “[p]rovide both current and forward-looking disclosures,”<sup>438</sup> which should provide registrants with more flexibility to determine the appropriate disclosures needed in response to the requirement. We also have eliminated the requirement to describe how any of the financial statement metrics or GHG emissions metrics relate to the registrant’s business model or business strategy.<sup>439</sup> Although a registrant may choose to include forward-looking information or discuss any climate-related metrics or financial information in response to Item 1502(c), the final rule leaves it up to each registrant to determine, based on its particular facts and circumstances, what disclosure is necessary to help investors understand whether and how management has incorporated the material impacts of its climate-related risks into its business

strategy, financial planning, and capital allocation.

In addition, to further streamline the disclosure and reduce some of the redundancy in the rule proposal,<sup>440</sup> we have eliminated from Item 1502(c) the proposed disclosure requirement concerning the role that the use of carbon offsets or RECs has played in a registrant’s climate-related strategy. Under the final rules, as part of its targets and goals disclosure,<sup>441</sup> a registrant will be required to provide disclosure concerning its use of carbon offsets or RECs if they constitute a material component of a registrant’s plan to achieve its climate-related targets or goals.<sup>442</sup> Given this targets and goals disclosure requirement, explicitly requiring disclosure concerning the use of carbon offsets and RECs in the context of Item 1502(c) is not necessary.

We acknowledge the commenter who recommended that we delete the term “business model” in the proposed disclosure item;<sup>443</sup> however, we have retained the use of this term in the final rule because requiring a registrant to disclose a material impact on its business model caused by a climate-related risk will provide important information to investors about the effectiveness of the registrant’s climate risk management that would otherwise be lost were we to omit this reference. In addition, registrants generally should be familiar with the term even if not previously used in Regulation S–K.<sup>444</sup> Moreover, the TCFD uses that term in connection with disclosure about the resilience of a company’s strategy to climate-related risks, and as such, using the concept in the final rules will provide consistency for those registrants that have been providing climate-related information based on that framework.<sup>445</sup> If a registrant has not yet articulated a business model, or does not believe that its business model is or will be materially impacted by climate-related

<sup>440</sup> One commenter stated that the Commission should follow the TCFD’s recommendation that “[d]isclosures should be eliminated if they are immaterial or redundant to avoid obscuring relevant information.” Letter from Chamber.

risks, it need not provide the disclosure specified in this rule provision.

Proposed Item 1502(d) would have required a registrant to provide a narrative discussion of whether and how any climate-related risks described in response to proposed Item 1502(a) have affected or are reasonably likely to affect the registrant's consolidated financial statements.<sup>446</sup> When proposing Item 1502(d), the Commission explained that this provision was intended to elicit a discussion of the financial effects of climate-related risks similar to MD&A.<sup>447</sup> In a clarifying change from the proposal, and to address commenters' concern that the proposed rule could result in immaterial disclosure,<sup>448</sup> we have added materiality qualifiers to "have affected" and "are reasonably likely to affect" to clarify that Item 1502(d) requires a discussion only of material climate-related risks (*i.e.*, climate-related risks that a registrant has identified as having had or being reasonably likely to have a material effect on the registrant).<sup>449</sup> In a further change from the proposal, the final rules refer to the registrant's "business, results of operations, and financial condition" rather than "consolidated financial statements." This is to reflect that the type of disclosure that is intended by this provision is more similar to that found in MD&A than that found in the notes to the financial statements.<sup>450</sup>

Proposed Item 1502(d) also would have required a discussion that included the financial statement metrics to be disclosed pursuant to proposed Article 14 of Regulation S-X. In a change from the proposal, Item 1502(d)(2) will require a registrant to describe quantitatively and qualitatively the material expenditures incurred and material impacts on financial estimates and assumptions that, in management's assessment, directly result from activities to mitigate or adapt to climate-related risks disclosed pursuant to Item 1502(b)(4).<sup>451</sup> Focusing the disclosure requirement on material expenditures that, based on management's assessment, were incurred as a direct result of the registrant's mitigation or adaptation activities will provide investors with a financial metric that is important to assessing the registrant's

management of the disclosed risk, as well as assessing the financial impact of such activities. At the same time, linking the disclosure of the expenditures with management's assessment that they directly result from mitigation or adaptation activities will more closely align the disclosure requirement with how the registrant actually evaluates a material climate-related risk. This will not only provide investors with important information about a registrant's strategic decision-making concerning a material climate-related risk but should also help the registrant determine whether there are material expenditures that must be disclosed, thereby lowering the compliance burden, as some commenters noted.<sup>452</sup>

This disclosure requirement is intended to capture actual material expenditures, both capitalized and expensed, made during the fiscal year for the purpose of climate-related risk mitigation or adaptation. As one commenter noted, requiring the disclosure of material expenditures that are directly linked to a registrant's climate-related goals as part of a registrant's strategy or targets and goals disclosure under Regulation S-K,<sup>453</sup> instead of requiring the disclosure of climate-related financial impacts on line items under Regulation S-X, as proposed, will help reduce the compliance burden of the final rules while providing material information for investors.<sup>454</sup> Although this commenter recommended that such expenditures disclosure be presented in tabular format, the final rule provision does not specify a particular format. The final rule also does not require disclosure of "discrete and separable" expenditures, as the commenter suggested. A registrant may present the material expenditures disclosure in tabular or narrative form according to how it believes such information best fits within its overall climate risk

disclosure.<sup>455</sup> Likewise, the final rules provide registrants with more flexibility than that suggested by the commenter to determine which and to what extent expenditures must be disaggregated or otherwise broken out. This disclosure requirement covers material expenditures for the mitigation or adaptation of both physical risks and transition risks. The final Regulation S-X provisions that we are adopting, on the other hand, do not cover financial impacts caused by transition risks.<sup>456</sup> This Regulation S-K provision, therefore, will elicit disclosures about material expenditures related to activities engaged in for the mitigation of and adaptation to climate-related risks in Commission filings while avoiding the difficulties of reporting such information in a note to the financial statements, as proposed.<sup>457</sup>

As discussed in more detail below,<sup>458</sup> we recognize that some commenters on the proposed Regulation S-X amendments expressed concern regarding the attribution of expenses to climate risk mitigation activities. Specifically, these commenters stated that registrants make business decisions, such as incurring an expenditure to purchase a piece of machinery that is more energy efficient, for multiple reasons, and as a result, a registrant's transition activities may be inextricably intertwined with its ordinary business activities.<sup>459</sup> Although similar concerns could arise with respect to Item 1502(d)'s expenditures disclosure requirement, subjecting the disclosure requirement to materiality rather than a bright-line threshold, as was proposed for the Regulation S-X amendments, and limiting the disclosure to material expenditures that, in "management's assessment," are the direct result of

<sup>455</sup> The structured data requirements set forth in Item 1508 will facilitate investors' ability to find and analyze material expenditures disclosure regardless of whether provided in tabular or narrative form. See *infra* section II.M.3.

<sup>456</sup> See *infra* section II.K. In addition, in a change from the proposal, the amendments to Regulation S-X do not require the disclosure of expenditures to mitigate the risks of severe weather events and other natural conditions. Therefore, under Item 1502, investors will also receive information about expenditures related to the mitigation of physical risks that they will not otherwise receive in the disclosures required by the amendments to Regulation S-X.

<sup>457</sup> See *supra* notes 409 and 452 and accompanying text. The amendments to Regulation S-X will require the disclosure of expenditures related to carbon offsets and RECs, a type of transition activity, if carbon offsets and RECs have been used as a material component of a registrant's plans to achieve its disclosed climate-related targets or goals in a note to the financial statements. See *infra* section II.K.

<sup>458</sup> See *infra* sections II.K.2.b.iii, 3.b and c.

<sup>459</sup> See *infra* note 1892 and accompanying text.

<sup>446</sup> See Proposing Release, section II.C.1.

<sup>447</sup> See *id.*

<sup>448</sup> See *supra* note 415 and accompanying text.

<sup>449</sup> See 17 CFR 229.1502(d)(1).

<sup>450</sup> As previously noted, several commenters recommended making or linking any climate-related financial disclosure requirements under or with MD&A disclosure requirements. See *supra* note 409 and accompanying text.

<sup>451</sup> See 17 CFR 229.1502(d)(2).

<sup>452</sup> See, e.g., letters from Amazon; and PwC.

<sup>453</sup> See *infra* sections II.D.2.c and II.G.3.a for a similar material expenditures disclosure requirement, respectively, as part of a registrant's transition plan disclosure under Item 1502(e) and targets and goals disclosure under Item 1504 of Regulation S-K. To the extent that there is any overlapping disclosure of material expenditures in response to these Items, to avoid redundancy, a registrant should provide disclosure of material expenditures regarding the Item where, in its assessment, such disclosure is most appropriate, and then cross-reference to this disclosure when responding to the other Items.

<sup>454</sup> See letter from Amazon. As examples of transition activities expenditures, this commenter presented costs and expenses related to electrifying its delivery fleet, renewable energy purchases, and carbon offset purchases. See *id.*, Appendix A.

mitigation or adaptation activities, will help to mitigate the compliance burden and related concerns. In addition, in responding to the final rules, registrants will have the flexibility to explain qualitatively the nature of the expenditure and how management has determined that it is a direct result of the disclosed transition activities, which may help alleviate concerns about potential liability exposure for attribution decisions.<sup>460</sup>

Requiring the disclosure of material impacts on financial estimates and assumptions that, from management's assessment, directly result from mitigation or adaptation activities will also provide investors with important information that will help them understand a registrant's climate risk management and assess any effects on its asset valuation and securities pricing.<sup>461</sup> Registrants will similarly have the flexibility to explain qualitatively the nature of the impact on financial estimates and assumptions and how, in management's assessment, it is a direct result of the disclosed mitigation or adaptation activities.

We recognize that registrants may need to develop new systems and adjust their DCPs to ensure the accurate tracking and reporting of material expenditures and material impacts on financial estimates and assumptions that directly result from climate-related mitigation or adaptation activities.<sup>462</sup> To accommodate such development and adjustment, we are providing an additional phase in for the requirement to disclose this information in the context of Item 1502. Accordingly, a registrant will not be required to comply with the Item 1502(d)(2) requirement until the fiscal year immediately following the fiscal year of its initial compliance date for subpart 1500 disclosures based on its filer status.<sup>463</sup>

## 2. Transition Plan Disclosure (Items 1500 and 1502(e))

### a. Proposed Rule

The Commission proposed to require a registrant that has adopted a transition

plan as part of its climate-related risk management strategy to describe the plan, including the relevant metrics and targets used to identify and manage any physical and transition risks.<sup>464</sup> The proposed requirements were intended to help investors understand how a registrant intends to address identified climate-related risks and any transition to a lower carbon economy while managing and assessing its business operations and financial condition. The Commission proposed to define "transition plan" to mean a registrant's strategy and implementation plan to reduce climate-related risks, which may include a plan to reduce its GHG emissions in line with its own commitments or commitments of jurisdictions within which it has significant operations. To allow for an understanding of a registrant's progress to meet its plan's targets or goals over time, the proposed rules would have required the registrant to update its disclosure about its transition plan each fiscal year by describing the actions taken during the year to achieve the plan's targets or goals.<sup>465</sup>

The proposed rules would have further required a registrant that has adopted a transition plan to discuss, as applicable:

- How the registrant plans to mitigate or adapt to any identified physical risks, including but not limited to those concerning energy, land, or water use and management; and
- How the registrant plans to mitigate or adapt to any identified transition risks, including the following:
  - Laws, regulations, or policies that:
    - Restrict GHG emissions or products with high GHG footprints, including emissions caps; or
    - Require the protection of high conservation value land or natural assets;
  - Imposition of a carbon price; and
  - Changing demands or preferences of consumers, investors, employees, and business counterparties.

The proposed rules provided that a registrant that has adopted a transition plan may also describe how it plans to achieve any identified climate-related opportunities, such as:

- The production of products that may facilitate the transition to a lower carbon economy, such as low emission modes of transportation and supporting infrastructure;
- The generation or use of renewable power;
- The production or use of low waste, recycled, or other consumer products that require less carbon intensive production methods;
- The setting of conservation goals and targets that would help reduce GHG emissions; and
- The provision of services related to any transition to a lower carbon economy.

### b. Comments

Many commenters supported the proposed provision requiring a registrant that has adopted a transition plan to describe the plan, including the relevant metrics and targets used to identify and manage any physical and transition risks.<sup>466</sup> Commenters stated that information about a registrant's transition plan would help investors evaluate the seriousness of stated corporate intentions to identify and manage climate-related risks, including the credibility of climate-related targets and progress made toward those targets.<sup>467</sup> Several commenters stated that information regarding a registrant's transition plan is important to help investors evaluate a registrant's management of its identified climate-related risks and help them assess the resiliency of a registrant's strategy in a potential transition to a lower carbon economy.<sup>468</sup> Some commenters specifically supported requiring disclosure, as applicable, of a registrant's plan to mitigate or adapt to identified physical risks, as proposed, and further stated that there are no transition risks, as identified in the rule proposal, that should be excluded from the transition plan disclosure requirement.<sup>469</sup> Other commenters stated that the proposed requirement would help provide more consistent and comparable disclosure about companies' transition plans, which, despite the

<sup>460</sup> We note also that the "significant contributing factor" attribution principle applicable to certain disclosures required by the final rules in the financial statements, as well as any other guidance we provide below regarding the presentation of the disclosures in the financial statements, does not pertain to the expenditure disclosure in Regulation S-K. See *infra* section II.K.3.c.

<sup>461</sup> See, e.g., letter from IMA.

<sup>462</sup> See, e.g., letters from ABA; Cohn Rez; HP; and IMA.

<sup>463</sup> We are providing the same one-year phase in for the material expenditures disclosure requirements being adopted in connection with a transition plan or a target and goal. See *infra* section II.O.3 below.

<sup>464</sup> See Proposing Release, section II.E.2. The Commission proposed to require transition plan disclosure in connection with a registrant's risk management discussion. The final rules include transition plan disclosure as part of a registrant's disclosure about climate-related risks and their impact on the registrant's strategy to be consistent with TCFD's recommended transition plan disclosure. See, e.g., TCFD, *Guidance on Metrics, Targets, and Transition Plans* (Oct. 2021), available at [https://assets.bbhub.io/company/sites/60/2021/07/2021-Metrics\\_Targets\\_Guidance-1.pdf](https://assets.bbhub.io/company/sites/60/2021/07/2021-Metrics_Targets_Guidance-1.pdf).

<sup>467</sup> See, e.g., letters from Amer. for Fin. Reform, Sunrise Project *et al.*; and Calvert.

<sup>468</sup> See, e.g., letters from CalPERS; Calvert; ICGN; Morningstar; PRI; PwC; and Soros Fund.

<sup>469</sup> See, e.g., letters from Anthesis; Calvert; and TotalEnergies.

importance of such information, is currently lacking.<sup>470</sup> As previously noted, one other commenter recommended requiring the disclosure of a registrant's climate-related expenditures, both expensed and capitalized, made during each fiscal year, which would be linked to and aligned with the risks, goals, and strategies that the registrant would disclose under proposed Item 1502 of Regulation S-K.<sup>471</sup>

One commenter stated that the Commission should require a registrant that has a transition plan to disclose how it is aligned with the goals of the Paris Agreement.<sup>472</sup> Another commenter similarly indicated that the proposed transition plan disclosure requirement would help investors evaluate the extent to which a registrant's plan is aligned with global climate-related goals.<sup>473</sup> A few commenters stated that mandatory disclosure of a transition plan would not raise competitive harm concerns.<sup>474</sup> One commenter recommended that we revise the transition plan disclosure requirement so that it aligns more with the TCFD's recommended disclosure of transition plans, which focuses solely on transition risk and does not include the mitigation or adaptation of physical risk.<sup>475</sup> According to this commenter, a transition plan "is not a tool for addressing physical risks, and disclosures on how an organization would address, manage and reduce the impact of physical risks should be disclosed under the risk management or targets sections."<sup>476</sup>

A number of commenters opposed the proposed requirement to describe a transition plan if one has been adopted.<sup>477</sup> Some commenters stated

that the proposed disclosure requirement was too prescriptive and would likely create a disincentive for the adoption of transition plans.<sup>478</sup> Some commenters also stated that the proposed requirement would compel the disclosure of confidential business information and raise competitive harm concerns.<sup>479</sup> One commenter asserted that the proposed requirement is not necessary because the Commission's existing rules, which require disclosure of any material change to a previously disclosed business strategy, would arguably elicit disclosure of a registrant's transition plan.<sup>480</sup> Other commenters recommended that the Commission reduce the prescriptive nature of the proposed transition plan disclosure provision by requiring disclosure only of elements of a transition plan or transition activities that are material.<sup>481</sup> One other commenter similarly recommended requiring the disclosure only of a material transition plan that has been approved by the board of directors.<sup>482</sup> Still other commenters stated that transition plan disclosure should be voluntary.<sup>483</sup>

Some commenters supported the proposed provision specifying that a registrant may disclose how it plans to achieve any climate-related opportunities.<sup>484</sup> Commenters stated that information about whether and how a registrant intends to achieve climate-related opportunities, such as by creating products and services to facilitate a transition to a lower carbon economy, would be helpful for investors when comparing registrants' climate-related preparedness for the purpose of making investment decisions.<sup>485</sup> One commenter recommended that the Commission require, rather than permit, the disclosure of how a registrant plans to achieve any climate-related opportunities mentioned in its

transition plan in order to discourage deceptive statements.<sup>486</sup>

Some commenters supported the proposed provision requiring a registrant to update its disclosure about its transition plan each fiscal year by describing the actions taken during the year to achieve the plan's targets or goals.<sup>487</sup> Several of these commenters stated that the updating provision was necessary to help investors track a registrant's progress toward meeting a transition plan's goals and to enable investors to make or alter their investment decisions based on current climate-related information.<sup>488</sup> One of these commenters stated that "[c]ompanies that try to distinguish themselves by releasing a public transition plan often are not required to provide updates as to how they are progressing against those targets, significantly limiting an investor's ability to assess management's success in reaching their goals."<sup>489</sup> A few of these commenters further stated that the proposed updating requirement would not act as a disincentive to the adoption of a transition plan because companies that intend to follow through on their transition plan commitments will want to assess their progress in achieving them and report on such progress and any climate-related opportunities they may be pursuing.<sup>490</sup>

Other commenters, however, opposed the proposed updating requirement.<sup>491</sup> One commenter stated that the proposed requirement would be burdensome for registrants and would act as a disincentive to the adoption of a transition plan.<sup>492</sup> Another commenter stated that, due to the long timeline of transition plans, annual progress updates would in many cases not provide meaningful information for investors.<sup>493</sup> This commenter recommended that there should instead be a requirement to annually report any actions taken to achieve transition plans that are material to the registrant, as well as any material positive or negative deviations from the plan or changes to it that are material to the registrant.<sup>494</sup> Another commenter stated that a registrant should have to update its

<sup>470</sup> See, e.g., letters from CalSTRS; and Ceres.

transition plan disclosure only when the registrant believes it is appropriate to do so, and such updating should occur at most on an annual basis.<sup>495</sup>

### c. Final Rule

After considering comments received, we are adopting, with modifications from the proposal, a final rule provision (Item 1502(e)) that will require a registrant to describe a transition plan if it has adopted the plan to manage a material transition risk.<sup>496</sup> Like the rule proposal, the final rules define (in Item 1500) a “transition plan” to mean a registrant’s strategy and implementation plan to reduce climate-related risks, which may include a plan to reduce its GHG emissions in line with its own commitments or commitments of jurisdictions within which it has significant operations.<sup>497</sup> The final rules do not mandate that registrants adopt a transition plan; if a registrant does not have a plan, no disclosure is required.

As noted in the Proposing Release, registrants may adopt transition plans to mitigate or adapt to climate-related risks as an important part of their climate-related risk management strategy, particularly if the registrant has made commitments, or operates in a jurisdiction that has made commitments, to reduce its GHG emissions.<sup>498</sup> We recognize that not every registrant has a transition plan and, as noted above, this rulemaking does not seek to prescribe any particular tools, strategies, or practices with respect to climate-related risks. If, however, a registrant has adopted such a plan, information regarding the plan is important to help investors evaluate a registrant’s management of its identified climate-related risks and assess the potential impacts of a registrant’s strategy to achieve its short- or long-term climate-related targets or goals on its business, results of operations, and/or its financial condition. Moreover, a registrant’s transition plan may have a significant impact on its overall business strategy, for example, where companies operate in jurisdictions with laws or regulations in place designed to move them away from high emissions products and services.<sup>499</sup> Because the steps a registrant plans to take pursuant to its transition plan may have a material impact on its business, results of operations, or financial condition,

investors have sought more detailed disclosure about transition plans.<sup>500</sup>

We disagree with commenters that stated that transition plan disclosure should be voluntary<sup>501</sup> and that a transition plan disclosure requirement was not necessary because the Commission’s existing business description rules would arguably elicit sufficient disclosure of a registrant’s transition plan.<sup>502</sup> As other commenters noted, many registrants are not providing decision-useful information about their transition plans under the Commission’s existing disclosure rules.<sup>503</sup> While existing Item 101 of Regulation S–K may result in some disclosure regarding transition plans in response to the general requirements of that rule, mandatory disclosure about transition plans will help ensure that investors receive the information they need to evaluate a registrant’s management of material climate-related risks and the impact of those plans on its results of operations and financial condition in a more consistent and predictable manner.

We are cognizant, however, of commenters’ concerns that the proposed transition plan disclosure provision was overly prescriptive and could result in immaterial disclosure or discourage registrants from adopting a transition plan to avoid having to describe the plan in detail.<sup>504</sup> To address these concerns, we have significantly streamlined the transition plan disclosure provision and revised the provision so that the description of a transition plan is only required if a registrant has adopted the plan to manage a material transition risk. Unlike the proposed rule, the final rule does not list the types of transition risks and factors related to those risks that must be disclosed, if applicable.<sup>505</sup> Instead, a registrant that is required to provide transition plan disclosure will have the flexibility to provide disclosure that addresses the particular facts and circumstances of its material transition risk.<sup>506</sup> We also note that, as with

scenario analysis and use of internal carbon price disclosure, a registrant’s transition plan disclosure will be subject to a safe harbor.<sup>507</sup>

Similar to the proposed rule, the final rule requires a registrant to update its annual report disclosure about the transition plan each fiscal year by describing any actions taken during the year under the plan, including how such actions have impacted the registrant’s business, results of operations, or financial condition.<sup>508</sup> This updating requirement will help investors understand the registrant’s progress under the plan over time, track the impacts of a transition plan on a registrant’s business and, as noted by commenters, help inform investment decisions.<sup>509</sup> We disagree with the view of commenters who stated that this updating requirement would result in disclosure of information that is not meaningful for investors.<sup>510</sup> Investors have indicated that they need periodic information regarding the steps a registrant has taken to achieve an announced climate-related target or goal in order to evaluate a registrant’s ongoing management of a material transition risk for the purpose of informing their investment or voting decisions.<sup>511</sup> Once a registrant has provided disclosure about a transition plan it has adopted to manage a material climate risk, we do not expect that it would be particularly burdensome for the company to disclose updated information about actions taken under the plan on a going forward basis.<sup>512</sup> Disclosure of the steps a registrant intends to make under a transition plan, and whether it has taken those steps, will help investors assess the financial impacts of the plan on the registrant’s business, results of operations, or financial condition.<sup>513</sup> Moreover,

profits for such products, the devaluation or abandonment of assets, risk of legal liability and litigation defense costs, competitive pressures associated with the adoption of new technologies, and reputational impacts (including those stemming from a registrant’s customers or business counterparties) that might trigger changes to market behavior, consumer preferences or behavior, and registrant behavior. See 17 CFR 229.1500.

<sup>507</sup> See *infra* section II.J.3.

<sup>508</sup> See 17 CFR 229.1502(e)(1).

<sup>509</sup> See *supra* note 488 and accompanying text.

<sup>510</sup> See *supra* note 490 and accompanying text.

<sup>511</sup> See, e.g., letters from AGs of Cal. *et al.*; Amer. for Fin. Reform, Sunrise Project *et al.*; Anthesis; BNP Paribas; CalPERS; CalSTRS; Ceres; and Morningstar.

<sup>512</sup> We note that such an update would not be required where disclosure of the underlying transition plan would not be currently required (e.g., because the plan is no longer used to manage a material transition risk).

<sup>513</sup> See, e.g., letters from AGs of Cal. *et al.*; BNP Paribas; and Morningstar.

<sup>500</sup> See, e.g., letters from AGs of Cal. *et al.*; BNP Paribas; and Morningstar.

<sup>501</sup> See *supra* note 483 and accompanying text.

<sup>502</sup> See *supra* note 480 and accompanying text.

<sup>503</sup> See *supra* note 470 and accompanying text.

<sup>504</sup> See *supra* notes 478 and 481 and accompanying text.

<sup>505</sup> See Proposing Release, section II.E.2.

<sup>506</sup> As discussed above, transition risk is defined as the actual or potential negative impacts on a registrant’s business, results of operations, or financial condition attributable to regulatory, technological, and market changes to address the mitigation of, or adaptation to, climate-related risks, such as increased costs attributable to changes in law or policy, reduced market demand for carbon-intensive products leading to decreased prices or

<sup>495</sup> See letter from Unilever.

<sup>496</sup> See 17 CFR 229.1502(e).

<sup>497</sup> See 17 CFR 229.1500 (definition of “transition plan”).

<sup>498</sup> See Proposing Release, section II.E.2.

<sup>499</sup> See *supra* section II.A.

requiring this information on an annual basis will allow investors to take into account current climate-related information in their investment and voting decisions more consistently than they would be able to if registrants were required to update their climate-related information less frequently or only when they deemed it appropriate.<sup>514</sup>

We recognize that some commenters asserted that an updating requirement would act as a disincentive to the adoption of a transition plan. This effect may be attenuated, as some commenters indicated,<sup>515</sup> if registrants that have disclosed a plan wish to inform investors about progress achieved pursuant to the plan. In any event, if a registrant is using a transition plan to manage a material transition risk, we think it is appropriate for registrants to provide ongoing disclosure about the plan so that investors can assess its impact on the registrant's business.<sup>516</sup> As previously noted, however, we are agnostic about whether or how a registrant is managing its climate-related risks, and the final rules are intended neither to incentivize nor disincentivize the use of a transition plan or any other climate risk management tool.

In a modification of the proposed rule, which would have generally required the disclosure of the relevant metrics and targets used to identify and manage transition risk under a transition plan, the final rule will require a registrant, as part of its updating disclosure, to include quantitative and qualitative disclosure of material expenditures incurred and material impacts on financial estimates and assumptions as a direct result of the disclosed actions taken under the plan.<sup>517</sup> While this provision is similar to Item 1502(d), Item 1502(e) differs in that it is intended to elicit disclosure about material expenditures and material impacts on financial estimates and assumptions that directly result from actions taken under a transition plan (e.g., material expenditures made for climate-related research and development). Item 1502(e) is not limited to disclosure concerning expenditures and impacts that directly result from mitigation or adaptation activities;<sup>518</sup> however, to the extent that

a registrant's disclosure made in response to Item 1502(d) or Item 1502(e) overlap with each other or with disclosure required under any other subpart 1500 provision,<sup>519</sup> the registrant need not repeat the disclosure.

Similar to Item 1502(d), the disclosure requirement under Item 1502(e) is intended to capture material expenditures, both capitalized and expensed, made during the fiscal year under a transition plan, and to more closely align with how the registrant actually makes strategic decisions about taking actions under a transition plan. This provision will provide an important metric to help investors assess a registrant's climate risk management and the financial impact of a transition plan while also helping to limit the compliance burden, as some commenters noted.<sup>520</sup> We have not qualified Item 1502(e) by referring to management's assessment as we have done in Item 1502(d) (i.e., material expenditures and material impacts that, in management's assessment, directly result from the disclosed actions). We believe that if a registrant has adopted a transition plan to manage a material transition risk, it is likely that management will oversee actions taken under the plan and, therefore, any material expenditures or material impacts on financial estimates and assumptions that are disclosed will have been assessed by management as being the direct result of such actions.

As under Item 1502(d), when responding to Item 1502(e), a registrant will have flexibility to explain qualitatively the nature of a material expenditure or material impact on its financial estimates or assumptions and how it directly resulted from the disclosed actions taken under the plan. Additionally, when considering which expenditures related to actions taken under a disclosed plan are material over the relevant period and therefore require disclosure, if individual expenditures do not appear to be material, registrants should consider whether overall expenditures related to actions taken under the plan are material in the aggregate and, if so, provide appropriate disclosure. For example, a series of

individually immaterial expenditures could be the result of the same action or related actions under the plan, and those expenditures could be material in the aggregate. With respect to the disclosure of material impacts on financial estimates and assumptions as a direct result of the disclosed actions, to the extent that such information is disclosed in response to Rule 14-02(h) of Regulation S-X, a registrant would be able to cross-reference to such disclosure.<sup>521</sup>

Similar to Item 1502(d)(2), to allow for the development of systems, controls, and procedures to track and report material expenditures and material impacts on financial estimates and assumptions directly resulting from actions taken under a transition plan, we are phasing in compliance with Item 1502(e)(2). A registrant will not be required to comply with either provision until the fiscal year immediately following the fiscal year of its initial compliance date for the subpart 1500 rules based on its filer status.<sup>522</sup>

As recommended by one commenter,<sup>523</sup> we have removed the reference to physical risks that was in the proposed rule.<sup>524</sup> This change will make the transition plan disclosure requirement more consistent with voluntary disclosures that are based on the TCFD's recommendations,<sup>525</sup> which may mitigate the costs and complexity of complying with the final rule for registrants already familiar with the TCFD's framework.<sup>526</sup> A registrant that faces a material physical risk, however, will still be required to disclose how it is managing that risk as part of its risk management disclosure.<sup>527</sup> These revisions will elicit material information for investors about how a registrant

<sup>521</sup> We remind registrants that while they are permitted to cross-reference to information in their financial statements to satisfy their Regulation S-K disclosure obligations, they are not permitted to cross-reference to Regulation S-K disclosures in their financial statements, unless otherwise specifically permitted or required by the Commission's rules or by U.S. Generally Accepted Accounting Principles ("U.S. GAAP") or International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB"), whichever is applicable. See 17 CFR 230.411 and 17 CFR 240.12b-23.

<sup>522</sup> See *infra* section II.O.3.

<sup>523</sup> See letter from PRI.

<sup>524</sup> See Proposing Release, section II.E.2.

<sup>525</sup> See TCFD, *Guidance on Metrics, Targets, and Transition Plans* section E (Oct. 2021), available at [https://assets.bbhub.io/company/sites/60/2021/07/2021-Metrics\\_Targets\\_Guidance-1.pdf](https://assets.bbhub.io/company/sites/60/2021/07/2021-Metrics_Targets_Guidance-1.pdf).

<sup>526</sup> See, e.g., *infra* note 2690 and accompanying text (describing a report finding that 50 percent of sustainability reports from Russell 1000 companies aligned with the TCFD recommendations).

<sup>527</sup> See 17 CFR 229.1503, discussed *infra* section II.F.

<sup>514</sup> See *supra* note 495 and accompanying text.

<sup>515</sup> See *supra* note 490 and accompanying text.

<sup>516</sup> To the extent that a registrant no longer uses a transition plan to manage a material climate risk, disclosure under this item, including the requirement for updates, would not be required.

<sup>517</sup> See 17 CFR 229.1502(e)(2).

<sup>518</sup> See *supra* section II.D.1.c for a discussion of Item 1502(d)(2)'s requirement to disclose material expenditures and material impacts on financial estimates and assumptions directly resulting from mitigation or adaptation activities.

<sup>519</sup> For example, Item 1504(c)(2) requires similar disclosure regarding material impacts that directly result from actions taken by a registrant to achieve a disclosed target or goal. See *infra* section II.G.3. To the extent that there is any overlapping disclosure of material expenditures in response to Items 1502(d)(2), 1502(e), and 1504(c)(2), to avoid redundancy, a registrant should provide disclosure of material expenditures regarding the item where, in its assessment, such disclosure is most appropriate, and then cross-reference to this disclosure when responding to the other items.

<sup>520</sup> See, e.g., letters from Amazon; and PWC.

intends to reduce its exposure to a material transition risk while limiting the burdens on registrants and providing them more flexibility to determine what aspects of the transition plan should be disclosed in light of their facts and circumstances.

We are cognizant that some commenters expressed concern that the proposed transition plan disclosure requirement would result in the disclosure of confidential or proprietary information that could cause competitive harm to the registrant.<sup>528</sup> Modifying the transition plan disclosure provision to focus on material expenditures and material impacts on financial estimates and assumptions, rather than all relevant metrics and targets, will help to mitigate this concern by providing registrants with more flexibility to determine what is necessary to disclose in order to describe the plan. Similarly, modifying the transition plan disclosure provision to require disclosure only when a plan has been adopted to manage a material transition risk will further help to mitigate this concern. This added flexibility regarding transition plan disclosure will also help address concerns that the final rule could act as a disincentive to adoption of transition plans.<sup>529</sup> While the final rules seek neither to incentivize nor disincentivize the adoption of transition plans, we recognize that the compliance burdens of disclosure may influence some registrants' decisions with respect to risk management practices and have therefore sought to mitigate such effects.

We decline to follow the recommendation of one commenter to limit the transition plan disclosure requirement to only material transition plans that have been formally approved by a registrant's board of directors.<sup>530</sup> We do not believe that board approval should be the determining factor in whether disclosure is provided. Such a provision would fail to elicit disclosure of a material transition plan adopted by senior management that, due to a registrant's particular corporate governance structure, is not required to be subject to a board vote but nevertheless has significant potential implications for the registrant's financial condition or results of operations. Like the proposal, the final rule does not require a registrant to disclose climate-related opportunities included in its transition plan. Nevertheless, as previously mentioned, a registrant may still elect to describe

any opportunities that it intends to achieve as part of its transition plan discussion or when responding to any of the Item 1502 provisions.<sup>531</sup> We decline, however, to follow the recommendation of one commenter to require the disclosure of how a registrant intends to achieve any climate-related opportunities that are a part of its transition plan.<sup>532</sup> Consistent with the rule proposal, we have determined to treat disclosure regarding climate-related opportunities as optional, among other reasons, to allay any anti-competitive concerns that might arise from a requirement to disclose a particular business opportunity.<sup>533</sup> We believe those concerns could be exacerbated by requiring disclosure not only of the existence of opportunities in the transition plan but also how the registrant intends to achieve those opportunities.

### 3. Disclosure of Scenario Analysis If Used (Items 1500 and 1502(f))

#### a. Proposed Rule

The Commission proposed to require a registrant to describe the resilience of its business strategy in light of potential future changes in climate-related risks.<sup>534</sup> In connection with this disclosure, the Commission proposed to require a registrant to describe any analytical tools, such as scenario analysis, that the registrant uses to assess the impact of climate-related risks on its business and consolidated financial statements, and to support the resilience of its strategy and business model in light of foreseeable climate-related risks.<sup>535</sup> The Commission proposed to define scenario analysis to mean a process for identifying and assessing a potential range of outcomes of various possible future climate scenarios, and how climate-related risks may impact a registrant's operations, business strategy, and consolidated financial statements over time.<sup>536</sup> The proposed definition included an example of how registrants might use scenario analysis.<sup>537</sup>

The Commission proposed to require a registrant that uses scenario analysis to assess the resilience of its business

strategy to climate-related risks to disclose the scenarios considered (e.g., an increase of no greater than 3 deg:C, 2 deg:C, or 1.5 deg:C above pre-industrial levels), including the parameters, assumptions, and analytical choices, and the projected principal financial impacts on the registrant's business strategy under each scenario. The Commission further proposed that such disclosure should include both qualitative and quantitative information.<sup>538</sup>

#### b. Comments

Several commenters supported the proposed rule requiring a registrant to describe any analytical tools, such as scenario analysis, that the registrant uses to assess the impact of climate-related risks on its business and consolidated financial statements, and to support the resilience of its strategy and business model in light of foreseeable climate-related risks.<sup>539</sup> One commenter stated that scenario analysis has emerged as a key analytical tool for assessing potential climate-related impacts on a company by allowing market participants to understand multiple possible outcomes while still reflecting a realistic level of uncertainty.<sup>540</sup> This commenter further indicated that disclosure of scenario analysis if used would allow investors to review the general models and projections used by the company in its planning and capital allocation strategy, and would greatly assist investors in understanding a firm's resilience and assumptions about the effects of climate change.<sup>541</sup> Another commenter supported the disclosure of scenario analysis if used because of the importance to investors of forward-looking assessments of climate-related

<sup>538</sup> See *id.*

<sup>539</sup> See, e.g., letters from American Institute of CPAs (June 15, 2022) ("AICPA"); AllianceBernstein; Amer. for Fin. Reform, Sunrise Project *et al.*; Bloomberg; CalSTRS; Ceres; CFA; Council of Institutional Advisors (May 19, 2022) ("CII"); Eni SpA; IAC Recommendation; ICGN; ICI; J. <sup>540</sup> See letter from Amer. for Fin. Reform, Sunrise Project *et al.*

<sup>541</sup> See *id.*; see also letters from ICI (stating that "[i]nformation about scenario analysis can help investors evaluate the resilience of the company's business strategy in the face of various climate scenarios that could impose potentially different climate-related risks"); and Wellington Mgmt. (stating that "disclosure of a scenario analysis enables investors to assess an issuer's risk management process and whether an issuer is considering different climate risk outcomes in its planning").

<sup>531</sup> See *supra* section II.C.1.c.

<sup>532</sup> See *supra* note 486 and accompanying text.

<sup>533</sup> See Proposing Release, section II.A.1.

<sup>534</sup> See Proposing Release, section II.C.4.

<sup>535</sup> See *id.*

<sup>536</sup> See *id.* More generally, scenario analysis is a process for identifying and assessing a potential range of outcomes of future events under conditions of uncertainty. See, for example, the definition of "scenario analysis" in TCFD, Recommendations of the Task Force on Climate-related Financial Disclosures, Appendix 5.

<sup>537</sup> See Proposing Release, section II.C.4.

<sup>528</sup> See *supra* note 479 and accompanying text.

<sup>529</sup> See, e.g., letters from CEMEX; and SIFMA.

<sup>530</sup> See *supra* note 482 and accompanying text.

risks in understanding the resilience of a company's climate-related strategy.<sup>542</sup>

Some commenters recommended that the Commission require all registrants to provide scenario analysis disclosure in their climate risk reporting, regardless of whether they otherwise use scenario analysis.<sup>543</sup> One such commenter stated that requiring scenario analysis disclosure is essential if a registrant's disclosure of material climate-related risks is to be decision-useful for investors.<sup>544</sup> According to that commenter, because scenario analysis requires a registrant to make assumptions regarding different global temperature increase pathways and various potential pathways of decarbonization involving regulatory, technological, and behavioral responses, investors need to know the assumptions and parameters considered by the registrant in order to understand the registrant's disclosure of likely climate-related impacts.<sup>545</sup> One other commenter stated that, "all else being equal," registrants that conduct strong scenario analyses should have more intrinsic value in the securities they offer than issuers that do not plan sufficiently for climate risk.<sup>546</sup>

One commenter stated that the proposed scenario analysis disclosure requirement struck an appropriate balance by requiring registrants to share any scenario analysis that they are otherwise conducting for their business operations while avoiding imposing a potentially difficult or burdensome requirement on those registrants that have not yet conducted such analysis.<sup>547</sup> Some commenters similarly stated that, due to cost concerns, they could only support a requirement to disclose scenario analysis if it was limited to situations in which a registrant has actually used such analysis in its assessment of climate-related risks.<sup>548</sup> Other commenters supported the proposed scenario analysis disclosure requirement but

only if the use of scenario analysis reflected an expected material impact on the registrant's business strategy, financial planning, and capital raising.<sup>549</sup> Still other commenters recommended that the Commission require a registrant that does not currently use scenario analysis to explain why it does not do so to prevent the disclosure requirement from acting as a disincentive to the adoption of scenario analysis.<sup>550</sup>

Several commenters opposed or expressed concerns about the proposed requirement to disclose scenario analysis, if used.<sup>551</sup> Some commenters stated that the proposed requirement could result in the disclosure of confidential business information.<sup>552</sup> Other commenters stated that a scenario analysis disclosure requirement that is not qualified by materiality would act as a disincentive to the use of scenario analysis as a climate-related tool.<sup>553</sup> Still other commenters opposed the proposed disclosure requirement because it was too prescriptive and would be costly and burdensome to fulfill.<sup>554</sup> Because of the above concerns, some commenters stated that the disclosure of scenario analysis should be voluntary.<sup>555</sup> Other commenters stated that the required scenario analysis disclosure should be limited to high level trends or material drivers and impacts, and should not cover more detailed parameters, assumptions, and analytical choices underlying the scenario analysis, as proposed.<sup>556</sup> One commenter stated that scenario analysis disclosure should only be required when it is broadly used by senior management and the board as part of their strategic planning process and

when integrated and material to a publicly announced climate-related strategy or initiative.<sup>557</sup>

Some commenters recommended that the Commission require the use of certain publicly available scenario models, such as those published by the Intergovernmental Panel on Climate Change ("IPCC"), the International Energy Agency ("IEA"), or the Network of Central Banks and Supervisors for Greening the Financial System ("NGFS"), to enhance the comparability of the scenario analysis disclosure.<sup>558</sup> Other commenters stated that it should be up to each registrant to choose those scenarios that best fit its particular business or industry and tailor its disclosure accordingly.<sup>559</sup>

### c. Final Rule

We are adopting a final rule (Item 1502(f)) requiring the disclosure of scenario analysis under certain circumstances. The disclosure of a registrant's use of scenario analysis can provide important forward-looking information to help investors evaluate the resilience of the registrant's strategy under various climate-related circumstances.<sup>560</sup> Scenario analysis has increasingly been recognized as an important analytical tool in assessing a company's climate-related risk exposure,<sup>561</sup> and investors have increasingly sought information from registrants about their use of scenario analysis and expressed a need for improved disclosure about such use.<sup>562</sup>

<sup>557</sup> See letter from Amazon.

<sup>558</sup> See, e.g., letters from Anthesis; Bloomberg; CalSTRS; Chevron; and Shell plc (June 17, 2022) ("Shell").

<sup>559</sup> See, e.g., letters from American Council of Life Insurers (June 17, 2022) ("ACLI"); J. Herron; and TotalEnergies.

<sup>560</sup> See *supra* notes 540–542 and accompanying text.

<sup>561</sup> See, e.g., letter from AllianceBernstein (stating that "[s]cenario analysis is particularly important for those registrants in emissions-intensive industries where such analysis can demonstrate the quality of impairment testing and increase confidence in asset values"). The Federal Reserve Board's climate scenario analysis pilot program, in which six of the nation's largest banks are voluntarily participating, further demonstrates the increased recognition of scenario analysis as an important tool to assess climate-related financial risks. See Board of Governors of the Federal Reserve System, *Federal Reserve Board announces that six of the nation's largest banks will participate in a pilot climate scenario analysis exercise designed to enhance the ability of supervisors and firms to measure and manage climate-related financial risks* (Sept. 29, 2022), available at <https://www.federalreserve.gov/newsevents/pressreleases/other20220929a.htm>.

<sup>548</sup> See, e.g., letters from AICPA; J. McClellan; and Unilever.

Although some commenters recommended that we require all registrants to include scenario analysis disclosure in their climate risk reporting,<sup>563</sup> we recognize that not every registrant conducts scenario analysis and, as noted above, this rulemaking does not seek to prescribe any particular tools, strategies, or practices with respect to climate-related risks but rather, when material, to provide investors with the information they need to evaluate the climate-related risks faced by the registrant and their potential impacts on the registrant's business, results of operations, or financial condition. Therefore, similar to the proposed rule, the final rule's scenario analysis disclosure requirement will depend on whether and how a registrant uses such analysis. Importantly, the rule will not require any registrant to conduct scenario analysis.

We are, however, adopting modifications in the final rules. For example, we have added a materiality qualifier regarding the disclosure of scenario analysis to address commenters' concern that the proposed requirement could result in disclosure of immaterial information that would be burdensome and costly to produce.<sup>564</sup> We also note that, as with transition plan and use of internal carbon price disclosure, a registrant's scenario analysis disclosure will be subject to a safe harbor.<sup>565</sup> The final rule provides that, if a registrant uses scenario analysis<sup>566</sup> to assess the impact of climate-related risks on its business, results of operations, or financial condition, and if, based on the results of scenario analysis, a registrant determines that a climate-related risk is reasonably likely to have a *material* impact on its business, results of operations, or financial condition, then

making their results challenging to compare"); and Ceres (citing evidence from the Climate Action 100+ Benchmark that companies' "scenario analyses leave much room for improvement").

<sup>563</sup> See *supra* note 543 and accompanying text.

<sup>564</sup> See *supra* note 554 and accompanying text.

<sup>565</sup> See *infra* section II.J.3.

<sup>566</sup> We are largely adopting the definition of scenario analysis, as proposed. See 17 CFR 229.1500 ("Scenario analysis means a process for identifying and assessing a potential range of outcomes of various possible future climate scenarios, and how climate-related risks may impact a registrant's business strategy, results of operations, and financial condition over time.") We have deleted from the definition the example that "registrants might use scenario analysis to test the resilience of their strategies under certain future climate scenarios, such as those that assume global temperature increases of 3 °C, 2 °C, and 1.5 °C above pre-industrial levels" because we do not wish to convey the impression that these scenarios are required should a registrant elect to conduct scenario analysis.

the registrant must describe each such scenario,<sup>567</sup> including a brief description of the parameters, assumptions, and analytical choices used, as well as the expected material impacts, including financial impacts, on the registrant under each such scenario.<sup>568</sup> We are adopting this disclosure requirement because, if a registrant has used scenario analysis to assess and manage a material climate-related risk, investors need to understand how it conducted that analysis in order to evaluate the registrant's conclusions regarding material impacts on its business, results of operations, or financial condition.

We also have streamlined the proposed scenario analysis disclosure requirements to reduce redundancy in the final rules. For example, we have eliminated the introductory provision in the rule proposal requiring a registrant to describe the resilience of its business strategy in light of potential future changes in climate-related risks. Because companies use scenario analysis to test the resilience of their business strategies under varying future climate scenarios, and because such use is explained in the definition of scenario analysis (in Item 1500) that we are adopting largely as proposed,<sup>569</sup> if registrants are required to disclose their use of scenario analysis under the final rules, such disclosure likely would include a description of the resilience of their strategies under various climate scenarios.

The rule proposal would have required a registrant to disclose "any analytical tools, such as scenario analysis" that it uses to assess the impact of climate-related risks on its business. In a modification of the proposed rule, we have eliminated the reference to "any analytical tools" to clarify that the disclosure required by this provision should concern the registrant's use of scenario analysis rather than any other analytical tools. We note that the TCFD's guidance discusses scenario analysis as the primary tool to help companies assess the impacts of climate-related risks on their business strategies, and therefore this change should eliminate any confusion about what other analytical tools might fall under the scope of the requirements.<sup>570</sup>

<sup>567</sup> See 17 CFR 229.1502(f). Conversely, if a registrant conducts scenario analysis and determines from its results that it is not likely to be materially impacted by a climate-related risk, no disclosure about its use of scenario analysis is required under Item 1502(f).

<sup>568</sup> See *id.*

<sup>569</sup> See 17 CFR 229.1500.

<sup>570</sup> See TCFD, *supra* note 332.

In another change from the rule proposal, we have added the term "brief" to modify the "description of the parameters, assumptions, and analytical choices used" prong of the scenario analysis disclosure provision. The adopted provision will continue to elicit disclosure that will enhance investors' assessment of the resiliency of a registrant's strategy while also mitigating the compliance burden for registrants. Requiring a *brief* description of the parameters, assumptions, and analytical choices used, together with a description of the projected *material* financial impacts on the registrant's business strategy under each scenario, should help elicit disclosure that neither burdens investors with immaterial detail nor unduly adds to a registrant's compliance burden. As with disclosure related to transition plans, we reiterate that our focus in adopting these requirements is neither on incentivizing nor disincentivizing any particular risk management practice but rather on providing investors with the information they need with respect to the particular practices of a registrant in order to make informed investment and voting decisions.

These revisions to the proposed rule also address commenters' concern that the required scenario analysis disclosure could result in the disclosure of confidential business information.<sup>571</sup> If a registrant has used scenario analysis to determine that an identified climate-related risk is likely to have a material impact on its business, results of operations, or financial condition, it is important for investors to receive disclosure about that material impact. The registrant will not, however, be required to provide a lengthy description of the underlying parameters and assumptions that may be more likely to reveal confidential business information.

Although some commenters recommended that we require the use of one or more climate scenario models,<sup>572</sup> the final rules do not impose any specific risk management model. By requiring disclosure based on whether a registrant has determined to conduct scenario analysis as part of its consideration of material climate-related risks, a registrant will be able to select the climate scenario model or models that it believes best fits its particular industry or business, or its climate risk assessment approach. This approach will provide useful information to investors about the resilience of a registrant's climate-related business

<sup>571</sup> See *supra* note 552 and accompanying text.

<sup>572</sup> See *supra* note 558 and accompanying text.

strategy while also helping to limit the registrant's compliance burden relating to scenario analysis disclosure under the final rules.

The proposed scenario analysis disclosure provision would have included as an example of potential scenarios to be considered "an increase of no greater than 3 °C, 2 °C, or 1.5 °C above pre-industrial levels."<sup>573</sup> Because this was for illustrative purposes only, and because we have removed the same example from the definition of scenario analysis to avoid conveying the impression that these scenarios are required,<sup>574</sup> we have also removed the example from Item 1502(f).

To further streamline the scenario analysis disclosure requirement, we have removed the proposed provision stating that the disclosure should include both qualitative and quantitative information.<sup>575</sup> We recognize that, as noted by some commenters, scenario analysis practices are still evolving,<sup>576</sup> and that, in the early stages of use, a registrant's disclosure regarding its use of scenario analysis may be qualitative. As a registrant's use of scenario analysis becomes more sophisticated, we would expect its disclosure of the results of scenario analysis to become more quantitative, particularly when discussing the expected material financial impacts on the registrant's business strategy, under each considered scenario, which, like the proposed rule, must be addressed should a registrant be required to disclose its use of scenario analysis. Streamlining the proposed scenario analysis disclosure requirement in this way will enable a registrant to determine the mix of qualitative and quantitative disclosure that best fits its particular circumstances when satisfying its obligations under the final rule.

We decline to follow the recommendation of one commenter who stated that disclosure of scenario analysis should only be required when integrated and material to a publicly announced climate-related strategy or initiative.<sup>577</sup> Conditioning the disclosure requirement in this way could deprive investors of needed information solely because the registrant has not yet announced the corresponding strategy or initiative.

#### 4. Disclosure of a Maintained Internal Carbon Price (Item 1502(g))

##### a. Proposed Rule

The Commission proposed to define an internal carbon price to mean an estimated cost of carbon emissions used internally within an organization.<sup>578</sup> The Commission also proposed that, if a registrant maintains an internal carbon price, it would have to disclose:

- The price in units of the registrant's reporting currency per metric ton of carbon dioxide equivalent ("CO<sub>2</sub>e");
- The total price, including how the total price is estimated to change over time, if applicable;
- The boundaries for measurement of overall CO<sub>2</sub>e on which the total price is based, if different from the GHG emission organizational boundary required pursuant to the proposed GHG emissions disclosure provision; and
- The rationale for selecting the internal carbon price applied.<sup>579</sup>

The proposed rules would have further required a registrant to describe how it uses an internal carbon price to evaluate and manage climate-related risks. In addition, the proposed rules would have required a registrant that uses more than one internal carbon price to provide the proposed disclosures for each internal carbon price and to disclose its reasons for using different prices.<sup>580</sup>

##### b. Comments

Several commenters supported the rule proposal requiring a registrant to disclose information about a maintained internal carbon price because of the important role played by internal carbon pricing in the management of climate-related risks.<sup>581</sup> One commenter stated that internal carbon pricing has become an important mechanism to help companies manage risks and capitalize on emerging opportunities in the transition to a low-carbon economy.<sup>582</sup> According to this commenter, in the event that governments adopt a carbon tax, registrants that have not begun using internal carbon pricing could find themselves increasingly vulnerable due to their failure to internalize the cost into their business.<sup>583</sup> A different

commenter stated that an internal carbon price is a multifaceted tool that enables a registrant to embed a shadow cost for carbon in all carbon mitigation investment decisions, or impose an internal carbon fee by charging business units for their emissions and using the revenue generated to support investment into clean technologies.<sup>584</sup> Other commenters similarly stated that an internal carbon price can assist companies in steering capital expenditures, research and design, and other financing decisions toward projects with reduced emissions.<sup>585</sup> One commenter asserted that nearly half of the world's largest companies factor a cost of carbon into their business plans.<sup>586</sup> Other commenters recommended that the Commission require a registrant that does not use internal carbon pricing to explain its reason for not doing so, as to prevent the proposed disclosure requirement from acting as a disincentive toward the use of this tool.<sup>587</sup>

Most of the above commenters supported requiring a registrant that uses internal carbon pricing to disclose the proposed items, including:

- The price in units of the registrant's reporting currency per metric ton of CO<sub>2</sub>e;
- The total price;
- The rationale for selecting the internal carbon price applied; and
- How it uses internal carbon price to evaluate and manage climate-related risks.<sup>588</sup>

Some commenters also supported requiring the disclosure of the methodology used to develop and apply an internal carbon price.<sup>589</sup> In this regard, one commenter stated that while many companies claim to utilize

<sup>584</sup> See letter from Eni SpA.

<sup>585</sup> See letters from AllianceBernstein (stating that "[i]nternal carbon pricing can guide capital expenditures, research and design and other fundamental decisions towards projects, products and services that are more resilient to climate change and away from assets that may become economically unviable in the global transition to a lower carbon economy"); and Ceres.

<sup>583</sup> See *id.*

<sup>573</sup> See Proposing Release, section I.I.C.4.

<sup>574</sup> See *supra* note 566 and accompanying text.

<sup>575</sup> See *id.*

<sup>576</sup> See, e.g., letters from Bloomberg; and Chamber.

<sup>577</sup> See letter from Amazon.

internal carbon pricing, it is challenging for investors to assess “the validity and strength” of such pricing without transparency on methodology, price, and application.<sup>590</sup> Other commenters stated that the proposed disclosure details are important for investors to assess the reasonableness, applicability, comparability, and accuracy of internal carbon pricing by registrants.<sup>591</sup> These commenters supported requiring the disclosure of the boundaries for measurement of overall CO<sub>2</sub>e on which the total price is based,<sup>592</sup> including when those boundaries are different than the organizational boundaries used to measure a registrant’s GHG emissions, in order to increase the transparency underlying the use of internal carbon pricing.<sup>593</sup>

Several other commenters, however, opposed the proposed internal carbon disclosure requirement.<sup>594</sup> Some commenters stated that the proposed requirement could result in competitive harm for registrants,<sup>595</sup> such as through potential disclosure of confidential or proprietary business information.<sup>596</sup> For example, commenters asserted that such disclosures “would divulge sensitive information to . . . competitors”<sup>597</sup> and noted that registrants “us[ing] internal prices of carbon in their operations may often be doing so for pricing or other competitive purposes”<sup>598</sup> and “private companies and state-owned enterprises that compete in a registrant’s sector would not need to provide the same type and level of information as public companies.”<sup>599</sup> Other commenters indicated that the proposed disclosure requirement was too prescriptive and, lacking a materiality qualifier, would result in the disclosure of information that is not decision-useful for investors

and costly to produce.<sup>600</sup> Because of these concerns, commenters stated that the proposed disclosure requirement would act as a disincentive to the use of internal carbon pricing.<sup>601</sup> Accordingly, some commenters recommended that the Commission provide exceptions to any internal carbon price disclosure requirements (such as exclusions for information that is competitively sensitive),<sup>602</sup> a separate safe harbor or exemption from liability for internal carbon price disclosure,<sup>603</sup> or a phase in period for these requirements.<sup>604</sup> One commenter stated that disclosure of internal carbon pricing should be required only when it is broadly used by senior management and the board as part of their strategic planning process and when integrated and material to a publicly announced climate-change strategy or initiative.<sup>605</sup> Finally, one commenter, who was concerned that the proposed internal carbon pricing requirement would require the disclosure of proprietary information, recommended that the Commission adopt an alternative approach to obtain carbon price-related disclosures, such as an approach similar to the Financial Accounting Standards Board’s (“FASB”) standardized measure of oil and gas, or SMOG.<sup>606</sup>

#### c. Final Rule

The final rule (Item 1502(g)) will require a registrant that uses internal carbon pricing to disclose certain information about the internal carbon price, if such use is material to how it evaluates and manages a climate-related risk that, in response to Item 1502(a), it has identified as having materially impacted or is reasonably likely to have a material impact on the registrant,

including on its business strategy, results of operations, or financial condition.<sup>607</sup> As commenters have noted, many registrants use internal carbon pricing as a planning tool, among other purposes: to help identify climate-related risks and opportunities; as an incentive to drive energy efficiencies to reduce costs; to quantify the potential costs the company would incur should a carbon tax be put into effect; and to guide capital investment decisions.<sup>608</sup> Information about a registrant’s use of internal carbon pricing will help investors evaluate how a registrant is managing climate-related risks, particularly transition risks, and the effectiveness of its business strategy to mitigate or adapt to such risks.

At the same time, we recognize commenters’ concern that, without a materiality qualifier, the proposed rule could have resulted in the disclosure of internal carbon pricing data that would not be decision-useful for investors and would be burdensome for registrants to produce.<sup>609</sup> To address this concern, in a change from the proposed rule, which would have required internal carbon pricing disclosure whenever a registrant maintains an internal carbon price, the final rule will require this disclosure only when the registrant’s use of internal carbon pricing is material to how it evaluates and manages a climate-related risk identified in response to Item 1502(a).

If a registrant’s use of internal carbon pricing is material, similar to the proposed rule, the final rule will require it to disclose in units of the registrant’s reporting currency:

- The price per metric ton of CO<sub>2</sub>e; and
- The total price, including how the total price is estimated to change over the time periods referenced in Item 1502(a), as applicable.<sup>610</sup>

Similar to the proposed rule, if a registrant uses more than one internal carbon price to evaluate and manage a material climate-related risk, it must provide the required disclosures for each internal carbon price, and disclose its reasons for using different prices.<sup>611</sup> We also have included a provision, similar to the rule proposal and as

<sup>590</sup> See, e.g., letter from AllianceBernstein; see also letter from Paradise Invest. Mgmt. (stating that “[w]here a company does use an internal carbon price, unless transparency is provided on what the price is and how it is set, investors cannot determine whether this is appropriate and what the financial implications may be”).

<sup>604</sup> See, e.g., letters from Managed Funds Association (June 17, 2022) (“MFA”); Moody’s; TRC; and Inclusive Capital Partners, L.P. (June 24, 2022) (“Inclusive Cap.”).

<sup>605</sup> See letter from Amazon.

<sup>606</sup> See letter from Chevron (recommending “a disclosure requirement similar to FASB Accounting Standards Codification (ASC) 932, which requires a standardized measure of discounted future cash flows relating to proved oil and gas reserves quantities, often referred to as the standardized measure of oil and gas, or SMOG”).

<sup>607</sup> See 17 CFR 229.1502(g).

<sup>608</sup> See *supra* notes 581–585 and accompanying text. We also note, based on current voluntary reporting, an increasing trend among public companies to use internal carbon pricing. See CDP, *Putting a Price on Carbon* (2021), available at [https://cdn.cdp.net/cdp-production/cms/reports/documents/000/005/651/original/CDP\\_Global\\_Carbon\\_Price\\_report\\_2021.pdf](https://cdn.cdp.net/cdp-production/cms/reports/documents/000/005/651/original/CDP_Global_Carbon_Price_report_2021.pdf).

<sup>609</sup> See *supra* note 600 and accompanying text.

<sup>610</sup> See 17 CFR 229.1502(g)(1).

<sup>611</sup> See 17 CFR 229.1502(g)(2).

recommended by some commenters,<sup>612</sup> stating that if the scope of entities and operations involved in the use of a described internal carbon price is materially different than the organizational boundaries used for the purpose of calculating a registrant's GHG emissions pursuant to the final rule, the registrant must briefly describe this difference.<sup>613</sup>

We are requiring disclosure of this information because, as commenters noted, it will help investors understand a registrant's internal carbon pricing practice and how such practice has contributed to the registrant's overall evaluation and planning regarding climate-related risk.<sup>614</sup> Increased transparency about internal carbon pricing by registrants that use an internal carbon price to evaluate and manage a material climate-related risk, in particular a material transition risk, will help investors understand the assumptions and analyses made by registrants when determining and managing the likely financial impacts of such risks on the company. Moreover, including a requirement to disclose any material difference in the boundaries used for internal carbon pricing and GHG emissions measurement will help minimize investor confusion about the scope of entities and operations included in a registrant's application of internal carbon pricing and improve transparency about the methodology underlying the use of internal carbon pricing so that investors may better compare such use across registrants.<sup>615</sup>

To streamline the internal carbon price disclosure requirement and to reduce redundancy, we have eliminated the proposed requirement to describe how a registrant uses an internal carbon price to evaluate and manage climate-related risks.<sup>616</sup> If a registrant is required to provide internal carbon pricing disclosure under the final rules, the registrant is likely to describe how it uses an internal carbon price to evaluate and manage a material climate-related risk when responding to other final rule provisions, such as when describing a related transition plan,<sup>617</sup> even if the description of internal carbon pricing is less detailed because it is part of a broader narrative discussion. To further streamline the internal carbon price disclosure requirement, we have eliminated from

the final rule the proposed requirements to disclose the rationale for selecting the internal carbon price applied.<sup>618</sup>

By streamlining the internal carbon price disclosure requirement in this way and adding materiality qualifiers, the final rules will help ensure that investors receive material information about the registrant's use of internal carbon pricing to inform their investment and voting decisions while limiting the compliance burden for registrants. Moreover, eliminating the proposed requirement to provide a separate narrative description of how a registrant uses an internal carbon price and the rationale for selecting the internal carbon price applied will help address commenters' concerns that the proposed disclosure requirement would result in the disclosure of confidential or proprietary information and act as a disincentive to using an internal carbon pricing mechanism.<sup>619</sup> We also note that, as with transition plan and scenario analysis disclosure, disclosure of a registrant's use of an internal carbon price will be subject to a safe harbor.<sup>620</sup> Because of these changes to the proposed rule, we believe that it is unnecessary to adopt an exemption or exception to the internal carbon price disclosure requirement, as some commenters recommended,<sup>621</sup> or a separate phase in for the disclosure requirement, as recommended by other commenters.<sup>622</sup>

#### E. Governance Disclosure

##### 1. Disclosure of Board Oversight (Item 1501(a))

###### a. Proposed Rules

The proposed rules would have required a registrant to disclose a number of items related to a board of directors' oversight of climate-related risks, largely based on the TCFD framework. First, the Commission proposed to require the identification of any board members or board committees responsible for the oversight of climate-related risks,<sup>623</sup> whether an existing committee, such as the audit committee or risk committee, or a separate committee established to focus on climate-related risks. Next, the proposed rules required detailed disclosure of whether any member of a registrant's board of directors possessed expertise in climate-related risk.<sup>624</sup> Additionally, the

proposal required a description of the processes and frequency by which the board or board committee discusses climate-related risks,<sup>625</sup> including disclosure of how the board is informed about climate-related risks, and how frequently the board considers such risks. These proposed disclosure items were intended to afford investors with transparency into how a registrant's board considers climate-related risks and any relevant qualifications of board members.<sup>626</sup>

The proposed rules would also have required disclosure about whether and how the board or board committee considered climate-related risks as part of its business strategy, risk management, and financial oversight.<sup>627</sup> This disclosure was intended to give investors information regarding how the board or board committee considers climate-related risks when reviewing and guiding business strategy and major plans of action; when setting and monitoring implementation of risk management policies and performance objectives; when reviewing and approving annual budgets; and when overseeing major expenditures, acquisitions, and divestitures. The proposed disclosure requirement sought to provide investors with information to assess the degree to which a board's consideration of climate-related risks has been integrated into a registrant's strategic business and financial planning, and its overall level of preparation to maintain its shareholder value.

The proposed rules also would have required disclosure about whether and how the board sets climate-related targets or goals and how it evaluates progress, including the establishment of any interim targets or goals.<sup>628</sup> This proposed requirement was intended to help investors evaluate whether and how a board is preparing to mitigate or adapt to material transition risks. Finally, the proposed rule provided that, if applicable, a registrant may describe the board of directors' oversight of climate-related opportunities.

While the goal of these governance-related proposals was to elicit decision-useful information about the board's oversight of climate-related risks for investors, the proposal neither required nor encouraged any particular board composition or board practices. Similarly, the proposal was not intended to affect how a registrant

<sup>612</sup> See *supra* notes 592–593 and accompanying text.

<sup>613</sup> See 17 CFR 229.1502(g)(3).

<sup>614</sup> See *supra* notes 590–591 and accompanying text.

<sup>615</sup> See, e.g., letters from ERM CVS; and PRI.

operates, at any level, either through management or the board of directors.

#### b. Comments

A number of commenters supported the Commission's proposed board oversight disclosures.<sup>629</sup> Some of these commenters stated that investors currently lack easily accessible and comparable information regarding how registrants' governance structures contribute to the evaluation and assessment of material climate-related risks,<sup>630</sup> while others stated the proposed rules would allow investors to understand the governance context in which financial results are achieved.<sup>631</sup> One commenter expressed particular support for those aspects of the proposal that aligned with the TCFD framework.<sup>632</sup> Another commenter suggested that registrants should be required to describe board member training, expertise, or skill-building related to the understanding of climate-related financial risks and opportunities.<sup>633</sup>

Other commenters opposed the proposed board oversight disclosures, stating that the proposals were overly prescriptive,<sup>634</sup> duplicative,<sup>635</sup> and should be integrated into existing disclosure requirements.<sup>636</sup> Commenters that opposed the board oversight provisions expressed concern that the proposed rules narrowly focused on board members' climate expertise and could have a negative overall impact on governance by limiting the flexibility of companies to fill limited numbers of board seats with the individuals best suited to a given company's needs, including individuals' suitability to whole-of-the-board undertakings.<sup>637</sup> These

commenters stated that registrants may be better served appointing directors with wide ranging expertise rather than technical skills in one particular area.<sup>638</sup> Other commenters stated that the Commission was placing an undue emphasis on board oversight of climate risk, disproportionate to disclosure requirements in other areas.<sup>639</sup> Some commenters asserted that Regulation S-K already requires the disclosure of information that allows for investors to adequately assess a registrant's board of directors<sup>640</sup> while another commenter stated that the Commission should enhance existing disclosure requirements rather than adopt a new rule.<sup>641</sup> Other commenters noted that the proposed rules went beyond the requirements of the TCFD, in particular as it pertains to board-level expertise.<sup>642</sup>

With respect to the proposed requirement to identify any board members or board committees responsible for the oversight of climate-related risks, some commenters were supportive of the proposal.<sup>643</sup> However,

conducive to a holistic undertaking by the board."); INGAA ("More fundamentally, the proposed requirement is problematic because the emphasis on climate expertise will have the practical result of elevating climate issues above other business considerations, thus removing the flexibility that companies need to select the right board members for their unique circumstances."); Sullivan Cromwell ("We believe some of these requirements could harm the overall effectiveness of governance by reducing the flexibility of registrants' boards and management to exercise their judgment on the most appropriate governance framework for responding to climate-related risks and opportunities, and to evolve their approach based on new risks developments."); and Deloitte & Touche LLP (May 31, 2022) ("Deloitte & Touche") ("While specific expertise may be valuable in some cases, in general, especially given the limited size of boards, we do not think it is practical for all boards to recruit dedicated experts in each of its critical oversight areas."). See also, e.g., letters from ACA Connects (June 17, 2022); Airlines for America; Amer. many commenters were opposed or expressed concerns about the proposed requirement.<sup>644</sup> Several commenters stated that the identification of key personnel could lead to poaching and would undermine registrant's efforts to retain individuals with climate expertise.<sup>645</sup>

Other commenters highlighted the difficulty that small or specialized companies could face if the proposed disclosure requirement creates pressure to appoint individuals with climate expertise, as it elevates climate expertise at the expense of other skills that are arguably more important to their business.<sup>646</sup>

Some commenters were supportive of the proposal for detailed disclosure of whether any member of a registrant's board of directors possessed expertise in climate-related risk, with some also recommending that the Commission require additional detailed disclosures.<sup>647</sup> For example, one of these commenters suggested that the rules should require disclosure of whether and how the board brings in additional expertise and conducts training for board members.<sup>648</sup> Other commenters, however, asserted that this proposed disclosure requirement would drive registrants to appoint board members with climate expertise, at the potential expense of more relevant areas, and stated that the Commission's rules should not influence registrants' decisions regarding the composition of their boards.<sup>649</sup> Some suggested that this proposed disclosure requirement would result in the expansion of boards, driving up costs for registrants, even those that do not currently have a need for particularized climate-related expertise.<sup>650</sup> Others asserted that, by designating specific board members as having climate-related expertise, the

<sup>635</sup> See, e.g., letter from GPA Midstream.

<sup>636</sup> See, e.g., letters from PwC; and Davis Polk ("We believe proposed new Regulation S-K Item 1501(a), covering the board's role in the management of climate-related risk, is overly prescriptive and unnecessary, because any material information that could be captured by the proposed rule is already addressed by Item 407(h) of Regulation S-K, which obligates companies to disclose the extent of the board's role in the company's risk oversight and how the board administers this oversight function.")

<sup>637</sup> See letters from BlackRock ("We believe that robust board oversight with respect to climate requires a whole-of-the-board approach, and the identification of 'specialist' directors is not

provision would discourage the full engagement of the board on climate-related matters.<sup>651</sup>

Commenters expressed mixed views on the proposal to describe the processes and frequency by which the board or board committee discusses climate-related risks, including disclosure of how the board is informed about climate-related risks, and how frequently the board considers such risks. One commenter stated that this aspect of the Commission's proposal would help ensure that the board was receiving and processing consistent information on climate-related risk.<sup>652</sup> Others went further, asserting that directors have a fiduciary responsibility to conduct increased oversight of climate-related risks, and that the proposal would require registrants to report whether and how its board was fulfilling these responsibilities.<sup>653</sup> Some commenters stated that this proposed disclosure requirement was too detailed, would invite micromanagement of both the board and management, and be potentially misleading to investors.<sup>654</sup> Commenters also stated that disclosure of when and how often boards meet on climate-related matters could lead to changes in how board time and resources are allocated, without necessarily improving the quality of climate-related risk disclosure.<sup>655</sup> Some commenters pointed out that the Commission does not require registrants to report on how frequently other topics are considered by the board of directors and asserted that requiring the disclosure of this information with respect to climate-related risks would be out of step with other governance disclosure rules.<sup>656</sup> According to these commenters, the proposed disclosure requirements were so prescriptive that they singled out climate-related disclosures for presentation in a level of detail that was not consistent with the Commission's overall disclosure regime. Other commenters stated that the information was simply unnecessary and could lead to boilerplate disclosures.<sup>657</sup> Some commenters cautioned that, by requiring this level of detail, the Commission was inadvertently discouraging companies from engaging in internal decision making that would then have to be disclosed under the proposal.<sup>658</sup>

<sup>651</sup> See, e.g., letter from Vodafone.

<sup>652</sup> See, e.g., letter from NEI.

<sup>653</sup> See, e.g., letter from Center for International Environmental Law (June 17, 2022) ("CIEL").

<sup>654</sup> See, e.g., letter from Business Roundtable.

<sup>655</sup> See, e.g., letters from Fidelity; and PGIM.

<sup>656</sup> See, e.g., letter from SIFMA.

<sup>657</sup> See, e.g., letter from Morningstar.

<sup>658</sup> See, e.g., letter from Energy Transfer.

Regarding the proposal for disclosure on whether and how the board considers climate-related risks as part of its business strategy, risk management, and financial oversight, a number of commenters agreed that registrants should disclose this information as it is currently "unnecessarily difficult" for investors to assess whether there is "effective oversight of risks to firm value, including material environmental risks."<sup>659</sup> However, a number of commenters expressed concerns with the granularity of the proposal and urged the Commission to take a less-prescriptive approach more consistent with the Commission's overall disclosure regime.<sup>660</sup> Some commenters urged the Commission to adopt a materiality qualifier to avoid eliciting immaterial or overly granular information and bring the requirements more in line with other required disclosures.<sup>661</sup>

Commenters were divided on the proposal related to disclosure of board oversight of targets and goals, particularly how the board sets such targets and monitors progress. Commenters supportive of the proposal stated that investors need more granular governance disclosures to assess whether the board has sufficient experience in managing dynamic climate-related risk.<sup>662</sup> In contrast, other commenters asserted that the proposal would require the expenditure of significant resources by registrants while offering little in the way of benefit to investors.<sup>663</sup> Other commenters expressed the view that the proposal should focus on management's role in setting targets and goals, given that the board's role is more appropriately focused on monitoring the targets and goals that management sets.<sup>664</sup>

### c. Final Rule

We are adopting the proposed requirements to disclose board oversight

<sup>659</sup> See letter from NY City Comptroller. See also, e.g., letters from AFL-CIO; IATP; PRI; 60 Plus; NEI; Vodafone; CalSTRS; CalPERS; BlackRock; Soros Fund; Morningstar; State Street Corporation (June 17, 2022) ("State St."); and Canadian Investor Relations Institute (June 17, 2022).

<sup>660</sup> See, e.g., letters from Corteva; Energy Transfer; and Soc. Corp. Gov.

<sup>661</sup> See, e.g., letter from Bipartisan Policy Center (June 13, 2022) ("Bipartisan Policy").

<sup>662</sup> See, e.g., letters from The Ocean Foundation (June 10, 2022) ("Ocean Fnd."); ICCR; For the Long Term (June 17, 2022); and PRI.

<sup>663</sup> See, e.g., letters from American Securities Association (June 13, 2022) ("ASA"); Morningstar; and PGIM (stating that only registrants with material climate-related exposure should be required to provide detailed disclosure of board management of climate-related risk).

<sup>664</sup> See, e.g., letter from National Association of Corporate Directors (June 13, 2022).

of climate-related risks (Item 1501(a)), with some modifications to address the concerns of commenters. These disclosures will enhance investors' ability to evaluate a registrant's overall management of climate-related risks by improving their understanding of the board's role in overseeing those risks.<sup>665</sup> The final rule will require a description of a board of directors' oversight of climate-related risks, as proposed.<sup>666</sup> The final rule will also require the identification, if applicable, of any board committee or subcommittee responsible for the oversight of climate-related risks and a description of the processes by which the board or such committee or subcommittee is informed about such risks. Further, if there is a target or goal disclosed pursuant to § 229.1504 or transition plan disclosed pursuant to § 229.1502(e)(1), the final rule will require disclosure of whether and how the board oversees progress against the target or goal or transition plan.<sup>667</sup> These disclosures are not required for registrants that do not exercise board oversight of climate-related risks.

Despite the concerns expressed by several commenters, the proposed rules were not intended to shift governance behaviors, including board composition or board practices. Similarly, the final rules neither seek to influence registrants' decisions about how to manage climate-related risks nor does their design incorporate, reflect, or favor any governance structure or process. Rather, consistent with our statutory authority, the final rules focus on disclosure of registrants' existing or developing climate-related risk governance practices. We recognize that registrants have varied reasons for pursuing different oversight arrangements, and some registrants may reasonably determine that climate-related risks are not among the most pressing issue facing the company. The final rules will provide investors with the information they need to understand and evaluate those oversight arrangements and make informed

<sup>665</sup> See, e.g., letters from Ceres; PRI; and RMI.

<sup>666</sup> We are also adding Instruction 1 to Item 1501 to clarify that in the case of a foreign private issuer with a two-tier board of directors, the term "board of directors" means the supervisory or non-management board. In the case of a foreign private issuer meeting the requirements of 17 CFR 240.10A-3(c)(3), the term board of directors means the issuer's board of auditors (or similar body) or statutory auditors, as applicable.

<sup>667</sup> The proposed governance provision stated that a registrant may also describe the board of directors' oversight of climate-related opportunities. As previously mentioned, although the final rules do not contain a similar provision, a registrant may elect to provide such disclosure as part of its governance disclosure.

investment decisions in light of their overall investment objectives and risk tolerance. Furthermore, as stated above, these disclosure requirements apply to those registrants the boards of which exercise oversight of climate-related risks; no disclosure is required for registrants that do not have information responsive to the disclosure requirements.

We are not adopting some of the more prescriptive elements of the proposal in response to commenter concerns.

Specifically, we are eliminating the proposed requirements to disclose:

- The identity of specific board members responsible for climate-risk oversight;
- Whether any board member has expertise in climate-related risks and the nature of the expertise;
- How frequently the board is informed of such risks; and
- Information regarding whether and how the board sets climate-related targets or goals, including interim targets or goals.

While the proposal would have required this disclosure only to the extent applicable, we appreciate the concerns of some commenters who stated that these elements of the proposal could have unintended effects on the registrant's governance structure and processes by focusing on one area of risk at the expense of others. In addition, some commenters raised concerns that the level of detail required by the proposal would cause registrants to divulge sensitive internal board processes. It may be that a registrant, in describing "the board of directors' oversight of climate-related risks," will find it necessary to disclose, or otherwise choose to disclose, some or all of the information called for by the proposal. But, by adopting a more streamlined rule, we intend to eliminate any misperception that this information is required for all registrants, particularly those without existing processes or information to disclose.

We are, however, adopting the proposed requirement to identify any board committee or subcommittee responsible for the oversight of climate-related risks, if a registrant has such a committee or subcommittee. This information is important to an understanding of how the board is managing such risk and will not be burdensome to disclose. Moreover, the provision simply requires the registrant to identify any committee or subcommittee that has been tasked with managing climate-related risks and is not designed to influence decisions about whether and how the board allocates responsibility for oversight of

such risk. We are also adopting a requirement, albeit modified from the proposal, to describe whether and how the board of directors oversees progress against disclosed climate-related targets, goals, or transition plans. By tying this disclosure requirement to circumstances in which the registrant has a disclosed climate-related target, goal, or transition plan, the final rule will avoid generating detailed disclosure about matters that are not important to investors. In addition, in light of commenter concerns regarding the proposed disclosure of whether and how the board of directors establishes any final or interim targets or goals,<sup>668</sup> we are omitting this requirement from the final rule. Overall, the less prescriptive approach to disclosure in the final rule will facilitate investors' understanding of how a registrant intends to manage a target or goal that is material to its business while discouraging boilerplate disclosures and avoiding any unintended adverse effects on the board's governance structures.

We are also adopting the proposed requirement to describe the processes by which the board or any board committee or subcommittee is informed about climate-related risks, while eliminating the requirement to describe the frequency of these discussions. While some commenters stated that it would be helpful to investors for registrants to disclose both the processes and frequency of these discussions,<sup>669</sup> other commenters expressed concern that this disclosure will shift governance behavior.<sup>670</sup> The final rules balance investors' need to understand the board's governance of climate-related risks in sufficient detail to inform an investment or voting decision with concerns that the proposal could inadvertently pressure registrants to adopt specific or inflexible climate-risk governance practices or organizational structures or otherwise influence the conduct of the board. By retaining the requirement to disclose the process by which the board is informed, investors will have meaningful information that they can use to assess the conduct of boards in dealing with climate-related risks while avoiding overly detailed or granular disclosures that could unduly influence such processes.

Although some commenters asserted that registrants may feel pressure to appoint certain individuals with climate expertise,<sup>671</sup> we reemphasize that the

Commission remains agnostic about whether and/or how registrants govern climate-related risks. Registrants remain free to elect whether and how to establish or retain the procedures and practices that they determine best fit their business. The focus of the final rules remains on investor protection and improving investors' access to comparable and consistent climate-related disclosures. The final rules are focused on disclosure and do not require, and are not formulated to prompt, registrants to change their governance or other business practices.

We are not, as suggested by some commenters, adopting a materiality qualifier for this portion of the final rule. As discussed above, we have revised the final rule from the proposal to make the disclosure requirement less prescriptive. As such, registrants will have additional flexibility to determine how much detail to provide about the board's oversight of climate-related risk. These revisions help mitigate some commenters' concerns that the rule will require disclosure of immaterial information. The specific information called for by the final rule will provide important context for an investor to evaluate the extent to which the board is evaluating climate-related risks. If a board of directors determines to oversee a particular risk, the fact of such oversight being exercised by the board is likely material to investors given other demands on the board's time and attention.<sup>672</sup> Moreover, unlike management, which likely oversees many more routine matters, some of which may not be material to investors, we expect that any risks elevated to the board level will be material to the company and limited in number. Accordingly, we do not believe that a materiality qualifier is necessary for this provision.

## 2. Disclosure of Management Oversight (Item 1501(b))

### a. Proposed Rules

Similar to the proposed disclosures on board oversight, the proposed rules would have required a registrant to disclose a number of items, as applicable, about management's role in the assessment and management of climate-related risks. First, the Commission proposed to require registrants to disclose whether certain management positions or committees are responsible for assessing and managing climate-related risks and, if so, to identify such positions or

<sup>668</sup> See *supra* note 663 and accompanying text.

<sup>669</sup> See, e.g., letters from FTLT; Morningstar; and PRI.

<sup>670</sup> See *supra* note 655.

<sup>671</sup> See *supra* note 646.

<sup>672</sup> See discussion *infra* section II.E.2.c (regarding our reasons for adding a materiality qualifier to Item 1501(b)).

committees and disclose the relevant expertise of the position holders or members in such detail as necessary to fully describe the nature of the expertise.<sup>673</sup> This proposed requirement was intended to better inform investment or voting decisions by providing information on the extent to which management addresses climate-related risks. Additionally, the proposed rules would have required disclosure about the processes by which the responsible managers or management committees are informed about and monitor climate-related risks.<sup>674</sup> Finally, the proposed rule would have also required disclosure about whether the responsible positions or committees report to the board or board committee on climate-related risks and how frequently this occurs.<sup>675</sup> These proposed disclosure items were intended to help investors understand management's processes to identify, assess, and manage climate-related risks. Under the proposal, if applicable, a registrant also could elect to describe management's role in assessing and managing climate-related opportunities.

#### b. Comments

Many commenters generally supported the proposed requirement to disclose management oversight of climate-related risks,<sup>676</sup> and expressed support for the proposed requirement to describe management's role in assessing and managing climate-related risks.<sup>677</sup> These commenters stated that investors are interested in procuring comprehensive and standardized information that allows for an examination of how management monitors and assesses climate-related risk. Some supportive commenters stated that there is currently a lack of detailed and available information on how registrants manage climate-related

risks.<sup>678</sup> Commenters were generally supportive of the proposals that aligned with the TCFD, including the proposal to require a description of management's role in assessing and managing climate-related risks.<sup>679</sup> A few commenters also recommended that the final rule require more detailed disclosure, including organizational diagrams so that reporting lines to the executive management and board of directors are disclosed<sup>680</sup> and information about executive management remuneration linked to climate-based incentives.<sup>681</sup>

By contrast, some commenters expressed concerns that the proposals were overly prescriptive, and would require disclosure of potentially proprietary and sensitive information about management structure and individual employees.<sup>682</sup> These commenters further expressed concerns that disclosure of such information would cause competitive harm.<sup>683</sup> Another commenter stated that the Commission could elicit more helpful information by adopting a principles-based approach that would allow registrants to tailor disclosures to their specific business, thereby avoiding unnecessary reporting burdens and the production of boilerplate language that provides little value to investors.<sup>684</sup>

With respect to the proposed requirement to describe management's role in assessing and managing climate-related risks, some commenters emphasized how critical this information is to investors, explaining that the current lack of transparent and standardized information prevents investors from assessing the operating environments of the companies in which they invest.<sup>685</sup> Another commenter stated that the requirement would be unduly burdensome for many

companies, particularly smaller companies that either do not maintain a large management team or have not established formalized internal controls to produce the proposed disclosures on climate-related risks.<sup>686</sup>

Commenters expressed mixed views about the proposal to require disclosure of the management positions or committees responsible for assessing and managing climate-related risks and the identity of such positions or committees. Some commenters were concerned that the disclosure of management positions or committees could reveal proprietary information about the internal structure of registrants.<sup>687</sup> On the other hand, some commenters emphasized the relevance of these proposed disclosures,<sup>688</sup> with many of these commenters explicitly tying this information to the need for transparency about compensation practices.<sup>689</sup> Supportive commenters also emphasized that the proposed disclosure requirements would allow investors to evaluate the capabilities and preparedness of a company's executive management, who are often tasked with incorporating climate-related risk management into business practices and decisions.<sup>690</sup> One commenter indicated that this proposal would provide different information to investors than the proposed information about boards, as it would allow investors to understand the operational expertise and accountability that exists in relation to how a registrant is overseeing such risk.<sup>691</sup> Commenters stated that investors are seeking particularized information about management's role in dealing with climate-related risks given that effective oversight requires business-level understanding of these risks.<sup>692</sup>

Some commenters supported the proposed requirement to disclose the relevant expertise or identity of management position holders or members responsible for managing climate related risk, stating that such disclosures would provide investors with a general understanding of how management's climate expertise is deployed, as well as whether and how climate-related risk is integrated in the organization.<sup>693</sup> In contrast, many commenters stated that this disclosure would require registrants to publish

<sup>683</sup> See, e.g., letter from Amer. Chem.

<sup>684</sup> See letter from Sullivan Cromwell ("Requiring registrants to disclose governance and risk management information with more granularity inappropriately places greater emphasis on climate risk oversight compared to the oversight of other business risks that are equally (and in some cases, more) deserving of the attention of a registrant's board and management.").

<sup>685</sup> See, e.g., letter from CFA.

<sup>686</sup> See, e.g., letter from NRP.

<sup>687</sup> See, e.g., letters from AFP; BlackRock.

<sup>688</sup> See, e.g., letter from PRI.

<sup>689</sup> See, e.g., letters from CFA; and Nia Impact Capital (June 15, 2022) ("Nia Impact").

<sup>690</sup> See, e.g., letter from D. Higgins.

<sup>691</sup> See, e.g., letter from RMI.

<sup>692</sup> See, e.g., letters from RMI; and Ocean Fnd.

<sup>693</sup> See, e.g., letters from PRI; and NEI.

detailed descriptions of in-house staff and management's reliance on such staff.<sup>694</sup> Other commenters asserted that the universe of climate-related experts is limited, and that the proposed requirements would increase the competition for executives with climate-related expertise.<sup>695</sup> Some commenters further asserted that the proposed rules would encourage the recruitment of climate experts, who are already scarce, and constrain registrants' ability to produce climate disclosures and institute climate-related strategies.<sup>696</sup> Other commenters were skeptical of the value added by disclosing the relevant expertise or identity of management, stating that these positions turn over frequently and more generalized disclosures of the management process would afford investors with better quality information.<sup>697</sup>

Many commenters were supportive of the proposal to require registrants to describe the processes by which the management positions or committees responsible for climate-related risks are informed about and monitor climate-related risks.<sup>698</sup> These commenters stated that this information was highly relevant to and sought after by investors, and would provide the kind of detailed and standardized information that is currently unavailable in current disclosures.<sup>699</sup> Other commenters expressed concerns regarding the utility of this information.<sup>700</sup> Some commenters stated that, by requiring this kind of disclosure, the Commission was placing an undue priority on climate-related risks above other more pressing business risks.<sup>701</sup> Other commenters stated that a high-level summary of the management of material climate-related risks was sufficient and would avoid the expense of producing excessive and unnecessary information.<sup>702</sup> In addition, commenters

representing smaller registrants or registrants in particular industries stated that their management of climate-related risks are appropriately tailored to their size and scale and asserted that the proposed rule unduly pressures such registrants into a one-sized-fits-all approach.<sup>703</sup>

Commenters were divided on the proposal to require disclosure of whether and how frequently such positions or committees report to the board or a committee of the board on climate-related risks. Commenters supportive of the proposal stated that the disclosure would allow investors to analyze how boards integrate climate-related information into the overall risk management structure and how this information affects decision-making.<sup>704</sup> Other commenters suggested that this disclosure would drive unwelcome changes in current business practice and structure, potentially diverting attention and resources away from other material risks or other matters.<sup>705</sup>

Commenters also provided views on the proposal to allow, but not require, registrants to disclose the board's oversight of, and management's role in, assessing and managing climate-related opportunities. While some commenters supported allowing such disclosure to be optional and not mandatory,<sup>706</sup> others indicated that how companies are responding to highly dynamic opportunities is material information and therefore should be required to be disclosed.<sup>707</sup> One commenter stated that climate-related opportunity reporting is likely to be adopted in both the EU and UK, and therefore, to streamline mandatory disclosures for dually-listed companies, the commenter recommended that the Commission require this disclosure, except for

of detail called for by the Proposed Rules."); and PwC ("Focusing on information that the registrant's management uses to make strategic decisions—instead of a broad requirement to disclose 'any' climate-related risks—would improve the usefulness of the disclosures and provide additional insight to investors, while simultaneously reducing the burden on registrants.").

opportunities unrelated to a registrant's principal line of business.<sup>708</sup>

### c. Final Rule

We are adopting the proposed requirement to disclose management oversight of climate related risks (Item 1501(b)) with some modifications to address the concerns of commenters. The final rules will, like the proposed rules, require that registrants describe management's role in assessing and managing climate-related risks. As commenters stated, investors need information about how management-level staff assess and manage material climate-related risks to make informed investment and voting decisions. However, we are limiting the disclosure required by this final rule provision to material climate-related risks, as suggested by commenters,<sup>709</sup> given the multitude of climate-related matters that may be overseen by management. The final rules also specify that a registrant should address, as applicable, the following non-exclusive list of disclosure items when describing management's role in assessing and managing the registrant's material climate-related risks:

- Whether and which management positions or committees are responsible for assessing and managing climate-related risks, and the relevant expertise of such position holders or committee members in such detail as necessary to fully describe the nature of the expertise;
- The processes by which such positions or committees assess and manage climate-related risks; and
- Whether such positions or committees report information about such risks to the board of directors or a committee or subcommittee of the board of directors.

The non-exclusive list of disclosures in Item 1501(b) should help elicit specific information about management's oversight of climate-related risks and thereby mitigate any tendency towards boilerplate disclosures. At the same time, by focusing the disclosure on management's role in assessing and managing material climate-related risks, the final rules will provide registrants with the flexibility to tailor the disclosures based on their particular governance structure. Given these changes, we believe the final rule appropriately balances investors' needs for information to understand management's involvement in assessing

<sup>696</sup> See, e.g., letter from Can. Bankers (arguing "Highlighting reliance on these experts will . . . lead to potential poaching issues that could further inhibit registrants' ability to comply with climate disclosures and to implement climate strategies.").

<sup>697</sup> See, e.g., letters from RILA; and ICI.

<sup>698</sup> See, e.g., letters from GHGSAT; NY City Comptroller; Anthesis; and J. Brendan Herron.

<sup>699</sup> See, e.g., letters from TotalEnergies; and Greenlining Institute.

<sup>700</sup> See, e.g., letters from Corteva; IC; and AFPA.

<sup>701</sup> See, e.g., letters from Charles Franklin (Nov. 1, 2022); Southside Bancshares; and BIO.

<sup>702</sup> See, e.g., letters from GPA Midstream ("While we agree with the Commission that general information on governance, such as identification of the committee or committees responsible for addressing climate-related risks, may be relevant information for investors, we disagree with the level

and managing material climate risks with concerns that a more prescriptive rule could have adverse consequences on registrants' governance practices or organizational structures.

We reiterate, as we did above with respect to our rules requiring disclosure of board oversight of climate-related risks, that the final rule does not seek to influence decisions about how to manage climate-related risks or otherwise change registrant behavior. Rather, the final rule seeks to elicit disclosure about existing oversight practices that will allow investors to make better informed judgments about registrants' oversight processes and mechanisms in light of their overall investment objectives and risk tolerance. Furthermore, the final rule does not require registrants that do not engage in the oversight of material climate-related risk to disclose any information.

We are mindful of the suggestions of some commenters that we adopt additional requirements to disclose information related to management oversight of climate-related risks, including descriptions of internal positions and reporting structures and detailed information about climate-based remuneration. However, consistent with our overall goal to streamline the proposed requirements and to focus on management's oversight of material climate-related risk, we are not including such additional disclosure elements in the final rule.<sup>710</sup>

We are adopting the proposal requiring a description of the relevant expertise of position holders or members responsible for assessing and managing climate-related risk.<sup>711</sup> While we considered the view of commenters that this could cause registrants to feel compelled to find and hire management with such expertise, regardless of whether that is the most sensible use of managerial resources given the registrant's particular facts and circumstances, the added qualification that disclosure is only required where the risk is material mitigates this concern. We agree with commenters

<sup>710</sup> Although we are not adopting specific requirements related to executive management remuneration linked to climate-based incentives, to the extent a climate-related target or goal or other measure is a material element of a registrant's compensation of named executive officers, such information is required to be disclosed under Item 402(b) of Regulation S-K.

<sup>711</sup> Further, we are adding Instruction 2 to Item 1501 to clarify that relevant expertise of management in Item 1501(b)(1) may include, for example: prior work experience in climate-related matters; any relevant degrees or certifications; any knowledge, skills, or other background in climate-related matters.

that asserted that this information will be helpful to understanding a registrant's ability to manage climate-related risks given the direct role that management will play in overseeing any such risks yet emphasize that registrants are required to make this disclosure only if they have identified a material climate risk.

As noted above, the final rule has been modified to eliminate many of the prescriptive disclosure elements from the proposal, and it instead provides a non-exclusive list of the types of disclosures that a registrant should include, as applicable, when describing management's role in assessing and managing the registrant's material climate-related risk. For example, if applicable, registrants should describe the processes by which certain positions or committees are informed about and monitor climate-related risks. A process-based description of management's governance of material climate-risks can offer investors a meaningful look at how registrants manage material climate-related risks. Registrants should also disclose, if applicable, whether management reports to the board or a subcommittee of the board on climate-related risks. Elimination of the proposed requirement to disclose how frequently the board meets to discuss climate-related matters, as discussed above, addresses commenters' concerns that this disclosure, if provided, could divert limited resources from the consideration of other material risks and encourage changes to business practices. Nonetheless, information on whether management reports to the board can provide needed clarity on the connection between board and management level governance of climate-related risks, and accordingly, we have retained it as an example of the type of disclosure that might be responsive to the rule. We have also added a reference to a subcommittee of the board because some registrants may establish a subcommittee to focus on climate-related issues.

Finally, as noted above,<sup>712</sup> we are not adopting the proposed rule that would have allowed, but did not require, registrants to describe management's role in assessing and managing climate-related opportunities. As with other voluntary disclosure, registrants may elect to include such disclosure. While we recognize that some commenters recommended that such disclosure be mandatory, we have determined to treat the disclosure regarding climate-related opportunities as optional, among other reasons, to allay any anti-competitive

<sup>712</sup> See section ILC.1.c.

concerns that might arise from a requirement to disclose a particular business opportunity.<sup>713</sup>

These changes will also help address the concerns expressed by some commenters, including from smaller reporting companies and registrants in certain industries,<sup>714</sup> that the proposed rules would unduly pressure such registrants into a one-sized-fits-all governance approach given the line of business, size, and structure of their companies.<sup>715</sup> While we disagree with one commenter's suggestion that the proposal would "mandate that every company in the United States be required to expand management structures in order to accommodate concerns that are not material to a company,"<sup>716</sup> shifting to a non-exclusive list of topics that a registrant should address, as applicable, will mitigate the concerns raised by some commenters that the prescriptiveness of the proposed disclosures could lead to such a result. In addition, the flexibility afforded to registrants under the final rule to determine which details about management's oversight of climate-related risks to include in their disclosure will help alleviate concerns that the proposal would elevate climate-related disclosures above other, equally important, disclosures. Furthermore, as stated above, the final rule does not impose any disclosure requirements on registrants that do not exercise management oversight of climate-related risks.

#### *F. Risk Management Disclosure (Item 1503)*

##### 1. Proposed Rule

The Commission proposed to require a registrant to describe any processes the registrant has for identifying, assessing, and managing climate-related risks.<sup>717</sup> The Commission stated that

<sup>713</sup> See Proposing Release, section II.A.1.

<sup>714</sup> See, e.g., letter from BIO.

<sup>715</sup> See, e.g., letter from Chamber ("We believe the Proposed Rule, if adopted, would create a board oversight and risk management structure that not only makes little sense for certain companies but could harm investors in companies that have no need for such extensive oversight of climate risk. The Proposed Rule, if adopted, would present a costly distraction for companies with limited resources (particularly small-cap and many mid-cap companies) to attempt to align their behavior and disclosures with those of other companies that similarly felt pressured by the rule to adapt their behavior to what appears to be the SEC's preferred response to climate-related risks.").

<sup>716</sup> See letter from BIO.

<sup>717</sup> See Proposing Release, section II.E.1. As previously noted, see *supra* note 464, the Commission proposed to require transition plan disclosure in connection with a registrant's risk management discussion. See Proposing Release, section II.E.2. The final rule includes transition

more granular information regarding climate-related risk management could allow investors to better understand how a registrant identifies, evaluates, and addresses climate-related risks that may materially impact its business.<sup>718</sup> Such information could also permit investors to ascertain whether a registrant has integrated the assessment of climate-related risks into its regular risk management processes.<sup>719</sup>

The rule proposal would have required a registrant, when describing the processes for identifying and assessing climate-related risks, to disclose, as applicable, how the registrant:

- Determines the relative significance of climate-related risks compared to other risks;
- Considers existing or likely regulatory requirements of policies, such as GHG emissions limits, when identifying climate-related risks;
- Considers shifts in customer or counterparty preferences, technological changes, or changes in market prices in assessing potential transition risks; and
- Determines the materiality of climate-related risks, including how it assesses the potential size and scope of any identified climate-related risk, such as the risks identified in response to proposed Item 1502.<sup>720</sup>

The rule proposal also required a registrant, when describing any processes for managing climate-related risks, to disclose, as applicable, how the registrant:

- (a) Decides whether to mitigate, accept, or adapt to a particular risk;
- (b) Prioritizes addressing climate-related risks; and
- (c) Determines how to mitigate a high priority risk.<sup>721</sup>

The rule proposal further required a registrant to disclose whether and how climate-related risks are integrated into the registrant's overall risk management system or processes.<sup>722</sup> If a separate board or management committee is responsible for assessing and managing climate-related risks, the rule proposal required a registrant to disclose how that committee interacts with the registrant's board or management committee governing risks.<sup>723</sup> The Commission explained that these proposed disclosures would help

plan disclosure as part of a registrant's disclosure about climate-related risks and their impact on the registrant's strategy. We discuss transition plan disclosure requirements above in section II.D.2.

<sup>718</sup> See Proposing Release, section II.E.1.

<sup>719</sup> See *id.*

<sup>720</sup> See *id.*

<sup>721</sup> See *id.*

<sup>722</sup> See *id.*

<sup>723</sup> See *id.*

investors assess whether the registrant has centralized the processes for managing climate-related risks, which may indicate to investors how the board and management may respond to such risks as they unfold.<sup>724</sup>

## 2. Comments

Many commenters supported the proposed rule requiring registrants to describe any processes in place for identifying, assessing, and managing climate-related risks.<sup>725</sup> Commenters stated that investors would use the risk management disclosures to evaluate an issuer's readiness for confronting climate-related risks.<sup>726</sup> Commenters also stated that the proposed risk management disclosure requirement would improve the quality of the disclosures that registrants currently provide on a voluntary basis.<sup>727</sup> Commenters further stated that the proposed risk management disclosure requirement is aligned with the TCFD's recommended disclosures regarding risk management, with which many registrants are already familiar.<sup>728</sup>

Other commenters generally opposed the proposed risk management disclosure requirement.<sup>729</sup> Commenters objected to the prescriptiveness of the proposal, which they stated would result in overly granular disclosure that may not be relevant to a registrant's particular business or industry and, therefore, may not be material for investors.<sup>730</sup> Commenters also stated that the prescriptive nature of the rule proposal may result in the disclosure of commercially sensitive and strategic information.<sup>731</sup> These commenters

<sup>724</sup> See *id.*

<sup>731</sup> See, e.g., letters from Airlines for America; Business Roundtable; CEMEX; and Dominion Energy.

urged the Commission to adopt a more principles-based approach that would allow registrants to avoid the disclosure of commercially sensitive or proprietary information.<sup>732</sup>

Some commenters opposed the proposed risk management disclosure requirement because they believed that the Commission's existing rules already require the disclosure of material risks and how the registrant is managing them.<sup>733</sup> Other commenters stated that the Commission's proposed climate-related risk management disclosure provision deviated from the Commission's disclosure requirements for other risk categories and placed undue emphasis on climate-related matters.<sup>734</sup> Additionally, some commenters expressed general opposition to the proposed disclosure requirements, including risk management disclosures, because of concerns about the resulting compliance burden and costs.<sup>735</sup>

Several of the commenters that supported the risk management disclosure proposal also expressed support for the proposal's discrete disclosure items.<sup>736</sup> For example, one commenter supported requiring the disclosure of how a registrant determines the relative significance of climate-related risks compared to other risks, how it determines the materiality of climate-related risks, and how it considers various factors, such as existing or prospective regulatory requirements or policies, shifts in customer or counterparty preferences, technological changes, and changes in market prices, in assessing potential transition risks, and specifically mentioned that such disclosures are recommended by the TCFD.<sup>737</sup> Another commenter stated that requiring disclosure of how a company determines the importance of climate-related risks would be useful to investors, as this determination provides the foundation for all other climate-related considerations.<sup>738</sup>

<sup>732</sup> See, e.g., letters from Airlines for America; BOA; Business Roundtable; and Soc. Corp. Gov.

<sup>733</sup> See, e.g., letters from BIO; CEMEX; and Dominion Energy.

<sup>734</sup> See, e.g., letters from Airlines for America; Davis Polk; Dominion Energy; RILA; and Soc. Corp. Gov.

<sup>735</sup> See, e.g., letters from CEMEX; Davis Polk; GPA Midstream; Fred Reitman (June 16, 2022) ("F. Reitman"); and J. Weinstein.

<sup>736</sup> See, e.g., letters from Amer. for Fin. Reform, Sunrise Project *et al.*; C2ES; ICI; Morningstar; PRI; TotalEnergies; and WSP.

<sup>737</sup> See letter from Anthesis. See also *supra* note 728.

<sup>738</sup> See letter from PRI (stating that the determination of how a company determines the importance of climate-related risks "will then go on

Relatedly, one commenter stated that it needs transparent disclosure regarding how companies are determining the materiality of climate-related risks in order to evaluate issuer risks properly.<sup>739</sup> Another commenter stated that how a registrant determines the materiality of climate-related risks is important for investors to understand because it helps set the necessary context for all of the other climate-related disclosures.<sup>740</sup>

Commenters also supported the proposed requirement to describe how the registrant considers existing or likely regulatory requirements or policies, such as GHG emissions limits, when identifying climate-related risks.<sup>741</sup> One commenter stated that this would provide information about an important transition-related risk.<sup>742</sup> Another commenter stated that this type of information, among others, would help investors evaluate whether a company has implemented adequate processes for identifying, assessing, and managing climate-related risks.<sup>743</sup>

For similar reasons, some commenters supported the proposal requiring a registrant to disclose how it considers shifts in customer or counterparty preferences, technological changes, or changes in market prices in assessing potential transition risks.<sup>744</sup> Certain commenters, while supportive of the proposal, stated that the Commission should go further and also afford registrants the ability to provide additional disclosures, such as regarding how climate-related technological and customer shifts are being managed, minimized, tracked over time, and reported on regularly.<sup>745</sup>

Many commenters supported the proposal to require a registrant to disclose how it decides whether to mitigate, accept, or adapt to a particular climate-related risk.<sup>746</sup> One of these commenters stated that this information would help investors evaluate whether a company has implemented adequate processes for identifying, assessing, and managing climate-related risks.<sup>747</sup> Many commenters similarly supported the

Commission's proposal to require disclosure of how registrants prioritize climate-related risks and how they determine to mitigate a high priority risk.<sup>748</sup> Commenters indicated that information concerning how the registrant prioritizes climate-related risks vis-à-vis other risks that the registrant is managing would be particularly useful.<sup>749</sup> One commenter stated that disclosure of a registrant's rationale for pursuing capital expenditures for managing certain climate-related risks would be beneficial for investors to better assess the company's capital allocation.<sup>750</sup> Other commenters emphasized that since investors must depend on issuers' assessment of their own significant or material climate-related risks, the proposed disclosure requirements would allow investors to understand how issuers reach these conclusions.<sup>751</sup>

Many commenters also supported the proposed disclosure requirement concerning whether and how climate-related risk management processes are integrated into a registrant's overall risk management system.<sup>752</sup> One commenter stated that information about how a registrant integrates its climate risk management processes into its overall risk management system is essential to understanding the effectiveness of those climate risk management processes.<sup>753</sup> Another commenter stated that disclosure regarding how a registrant's identified material climate-related risks are "integrated into its company-wide enterprise risk management framework [would] allow for comparability of climate risks with other financial and non-financial risks."<sup>754</sup> Yet another commenter stated that information about whether a registrant has centralized its climate-related risk management into its regular risk management processes is decision-useful for investors because the disintegration of climate-related risks from other risks signals insufficient competence in managing the financial implications of climate-related

matters.<sup>755</sup> One commenter expressed support for the proposed risk management disclosure provision but cautioned that registrants should not be required to speculate about future restructurings, write-downs, or impairments related to climate risks or disclose any trade secrets or confidential business information in their climate-related risk management disclosures.<sup>756</sup>

Several commenters opposed the proposed risk management disclosure requirement because of the detailed items that a registrant would be required to address when describing the processes used to identify, assess, and manage climate-related risks and how those processes are integrated into the registrant's overall risk management system.<sup>757</sup> One commenter stated that the proposed disclosure requirement could cause investors to overestimate climate-related risks and improperly contextualize the materiality of those risks.<sup>758</sup> Another commenter stated that the proposed disclosure requirement was redundant because such information already must be included in annual reports.<sup>759</sup> Other commenters expressed concern that the proposed disclosure requirement called for unnecessarily detailed, confidential, and proprietary information.<sup>760</sup> Some commenters also asserted that the proposed itemized risk management disclosure requirements go well beyond the TCFD framework, which one commenter stated would "not provide a material benefit to investors and in fact may harm the public markets by creating undue costs on issuers to produce such information."<sup>761</sup> Other commenters criticized the proposed risk management disclosure provision for not including materiality qualifiers and not being more principles-based, and cautioned that the prescriptiveness of the rule proposal would lead to boilerplate language that would not provide decision-useful information to investors.<sup>762</sup>

### 3. Final Rule

After considering the comments received, we are adopting a requirement (Item 1503), modified from the proposal

to dictate how management and the board consider climate-related risks as part of governance. [and] whether management sets climate related targets or uses other tools such as scenario analysis").

as discussed below, to describe any processes the registrant has for identifying, assessing, and managing material climate-related risks.<sup>763</sup> We agree with those commenters that stated investors need more comprehensive disclosure of registrants' climate-related risk management practices to inform their investment and voting decisions.<sup>764</sup> Because climate-related risks can have material impacts on a registrant's business, it is important for investors to have information available to them so that they can understand how a registrant identifies, assesses, and manages any such risks. At the same time, we are mindful of commenters' suggestions, both for this risk management disclosure in particular and climate-related disclosures more generally, that the Commission promulgate rules that allow registrants to tailor the disclosure of material climate-related risks and related management practices to their own particular facts and circumstances.<sup>765</sup> Accordingly, we are adopting a less prescriptive approach that focuses on a description of processes for identifying, assessing, and managing *material* climate-related risks. In doing so, we have sought to avoid imposing a "one-size-fits-all" disclosure model<sup>766</sup> that fails to account for differences in industries and businesses and that could result in disclosure of immaterial information while still eliciting decision-useful information for investors about registrants' risk management practices.

As a number of commenters indicated, consistent information about a registrant's management of climate-related risks is vital to informed investment and voting decisions.<sup>767</sup> Despite the importance of climate-related risk management information to investors, only a minority of registrants currently include such information in their voluntary climate reports or in their Exchange Act filings.<sup>768</sup> We

considered comments that the proposed disclosure requirements are redundant because existing rules already require disclosure about material risks in annual reports, but we continue to believe that a specific disclosure item focused on managing material climate-related risks is warranted. While registrants may be required to disclose certain climate-related information in filings made with the Commission pursuant to existing disclosure requirements, as noted above<sup>769</sup> there is a need to improve the consistency, comparability, and reliability of disclosures about climate-related risk management for investors given that, as noted above, most registrants are not currently including the type of information called for by the final rules in voluntary climate reports or Exchange Act filings.<sup>770</sup> We also considered comments that the proposal placed undue emphasis on climate-related risks and, as discussed below, have made a number of changes in response to streamline the requirements and focus on material climate-related risks.

First, in a change from the proposal, we have added a materiality qualifier to the disclosure item.<sup>771</sup> The final rule will require registrants to disclose any existing processes for the identification, assessment, and management of material climate-related risks. Including a materiality qualifier addresses the specific concerns expressed by commenters that the proposal would require registrants to disclose this information in a level of detail that would impose undue costs. If a registrant has not identified a material climate-related risk, no disclosure is required. Given the concerns expressed by commenters that there is a wide range of risks that registrants manage as part of their operations, we are persuaded that it is appropriate to include a materiality qualifier for this aspect of the proposal to help ensure that the final rule elicits decision-useful information for investors without imposing an undue burden on registrants and placing undue emphasis on climate-related risks that are not material.

Similarly, to address the concerns of commenters that the proposed risk management disclosure provision would require registrants to address items that might not be relevant to their

particular business or industry,<sup>772</sup> we have removed several prescriptive elements from the final rule. Those proposed provisions that we are not adopting would have required a registrant, when describing any processes for identifying and assessing climate-related risks, to disclose, as applicable, how the registrant:

- Determines the relative significance of climate-related risks compared to other risks;
- Considers existing or likely regulatory requirements or policies, such as GHG emissions limits, when identifying climate-related risks;
- Considers shifts in customer or counterparty preferences, technological changes, or changes in market prices in assessing potential transition risks; and
- Determines the materiality of climate-related risks.

Instead, the final rule will allow a registrant, when describing its processes for identifying, assessing, and managing material climate-related risks, to determine which factors are most significant, and therefore should be addressed, based on its particular facts and circumstances, which may include information on the items listed above.

Commenters that supported the proposal stated that a meaningful description of the processes underlying climate risk management is necessary to enable investors to evaluate registrants' climate risk management practices as part of their investment decisions. The final rule will elicit disclosures that offer a more complete picture of the management of material climate-related risks while also mitigating concerns that the proposed rule could unnecessarily elevate climate-related risk above other important matters and give rise to competitive harm and increased litigation risk for registrants. The final rule will also promote more consistent and comparable disclosure of registrants' climate-related risk management practices than is currently available from voluntary reporting and, as these provisions of the final rules more closely align with the TCFD, they may limit costs for those registrants who are familiar with reporting under this framework.

The final rule provides that a registrant should address, as applicable, how it identifies whether it has incurred or is reasonably likely to incur a material physical or transition risk.<sup>773</sup> This provision is similar to the proposed rule that would have required a registrant to describe its processes for

<sup>763</sup> See 17 CFR 229.1503(a). As noted in section II.D.2.c above, we have moved the disclosure requirement concerning a registrant's transition plan to the 17 CFR 229.1502.

<sup>764</sup> See, e.g., letters from Ceres; C2ES; PWHC; SKY Harbor; and WSP.

<sup>765</sup> See *supra* note 730 and accompanying text.

<sup>766</sup> See, e.g., letters from API; Chamber; and SIFMA.

<sup>767</sup> See *supra* note 727 and accompanying text. See also Anthesis (stating that the SEC should require the registrant to disclose its process for identifying climate risks with the highest materiality and explain its adaptation/mitigation plan to build resiliency).

<sup>768</sup> See TCFD, 2022 Status Report (Oct. 2022), available at <https://assets.bbhub.io/company/sites/60/2022/10/2022-TCFD-Status-Report.pdf> (indicating that only approximately one-third of over 1,400 public companies surveyed provided

disclosure concerning climate risk management processes in their 2021 reports).

<sup>769</sup> See *supra* note 727 and accompanying text.

<sup>770</sup> See section IV.A.5.

<sup>771</sup> See *supra* note 730 and accompanying text.

<sup>772</sup> See *supra* note 730 and accompanying text.

<sup>773</sup> See 17 CFR 229.1503(a)(1).

identifying a climate-related risk.<sup>774</sup> The final rule substitutes the more specific terms “physical risk or transition risk” for “climate-related risk” to clarify and simplify the requirement since Item 1500 defines climate-related risk to encompass physical and transition risks. In addition, because the processes and factors that a registrant may use to identify the two types of risks may differ in certain respects, or in some cases a registrant may face one and not the other kind of risk, this change should elicit more relevant information for investors.<sup>775</sup>

Similar to the rule proposal, the final rule also provides that a registrant should address, as applicable, how it:

- Decides whether to mitigate, accept, or adapt to the particular risk;<sup>776</sup> and
- Prioritizes whether to address the climate-related risk.<sup>777</sup>

The final rules will help investors to understand the processes that a registrant has for identifying, assessing, and managing climate-related risks, consistent with the feedback of many commenters.<sup>778</sup> In this regard, commenters further indicated that information concerning how a registrant prioritizes climate-related risks vis-à-vis other risks that the registrant is managing would be particularly useful.<sup>779</sup> We are not, however, retaining the proposed requirement to disclose how a registrant determines how to mitigate any high priority risks. In response to the concerns expressed by several commenters,<sup>780</sup> we have removed this proposed disclosure item to reduce the prescriptiveness of the risk management disclosure requirement and streamline this requirement, as we have done with other areas of the final rules. Furthermore, in response to one commenter who supported the proposal but cautioned against an overly broad application,<sup>781</sup> we confirm that the final rules do not require registrants to speculate in their disclosures about future restructurings, write-downs, or impairments related to climate risk management. The flexibility afforded by the final rules also helps address the point made by the same commenter that the proposed disclosure item should not compel registrants to disclose trade

secrets or confidential business information.

Also similar to the rule proposal, the final rule provides that, if a registrant is managing a material climate-related risk, it must disclose whether and how any of the processes it has described for identifying, assessing, and managing the material climate-related risk have been integrated into the registrant’s overall risk management system or processes.<sup>782</sup> As some commenters noted, information about how a registrant integrates its climate risk management processes into its overall risk management system is important to help investors understand and assess the effectiveness of those climate risk management processes.<sup>783</sup> Mandating this disclosure, therefore, will allow investors to make better informed decisions about the overall risk profile of their investment in the registrant and provide a measure from which they can evaluate similarly situated companies.<sup>784</sup>

We are not adopting the proposed requirement for a registrant to disclose, if it has a separate board or management committee responsible for assessing and managing climate-related risks, how that committee interacts with the registrant’s board or management committee governing risks. Several commenters stated that they do not have dedicated board or management committees for managing climate-related risks,<sup>785</sup> or asserted that including such prescriptive elements in the final rule could lead to boilerplate disclosure.<sup>786</sup> Having considered these comments, and in light of our overall aim to reduce the prescriptiveness of the proposed requirements, we are not including this disclosure item in the final rule. We believe the other disclosure items we are adopting will still provide investors with decision-useful information about how registrants manage their material climate-related risks.

Finally, as noted above,<sup>787</sup> we are not adopting the proposed rule that allowed but did not require registrants to describe any processes for identifying, assessing, and managing climate-related opportunities when responding to any of the provisions in the risk management section.<sup>788</sup> As with other voluntary disclosure, registrants may elect to include such disclosure. While we recognize the recommendation of

some commenters that such disclosure be mandatory, consistent with the rule proposal, we have determined to treat disclosure regarding climate-related opportunities as optional, among other reasons, to allay any anti-competitive concerns that might arise from a requirement to disclose a particular business opportunity.<sup>789</sup>

### G. Targets and Goals Disclosure (Item 1504)

#### 1. Proposed Rule

The Commission proposed to require a registrant that has set any climate-related targets or goals to disclose certain information about those targets or goals.<sup>790</sup> The proposed rule provided examples of climate-related targets or goals, such as those related to the reduction of GHG emissions or regarding energy usage, water usage, conservation or ecosystem restoration, or revenues from low-carbon products in line with anticipated regulatory requirements, market constraints, or other goals established by a climate-related treaty, law, regulation, policy, or organization.<sup>791</sup>

The proposed rule would have required a registrant that has set climate-related targets or goals to disclose the targets or goals and include, as applicable, a description of:

- The scope of activities and emissions included in the target;
- The unit of measurement, including whether the target is absolute or intensity based;
- The defined time horizon by which the target is intended to be achieved, and whether the time horizon is consistent with one or more goals established by a climate-related treaty, law, regulation, policy, or organization;
- The defined baseline time period and baseline emissions against which progress will be tracked with a consistent base year set for multiple targets;
- Any interim targets set by the registrant; and
- How the registrant intends to meet its climate-related targets or goals.<sup>792</sup>

The proposed rule also would have required a registrant to disclose relevant data to indicate whether it is making progress toward achieving the target or goal and how such progress has been

<sup>774</sup> See Proposing Release, section II.E.1.

<sup>775</sup> See TCFD, *supra* note 332, at 13–14 (providing different tables (Tables D2 and D3) outlining the identification and assessment approaches for transition risks and physical risks).

<sup>776</sup> See 17 CFR 229.1503(a)(2).

<sup>777</sup> See 17 CFR 229.1503(a)(3).

<sup>778</sup> See *supra* note 747 and accompanying text.

<sup>779</sup> See *supra* note 749 and accompanying text.

<sup>780</sup> See *supra* note 733 and 734 and accompanying text.

<sup>781</sup> See *e.g.*, letter from BOA.

<sup>782</sup> See 17 CFR 229.1503(b).

<sup>783</sup> See *supra* note 753 and accompanying text.

<sup>784</sup> See, *e.g.*, letter from SKY Harbor.

<sup>785</sup> See, *e.g.*, letter from BIO.

<sup>786</sup> See, *e.g.*, letter from Chamber.

<sup>787</sup> See *supra* section II.C.1.c.

<sup>788</sup> See 17 CFR 229.1503(c).

<sup>789</sup> See Proposing Release, section II.A.1.

<sup>790</sup> See Proposing Release, section III.

<sup>791</sup> See *id.*

<sup>792</sup> See *id.* The proposed rule further provided, as an example, that for a target or goal regarding net GHG emissions reduction, the discussion could include a strategy to increase energy efficiency, transition to lower carbon products, purchase carbon offsets or RECs, or engage in carbon removal and carbon storage.

achieved. The proposed rule would have required the registrant to update this disclosure each fiscal year by describing the actions taken during the year to achieve its targets or goals.<sup>793</sup>

Finally, the Commission proposed to require a registrant that, as part of any net emissions reduction strategy, uses carbon offsets<sup>794</sup> or RECs<sup>795</sup> to disclose the role that carbon offsets or RECs play in the registrant's climate-related business strategy.<sup>796</sup> If the registrant used carbon offsets or RECs in its plan to achieve climate-related targets or goals,<sup>797</sup> the proposed rule would have required it to disclose the amount of carbon reduction represented by the offsets or the amount of generated renewable energy represented by the RECs, the source of the offsets or RECs, a description and location of the underlying projects, any registries or other authentication of the offsets or RECs, and the cost of the offsets or RECs.<sup>798</sup>

<sup>793</sup> See *id.*

<sup>794</sup> The proposed rules defined carbon offsets as representing an emissions reduction or removal of greenhouse gases in a manner calculated and traced for the purpose of offsetting an entity's GHG emissions. See Proposing Release, section I.I.C.2.

<sup>795</sup> The proposed rules defined a REC, consistent with the EPA's commonly used definition, to mean a credit or certificate representing each purchased megawatt-hour (1 MWh or 1000 kilowatt-hours) of renewable electricity generated and delivered to a registrant's power grid. See *id.*

<sup>796</sup> See *id.* The Commission proposed the requirement to disclose information about the carbon offsets or RECs used by a registrant both in the proposed disclosure requirements for targets and goals and as part of the proposed disclosure requirements regarding the impacts of climate-related risks on a registrant's strategy. See Proposing Release, sections I.I.C.2 and I.I.I. To streamline and reduce redundancies in the subpart 1500 disclosure requirements, the final rules require disclosure of used carbon offsets or RECs only as part of the targets and goals disclosure requirements. Nevertheless, as discussed below, a registrant may elect to provide its disclosure about targets and goals as part of its strategy discussion, including its transition plan disclosure, as applicable. The final rules also require certain disclosures of offsets and RECs under the Regulation S-X amendments. See 17 CFR 210.14-02(e)(1) and *infra* section I.I.K.3.c.vi.

<sup>797</sup> While both carbon offsets and RECs represent commonly used GHG emissions mitigation options for companies, they are used for somewhat different purposes. A company may purchase carbon offsets to address its GHG emissions (Scopes 1, 2, and 3 emissions) by verifying global emissions reductions at additional, external projects. The reduction in GHG emissions from one place ("offset project") can be used to "offset" the emissions taking place somewhere else (at the company's operations). See, e.g., EPA, *Offsets and RECs: What's the Difference?* (Feb. 2018), available at [https://www.epa.gov/sites/default/files/2018-03/documents/gpp\\_guide\\_recs\\_offsets.pdf](https://www.epa.gov/sites/default/files/2018-03/documents/gpp_guide_recs_offsets.pdf). In contrast, a company may purchase an REC in renewable electricity markets solely to address its indirect GHG emissions associated with purchased electricity (*i.e.*, Scope 2 emissions) by verifying the use of zero- or low-emissions renewable sources of electricity.

<sup>798</sup> See Proposing Release, section I.I.I.

The proposed rule further stated that a registrant could provide the disclosures regarding its targets and goals when discussing climate-related impacts on its strategy, business model, and outlook or when discussing its transition plan.<sup>799</sup>

## 2. Comments

### a. The Overall Proposed Disclosure Requirements

Many commenters supported the rule proposal requiring a registrant that has set climate-related targets or goals, including the reduction of GHG emissions, to disclose certain information about those targets or goals.<sup>800</sup> Commenters stated that information about a registrant's set targets and goals, how a registrant plans to achieve them, and progress made towards them is critical to understanding a registrant's transition risk management and its exposure to the likely financial impacts of identified transition risks.<sup>801</sup> Commenters also stated that the proposed targets and goals disclosure requirement would help investors assess a registrant's transition plan and whether it is aligned with global climate-related goals so that they may better understand the registrant's transition risk exposure.<sup>802</sup> Commenters also indicated that the proposed targets and goals disclosure requirement would provide needed data to help investors determine if a registrant's climate-related public commitments are real and would help discourage greenwashing.<sup>803</sup> Commenters further indicated that, despite the importance of information about a registrant's targets or goals to investors, such information currently is lacking.<sup>804</sup>

<sup>799</sup> See *id.*

<sup>803</sup> See, e.g., letters from Center Amer. Progress; D. Hileman Consulting; and Sens. Schatz *et al.*

<sup>804</sup> See, e.g., letters from Calvert; Engine No. 1; IIF; Maple-Brown; NY St. Comptroller; and Paradise Invest. Mgmt.

Several of the commenters that supported requiring disclosure of a GHG emissions reduction target or goal also supported the disclosure of other climate-related targets or goals, such as those pertaining to energy usage, water usage, conservation or ecosystem restoration, and revenues from low-carbon products.<sup>805</sup> Some commenters also recommended requiring the disclosure of any targets or goals that a registrant has set to mitigate climate-related impacts on local or indigenous communities or that involve human capital management goals related to employee retraining and retention in clean energy jobs.<sup>806</sup> One commenter, however, stated that the targets and goals disclosure requirement should only pertain to GHG emissions reduction.<sup>807</sup> According to this commenter, because standards for other climate-related targets and goals have not been broadly defined or accepted, voluntary reporting regarding such targets or goals is more appropriate.<sup>808</sup>

Several commenters that supported the proposed targets and goals disclosure requirement also supported requiring a registrant that has set a climate-related target or goal to describe, as proposed:

- The scope of activities and emissions included in the target;
- The unit of measurement, including whether the target is absolute or intensity based;
- The defined time horizon by which the target is intended to be achieved, and whether the time horizon is consistent with one or more goals established by a climate-related treaty, law, regulation, policy, or organization;
- The defined baseline time period and baseline emissions against which progress will be tracked with a consistent base year set for multiple targets;
- Any interim targets set by the registrant; and
- How the registrant intends to meet its climate-related targets or goals.<sup>809</sup>

<sup>805</sup> See, e.g., letters from Amer. for Fin. Reform, Evergreen Action *et al.*; Ceres; Moody's; TotalEnergies; U.S. Green Building Council (June 17, 2022) ("USGBC"); and WRI.

<sup>806</sup> See, e.g., letters from CIEL; ICCR; and Seventh Gen.

<sup>807</sup> See letter from Dell.

<sup>808</sup> See *id.*

<sup>809</sup> See, e.g., letters from Amer. for Fin. Reform, Sunrise Project *et al.*; Bloomberg; Maple-Brown; Moody's; and WRI; see also letters from IATP (supporting disclosure of the scope of activities and emissions, how targets have been set, and progress realized); and Unilever (supporting disclosure of the scope, details of the method of calculation and any baseline being used, together with any plans to meet the targets, but stating that it is not necessary to require disclosure of any other climate targets

Commenters stated that the proposed detailed disclosure requirements would help investors understand the level of a registrant's commitment to achieving its climate-related targets and goals.<sup>810</sup> Some commenters recommended requiring additional disclosure requirements, such as whether the registrant has set science-based greenhouse gas emission reduction targets under the Science Based Targets Initiative,<sup>811</sup> or the extent to which it can achieve its targets or goals using existing technology.<sup>812</sup>

Several commenters supported the proposed rule provision requiring a registrant to disclose relevant data indicating whether it is making progress toward achieving a set target or goal and how such progress has been achieved.<sup>813</sup> One commenter stated that the proposed requirement would enhance management's accountability for its climate-related commitments.<sup>814</sup> This commenter further supported requiring a registrant to provide periodic updates to help investors evaluate its progress in achieving its targets or goals.<sup>815</sup> Another commenter stated that disclosure regarding a registrant's progress toward achieving its targets or goals should include information about the related capital expenditures it has made or intends to make.<sup>816</sup> One other commenter, in response to the proposed Regulation S-X amendments, recommended requiring the disclosure of a registrant's discrete and separable expenditures, both expensed and capitalized, related to transition activities for the registrant's publicly disclosed, climate-related targets and goals.<sup>817</sup>

Some commenters supported a targets and goals disclosure requirement but recommended conditions to such

because, if material, they will be included in the registrant's plans to meet the GHG reduction target).

<sup>810</sup> See, e.g., letters from Maple-Brown; and USGBC.

<sup>811</sup> See, e.g., letter from WRI.

<sup>812</sup> See, e.g., letter from Amer. for Fin. Reform, Sunrise Project *et al.* ("The Commission should require a registrant, when disclosing its targets or goals, to disclose any data that indicate whether the registrant is making progress toward meeting the target and how such progress has been achieved, as proposed. This should include how a registrant's progress toward targets or goals links to the financial statements, because capital expenditures made by registrants in implementing transition plans are a key metric for investors.").

<sup>813</sup> See, e.g., letters from Amer. for Fin. Reform, Sunrise Project *et al.*; CalPERS; CEMEX; D. Hileman Consulting; Morningstar; Paradise Invest. Mgmt.; PwC; Sens. B. Schatz *et al.*; TotalEnergies; USGBC; and WRI.

<sup>815</sup> See *id.*

<sup>816</sup> See letter from Amer. for Fin. Reform, Sunrise Project *et al.*

<sup>817</sup> See letter from Amazon.

requirement. For example, some commenters stated that, in order to prevent the proposed disclosure requirement from acting as a disincentive to the adoption of climate-related targets or goals, the final rule should provide an opportunity for a registrant that has not set a target or goal to explain why it has not done so.<sup>818</sup> Some commenters indicated that a registrant should only be required to provide data about a publicly announced target or goal.<sup>819</sup> One commenter stated that the disclosure requirement should only be triggered by the board's or CEO's formal adoption of the target or goal to encourage the informal development of the target or goal.<sup>820</sup> One other commenter similarly stated that the Commission should require disclosure of targets or goals only when the board and senior management use the target or goal in their decision-making.<sup>821</sup>

Several commenters opposed the proposed targets and goals disclosure requirement.<sup>822</sup> Commenters expressed concern that the proposed disclosure requirement was overly prescriptive and would require detailed disclosure about a target or goal even if the target or goal was not material.<sup>823</sup> Commenters asserted that the disclosure requirements for targets and goals were overly prescriptive and would impose a costly compliance burden on registrants that, together with liability concerns, would discourage registrants from setting climate-related targets or goals.<sup>824</sup> One commenter stated that the proposed targets and goals disclosure requirement would have a chilling effect on registrants setting even aspirational

<sup>818</sup> See, e.g., letters from Impax Asset Mgmt.; Maple-Brown; and TIAA.

<sup>819</sup> See letter from PwC (recommending that the Commission clarify that the disclosure of voluntary targets or goals applies only to targets and goals that have been publicly announced by the registrant, its subsidiaries that are separate registrants, or its significant subsidiaries); see also letter from Amazon (indicating that some internal targets or goals may never be as fully developed with the level of detail that the proposed rule would require).

<sup>820</sup> See letter from SKY Harbor.

<sup>821</sup> See letter from Amazon.

targets or goals.<sup>825</sup> Another commenter stated that the proposed disclosure requirement would chill even preliminary discussions of climate-related initiatives at the board or management level.<sup>826</sup> A different commenter stated that the proposed targets and goals disclosure requirement would effectively punish early adopters of targets or goals by exclusively requiring them to disclose their targets and goals in extensive detail.<sup>827</sup>

Commenters also expressed concern that the proposed disclosure requirement would compel disclosure of internal, non-public targets that would reveal confidential proprietary information.<sup>828</sup> Because of these concerns, some of these commenters recommended that the Commission only require the disclosure of material targets and goals that have been publicly announced.<sup>829</sup>

#### b. The Proposed Disclosure Requirement Concerning the Use of Carbon Offsets or RECs

Many commenters supported the proposed rule provision requiring a registrant that uses carbon offsets or RECs in its plan to achieve climate-related targets or goals to disclose information about: the amount of carbon reduction represented by the offsets or the amount of generated renewable energy represented by the RECs; the source of the offsets or RECs; a description and location of the underlying projects; any registries or other authentication of the offsets or RECs; and the cost of the offsets or RECs.<sup>830</sup> Commenters stated that, because many registrants rely on the use of carbon offsets or RECs to achieve their GHG emissions reduction targets or goals, and because there are different types of carbon offsets and RECs with different attendant risks and benefits, investors need detailed information

<sup>825</sup> See letter from Abrasca.

<sup>826</sup> See letter from Chamber.

<sup>827</sup> See letter from Business Roundtable.

<sup>828</sup> See, e.g., letters from Abrasca; AIC; Amer. Chem.; Chamber; and Soc. Corp. Gov.

<sup>829</sup> See, e.g., letters from Abrasca; AIC; Chamber; and Soc. Corp. Gov.

<sup>830</sup> See, e.g., letters from AllianceBernstein; Amazon; Amer. for Fin. Reform, Sunrise Project *et al.*; As You Sow; CalPERS; Calvert; Carbon Direct (June 16, 2022); CarbonPlan (June 16, 2022); Ceres; Constellation Energy Corporation (June 7, 2022) ("Constellation Energy"); D. Hileman Consulting; Domini Impact; Enerplus (June 16, 2022); Engine No. 1; Eni SpA; Ethic Inc. (June 17, 2022) ("Ethic"); Harvard Mgmt.; J. Herron; IATP; ICCR; J. McClellan; Morningstar; NRDG; Paradise Invest. Mgmt.; PGIM; SKY Harbor; TotalEnergies; and WRI. See also IAC Recommendation ("We support requiring companies to disclose the role that carbon offsets or renewable energy credits play in their climate-related business strategy or if the company used them to meet targets or goals").

about the carbon offsets or RECs used in order to evaluate the effectiveness of a registrant's transition risk strategy and management of climate-related impacts on its business.<sup>831</sup> Commenters further stated that, despite this need, such information is currently lacking, and that without detailed information about the type, underlying project, authentication, and cost of the offsets, investors cannot adequately assess a registrant's climate-related strategy and its exposure to climate-related risks, particularly transition risks.<sup>832</sup>

For example, some commenters expressed concern that registrants' carbon offset purchases vary considerably in terms of quality and effectiveness in meeting their own net-zero carbon targets or those required by jurisdictions in which they operate.<sup>833</sup> In this regard one commenter stated that investors need to know the type of carbon offset purchased in order to assess a registrant's climate risk management because, if the registrant has a net-zero target or goal, it must use a carbon removal offset rather than a carbon avoidance offset to achieve the net-zero target or goal.<sup>834</sup> Commenters relatedly recommended defining carbon offsets to include those that seek to avoid emissions (in addition to those that seek to reduce or remove them) and to require registrants that have used offsets to disclose the type of offset used (e.g., avoidance, reduction, or removal).<sup>835</sup> Other commenters expressed support for increased disclosure about carbon offsets because of concerns about perceived problems in carbon offset markets regarding the quality and permanence of offsets.<sup>836</sup> Commenters further stated that a registrant's strategy that is heavily dependent on the use of carbon offsets or RECs runs the risk of market volatility, including spikes in the price of such instruments due to low supply and increased demand, and litigation and reputational risks from conducting

an ineffective transition risk strategy or from claims of greenwashing.<sup>837</sup>

Some commenters recommended that the Commission require the disclosure of certain information about RECs in addition to the proposed disclosure items.<sup>838</sup> For example, commenters<sup>839</sup> recommended requiring the disclosure of whether a registrant's RECs are bundled or unbundled.<sup>840</sup> Commenters<sup>841</sup> also sought disclosure regarding whether a registrant purchased or obtained its RECs from a compliance market or voluntary market.<sup>842</sup>

Other commenters, however, opposed the proposed requirement to disclose detailed information regarding a registrant's use of carbon offsets or RECs.<sup>843</sup> One commenter stated that the proposed disclosure requirement was overly prescriptive and that, without a materiality qualifier, it was likely to result in disclosure that was not decision-useful for investors.<sup>844</sup> Another commenter similarly stated that the proposed requirement would result in the disclosure of immaterial information and also indicated that the proposed requirement, which the commenter characterized as seeking to regulate offsets and RECs, was outside the area

<sup>837</sup> See, e.g., letters from Amer. Fin. Reform, Sunrise Project *et al.*; CarbonDirect; and CarbonPlan.

<sup>838</sup> See, e.g., letters from American Clean Power Association (June 17, 2022) ("Amer. Clean Power"); BCSE; CalPERS; and International Emissions Trading Association (June 17, 2022) ("IETA").

<sup>839</sup> See letters from Amer. Clean Power; and IETA; see also letter from CalPERS (stating its belief that unbundled RECs should not be allowed to be counted, but if the final rule allows for unbundled RECs to be counted, then a registrant should be required to disclose both a total amount with, and a total amount without, the use of unbundled RECs for each scope of emissions).

<sup>840</sup> A bundled REC is one that is sold together with the generated electricity directly to the consumer or reseller whereas an unbundled REC is one that has been separated from and sold without delivery of the generated electricity. See, e.g., U.S. EPA, *Retail RECs*, available at <https://www.epa.gov/green-power-markets/retail-recs> (last updated Nov. 1, 2023); see also Sustainable Development Strategy Group ("SDSG"), *Renewable Energy Credits* (Jan. 2020), available at <https://static1.squarespace.com/static/5bb24d3c9b8fe8421e87bbb6/t/5e212aa512182f60deb4849c/1579231912520/RECs+Policy+Primer.pdf>.

<sup>841</sup> See, e.g., letters from Amer. Clean Power; and BCSE.

<sup>842</sup> Utilities may purchase RECs in a compliance market to comply with a state's renewable portfolio standard whereas a non-utility company may purchase RECs in a voluntary market to support the general deployment of renewable energy. RECs purchased in a compliance market must meet certain standards and must be certified by an approved certifying group. RECs purchased in a voluntary market may or may not be subject to certain standards and technically are not required to be certified. See SDSG, *supra* note 840.

<sup>843</sup> See, e.g., letters from Beller *et al.*; CEMEX; and J. Weinstein.

<sup>844</sup> See letter from Beller *et al.*

of the Commission's expertise and beyond the Commission's statutory authority.<sup>845</sup> One other commenter stated that it did not believe it was necessary for companies to disclose the amount of energy represented by RECs, their nature, or the location of the underlying projects.<sup>846</sup>

### 3. Final Rule

#### a. The Overall Disclosure Requirement (Item 1504(a), (b), and (c))

The final rule (Item 1504(a)) will require a registrant to disclose any climate-related target or goal if such target or goal has materially affected or is reasonably likely to materially affect the registrant's business, results of operations, or financial condition.<sup>847</sup> Investors need detailed information about a registrant's climate-related targets or goals in order to understand and assess the registrant's transition risk strategy and how the registrant is managing the material impacts of its identified climate-related risks. We recognize, however, as some commenters indicated, that an overly broad requirement to disclose any climate-related target or goal, even one that is meant for preliminary, internal planning purposes and that is not yet material, could impose a compliance burden on registrants that may outweigh its benefit to investors.<sup>848</sup> Conditioning the targets and goals disclosure requirement on the targets or goals being material will help to address this concern by focusing the requirement on the information that is most likely to be decision-useful for investors.

If a registrant sets an internal target or goal that materially affects or is reasonably likely to materially affect the registrant's business, results of operations, or financial condition (e.g., due to material expenditures or operational changes that are required to achieve the target or goal), then investors should have access to information about that target or goal to help them understand the financial impacts and assess the registrant's transition risk management. While some commenters recommended that the Commission require the disclosure only of targets or goals that are both material and publicly announced,<sup>849</sup> we decline to follow this suggestion. Such a condition would enable a registrant to keep non-public an internal target or goal that is material, which would fail

<sup>845</sup> See letter from J. Weinstein.

<sup>846</sup> See letter from CEMEX.

<sup>847</sup> See 17 CFR 229.1504(a).

<sup>848</sup> See *supra* notes 823 and 828 and accompanying text.

<sup>849</sup> See *supra* note 829 and accompanying text.

<sup>831</sup> See, e.g., letters from AllianceBernstein; Carbon Direct; CarbonPlan; and Ceres.

<sup>832</sup> See, e.g., letter from AllianceBernstein (stating that "[t]he markets for carbon credits and offsets are nascent, fragmented and opaque, with significant variability in governance, quality, pricing and sourcing" and that "[i]ncreasing transparency on offsets is critical to an investor's assessment of how well a registrant is managing the risk of climate change to its business, particularly transition risk."); see also letters from Calvert; CarbonDirect; CarbonPlan; Ceres; Engine No. 1; and Ethic.

<sup>833</sup> See, e.g., letters from CarbonPlan; Ceres; and Morningstar.

<sup>834</sup> See letter from CarbonPlan.

<sup>835</sup> See, e.g., letters from Amer. Fin. Reform, Sunrise Project *et al.*; Business Council for Sustainable Energy (June 17, 2022) ("BCSE"); Ceres; and WBCSD.

<sup>836</sup> See, e.g., letter from ICCR.

to protect investors by potentially precluding their access to information that is important to make informed investment and voting decisions. We reemphasize, however, that a registrant is not required to disclose an internal target or goal that is not material.

In addition, we decline to follow the recommendation of some commenters that the targets and goals disclosure requirement should only be triggered by the board's or CEO's formal adoption of the target or goal.<sup>850</sup> Such a provision would deprive investors of material information for procedural reasons unrelated to the importance of the information to investors. Furthermore, as previously mentioned, the final rules are intended to elicit material climate-related disclosures for investors and not to influence governance practices regarding climate-related matters. Because registrants may have different processes for setting targets or goals, we believe that materiality is a better threshold for disclosure of targets or goals than basing the disclosure requirement on an internal process that may differ from company to company.

Similarly, although one commenter recommended that the Commission require the disclosure only of targets or goals related to a registrant's GHG emissions,<sup>851</sup> we decline to follow this recommendation. Investors need information about all of a registrant's material climate-related targets and goals in order to assess the impact of such targets and goals on a registrant's overall business, results of operations, financial condition, and prospects. Although the particular non-GHG emissions target or goal to be disclosed will depend on a registrant's particular facts and circumstances, to the extent such targets or goals are material, a registrant must disclose them. To simplify the targets and goals disclosure requirement and avoid implying any topical focus regarding the particular targets or goals that should be discussed, we have eliminated from the final rule the parenthetical "e.g., the reduction of GHG emissions or regarding energy usage, water usage, or revenues from low-carbon products."

We also decline to follow the recommendations of some commenters to include provisions that specifically require the disclosure of targets or goals related to mitigation of impacts on local communities or that concern human capital management goals.<sup>852</sup> The final rule is intended to elicit disclosure of any climate-related target or goal that has materially affected or is reasonably likely to materially affect a registrant's business, results of operations, or financial condition. Accordingly, any target or goal meeting the conditions of the final rule (including that it is material) will need to be disclosed regardless of the particular issues it addresses, if that target or goal is considered climate-related in the registrant's particular circumstances and if achieving such target or goal would materially impact its business, results of operations, or financial condition. We note that a registrant may voluntarily disclose additional information that is not required to be disclosed under the final rule (and not part of a target or goal) but that is related to the mitigation of climate-related risks.

Similar to the proposed rule, with some modifications as discussed below, the final rule (Item 1504(b)) will require a registrant that is disclosing its targets and goals pursuant to Item 1504 to provide any additional information or explanation necessary to an understanding of the material impact or reasonably likely material impact of the target or goal, including, as applicable, a description of:

- The scope of activities included in the target;
- The unit of measurement;
- The defined time horizon by which the target is intended to be achieved, and whether the time horizon is based on one or more goals established by a climate-related treaty, law, regulation, policy, or organization;
- If the registrant has established a baseline for the target or goal, the defined baseline time period and the means by which progress will be tracked; and
- A qualitative description of how the registrant intends to meet its climate-related targets or goals.<sup>853</sup>

These disclosures will allow investors to better understand a registrant's targets or goals and how it intends to achieve them, which will help investors better assess a registrant's transition risks and make more informed investment and voting decisions. In order to address the concern of some commenters that the proposed targets and goals disclosure

provision was too prescriptive and would impose a costly compliance burden without necessarily resulting in material information,<sup>854</sup> the final rule has been revised so that the listed items are non-exclusive examples of additional information or explanation that a registrant must disclose only if necessary to an understanding of the material impact or reasonably likely material impact of the target or goal.<sup>855</sup>

To further streamline the targets and goals disclosure requirement, the final rules do not include "emissions" in the list of information that must be disclosed if necessary to an understanding of the material impact or reasonably likely material impact of a target or goal. If a registrant has set a material target or goal to reduce emissions, it will be required to disclose this when explaining the scope of activities included in the target. We also have eliminated the proposed disclosure item regarding whether a target is absolute or intensity-based because this information will likely be elicited by other required disclosure, such as the unit of measurement pertaining to the target or goal.<sup>856</sup>

Similar to the proposed rule, the final rule requires disclosure, as applicable, of how the registrant intends to meet its climate-related targets or goals.<sup>857</sup> However, in order to help address the concern of some commenters that the proposed rule could result in the disclosure of an excessive amount of detail, the final rule specifies that this discussion of prospective activities need only be qualitative. In addition, we are eliminating the proposed example that, for a target or goal regarding net GHG emissions reduction, the discussion could include a strategy to increase energy efficiency, transition to lower carbon products, purchase carbon offsets or RECs, or engage in carbon removal and carbon storage.<sup>858</sup> This will avoid any misperception that these are required items of disclosure. The final rule leaves it up to the registrant to determine what specific factors to highlight as part of the qualitative description of how it plans to meet its targets or goals.

We are also not adopting the proposed requirement to disclose any interim targets set by the registrant. We agree

<sup>854</sup> See *supra* note 823 and accompanying text.

<sup>855</sup> See 17 CFR 229.1504(b).

<sup>856</sup> In addition, as discussed below in section II.H, elimination of this proposed disclosure requirement is consistent with our removal of the proposed requirement to disclose a registrant's GHG emissions metrics in intensity terms in addition to absolute terms.

<sup>857</sup> See 17 CFR 229.1504(b)(5).

<sup>858</sup> See Proposing Release, section III.

<sup>850</sup> See *supra* note 820 and accompanying text.

<sup>851</sup> See *supra* note 807 and accompanying text.

<sup>852</sup> See *supra* note 806 and accompanying text.

<sup>853</sup> See 17 CFR 229.1504(b).

with commenters that stated that this disclosure item is not necessary because, if a registrant has set an interim target that is material, it will likely be included in the registrant's discussion of its plan to achieve its targets or goals.<sup>859</sup>

Similar to the proposed rule, the final rule (Item 1504(c)) will require a registrant to disclose any progress toward meeting the target or goal and how such progress has been achieved.<sup>860</sup> Also similar to the proposed rule, the final rule will require the registrant to update this disclosure each fiscal year by describing the actions taken during the year to achieve its targets or goals.<sup>861</sup> We are adopting this updating requirement for substantially the same reasons we are adopting the updating requirement with respect to the transition plan disclosure required under Item 1502(e),<sup>862</sup> including because it will better enable investors to monitor impacts on the registrant as it attempts to meet its targets or goals.

Relatedly, the final rule will require a registrant to include in its targets and goals disclosure a discussion of any material impacts to the registrant's business, results of operations, or financial condition as a direct result of the target or goal or the actions taken to make progress toward meeting the target or goal.<sup>863</sup> This discussion must include quantitative and qualitative disclosure of any material expenditures and material impacts on financial estimates and assumptions as a direct result of the target or goal or the actions taken to make progress toward meeting the target or goal,<sup>864</sup> consistent with the suggestion of some commenters.<sup>865</sup> We have added these latter provisions because, as commenters noted, a company's climate commitments, and progress in relation to its commitments, may materially impact its business, outlook, operating expenditures, capital expenditures, liquidity, and other capital resources, which is why investors seek and need information about such material expenditures and other material financial impacts related

to its targets and goals.<sup>866</sup> As discussed in more detail below,<sup>867</sup> a number of commenters who supported the proposed expenditures disclosures in Regulation S-X indicated that such disclosure would help investors understand a registrant's ability to meet its climate-related targets and goals.<sup>868</sup>

We recognize commenters' concerns about registrants' abilities to identify, attribute, and quantify the impact of transition activities in the financial statements.<sup>869</sup> We believe that providing for this disclosure in the context of Item 1504 information on progress towards targets or goals appropriately balances investors' need for this information with commenters' concerns about implementation challenges. As discussed above,<sup>870</sup> with respect to concerns raised in the context of the proposed Regulation S-X amendments about registrants' abilities to disaggregate the portion of an expenditure that is directly related to transition activities, under the final rules, registrants will have flexibility to explain qualitatively the nature of any disclosed expenditure and how it is a direct result of progress under a disclosed target or goal. In addition, subjecting the disclosure requirement to materiality rather than a bright-line threshold, as was proposed for the Regulation S-X amendments, will help reduce the compliance burden of the final rules while providing material information for investors. Additionally, when considering which expenditures related to progress under a disclosed target or goal are material over the relevant period and therefore require disclosure, registrants should consider whether overall expenditures related to progress under a disclosed target or goal are material in the aggregate and, if so, provide appropriate disclosure. Finally, to the extent that disclosure of material impacts on financial estimates and assumptions as a direct result of the

target or goal is disclosed in response to Rule 14-02(h) of Regulation S-X, a registrant would be able to cross-reference to such disclosure.<sup>871</sup>

Similar to the rule proposal, the final rule will permit a registrant to provide the required targets and goals disclosure as part of its discussion pursuant to Item 1502 regarding its transition plan or when otherwise discussing material impacts of climate-related risks on its business strategy or business model.<sup>872</sup> A registrant will also be permitted to provide the required targets and goals disclosure in its risk management discussion pursuant to Item 1503.<sup>873</sup> This provision will help to eliminate redundancies in the subpart 1500 disclosure.

Similar to Items 1502(d)(2) and 1502(e)(2), and for similar reasons, we are providing a phase in for compliance with the Item 1504(c)(2) disclosure requirement. A registrant will not be required to comply with the requirements of Item 1504(c)(2) until the fiscal year immediately following the fiscal year of its initial compliance date for the subpart 1500 rules based on its filer status.<sup>874</sup>

We decline to follow the recommendation of some commenters to require the disclosure of whether the registrant has set science-based GHG emission reduction targets under the Science Based Targets Initiative, or the extent to which it can achieve its targets or goals using existing technology.<sup>875</sup> As we similarly noted when declining to follow a recommendation to broaden transition risk disclosure, the targets and goals disclosure requirement we are adopting is consistent with the TCFD framework, which provides flexibility in terms of which tools or methods a registrant chooses to use, and therefore will limit the targets and goals compliance burden for those registrants that are already familiar with the TCFD framework.<sup>876</sup> A registrant may elect to provide disclosure regarding these additional items, but they are not required items of disclosure.

#### b. The Carbon Offsets and RECs Disclosure Requirement (Item 1504(d))

Similar to the proposed rule, the final rule includes a disclosure requirement about a registrant's use of carbon offsets or RECs (Item 1504(d)). Unlike the proposed rule, however, a registrant will be required to disclose certain

<sup>866</sup> See, e.g., letters from Amazon; Amer. for Fin. Reform, Sunrise Project *et al.*; and PwC.

<sup>867</sup> See *infra* sections II.K.3.b and c.

<sup>868</sup> See *infra* notes 1967 and accompanying text.

<sup>869</sup> See *infra* notes 1902 and 1907 and accompanying text.

<sup>870</sup> See *supra* sections II.D.1.c. and II.D.2.c for discussion of similar material expenditures disclosure requirement, respectively, as part of a registrant's transition plan disclosure under Item 1502(e) and from activities to mitigate or adapt to climate-related risks disclosed pursuant to Item 1502(b)(4) under Item 1502(d) of Regulation S-K. To the extent that there is any overlapping disclosure of material expenditures in response to these Items, to avoid redundancy, a registrant should provide disclosure of material expenditures regarding the Item where, in its assessment, such disclosure is most appropriate, and then cross-reference to this disclosure when responding to the other Items.

<sup>871</sup> See *supra* note 521.

<sup>872</sup> See 17 CFR 229.1504(a).

<sup>873</sup> See *id.*

<sup>874</sup> See section II.O.3.

<sup>875</sup> See *supra* notes 811-812 and accompanying text.

<sup>876</sup> See *supra* section II.C.1.c.

<sup>859</sup> See letter from Unilever.

<sup>860</sup> See 17 CFR 229.1504(c).

<sup>861</sup> See *id.*

<sup>862</sup> See *supra* notes 508-514 and accompanying text. In addition, as with the required transition plan disclosure, no update about targets and goals would be required to be disclosed if the underlying targets or goals are not required to be disclosed (e.g., because the target or goal is no longer material).

<sup>863</sup> See 17 CFR 229.1504(c)(1).

<sup>864</sup> See 17 CFR 229.1504(c)(2).

<sup>865</sup> See *supra* notes 816 and 817 and accompanying text.

information about the carbon offsets or RECs only if they have been used as a material component of a registrant's plan to achieve climate-related targets or goals.<sup>877</sup> We have added a materiality qualifier to the final rule to address the concern of commenters that the proposed disclosure requirement could result in detailed offsets or RECs information that is of little use to investors.<sup>878</sup> Under the final rule, registrants will need to make a determination, based upon their specific facts and circumstances, about the importance of such carbon offsets and credits to their overall transition plan and provide disclosure accordingly.

If carbon offsets or RECs have been used as a material component of a registrant's plan to achieve climate-related targets or goals, then, similar to the proposed rule, the registrant will be required to disclose: the amount of carbon avoidance, reduction or removal represented by the offsets or the amount of generated renewable energy represented by the RECs; the nature and source of the offsets or RECs;<sup>879</sup> a description and location of the underlying projects; any registries or other authentication of the offsets or RECs; and the cost of the offsets or RECs.<sup>880</sup>

Information about the source, value, underlying projects, and authentication of the carbon offsets or RECs will help investors evaluate the role of these instruments in a registrant's climate-related strategy and the impacts on its business. For example, understanding the role that carbon offsets or RECs play in a registrant's climate-related business strategy can help investors assess the potential risks and financial impacts of pursuing that strategy. Relatedly, a registrant that relies on carbon offsets or RECs as a material component of its plan to achieve its targets or goals might need to consider whether fluctuating supply or demand, and corresponding variability of price, related to carbon

offsets or RECs, presents an additional material risk that is required to be disclosed when discussing its plan to achieve such target or goal pursuant to the requirements of subpart 1500.

At the recommendation of commenters, in addition to carbon reduction, we have added the amount of carbon avoidance and carbon removal<sup>881</sup> represented by carbon offsets as disclosure items to clarify that disclosure is required about offsets representing carbon removal and those representing carbon avoidance or reduction if the registrant has used these types of offsets as a material part of its climate-related strategy.<sup>882</sup> This addition will help investors assess the risks associated with the different types of offsets used and how they may affect a registrant's transition risk management and the related impacts on the registrant's business and financial condition.

Also, at the recommendation of commenters, we have added the nature of the carbon offsets or RECs as a disclosure item in addition to the source of the offsets or RECs.<sup>883</sup> This addition will help investors understand whether a purchased offset represents carbon avoidance, reduction, or removal, and whether an REC is bundled or unbundled. Requiring the disclosure of the source of the offset or REC will help investors determine whether the offset has met certain criteria of an established standard-setting body,<sup>884</sup> and whether the REC originated from and met the standards of a compliance market or is instead derived from a more loosely regulated voluntary market.<sup>885</sup> These factors can affect the value and cost of the offsets and RECs and their attendant risks. For example, as one commenter noted, a market that develops increased demand for carbon removal offsets, either because of new regulation or stricter voluntary standards for net-zero

targets, could result in a significant increase in offset prices, potential supply bottlenecks, and increased transition risk for registrants that assumed the continued availability and abundance of cheaper offsets.<sup>886</sup>

One commenter who objected to the proposed offsets and RECs disclosure requirement asserted that the Commission lacks statutory authority to regulate offsets and RECs.<sup>887</sup> We disagree with that commenter's characterization of the rule. In requiring the disclosure of certain information about a registrant's use of offsets or RECs when such use is a material component of the registrant's plan to achieve a target or goal that is required to be disclosed, we are not advocating for or against the use of offsets or RECs generally, or for or against the use of certain types of offsets or RECs. Nor are we substantively regulating their use. As previously mentioned, the final rules, including those pertaining to the use of offsets or RECs, are neutral regarding any strategy that a registrant may choose to manage a material climate-related risk. Instead, like the other climate-related disclosure rules we are adopting, the final rule regarding the disclosure of offsets or RECs is intended to provide investors with the decision-useful information they need to understand a registrant's strategy to mitigate or adapt to the realized or reasonably likely financial impacts of a material climate-related risk.

#### H. GHG Emissions Disclosure (Item 1505)

##### 1. Proposed Rule

The proposed rules would have required a registrant to disclose its GHG emissions<sup>888</sup> for its most recently completed fiscal year and for the historical fiscal years included in its consolidated financial statements, to the extent such historical GHG emissions data is reasonably available.<sup>889</sup> The Commission based the proposed GHG emissions disclosure requirement on the

<sup>877</sup> See 17 CFR 229.1504(d).

<sup>878</sup> See, e.g., letters from Beller *et al.*; and J. Weinstein.

<sup>879</sup> The nature of an offset refers to whether it represents carbon avoidance, reduction, or removal. The nature of an REC refers primarily to whether it is bundled or unbundled. The source of an offset or REC refers to the party that has issued the offset or REC. Commenters stated that investors need such detailed information about offsets or RECs in order to evaluate the effectiveness of a registrant's transition risk strategy and management of climate-related impacts on its business. See *supra* notes 831–834 and accompanying text.

<sup>880</sup> See 17 CFR 229.1504(d). At the recommendation of commenters, see *supra* note 835, to clarify that an offset can represent carbon avoidance, in addition to carbon reduction or removal, we have added "avoidance" to the definition of carbon offset. See 17 CFR 229.1500.

<sup>881</sup> A carbon avoidance occurs, e.g., when a company protects a forest from deforestation. A carbon reduction occurs when emissions are reduced, e.g., when a company switches from the use of fossil-fuel based energy to the use of wind or solar power. A carbon removal occurs when CO<sub>2</sub> is drawn out of the atmosphere and sequestered, e.g., by carbon capture and storage technology. See, e.g., letter from Ceres; and Ceres, *Evaluating the Use of Carbon Credits* (Mar. 1, 2022), available at <https://www.ceres.org/resources/reports/evaluating-use-carbon-credits>.

<sup>882</sup> See, e.g., letters from Amer. Fin. Reform, Sunrise Project *et al.*; BCSE; and Ceres.

<sup>883</sup> See, e.g., letters from Amer. Clean Power; and IETA.

<sup>884</sup> See, e.g., letter of IETA (referencing the Carbon Offset Reduction Scheme for International Aviation ("CORSA") market established by the UN International Civil Aviation Organization ("ICAO") and adopted by the U.S. Federal Aviation Authority).

<sup>885</sup> See, e.g., letter from Amer. Clean Power.

<sup>886</sup> See letter from CarbonPlan.

<sup>887</sup> See letter from J. Weinstein.

<sup>888</sup> We proposed to define "greenhouse gases" as carbon dioxide ("CO<sub>2</sub>"); methane ("CH<sub>4</sub>"); nitrous oxide ("N<sub>2</sub>O"); nitrogen trifluoride ("NF<sub>3</sub>"); hydrofluorocarbons ("HFCs"); perfluorocarbons ("PFCs"); and sulfur hexafluoride ("SF<sub>6</sub>"). The greenhouse gases included in the proposed definition reflect the gases that are currently commonly referenced by international, scientific, and regulatory authorities as having significant climate impacts. This list of constituent greenhouse gases is consistent with the gases identified by widely used frameworks, such as the Kyoto Protocol, the UN Framework Convention on Climate Change, the U.S. Energy Information Administration, the EPA, and the GHG Protocol. See Proposing Release, section II.G.1.a.

<sup>889</sup> See *id.*

concept of scopes, which are themselves based on the concepts of direct and indirect emissions, developed by the GHG Protocol.<sup>890</sup> The Commission proposed to require a registrant to disclose its Scope 1 emissions, which, similar to the GHG Protocol, were defined to mean the direct GHG emissions from operations that are owned or controlled by a registrant.<sup>891</sup> The Commission also proposed to require a registrant to disclose its Scope 2 emissions, which, similar to the GHG Protocol, were defined to mean the indirect GHG emissions from the generation of purchased or acquired electricity, steam, heat, or cooling that is consumed by operations owned or controlled by a registrant.<sup>892</sup> By sharing certain basic concepts and a common vocabulary with the GHG Protocol, the Commission intended to both elicit consistent, comparable, and reliable climate-related information for investors, and mitigate the compliance burden of the proposed rules for those registrants that are already disclosing or estimating their GHG emissions pursuant to the GHG Protocol.<sup>893</sup>

The Commission further proposed to require a registrant, other than an SRC, to disclose its Scope 3 emissions, which, similar to the GHG Protocol, were defined to mean all indirect GHG emissions not otherwise included in a registrant's Scope 2 emissions that occur in the upstream and downstream activities of a registrant's value chain.<sup>894</sup> Unlike the proposed disclosure requirement for Scopes 1 and 2 emissions, however, the Commission proposed to require the disclosure of a registrant's Scope 3 emissions only if those emissions are material, or if the registrant has set a GHG emissions reduction target or goal that includes its Scope 3 emissions.<sup>895</sup> The Commission

proposed these limitations regarding Scope 3 disclosure in recognition of the fact that, unlike Scopes 1 and 2 emissions, Scope 3 emissions typically result from the activities of third parties in a registrant's value chain and, thus, collecting the appropriate data and calculating these emissions would potentially be more difficult than for Scopes 1 and 2 emissions. Although the Commission recognized that the disclosure of Scope 3 emissions may be important to provide investors with a complete picture of the climate-related risks that a registrant faces—particularly transition risks—it also believed it was necessary to balance the importance of Scope 3 emissions with the potential relative difficulty in data collection and measurement.<sup>896</sup>

For each of its Scopes 1, 2, and 3 emissions, the proposed rules would have required a registrant to disclose the emissions both disaggregated by each constituent greenhouse gas and in the aggregate, expressed in terms of CO<sub>2</sub>e. The Commission proposed this requirement so that investors could gain decision-useful information regarding the relative risks to the registrant posed by each constituent GHG in addition to the risks posed by its total GHG emissions by scope.<sup>897</sup> The proposed rules would also have required a registrant to disclose the GHG emissions data in gross terms, excluding any use of purchased or generated offsets,<sup>898</sup> and in terms of GHG intensity.<sup>899</sup>

The proposed rules would have required a registrant to describe the methodology, significant inputs, and significant assumptions used to calculate its GHG emissions metrics.<sup>900</sup> While the proposed GHG emissions disclosure rules shared many features with the GHG Protocol, they differed regarding the approach required to set a registrant's organizational boundaries. Those boundaries determine the business operations owned or controlled by a registrant to be included in the calculation of its GHG emissions. The proposed approach would have required a registrant to set the organizational boundaries for its GHG emissions disclosure using the same scope of entities, operations, assets, and other holdings within its business organization as those included in, and based upon the same set of accounting

principles applicable to, its consolidated financial statements.<sup>901</sup> The Commission proposed this approach in order to provide investors a consistent view of the registrant's business across its financial and GHG emissions disclosures. The same organizational boundaries requirement would have applied to each disclosure of a registrant's Scope 1, Scope 2, and Scope 3 emissions.<sup>902</sup>

The rule proposal provided that a registrant may use reasonable estimates when disclosing its GHG emissions as long as it also describes the assumptions underlying, and its reasons for using, the estimates. In proposing this provision, the Commission stated that while it encouraged registrants to provide as accurate a measurement of its GHG emissions as is reasonably possible, it recognized that, in many instances, direct measurement of GHG emissions at the source, which would provide the most accurate measurement, may not be possible.<sup>903</sup>

The Commission proposed to require the disclosure of a registrant's GHG emissions as of the end of its most recently completed fiscal year in its Exchange Act annual report for that year and in a Securities Act or Exchange Act registration statement filed subsequent to the compliance date for the climate-related disclosure rules.<sup>904</sup> The Commission also proposed to permit a registrant to use a reasonable estimate of its GHG emissions for its fourth fiscal quarter if no actual reported data is reasonably available, together with actual, determined GHG emissions data for its first three fiscal quarters when disclosing its GHG emissions for its most recently completed fiscal year, as long as the registrant promptly discloses in a subsequent filing any material difference between the estimate used and the actual, determined GHG emissions data for the fourth fiscal quarter.<sup>905</sup> The Commission proposed this accommodation to address the concern of some commenters that a registrant may find it difficult to complete its GHG emissions calculations for its most recently completed fiscal year in time to meet its disclosure obligations for that year's Exchange Act annual report.<sup>906</sup>

<sup>890</sup> Direct emissions are GHG emissions from sources that are owned or controlled by a registrant, whereas indirect emissions are GHG emissions that result from the activities of the registrant but occur at sources not owned or controlled by the registrant. See World Business Council for Sustainable Development and World Resources Institute, GHG Protocol, *Corporate Accounting and Reporting Standard* (2004), available at <https://ghgprotocol.org/sites/default/files/standards/ghg-protocol-revised.pdf>.

<sup>891</sup> See Proposing Release, section II.G.1.a.

<sup>892</sup> See *id.*

<sup>893</sup> See Proposing Release, section I.D.2.

<sup>894</sup> See Proposing Release, section II.G.1.a.

Upstream emissions include emissions attributable to goods and services that the registrant acquires, the transportation of goods (for example, to the registrant), and employee business travel and commuting. Downstream emissions include the use of the registrant's products, transportation of products (for example, to the registrant's customers), end of life treatment of sold products, and investments made by the registrant.

<sup>895</sup> See Proposing Release, section II.G.1.b.

<sup>896</sup> See *id.*

<sup>897</sup> See Proposing Release, section II.G.1.a.

<sup>898</sup> See *id.*

<sup>899</sup> See Proposing Release, section II.G.1.c. The proposed rules would have required the disclosure of GHG intensity to be in terms of metric tons of CO<sub>2</sub>e per unit of total revenue and per unit of production for the fiscal year.

<sup>900</sup> See Proposing Release, section II.G.2.

<sup>901</sup> See Proposing Release, section II.G.2.a.

<sup>902</sup> See *id.*

<sup>903</sup> See Proposing Release, section II.G.2.d.

<sup>904</sup> See Proposing Release, section II.G.1.a.

<sup>905</sup> See Proposing Release, section II.G.1.

<sup>906</sup> See *id.*

## 2. Comments

### a. Overall GHG Emissions Disclosure Requirement

Several commenters supported the proposed requirement to disclose Scopes 1 and 2 emissions, as well as Scope 3 emissions if material or if included in a registrant's GHG emissions reduction target or goal.<sup>907</sup> The most common reason asserted for supporting the mandatory disclosure of GHG emissions is that such disclosure would provide investors with specific metrics to assess a registrant's exposure to transition risks.<sup>908</sup> Commenters also relatedly stated that mandatory disclosure of GHG emissions would enable investors to evaluate a registrant's progress towards achieving any publicly announced transition targets and goals,<sup>909</sup> and allow investors to compare registrants across sectors and industries to determine whether their transition strategies are aligned with investors' investment objectives.<sup>910</sup>

Some of these commenters also indicated that Scope 3 emissions disclosure was necessary to provide a complete picture of a registrant's transition risk exposure and therefore recommended that the Commission require the disclosure of Scope 3 emissions for all registrants.<sup>911</sup> Some commenters indicated that they are already using Scope 3 emissions data to make investment decisions.<sup>912</sup> Other commenters stated that, as registrants, they have disclosed Scope 3 emissions from certain activities and indicated

their support for a Scope 3 emissions disclosure requirement with certain accommodations.<sup>913</sup> One commenter stated that capital markets are now assigning financial value to Scope 3 emissions metrics and, in supporting a Scope 3 emissions disclosure requirement, recommended that the Commission establish a quantitative threshold for determining the materiality and corresponding disclosure of Scope 3 emissions.<sup>914</sup> In addition, some commenters indicated that the disclosure of Scope 3 emissions may deter registrants from outsourcing to third-parties facilities that would otherwise count as sources of Scopes 1 and 2 emissions, thereby seeming to lower their transition risk exposure and facilitating greenwashing.<sup>915</sup> Some commenters indicated that while many registrants already measure and voluntarily disclose their Scopes 1 and 2 emissions, that is not the case for Scope 3 emissions.<sup>916</sup> Another commenter stated that publishing Scope 3 emissions information has not been cost prohibitive.<sup>917</sup>

While many commenters, including both issuers and investors, stated that they supported requiring Scope 1 and 2 disclosures, a significant number of commenters raised serious concerns about requiring Scope 3 emissions disclosures. Some asserted that the Commission lacks the authority to require disclosures of information that may come largely from non-public companies in registrants' value chain;<sup>918</sup> others questioned the value of Scope 3 emissions disclosures for investors, citing their concerns about the reliability of the metric;<sup>919</sup> others focused on their view of the costs and

burdens of gathering, validating, and reporting the information.<sup>920</sup> A number of commenters representing entities not subject to the Commission's disclosure authority raised serious concerns about the costs and burdens they could face as a result of the requirement on registrants.<sup>921</sup> Among those costs, they highlighted not only the cost of collecting and reporting information but also the potential competitive disadvantage for smaller suppliers, if registrants select larger suppliers that may be in a better position to supply information to use in their Scope 3 emissions disclosures.<sup>922</sup> We discuss certain of these comments in more detail.

Some commenters supported the mandatory disclosure of Scopes 1 and 2 emissions but opposed the proposed disclosure of Scope 3 emissions.<sup>923</sup> Commenters stated that, because much of the data underlying Scope 3 emissions is in the control of third parties, registrants could face difficulty collecting such data, resulting in likely data gaps.<sup>924</sup> Commenters also asserted that the methodologies underlying the measurement and reporting of Scope 3 emissions are still too uncertain and expressed concerns about the reliability of Scope 3 emissions disclosure.<sup>925</sup> In light of these concerns, commenters stated that the compliance burden associated with Scope 3 emissions disclosure would be costly to registrants and that such costs were likely to exceed the benefit to investors.<sup>926</sup> Relatedly, one commenter raised concerns that Scope 3 emissions disclosure would not meet the materiality threshold for any registrant because of the challenges in calculating Scope 3 emissions in a reliable and consistent manner.<sup>927</sup>

<sup>926</sup> See, e.g., letter from Harvard Mgmt.

<sup>927</sup> See letter from Fidelity. While not directly opposing the proposed Scope 3 emissions disclosure requirement, another commenter recommended that, due to perceived complexities in the calculation of Scope 3 emissions, the Commission reconsider this proposed requirement

One commenter supported the disclosure of Scope 3 emissions but only for activities, such as business travel, over which a registrant has influence or indirect control.<sup>928</sup> This commenter also recommended adopting a safe harbor for Scope 3 emissions modeled on the PSLRA safe harbors and treating Scope 3 emissions disclosure as furnished rather than filed because of the “inherent uncertainty” in the estimates and assumptions underlying Scope 3 emissions disclosure.<sup>929</sup>

Many commenters, however, generally opposed the proposed mandatory GHG emissions disclosure requirement, including the disclosure of Scopes 1 and 2 emissions.<sup>930</sup> Commenters stated that because the proposed disclosure of Scopes 1 and 2 emissions would require such disclosure even when a registrant has not determined climate-related risks to be material, the proposed GHG emissions disclosure requirement may not result in decision-useful information for investors.<sup>931</sup> Commenters also stated that because the registrants producing 85 to 90 percent of the emissions in the United States already report their emissions pursuant to the EPA’s Greenhouse Gas Reporting Program, the Commission’s proposed emissions disclosure requirements are unnecessary and the resulting emissions data potentially confusing for investors.<sup>932</sup>

Further, commenters opposed the GHG emissions disclosure requirement because of the expected high compliance costs, which they believed the Commission had underestimated.<sup>933</sup>

and, if it retains the requirement, then it should provide guidance around determining the materiality of Scope 3 emissions as well as more explicit standards to calculate Scope 3 emissions for key industries. See letter from SFERS.

<sup>928</sup> See letter from Amazon.

<sup>929</sup> See *id.*

<sup>930</sup> See, e.g., letters from API; Atlas Sand Company, LLC (June 17, 2022) (“Atlas Sand”); Bipartisan Policy; Brigham Exploration (June 17, 2022); Chamber; ConocoPhillips; Dimensional Fund; Independent Petroleum Association of New Mexico (June 17, 2022); Iowa Commissioner of Insurance (June 13, 2022); and Soc. Corp. Gov.

<sup>931</sup> See, e.g., letters from API; Dimensional Fund Advisors; and Soc. Corp. Gov.

<sup>932</sup> See, e.g., letters from API; Chamber; and ConocoPhillips. According to commenters, confusion could result from the fact that the EPA’s Greenhouse Gas Reporting Program (“GHGRP”) requires the disclosure of emissions by individual source whereas the Commission’s proposed rules would require the disclosure by company; see also discussion *infra* notes 2593–2595 and accompanying text. As noted in section IV.A.3, we estimate that approximately 365 registrants had an ownership stake in facilities that reported to the GHGRP in 2022; see *infra* note 2596 and accompanying text.

<sup>933</sup> See *infra* sections IV.C.3.b.ii and iii for more information on specific cost estimates provided by commenters.

One commenter further indicated that, although the Commission had stated that many companies were already disclosing their GHG emissions, according to a number of studies, most registrants have not yet measured and reported their Scopes 1 and 2 emissions, let alone their Scope 3 emissions.<sup>934</sup>

Commenters also expressed concerns, in connection with registrants’ disclosure of Scope 3 emissions, regarding compliance costs involving private companies, which comprise a large percentage of many registrants’ value chains or joint ventures, and which, through the influence of those registrants, would be compelled to measure and report their GHG emissions for the first time.<sup>935</sup> Some of these commenters asserted that registrants would likely incur costs to renegotiate contracts with these third parties to obtain the GHG emissions data required to comply with the proposed rules.<sup>936</sup> Another commenter stated that third parties that are unwilling or unable to provide their GHG emissions to registrants could eventually be excluded from consideration for contracts to provide goods or services to registrants, which could diminish opportunities for these third-parties, which may often be smaller businesses.<sup>937</sup>

In addition, commenters stated that, even if registrants are already voluntarily disclosing their Scopes 1 and 2 emissions pursuant to the GHG Protocol, those registrants will incur an increased compliance burden if the Commission was to adopt the proposed GHG emissions disclosure requirement, because of differences between the Commission’s proposed requirement and the GHG Protocol and the TCFD.<sup>938</sup>

<sup>934</sup> See *infra* section IV.A.5c (citing statistics in the 2021 TCFD Status Report and a Moody’s Analytics analysis of TCFD reporting of 2020/21 public disclosures showing that only 21% of North American companies and 19% of U.S. companies reported their Scopes 1 and 2 emissions and, if appropriate, their Scope 3 emissions).

<sup>935</sup> See, e.g., letters from API; Atlas Sand; Bipartisan Policy; Brigham Exploration; Chamber; ConocoPhillips; Independent Petroleum Association of New Mexico; and Iowa Commissioner of Insurance.

<sup>936</sup> See, e.g., letter from ConocoPhillips.

<sup>937</sup> See letter from Soc. Corp. Gov.

<sup>938</sup> See *id.* Specifically, the commenter noted that the proposed rules would require a registrant’s organizational boundaries to be consistent with the scope of entities included in its consolidated financial statements, whereas the GHG Protocol permits a company to choose between an equity share, operational control, or financial control method. The commenter also noted that the Commission’s proposed rules would require a company to disclose its GHG emissions both on a disaggregated and aggregated basis whereas the TCFD requires a company to disclose its Scopes 1 and 2 emissions, without specifying whether the disclosure must be on a disaggregated basis. According to the commenter, these differences

These commenters also shared many of the concerns about the proposed Scope 3 emissions disclosure provision discussed above, including the difficulties of collecting emissions data from third parties in its value chain, the unreliability of reported data stemming from third parties’ lack of sophisticated data collection technologies and the use of proxy data to fill data gaps, and the absence of a fully developed and uniformly accepted methodology to report Scope 3 emissions. According to commenters, these concerns would increase compliance costs and raise a registrant’s liability exposure so that the total cost of the Scope 3 emissions disclosure would likely exceed its benefit.<sup>939</sup> Because of the difficulties and uncertainties involved in Scope 3 emissions disclosure, some commenters recommended that the reporting of Scope 3 emissions should remain voluntary.<sup>940</sup>

One commenter presented an alternative to the proposed GHG emissions requirement.<sup>941</sup> This commenter stated that, rather than adopting the proposed GHG emissions disclosure requirement, the Commission should “mandate reporting, on a standardized form, of emissions data that registrants are required to disclose publicly pursuant to other federal, state, or foreign regulations.” This commenter also stated that the alternative set of rules “would, in effect, integrate the existing EPA reporting regime with the SEC’s disclosure system in a manner that would be easier for investors and registrants to access and analyze.”<sup>942</sup> This commenter further stated that approximately 40 foreign countries already require various forms of emissions disclosures, and that California and other states are considering the adoption of their own mandatory emissions reporting regimes.<sup>943</sup> According to this commenter, the alternative set of rules “would efficiently integrate, aggregate, and collate those disclosures on a single form available to all investors through

could result in an increased compliance burden for a registrant. We discuss additional commenter input on these differences below.

documents provided to the Commission.”<sup>944</sup>

Some commenters supported the proposed exemption from Scope 3 emissions reporting for SRCs.<sup>945</sup> Some commenters also supported exempting SRCs from the requirement to disclose Scopes 1 and 2 emissions because, in their experience, SRCs have not historically tracked their GHG emissions and exempting SRCs from a GHG emissions reporting requirement would be consistent with a scaled disclosure regime for such issuers.<sup>946</sup>

Other commenters, however, opposed exempting all SRCs from the proposed Scope 3 emissions disclosure requirement.<sup>947</sup> Commenters stated that investors need climate-related disclosures from SRCs because SRCs are as exposed to climate-related risks as larger issuers, including risks stemming from their value chains.<sup>948</sup> Commenters also stated that because many large companies obtain climate-related data (e.g., Scopes 1 and 2 emissions data) from small companies in their value chains, exempting SRCs from climate-related disclosures could hamper larger registrants from accurately assessing their Scope 3 emissions.<sup>949</sup> Instead of, or in addition to, an exemption from Scope 3 reporting, some commenters recommended providing a longer transition period for SRCs.<sup>950</sup>

Some commenters recommended that the Commission exempt EGCs from the proposed rules, including GHG emissions reporting requirements, or at least provide them with the same accommodations as SRCs.<sup>951</sup>

Commenters stated that the large compliance costs of the proposed rules would likely deter many potential EGCs from going public.<sup>952</sup> Other commenters opposed exempting EGCs from the proposed rules because such companies, like SRCs, may be exposed to climate-related risks.<sup>953</sup>

#### b. Presentation of the GHG Emissions Metrics and Underlying Methodologies and Assumptions

Commenters expressed mixed views on the proposed requirement to disclose GHG emissions on both an aggregated and disaggregated basis. Some commenters supported the proposed requirement because each constituent gas may be subject to differing regulations and presents its own set of risks, which aggregated disclosure, by itself, would conceal.<sup>954</sup> Other commenters supported the proposed requirement because it would standardize the GHG emissions disclosure and help investors compare the GHG emissions data when making their risk assessments regarding a registrant.<sup>955</sup> Still other commenters supported the proposed requirement because it is consistent with the GHG Protocol and would generally enhance the transparency of GHG emissions disclosure, which they viewed as fundamental for investors because it helps investors understand the financial impacts that transition risk may have on a registrant’s business and financial condition, including on its liquidity and capital resources.<sup>956</sup>

Other commenters, however, opposed the proposed requirement to disclose GHG emissions on a disaggregated basis because they believe it would impose additional costs without necessarily resulting in material disclosure.<sup>957</sup> Several of these commenters stated that a registrant should only be required to disclose disaggregated data for constituent gases that are material.<sup>958</sup> Other commenters opposed the proposed requirement because it would be difficult to obtain the necessary data for each constituent gas, particularly for Scopes 2 and 3 emissions.<sup>959</sup> One

commenter stated that the proposed disaggregated disclosure requirement would not be compatible with certain industry standard life cycle assessment models.<sup>960</sup> Another commenter opposed a disaggregated disclosure requirement for GHG emissions unless a registrant’s particular industry required such disclosure.<sup>961</sup>

Many commenters supported the proposed requirement to describe the methodology, significant inputs, and significant assumptions used to calculate a registrant’s GHG emissions metrics.<sup>962</sup> Commenters stated that such disclosure is necessary to place the GHG emissions data in context and to help investors properly understand and interpret the reported emissions information and associated risks.<sup>963</sup> One commenter, however, opposed the proposed requirement, asserting that it would require extensive disclosure of information that is unlikely to be material to investors and will require significant additional effort by registrants.<sup>964</sup> Other commenters opposed a requirement to disclose the emission factors used when calculating GHG emissions because, in their view, such disclosure would be burdensome to produce and of limited use by investors.<sup>965</sup>

Many commenters stated that a registrant should be required to calculate its GHG emissions pursuant to the GHG Protocol because the GHG Protocol’s methodologies have been widely accepted and requiring their adherence would promote comparability.<sup>966</sup> Several of these commenters further recommended that the Commission allow registrants to follow the GHG Protocol’s methodology regarding setting organizational boundaries<sup>967</sup> instead of the proposed requirement to base a registrant’s organizational boundaries on the

<sup>966</sup> See, e.g., letters from Alphabet *et al.*; As You Sow; Beller *et al.*; CalSTRS; CFA; Dell; Deloitte & Touche; Engine No. 1; ERM CVS; KPMG; Morningstar; Soc. Corp. Gov.; and WRI.

<sup>967</sup> See, e.g., letters from Alphabet *et al.*; Beller *et al.*; Deloitte & Touche; and KPMG; *see also* Soc. Corp. Gov (stating that because many registrants use the operational control method, the proposed GHG emissions requirement would not only require unnecessary additional time, effort, and resources and present significant challenges, but it would also generate discrepancies between earlier-reported data and data disclosed pursuant to the proposed rule). *See also* discussion *supra* note 938.

entities included in its consolidated financial statements. One of these commenters stated that because many registrants use the “operational control” approach permitted under the GHG Protocol, allowing such registrants to continue to follow the GHG Protocol in this regard would mitigate the compliance burden of GHG emissions disclosure because those registrants would not be required to implement a different approach, in particular, regarding equity method investees.<sup>968</sup> Some commenters, however, stated that a registrant should be permitted to follow other climate-related standards, such as certain International Organization for Standardization (ISO) standards, used by some companies when calculating their GHG emissions.<sup>969</sup>

Several commenters supported the proposed requirement to disclose gross emissions by excluding any purchased or generated carbon offsets.<sup>970</sup> Commenters stated that requiring the disclosure of gross emissions would enable investors to gain a full picture of a registrant’s emissions profile and better assess its transition risk exposure.<sup>971</sup> Some commenters also pointed to perceived problems in carbon offset markets regarding the quality and permanence of offsets when supporting a gross emissions disclosure requirement.<sup>972</sup> Other commenters stated that a registrant should be required to disclose both a total amount with, and a total amount without, the use of offsets for each scope of emissions because such disclosure would increase transparency on offset use, which is critical to understanding how a registrant is managing transition risk to its business.<sup>973</sup>

Some commenters, however, opposed the proposed requirement to exclude carbon offsets when disclosing GHG emissions.<sup>974</sup> These commenters stated

that the purchase of carbon offsets is a legitimate means for a registrant to reduce its carbon emissions and expressed the view that high-quality carbon offsets should play a significant role in a transition to a lower carbon economy.<sup>975</sup>

A number of commenters supported the proposed requirement to disclose GHG emissions in terms of GHG intensity.<sup>976</sup> These commenters stated that investors would find the disclosure of GHG intensity useful because it would help them assess a registrant’s progress in achieving its emissions management and reduction goals, put in context its emissions in relation to its scale, and facilitate comparing the registrant’s emissions efficiency with other registrants in the same industry.<sup>977</sup> Some commenters also noted that the TCFD recommends the disclosure of GHG emissions both in absolute terms and terms of intensity because each metric serves a different purpose.<sup>978</sup> For example, one commenter stated that the disclosure of emissions in absolute terms provides necessary baseline emissions data whereas normalizing the data using an intensity metric allows for a focus on emissions efficiency per unit of production relevant to the registrant’s industry.<sup>979</sup> While some commenters supported the proposed requirement to disclose GHG intensity in terms of both metric tons of CO<sub>2</sub>e per unit of total revenue and per unit of production relevant to the registrant’s industry,<sup>980</sup> other commenters recommended making the final rules more flexible by expressly permitting registrants to use other GHG intensity metrics.<sup>981</sup>

2022) (“IATA”); and SIFMA (each opposed to a requirement to solely disclose GHG emissions in gross terms and supporting GHG emissions disclosure both in gross and net terms); *see also* letter from J. Weinstein (opposed to any requirement to exclude carbon offsets when disclosing GHG emissions).

<sup>975</sup> *See* letters from Airlines for America; and SIFMA.

<sup>978</sup> *See, e.g.*, letters from BOA; and PRI.

<sup>979</sup> *See* letter from BOA.

<sup>980</sup> *See, e.g.*, letters from Amazon (stating that an intensity metric based on “gross merchandise sales” should be an appropriate unit of production); ERM CVS (stating that an intensity metric based on unit of production should be required where possible); and C. Howard.

<sup>981</sup> *See, e.g.*, letters from BOA (stating that registrants should be permitted to use GHG intensity metrics specified under the TCFD framework or incorporated into the Partnership for Carbon Accounting Financials’ Global GHG Accounting & Reporting Standard used by banks and other financial institutions); and NAM (supporting increased flexibility that would allow

Some commenters, however, opposed the proposed GHG intensity disclosure requirement.<sup>982</sup> These commenters stated that the proposed requirement to disclose a registrant’s GHG emissions per unit of total revenue was unnecessary because investors can easily calculate this metric from a registrant’s gross GHG emissions divided by its total revenues.<sup>983</sup> Some commenters further stated that the proposed requirement to disclose a registrant’s GHG emissions per unit of production would be unworkable for many registrants with different product lines, even within the same industry, and would not result in comparable disclosure for investors.<sup>984</sup> Consequently, according to these commenters, GHG intensity disclosure should only be voluntary.<sup>985</sup>

Several commenters supported the proposed provision that would allow a registrant to use reasonable estimates when disclosing its GHG emissions as long as it also describes the assumptions underlying, and its reasons for using, the estimates.<sup>986</sup> One commenter stated that the proposed provision would encourage the disclosure of GHG emissions.<sup>987</sup> Other commenters supported the proposed provision because the reporting of GHG emissions often relies on the use of estimates, such as emission factors and location-based data.<sup>988</sup> Another commenter stated that, while the use of estimates would primarily be needed for the disclosure of Scope 3 emissions, in certain instances registrants may need to estimate their Scope 1 and 2 emissions if they are not able to access the necessary information.<sup>989</sup> One other commenter stated that the use of

companies to choose and disclose a single GHG intensity metric, or to forgo intensity reporting, depending on the metrics’ relevance to their operations and emissions).

estimates should not be permitted when actual data is available.<sup>990</sup>

### c. Timeline for Reporting GHG Emissions Metrics

Some commenters supported the proposed requirement to provide GHG emissions disclosure for the registrant's most recently completed fiscal year and for the appropriate, corresponding historical fiscal years included in the registrant's consolidated financial statements in the filing, to the extent such historical GHG emissions data is reasonably available.<sup>991</sup> Other commenters, however, stated that the GHG emissions disclosure requirement should be applied initially only to the most recently completed fiscal year following the date of compliance, with GHG emissions disclosure for historical periods required prospectively only.<sup>992</sup>

Several commenters supported the proposed requirement to disclose a registrant's GHG emissions as of fiscal year-end in its corresponding Exchange Act annual report.<sup>993</sup> Commenters stated that the proposed timeline for reporting a registrant's GHG emissions should be consistent with the timeline for its financial reporting to maximize the use of the GHG emissions data and to enhance the data's comparability.<sup>994</sup> One commenter further stated that the timing of a registrant's emissions data disclosure should be coincident with its financial statement data reporting because the objective of reporting climate-related data for investors is to understand the correlation with financial performance.<sup>995</sup>

Many other commenters<sup>996</sup> opposed the proposed requirement to disclose GHG emissions metrics in a registrant's Exchange Act annual report.<sup>997</sup>

<sup>990</sup> See letter from ERM CVS.

<sup>991</sup> See, e.g., letters from Morningstar; Salesforce; Unilever; and WRI.

<sup>992</sup> See, e.g., letters from Alphabet *et al.*; ABA; BHP; BlackRock; BOA; BP; Chamber; Citigroup; Cleary Gottlieb; Dell; D. Hileman Consulting; NAM; PwC; SIFMA; and T Rowe Price.

<sup>993</sup> See, e.g., letters from Alternative Investment Management Association (June 17, 2022) ("AIMA"); CalPERS; CEMEX; Eni SpA; Morningstar; TotalEnergies; and XBRL US (June 17, 2022).

<sup>994</sup> See, e.g., letters from AIMA; CEMEX; and XBRL US.

<sup>995</sup> See letter from XBRL US.

<sup>996</sup> See, e.g., letters from ABA; ACLI; Amer. Bankers; Blackrock; Can. Bankers; Chamber; ConocoPhillips; GM; HP; Hydro One; Microsoft; NAM; Nareit; Nasdaq; NMA; NRF; Prologis (June 17, 2022); Real Estate Board of New York (June 15, 2022) ("Real Estate NY"); SIFMA; Soc. Corp. Gov.; Walmart; and Williams Cos.

<sup>997</sup> Commenters also expressed timing concerns regarding the proposed requirement to include the GHG emissions disclosure in a Securities Act or Exchange Act registration statement. In particular, commenters raised concerns with applying the proposed climate disclosure rules to registrants in

Commenters stated that, because of the difficulty required to calculate, verify, and disclose a registrant's GHG emissions, and because much of the necessary data for such disclosure does not become available along the same timeline as its other Exchange Act annual reporting requirements, the Commission should permit a registrant to provide its GHG emissions disclosure sometime after the Exchange Act annual report deadline.<sup>998</sup> Commenters recommended that the Commission permit registrants to include the GHG emissions disclosure either in a separate report that would be due later than the deadline for filing their annual report on Form 10-K or Form 20-F,<sup>999</sup> in a Form 10-Q or Form 6-K filed subsequent to the due date for the Exchange Act annual report,<sup>1000</sup> or in an amendment to the Exchange Act annual report.<sup>1001</sup> Commenters recommended varying deadlines for reporting GHG emissions, such as 120 days<sup>1002</sup> or 180 days following the end of its most recently completed fiscal year,<sup>1003</sup> or the due date for the Form 10-Q for the registrant's first<sup>1004</sup> or second fiscal quarter.<sup>1005</sup> Commenters further stated that providing a later deadline for GHG emissions disclosure would better align

initial public offerings or to companies that are the target of a Form S-4 or F-4 transaction. We discuss these comments in section II.L below.

<sup>998</sup> See, e.g., letters from ABA; BlackRock; Chamber; GM; SIFMA; and Soc. Corp. Gov.

<sup>999</sup> See, e.g., letters from Alphabet *et al.* (recommending inclusion in a separate form filed no earlier than 180 days after fiscal year-end); BlackRock (recommending inclusion in a new form due 120 days after fiscal year-end); Chamber (recommending inclusion in a form due no earlier than 180 days after fiscal year-end); D. Hileman Consulting (recommending inclusion in a form due by May 31st in the subsequent fiscal year); NAM (recommending inclusion in a form due no earlier than the end of the second quarter in the subsequent fiscal year); and T Rowe Price (recommending inclusion in a form due 120 days after fiscal year-end).

<sup>1000</sup> See, e.g., letters from ABA (recommending inclusion in the Form 10-Q for the first quarter in the subsequent fiscal year or in a Form 6-K furnished at a comparable time); BOA (recommending inclusion no later than the due date for the Form 10-Q for the second quarter in the subsequent fiscal year); and SIFMA (recommending inclusion in the Form 10-Q for the second quarter in the subsequent fiscal year or in a Form 6-K furnished at a comparable time).

<sup>1001</sup> See letter from Cleary Gottlieb.

<sup>1003</sup> See, e.g., letters from ACLI; Can. Bankers; Chamber; HP; Nareit; NMA; Soc. Corp. Gov.; Sullivan Cromwell (recommending 180 days after fiscal year-end deadline for all climate disclosures).

<sup>1004</sup> See, e.g., letter from ABA.

<sup>1005</sup> See, e.g., letters from NAM (recommending that GHG emissions be disclosed in separate report that is aligned with due date for 2nd fiscal quarter Form 10-Q); and SIFMA.

with the GHG emissions reporting required by other administrative agencies.<sup>1006</sup> In addition, commenters stated that providing a later deadline for GHG emissions disclosure would be preferable to the proposed use of a fourth quarter estimate, which would likely require an additional submission that would be burdensome for registrants and potentially confusing for investors.<sup>1007</sup>

### 3. Final Rule

#### a. Overview of the GHG Emissions Disclosure Requirement

As many commenters have indicated, investors view information about a registrant's GHG emissions, including its Scopes 1 and 2 emissions, as a central measure and indicator of the registrant's exposure to transition risk as well as a useful tool for assessing its management of transition risk and understanding its progress towards a registrant's own climate-related targets or goals.<sup>1008</sup> Because such information can be necessary to inform an investor's understanding of the overall impact of transition risk and related targets and goals on a registrant's business, results of operations, financial condition, and prospects, the final rules include a Scopes 1 and 2 emissions disclosure requirement (Item 1505), although modified from the rule proposal. We recognize commenters' concerns about the potentially high cost of compliance associated with the proposed GHG emissions disclosure requirement, including Scopes 1 and 2 emissions,<sup>1009</sup> as well as concerns about the current availability and reliability of the underlying data for Scope 3 emissions.<sup>1010</sup> To help address these concerns, instead of requiring, as proposed, the disclosure of Scopes 1 and 2 emissions by all registrants regardless of their materiality, the final rules will require the disclosure of Scope 1 emissions and/or Scope 2 emissions metrics<sup>1011</sup> by LAFs and AFs

<sup>1006</sup> See, e.g., letters from ABA; Chamber; GM; HP; NAM; NMA; and Soc. Corp. Gov.

<sup>1007</sup> See, e.g., letters from ABA; Can. Bankers; Chamber; GM; HP; Microsoft; NAM; Nareit; and Soc. Corp. Gov.

<sup>1008</sup> See, e.g., letters from AGs of Cal. *et al.*; AllianceBernstein; CalPERS; CalSTRS; IAA; Miller/Howard; Morningstar; Trillium; and Wellington Mgmt.

<sup>1009</sup> See *supra* notes 933 to 935 and accompanying text.

<sup>1010</sup> See *supra* notes 924–925 and accompanying text.

<sup>1011</sup> The concept of scopes was developed as part of the GHG Protocol. See World Business Council for Sustainable Development and World Resources Institute, GHG Protocol, *Corporate Accounting and Reporting Standard* (2004), available at <https://ghgprotocol.org/sites/default/files/standards/ghg-protocol-revised.pdf>. We understand that some

that are not SRCs or EGCs, on a phased in basis,<sup>1012</sup> if such emissions are material.<sup>1013</sup>

As commenters have noted, some registrants already measure their GHG emissions, typically Scopes 1 and 2 emissions,<sup>1014</sup> and some use the data to manage their transition risk exposure or monitor their progress towards achieving climate-related targets and goals.<sup>1015</sup> Many other registrants, however, have determined that climate is not a material risk to their business, or are not currently measuring their GHG emissions.<sup>1016</sup>

In balancing these considerations, we are not mandating Scopes 1 and/or 2 emissions disclosures from all registrants. Rather, under the final rule, if either or both of those categories of GHG emissions are material, and the registrant is an LAF or an AF other than an SRC or EGC, it must disclose its Scopes 1 and/or 2 emissions metrics.<sup>1017</sup> As we stated when

registrants may measure their GHG emissions pursuant to other well-established standards, such as ISO 14064 and related ISO standards, which do not refer to scopes. For the purposes of the final rules, we have defined “Scope 1 emissions” and “Scope 2 emissions,” respectively, as a registrant’s direct emissions and indirect emissions largely from the generation of purchased or acquired electricity consumed by the registrant’s operations. We intend these definitions to include substantially similar emissions as those measured pursuant to the ISO standards. Accordingly, registrants have flexibility to leverage standards of their choice in calculating and disclosing GHG emissions metrics required by the final rules, including the GHG Protocol or relevant ISO standards, or other standards that may be established over time.

<sup>1012</sup> As discussed in section I.I.O below, LAFs will have a one-year transition period before they are required to comply with the final rule’s GHG emissions disclosure requirements. AFs that are not SRCs or EGCs will be required to comply with the final rule’s GHG emissions disclosure requirements two years following the GHG emissions compliance date for LAFs.

<sup>1013</sup> See 17 CFR 229.1505(a)(1). To the extent Scope 1 and/or 2 emissions disclosure are required under the final rules, 17 CFR 230.409 or 17 CFR 240.12b–21, which provide accommodations for information that is unknown and not reasonably available, would be available if its conditions are met.

<sup>1014</sup> See *supra* note 916 and accompanying text.

<sup>1015</sup> See *id.*

<sup>1016</sup> Although the TCFD has reported a significant increase in the number of companies that have publicly disclosed their GHG emissions across the globe in recent years, a minority of North American and U.S. companies have done so. The TCFD recently reported that only 30% of North American companies surveyed reported their Scopes 1, 2, and 3 emissions in 2021. See TCFD, *supra* note 768.

<sup>1017</sup> If a registrant is an LAF or an AF other than an SRC or EGC and its Scope 1 emissions are material but its Scope 2 emissions are not material, then, under the final rules, the registrant must disclose its Scope 1 emissions and is not required to disclose its Scope 2 emissions (and vice versa if its Scope 2 emissions are material but its Scope 1 emissions are not). If a registrant’s Scope 1 and Scope 2 emissions both are material, then it must disclose both categories of emissions.

discussing a registrant’s determination of material impacts of climate-related risks, we intend that a registrant apply traditional notions of materiality under the Federal securities laws when evaluating whether its Scopes 1 and/or 2 emissions are material.<sup>1018</sup> Thus, materiality is not determined merely by the amount of these emissions. Rather, as with other materiality determinations under the Federal securities laws and Regulation S–K, the guiding principle for this determination is whether a reasonable investor would consider the disclosure of an item of information, in this case the registrant’s Scope 1 emissions and/or its Scope 2 emissions, important when making an investment or voting decision or such a reasonable investor would view omission of the disclosure as having significantly altered the total mix of information made available.

A registrant’s Scopes 1 and/or 2 emissions may be material because their calculation and disclosure are necessary to allow investors to understand whether those emissions are significant enough to subject the registrant to a transition risk that will or is reasonably likely to materially impact its business, results of operations, or financial condition in the short- or long-term. For example, where a registrant faces a material transition risk that has manifested as a result of a requirement to report its GHG emissions metrics under foreign or state law<sup>1019</sup> because such emissions are currently or are reasonably likely to be subject to additional regulatory burdens through increased taxes or financial penalties, the registrant should consider whether such emissions metrics are material under the final rules. A registrant’s GHG emissions may also be material if their calculation and disclosure are necessary to enable investors to understand whether the registrant has made progress toward achieving a target or goal or a transition plan that the registrant is required to disclose under the final rules.

Conversely, the fact that a registrant is exposed to a material transition risk does not necessarily result in its Scope 1 and Scope 2 emissions being de facto material to the registrant. For example, a registrant could reasonably determine that it is exposed to a material transition

risk for reasons other than its GHG emissions, such as a new law or regulation that restricts the sale of its products based on the technology it uses, not directly based on its emissions.<sup>1020</sup> Such a risk may trigger disclosure under other provisions of subpart 1500 but may not necessarily trigger disclosure of Scope 1 and Scope 2 emissions information under Item 1505.<sup>1021</sup>

This revised approach to GHG emissions disclosure will provide investors with information they need to make informed investment and voting decisions while addressing concerns regarding the disclosure of GHG emissions data that may be immaterial. This approach will also limit the compliance costs of the final rules, as it will *not* require disclosure of GHG emissions data where such data is immaterial. Basing the GHG emissions disclosure requirement on traditional notions of materiality, which are fundamental to U.S. securities laws and the Commission’s securities regulation, is more appropriate than a requirement that relies on GHG emissions disclosure laws or regulations required by other Federal agencies and foreign or state jurisdictions, as one commenter recommended.<sup>1022</sup> Those other laws or regulations may be adopted to serve other purposes and may be presented without the additional disclosures that supplement the “total mix” of information investors need for context and to understand why the GHG emissions information is material.

We acknowledge, however, that registrants could incur costs to assess and monitor the materiality of their emissions, even in situations in which they ultimately determine that they do not need to provide disclosure, and that for some registrants these costs could be significant, especially if firms are not already tracking this information for internal purposes.<sup>1023</sup> Mindful of these costs, we are further limiting the GHG emissions disclosure requirement to LAFs and AFs that are not SRCs or EGCs and on a phased in basis. These further limitations will help ensure that any registrants potentially subject to the final rule have sufficient resources and time to prepare for what we

<sup>1018</sup> See, e.g., *supra* note 381 and accompanying text.

<sup>1019</sup> See *supra* section I.I.A.3 (discussing adoption of the ISSB climate disclosure standard and the foreign jurisdictions that intend to implement the standard and California’s recently adopted laws requiring certain large corporations to disclose their GHG emissions metrics and their climate-related financial risks).

<sup>1020</sup> See, e.g., Simone Foxman, *The Electric Revolution Is Coming for Your Lawn Mower*, Bloomberg (Nov. 20, 2023), available at <https://www.bloomberg.com/news/articles/2023-11-20/gas-lawn-care-ban-in-california-tests-electric-leaf-blower-appeal>.

<sup>1021</sup> See *id.*

<sup>1022</sup> See letter from Grundfest.

<sup>1023</sup> See *infra* section IV.C.2.e.

acknowledge could be a significant additional compliance obligation.<sup>1024</sup>

We recognize that many commenters supported the proposed requirement for disclosure of Scopes 1 and 2 emissions for all registrants. Nevertheless, mindful of the attendant costs, we believe that the final rules present an appropriate means to achieve the primary benefits of GHG emissions disclosure, namely: providing investors with material metrics that will aid in the assessment of transition risk for those registrants that have identified a material climate risk; and facilitating investors' evaluation of a registrant's progress towards achieving a material target or goal and the attendant effects on the registrant's business, results of operations, or financial condition. While the final GHG emissions disclosure provision will not apply to as many registrants or achieve the same level of comparability as may have been achieved under the proposed rules, on balance, we believe that, coupled with the other disclosures required under subpart 1500 and the structured data requirements of the final rules, investors will have sufficient information to assess the operational and financial impact of transition risks and strategies on registrants and compare such impacts across registrants.

#### b. Presentation of the GHG Emissions Metrics and Disclosure of the Underlying Methodologies and Assumptions

In a change from the rule proposal, which would have required the disclosure of a registrant's GHG emissions both disaggregated by each constituent GHG and in the aggregate, the final rule will require the disclosure of any described scope of emissions to be expressed in the aggregate in terms of CO<sub>2</sub>e.<sup>1025</sup> This change is intended to address the concern of some commenters that the proposed approach would impose additional burdens and costs on registrants without necessarily resulting in material information for investors.<sup>1026</sup> In addition, if a registrant is required to disclose its Scope 1 and/or Scope 2 emissions, and any constituent gas of the disclosed emissions is individually material, it must also disclose such constituent gas disaggregated from the other gases.<sup>1027</sup> For example, if a registrant has included a particular constituent gas, such as

methane, in a GHG emissions reduction target that is disclosed pursuant to Item 1504(a) because it is reasonably likely to materially affect the registrant's business, such constituent gas may be material and, therefore, required to be disclosed in disaggregated fashion. The required disaggregated disclosure of an individually material gas will help inform investors about the degree to which a registrant is exposed to transition risk as governments and markets may treat the individual GHG components differently.<sup>1028</sup> As explained in the Proposing Release, requiring a standard unit of measurement for GHG emissions with which many registrants are familiar should simplify the disclosure for investors and enhance its comparability across registrants with different types of GHG emissions.<sup>1029</sup>

Consistent with the rule proposal, under the final rule, a registrant that is required to disclose its Scope 1 and/or Scope 2 emissions must disclose those emissions in gross terms by excluding the impact of any purchased or generated offsets.<sup>1030</sup> As noted by some commenters, this requirement will enable investors to gain a more complete understanding of the full magnitude of a registrant's exposure to transition risk and to assess the extent to which a registrant relies upon purchased or generated offsets, if the registrant provides disclosure about the offsets pursuant to Item 1504, and better compare such exposure across registrants.<sup>1031</sup> Information about the degree to which a registrant's strategy relies on offsets is increasingly

important for investors not only because their use exposes the registrant to offset market fluctuations but also because such use may indicate heightened transition risk exposure to the extent governments seek to regulate their use.<sup>1032</sup>

Also, similar to the rule proposal,<sup>1033</sup> the final rule will require a registrant to describe the methodology, significant inputs, and significant assumptions used to calculate the registrant's disclosed GHG emissions.<sup>1034</sup> We continue to believe that this information is important to investors because it will help them understand GHG emissions disclosures by providing important contextual information, such as the scope of the entities included in the GHG emissions results that may be subject to transition risk, and inform comparability across registrants while also providing registrants with flexibility to determine the appropriate methodologies and assumptions to use based on their own facts and circumstances. However, we have modified the proposed requirement to provide registrants with greater flexibility to present this information in a manner that best fits with their particular facts and circumstances, as several commenters recommended.<sup>1035</sup> For example, like the rule proposal, the final rule will require a registrant to disclose the organizational boundaries used when calculating its Scope 1 emissions and/or its Scope 2 emissions.<sup>1036</sup> Unlike the rule proposal, however, which would have required a registrant to use the same scope of entities and other assets included in its consolidated financial statements when determining the organizational boundaries for its GHG emissions calculation,<sup>1037</sup> the final rule provides that the registrant must disclose the method used to determine the organizational boundaries, and if the organizational boundaries materially differ from the scope of entities and operations included in the registrant's consolidated financial statements, the registrant must provide a brief

<sup>1028</sup> For example, the EPA recently adopted a new regulation to curb methane emissions, which could be a source of transition risk for some registrants. See EPA, *EPA's Final Rule for Oil and Natural Gas Operations Will Sharply Reduce Methane and Other Harmful Pollution* (Dec. 2, 2023), available at <https://www.epa.gov/controlling-air-pollution-oil-and-natural-gas-operations/epas-final-rule-oil-and-natural-gas>.

<sup>1029</sup> See Proposing Release, section II.G.1.

<sup>1030</sup> See 17 CFR 229.1505(a)(2)(ii). While the rule specifies that gross emissions should be calculated without taking into account any purchased or generated offsets, the extent to which a registrant will exclude RECs from its gross emissions will depend on the methodology the registrant chooses to use. As described in the Proposing Release, section II.G.2., there are two common methods for calculating Scope 2 emissions: the market-based method and the location-based method. The market-based method may involve the use of RECs. See World Resources Institute, *GHG Protocol Scope 2 Guidance (2015)*, Chapter 4, available at [https://ghgprotocol.org/sites/default/files/standards/Scope%202%20Guidance\\_Final\\_Sept26.pdf](https://ghgprotocol.org/sites/default/files/standards/Scope%202%20Guidance_Final_Sept26.pdf). A registrant is required to describe its methodology, and in the case of Scope 2 emissions, it should include a description of whether and how RECs factor into its gross emissions calculation.

<sup>1031</sup> See, e.g., letters from ICI; and Wellington Mgmt.

<sup>1032</sup> See California Legislative Information, Assembly Bill No. 1305, *Voluntary carbon market disclosures* (Oct. 7, 2023), available at [https://leginfo.ca.gov/faces/leginfo/client.xhtml?bill\\_id=202320240AB1305](https://leginfo.ca.gov/faces/leginfo/client.xhtml?bill_id=202320240AB1305).

<sup>1033</sup> See Proposing Release, section II.G.2.

<sup>1034</sup> See 17 CFR 229.1505(b)(1).

<sup>1035</sup> See, e.g., letters from ABA; Chamber; SIFMA; and Soc. Corp. Gov.

<sup>1036</sup> Like the rule proposal, the final rule defines "organizational boundaries" to mean the boundaries that determine the operations owned or controlled by a registrant for the purpose of calculating its GHG emissions. See 17 CFR 229.1500.

<sup>1037</sup> See Proposing Release, section II.G.2.a.

<sup>1024</sup> As discussed below, neither EGCs nor SRCs will be required to disclose their Scopes 1 and 2 emissions under the final rules. See 17 CFR 229.1505(a)(3)(i).

<sup>1025</sup> See 17 CFR 229.1505(a)(2)(i).

<sup>1026</sup> See *supra* note 957 and accompanying text.

<sup>1027</sup> See 17 CFR 229.1505(a)(2)(i).

explanation of this difference in sufficient detail for a reasonable investor to understand. In addition, when describing its organizational boundaries, a registrant must describe the method used to determine those boundaries.<sup>1038</sup> Under this approach, a registrant will have flexibility to use, for example, one of the methods for determining control under the GHG Protocol, including the operational control approach, as recommended by some commenters,<sup>1039</sup> as long as it discloses the method used, and provides investors with information material to understanding the scope of entities and operations included in the GHG emissions calculation as compared to those included in its financial statements. We have made this change to address widely shared concerns about the compliance burden and associated costs of the more prescriptive aspects of the rule proposal.<sup>1040</sup> At the same time, requiring the registrant to provide a brief explanation of any material difference from the scope of entities and operations included in the consolidated financial statements will help avoid any potential confusion on the part of investors about the scope of entities included in the GHG emissions calculation and help them assess the extent of the registrant's transition risk-related financial impacts.

Similarly, we have also streamlined the methodology disclosure provision by, for example, specifying that a *brief* discussion, in sufficient detail for a reasonable investor to understand, is required of the operational boundaries used,<sup>1041</sup> including the approach to categorization of emissions and emissions sources.<sup>1042</sup> This provision is intended to provide investors with a general understanding of how the registrant determined which sources of emissions to include when calculating its direct emissions (Scope 1) and indirect emissions (Scope 2) to facilitate investors' understanding of the GHG emissions results and enhance their comparability across registrants while avoiding extensive disclosure that may be more burdensome for registrants to produce or investors to process.

Whereas the rule proposal would have required the disclosure of the calculation approach, including any

emission factors used and the source of the emission factors,<sup>1043</sup> and any calculation tools used to calculate the GHG emissions, the final rule requires a *brief* description of, in sufficient detail for a reasonable investor to understand, the protocol or standard used to report the GHG emissions, including the calculation approach, the type and source of any emission factors used, and any calculation tools used to calculate the GHG emissions.<sup>1044</sup> Rather than potentially requiring a lengthy explanation of the calculation approach used, this provision will require a registrant to disclose whether it calculated its GHG emissions metrics using an approach pursuant to the GHG Protocol's Corporate Accounting and Reporting Standard, an EPA regulation, an applicable ISO standard,<sup>1045</sup> or another standard. Pursuant to this provision, we would expect a registrant to also disclose whether it calculated its Scope 2 emissions using a particular method (which may differ from the method used to calculate Scope 1 emissions, to the extent both Scope 1 and 2 emissions are required to be disclosed under the final rules), such as the location-based method, market-based method, or both.<sup>1046</sup> Similarly, a registrant should disclose the identity of any calculation tools used, such as those provided by the GHG Protocol or pursuant to GHG emissions calculation under the ISO standards. In addition, by modifying the proposed requirement to disclose any emission factors used, we are clarifying that the final rule will not require the disclosure of any quantitative emission factors used. Instead, the final rule will require a registrant to disclose the type and source of any emission factors used, such as the EPA's emission factors for

stationary combustion and/or mobile combustion of various fuel types.<sup>1047</sup>

Requiring a brief description of the protocol or standard used to calculate a registrant's GHG emissions, together with the type and source of any emission factors used, will provide investors with information that is important to understanding the reported emissions data and associated risks<sup>1048</sup> without burdening registrants by requiring disclosure of detailed information that may not be material.<sup>1049</sup> Such disclosure should assist investors in understanding the emission disclosures and promote consistency and comparability over time. For example, with the required disclosures, an investor will be able to evaluate the registrant's selected emission factor(s) in the context of its operations and assess whether changes in reported emissions over time reflect changes in actual emissions in accordance with its strategy or simply a change in calculation methodology.

Unlike the rule proposal, which would have required a registrant to disclose its GHG emissions in both absolute terms and terms of intensity,<sup>1050</sup> under the final rule, registrants will not be required to disclose its GHG emissions in terms of intensity. As some commenters noted, the proposed intensity disclosure requirement is not necessary because investors should be able to calculate a registrant's GHG emissions per unit of total revenue by dividing a registrant's gross GHG emissions by its total revenues.<sup>1051</sup> Eliminating the GHG intensity disclosure requirement will also help lower the final rules' compliance burden. Although a registrant may choose to disclose its GHG emissions in terms of intensity, it is not required under the final rule.

Like the rule proposal, the final rule provides that a registrant may use reasonable estimates when disclosing its GHG emissions as long as it also describes the assumptions underlying, and its reasons for using, the estimates.<sup>1052</sup> This explanation will

<sup>1043</sup> Emission factors are ratios that typically relate GHG emissions to a proxy measure of activity at an emissions source. Examples of activity data reflected in emission factors include kilowatt-hours of electricity used, quantity of fuel used, output of a process, hours of operation of equipment, distance travelled, and floor area of a building. The EPA has published a series of commonly used emission factors. See EPA, *Emission Factors for Greenhouse Gas Inventories* (Apr. 2021), available at [https://www.epa.gov/sites/default/files/2021-04/documents/emission-factors\\_apr2021.pdf](https://www.epa.gov/sites/default/files/2021-04/documents/emission-factors_apr2021.pdf). See also 17 CFR 229.1500 (definition of "emission factors").

<sup>1044</sup> See 17 CFR 229.1505(b)(1)(iii).

<sup>1045</sup> See *supra* note 969.

<sup>1046</sup> The market-based method and the location-based method are two common methods for calculating Scope 2 emissions for purchased electricity. For a description of these methods, see World Resources Institute, *GHG Protocol Scope 2 Guidance*, Chapter 7, available at <https://files.wri.org/d8/s3fs-public/ghg-protocol-scope-2-guidance.pdf>; and EPA Center for Corporate Climate Leadership, *Scope 1 and Scope 2 Inventory Guidance*, available at <https://www.epa.gov/climate-leadership/scope-1-and-scope-2-inventory-guidance>.

<sup>1047</sup> The EPA has published a set of emission factors based on the particular type of source (e.g., stationary combustion, mobile combustion, refrigerants, and electrical grid, among others) and type of fuel consumed (e.g., natural gas, coal or coke, crude oil, and kerosene, among many others). See EPA, *Emission Factors for Greenhouse Gas Inventories* (Apr. 2021), available at [https://www.epa.gov/sites/default/files/2021-04/documents/emission-factors\\_apr2021.pdf](https://www.epa.gov/sites/default/files/2021-04/documents/emission-factors_apr2021.pdf).

<sup>1048</sup> See *supra* note 963 and accompanying text.

<sup>1049</sup> See *supra* note 964 and accompanying text.

<sup>1050</sup> See Proposing Release, section II.G.1.

<sup>1051</sup> See *supra* note 983 and accompanying text.

<sup>1052</sup> See 17 CFR 229.1505(b)(2).

<sup>1038</sup> See 17 CFR 229.1505(b)(1)(i).

<sup>1039</sup> See *supra* note 967 and accompanying text.

<sup>1040</sup> See *supra* notes 956 and 968 and accompanying text.

<sup>1041</sup> Like the rule proposal, the final rule defines "operational boundaries" to mean the boundaries that determine the direct and indirect emissions associated with the business operations owned or controlled by a registrant. See 17 CFR 229.1500.

<sup>1042</sup> See 17 CFR 229.1505(b)(1)(ii).

help investors understand and assess the GHG emissions disclosures and facilitate comparability across registrants. We recognize that, in many instances, direct measurement of GHG emissions at the source, which would provide the most accurate measurement, may not be possible. We also recognize that it is common practice under various GHG emissions reporting methodologies to use estimates, such as emission factors, when calculating a company's Scopes 1 and 2 emissions.<sup>1053</sup> A registrant may use reasonable estimates under the final rule as long as it describes the underlying assumptions and explains its reasons for using the estimates. Allowing for the use of reasonable estimates with an explanation will help lower the compliance burden for a registrant that must disclose its GHG emissions without, in our view, unduly undermining comparability and reliability of the GHG emissions metrics disclosure.

#### c. Exclusions From the GHG Emissions Disclosure Requirement

We are not adopting a provision that would require a registrant to disclose its Scope 3 emissions at this time. We are mindful of the potential burdens such a requirement could impose on registrants and other parties as well as questions about the current reliability and robustness of the data associated with Scope 3 emissions, as noted by commenters.<sup>1054</sup> However, we also recognize that, as some commenters indicated, disclosure of a registrant's Scope 3 emissions, including emissions from its suppliers (*i.e.*, upstream emissions) and its customers or consumers (*i.e.*, downstream emissions), or at least from those parties in its value chain that have significant emissions, may allow investors to develop a fuller picture of the registrant's transition risk exposure and evaluate and compare investment risks across registrants more thoroughly.<sup>1055</sup> Moreover, because many registrants will be required to disclose their Scope 3 emissions under foreign or state law or regulation,<sup>1056</sup> Scope 3 calculation methodologies may continue to evolve, mitigating many of the concerns noted by commenters about the disclosure of Scope 3 emissions. While such developments may encourage more registrants to disclose their Scope 3 emissions in

Commission filings, at the present time, because of the potential costs and difficulties related to Scope 3 emissions reporting, the disclosure of Scope 3 emissions in Commission filings will remain voluntary.

Unlike the proposed rule, which would have exempted SRCs from the requirement to disclose Scope 3 emissions,<sup>1057</sup> the final rule will exempt SRCs and EGCs from any requirement to disclose its GHG emissions, including its Scopes 1 and 2 emissions.<sup>1058</sup> Such treatment is consistent with the scaled disclosure approach that is sometimes adopted for SRCs and EGCs.<sup>1059</sup> We understand from commenters that SRCs and EGCs will face the greatest burden and costs in attempting to comply with the GHG emissions disclosure requirement as compared to the other climate-related disclosure requirements.<sup>1060</sup> Accordingly, exempting SRCs and EGCs from this requirement but requiring them to comply with the final rules' other climate-related disclosure requirements should allow investors in SRCs and EGCs to gain a better understanding of the material climate risks such companies may be facing while limiting the overall costs to these registrants by alleviating the significant burdens associated with GHG emissions disclosure.

The final rules provide that a registrant is not required to include GHG emissions from a manure management system when disclosing its overall Scopes 1 and 2 emissions pursuant to 17 CFR 229.1505(a)(1).<sup>1061</sup> This exclusion from the GHG emissions

disclosure requirement has been included in light of the 2023 Consolidated Appropriations Act, which provides that none of the funds made available under that Act or any other Act (including to the Commission) may be used to implement "any provision in a rule, if that provision requires mandatory reporting of greenhouse gas emissions from manure management systems."<sup>1062</sup> Accordingly, an agricultural producer or other registrant that operates a manure management system will not be required to include GHG emissions from that system when disclosing its overall Scopes 1 and 2 emissions for so long as implementation of such a provision is subject to restrictions on appropriated funds or otherwise prohibited by Federal law.

#### d. Timeline for Reporting GHG Emissions Metrics

Under the final rules, if a registrant is required to disclose its Scope 1 and/or Scope 2 emissions, it must disclose those emissions for its most recently completed fiscal year and, to the extent previously disclosed in a Commission filing, for the historical fiscal year(s) included in the consolidated financial statements included in the filing.<sup>1063</sup> By contrast, a registrant that has not previously disclosed its Scopes 1 and 2 emissions in a Commission filing for a particular historical fiscal year will not be required to estimate and report those emissions for such period.<sup>1064</sup> Limiting the historical period disclosure requirement for GHG emissions in this fashion is largely consistent with the recommendation of commenters that any GHG emissions disclosure not be required for historical periods prior to the initial compliance date<sup>1065</sup> and should help mitigate the compliance costs for registrants that have not yet disclosed their Scopes 1 and 2 emissions in a Commission filing. This approach is also consistent with the approach taken for the disclosure of financial effects for historical periods under new Article 14 of Regulation S-X,<sup>1066</sup> as well as with approaches taken

<sup>1057</sup> See Proposing Release, section II.G.3.

<sup>1058</sup> See 17 CFR 229.1505(a)(3)(i). A registrant will be exempt from any requirement to disclose its GHG emissions for any fiscal year in which it qualified as an SRC. A registrant that previously qualified as an SRC also will be exempt from the GHG emissions disclosure requirements in the first fiscal year in which it no longer so qualifies because a registrant must reflect the determination of whether it came within the definition of smaller reporting company in its quarterly report on Form 10-Q for the first fiscal quarter of the next year, see 17 CFR 240.12b-2, which will be after the date of the annual report on Form 10-K in which the GHG emissions disclosure is required. This remains the case notwithstanding the permissibility under the final rules (as discussed *infra* Section II.H.3.d) of a registrant incorporating by reference its GHG emissions disclosures required in its Form 10-K from its Form 10-Q for the second quarter of that next fiscal year.

<sup>1059</sup> See *supra* notes 946 and accompanying text.

<sup>1060</sup> See, e.g., letter from BIO (When recommending adoption of additional exemptions for small companies from the proposed rules, this commenter stated that "67% of BIO members surveyed said that they currently do not report on carbon emissions, and a similar majority have significant concerns with the ability to collect and accurately report without significant liability.")

<sup>1061</sup> See 17 CFR 229.1505(a)(3)(ii).

<sup>1062</sup> Public Law 117-328, div. G, tit. IV, § 437, 136 Stat. 4459, 4831 (2022).

<sup>1063</sup> See 17 CFR 229.1505(a)(1).

<sup>1064</sup> For example, if a registrant becomes an LAF during the fiscal year, it is required to present these disclosures for the most recently completed fiscal year in which it became an LAF; however, it is not required to provide those disclosures for the prior fiscal years included in its filing when it was not an LAF, to the extent that information was not previously required to be disclosed.

<sup>1065</sup> See *supra* note 992 and accompanying text.

<sup>1066</sup> See *infra* section II.K.

<sup>1053</sup> See, e.g., letter from PWC.

<sup>1054</sup> See *supra* notes 924-925 and accompanying text.

<sup>1055</sup> See, e.g., letters from AllianceBernstein; CalPERS; Miller/Howard; Trillium; and Wellington Mgmt.

<sup>1056</sup> See *supra* section II.A.3.

for other recently adopted changes to Regulation S-K.<sup>1067</sup>

We recognize that, as many commenters have stated, a registrant may have difficulty measuring and reporting its GHG emissions as of fiscal year-end by the same deadline for its Exchange Act annual report.<sup>1068</sup> To address this concern, the final rules provide that any GHG emissions metrics required to be disclosed pursuant to Item 1505 in an annual report filed with the Commission on Form 10-K may be incorporated by reference from the registrant's Form 10-Q for the second fiscal quarter in the fiscal year immediately following the year to which the GHG emissions metrics disclosure relates.<sup>1069</sup> Many commenters requesting additional time to disclose GHG emissions metrics indicated that most registrants currently report such metrics outside of Commission filings after completion of the second fiscal quarter. Accordingly, this change will help alleviate the challenges with disclosing such data in the annual report and be consistent with current market practices while still providing investors with timely GHG emissions information.

To provide comparable treatment for foreign private issuers, the final rules provide that the GHG emissions metrics required to be disclosed pursuant to Item 1505 may be disclosed in an amendment to their annual report on Form 20-F, which shall be due no later than 225 days after the end of the fiscal year to which the GHG emissions metrics disclosure relates. This corresponds approximately to the second quarter Form 10-Q filing deadline and should provide foreign private issuers with an appropriate and similar amount of time as domestic registrants to provide the required GHG emissions metrics disclosure.<sup>1070</sup> In

order to treat the GHG emissions disclosure as filed and maintain the same level of liability as for corresponding disclosure by domestic registrants, a foreign private issuer must provide its GHG emissions disclosure in an amendment to its annual report on Form 20-F instead of on a Form 6-K.

Whether a registrant is a domestic registrant or foreign private issuer, the final rules provide that the registrant must include an express statement in its annual report indicating its intention to incorporate by reference or amend its filing for this information.<sup>1071</sup> This requirement will provide notice to investors regarding where to find the required GHG emissions metrics disclosure and is consistent with the general notice requirements for information that is being incorporated by reference under existing Securities Act and Exchange Act rules.<sup>1072</sup>

To provide similar treatment to GHG emissions metrics required to be disclosed under Item 1505 in a Securities Act or Exchange Act registration statement, the final rules state that the GHG emissions metrics must be provided as of the most recently completed fiscal year that is at least 225 days prior to the date of effectiveness of the registration statement.<sup>1073</sup> For example, if a calendar year-end LAF files a Form S-1 registration statement in 2028, which goes effective on or after Monday, August 7, 2028, its GHG emissions metrics disclosure must be as of 2027 since the Form S-1's date of effectiveness is at least 225 days after the 2027 fiscal year-end. If, however, the Form S-1 registration statement goes effective on Friday, August 4, 2028, which is less than 225 days after its 2027 fiscal year-end, the registrant may provide its GHG emissions metrics disclosure as of its 2026 fiscal year-end.<sup>1074</sup>

quarter corresponds to 181 days following the most recently completed fiscal year (and 182 days in a leap year). The 225-day deadline is intended to account for the upper limit combined periods (42 days + 182 days = 224 days).

<sup>1071</sup> See 17 CFR 229.1505(c)(1).

<sup>1072</sup> See 17 CFR 230.411(e) and 17 CFR 240.12b-23(e).

<sup>1073</sup> See 17 CFR 229.1505(c)(2).

<sup>1074</sup> Similarly, for a registration statement on Form S-3, because information is incorporated by reference from a registrant's Exchange Act filings, to address the scenario where a Form S-3 registration statement goes effective after a registrant files its Form 10-K annual report for its most recently completed fiscal year but before it has filed its second quarter Form 10-Q containing its GHG emissions metrics disclosure for its most recently completed fiscal year, we have added a provision to Form S-3 stating that the GHG emissions metrics disclosure must be as of its most recently completed fiscal year that is at least 225 days prior to the date of effectiveness of the Form S-3 registration statement. Accordingly, where a

## I. Attestation Over GHG Emissions Disclosure (Item 1506)

### 1. Overview

#### a. Proposed Rules

The Commission proposed to require a registrant, including a foreign private issuer, that is an AF or an LAF to include in the relevant filing an attestation report covering the disclosure of its Scope 1 and Scope 2 emissions and to provide certain related disclosures about the service provider providing the attestation report.<sup>1075</sup> The proposed rules also included requirements related to the service provider and requirements for the engagement and the attestation report.<sup>1076</sup> The proposed rules would have required the attestation engagement to be performed by the service provider at a "limited assurance" level<sup>1077</sup> for fiscal years 2 and 3 after the Scopes 1 and 2 emissions disclosure compliance date and at a reasonable assurance level<sup>1078</sup> for fiscal year 4 and beyond.<sup>1079</sup> The Commission explained that during the transition period when limited assurance would be required, an AF or an LAF would be permitted to obtain "reasonable assurance" of its Scope 1 and 2 emissions disclosure at its option.<sup>1080</sup>

Also at its option, an AF or an LAF would have been permitted under the proposed rules to obtain any level of assurance over climate-related disclosures that are not subject to the

registrant has filed its annual report on Form 10-K for the most recently completed fiscal year but has not yet filed its Form 10-Q for the second fiscal quarter containing the disclosure required by 17 CFR 229.1505(a), it must incorporate its GHG emissions metrics disclosure for the fiscal year that is immediately prior to its most recently completed fiscal year. See Item 12(e) to Part I of Form S-3. For example, if a calendar year-end LAF has a Form S-3 registration statement go effective after it files its Form 10-K for 2028 but before it files its second quarter Form 10-Q (due no later than Aug. 9, 2029), it must incorporate its GHG emissions disclosure for the 2027 fiscal year previously filed on a Form 10-Q or a Form 10-K/A. We have added a similar provision to Form F-3. See Item 6(g) to Part I of Form F-3. For any registration statement, if the date of effectiveness is less than 225 days after its most recently completed fiscal year-end, a registrant will only be required to disclose its GHG emissions for the fiscal year that is immediately prior to its most recently completed fiscal year if the registrant was required to disclose its Scope 1 and/or Scope 2 emissions pursuant to Item 1505 for that year.

<sup>1075</sup> See Proposing Release, section II.H.1.

<sup>1076</sup> See Proposing Release, section II.H.2 and 3.

<sup>1077</sup> Limited assurance is equivalent to the level of assurance (commonly referred to as a "review") provided over a registrant's interim financial statements included in a Form 10-Q.

<sup>1078</sup> Reasonable assurance is equivalent to the level of assurance provided in an audit of a registrant's consolidated financial statements included in a Form 10-K.

<sup>1079</sup> See Proposing Release, section II.H.1.

<sup>1080</sup> See *id.*

<sup>1067</sup> See, e.g., Management's Discussion and Analysis, Selected Financial Data, and Supplementary Financial Information, Release No. 33-10890 (Nov. 19, 2020) [86 FR 2080 (Jan. 11, 2021)]; and Pay Versus Performance, Release No. 34-95607 (Aug. 25, 2022) [87 FR 55134 (Sept. 8, 2022)], which provided similar transition periods.

<sup>1068</sup> See *supra* note 998 and accompanying text.

<sup>1069</sup> See 17 CFR 229.1505(c)(1). A registrant may also include this in an amended Form 10-K filed no later than the due date for the registrant's second quarter Form 10-Q. This deadline would also apply to transition year registrants, *i.e.*, to registrants that have changed their fiscal year and the difference in reporting periods is so small that they are not required to file a Form 10-KT and can report the difference in a Form 10-Q.

<sup>1070</sup> See Form 10-Q, General Instruction A.1, which states that the Form 10-Q must be filed within 40 days after the end of the fiscal quarter if the registrant is an LAF or AF (and, if that 40 day period falls on a Saturday, the filing is not due until the following Monday, which is the 42nd day after the end of the quarter). The end of the second fiscal

proposed assurance requirements.<sup>1081</sup> To avoid potential confusion, however, the proposed rules would have required the voluntary assurance obtained by such registrant to follow the requirements of proposed Items 1505(b) through (d), including using the same attestation standard as the required assurance over Scope 1 and Scope 2 emissions. For filings made by AFs and LAFs after the compliance date for the GHG emissions disclosure requirements but before proposed Item 1505(a) would require limited assurance, the proposed rules only would have required the filer to provide the disclosure called for by proposed Item 1505(e) if it chose to voluntarily obtain attestation.<sup>1082</sup> The Commission stated that a registrant that is not an AF or LAF that obtains voluntary assurance would be required to comply only with proposed Item 1505(e).<sup>1083</sup>

In the Proposing Release, the Commission stated that requiring GHG emissions disclosure in Commission filings should enhance the consistency, comparability, and reliability of such disclosures due to the application of a registrant's DCP and the proposed inclusion of certain prescriptive elements that may help improve standardization of GHG emission calculations.<sup>1084</sup> The Commission also observed that the evolving and unique nature of GHG emissions involves and, in some cases, warrants varying methodologies, differing assumptions, and a substantial amount of estimation.<sup>1085</sup> Certain aspects of GHG emissions disclosure also involve reliance on third-party data. As such, the Commission concluded that requiring a third-party's attestation over these disclosures would provide investors with an additional degree of reliability regarding not only the figures that are disclosed, but also the key assumptions, methodologies, and data sources the registrant used to arrive at those figures.<sup>1086</sup>

In the Proposing Release, the Commission explained that, although many registrants have voluntarily obtained some level of assurance for their climate-related disclosures,<sup>1087</sup>

current voluntary climate-related assurance practices have been varied with respect to the levels of assurance provided (e.g., limited versus reasonable), the assurance standards used, the types of service providers, and the scope of disclosures covered by the assurance.<sup>1088</sup> The Commission stated that this fragmentation has diminished the comparability of the assurance provided and may require investors to become familiar with many different assurance standards and the varying benefits of different levels of assurance.<sup>1089</sup> Accordingly, to improve accuracy, comparability, and consistency with respect to the proposed GHG emissions disclosure, the Commission proposed to require a minimum level of assurance services for AFs and LAFs including: (1) limited assurance<sup>1090</sup> for Scopes 1 and 2 emissions disclosure that scales up to reasonable assurance<sup>1091</sup> after a

other metrics. See CAQ, *S&P 500 and ESG Reporting* (Aug. 9, 2021), available at <https://www.thecaq.org/sp-500-and-esg-reporting-2019-2020>. Another survey of sustainability reporting trends from 5,200 companies across 52 countries (including the United States) stated that, of the top 100 companies (by revenue), 80% have reporting on ESG (including climate), with up to 61% of those companies obtaining assurance. See KPMG, *The KPMG Survey of Sustainability Reporting 2020*, available at <https://home.kpmg/xx/en/home/insights/2020/11/the-time-has-come-survey-of-sustainability-reporting.html>. Proposing Release, section II.H.1.

<sup>1088</sup> See Proposing Release, section II.H.1.

<sup>1089</sup> See *id.* The Commission noted in the Proposing Release that the consequences of such fragmentation have also been highlighted by certain international organizations, including IOSCO, which stated that it "identified a perceived lack of clarity and consistency around the purpose and scope of [voluntary] assurance . . . [which] can potentially lead to market confusion, including misleading investors and exacerbating the expectations gap." IOSCO, *Report on Sustainability-related Issuer Disclosures* (June 2021), available at <https://www.iosco.org/library/pubdocs/pdf/IOSCOPD678.pdf>. See also, e.g., International Federation of Accountants, *The State of Play in Sustainability Assurance* (June 23, 2021), available at <https://www.ifac.org/knowledge-gateway/contributing-global-economy/publications/state-play-sustainability-assurance>. See Proposing Release, section II.H.1.

<sup>1090</sup> The Commission explained in the Proposing Release that the objective of a limited assurance engagement is for the service provider to express a conclusion about whether it is aware of any material modifications that should be made to the subject matter (e.g., the Scopes 1 and 2 emissions disclosure) in order for it to be fairly stated or in accordance with the relevant criteria (e.g., the methodology and other disclosure requirements specified in proposed Item 1504). See Proposing Release, section II.H.1 (citing, for example, AICPA's Statement on Standards for Attestation Engagements (SSAE) No. 22, AT-C section 210). In such engagements the conclusion is expressed in the form of negative assurance regarding whether any material misstatements have been identified. See *id.*

<sup>1091</sup> The Commission explained in the Proposing Release that the objective of a reasonable assurance engagement, which is the same level of assurance

specified transition period; (2) minimum qualifications and independence requirements for the attestation service provider; and (3) minimum requirements for the accompanying attestation report.<sup>1092</sup>

The Commission stated that by specifying minimum standards for the attestation provided with respect to GHG emissions disclosure by AFs and LAFs, the proposed rules should improve accuracy and consistency in the reporting of this information, while also providing investors with an enhanced level of reliability against which to evaluate the disclosure.<sup>1093</sup> In addition to the proposed minimum standards for attestation services, the Commission explained that the proposed additional disclosure requirements for registrants should further assist investors in understanding the qualifications and suitability of the GHG emissions attestation provider selected by the registrant, particularly in light of the broad spectrum of attestation providers that currently provide and that would be permitted under the proposed rules to provide attestation services.<sup>1094</sup>

The Commission explained that the proposed rules did not aim to create or adopt a specific attestation standard for assuring GHG emissions because both the reporting and attestation landscapes are currently evolving and it would be premature to adopt one approach and potentially curtail future innovations in these two areas.<sup>1095</sup> The Commission acknowledged in the Proposing Release that the proposed minimum standards for attestation services and the proposed additional disclosure requirements would not eliminate fragmentation with respect to assurance or obviate the need for investors to assess and compare multiple attestation standards.<sup>1096</sup> Nevertheless, the Commission stated it believed some flexibility in its approach was warranted at this time given the unique and evolving nature of third-party assurance for climate-related disclosures.<sup>1097</sup>

In proposing mandatory assurance of GHG emissions disclosure, the

provided in an audit of a registrant's consolidated financial statements, is to express an opinion on whether the subject matter is in accordance with the relevant criteria, in all material respects. A reasonable assurance opinion provides positive assurance that the subject matter is free from material misstatement. See Proposing Release, section II.H.1 (citing, for example, AICPA SSAE No. 21, AT-C sections 205 and 206).

<sup>1092</sup> See Proposing Release, section II.H.1.

<sup>1093</sup> See *id.*

<sup>1094</sup> See *id.*

<sup>1095</sup> See *id.*

<sup>1096</sup> See *id.*

<sup>1097</sup> See *id.*

<sup>1081</sup> See *id.* For example, the Commission stated that an AF or LAF could voluntarily include an attestation report at the limited assurance level for its GHG intensity metrics or its Scope 3 emissions disclosure.

<sup>1082</sup> See *id.*

<sup>1083</sup> See *id.*

<sup>1084</sup> See *id.*

<sup>1085</sup> See *id.*

<sup>1086</sup> See *id.*

<sup>1087</sup> For example, the Commission stated that according to one study, 53% of the S&P 500 companies had some form of assurance or verification over climate-related metrics, along with

Commission weighed the challenges such requirements could present with the benefits that assurance would provide to investors and proposed only requiring AFs and LAFs to obtain an attestation report, subject to a phased in compliance period, to help mitigate concerns about cost and burden.<sup>1098</sup> In addition, the Commission stated that the proposed phase in periods would provide AFs and LAFs with significant time to develop processes to support their GHG emissions disclosure requirements and the relevant DCP, as well as to adjust to the incremental costs and efforts associated with escalating levels of assurance.<sup>1099</sup> During the proposed transition period, GHG emissions attestation providers would also have had time to prepare themselves for providing such services in connection with Commission filings.<sup>1100</sup>

In the Proposing Release, the Commission stated that the voluntary attestation obtained by some registrants has been at the reasonable assurance level; however, it acknowledged that a limited assurance engagement is less extensive and currently the level of assurance most commonly provided in the voluntary assurance market for climate-related disclosure.<sup>1101</sup> The Commission explained that, for this reason, prior to the transition to reasonable assurance, the additional compliance efforts required to comply with the proposed assurance requirement should be limited for the many registrants that are already obtaining limited assurance for their climate related disclosures.<sup>1102</sup> Although reasonable assurance provides a significantly higher level of assurance than limited assurance, the Commission

<sup>1098</sup> See *id.* The Commission further stated that, for the many LAFs that are already voluntarily obtaining some form of assurance over GHG emissions, any cost increases associated with complying with the proposed rules would be mitigated and larger issuers generally bear proportionately lower compliance costs than smaller issuers due to the fixed cost components of such compliance. See *id.*

<sup>1099</sup> See *id.*

<sup>1100</sup> See *id.*

<sup>1101</sup> See *id.* (citing CAQ, *S&P 500 and ESG Reporting* (Aug. 9, 2021) (providing statistics on limited assurance versus reasonable assurance obtained voluntarily in the current market (*e.g.*, at least 26 of 31 companies that obtained assurance from public company auditors obtained limited assurance; at least 174 of 235 companies that obtained assurance or verification from other service providers (non-public company auditors) obtained limited assurance)) and CAQ, *S&P 100 and ESG Reporting* (Apr. 29, 2021), available at <https://www.thecaq.org/sp-100-and-esg-reporting/>). The Commission stated that based on an analysis by Commission staff on Mar. 3, 2022, a substantial number of the S&P 500 companies (460+) are LAFs. See Proposing Release, section II.H.1.

<sup>1102</sup> See Proposing Release, section II.H.1.

expressed its belief that limited assurance would benefit investors during the initial transition period by enhancing the reliability of a registrant's Scopes 1 and 2 emissions disclosure, in light of the benefits that assurance provides.

Finally, the Commission stated in the Proposing Release that it did not propose to require assurance of Scope 3 emissions disclosure because the preparation of such disclosure presents unique challenges.<sup>1103</sup> The Commission explained that depending on the size and complexity of a company and its value chain, the task of calculating Scope 3 emissions could be relatively more burdensome and expensive than calculating Scope 1 and Scope 2 emissions, and in particular, it may be difficult to obtain activity data from suppliers, customers, and other third parties in a registrant's value chain, or to verify the accuracy of that information compared to disclosures of Scope 1 and Scope 2 emissions data, which are more readily available to a registrant.<sup>1104</sup>

#### b. Comments

Commenters expressed a variety of views on the proposal to require AFs and LAFs to provide an attestation report from a service provider over Scope 1 and Scope 2 emissions. A number of commenters supported the proposal to require some form of attestation.<sup>1105</sup> These commenters

<sup>1103</sup> See *id.*

<sup>1104</sup> See *id.*

<sup>1105</sup> See, *e.g.*, letters from 3Degrees Group Inc. (June 17, 2022) (“3Degree”); AGs of Cal. *et al.*; ANSI National Accreditations Board (June 17, 2022) (“ANSI NAB”); Anthesis Grp.; A. Payton; BC IM Corp.; Better Markets (June 17, 2022) (stating that the Commission should apply the attestation requirement to all registrants); Bloomberg; BNP Paribas (supporting the proposal to require attestation over Scope 1 and 2 emissions but recommending only requiring limited assurance initially and on a time-limited basis); BOA (supporting the proposal to require attestation over Scope 1 and Scope 2 emissions with a two-year extension to the proposed phase in periods); Boston Common Asset Mgmt; Breckinridge Capital; Bureau Veritas; CalPERS; CalSTRS; Can. Coalition GG; Center for Amer. Progress; Center for Audit Quality (June 17, 2022) (“CAQ”); CEMEX; Ceres; CFA; CFA Institute; Chevron (supporting the proposal to require attestation over Scope 1 and Scope 2 emissions with an extended phase in period); CFB; Climate Advisers; Corteva; DSC Meridian; East Bay Mun.; Educ. <sup>1109</sup> See letter from Can. Coalition GG.

<sup>1110</sup> See letter from DSC Meridian.

<sup>1111</sup> See, *e.g.*, letters from Better Markets; CAQ; IFAC; and SFERS.

<sup>1112</sup> See, *e.g.*, letters from Climate Advisers; BNP Paribas; and UAW Retiree.

management and quality of our reporting.”<sup>1113</sup> In addition, a number of commenters agreed with the Commission’s statement in the Proposing Release that many registrants already obtain some form of assurance over GHG emissions data.<sup>1114</sup>

Conversely, a number of commenters did not support the proposed requirement for AFs and LAFs to provide an attestation report over Scope 1 and Scope 2 emissions.<sup>1115</sup> Many of these commenters stated that the proposed attestation requirements would be costly for registrants,<sup>1116</sup> with some commenters stating that the costs would outweigh any potential benefit to investors.<sup>1117</sup> For example, one

<sup>1113</sup> See letter from Etsy (stating it has received limited assurance for its reported Scope 1, 2, and 3 emissions since 2016).

<sup>1114</sup> See, e.g., letters from CalPERS (“Many issuers already obtain assurance for such information when the disclosure appears in non-regulatory reports. It is appropriate to maintain verification of the data when such disclosures move to regulatory reports.”); Climate Advisers; KPMG; SIFMA AMG (stating that many large registrants obtain limited assurance in connection with existing voluntary GHG emissions disclosures); and USIIA. Relatedly, some registrants stated that they are currently obtaining assurance over their GHG emissions disclosures. See, e.g., Dow (stating it obtained limited assurance on its GHG emissions metrics beginning in 2021); and Microsoft (stating that it has obtained limited assurance over Scopes 1, 2, and 3 emissions for the past two years).

<sup>1115</sup> See, e.g., letters from AAFA; AALA *et al.*; ABA; ACA Connects; AEPC; AFPM; American Hotel and Lodging Association (June 17, 2022) (“AHLA”); Amer. <sup>1127</sup> See letter from NAA.

<sup>1128</sup> See, e.g., letters from APCIA; Capital Group; Capital Research (“In addition, no other numerical data in a company’s regulatory filing, other than its financial statements, is required to be audited today. We are not persuaded that Scope 1 and Scope 2 GHG emissions data should be treated any differently. . . .”); and Soc. Corp. Gov. See also BCSE (“There is nothing particularly unique about the proposed disclosures as compared to numerous existing disclosures on other topics that would justify imposing an attestation requirement.”).

<sup>1129</sup> See letter from PwC.

However, other commenters disagreed with that statement.<sup>1130</sup>

Alternatively, some commenters stated that the Commission should wait before determining whether to adopt a mandatory assurance requirement for GHG emissions.<sup>1131</sup> A few commenters stated that instead of requiring mandatory assurance over GHG emissions disclosures, assurance should be voluntary.<sup>1132</sup> One of these commenters stated that permitting registrants to disclose whether they obtained voluntary attestation in accordance with proposed Items 1505(e)(1) through (3) would help investors understand whether the attestation or verification has enhanced the reliability of the GHG emissions disclosures.<sup>1133</sup>

A number of commenters offered their views on the types of registrants that should be subject to any attestation requirement. A few commenters stated that the attestation requirements should apply to AFs and LAFs as proposed.<sup>1134</sup> Several commenters stated that the proposed attestation requirements should apply to all registrants, not just AFs and LAFs.<sup>1135</sup> One of these

commenters explained that it supported requiring all registrants to comply with the proposed attestation requirements because “GHG emissions are a key metric for determining climate-related transition risks, and those risks are likely to impact small companies as well as large companies.”<sup>1136</sup> Similarly, another commenter stated that extending the attestation requirement to additional registrants “would be insightful for investors and allow comparability amongst disclosures of these attestation reports between several types of filers.”<sup>1137</sup> Commenter feedback was mixed regarding whether SRCs should be subject to the proposed mandatory assurance requirements. Several commenters stated that SRCs should be excluded from the attestation requirement.<sup>1138</sup> On the other hand, one commenter stated that the Commission did not adequately justify an exclusion for SRCs and that excluding SRCs “will undoubtedly undermine one of the key goals of the rule, here the reliability of climate disclosures.”<sup>1139</sup> Alternatively, one commenter stated that the attestation requirement should be limited to “seasoned issuers” and “those companies with more than [\$1 billion] in revenue and more than [\$2 billion] in public float.”<sup>1140</sup>

Some commenters stated that they supported phasing in the assurance requirement from limited assurance to reasonable assurance over time as proposed.<sup>1141</sup> One of these commenters

year delay for smaller reporting companies); NY St. Comptroller; and OMERS.

<sup>1136</sup> See letter from AGs of Cal. *et al.* (“To address burdens on SRCs, we recommend a longer phase in period for SRCs than for large accelerated filers, with the expectation that as independent attestation services become more mainstream, competition will increase and costs will come down.”).

<sup>1137</sup> See letter from CEMEX.

<sup>1138</sup> See, *e.g.*, letters from ABA; MFA (“[T]he exclusion of non-accelerated filers and smaller reporting companies from the attestation requirement will aid in relieving the burden on those issuers that may face the greatest challenges.”); and Sullivan Cromwell (“[T]he burden and cost required to comply with the Proposed Rules will be significant and will disproportionately impact smaller registrants.”). See also letter from ICBA (The final rule is improperly scaled because it imposes the same requirements on smaller banks (that aren’t SRCs) as on larger banks. This includes the costs of assurance.)

McClellan; Mackenzie Invest.; Morningstar; NEI Investments; Net Zero Owners Alliance; NY City Comptroller (recommending that the Commission consider proposing incentives to encourage companies to obtain reasonable assurance early); OMERS; PGIM

stated that the phased in approach would “enable registrants to install the necessary DCP” and “enable assurance providers to upskill and establish the necessary capacity to provide limited and then reasonable assurance.”<sup>1142</sup> Another commenter stated that phase in periods would balance investors’ “needs for data with the ability of issuers to provide that data.”<sup>1143</sup> Some commenters stated that it was important for GHG emissions disclosures to ultimately be subject to reasonable assurance because reasonable assurance is necessary to ensure reliability.<sup>1144</sup> In fact, a number of commenters stated that the Commission should require reasonable assurance from the start without a phase in from limited assurance.<sup>1145</sup> One of these commenters stated that “[i]nvestors may place disproportionate reliance on disclosures subject only to the review procedures of a limited assurance engagement, creating an expectations gap.”<sup>1146</sup>

A few commenters stated that the level of assurance for Scope 1 and Scope 2 emissions should only be raised from limited to reasonable assurance after the Commission assesses the implementation of the assurance requirement.<sup>1147</sup> One of these commenters stated that, as a first step, “limited assurance is all that is required to accomplish the SEC’s objective to provide an external independent verification of climate disclosures—and reasonable assurance would be unduly burdensome and unnecessary at this stage, given data gaps.”<sup>1148</sup> According to this commenter, “[a]s data gaps are progressively addressed, reasonable assurance could be applied as in an audit of financial statements if it is determined that it is practical and the

<sup>1131</sup> See, *e.g.*, letters from Allstate (“[W]e believe the Commission should set dates for limited assurance engagements only after attestation standards and interpretive guidance have been published.”); Anonymous; Davis Polk; Sullivan Cromwell (stating that before mandating assurance the Commission should “work with industry participants and standard setters to develop generally accepted climate disclosure attestation principles”); and TIAA (“Waiting to impose audit and attestation requirements will give registrants and other industry participants more time to become informed about the specifics of the new climate disclosure landscape and weigh in knowledgeably on the implications of auditing climate data.”). See also letter from Bipartisan Policy (recommending that the Commission monitor company disclosures and public statements for consistent disclosure and ultimately defer to Congress to address whether attestation of GHG emissions disclosures is needed).

<sup>1132</sup> See, *e.g.*, letters from AEPC (stating that the Commission “should allow a commensurate market-based approach to third-party assurance for climate-related reporting for registrants that desire to enhance the reliability of information”); AFPA (same); Chamber (“Alternatively, to the extent companies are obtaining assurances, the SEC’s alternative that registrants disclose what type of assurance, if any, they are obtaining may be appropriate.”); Nasdaq; and RILA.

<sup>1133</sup> See letter from Nasdaq.

<sup>1134</sup> See letter from BC IM Corp.; and Morningstar (recommending that filers other than AFs and LAFs obtain attestation on a voluntary basis).

<sup>1135</sup> See, *e.g.*, letters from AGs of Cal. *et al.*; Better Markets; CalSTRS (noting that a phase in schedule could provide more time for non-accelerated filers and smaller companies); CEMEX (supporting a specified transition period for filers other than accelerated filers and large accelerated filers); ERM CVS (recommending that the proposed attestation requirements apply to all registrants with material GHG emissions and suggesting an additional one-

robustness of data warrants the enactment of a reasonable assurance standard.”<sup>1149</sup> Another commenter recommended that the Commission take into consideration the EU’s CSRD and “contemplate raising the level of assurance within the same timeline subject to an assessment.”<sup>1150</sup>

On the other hand, a number of commenters recommended that the Commission only require AFs and LAFs to obtain limited assurance over their Scope 1 and Scope 2 disclosures without a requirement to phase in reasonable assurance.<sup>1151</sup> This includes commenters that stated they did not support requiring mandatory attestation but, if the Commission adopts an assurance requirement, then the Commission should only require limited assurance.<sup>1152</sup> Some of these commenters stated that limited assurance should be sufficient to provide investors with comfort that GHG emissions disclosures are accurate.<sup>1153</sup> Other commenters stated that existing voluntary assurance over GHG emissions is most frequently performed at a limited assurance level.<sup>1154</sup> A few commenters stated that registrants had not received requests or feedback from investors asking for reasonable assurance.<sup>1155</sup> One commenter that has obtained limited assurance over its GHG emissions data stated that, based on its experience with

limited assurance and discussions with its auditors, it anticipated a “significant incremental investment in our processes, systems and personnel would be required to achieve reasonable assurance.”<sup>1156</sup>

More generally, a number of commenters raised concerns about a requirement to obtain reasonable assurance.<sup>1157</sup> Several commenters expressed the view that reasonable assurance would be costly.<sup>1158</sup> For example, one commenter stated that “moving from limited assurance to reasonable assurance could add far greater costs than anticipated, potentially without a commensurate increase in reliability of the information.”<sup>1159</sup> One commenter stated that requiring reasonable assurance “significantly increases regulatory risk” and could result in penalties for companies.<sup>1160</sup> Another commenter stated that reasonable assurance would be impracticable for companies because “unlike financial data, Scope 1 and 2 emissions calculations are never completely precise or completely ‘knowable.’”<sup>1161</sup> One commenter stated that reasonable assurance is “difficult at this stage in

the absence of sustainability assurance standards.”<sup>1162</sup>

As an alternative, one commenter recommended that the Commission require registrants to initially obtain reasonable assurance, followed by two years of limited assurance, provided that the first year’s attestation report included no modifications or qualifications.<sup>1163</sup> This commenter explained that this order would enable the attestation provider to understand and examine the design and implementation of controls to detect misstatements far more thoroughly than is possible during a limited assurance engagement.<sup>1164</sup>

Several commenters agreed with the proposed timing for phasing in the attestation requirement from limited to reasonable assurance.<sup>1165</sup> On the other hand, a number of commenters, including those that did not support requiring mandatory assurance, stated that the Commission should allow for a longer phase in period for the attestation requirements.<sup>1166</sup> One commenter stated

<sup>1162</sup> See letter from WFE. See also letter from Cleary Gottlieb (stating that because reporting and attestation practices are in the preliminary stages of development, it is premature to mandate that registrants obtain reasonable assurance).

<sup>1154</sup> See, e.g., letters from Financial Services Forum; and SIFMA.

<sup>1155</sup> See, e.g., letters from Alphabet et al.; IIB; Nareit (“Our members note that they are unaware of investors who have expressed concerns about their current attestation approach, which often provides limited assurance for the GHG reporting.”); and SIFMA (“As a general matter, we do not believe investors currently are pressing for assurance of GHG emissions data at any level of assurance, and certainly not at a reasonable assurance level.”).

<sup>1156</sup> See letter from Salesforce (stating that its costs would include, but would not be limited to, incremental headcount or consulting fees to enhance documentation over processes and controls, incremental investments in systems to track and monitor GHG emission data points, including headcount to implement and maintain such systems, and incremental costs to the third-party reviewer to complete a reasonable assurance review).

<sup>1157</sup> See, e.g., letters from AFPM; Can. Bankers (stating that the proposed requirements would require registrants to gather substantial data from third parties and it is not clear that third parties will have in places processes and procedures to generate data that would meet a reasonable assurance standard); Climate Risk Consortia; EMC; Financial Services Forum; ICI; INGAA; Nareit; NAM; PIMCO; Reinsurance AA; and SIFMA.

<sup>1158</sup> See, e.g., letters from Climate Risk Consortia (“Requiring reasonable assurance would impose immediate costs on registrants by requiring additional build-out of controls but provide little to no benefit for investors.”); Financial Services Forum; ICI; INGAA; NAM; Nareit; PIMCO; Reinsurance AA (stating that there would be significant initial and ongoing costs because reasonable assurance “is a very high level of assurance” that “involves significantly more examination, including the evaluation and testing of ICFR”); and SIFMA.

<sup>1159</sup> See letter from Business Roundtable. See also letter from AFPM (stating that the Commission “provided no evidence demonstrating that reasonable assurance would increase the reliability of disclosures above limited assurance, let alone that such benefits would outweigh additional costs, burdens, and risks.”).

<sup>1160</sup> See letter from AEM.

<sup>1161</sup> See letter from INGAA (stating that one member, for example, reports that more than 80% of its Scope 1 and 2 data are based on emissions factors or other forms of extrapolation, not actual measurements).

that delaying the phase in periods would provide time for assurance standard setters to “develop specialized assurance standards necessary for GHG emissions” and would provide them time to obtain necessary staff and resources, which could help to reduce costs for registrants.<sup>1167</sup> A few commenters stated that the phase in period should be accelerated.<sup>1168</sup> For example, one of these commenters stated that an accelerated phase in period was warranted given that various attestation providers are already offering limited, and in some cases, reasonable assurance of GHG emissions reporting.<sup>1169</sup>

Also related to timing, a number of commenters stated that the proposed timeline for attestation, which would require disclosure in annual reports, was impractical because it would not provide adequate time for registrants to prepare disclosures and for third-party providers to complete attestation procedures before the annual report is due.<sup>1170</sup> For example, one commenter stated that “[c]ompiling, reviewing, and publishing” GHG emissions data “as well as obtaining assurance” is a “significant undertaking that can extend

Size Bank; NMA; NRA/RLC (stating that the phase in of limited assurance should be extended by three years and the transition to reasonable assurance should be extended by six years); NRF; Nikola (recommending an additional two years of limited assurance for Scopes 1 and 2 emissions); Petrol. OK; and PGIM (supporting the proposal, but recommending registrants be given an additional year to comply).

<sup>1167</sup> See letter from BOA.

<sup>1168</sup> See, e.g., letters from Better Markets (“Again, while transition periods for new rules may be appropriate, particularly in the cases of new or novel requirements, such transition periods should not be solely justified by reducing costs or burdens for registrants.”); Center Amer. Progress (stating that five years to phase in reasonable assurance is “far too long” since many filers already disclose or at least track Scopes 1 and 2 emissions); and M. Hadick (stating that the timeline should be accelerated to require limited assurance in the first reporting year and reasonable assurance in the second reporting year).

<sup>1169</sup> See letter from Amer. for Fin. Reform, Evergreen Action *et al.*

<sup>1170</sup> See, e.g., letters from AEPC; AHLA; Alphabet *et al.*; APCIA; Barrick Gold; BPI; Business Roundtable; Chamber; Climate Risk Consortia; Dow Inc.; ITIC; NMA; NOIA; SEC Professionals (recommending that the Commission modify or re-purpose the current Commission Form SD which is currently filed no later than May 31st after the end of the issuer’s most recent calendar year, which would allow additional time to collect, quantify, validate and obtain assurance over GHG emissions); SIA; Trane; Travelers (stating that “Scope 1 and Scope 2 GHG emissions data is currently not available until about six months after the calendar year end” and noting that “is one of the reasons we provided our sustainability reports mid-year”); T. Rowe Price (recommending that Scope 1 and Scope 2 GHG emissions be disclosed in a furnished form due within 120-days of the fiscal year end, aligning with the timing of proxy statements); and Williams Cos.

a number of months beyond a registrant’s fiscal year end.”<sup>1171</sup> Another commenter stated that “[w]hile third party attestation is common” it was “concerned about the feasibility of obtaining assurance on the proposed timelines required to file on the Form 10–K.”<sup>1172</sup>

One commenter supported requiring any voluntary assurance obtained by AFs and LAFs after limited assurance is required to follow the same attestation requirements of Items 1505(b) through (d) as proposed.<sup>1173</sup> Several commenters stated that the Commission should adopt an attestation requirement for Scope 3 GHG emissions disclosures<sup>1174</sup> with some commenters suggesting limited assurance would be sufficient<sup>1175</sup> while others recommended phasing in reasonable assurance.<sup>1176</sup> On the other hand, a number of commenters stated that they did not support requiring attestation over Scope 3 emissions disclosures, with several pointing to the potential cost.<sup>1177</sup>

In the Proposing Release, the Commission explained that it did not propose definitions for the terms “limited assurance” and “reasonable assurance” because under prevailing attestation standards these are defined terms that the Commission believed were generally understood in the marketplace, both by those seeking and

<sup>1171</sup> See letter from ITIC.

<sup>1174</sup> See, e.g., letters from B. Gillespie; CalSTRS; Center Amer. Progress; CFA; CIEL; E. Kenny; ERM CVS; Evergreen (June 17, 2022); IATP; ICCR; NY City Comptroller; NY SIF; NY St. Comptroller; Oxfam America; PWYP; and Rick Love (Mar. 30, 2022) (“R. Love”).

<sup>1175</sup> See, e.g., letters from ANSI NAB (recommending the Commission allow a limited level of assurance engagement to be provided as per ISO 14064–3); Anthesis Grp. (recommending that limited assurance for material sources of Scope 3 emissions be phased in over the next five to ten years); B. Lab Global *et al.* (recommending the Commission phase in limited assurance for Scope 3 emissions); Morningstar (supporting requiring limited assurance for registrants with material Scope 3 emissions or with Scope 3 targets); and Salesforce.

<sup>1176</sup> See, e.g., A. Payton; Impossible Foods; M. Hadick (supporting reasonable assurance over Scope 3 emissions for large registrants); Praxis; Sens. E. Markey, *et al.* (recommending that the Commission require accelerated and large accelerated filers obtain limited and reasonable assurance over Scope 3 emissions on a phased in timeline); and US SIF.

<sup>1177</sup> See, e.g., letters from BC IM Corp.; Can. Bankers; CEMEX; CFA Institute; Climate Advisers; Ernst & Young (“We support the proposed approach of excluding Scope 3 GHG emissions from assurance requirements for all filers because the cost of compliance for registrants would likely outweigh the benefits to investors.”); Futurepast; JLL; JPN Bankers; J. McClellan; NAM; Nutrien; RSM US LLP; SIFMA; and WEA/USOGA.

those engaged to provide such assurance.<sup>1178</sup> The Commission included a request for comment asking if, instead, the Commission should define “limited assurance” and “reasonable assurance,” and if so, how it should define them.<sup>1179</sup> Several commenters recommended that the Commission include a definition of “limited assurance” and “reasonable assurance” in the final rules.<sup>1180</sup> One of these commenters explained that providing definitions would “reduce any confusion in the market” and “ensure those familiar with greenhouse gas accounting principles and third-party validation/verification for greenhouse gas inventories can more easily translate to either limited or reasonable assurance.”<sup>1181</sup> Other commenters recommended that the Commission provide guidance explaining the differences between limited assurance and reasonable assurance.<sup>1182</sup>

Some commenters stated that no definition is needed for these terms.<sup>1183</sup> For example, one commenter stated that it agreed that limited assurance and reasonable assurance are defined terms that are generally understood in the marketplace and therefore no definitions are needed.<sup>1184</sup> A few commenters stated that if the attestation standards are limited to those issued by the AICPA, IAASB, and the Public Company Accounting Oversight Board

<sup>1178</sup> See Proposing Release, section II.H.1.

<sup>1179</sup> See *id.*

<sup>1180</sup> See, e.g., letters from Amer. for Fin. Reform, Sunrise Project *et al.* (stating that the Commission should provide a definition for limited assurance to “establish a process more rigorous than currently used for assurance of quarterly SEC filings”); C2ES; ENGIE; ERM CVS; IECA (stating that the Commission should define these terms because it is “not clear what those terms mean in this context, nor how they relate to the standard GHG terms of ‘measured,’ ‘monitored,’ and ‘verified.’”); J. Weinstein; NASBA (stating that limited assurance and reasonable assurance should be defined in the proposal and noting that if “non-CPAs are permitted to perform these attestation services, then regulations must be developed to build the intellectual infrastructure . . . outside of the professional standards governing the public accounting profession”); and SCS Global.

<sup>1181</sup> See letter from C2ES.

<sup>1182</sup> See, e.g., letters from Ceres; ICCR (stating it would be helpful for the Commission to describe some minimum procedures that the auditor would be expected to utilize in performing a limited assurance engagement); and Morningstar.

<sup>1183</sup> See, e.g., letters from ABA (stating that definitions are not needed but recommending additional guidance for limited and reasonable assurance engagements); CFA Institute; Eni SpA; and Futurepast (stating that these terms are generally understood).

<sup>1184</sup> See letter from CFA Institute (stating that it did not support providing additional or alternative definitions for these terms because it was concerned this would cause confusion regarding other attestation engagements not covered by the proposed rules).

(“PCAOB”), no definitions are needed; however, if the standards are not so limited, then the SEC should define the terms in the final rule.<sup>1185</sup> One commenter stated that it believed assurance terms should be defined by assurance standard setters and not by the Commission.<sup>1186</sup>

In the Proposing Release, the Commission asked if it should require AFs and LAFs to provide a separate management assessment and disclosure of the effectiveness of controls over GHG emissions disclosure (separate from the existing requirements with respect to the assessment and effectiveness of DCP).<sup>1187</sup> Some commenters stated that the Commission should require a registrant to provide a separate assessment and disclosure of the effectiveness of controls over GHG emissions disclosure by management.<sup>1188</sup> One commenter stated that such a requirement would “further strengthen the validity of the data available.”<sup>1189</sup> Conversely, some commenters stated that the Commission

should not require registrants to provide a separate assessment and disclosure of the effectiveness of controls over GHG emissions disclosures.<sup>1190</sup> One commenter explained that current DCP requirements have proven to be effective and should suffice.<sup>1191</sup> Another commenter stated that the “cost of such an undertaking may not support the incremental benefit to investors.”<sup>1192</sup> Similarly, in the Proposing Release, the Commission asked whether, instead of, or in addition to, such management assessment, it should require the registrant to obtain an attestation report from a GHG emissions attestation provider that covers the effectiveness of such GHG emissions controls.<sup>1193</sup> Some commenters stated that the Commission should not require an attestation report from a GHG emissions provider that covers the effectiveness of such GHG emissions controls.<sup>1194</sup> One commenter questioned the value of a separate attestation report on controls at the moment because it does not believe

there is a “specific standard for . . . controls around non-financial data” that “takes into account the specific subject matter expertise needed in the internal control process.”<sup>1195</sup>

c. Final Rules (Item 1506)

After considering comments, we are adopting final rules (Item 1506(a)(1)) that require a registrant, including a foreign private issuer, that is required to provide Scope 1 and/or Scope 2 emissions disclosure pursuant to Item 1505 to include an attestation report covering the disclosure of its Scope 1 and/or Scope 2 emissions in the relevant filing.<sup>1196</sup> However, as discussed in greater detail below, we made a number of modifications to the proposal to address certain concerns raised by commenters.

Under the final rules, the attestation engagement must, at a minimum, be at the following assurance level for the indicated fiscal year for the required GHG emissions disclosure:<sup>1197</sup>

Filer type	Scopes 1 and 2 emissions disclosure compliance date	Limited assurance compliance date	Reasonable assurance compliance date
LAFs .....	Fiscal year 2026 .....	Fiscal year 2029 .....	Fiscal year 2033.
AFs (other than SRCs and EGCs)	Fiscal year 2028 .....	Fiscal year 2031 .....	N/A.

AFs (excluding SRCs and EGCs) and LAFs are required to obtain an attestation report under the final rules,<sup>1198</sup> consistent with the scope of registrants that are required to comply with the GHG emissions disclosure requirements in Item 1505.<sup>1199</sup> As illustrated in the table above, the final rules (Item 1506(a)(1)(i), (ii)) require both AFs and LAFs to obtain limited assurance beginning the third fiscal year after the compliance date for Item 1505; however, under the final rules (Item 1506(a)(1)(iii)), only LAFs are required to obtain an attestation report at a reasonable assurance level beginning

the seventh fiscal year after the compliance date for Item 1505.<sup>1200</sup> The final rules do not require an AF to obtain an attestation report at a reasonable assurance level. Consistent with the proposed rules, and with the lack of a requirement to disclose Scope 3 emissions under the final rules, no registrants will be required to obtain assurance over Scope 3 emissions under the final rules. Furthermore, as explained in greater detail below in section II.L.3, the final rules, including Item 1506, will not apply to a private company that is a party to a business combination transaction, as defined by

Securities Act Rule 165(f), involving a securities offering registered on Form S-4 or F-4.

As discussed above, a significant number of commenters supported the Commission’s proposal to require certain registrants to obtain mandatory assurance over GHG emissions disclosure.<sup>1201</sup> Many of these commenters agreed with the Commission that mandatory assurance would improve the accuracy, comparability, and consistency of registrants’ GHG emissions disclosure.<sup>1202</sup> As the Commission explained in the Proposing Release,

<sup>1185</sup> See, e.g., letters from CAQ (stating that the Commission should define “limited assurance” and “reasonable assurance” by reference to the standards of the AICPA and IAASB rather than developing alternative definitions); and KPMG.

<sup>1186</sup> See letter from Mazars (stating that definitions of “limited assurance” and “reasonable assurance” currently exist within AICPA and IAASB standards).

<sup>1187</sup> See Proposing Release, section II.H.1.

<sup>1188</sup> See, e.g., letters from B. Smith.; ERM CVS; and RSM US LLP.

<sup>1189</sup> See letter from B. Smith.

<sup>1190</sup> See, e.g., letters from CEMEX; CFA Institute (stating that the issue could be revisited by the Commission in the future); Grant Thornton; J. Herron; and PwC.

<sup>1191</sup> See letter from CEMEX. See also letter from PwC (“We believe that the overall certifications regarding DC&P are sufficient and do not recommend modifying such language to specifically refer to GHG or other climate disclosures more broadly.”).

<sup>1192</sup> See letter from Grant Thornton.

<sup>1193</sup> See Proposing Release, section II.H.1.

<sup>1194</sup> See, e.g., letters from CEMEX; CFA Institute (stating that the issue could be revisited by the Commission in the future); and Grant Thornton.

<sup>1195</sup> See letter from ERM CVS.

<sup>1196</sup> See 17 CFR 229.1506. Consistent with the Commission’s statement in the Proposing Release, in order to attest to Scopes 1 and/or 2 emissions disclosure, a GHG emissions attestation provider will need to include in its evaluation relevant contextual information. See Proposing Release, section II.H.1. In particular, under the final rules,

the attestation provider will be required to evaluate the registrant’s compliance with (i) Item 1505(a), which includes presentation requirements (e.g., disaggregation of any constituent gas if individually material), and (ii) the disclosure requirements in Item 1505(b) regarding methodology, organization boundary, and operational boundary. See *infra* section II.L.3.c for further discussion of the criteria against which the Scopes 1 and 2 emissions disclosure are measured or evaluated.

<sup>1197</sup> See *infra* section II.O.3 for a detailed discussion of compliance dates for the final rules.

<sup>1198</sup> See 17 CFR 229.1506(a).

<sup>1199</sup> See 17 CFR 229.1505. See also *supra* section II.H.3.

<sup>1200</sup> See 17 CFR 229.1506(a)(1).

<sup>1201</sup> See *supra* note 1105 and accompanying text.

<sup>1202</sup> See *supra* note 1106 and accompanying text.

obtaining assurance over GHG emissions disclosure provides investors with an additional degree of reliability regarding not only the figures that are disclosed, but also the key assumptions, methodologies, and data sources the registrant used to arrive at those figures.<sup>1203</sup> The Commission has long recognized the important role played by an independent auditor in contributing to the reliability of financial reporting.<sup>1204</sup> Studies suggest that investors have greater confidence in information that has been assured, particularly when it is assured at the reasonable assurance level,<sup>1205</sup> and that high quality audits reduce the cost of capital,<sup>1206</sup> which may benefit both registrants and investors. Similarly, studies of ESG-related assurance, which is typically provided at a limited assurance level, have found benefits such as credibility enhancement, lower cost of equity capital, and lower analyst forecast errors and dispersion.<sup>1207</sup> The benefits that assurance will provide in terms of investor protection and increased confidence in GHG emissions disclosure warrants requiring attestation.<sup>1208</sup> That said, we recognize commenters' concerns about the potential cost of obtaining assurance, the potential shortage in the current supply of assurance providers, and the continually evolving state of assurance standards and methodologies.<sup>1209</sup> As

discussed below, we have made modifications in the final rules to mitigate these concerns.

We considered the view expressed by some commenters that there is no reason to treat GHG emissions disclosures differently than other disclosures located outside of the financial statements, which do not require assurance.<sup>1210</sup> Although we recognize that registrants may provide quantitative disclosure outside of the financial statements that is not subject to any assurance requirement, as explained in the Proposing Release,<sup>1211</sup> and consistent with the feedback provided by commenters,<sup>1212</sup> GHG emissions disclosures are unique in that many companies currently voluntarily seek third-party assurance over their climate-related disclosures, and commenters, including investors, have expressed a particular need for assurance over GHG emissions disclosures. Current voluntary assurance practices have been varied and this fragmentation has diminished the comparability of assurance provided. Prescribing a minimum level of assurance required for AFs and LAFs over their Scope 1 and/or Scope 2 emissions in the final rules, along with minimum requirements for the GHG emissions attestation provider and the engagement, will enhance comparability and consistency with respect to assurance over GHG emissions disclosures.

A few commenters stated that it is unnecessary to mandate assurance because there are existing incentives for accuracy in connection with corporate disclosures, such as the Commission staff's filing review process or the possibility of Commission enforcement actions or private litigation.<sup>1213</sup> While it is true that there are existing incentives for companies to provide accurate information to investors, these incentives do not provide the same benefits that assurance will provide under the final rules. Although the desire to avoid an enforcement action or private litigation has a deterrent effect on registrants, such proceedings generally serve to adjudicate claims after investors have allegedly received inaccurate or misleading disclosures. In contrast, the assurance requirement in the final rules will require an independent third-party to provide a check on the accuracy and completeness of a registrant's GHG emissions

disclosure before the information is provided to investors, which as explained above, will likely result in additional benefits such as lower cost of equity capital and lower analyst forecast errors.<sup>1214</sup> Furthermore, although the Commission staff's filing review process serves a valuable compliance function that contributes to investor protection, it is not designed to provide assurance, and certainly not for every filing. We note that, despite the existence and benefits of the filing review process, the Commission requires annual financial statements to be audited and has adopted other rules requiring an expert to review and provide conclusions on other specialized quantitative data that is provided outside of the financial statements to enhance its reliability.<sup>1215</sup>

Several commenters raised concerns about registrants' ability to obtain assurance over GHG emissions disclosure in light of the level of judgment, estimation, or uncertainty that would be involved in calculating GHG emissions data.<sup>1216</sup> While we acknowledge these concerns, we note that a number of registrants have voluntarily obtained either limited or reasonable assurance over their GHG emissions data, which shows that the practice is feasible.<sup>1217</sup> And although there are differences between a financial statement audit and an assurance engagement over GHG emissions, registered public accounting firms regularly must provide assurance over financial statement amounts that are

subject to significant judgment, estimates, or assumptions or that rely upon information received from a third party. We acknowledge that auditing standards for financial statement audits are more established after decades of development and required use than attestation standards and practices for GHG emissions. Nevertheless, as noted above, the practice of providing assurance over GHG emissions is far from nascent and is now expected by many market participants.<sup>1218</sup>

Several commenters urged the Commission to adopt the verification process for GHG reporting used by the EPA in lieu of the proposed assurance requirements.<sup>1219</sup> Although we considered the EPA's multi-step verification process, given the differences in the Commission's and EPA's reporting requirements, the different purposes of the Commission's and EPA's respective regulatory regimes, and the benefits of third-party assurance, we determined that independent, third-party assurance is a more appropriate model for the final rules.<sup>1220</sup>

<sup>1218</sup> As discussed above, a number of jurisdictions have undertaken efforts to obtain more consistent, comparable, and reliable climate-related information for investors, *see supra* section II.A.3, with certain jurisdictions requiring the disclosure of GHG emissions data along with assurance. *See* Directive (EU) 2022/2464 of the European Parliament and of the Council of 14 December 2022 amending Regulation (EU) No 537/2014, Directive 2004/109/EC, Directive 2006/43/EC and Directive 2013/34/EU, as regards corporate sustainability reporting (Text with EEA relevance), available at [https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=uriserv%3AOJ.L\\_.2022.322.01.0015.01.ENG](https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=uriserv%3AOJ.L_.2022.322.01.0015.01.ENG) (requiring companies within its jurisdiction to obtain limited assurance over sustainability reporting and stating that the European Commission will perform an assessment to determine if moving from limited to reasonable assurance is feasible for both auditors and companies); SB–253, *Climate Corporate Data Accountability Act* (Oct. 7, 2023), available at [https://leginfo.ca.gov/faces/billNavClient.xhtml?bill\\_id=202320240SB253](https://leginfo.ca.gov/faces/billNavClient.xhtml?bill_id=202320240SB253) (requiring the California state board to develop and adopt regulations requiring the disclosure of GHG emissions and accompanying assurance engagements beginning with limited assurance and transitioning to reasonable assurance). In addition, the IAASB issued an exposure draft on Proposed International Standard on Sustainability Assurance 5000. *See* Proposed International Standard on Sustainability Assurance (ISSA) 5000, General Requirements for Sustainability Assurance Engagements (Exposure Draft) (Aug. 2, 2023), available at <https://www.iasb.org/publications/proposed-international-standard-sustainability-assurance-5000-general-requirements-sustainability> (proposing assurance standards for both reasonable and limited assurance engagements).

<sup>1219</sup> *See supra* note 1126 and accompanying text.

<sup>1220</sup> For a summary of the EPA's multi-step verification process, which includes verification performed by the EPA itself, *see* EPA Fact Sheet *supra* note 1126. *See also* EPA, Greenhouse Gas Reporting Program Report Verification, available at [https://www.epa.gov/sites/default/files/2017-12/documents/ghgp\\_verification\\_factsheet.pdf](https://www.epa.gov/sites/default/files/2017-12/documents/ghgp_verification_factsheet.pdf). The

Some commenters urged the Commission to wait before determining whether to adopt a mandatory attestation requirement for GHG emissions or to adopt final rules that permit registrants to disclose whether they voluntarily obtained attestation and related details instead of mandating assurance.<sup>1221</sup> We agree with commenters that requiring registrants to disclose whether they obtained voluntary assurance and related details would help those investors that invest in companies that decide to voluntarily obtain assurance understand whether the attestation obtained has enhanced the reliability of the GHG emissions disclosure, which is why we have included a requirement in the final rules for registrants that are not subject to Item 1505 to provide certain disclosure if they voluntarily obtain assurance over any voluntary GHG emissions disclosure included in Commission filings.<sup>1222</sup> However, requiring AFs and LAFs to obtain assurance over their Scope 1 and/or Scope 2 emissions disclosure in accordance with the final rules will result in more investors receiving the important benefits of assurance, including increased confidence in the reliability of, and an improved ability to make informed investment decisions based on, assured GHG emissions disclosures, which, as discussed above, provide investors with information for assessing a registrant's business, results of operations, and financial condition.<sup>1223</sup> As discussed in greater detail below, the assurance requirements in the final rules are narrowly tailored and limited to a subset of registrants, many of which already obtain assurance services with respect to their GHG emissions disclosures. In addition, we disagree with those commenters that suggested we wait before determining whether to adopt a mandatory attestation requirement for GHG emissions.<sup>1224</sup> The phase in periods included in the final rules should mitigate the concerns of commenters that stated the Commission should wait in order to give registrants

comment letter submitted by the EPA notes distinctions in reporting requirements between the Commission's proposed rules and the EPA's GHGRP, including that the Commission's proposal covers publicly traded companies (domestic and international) regardless of their emissions level, while the EPA's GHGRP covers facilities and GHG and fuel suppliers (located in the U.S. and its territories) that fall into one or more of forty-one industrial categories and that, in general, emit or supply 25,000 metric tons CO<sub>2</sub> equivalent or more. *See* letter from EPA.

<sup>1221</sup> *See supra* notes 1131 and 1132 and accompanying text.

<sup>1222</sup> *See infra* section III.5.

<sup>1223</sup> *See supra* section II.H.3.a.

<sup>1224</sup> *See supra* note 1131 and accompanying text.

and GHG emissions attestation providers more time to prepare for assurance, or to allow more time for attestation standards or guidance to develop.

Consistent with the proposal, the final rules will apply the attestation requirements to AFs and LAFs.<sup>1225</sup> However, in a shift from the proposal, the final rules will exempt SRCs and EGCs from the requirement to obtain an attestation report.<sup>1226</sup> Although some commenters urged the Commission to apply the final rules to all registrants,<sup>1227</sup> not just AFs and LAFs, our decision to exempt SRCs and EGCs from the assurance requirement is driven by our decision to exempt these companies from the requirement to disclose GHG emissions, which is discussed in greater detail above.<sup>1228</sup> Since SRCs and EGCs will not be required to disclose GHG emissions, they also will not be required to obtain assurance.

Under the final rules, AFs and LAFs will be required to obtain limited assurance over their GHG emissions disclosure beginning the third fiscal year after the compliance date for Item 1505 (the GHG emissions disclosure provision).<sup>1229</sup> LAFs will be required to obtain reasonable assurance over their GHG emissions disclosure beginning the seventh fiscal year after the compliance date for Item 1505.<sup>1230</sup> In a change from the proposal, AFs will *not* be required to scale up to reasonable assurance under the final rules. Although we agree with those commenters that stated that reasonable assurance would provide investors with increased confidence that a registrant's GHG emissions disclosure is reliable, as compared to limited assurance,<sup>1231</sup> we have determined that it is appropriate to apply the reasonable assurance requirement to a more limited pool of registrants—LAFs—at this time because some LAFs are already collecting and disclosing climate-related information, including GHG emissions data,<sup>1232</sup> and larger issuers generally

<sup>1225</sup> *See* 17 CFR 229.1506(a).

<sup>1226</sup> SRCs and EGCs that qualified as AFs would have been included within the scope of AFs subject to the requirement to obtain an attestation report under the proposed rules.

<sup>1227</sup> *See supra* note 1135 and accompanying text.

<sup>1228</sup> *See supra* section II.H.3.

<sup>1229</sup> *See* 17 CFR 229.1506(a)(1)(i), (ii).

<sup>1230</sup> *See* 17 CFR 229.1506(a)(1)(iii).

<sup>1231</sup> *See, e.g.,* letter from GRI.

<sup>1232</sup> According to one study, 99% of S&P 500 companies reported ESG information in 2021 and 65% of such companies reported obtaining assurance over some ESG information. *See* CAQ, *S&P 500 and ESG Reporting* (updated June 2023), available at <https://www.thecaq.org/sp-500-and-esg-reporting>. In addition, according to the study, over 63% of S&P 500 companies reported obtaining

bear proportionately lower compliance costs than smaller issuers due to the fixed cost components of such compliance. This scaled approach will avoid increasing compliance burdens for AFs that may be smaller or less sophisticated issuers.

We considered whether to require LAFs to obtain an attestation report at a reasonable assurance level from the start as suggested by some commenters.<sup>1233</sup> However, most registrants that are voluntarily obtaining assurance today obtain limited assurance rather than reasonable assurance,<sup>1234</sup> and therefore a transition period is appropriate to give LAFs and GHG emissions attestation providers time to prepare for the higher level of assurance. In contrast to some commenters' suggestion that obtaining reasonable assurance would be impractical,<sup>1235</sup> we note that some registrants have voluntarily obtained reasonable assurance over their GHG emissions disclosure.<sup>1236</sup> In addition, one commenter stated that it agreed with the Commission's statement in the Proposing Release that limited assurance is not possible unless the assurance provider also believes reasonable assurance is possible on the subject matter.<sup>1237</sup>

We recognize that obtaining reasonable assurance over GHG emissions disclosure will be more costly than obtaining limited assurance because the scope of work in a limited assurance engagement is substantially

assurance specifically over some portion of their GHG emissions disclosures. *See id.* Based on an analysis by Commission staff on Feb. 29, 2024, a substantial number of the S&P 500 companies (494) are LAFs.

<sup>1233</sup> See *supra* note 1145 and accompanying text.

<sup>1234</sup> See CAQ, *S&P 500 and ESG Reporting* (Updated June 2023), available at <https://www.thecaq.org/sp-500-and-esg-reporting> (stating that in 2021 most companies that obtained assurance from public company auditors and other providers opted for limited assurance).

<sup>1235</sup> See, e.g., letter from INGA.

<sup>1236</sup> See *supra* note 1217.

<sup>1237</sup> See letter from ERM CVS. As the Commission explained in the Proposing Release, under commonly used attestation standards, both a reasonable assurance engagement and a limited assurance engagement have the same requirement that the subject matter (e.g., Scope 1 and Scope 2 emissions) of the engagement be appropriate as a precondition for providing assurance. Thus, if the subject matter is appropriate for a limited assurance engagement, it is also appropriate for a reasonable assurance engagement. *See* Proposing Release, section II.H.1 *See also*, e.g., AICPA SSAE No. 18, Attestation Standards, available at <https://us.aicpa.org/content/dam/aicpa/research/standards/auditattest/downloadabledocuments/ssae-no-18.pdf>; and IAASB ISAE 3000 (Revised), Assurance Engagements Other than Audits or Reviews of Historical Financial Information, available at [https://www.ifac.org/\\_flysystem/azure-private/publications/files/ISAE%203000%20Revised%20-%20for%20IAASB.pdf](https://www.ifac.org/_flysystem/azure-private/publications/files/ISAE%203000%20Revised%20-%20for%20IAASB.pdf).

less than the scope of work in a reasonable assurance engagement. The primary difference between the two levels of assurance relates to the nature, timing, and extent of procedures required to obtain sufficient, appropriate evidence to support the limited assurance conclusion or reasonable assurance opinion. For example, in a limited assurance engagement, the procedures performed by attestation providers are generally limited to analytical procedures and inquiries,<sup>1238</sup> but in a reasonable assurance engagement, they are also required to perform risk assessment and detail testing procedures to respond to the assessed risk.<sup>1239</sup> However, the outcome of a reasonable assurance engagement results in positive assurance (e.g., the provider forms an opinion about whether the registrant's GHG emissions disclosures are in accordance with Item 1505 in all material respects) while the outcome of a limited assurance engagement results in negative assurance (e.g., the provider forms a conclusion about whether it is aware of any material modifications that should be made to the disclosures for it to be in accordance with Item 1505). Therefore, we agree with those commenters that stated reasonable assurance will provide greater value to investors because at the reasonable assurance level, investors receive more reliable information about GHG emissions.<sup>1240</sup> Registrants may also benefit from providing disclosures subject to a reasonable assurance level because such assurance enhances investor confidence in the disclosures, and as a result, may lower the cost of capital for registrants.<sup>1241</sup>

As explained above, LAFs are best positioned to bear the increased costs of obtaining reasonable assurance. Such costs are justified for these registrants by the benefits that investors and registrants will receive in the form of positive assurance, which makes it more likely that material errors or omissions are detected and is consistent with the Commission's investor protection mission. In light of the significant phased in compliance period that LAFs will have before reasonable assurance is required, we expect that registrants will incur these costs over several years, which should make the burden easier to bear in any particular year. We also expect that during the significant

<sup>1238</sup> See, e.g., AICPA SSAE No. 18, AT-C § 105.A14.

<sup>1239</sup> See, e.g., AICPA SSAE No. 18, AT-C § 205.18.

<sup>1240</sup> See *supra* note 1145 and accompanying text.

<sup>1241</sup> See letter from Anthesis Grp. *See also supra* note 1207.

phased in compliance period new assurance providers will enter the market and any resulting increase in competition will lead to relative reductions in the costs of providing those services over time.<sup>1242</sup>

We considered whether it would be appropriate to wait to make a determination about whether LAFs should be required to scale up to reasonable assurance, but decided against such an approach because the benefits of obtaining reasonable assurance are apparent now<sup>1243</sup> and we do not expect those to change in the future, while our decision to limit the reasonable assurance requirement to a narrower scope of registrants and to provide a significant transition period will help address the concerns raised by commenters. We also considered the suggestion by one commenter that the Commission initially require registrants to obtain reasonable assurance, followed by limited assurance engagements to the extent the first year's attestation report included no qualifications; however, for the reasons stated above, the scaled approach, starting with limited assurance and subsequently moving to reasonable assurance, will allow LAFs time for their processes and controls to mature before being subject to the higher level of assurance. It will also provide attestation service providers that do not currently provide assurance over GHG emissions disclosure with additional time to familiarize themselves with providing assurance over such disclosure, which, as noted above, should facilitate additional competition between assurance

<sup>1242</sup> See letter from Futurepast (expressing the view that the existence of a larger pool of potential GHG emissions attestation providers will enhance competition and likely result in lower costs to registrants). In addition, as discussed in greater detail below in Sections II.I.2.c and 3.c., we expect that registrants' ability to hire a non-accounting firm as a GHG emissions attestation provider and our decision to make certain modifications to the proposed requirements applicable to the GHG emissions attestation engagement should help address concerns about the supply of GHG emissions attestation providers.

<sup>1243</sup> See *supra* note 1193; Brandon Gipper, et al., *Carbon Accounting Quality: Measurement and the Role of Assurance* (Nov. 2023), available at <https://ssrn.com/abstract=4627783> (concluding that reasonable assurance improves carbon accounting quality more than limited assurance). *See also* letters from GRI ("Reasonable assurance should be adopted as this would be commensurate with the level of assurance provided through statutory audits of financial statements and will give information users increased confidence that the reported information is prepared in accordance with stated criteria."); and PWYP ("Given the importance of GHG emissions data to enable investors to fully understand the climate-related risks of issuers, reasonable assurance is necessary to ensure that information is subjected to sufficient examination and verification such that it can be relied on by investors.").

providers and further help decrease costs of compliance.

A number of commenters recommended that the Commission extend the phase in periods in the final rules because the proposed compliance schedule would have been too challenging for registrants to meet.<sup>1244</sup> We agree with commenters that extending the phase in periods would provide registrants and GHG emissions attestation providers with additional time to prepare for implementation of the rules and would allow assurance standards and practices applicable to GHG emissions to further evolve while balancing investors' need for the information. Therefore, as compared to the proposal, the final rules provide AFs and LAFs with additional time before they are required to comply with the GHG emissions assurance requirements in addition to the phased in GHG emissions compliance dates.<sup>1245</sup> Providing two phased in compliance dates—one before registrants are required to comply with the GHG emissions disclosure requirements and another before registrants are required to comply with the assurance requirements—will allow registrants and assurance providers to gain experience with the new rules before assurance is required.

Commenters expressed a variety of views about whether the Commission should define the terms “limited assurance” and “reasonable assurance” in the final rules. Some commenters stated that definitions or guidance could be helpful or reduce any potential confusion,<sup>1246</sup> while other commenters stated that no definition is needed.<sup>1247</sup> We have determined not to include definitions of “limited assurance” and “reasonable assurance” in the final rules because we agree with the commenters that stated that this terminology is generally well understood<sup>1248</sup> and should be defined by assurance standard setters and not by the Commission.<sup>1249</sup> As we explained in the

Proposing Release, “limited assurance” and “reasonable assurance” are currently defined by the prevailing attestation standards.<sup>1250</sup> Furthermore, we expect the description of the work performed as a basis for the assurance provider's conclusion on the GHG emissions attestation engagement to be included in any assurance report issued pursuant to the final rules, which should facilitate investors' understanding of the nature of the limited or reasonable assurance engagement.<sup>1251</sup>

One commenter asked the Commission to clarify how the terms “limited assurance” and “reasonable assurance” relate to the “standard GHG terms of ‘measured,’ ‘monitored,’ and ‘verified.’”<sup>1252</sup> It is our general understanding that “measured,” “monitored,” and “verified” are terms commonly used in the marketplace to describe the process for calculating and reporting GHG emissions data.<sup>1253</sup> Although such a process could share some similarities with the steps GHG emission attestation providers undertake during the course of an assurance engagement, such a process is distinct from the assurance required by the final rules, which must be performed in accordance with a standard that meets the requirements detailed below. Another commenter urged the Commission to provide a definition of limited assurance that establishes “a process more rigorous than currently used for assurance of quarterly SEC filings.”<sup>1254</sup> However, doing so would potentially result in the Commission's definition of limited

assurance being different from, or conflicting with, the definitions included in the prevailing attestation standards that we expect many GHG emissions attestation providers will use, which could cause confusion.

As discussed above, the final rules provide that any GHG emissions metrics required to be disclosed pursuant to Item 1505 in an annual report filed with the Commission on Form 10-K may be incorporated by reference from the registrant's Form 10-Q for the second fiscal quarter in the fiscal year immediately following the year to which the GHG emissions disclosure relates, or may be included in an amended annual report on Form 10-K no later than the due date for such Form 10-Q.<sup>1255</sup> The extension of the deadline for the filing of GHG emissions metrics also applies to the deadline for the filing of an attestation report, which should accompany the GHG emissions disclosure to which the report applies.<sup>1256</sup> This additional time—an additional two fiscal quarters—should provide registrants subject to Item 1505 and their GHG emissions attestation providers with sufficient time to measure GHG emissions, provide assurance, and prepare the required attestation report. Consistent with the notice requirements included in Item 1505(c), the final rules (Item 1506(f)) provide that a registrant that elects to incorporate by reference its attestation report from its Form 10-Q for the second fiscal quarter or to provide its attestation report in an amended annual report must include an express statement in its annual report indicating its intention to either incorporate by reference the attestation report from a quarterly report on Form 10-Q or amend its annual report to provide the attestation report by the due date specified in Item 1505.<sup>1257</sup>

<sup>1255</sup> See 17 CFR 220.1505(c)(1). If the registrant is a foreign private issuer, the final rules provide that its GHG emissions disclosure may be included in an amendment to its annual report on Form 20-F, which shall be due no later than 225 days after the end of the fiscal year to which the GHG emissions disclosure relates. See *id.* See also *supra* section II.H.3.

<sup>1256</sup> See 17 CFR 229.1506(f).

<sup>1257</sup> See *id.*

<sup>1250</sup> See Proposing Release, section II.H.1. See also, e.g., AICPA SSAE No. 18, AT-C § 105.10 and IAASB ISAE 3000 (Revised) § 12(a)(i).

<sup>1251</sup> See, e.g., IAASB ISAE 3000 (Revised) § 69(k).

<sup>1252</sup> See letter from IECA.

<sup>1253</sup> For example, the draft interagency report entitled, “Federal Strategy to Advance Greenhouse Gas Measurement and Monitoring for the Agriculture and Forest Sectors (Strategy),” states that “Measurement, Monitoring, Reporting, and Verification (MMRV) refers to activities undertaken to quantify GHG emissions and sinks (through direct measurement and/or modeling), monitor emission over time, verify estimates, and synthesize and report on findings.” See *Federal Strategy to Advance Measurement and Monitoring Greenhouse Gas Measurement and Monitoring for the Agriculture and Forest Sectors*, 88 FR 44251 (July 12, 2023).

<sup>1254</sup> See *supra* note 1180.

<sup>1244</sup> See *supra* note 1166 and accompanying text.

<sup>1245</sup> See 17 CFR 229.1506(a). See also *infra* section II.O.3 for further discussion of the compliance dates for the final rules.

<sup>1246</sup> See *supra* note 1180 and accompanying text.

<sup>1247</sup> See *supra* note 1183 and accompanying text.

<sup>1248</sup> See letter from CFA Institute.

<sup>1249</sup> See letter from Mazars.

The proposed rules would have required the attestation report to be included in the separately captioned “Climate-Related Disclosure” section in the relevant filing.<sup>1258</sup> However, as discussed above, the final rules leave the placement of climate-related disclosures, other than the financial statement disclosures, largely up to each registrant.<sup>1259</sup> As such, a registrant will not be required to include the attestation report in a separately captioned “Climate-Related Disclosure” section, although it may elect to do so.<sup>1260</sup>

Consistent with the proposed rules, during the phased in compliance period when limited assurance is required for LAFs, the final rules (Item 1506(a)(1)(ii)) permit an LAF, at its option, to obtain reasonable assurance of its Scope 1 and/or 2 emissions disclosure.<sup>1261</sup> Similarly, the final rules (Item 1506(a)(1)(i)) permit an AF, at its option, to obtain reasonable assurance of its Scope 1 and/or 2

emissions disclosure. In addition, at its option, a registrant that is subject to the assurance requirements would be able to obtain any level of assurance over its GHG emissions disclosures that are not required to be assured pursuant to Item 1506(a).<sup>1262</sup> For filings made after the compliance date for the GHG emissions disclosure requirements but before Item 1506(a) requires limited assurance, a registrant would only be required to provide the disclosure called for by Item 1506(e).<sup>1263</sup> For filings made after the compliance date for assurance required by Item 1506(a), to avoid potential confusion, the additional, voluntary assurance obtained by such filer would be required to follow the requirements of Items 1506(b) through (d), including using the same attestation standard as the required assurance over Scope 1 and/or Scope 2 emissions, which was supported by one commenter.<sup>1264</sup> Although in the Proposing Release, the requirements outlined in this paragraph

would have applied to any climate-related disclosures not subject to assurance under Item 1506(a),<sup>1265</sup> we have narrowed the scope of the final rule to apply only to GHG emissions disclosures that are not required to be assured under Item 1506(a) because, given the modifications in the final rule, we think it is unlikely that registrants will voluntarily obtain assurance over non-GHG emissions disclosure for which the disclosure required by 1506(e) would be useful to investors.<sup>1266</sup> Therefore, to reduce the complexity of the final rules, we are streamlining it in this way. In addition, as discussed below in section II.I.5, a registrant that is not subject to Item 1505 but that voluntarily discloses GHG emissions information and voluntarily obtains assurance will be required to comply only with Item 1506(e), if applicable.

For ease of reference, we have included a table reflecting the application of these requirements:

	After the compliance date for GHG emissions disclosure but before the compliance date for assurance	After the compliance date for assurance
LAFs and AFs subject to Items 1505 and 1506(a) through (d) (e.g., registrants that are required to disclose GHG emissions and obtain assurance).	Any voluntary assurance over any GHG emissions disclosure must comply with the disclosure requirements in Item 1506(e).	Any voluntary assurance obtained over GHG emissions disclosures that are not required to be assured pursuant to Item 1506(a) (e.g., voluntary Scope 3 disclosures) must follow the requirements of Item 1506(b) through (d), including using the same attestation standard as the registrant’s required assurance over Scope 1 and/or Scope 2 disclosure.
Registrants not subject to Items 1505 or 1506(a) through (d) (e.g., registrants that are not required to disclose GHG emissions).	Any voluntary assurance over any GHG emissions disclosure must comply with the disclosure requirements in Item 1506(e).	Any voluntary assurance over any GHG emissions disclosure must comply with the disclosure requirements in Item 1506(e).

2. GHG Emissions Attestation Provider Requirements

a. Proposed Rules

The proposed rules would have required the GHG emissions attestation report required by proposed Item 1505(a) for AFs and LAFs to be prepared and signed by a GHG emissions attestation provider.<sup>1267</sup> The proposed rules would have defined a GHG emissions attestation provider to mean a

person or firm that has all the following characteristics:

- Is an expert in GHG emissions by virtue of having significant experience in measuring, analyzing, reporting, or attesting to GHG emissions. Significant experience means having sufficient competence and capabilities necessary to:
  - Perform engagements in accordance with professional standards and

applicable legal and regulatory requirements; and

- Enable the service provider to issue reports that are appropriate under the circumstances.
    - Is independent with respect to the registrant, and any of its affiliates,<sup>1268</sup> for whom it is providing the attestation report, during the attestation and professional engagement period.<sup>1269</sup>
- The Commission explained that the proposed expertise requirement was

<sup>1258</sup> See Proposing Release, section II.H.3.

<sup>1259</sup> See *supra* section II.A.3.

<sup>1260</sup> See *id.* for further discussion of presentation requirements for GHG emissions disclosure under the final rules.

<sup>1261</sup> See Proposing Release, section II.H.1.

<sup>1262</sup> Scope 1 and/or Scope 2 emissions disclosures are required to be assured pursuant to Item 1506(a). As noted above, no registrants are required to provide Scope 3 GHG emissions disclosures; however, a registrant may choose to provide such disclosure voluntarily.

<sup>1263</sup> See 17 CFR 229.1506(a)(3).

<sup>1264</sup> See letter from Amer. for Fin. Reform, Sunrise Project *et al.*; 17 CFR 229.1506(a)(3). For

example, if an LAF was required to obtain reasonable assurance over its Scope 1 and/or Scope 2 emissions disclosure and the attestation provider chose to follow, for example, the AICPA attestation standards, the LAF could voluntarily obtain limited assurance over any voluntary Scope 3 GHG emissions disclosure, and the attestation provider would be required to follow the AICPA’s attestation standard for providing limited assurance.

<sup>1265</sup> See Proposing Release, section II.H.1.

<sup>1266</sup> See 17 CFR 229.1506(a)(3).

<sup>1267</sup> See Proposing Release, section II.H.2.

<sup>1268</sup> See *id.* Proposed Item 1505(b)(2)(iii) stated that the term “affiliates” has the meaning provided in 17 CFR 210.2–01, except that references to

“audit” are deemed to be references to the attestation services provided pursuant to this section.

<sup>1269</sup> See Proposing Release, section II.H.2. Proposed Item 1505(b)(2)(iv) stated that the term “attestation and professional engagement period” means the period covered by the attestation report and the period of the engagement to attest to the registrant’s GHG emissions or to prepare a report filed with the Commission. The professional engagement period begins when the GHG attestation service provider either signs an initial engagement letter (or other agreement to attest a registrant’s GHG emissions) or begins attest procedures, whichever is earlier.

intended to help ensure that the service provider preparing the attestation report has sufficient competence and capabilities necessary to execute the attestation requirement.<sup>1270</sup> If the service provider is a firm, the Commission stated it would expect that the firm has policies and procedures designed to provide it with reasonable assurance that the personnel selected to conduct the GHG emissions attestation engagement have sufficient experience with respect to both attestation engagements and GHG disclosure. This would mean that the service provider has the qualifications necessary for fulfillment of the responsibilities that it would be called on to assume, including the appropriate engagement of specialists, if needed.<sup>1271</sup> The Commission explained that the proposed expertise requirement would have applied to the person or the firm signing the GHG emissions attestation report.<sup>1272</sup>

The proposed requirement related to independence was modeled on the Commission's qualifications for accountants under 17 CFR 210.2-01 ("Rule 2-01 of Regulation S-X"), which are designed to ensure that auditors are independent of their audit clients.<sup>1273</sup> The Commission explained that similar to how assurance provided by independent public accountants improves the reliability of the financial statements and disclosures and is a critical component of our capital markets, assurance of GHG emissions disclosure by independent service providers should also improve the reliability of such disclosure.<sup>1274</sup> The Commission stated that academic studies demonstrate that assurance provided by an independent auditor reduces the risk that an entity provides materially inaccurate information to external parties, including investors, by facilitating the dissemination of transparent and reliable financial information.<sup>1275</sup> The Commission explained that it expected that GHG emissions disclosure would similarly benefit if assured by an independent service provider.<sup>1276</sup>

Similar to Rule 2-01 of Regulation S-X,<sup>1277</sup> the proposed rules provided that a GHG emissions attestation provider is not independent if, during the attestation and professional engagement period, such attestation provider is not, or a reasonable investor with knowledge of all relevant facts and circumstances would conclude that such attestation provider is not, capable of exercising objective and impartial judgment on all issues encompassed within the attestation provider's engagement.<sup>1278</sup> The proposed rules further stated that, in determining whether a GHG emissions attestation provider is independent the Commission would consider:

- Whether a relationship or the provision of a service creates a mutual or conflicting interest between the attestation provider and the registrant (or any of its affiliates), places the attestation provider in the position of attesting to such attestation provider's own work, results in the attestation provider acting as management or an employee of the registrant (or any of its affiliates), or places the attestation provider in a position of being an advocate for the registrant (or any of its affiliates); and

- All relevant circumstances, including all financial or other relationships between the attestation provider and the registrant (or any of its affiliates), and not just those relating to reports filed with the Commission.<sup>1279</sup>

These proposed provisions were modeled on the factors used by the Commission in determining whether an accountant is independent.<sup>1280</sup> The Commission explained that similar to Rule 2-01 of Regulation S-X, the proposed provisions should help protect investors by requiring the GHG emissions attestation provider to be independent both in fact and appearance from the registrant, including its affiliates.<sup>1281</sup>

The Commission also explained that because the GHG emissions attestation provider would be a person whose profession gives authority to the statements made in the attestation

report and who is named as having provided an attestation report that is part of the registration statement, the registrant would be required to obtain and include the written consent of the GHG emissions attestation provider pursuant to Securities Act section 7,<sup>1282</sup> the corresponding rule requiring the written consents of such experts,<sup>1283</sup> and the Regulation S-K provision requiring the attachment of the written consent of an expert to a Securities Act registration statement or Exchange Act report that incorporates by reference a written expert report attached to a previously filed Securities Act registration statement.<sup>1284</sup> The GHG emissions attestation provider would also be subject to liability under the Federal securities laws for the attestation conclusion or, when applicable, opinion provided.<sup>1285</sup> The Commission explained that such liability should encourage the attestation service provider to exercise due diligence with respect to its obligations under a limited or reasonable assurance engagement.<sup>1286</sup>

#### b. Comments

A number of commenters supported the proposed rules' requirement for a registrant to obtain a GHG emissions attestation report that is provided by a GHG emissions attestation provider that meets specified requirements.<sup>1287</sup> A number of commenters stated that they agreed with the approach taken in the proposed rules not to limit eligible GHG emissions attestation providers to only accounting firms.<sup>1288</sup> Several commenters stated that non-accounting firms may have expertise that would be relevant to providing assurance over

<sup>1282</sup> 15 U.S.C. 77g.

<sup>1283</sup> See 17 CFR 230.436.

<sup>1284</sup> See Proposing Release, section II.H.2. See also 17 CFR 229.601(b)(23).

<sup>1285</sup> As explained above, a limited assurance engagement results in a conclusion that no material modification is needed and a reasonable assurance engagement results in an opinion. See *supra* notes 1090 and 1091.

<sup>1286</sup> See Proposing Release, section II.H.2.

<sup>1287</sup> See, e.g., letters from BOA; Bureau Veritas; CII; Crowe; ERM CVS; Ernst & Young LLP; Futurepast; ICAEW ("Third party assurance providers should comply with a professional framework encompassing competence, independence and a system of quality management."); ICI; LRQA; MFA; Morningstar; and TotalEnergies.

<sup>1288</sup> See letter from ABA; Beller *et al.*; Bureau Veritas; Ceres; CFA Institute; Chevron; Climate Risk Consortia; ERM; Futurepast; J. Herron; J. McClellan ("Practically, many accounting firms will seek to hire subject matter experts to build their own internal expertise so it makes sense to expand the universe of assurance providers to include these specialist organizations."); LRQA; MFA; NAM; SKY Harbor; and TCS.

<sup>1270</sup> See Proposing Release, Section II.H.2.

<sup>1271</sup> See *id.*

<sup>1272</sup> See *id.* The Commission noted that it has adopted similar expertise requirements in the past to determine eligibility to prepare a mining technical report, although the mining technical report requirements differ in that such an engagement is not an assurance engagement. See *id.* (citing *Modernization of Property Disclosures for Mining Registrants*, Release No. 33-10570 (Oct. 31, 2018) [83 FR 66344 (Dec. 26, 2018)]).

<sup>1279</sup> See *id.*

<sup>1280</sup> See 17 CFR 210.2-01. For the avoidance of doubt, the Commission noted that if the independent accountant who audits the registrant's consolidated financial statements is also engaged to perform the GHG emissions attestation for the same filing, the fees associated with the GHG emissions attestation engagement would be considered "Audit-Related Fees" for purposes of Item 9(e) of 17 CFR 240.14a-101, Item 14 of Form 10-K, Item 16C of Form 20-F, or any similar requirements. See Proposing Release, section II.H.2.

<sup>1281</sup> See *id.*

GHG emissions disclosure.<sup>1289</sup> For example, one commenter stated that “certain situations may require specialist expertise and that limiting attestation providers only to accounting firms would prevent registrants in such situations from availing themselves of the requisite special knowledge.”<sup>1290</sup> Another commenter stated that “[e]xpanding assurance beyond accounting firms has the added benefit of providing a much larger pool of assurance providers, which could potentially lower compliance costs.”<sup>1291</sup> A few commenters stated that if non-accounting firms are eligible to provide assurance services, then the Commission would need to ensure that there are appropriate protections in place for investors.<sup>1292</sup> A few commenters stated that the proposed rules’ references to accounting or audit-style requirements could favor accounting firms or make it difficult for non-accounting firms to meet the qualifications.<sup>1293</sup>

<sup>1289</sup> See, e.g., letters from ABA (limiting qualified attestation providers to only accounting firms “would unnecessarily constrict the supply providers and ignore the fact that other types of enterprises, such as engineering and consulting firms, have expertise in the measurement of GHG emissions and could conduct attestation engagements”); Bureau Veritas (“This creates an open, competitive market, and enables engineers, environmental scientists who have subject matter expertise in climate change and understand the specifics of GHG management to an expert level.”); ERM CVS; and J. McClellan.

<sup>1290</sup> See letter from J. Herron.

<sup>1291</sup> See letter from ANSI NAB. See also letter from Ceres (stating that non-accounting firms “are likely to charge less for their services than major accounting firms, and we support having competition”).

<sup>1292</sup> See letter from Amer. for Fin. Reform, Sunrise Project *et al.* (“Eligible attestation providers should not be limited to only PCAOB-registered audit firms, but the SEC will need to conduct enhanced monitoring and enforcement of the assurance, as the attesting entities will be neither inspected by the PCAOB nor subject to PCAOB standards and enforcement.”); Center Amer. Progress (stating that non-accounting firms “should be subject to the internal controls or other guardrails that exist for financial auditors); and NASBA (recommending that the Commission develop regulations “to build the intellectual infrastructure, including independence requirements, quality management systems, and peer review inspections outside of the professional standards governing the public accounting profession”). See also letter from TCS (“The SEC should also permit attestation providers who are not registered public accounting firms to provide assurance of GHG emission disclosure, particularly for non-accelerated and smaller filers, so long as they can meet quality standards through certification or other means.”).

<sup>1293</sup> See, e.g., letters from AFPM (stating that although the proposed rule “ostensibly allow expert providers that are not auditors to provide assurance, imposing audit style assurance requirements will render the approach taken by many non-auditor consultants inadequate, leaving few firms that are qualified to provide this assurance”); and Airlines for America (“While the SEC appears to have

On the other hand, a few commenters stated that the Commission should require that the GHG emissions attestation provider be a public accounting firm registered with the PCAOB.<sup>1294</sup> One of these commenters stated that requiring a GHG emissions attestation provider to be a PCAOB-registered public accounting firm “will enhance the reliability of the [GHG emissions] disclosures themselves, thus promoting confidence in the disclosures among investors.”<sup>1295</sup> Another commenter explained that PCAOB-registered public accounting firms “already have a framework to adhere to professional obligations related to objectivity and due process, and to the independence rules,” which would negate “the burden for registrants to research and provide various information related to attestation service providers” required by the proposed rules.<sup>1296</sup>

Some commenters agreed with the proposal that significant experience means having sufficient competence and capabilities necessary to (a) perform engagements in accordance with professional standards and applicable legal and regulatory requirements and (b) enable the service provider to issue reports that are appropriate under the circumstances.<sup>1297</sup> One commenter recommended that the Commission require a minimum of three years of experience in GHG emissions attestation or assurance for the person or organization signing the assurance statement.<sup>1298</sup> Conversely, some commenters stated that the Commission should not prescribe a number of years

intended to allow the use of, for example, qualified environmental engineering firms that have traditionally provided GHG emissions verification, the repeated references to accounting standards throughout the proposed rules seem to strongly favor accounting firms.”).

<sup>1294</sup> See, e.g., letters from Better Markets (noting that the goals of the proposal would be served by requiring that providers be PCAOB-regulated entities because those firms are subject to oversight and inspection whereas other types of third-party verifiers are not); Mazars; and PRI. See also letter from NASBA (“We believe that permitting non-CPAs who are not subject to the standards that result from such due process procedures to provide attestation services is not the public interest.”); and RSM US LLP (“We believe assurance over climate-related reporting when performed by a public company auditor would offer increased investor protection compared with other forms of third-party assurance or verification.”).

<sup>1295</sup> See letter from Better Markets.

<sup>1296</sup> See letter from Mazars.

<sup>1297</sup> See, e.g., letters from CFA Institute; Crowe; and GGMI (recommending that the Commission further clarify that by “experience” it means that “experts have proper technical knowledge and competencies in STEM fields related to the sources and sinks of GHG emission and removals being quantified.”).

<sup>1298</sup> See letter from ERM CVS.

of experience that would be required to qualify as a GHG emissions attestation provider.<sup>1299</sup>

Some commenters stated that the proposed rules were not clear about the qualifications required for a GHG emissions attestation provider<sup>1300</sup> or that the Commission should provide additional guidance.<sup>1301</sup> One commenter stated that registrants “would face significant challenges and risks in connection with making determinations as to the qualification of attestation providers.”<sup>1302</sup> Several commenters raised concerns about the supply and availability of experienced and qualified GHG emissions attestation providers to meet the deadlines included in the proposed rules.<sup>1303</sup>

In the Proposing Release, the Commission asked if it should specify that a GHG emissions attestation provider meets the expertise requirements if it is a member in good standing of a specified accreditation body that provides oversight to service providers that apply attestation standards, and if so, which accreditation body or bodies it should consider.<sup>1304</sup> A few commenters stated that the Commission should require the use of GHG emissions attestation providers

<sup>1299</sup> See, e.g., letters from C2ES (“Prescribing a number of years of experience may limit new businesses who have employees with long term experience, therefore we do not recommend instead requiring a specified number of years of experience.”); CFA Institute; and Futurepast.

<sup>1300</sup> See, e.g., letters from AEPIC; APCIA; CEMEX (“We believe that in order to accurately comply with the proposed expertise requirements, additional guidance is needed. As done before with the recently implemented S-K 1300 where it specified the prescriptive requirements to be a ‘qualified person’ and provide insight to the registrant, something similar would suffice to ensure the experts that provide services to the registrant meet the necessary criteria and thus ensure a comparable and accurate GHG attestation amongst registrants.”); and INGA.

<sup>1301</sup> See, e.g., letters from Praxis, *et al.* (“In addition, the SEC should provide guidance on standards for third-party verifiers who are not accredited with the Public Company Accounting Oversight Board); S. Sills (same); and Veris Wealth (same).

<sup>1302</sup> See letter from Sullivan Cromwell.

<sup>1303</sup> See, e.g., letters from Financial Services Forum; Jones Day (“It is also not clear that there will be a sufficient number of qualified firms to provide these services for companies to comply with the attestation requirements.”); SouthState (“Further, the number of experienced personnel to oversee, execute, or otherwise be considered an ‘expert’ in climate-related financial risk management is currently (and likely for the foreseeable future) very low.”); and Sullivan Cromwell (“Although an industry of qualified third-party providers likely would develop, the current lack of qualified attestation providers would prove challenging and costly for companies, especially smaller registrants, to adhere to the proposed attestation requirements, particularly given the short proposed implementation period.”).

<sup>1304</sup> See Proposing Release, section II.H.2.

that are accredited to ISO 14065<sup>1305</sup> or require that the GHG emissions attestation provider be able to demonstrate expertise in ISO 14064–3.<sup>1306</sup> One commenter stated the Commission should include all firms that are accredited for independent certification and assurance work by one of the members of the International Accreditation Forum (IAF), as well as accounting firms that are members of the AICPA or other professional accounting organizations, and that either have significant experience in GHG emissions and their attestation or are able to supervise an appropriately qualified Auditor-Engaged Specialist.<sup>1307</sup> Another commenter stated that registrants should be required to “engage a verifier accredited by a reputable organization, such as ANAB.”<sup>1308</sup> One commenter recommended that the Commission establish a process for “staff oversight” of non-PCAOB-registered accounting firms,<sup>1309</sup> while another commenter suggested that the PCAOB be directed to develop “a separate registration process for service providers specific to climate disclosures.”<sup>1310</sup> Finally, one commenter stated that “since there is no internationally recognized accreditation body to certify the qualifications of third-party attestation providers, issuers may not have sufficient clarity as to which third-party attestation providers have adequate qualifications under the proposed rule.”<sup>1311</sup>

Some commenters recommended that the Commission specify additional qualifications for GHG emissions attestation providers.<sup>1312</sup> For example, a

<sup>1305</sup> See, e.g., letters from ANSI NAB; and LRQA.

<sup>1306</sup> See, e.g., letters from Anthesis Grp. (stating that the evaluation of attestation providers could “conform to ANSI ISO 14064–3” or an “accepted equivalent,” which “will ensure appropriate rigor and consistency”); and ERM CVS.

<sup>1307</sup> See letter from ERM CVS. See also letter from ANSI NAB (recommending that the Commission require a GHG emissions attestation provider to be “accredited to ISO 14065” or a signatory to the International Accreditation Forum’s Multilateral Recognition Arrangement (IAF MLA)).

<sup>1331</sup> See letter from Soc. Corp. Gov.

<sup>1332</sup> See, e.g., letters from Barrick Gold (“We note that Qualified Persons under the new mining rules under Regulation S–K 1300 are not required to be independent, and we do not believe that an independence requirement is necessary for this purpose.”); and Soc. Corp. Gov. (noting that “disclosures regarding mineral resources and oil and gas reserves do not contain similar independence requirements”).

additional burdens on registrants given that they will need to perform procedures to assess the independence of attestation providers.<sup>1333</sup>

Some commenters recommended that the Commission consider alternatives to the proposed independence requirement. Instead of the proposed independence requirement, one commenter suggested that the Commission allow a non-independent attestation provider to disclose that the provider is not independent to address any concerns investors or others may have about the relationship.<sup>1334</sup> Another commenter stated that instead of requiring a GHG emissions attestation provider to be independent, the Commission should provide that “if the firm retained by the company is providing other services to the company (in addition to attestation services) in excess of \$1 million (for example) during the last completed fiscal year, then the company must provide disclosure of the aggregate fees for the attestation services and for such additional other services provided to the company for such year.”<sup>1335</sup> One commenter stated that the proposed independence requirement was “overbroad” and recommended that the Commission permit qualified firms to provide services—at least to affiliates of the registrant—in addition to their attestation services.<sup>1336</sup> Another commenter stated that it would support a “slimmed down” version of Rule 2–01 for non-accountants and recommended particular criteria.<sup>1337</sup>

In the Proposing Release, the Commission explained that accountants are already required to comply with relevant quality control and management standards when providing audit and attest services under the PCAOB, AICPA, or IAASB standards, and those quality control and

<sup>1333</sup> See letter from Soc. Corp. Gov. (“Registrants and public audit firms determine auditor independence based on well-established rules, regulations, and procedures, including those promulgated by the Public Company Accounting Oversight Board. In light of the fact that there is no entity providing oversight of attestation providers for GHG emissions, this burden will fall squarely on issuers.”).

<sup>1334</sup> See letter from CEMEX.

<sup>1335</sup> See letter from Jones Day (recommending the Commission adopt a requirement similar to Item 407(e)(3)(iii)(A) of Regulation S–K).

<sup>1336</sup> See letter from IAA (noting its concern that the independence requirement would prohibit registrants from using firms “that may be the most qualified to provide such attestations” because those firms also provide other services to the registrant or their affiliates, such as audit or consulting services).

management standards would similarly apply to accountants providing GHG emissions attestation services pursuant to these standards.<sup>1338</sup> The Commission included a request for comment asking if it should require a GHG emissions attestation provider that does not (or cannot) use the PCAOB, AICPA, or IAASB attestation standards to comply with additional minimum quality control requirements.<sup>1339</sup> Some commenters recommended that the Commission require the GHG emissions attestation provider to be subject to additional minimum quality control requirements.<sup>1340</sup> One commenter stated that such requirements “would foster more consistent quality in attestation reports under the proposed rules when the registrant selects a service provider that does not use PCAOB, AICPA, or IAASB attestation standards.”<sup>1341</sup> One commenter stated that it believed the ISO standards create a sufficient basis for ensuring quality attestation engagements and therefore any attestation provider should be required to perform attestation engagements in accordance with these standards.<sup>1342</sup>

In the Proposing Release the Commission included a request for comment asking if it should amend 17 CFR 230.436 (“Rule 436”) to provide that a report on GHG emissions at the limited assurance level by a GHG emissions attestation provider that has reviewed such information is not considered a part of a registration statement prepared or certified by such person within the meaning of sections 7 and 11 of the Securities Act.<sup>1343</sup> Several commenters generally expressed support for such an amendment so that GHG emissions attestation providers would not be subject to liability under section 11.<sup>1344</sup> A few of these commenters stated that the potential for liability under section 11 would or could deter or reduce the number of

assurance providers available.<sup>1345</sup> On the other hand, a few commenters stated that the Commission should confirm that attestation reports are considered to be expertized material because firms acting as underwriters will be exposed to significant legal liability if Scope 1 and Scope 2 GHG emissions attestations are not considered to be expertized material for purposes of liability under section 11 of the Securities Act.<sup>1346</sup> One of these commenters further stated that “[f]or any period for which assurance is not required for GHG emissions attestation reports, the SEC should clarify that the reports will still be considered to be expertized material, to avoid inadvertently subjecting underwriters to heightened due diligence requirements during an interim period of disclosure implementation.”<sup>1347</sup>

### c. Final Rules (Item 1506(b))

We are adopting the GHG emissions attestation provider requirements substantially as proposed.<sup>1348</sup> We continue to believe that the expertise requirements (Item 1506(b)(1)) are necessary to help ensure that the service provider preparing the attestation report has sufficient competence and capabilities necessary to execute the attestation engagement.<sup>1349</sup> Several commenters agreed with the proposal’s expertise requirements and definition of significant experience.<sup>1350</sup> While some commenters urged the Commission to require a GHG emissions attestation provider to have a certain number of years of experience,<sup>1351</sup> other commenters stated that the Commission should not prescribe a minimum number of years.<sup>1352</sup> We do not think it is necessary to require a provider to have a certain number of years of experience because imposing such a requirement could result in a “check the

box” mentality, and we believe that investors would be better served by registrants undertaking a more holistic consideration of a provider’s qualifications in selecting a provider. Some commenters requested that the Commission provide additional guidance regarding the qualifications for a GHG emissions attestation provider;<sup>1353</sup> however, these commenters generally did not identify any particular aspects of the expertise requirement that required clarification. Adopting a principles-based approach inherently involves some uncertainty, but we believe registrants would be better served by such flexibility than an approach that, for example, identifies a static list of qualified providers. Such an approach will provide a registrant with more leeway to select a GHG emissions attestation provider that has the experience that best fits the registrant’s facts and circumstances, which could improve the quality of assurance provided thereby enhancing the reliability of GHG emissions disclosures.

In response to a question included in the Proposing Release, some commenters stated that the Commission should specify that a GHG emissions attestation provider meets the expertise requirements if it is a member in good standing of a specified accreditation body and identified particular bodies or approaches the Commission should consider.<sup>1354</sup> We have decided not to impose such a requirement at this time given the evolving nature of GHG emissions assurance and the possibility that new or different accreditation bodies may exist at the time when registrants subject to Item 1505 and Item 1506 are required to begin obtaining attestation reports. Several commenters recommended that the Commission specify additional qualifications for GHG emissions attestation providers,<sup>1355</sup> and while we considered each of these suggestions, we believe that the requirements we have included in the final rules will help ensure that GHG emissions attestation providers have sufficient competence and capabilities necessary to execute the attestation engagement.

While a number of commenters urged the Commission to require that a GHG emissions attestation provider be a public accounting firm registered with the PCAOB,<sup>1356</sup> we determined to retain

the principles-based approach in the final rules because it will provide registrants with the flexibility to hire a non-accounting firm that may have relevant or specialized experience with respect to assuring GHG emissions disclosure while at the same time ensuring that a GHG emissions attestation provider has the requisite expertise to perform the engagement in accordance with professional standards. Although we agree there would be investor protection benefits to be gained by requiring a registrant to use a PCAOB-regulated entity that is subject to oversight and inspections (even though the PCAOB’s inspection jurisdiction would not include engagements for the assurance of GHG emissions disclosure within its scope),<sup>1357</sup> we have balanced this against other considerations, such as the availability of GHG emissions providers and compliance costs, which could potentially be lower if a larger pool of assurance providers is available. Nevertheless, we agree with those commenters who stated that if the final rules permit non-PCAOB-registered accounting firms to provide attestation services, the Commission would need to ensure that there are appropriate protections in place for investors.<sup>1358</sup> The expertise, independence, and other requirements applicable to the GHG emissions attestation engagement under the final rules, such as the requirement for a provider to use attestation standards that are established by a body or group that has followed due process procedures, are intended to serve precisely that function.

As with the proposed rules, the final rules apply the expertise requirement to the person or firm signing the GHG emissions attestation report.<sup>1359</sup> If the service provider is a firm, we would expect it to have policies and procedures designed to provide it with reasonable assurance that the personnel selected to conduct the GHG emissions attestation engagement have significant experience with respect to both attestation engagements and GHG emissions. As we explained in the

<sup>1357</sup> The PCAOB’s inspection jurisdiction is limited to audits of issuers, brokers, and dealers and would not include engagements for the assurance of GHG emissions disclosure within its scope. See 15 U.S.C. 7214 (setting forth the PCAOB’s inspection jurisdiction). However, as discussed in greater detail below, oversight inspection programs can provide benefits, such as providing a check on a GHG emissions attestation provider’s overall activities and driving improvements in the quality of services overall, even when an oversight inspection program does not include a GHG emissions attestation engagement within its scope.

<sup>1358</sup> See *supra* note 1292 and accompanying text.

<sup>1359</sup> See 17 CFR 229.1506(b).

<sup>1345</sup> See, e.g., letters from Apex; D. Hileman Consulting; ERM CVS; and WSP. *But see, e.g.*, letter from Futurepast (“Futurepast does not believe that the possibility of section 11 liability will deter qualified firms and persons from providing attestation services to registrants.”).

<sup>1346</sup> See, e.g., letters from BPI; and Financial Services Forum.

<sup>1347</sup> See letter from BPI.

<sup>1348</sup> See 17 CFR 229.1506(b). To enhance clarity, we are making one minor change to the rule text. In the definition of “significant experience” in the final rules, we are substituting the proposed rule’s reference to “professional standards” with a reference to “attestation standards” to make it clear that the standards being referenced in Item 1506(b)(1)(i) are the attestation standards that meet the requirements of Item 1506(a). See 17 CFR 229.1506(b)(1)(i).

<sup>1349</sup> See Proposing Release, section II.H.2.

<sup>1352</sup> See *supra* note 1299 and accompanying text.

<sup>1353</sup> See *supra* notes 1300 and 1301 and accompanying text.

<sup>1354</sup> See *supra* notes 1305, 1307, and 1308 and accompanying text.

<sup>1355</sup> See *supra* note 1312 and accompanying text.

<sup>1356</sup> See *supra* note 1294 and accompanying text.

Proposing Release, this would mean that the service provider has the qualifications necessary for fulfillment of the responsibilities that it would be called on to assume, including the appropriate engagement of specialists, if needed.<sup>1360</sup> A few commenters supported a requirement for GHG emissions attestation providers to establish policies and procedures along these lines.<sup>1361</sup> Although, as stated above, we expect firms to adopt policies and procedures related to the expertise of its personnel, we have determined not to include such a requirement in the final rules because we do not want to foreclose other possible means by which a firm may ensure that it and its relevant personnel meet the expertise requirements set forth in Item 1506(b).

As noted above, one commenter recommended that the Commission consider whether state licensure laws would preclude parties other than CPAs from performing attestation services.<sup>1362</sup> It is our understanding that states typically require someone who holds itself out as a public accountant or as performing public accounting services to be licensed as a CPA. In addition, non-CPAs are not able to use the AICPA or PCAOB attestation standards.<sup>1363</sup> However, these principles would not prevent a non-CPA from performing attestation services as long as it was neither holding itself out as a CPA nor using an attestation standard that, by its terms, is only available to CPAs. In this regard, we note that the IAASB and ISO standards, two of the four standards we are explicitly permitting assurance providers to use under the final rules (as discussed in more detail below), are not restricted to CPAs, and we are not aware that any state laws are currently

impacting the ability of non-CPA service providers to provide assurance over GHG emissions.

With respect to independence, we are adopting each of the independence requirements (Item 1506(b)(2)) as proposed.<sup>1364</sup> These independence requirements are important because they help ensure that the attestation provider will perform the engagement in an objective and impartial manner. A number of commenters agreed with the proposed requirement for a GHG emissions attestation provider to be independent with respect to the registrant and any of its affiliates and agreed that the independence requirement would enhance the reliability of the attestation report.<sup>1365</sup> We continue to believe that, similar to how assurance provided by independent public accountants improves the reliability of financial statements and disclosures and is a critical component of our capital markets, assurance of GHG emissions disclosure by independent service providers should also improve the reliability of such disclosure.<sup>1366</sup> Several commenters agreed with the Commission's proposed approach of modeling the independence requirement and relevant definitions on the Commission's qualifications for accountants under Rule 2-01 of Regulation S-X,<sup>1367</sup> and we continue to believe the approach is appropriate given our experience in administering Rule 2-01 in the context of financial statement audits. One commenter appeared to suggest that, under the proposed rules, GHG emissions attestation providers would not be subject to the same level of independence as financial statement auditors.<sup>1368</sup> Although the final rules do not set forth a non-exclusive specification of circumstances inconsistent with independence like Rule 2-01(c) does for financial statement auditors, the foundational principles underlying the independence requirements in Rule 2-01 and the final rules are the same,<sup>1369</sup> and we view the

independence requirements in the two contexts as providing similar, if not equivalent, protections to investors. However, for the avoidance of any doubt, we are clarifying that registrants and GHG emissions attestation providers are only required to comply with the independence requirements included in Item 1506 and are not required to separately comply with the independence requirements included in Rule 2-01 with respect to the GHG emissions attestation engagement.<sup>1370</sup> Along those lines, existing Commission guidance and staff interpretations regarding Rule 2-01 do not apply to the independence requirements in Item 1506; however, to the extent any such guidance or interpretation may apply to an issue that is similarly presented under Item 1506 (which is a possibility since Item 1506 is modeled on Rule 2-01), the guidance or interpretation would be a useful starting point for consideration, although not determinative.<sup>1371</sup>

We considered the concern raised by commenters that requiring a GHG emissions attestation provider to be independent would limit the available pool of providers and potentially increase costs.<sup>1372</sup> However, we think these concerns are mitigated by the modifications in the final rules that provide registrants subject to the requirements with a multi-year transition period before they are required to obtain an attestation report. The phased in compliance period will give registrants adequate time to find a provider that meets the independence requirements. It will also give non-accountant attestation providers time to familiarize themselves with the independence requirements and adapt their business practices accordingly, which may help mitigate any adverse effects that the independence requirements could have on the available pool of providers. For this reason, we do not think it is necessary, as suggested by some commenters, to

final rules model the factors the Commission will consider in determining whether a GHG emissions attestation provider is independent on the introductory text to Rule 2-01. Compare 17 CFR 229.1506(b)(2)(ii) and Introductory Text to Rule 2-01.

<sup>1370</sup> The final rules do not alter or amend Rule 2-01 or its current applicability in any way, which means, for example, there is no change to the requirement that registrants and their financial statement auditor comply with Rule 2-01 with respect to the financial statement audit.

<sup>1371</sup> The staff of the Commission's Office of the Chief Accountant is available to consult with registrants or GHG emissions attestation providers regarding the independence requirements in the final rules.

<sup>1372</sup> See *supra* notes 1327, 1328, and 1331 and accompanying text.

<sup>1360</sup> See Proposing Release, section II.H.2.

<sup>1361</sup> See *supra* note 1315 and accompanying text.

<sup>1362</sup> See letter from PwC. See also letter from NASBA ("Virtually all of the State Boards do not allow non-CPAs to perform attestation services or issue reports under the professional standards governing the public accounting profession.")

<sup>1363</sup> By their terms, AICPA and PCAOB attestation standards are only applicable in the context of engagements performed by certified public accountants. See, e.g., PCAOB AT section 101, Attest Engagements, available at <https://pcaobus.org/oversight/standards/attestation-standards/details/AT101> (stating that "[t]his section applies to engagements . . . in which a certified public accountant in the practice of public accounting . . . is engaged to issue or does issue an examination, a review, or an agreed-upon procedures report on subject matter . . .") (emphasis added); AICPA SSAE No. 18, AT-C § 105.01 ("This section applies to engagements in which a CPA in the practice of public accounting is engaged to issue, or does issue, a practitioner's examination, review, or agreed-upon procedures report on subject matter or an assertion about subject matter (hereinafter referred to as an assertion) that is the responsibility of another party.") (emphasis added).

<sup>1364</sup> See 17 CFR 229.1506(b)(2).

<sup>1365</sup> See *supra* note 1317 and accompanying text.

<sup>1366</sup> See Proposing Release, section II.H.2.

<sup>1367</sup> See *supra* notes 1321 and 1324 and accompanying text.

<sup>1368</sup> See letter from PwC.

<sup>1369</sup> Namely, the final rules provide that a GHG emissions attestation provider is not independent if such attestation provider is not, or a reasonable investor with knowledge of all relevant facts and circumstances would conclude that such attestation provider is not, capable of exercising objective and impartial judgment on all issues encompassed within the attestation provider's engagement, which is modeled on Rule 2-01(b). Compare 17 CFR 229.1506(b)(2)(i) and 17 CFR 210.2-01(b). Also, the

adopt an alternative to the independence requirement to simply disclose the fees received.<sup>1373</sup> Although requiring the disclosure of any fees, including non-attestation fees, received by the GHG emissions attestation provider from the registrant would provide investors with important information for evaluating the objectivity of the attestation provider, such an alternative would not prohibit the GHG emissions attestation provider from performing the GHG emissions assurance services in circumstances where the provider was not independent from the registrant (as the final rules will do). A few commenters stated that the proposed rules' references to accounting or audit-style requirements could favor accounting firms,<sup>1374</sup> and we acknowledge that some of the requirements in the final rules, such as the independence requirements, may be more familiar to accounting firms versus non-accounting firms. However, we believe the principles-based approach in the final rules generally should be accessible for both accounting and non-accounting firms. Moreover, the phased in compliance period should give non-accountant attestation providers time to familiarize themselves with the independence requirements and provide existing service providers with time to unwind any existing conflicts to their independence.

Some commenters suggested that the proposed independence requirement was problematic because it would seem to prohibit an expert or other third-party that has assisted a registrant in calculating or preparing its GHG emissions data from serving as the registrant's GHG emissions attestation provider.<sup>1375</sup> We agree that it would be difficult for an expert that has assisted a registrant in calculating or preparing its GHG emissions data to meet the independence requirements because such an engagement would presumably place the attestation provider in the position of attesting to its own work and may create a mutual interest between the attestation provider and the registrant, two of the factors the final rules state the Commission will consider in determining whether the GHG emissions provider is independent.<sup>1376</sup> We think the conflict of interest presented by this

circumstance is exactly the type of situation that the independence requirement is intended to prevent, and therefore we are not modifying the independence requirement in response to these commenters' concerns. As a result, this could mean that a registrant that determines it is necessary to hire a third-party service provider to help it calculate or prepare its GHG emissions disclosure may have to pay a fee to both the third-party service provider and to its GHG emissions attestation provider. However, the likelihood of this scenario is reduced by the multiyear phase in compliance period we are adopting, which provides registrants with sufficient time to develop the necessary processes and procedures to calculate their GHG emissions data before they are required to comply with the assurance requirements. In addition, the exemption from the GHG emissions reporting and assurance requirements for SRCs and EGCs provides most newly public companies with time to develop any in-house expertise that may be necessary in case they no longer qualify for SRC or EGC status in the future and become subject to the final rules.

In response to the commenters that pointed out that the Commission did not adopt a requirement to retain an independent third party to prepare, or conduct a reserves audit of, a registrant's reserves estimates in the context of its mining and oil and gas disclosure rules,<sup>1377</sup> we note that the Commission's determination in each of its rulemakings about whether to require a registrant to retain an independent third-party is context specific. For example, with respect to its mining disclosure rules, the Commission stated that it was not adopting a requirement for a qualified person to be independent from the registrant because, among other things, the final rules require a registrant to disclose the qualified person's affiliated status with the registrant or another entity having an ownership or similar interest in the subject property, which is consistent with the Committee for Mineral Reserves International Reporting Standards' mining guidelines, to which the Commission was amending its mining rules to more closely align.<sup>1378</sup> With respect to its oil and gas disclosure rules, the Commission pointed out that most commenters did not support a requirement to obtain an independent

third-party assessment of reserves estimates because a company's internal staff is generally in a better position to prepare those estimates and there is a potential lack of qualified third party engineers and professionals available.<sup>1379</sup> However, the Commission did adopt a requirement for a registrant to provide a general discussion of the internal controls it uses to assure objectivity in the reserves estimation process and the disclosure of the qualifications of the technical person primarily responsible for preparing the reserves estimates.<sup>1380</sup> In keeping with this context specific approach, with respect to assurance over GHG emissions disclosure, we believe that the benefits to investors from requiring a GHG emissions attestation provider to be independent in accordance with Item 1506 justify the potential costs for the reasons stated above. Moreover, there is currently a growing practice among some registrants of obtaining third-party assurance over their GHG emissions data.<sup>1381</sup> Although generally the independence requirements in the assurance standards currently being used with respect to GHG emissions data are not as robust as the requirements in the final rules, many of these standards include requirements related to the objectivity and impartiality of the third-party assurance provider.<sup>1382</sup> Therefore, the final rules' independence requirement is not inconsistent with the general practice in this space of retaining an objective and impartial third-party to provide assurance.<sup>1383</sup>

<sup>1379</sup> See *Modernization of Oil and Gas Reporting*, Release No. 8995 (Dec. 31, 2008) [74 FR 2157, 2175 (Jan. 14, 2009)].

<sup>1380</sup> See *id.*

<sup>1381</sup> See *supra* note 1232.

<sup>1382</sup> See, e.g., AICPA SSAE No. 18, AT-C § 105.26; IAASB ISAE 3000 (Revised) § 20; and ISO 14064-3: 2019 § 4.2. The independence requirements in the final rules are more rigorous and may differ in scope from the requirements included in these standards. It is possible that the application of the independence requirements in the final rules may result in a GHG emissions attestation provider no longer being able to provide certain non-assurance services to its assurance client that may be permissible to provide outside the context of the final rules.

<sup>1383</sup> The International Ethics Standards Board for Accountants (IESBA), which is an independent global ethics standard-setting board, has recently proposed ethics standards for sustainability assurance providers (*i.e.*, professional accountants and other professionals performing sustainability assurance engagements), including robust independence standards. IESBA stated that it "holds to the premise that sustainability assurance engagements . . . must be underpinned by the same high standards of ethical behavior and independence that apply to audits of financial information." See IESBA, Explanatory Memorandum for Proposed International Ethics Standards for Sustainability Assurance (including International Independence Standards) (IESSA) and

<sup>1373</sup> See *supra* note 1335 and accompanying text.

<sup>1374</sup> See *supra* note 1293 and accompanying text.

<sup>1375</sup> See *supra* note 1329 and accompanying text.

<sup>1376</sup> See 17 CFR 229.1506(b)(2)(ii)(A). Conversely, we generally expect that a registrant would be able to use its financial statement auditor as its GHG emissions attestation provider consistent with the independence requirement in the final rules.

<sup>1377</sup> See *supra* note 1332 and accompanying text.

<sup>1378</sup> See *Modernization of Property Disclosures for Mining Registrants*, Release No. 33-10098 (June 16, 2016) [81 FR 41651, 41661 (June 27, 2016)]; *Modernization of Property Disclosures for Mining Registrants*, Release No. 33-10570 (Oct. 31, 2018) [83 FR 66344, 66363 (Dec. 26, 2018)].

In addition, we are adopting the definition of “affiliate” as proposed and consistent with the feedback provided by commenters that addressed this issue.<sup>1384</sup> Similarly, we are adopting the broad definition of “attestation and professional engagement period” as proposed, which is modeled on the definition of “audit and professional engagement period” in Rule 2–01.<sup>1385</sup>

As discussed in greater detail above, in response to a request for comment, some commenters recommended that the Commission require the GHG emissions attestation provider to be subject to additional minimum quality control requirements.<sup>1386</sup> We have determined not to impose such requirements at this time; however, we reiterate the statement the Commission made in the Proposing Release that accountants are already required to comply with relevant quality control and management standards when providing audit and attest services under PCAOB, AICPA, or IAASB standards, and those quality control and management standards would similarly apply to accountants providing GHG emissions attestation services pursuant to these standards.<sup>1387</sup> The IAASB standards impose similar quality control requirements on non-accountants.<sup>1388</sup> In addition, one commenter stated that, for example, all firms that are accredited by one of the members of the IAF must have a quality control and management system.<sup>1389</sup> As such, we believe that

<sup>1386</sup> See *supra* note 1340 and accompanying text.

<sup>1387</sup> See Proposing Release, section II.H.2.

<sup>1388</sup> See IAASB ISAE 3000.3(b) (Revised) (“The practitioner who is performing the engagement is a member of a firm that is subject to [International Standard on Quality Control (ISQC) 1], or other professional requirements, or requirements in law or regulation, regarding the firm’s responsibility for its system of quality control, that are at least as demanding as ISQC 1.”).

<sup>1389</sup> See letter from ERM CVS. The International Accreditation Forum is a worldwide association of accreditation bodies and other bodies interested in conformity assessment in the fields of management systems, products, processes, services, personnel, validation and verification and other similar programs of conformity assessment. See International Accreditation Forum, About IAF, available at <https://iaf.nu/en/about/>. Its members include ANAB, the ANSI National Accreditation Board, which provides accreditation to greenhouse gas verification and validation providers that demonstrate competence to validate or verify statements in accordance with its accreditation requirements, including ISO 14065.

many of the more experienced non-accountant GHG emissions attestation providers are required to comply with quality control requirements. More generally, we expect that any attestation standards that meet the requirements of the final rules would likely provide guidance on quality control for assurance providers.<sup>1390</sup>

Although the final rules do not include a requirement that a registrant’s audit committee pre-approve the GHG emissions attestation services, nor was such a requirement proposed, it would be permissible under the final rules for a registrant to use the auditor of its financial statements to perform the GHG emissions attestation engagement, assuming the final rules’ requirements for assurance providers are met. To the extent that the registrant’s auditor is engaged to provide an attestation report in connection with the registrant’s GHG emissions, or with respect to any other climate-related disclosures, the auditor would be required to comply with applicable, existing pre-approval requirements.<sup>1391</sup> Even in circumstances where the GHG emissions attestation services are not subject to a pre-approval requirement, however, audit committees should consider what level of involvement would be appropriate for them to take with respect to the selection and retention of attestation providers for climate-related disclosures.

In addition, in response to commenters’ feedback,<sup>1392</sup> we are amending Rule 436 to provide that a report by an attestation provider covering Scope 1 and/or Scope 2 emissions at a limited assurance level shall not be considered a part of the registration statement that is prepared or certified by an expert or person whose profession gives authority to the statements made within the meaning of

<sup>1390</sup> The ISO standards, which are used by many non-accountant GHG emissions attestation providers as described in greater detail below, include two standards that can be used as a basis for requirements for attestation providers related to impartiality, competency, and communication, which are areas typically covered by quality control requirements. See ISO 14065, General principles and requirements for bodies validating and verifying environmental information (2020); and ISO 14066, Environmental information—Competence requirements for teams validating and verifying environmental information (2023).

<sup>1391</sup> See 15 U.S.C. 78j–1(i). See also *supra* note 1280 (explaining that if the independent accountant who audits the registrant’s consolidated financial statements is also engaged to perform the GHG emissions attestation for the same filing, the fees associated with the GHG emissions attestation engagement would be considered “Audit-Related Fees” for purposes of Item 9(e) of 17 CFR 240.14a–101, Item 14 of Form 10–K, Item 16C of Form 20–F, or any similar requirements).

<sup>1392</sup> See *supra* note 1344 and accompanying text.

sections 7 and 11 of the Securities Act.<sup>1393</sup> We determined to include this amendment, in part, because we agree with commenters that the potential for section 11 liability could deter or reduce the number of attestation providers willing to accept these engagements.<sup>1394</sup> However, we are limiting the exception to those GHG emissions attestation engagements performed at a limited assurance level to encourage GHG emissions attestation providers to perform such engagements. We think there could be reluctance on the part of a GHG emissions attestation provider to perform attestation engagements at the limited assurance level because of their potential liability under section 11, and that, alternatively, if GHG emissions attestation providers perform significantly expanded procedures, much closer to reasonable assurance, in order to meet potential liability concerns under section 11, substantial increased costs to issuers could result.<sup>1395</sup> The same considerations do not apply to reasonable assurance engagements, and we are therefore not providing a similar exception for those engagements.

The amendment to Rule 436 also states that a report covering Scope 3 emissions at a limited assurance level shall not be considered a part of the registration statement that is prepared or certified by an expert or person whose profession gives authority to the statements made within the meaning of sections 7 and 11 of the Securities Act.<sup>1396</sup> Although no registrants are required to disclose Scope 3 emissions or obtain an attestation report for Scope 3 emissions under the final rules, we have included Scope 3 emissions within the exception contained in Rule 436 in the event that a registrant voluntarily discloses its Scope 3 emissions. We believe it is appropriate to provide these accommodations to encourage registrants to obtain limited assurance over Scope 3 disclosure.

Although not subjecting providers of these reports to liability could affect their incentives, on balance we think that encouraging more providers to enter this market would result in more

<sup>1393</sup> See 17 CFR 230.436(i)(1).

<sup>1394</sup> See *supra* note 1345 and accompanying text.

<sup>1395</sup> The Commission relied upon a similar rationale when it amended Rule 436 to provide that a report prepared or certified by an accountant within the meaning of sections 7 and 11 of the Securities Act shall not include a report by an independent accountant on a review of unaudited interim financial statements. See *Accountant Liability for Reports on Unaudited Interim Financial Information Under Securities Act of 1933*, Release No. 33–6173 (Jan. 8, 1980) [45 FR 1601, 1604 (Jan. 8, 1980)].

<sup>1396</sup> See 17 CFR 230.436(i)(1).

competition, which would benefit investors.<sup>1397</sup> We acknowledge the potential downsides of not subjecting the providers of these reports to liability; however, as noted above,<sup>1398</sup> these accommodations are consistent with the treatment of an accountant's report on unaudited interim financial statements included in a registration statement, which is also provided at the limited assurance level. Therefore, in these particular circumstances, we believe it is appropriate to provide these accommodations.

One result of the amendments to Rule 436 is that a GHG emissions attestation provider that has performed an attestation engagement over GHG emissions at a limited assurance level is not required to submit a consent in connection with the registration statement under section 7 of the Securities Act.<sup>1399</sup> However, we think it is nonetheless important that a GHG emissions attestation provider have some awareness about whether its attestation report is included in a registration statement under the Securities Act.<sup>1400</sup> Therefore, we are

<sup>1397</sup> In situations where GHG emissions attestation providers are experts, the amendments to Rule 436 will eliminate the potential for section 11 liability for those providers with respect to attestation reports at the limited assurance level. This could reduce the incentives for GHG emissions attestation providers to perform a thorough analysis and ensure that their attestation report, which is required to be included in a registration statement with GHG emissions disclosures to which the assurance services relate, is true and that there was no omission to state a material fact required to be stated therein or necessary to make the statements therein not misleading. We remind registrants and providers, however, that there are other remedies available to shareholders and/or the Commission, such as section 10(b) of the Exchange Act and Rule 10b-5 thereunder and section 17(a) of the Securities Act, which are not affected by the amendments to Rule 436.

<sup>1398</sup> See *supra* note 1395.

<sup>1399</sup> See 15 U.S.C. 77g. The amendments to Rule 436 provide that a report by a GHG emissions attestation provider covering Scope 1, Scope 2, and/or Scope 3 emissions at a limited assurance level shall not be considered part of the registration statement prepared or certified by an expert or person whose profession gives authority to the statements made, and therefore the requirement in section 7 of the Securities Act that written consent is required from "any person whose profession gives authority to a statement made by him" that is "named as having prepared or certified a report . . . for use in connection with the registration statement" does not apply.

<sup>1400</sup> The Commission relied on this same rationale when it adopted an amendment requiring issuers to file as an exhibit to a registration statement a letter from the independent accountants that acknowledges its awareness of the use in a registration statement of any of its reports which are not subject to the consent requirement of section 7. See *Accountant Liability for Reports on Unaudited Interim Financial Information Under Securities Act of 1933*, Release No. 33-6173 (Jan. 8, 1980) [45 FR 1601, 1604 (Jan. 8, 1980)]; *Amendments Regarding Exhibit Requirements*, Release No. 6230 (Sept. 5, 1980) [45 FR 58822, 58824 (Sept. 5, 1980)].

also amending Item 601 of Regulation S-K, which details the exhibits required to be included in Securities Act and Exchange Act filings, to require registrants to file as an exhibit to certain registration statements under the Securities Act or reports on Form 10-K or 10-Q that are incorporated into these registration statements a letter from the attestation provider that acknowledges its awareness of the use in certain registration statements of any of its reports which are not subject to the consent requirement of section 7.<sup>1401</sup>

We are amending the Instructions as to Exhibits section of Form 20-F to include the same requirement for Form 20-F filers to the extent the Form 20-F is incorporated into a registration statement under the Securities Act.<sup>1402</sup>

We note that certain commenters urged the Commission to confirm that any attestation reports are expertized material, stating that otherwise underwriters may face heightened due diligence requirements in light of potential section 11 liability over GHG emission disclosures included in a registration statement.<sup>1403</sup> We also note, as discussed above, that certain commenters stated that deeming the information expertized may have the effect of deterring or reducing available assurance providers.<sup>1404</sup> We believe the approach we have taken appropriately addresses these concerns by exempting the GHG emissions attestation providers that perform limited assurance

<sup>1401</sup> See 17 CFR 229.601(b)(27). This requirement is modeled on the requirement for an issuer to file as an exhibit to a registration statement a letter from the independent public accountant, which acknowledges their awareness that their report on unaudited interim financial information is being included in a registration statement. See 17 CFR 229.601(b)(15); *Accountant Liability for Reports on Unaudited Interim Financial Information Under Securities Act of 1933*, Release No. 33-6173 (Jan. 8, 1980) [45 FR 1601, 1604 (Jan. 8, 1980)]; *Amendments Regarding Exhibit Requirements*, Release No. 6230 (Sept. 5, 1980) [45 FR 58822, 58824 (Sept. 5, 1980)]. Although the Commission did not solicit comment specifically on the requirement to provide an acknowledgement letter, the requirement follows from similar contexts noted above. In addition, the associated burdens on issuers are less than the proposed consent requirement while retaining the benefit of providing notice to the assurance provider. Further, to help facilitate registrants' compliance with the requirement to file the letter from the GHG emissions attestation provider as an exhibit, we have included an instruction to Item 1506 that directs registrants obtaining assurance at a limited assurance level to Item 601(b)(27) (as well as to paragraph 18 of Form 20-F's Instructions as to Exhibits, as discussed *infra* note 1402 and accompanying text).

<sup>1402</sup> See Instructions as to Exhibits 18 of Form 20-F. Where Form 20-F is used a registration statement under the Exchange Act, this exhibit would not be required.

<sup>1403</sup> See *supra* note 1346 and accompanying text.

<sup>1404</sup> See *supra* note 1345 and accompanying text.

engagements from section 11 liability and the consent requirements associated with expertized reports, and requiring consent with corresponding section 11 liability only when the heightened level of review associated with reasonable assurance makes it appropriate for the report to be expertized. This bifurcated approach to reasonable versus limited assurance engagements is consistent with the current treatment of audited financial statements and unaudited (reviewed) interim financial statements.<sup>1405</sup> While we recognize underwriters and other non-issuer defendants subject to potential liability under section 11 may face additional due diligence costs during the transition period or where limited assurance is required,<sup>1406</sup> we do not believe this is unduly burdensome compared to other climate-related information that will be required in a registration statement pursuant to the final rules that is not otherwise expertized. Moreover, absent a mandatory limited assurance requirement in the final rules, a registrant would nonetheless be required to disclose its GHG emissions and underwriters and other defendants subject to potential liability under section 11 would be faced with the same potential liability and due diligence costs with respect to those disclosures.<sup>1407</sup> Finally, the other defenses to liability included in Securities Act section 11(b) remain available in accordance with the terms of that provision.<sup>1408</sup>

### 3. GHG Emissions Attestation Engagement and Report Requirements (Item 1506(a)(2) and (c))

#### a. Proposed Rules

The proposed rules would have required the attestation report required by proposed Item 1505(a) for AFs and LAFs to be included in the separately-captioned "Climate-Related Disclosure"

<sup>1405</sup> See *infra* section II.I.5.c discussing an additional amendment to Rule 436 in the context of a registrant's statements pertaining to voluntary assurance received over GHG emissions disclosure.

<sup>1406</sup> Compare 15 U.S.C. 77k(b)(3)(C) (providing underwriters and others with a defense for expertized material) with 15 U.S.C. 77k(b)(3)(A) (providing underwriters and others with a defense for non-expertized materials).

<sup>1407</sup> See 17 CFR 229.1505.

<sup>1408</sup> See 15 U.S.C. 77k(b)(3)(A) (providing that "no person, other than the issuer, shall be liable as provided therein who shall sustain the burden of proof . . . as regards any part of the registrant statement not purporting to be made on the authority of an expert . . . he had, after reasonable investigation, reasonable ground to believe and did believe, at the time such part of the registration statement became effective, that the statements therein were true and that there was no omission to state a material fact required to be stated therein or necessary to make the statements therein not misleading. . . .").

section in the relevant filing and provided pursuant to standards that are publicly available at no cost and are established by a body or group that has followed due process procedures, including the broad distribution of the framework for public comment.<sup>1409</sup> The Commission explained that the proposed requirement that the standards be established by a body or group that has followed due process procedures would be similar to the requirements for determining a suitable, recognized control framework for use in management's evaluation of an issuer's ICFR because in both cases a specific framework is not prescribed but minimum requirements for what constitutes a suitable framework are provided.<sup>1410</sup> The Commission stated that this approach would help to ensure that the standards upon which the attestation engagement and report are based are the result of a transparent, public and reasoned process.<sup>1411</sup>

In the Proposing Release, the Commission stated that, for example, in its view, the attestation standards of the PCAOB,<sup>1412</sup> AICPA,<sup>1413</sup> and IAASB<sup>1414</sup> would meet the proposed due-process requirement, and all of these standards are publicly available at no cost to investors who desire to review them.<sup>1415</sup> The Commission explained that by highlighting these standards, it did not mean to imply that other standards currently used in voluntary reporting would not be suitable for use under the proposed rules.<sup>1416</sup> The Commission further stated it intended the proposal to set minimum standards while

acknowledging the current voluntary practices of registrants.<sup>1417</sup>

The proposed rules would have required a GHG emissions attestation provider to follow the specific requirements regarding form and content of the reports set forth by the attestation standard (or standards) used by such attestation provider.<sup>1418</sup> In addition, the proposed rules would have imposed minimum requirements for the GHG emissions attestation report to provide some standardization and comparability of GHG emissions attestation reports.<sup>1419</sup> The Commission explained that the proposed minimum report requirements would provide investors with consistent and comparable information about the GHG emissions attestation engagement and report obtained by the registrant when the engagement is conducted by a GHG emissions attestation provider using an attestation standard that may be less widely used or that has less robust report requirements than more prevalent standards.<sup>1420</sup>

The proposed minimum attestation engagement and report requirements were primarily derived from the AICPA's attestation standards (e.g., SSAE No. 18), which are commonly used by accountants who currently provided GHG attestation engagement services as well as other non-GHG-related attestation engagement services and are largely similar to the report requirements under PCAOB AT-101 and IAASB ISAE 3410.<sup>1421</sup> The Commission explained that many of the proposed minimum attestation report requirements are also elements of an accountant's report when attesting to internal control over financial reporting, an accountant's report on audited financial statements (which is conducted at a reasonable assurance level), and a review report on interim financial statements (which is conducted at a limited assurance level).<sup>1422</sup>

## b. Comments

Several commenters agreed with the proposal to require that the attestation engagement and related attestation report be provided pursuant to standards that are publicly available at no cost to investors and are established by a body or group that has followed due process procedures.<sup>1423</sup> One

commenter stated that these proposed requirements would "help to protect investors who may rely on the attestation report by limiting the standards to those that have been sufficiently developed."<sup>1424</sup> Another commenter stated that these proposed requirements would "provide necessary transparency and opportunity for input from all stakeholders."<sup>1425</sup> One commenter stated that public availability of the standards "would be especially important for smaller investors and registrants."<sup>1426</sup>

Conversely, a few commenters disagreed with the proposal to require that the attestation engagement and related attestation report be provided pursuant to standards that are publicly available at no cost to investors and are established by a body or group that has followed due process procedures.<sup>1427</sup> One of these commenters stated it "strongly disagrees" with the proposal to require the use of standards that are publicly available at no cost because, in its view, such requirements would preclude the use of ISO 14064-3, a standard widely used for GHG verification, and therefore, would not serve the interests of investors.<sup>1428</sup>

Several commenters stated that they appreciated that the proposed rules were flexible or not overly prescriptive about the required attestation standards.<sup>1429</sup> However, some commenters stated it would be helpful to provide further guidance about which standards would meet the proposed requirements,<sup>1430</sup> or suggested that, absent a list of acceptable attestation standards, the proposed rules could

hinder consistency and comparability.<sup>1431</sup>

A few commenters agreed with the Commission's statement in the Proposing Release that the attestation standards of the PCAOB, AICPA, and IAASB would meet the proposed due process requirements.<sup>1432</sup> In fact, some commenters recommended that the Commission consider requiring a GHG emissions attestation provider to use the standards established by the AICPA, IAASB, or PCAOB.<sup>1433</sup> One of these commenters stated that limiting the permissible standards in this way would "promote the quality and comparability" of the attestation provided.<sup>1434</sup> Alternatively, one commenter recommended that the Commission require the use of attestation standards promulgated by the PCAOB because in general "investors would be best served if all verification was performed pursuant to the same standards."<sup>1435</sup> Another commenter stated that the PCAOB should "begin preparing a separate standard based on the proposed

<sup>1431</sup> See, e.g., letters from APCIA; and PLASTICS (stating that allowing the provider to "pick the attestation standard" could "add variability to costs and reporting methodology, thereby undermining the Proposed Rule's claimed goal of promoting consistency").

<sup>1432</sup> See, e.g., letters from ERM CVS (agreeing with the Commission's statement but stating that the attestation standards of the PCAOB, AICPA, and IAASB are "generic auditing/assurance/attestation standards and may not always address the complexities of non-financial or GHG emissions assurance/attestation"); and PwC. *But see* letter from RILA (stating that it appreciated the proposed rules' flexibility, but applying PCAOB, AICPA, and IAASB attestation standards "prematurely will cause confusion and inconsistency, especially since it is still not clear what 'reasonable assurance' means under these standards with respect to GHG emissions disclosures").

<sup>1433</sup> See letter from CAQ (stating that the PCAOB's attestation standards would need to be updated if required for use by the Commission); and Mazars. *See also*, e.g., letters from Deloitte & Touche (stating that the AICPA, IAASB, and PCAOB standards are well-established and would provide needed transparency to investors, but that it sees a risk of investor confusion beyond those standards); and KPMG (stating that if the Commission were to limit the requirements to the PCAOB, AICPA; and IAASB standards the other elements of the proposed rules, such as the minimum criteria for a report, could be removed).

<sup>1434</sup> See letter from CAQ.

<sup>1435</sup> See letter from CFA Institute. Other commenters suggested that the PCAOB may need to update its attestation standards. *See*, e.g., letters from Crowe (stating that the standard setters for the AICPA and IAASB attestation standards have issued standards or guidance on sustainability information, including GHG emissions information, while the PCAOB standards do not explicitly address these topics); and RSM US LLP (stating that if "the Commission determines that attestation engagements related to GHG emissions should be conducted in accordance with PCAOB standards, we believe the PCAOB may deem it appropriate to update its attestation standards.").

rule."<sup>1436</sup> One commenter stated that the Commission should consider requiring non-accountant service providers to use the IAASB attestation standards, which in its view would "potentially result in consistency across service providers, since accountants and non-accountants can both use those standards."<sup>1437</sup> Another commenter stated that if the Commission permits the use of attestation standards other than those of the PCAOB, AICPA, or IAASB, the Commission could establish "a process to consider whether these standards are sufficient" and "provide transparency on the differences compared to the widely understood standards," which would protect the public interest.<sup>1438</sup>

Several commenters stated that the Commission should require<sup>1439</sup> or permit<sup>1440</sup> attestation over GHG emissions disclosure be performed in accordance with standards promulgated by the ISO.<sup>1441</sup> Several commenters stated that ISO 14064–3 is widely or commonly used by attestation providers.<sup>1442</sup> For example, one commenter stated that the "International Civil Aviation Organization, a United Nations body, requires verification bodies to meet the requirements of ISO 14065 and perform

<sup>1436</sup> See letter from Amer. for Fin. Reform, Sunrise Project *et al.*

<sup>1437</sup> See letter from Crowe.

<sup>1438</sup> See letter from KPMG.

<sup>1439</sup> See letters from ANSI NAB ("ANAB believes that ISO standards, including ISO 14064–3, ISO 14065, and ISO 14066 form the basis for quality auditing of GHG emissions and environmental information, and that attestation bodies should be required to perform attestation engagements in accordance with these requirements."); Futurepast (stating that attestation bodies that are not public accounting firms should be required to perform attestation engagements in accordance with ISO standards); and LRQA.

<sup>1440</sup> See, e.g., letters from AIA; Anthesis Grp.; CCR (stating that "precluding the use of ISO 14064–3 under the proposed rules would require a significant population of registrants to reevaluate and potentially change service providers, reducing efficiencies gained through prior attestation engagements and narrowing the field of service providers qualified to issue an acceptable attestation report under the proposed rules"); Chevron; Eni SpA; ERM CVS; First Environment; ISO; ISO Comm. GHG; NAM; SCS Global Services; S. Robinson (5–3–22) (stating that "nearly two thirds of GHG reporting firms and approximately one third of all S&P 500 firms already report and receive external attestation using ISO"); and USTAG TC207. *See also* letter from Bureau Veritas (recommending that "validation and verification bodies" be accredited to "ISO 17029").

<sup>1441</sup> The ISO is an independent, non-governmental international organization with a membership of 169 national standards bodies. *See* ISO, About us, available at <https://www.iso.org/about-us.html>.

<sup>1442</sup> See, e.g., letters from Chevron (stating its view that ISO 14064–3 is the "most predominantly used in the United States"); NAM; and US TAG TC207.

verifications in accordance with ISO 14064–3" and also recognizes "ISO 14066 as the appropriate standard for assessing the competence of greenhouse gas validation teams and verification teams."<sup>1443</sup> Another commenter stated that ISO 14064–3 is either a "required" or "acceptable" method for "verification by all of the major voluntary and regulatory reporting schemes (CDP, The Climate Registry and regional regulatory programs in California, Washington State, Oregon, and Canadian Provinces)."<sup>1444</sup>

In addition, another commenter stated that ISO standards "have been subjected to a rigorous development and approval process and have been accepted internationally as the basis for . . . [the] conduct of attestation engagements for nearly two decades."<sup>1445</sup> Relatedly, one commenter stated that it believed ISO 14064–3 would meet the proposed due process and public availability requirements.<sup>1446</sup> Further, another commenter stated that it believes ISO standards 14064–3, 14065, and 14066 "address required expertise, independence, and quality control at least as well if not better than" the IAASB's ISAE 3000, ISAE 3410, and ISRS 4400.<sup>1447</sup>

Another commenter that supported the proposed requirement related to the public availability of standards noted that ISO standards "are not free" and suggested that "some agreement needs to be reached regarding access by investors to ISO 14064–3, if this standard is used by the attestation provider."<sup>1448</sup> On the other hand, one of the commenters that did not support

<sup>1443</sup> See letter from Futurepast (noting that Futurepast's president "helped write" the ISO standards "as a U.S. Expert to ISO Technical Committee 207").

<sup>1444</sup> See letter from SCS Global Services.

<sup>1445</sup> See letter from US TAG TC207 (stating that the ISO Technical Committee 207, which is responsible for the development, review, and revision of ISO environmental and climate change standards, includes 120 member countries, each represented by its national standards body, and includes liaisons with 32 organizations that monitor the committee's standards development activities and can provide input during standards development, including, among others, the European Commission, International Chamber of Commerce, and World Trade Organization).

<sup>1446</sup> See letter from NAM. *See also* letter from D. Hileman (stating that the Commission should require that attestation or verification reports be provided pursuant to standards publicly available and established by groups that have followed "due process for broad stakeholder process" and that "[d]evelopment of ISO standards follows a similar trajectory").

<sup>1447</sup> See letter from Futurepast. *See also* letter from ANSI NAB (stating that it supports the proposed requirement for attestation providers to be independent, which is supported by accreditation requirements such as those set forth in ISO 14065).

<sup>1448</sup> See letter from ERM CVS.

the proposed requirement for the attestation standards to be publicly available at no cost to investors explained that the fees ISO charges for standards are designed to support its standards writing activity and that it “does not have any other agenda than the publication of high quality, consensus-based standards.”<sup>1449</sup> Another commenter stated that “[a]lthough ISO standards must be purchased for a fee, we believe that the nominal fee required to obtain ISO 14064–3 would not be a serious obstacle to investors who desire to review the standard.”<sup>1450</sup>

A few commenters mentioned other potential attestation standards for the Commission’s consideration. One commenter recommended that the Commission consider the CDP’s criteria for third party verification standards<sup>1451</sup> and another commenter stated that the final rules should permit the use of “the standards accepted by the CDP so as to avoid inadvertently excluding qualified providers.”<sup>1452</sup> In response to a request for comment included in the Proposing Release, one commenter stated that it did not believe that AccountAbility’s AA1000 Series of Standards would meet the proposed requirements because, among other reasons, it does not believe AccountAbility’s process for developing and publishing standards would meet the proposed due process requirements.<sup>1453</sup> However, another commenter stated that the final rules should be inclusive of AccountAbility’s AA1000 Series of Standards.<sup>1454</sup>

Several commenters agreed that the Commission should require the GHG emission attestation report to meet certain minimum requirements in addition to any form and content requirements set forth by the attestation standard or standards used, as proposed.<sup>1455</sup> One commenter stated that the proposed minimum attestation report requirements are “similar to the requirements of an independent

auditor’s report, which is well-understood by the investment community.”<sup>1456</sup> Another commenter stated that the proposed minimum requirements for the attestation report are particularly important if standards beyond those of the AICPA, IAASB, and PCAOB are permitted.<sup>1457</sup> One commenter stated that the Commission should also require a description of the role of internal audit in the underlying GHG emissions data and whether or how the GHG emissions attestation provider relied on internal audit’s work in the minimum report requirements.<sup>1458</sup>

On the other hand, a few commenters recommended against requiring additional minimum requirements for attestation reports.<sup>1459</sup> One of these commenters stated that the report requirements from the attestation standard used should be sufficient.<sup>1460</sup> Another commenter recommended that the Commission clarify whether a report that states the GHG emissions attestation provider is disclaiming an opinion on the GHG emissions would satisfy the requirements of Regulation S–K.<sup>1461</sup>

Regarding the proposed provision requiring the identification of the criteria against which the subject matter was measured or evaluated, a few commenters agreed that reference to proposed Item 1504 would meet the “suitable criteria” requirement under the prevailing attestation standard.<sup>1462</sup> One commenter stated that, in addition to referencing proposed Item 1504, the attestation report should refer to “the (publicly available) standard used by the registrant to determine the emissions.”<sup>1463</sup>

In the Proposing Release, the Commission included a request for

<sup>1456</sup> See letter from CFA Institute.

<sup>1457</sup> See letter from CAQ.

<sup>1458</sup> See letter from D. Hileman Consulting.

<sup>1459</sup> See, e.g., letters from C2ES; and ERM CVS (stating that it believes it would be difficult to prescribe minimum contents that would be applicable under all standards used but welcoming the Commission to provide additional guidance on the contents of the attestation report, such as the importance of a description of the work undertaken).

<sup>1460</sup> See letter from C2ES (stating that in “common practice, the attestation reports deliver a statement explaining the items reviewed, findings, a list of the metrics as verified and statement of independence,” which “is sufficient”).

<sup>1461</sup> See letter from Grant Thornton (drawing a comparison to Article 2 of Regulation S–X, which requires “the clear expression of an opinion on the financial statements” and stating that a “report that states that the auditor is disclaiming an opinion on the financial statements for any reason does not satisfy the requirements of Regulation S–X.”)

<sup>1462</sup> See, e.g., letters from ERM CVS; Futurepast; and Mazars.

<sup>1463</sup> See letter from ERM CVS.

comment asking if it requires or permits a registrant to use the GHG Protocol as the methodology for determining GHG emissions, would the provisions of the GHG Protocol qualify as “suitable criteria” against which the Scope 1 and Scope 2 emissions disclosure should be evaluated.<sup>1464</sup> A number of commenters agreed that if the Commission required or permitted a registrant to use the GHG Protocol as the methodology for determining GHG emissions, the provisions of the GHG protocol would qualify as “suitable criteria.”<sup>1465</sup> On the other hand, one commenter stated that “the reporting standards are not fully developed enough to establish criteria for reliability measuring GHG emissions.”<sup>1466</sup>

### c. Final Rules

We are adopting the GHG emissions attestation engagement and report requirements with some modifications from the proposal.<sup>1467</sup> Consistent with the proposed rules, the final rules (Item 1506(a)(2)) provide that the attestation report must be provided pursuant to standards that are established by a body or group that has followed due process procedures, including the broad distribution of the framework for public comment.<sup>1468</sup> Most commenters who discussed this aspect of the proposal supported the proposed requirement related to due process procedures,<sup>1469</sup> and we continue to believe that requiring the attestation report to be provided pursuant to standards that are established by a body or group that has followed due process procedures would help to ensure that the standards upon which the attestation engagement and report are based are the result of a transparent, public, and reasoned process.<sup>1470</sup> As the Commission stated in the Proposing Release, this requirement should also help to protect investors who may rely on the attestation report by limiting the standards to those that have been sufficiently developed.<sup>1471</sup>

The proposed rules also would have required the attestation standards to be publicly available at no cost. We

<sup>1464</sup> See Proposing Release, section II.H.3.

<sup>1465</sup> See letter from Anthesis Grp.; CRS (stating that, in general, “the market-based methodology for Scope 2 accounting as found in 2015 GHG Protocol Scope 2 Guidance would qualify as suitable criteria against which Scope 2 emissions disclosure should be evaluated”); D. Hileman Consulting; ERM CVS; Futurepast; KPMG; Mazars; PwC; WBCSD; and WRI.

<sup>1467</sup> See 17 CFR 229.1506(a)(2), (c).

<sup>1468</sup> See 17 CFR 229.1506(a)(2).

<sup>1469</sup> See *supra* note 1423 and accompanying text.

<sup>1470</sup> See Proposing Release, section II.H.3.

<sup>1471</sup> See *id.*

<sup>1449</sup> See letter from Futurepast.

<sup>1450</sup> See letter from CCR.

<sup>1451</sup> See letter from 3Degree.

<sup>1452</sup> See letter from Climate Risk Consortia.

<sup>1453</sup> See letter from ERM CVS (additionally stating that, under AA1000, the disclosure of data for individual metrics such as GHG emissions cannot be assured separately from assurance on the implementation and application of AA1000APS, which pertains to sustainability management, and that it does not believe that many Commission registrants would be willing to disclose compliance with AA1000APS and obtain assurance over all of these disclosures).

<sup>1454</sup> See letter from Climate Risk Consortia.

<sup>1455</sup> See, e.g., letters from CAQ (stating that the proposed minimum requirements for the attestation report “will provide investors with increased trust and confidence in the GHG emissions data”); CFA Institute; Crowe; and RSM US LLP.

received feedback from some commenters indicating that including such a requirement in the final rules would preclude the use of certain standards that are currently widely used by GHG emissions attestation providers with respect to voluntary assurance over GHG emissions disclosures but that are not publicly available for free.<sup>1472</sup> After consideration of this feedback, the final rules will require that the attestation report be provided pursuant to standards that, in addition to being developed using due process, are either (i) publicly available at no cost, or (ii) widely used for GHG emissions assurance.<sup>1473</sup> In the Proposing Release, the Commission explained that open access is an important consideration when determining the suitability of attestation standards because it enables investors to evaluate the report against the requirements of the attestation standard.<sup>1474</sup> We continue to believe that open access is an important consideration for the reasons the Commission previously stated; however, we also recognize that the benefits provided by open access may also exist when a standard is widely used in the marketplace such that registrants, GHG emissions attestation providers, and investors have significant experience using, or evaluating disclosure assured pursuant to, that standard. In addition, it is important to recognize the value that investors have found in the voluntary assurance services currently being provided with respect to climate and GHG emissions disclosures. By making this modification to the final rules, we expect that many registrants and GHG emissions attestation providers will be able to continue to use assurance standards they are already using for their voluntary disclosures, assuming that those standards meet the due process requirement.<sup>1475</sup> This approach will not only reduce the costs of complying with the final rules<sup>1476</sup> but will likely benefit investors by leveraging the experience that GHG emissions attestation providers already have with particular standards, which

could lead to assurance engagements being performed with a greater level of skill initially than if GHG emissions attestation providers were required to gain expertise with an unfamiliar standard.

Several commenters agreed with the Commission's statement in the Proposing Release that the attestation standards of the PCAOB, AICPA, and IAASB would meet the proposed attestation standard requirements.<sup>1477</sup> We continue to be of the view that the PCAOB, AICPA, and IAASB standards meet the due process requirements and are publicly available at no cost to investors. In addition, in light of our modifications to the final rules, we also believe that the ISO standards related to the attestation of GHG emissions disclosures would meet these requirements. We agree with those commenters that stated the process the ISO undertakes for the development of its standards is consistent with due process requirement included in the final rules.<sup>1478</sup>

The ISO TC 207/SC7 is the technical committee responsible for the development of ISO 14064-3—Greenhouse gases—Part 3: Specification with guidance for the verification and validation of greenhouse gas statements.<sup>1479</sup> The committee includes members from 120 countries, each represented by the country's national standards body, and the committee also liaises with 32 organizations who monitor standards development activities and can provide input during

standards development.<sup>1480</sup> Members organize consultations among stakeholders in their country to develop a national position on ISO standards.<sup>1481</sup> The ISO member from the United States is ANSI and it publishes on its website a listing of draft ISO standards that are open to public comment.<sup>1482</sup> Moreover, ISO follows a consensus process for approval of its standards.<sup>1483</sup> This multi-stakeholder process, which includes an opportunity for public comment on proposed standards, is consistent with the reasoned and transparent process the Commission described in the Proposing Release as being the foundation for standards that are sufficiently developed. This leads us to the conclusion that ISO standards align with the due process requirement in the final rules.

As commenters have noted, ISO standards are not available for free. The ISO standards are, however, widely used for GHG emissions assurance. For example, a recent report determined that for S&P 500 companies that voluntarily obtained assurance over their climate-related disclosures, including in many cases GHG emissions disclosures, the most common standard referenced by non-accounting firm GHG emission attestation providers was ISO 14064-3.<sup>1484</sup> Specifically, the report found that ISO standards were used in connection with 196 out of a total 346 engagements.<sup>1485</sup> This frequency of use aligns with the “widely used” criteria in the final rules.

It is important to note that by highlighting these standards, we do not mean to imply that other standards, either those currently in existence, or those that may develop in the future, would not be suitable for use under the final rules. Commenters recommended a number of alternative approaches, such as providing a list of acceptable standards,<sup>1486</sup> or requiring the use of a

<sup>1477</sup> See *supra* note 1432 and accompanying text. The PCAOB has announced an ongoing project to evaluate its attestation standards for purposes of developing any potential recommendation to amend, consolidate or eliminate certain standards as appropriate. See PCAOB, *Attestation Standards Update* (Updated Sept. 26, 2022), available at <https://pcaobus.org/oversight/standards/standard-setting-research-projects/attestation-standards-update>. The AICPA included its attestation standards as an active project under consideration on its 2022–23 strategy work plan. See AICPA, *2022–23 ASB strategy work plan*, available at <https://us.aicpa.org/content/dam/aicpa/research/standards/auditattest/asb/downloadable/documents/2022-2023-asb-strategy-work-plan.pdf>.

<sup>1478</sup> See *supra* notes 1445 and 1446 and accompanying text.

<sup>1479</sup> See ISO/TC 207/SC7, *About us*, available at <https://committee.iso.org/home/tc207sc7>. More generally, the ISO is a non-governmental organization established in 1947 and based in Geneva, Switzerland. Its mission is to promote the development of standardization and related activities in the world with a view to facilitating the international exchange of goods and services, and to developing cooperation in the spheres of intellectual, scientific, technological and economic activity. See ANSI, *U.S. Representation in ISO*, available at <https://www.ansi.org/iso/us-representation-in-iso/introduction>. ISO is composed of representatives from 170 national standards bodies. See ISO, *About us*, available at <https://www.iso.org/about-us.html>.

<sup>1472</sup> See *supra* note 1428 and accompanying text.

<sup>1473</sup> See 17 CFR 229.1506(a)(2).

<sup>1474</sup> See Proposing Release, section II.H.3.

<sup>1475</sup> Registrants and GHG emissions attestation providers would also need to meet the other requirements included in the final rules relating to the level and scope of the engagement and the expertise and independence of the provider, among other requirements.

<sup>1476</sup> See letter from Futurepast (stating that one benefit of having non-accounting firm attestation providers provide assurance pursuant to ISO or IAASB ISAE standards is that it would make “available to registrants a much larger pool of potential service providers,” which “will enhance competition and likely result in lower costs to registrants”).

<sup>1480</sup> See letter from USTAG TC207. The 32 organizations include the European Commission, International Accreditation Forum, International Chamber of Commerce, United Nations Conference on Trade and Development, World Health Organization, and World Trade Organization, among others. <sup>1486</sup> See *supra* note 1430 and accompanying text. See also letter from Climate Risk Consortia (recommending that the Commission permit the use of “the standards accepted by the CDP”).

particular standard.<sup>1487</sup> Although we considered these alternatives, we ultimately agreed with those commenters who stated that the Commission should take a flexible approach to the acceptable standards in recognition that more than one suitable standard exists, and others could develop in the future.<sup>1488</sup>

The final rules (Item 1506(c)) require the form and content of the GHG emissions attestation report to follow the requirements set forth by the attestation standard or standards used, as proposed; however, in a shift from the proposal, the final rules do not prescribe minimum report requirements.<sup>1489</sup> The Commission explained in the Proposing Release that the proposed minimum components were all common elements of current assurance reports,<sup>1490</sup> a point that was affirmed in the feedback we received from commenters.<sup>1491</sup> We continue to expect that the attestation standards that meet the requirements of the final rules will generally include all of the elements that were proposed.<sup>1492</sup> Therefore, the benefit of including the proposed minimum requirements would be marginal, at best, and could be viewed as redundant and adding unnecessary complexity and associated burdens to the final rules. Instead, simply requiring the attestation report to follow the form and content requirements of the attestation standard

<sup>1487</sup> See *supra* notes 1433, 1435, 1437, and 1439 and accompanying text.

<sup>1488</sup> See *supra* note 1428 and accompanying text. For example, in the Proposing Release, the Commission included a request for comment asking if AccountAbility's AA1000 Series of Standards would meet the proposed requirements for attestation standards. We received one comment that stated the final rule should be written in a way that is inclusive of all standards, including AA1000, among others, but the commenter did not provide any substantive reasons why AA1000 would meet the proposed criteria. See letter from Climate Risk Consortia. Another commenter stated that the process for developing the AA1000 standard would not meet the proposed due process requirements. See letter from ERM CVS. Although the feedback we received from commenters was mixed, to the extent that the AA1000 standard meets the criteria in the final rule, registrants and GHG emissions attestation providers would not be precluded from using it in connection with complying with the final rules. The staff of the Commission's Office of the Chief Accountant is available to consult with registrants about whether a particular standard meets the requirements in the final rules.

<sup>1489</sup> See 17 CFR 229.1506(c).

<sup>1490</sup> The Commission explained in the Proposing Release that it primarily derived the proposed requirements from the AICPA's attestation standard (e.g., SSAE No. 18), which are largely similar to the report requirements under PCAOB AT-101 and IAASB ISAE 3410. See Proposing Release, section II.H.3.

<sup>1491</sup> See *supra* note 279 and accompanying text.

<sup>1492</sup> See *supra* note 1490. See also ISO 14064-3, §§ 6.3.2 and 9.3.

or standards should provide investors with important information about the attestation engagement in a consistent and comparable manner. Nevertheless, in light of this shift to a more principles-based approach, to the extent that a particular attestation standard does not include elements sufficiently similar to those commonly included in an assurance report, the GHG emissions attestation provider should consider including such information in its attestation report to facilitate investors' understanding of the nature and scope of the engagement. Although some commenters suggested additional minimum requirements that could be included in the final rules,<sup>1493</sup> we decided against including any additional requirements for the same reason.

A few commenters asked the Commission to clarify the level of assurance that is required for historical periods in a registrant's filing.<sup>1494</sup> We are therefore clarifying that the final rules apply on a prospective basis only with disclosure for historical periods phasing in over time. Specifically, in the first year that an AF or LAF is required to provide an attestation report, such report is only required to cover the Scope 1 and/or Scope 2 emissions for its most recently completed fiscal year. To the extent the AF or LAF disclosed Scope 1 and/or Scope 2 emissions for a historical period, it would not be required to obtain an assurance report covering such historical period in the first year of the attestation rule's applicability. However, for each subsequent fiscal year's annual report, the registrant will be required to provide an attestation report for an additional fiscal year until an attestation report is provided for the entire period covered by the registrant's GHG emissions disclosures. In circumstances where more than one GHG emissions provider may have provided an attestation report for the different fiscal years included in the filing, a GHG emissions attestation provider should be clear about its involvement with any historical information, including disclaiming any such involvement where applicable.<sup>1495</sup>

In response to a request for comment, a few commenters agreed that a

<sup>1493</sup> See *supra* note 1458 and accompanying text.

<sup>1494</sup> See, e.g., letters from Deloitte & Touche (requesting that the Commission clarify the level of assurance that is required for historical periods); and Grant Thornton (same).

<sup>1495</sup> This guidance parallels similar practices in the context of the financial statement audit. See, e.g., PCAOB AS 3101, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, paragraph 18h, available at <https://pcaobus.org/oversight/standards/auditing-standards/details/AS3101>.

reference to proposed Item 1504 would meet the "suitable criteria" requirement under the prevailing attestation standard and that the provisions of the GHG Protocol would qualify as "suitable criteria" against which Scope 1 and Scope 2 emissions disclosure should be evaluated.<sup>1496</sup> Consistent with the Proposing Release, we reiterate that prevailing attestation standards require the criteria against which the subject matter is measured or evaluated to be "suitable."<sup>1497</sup> Suitable criteria, when followed, will result in reasonably consistent measurement or evaluation of the registrant's disclosure that is within the scope of the engagement.<sup>1498</sup> Consistent with commenter feedback, Item 1505 of Regulation S-K will satisfy the suitable criteria requirements of the prevailing attestation standards because the proposed requirements set forth relevant, objective standards that call for measurable and complete disclosure of GHG emissions that would allow for a consistent evaluation of the registrant's disclosure.<sup>1499</sup> In addition, in response to a question from a commenter,<sup>1500</sup> we are clarifying that a report that states the GHG emissions attestation provider is disclaiming an opinion on the GHG emissions would not constitute compliance by the AF or LAF with the requirement to obtain an attestation report over its Scope 1 and/or Scope 2 emissions under the final rules.

Consistent with the proposed rules, the final rules do not require a registrant to obtain an attestation report specifically covering the effectiveness of internal control over GHG emissions disclosure.<sup>1501</sup> Such a report would not be required even when the GHG emissions attestation engagement is performed at a reasonable assurance level. As explained in the Proposing Release, given the current evolving state of GHG emissions reporting and assurance, existing DCP obligations and

<sup>1496</sup> See *supra* note 1462 and accompanying text.

<sup>1497</sup> See Proposing Release, section II.H.3.

<sup>1498</sup> Characteristics of suitable criteria include relevance, objectivity, measurability, and completeness. See, e.g., AICPA SSAE No. 18, AT-C § 105.A16 and A42; AICPA SSAE No. 21, AT-C § 105.A16 and .A44. In addition to relevance and completeness, the characteristics of suitable criteria under IAASB ISAE 3000.A23 include reliability, neutrality and understandability. Therefore, despite the differences in the characteristics listed, the underlying concepts and objectives are consistent.

<sup>1499</sup> In addition, to the extent an AF or LAF chooses to disclose its Scope 1 and/or Scope 2 emissions pursuant to Item 1505 and leverages the GHG Protocol's methodologies, we agree with the commenters that stated the provisions of the GHG Protocol would qualify as "suitable criteria" against which the Scope 1 and/or Scope 2 emissions disclosure should be evaluated. See *supra* note 1366 and accompanying text.

<sup>1500</sup> See letter from Grant Thornton.

<sup>1501</sup> See Proposing Release, section II.H.3.

the requirement that AFs and LAFs (initially) obtain at least limited assurance of such disclosure are appropriate first steps toward enhancing the reliability of GHG emissions disclosure.<sup>1502</sup>

As explained above in section II.H.3, in a modification from the proposal, the final rules will not require that GHG emissions disclosure be provided in a separately captioned “Climate-Related Disclosure” section in the relevant filing. Therefore, the final rules do not require a registrant to include an attestation report in such a section, although a registrant may choose to do so.

One commenter asked the Commission to clarify whether, to the extent the Commission permits the use of standards other than those developed by the PCAOB, AICPA, and IAASB, the Commission should clarify “whether all practitioners should be required to consider ‘other information’ in the same way as CPAs.”<sup>1503</sup> The GHG emissions attestation provider must perform the engagement in accordance with the requirements included in the attestation standard being used. We are clarifying that, to the extent an attestation standard requires an attestation provider to consider ‘other information,’ then the provider would be required to comply with such a requirement to perform the engagement in accordance with the standard.

One commenter stated that, due to the proposed phase in for the assurance requirements, an LAF or AF may be required to obtain assurance over its GHG emissions disclosures, while its consolidated public subsidiaries are not (or not yet) subject to the same level of assurance.<sup>1504</sup> This commenter asked the Commission to consider clarifying whether the consolidated subsidiary is expected to obtain assurance based on the requirements of its parent entity or entities, and if not, how the assurance provider for the parent entity or entities would report the level of assurance provided over the individual

<sup>1502</sup> See *id.* Under prevailing attestation standards for limited assurance engagements, the testing of and attestation over internal controls are not required. See, e.g., AICPA SSAE No. 22, AT-C § 210.A16. With respect to reasonable assurance, while there are requirements under prevailing attestation standards to consider and obtain an understanding of internal controls, there is no required attestation of the effectiveness of internal controls such as that included in section 404(b) of the Sarbanes-Oxley Act of 2002 (Sarbanes-Oxley Act). See 15 U.S.C. 7262(b) (requiring a registered public accounting firm that prepares or issues an audit report for certain issuers to attest to, and report on, the assessment made by the management of the issuer with respect to internal controls).

<sup>1503</sup> See letter from KPMG.

<sup>1504</sup> See letter from Grant Thornton.

components of the reporting entity.<sup>1505</sup> In response to the specific factual scenario raised by this commenter, we are clarifying that the consolidated information included in the parent company’s Commission filing would need to comply with the final rules’ requirements applicable to the parent company. This means that a subsidiary’s information that is part of the consolidated reporting of its parent company will need to be assured as part of the assurance over the parent company’s consolidated reporting even if the consolidated subsidiary itself is not subject to assurance. This is consistent with how the auditing standards over consolidated financial statements generally apply.

Along similar lines, another commenter stated that there might be instances where a subsidiary of a registrant has a separate attestation engagement performed over its GHG emissions data to meet local statutory or jurisdictional requirements and the subsidiary might choose an attestation provider at the local level that differs from the attestation provider retained to perform the assurance required under the Commission’s rules.<sup>1506</sup> This commenter stated, for example, if a subsidiary’s attestation engagement was performed by an accounting firm provider that used AICPA standards, then AICPA attestation standards would allow the provider performing the assurance required under the Commission’s rules to use the work of another practitioner; however, AICPA standards do not address the ability of an accounting firm provider to use the work of a non-accountant practitioner, particularly when the non-accountant uses different attestation standards.<sup>1507</sup> Consistent with our response above, we are clarifying that the consolidated information included in the parent company’s Commission filing would need to comply with the final rules’ requirements applicable to the parent company. As is the case with other new disclosure requirements, the Commission staff is available to answer practice questions as registrants begin applying the final rules.

#### 4. Additional Disclosure by the Registrant (Item 1506(d))

##### a. Proposed Rules

In addition to the proposed minimum attestation report requirements described above, the proposed rules would have required disclosure of certain additional matters related to the

<sup>1505</sup> See *id.*

<sup>1506</sup> See letter from Crowe.

<sup>1507</sup> See *id.*

attestation of a registrant’s GHG emissions.<sup>1508</sup> With respect to the Scope 1 and Scope 2 emissions attestation required pursuant to proposed Item 1505(a) for AFs and LAFs, the proposed rules would have required the registrant to disclose in the filing, based on relevant information obtained from any GHG emissions attestation provider:

- Whether the attestation provider has a license from any licensing or accreditation body to provide assurance, and if so, the identity of the licensing or accreditation body, and whether the attestation provider is a member in good standing of that licensing or accreditation body;

- Whether the GHG emission attestation engagement is subject to any oversight inspection program, and if so, which program (or programs);<sup>1509</sup> and

- Whether the attestation provider is subject to record-keeping requirements with respect to the work performed for the GHG emissions attestation engagement and, if so, identify the record-keeping requirements and the duration of those requirements.<sup>1510</sup>

The Commission stated that these disclosures are not typically included in an attestation report and would not be included in the GHG emissions attestation report under the proposed rules.<sup>1511</sup> Instead, the registrant would be required to provide these disclosures in the separately captioned “Climate-Related Disclosure” section, where the GHG emissions disclosure would be provided pursuant to the proposed rules.<sup>1512</sup>

##### b. Comments

A few commenters generally agreed that the Commission should require the proposed items of disclosure to be provided by the registrant in the filing that includes the attestation report (where the GHG emissions and other climate-related disclosures are presented), based on relevant information obtained from the GHG emissions attestation provider as proposed.<sup>1513</sup> Alternatively, several commenters stated that they supported such disclosure requirements when the GHG emissions attestation provider is not registered with the PCAOB.<sup>1514</sup> One

<sup>1508</sup> See Proposing Release, section II.H.4.

<sup>1509</sup> In the Proposing Release, the Commission stated that one example of an oversight program would be the AICPA peer review program, among others. See *id.*

<sup>1510</sup> See *id.*

<sup>1511</sup> See *id.*

<sup>1512</sup> See *id.*

<sup>1513</sup> See letters from Amer. for Fin. Reform, Sunrise Project *et al.*; and ICAEW.

<sup>1514</sup> See, e.g., letters from CAQ; CFA Institute; Crowe (“If a registrant uses its financial statement

of these commenters explained that when a registrant uses a PCAOB-registered accounting firm as its GHG emissions attestation provider it should not be required to make the proposed additional disclosures “[g]iven that a PCAOB-registered accounting firm is already complying with stringent requirements for things such as licensure, oversight, and record-keeping,” which is “well understood by investors.”<sup>1515</sup> On the other hand, one commenter stated that registrants should not be required to provide these additional items of disclosure because, in its view, these are not “appropriate determinations to be made by registrants and instead believe that this disclosure, if retained, should be included in the attestation provider’s report itself.”<sup>1516</sup>

Some commenters stated they agreed with the proposed requirement for a registrant to disclose whether the GHG emissions attestation provider has a license from an accreditation body.<sup>1517</sup> One of these commenters explained that this information “would be helpful to investors as they could then rely on the licensing and accreditation bodies to vet the provider’s expertise rather than needing to evaluate other related information.”<sup>1518</sup> A few commenters stated that they disagreed with the proposed requirement for registrants to disclose whether the attestation provider has a license from any licensing or accreditation provider. One commenter explained that “[i]n the absence of a universal certification or credential, registrants will seemingly bear the risk and burden of making a determination regarding the qualifications of an appropriate provider and disclosing these qualifications, and many registrants may lack the expertise to make such a determination or disclosure.”<sup>1519</sup> Similarly, another commenter stated that the “entity granting and monitoring professional practice for these credentials should bear the responsibility for making public disclosures” on these topics with the GHG emissions attestation provider

auditor, who currently must meet the requirements in Article 2 of Reg. S–X, to also perform any required GHG emissions attestation, we recommend the SEC consider exempting those registrants from additional disclosures.”); and PwC (stating that given the importance of licensing, oversight, and record-keeping requirements they should be added to the qualifications necessary to be a GHG emissions attestation provider).

<sup>1515</sup> See letter from CAQ.

<sup>1516</sup> See letter from ABA. See also letter from D. Hileman (stating that “none of the proposed requirements in this section should be borne by the registrant”).

<sup>1517</sup> See, e.g., letters from ICAEW; ICI; Morningstar; and RSM.

<sup>1518</sup> See letter from RSM.

<sup>1519</sup> See letter from ABA.

providing “a citation to the granting entity’s website.”<sup>1520</sup> One commenter urged the Commission to “defer action” on this matter until after the rules have been implemented for a period of time.<sup>1521</sup>

The Proposing Release included a request for comment asking if, in lieu of only requiring disclosure about whether the GHG emissions attestation provider has a license from an accreditation body, the Commission instead should require a GHG emissions attestation provider to be licensed to provide assurance by specified licensing or accreditation bodies, and if so, which bodies the Commission should specify.<sup>1522</sup> One commenter stated that “review by a licensed or accredited firm with minimum standards is essential for reliable GHG emissions reporting.”<sup>1523</sup> Conversely, one commenter stated that the Commission should not require accreditation or require a GHG emissions attestation provider “to be a member in good standing of a particular body” because it could unintentionally disqualify an appropriate provider.<sup>1524</sup> Although the proposed rules would not have required a GHG emissions attestation provider to be licensed, one commenter asked the Commission to clarify “which existing licensing or accrediting bodies meet SEC standards” under the proposed rules.<sup>1525</sup>

Some commenters agreed that the Commission should require a registrant to disclose whether the GHG emissions attestation engagement is subject to any oversight inspection program, and if so, which program(s), as proposed.<sup>1526</sup> One commenter stated that this proposed requirement “would provide decision-useful information to investors.”<sup>1527</sup> On the other hand, one commenter disagreed with the proposed requirement and suggested instead the Commission require the attestation provider to publicly disclose on its website certain information such as the “qualifications and experience of its

principals” and “errors and omissions insurance information,” among other things.<sup>1528</sup> Another commenter stated that such requirement is “only relevant if the Commission also specifies the particular standards under which the attestation engagement should be performed.”<sup>1529</sup> One commenter stated that such information “should be communicated by the attestation provider as part of their reporting, rather than being reported by the issuer, who may or may not be able to confirm the information (notwithstanding its responsibility to do so in all SEC filings).”<sup>1530</sup> In addition, one commenter stated that the Commission should work toward establishing oversight over GHG emissions attestation providers in the near future,<sup>1531</sup> and other commenters asked the Commission to “clarify what regulatory environment applies to GHG attestation providers”<sup>1532</sup> or stated that it was not clear what any oversight inspection program would include.<sup>1533</sup>

A few commenters stated that they supported the proposed requirement for registrants to disclose whether the GHG emissions attestation provider is subject to record-keeping requirements for the engagement.<sup>1534</sup> The Proposing Release included a request for comment asking if, in lieu of requiring disclosure about such matters, the Commission instead should specify that the record-keeping requirements of a GHG emissions attestation provider must be of a certain minimum duration.<sup>1535</sup> One commenter stated it believed “the record-keeping requirement for the GHG attestation provider should extend to the duration of the securities law protections for investors.”<sup>1536</sup>

One commenter recommended that the Commission include an additional element of disclosure and require registrants to disclose the terms that they negotiate with third-party verification firms to enable investors to evaluate the adequacy of third-party oversight.<sup>1537</sup>

Continued

In the Proposing Release, the Commission included a request for comment asking if it should include disclosure requirements when there is a change in, or disagreement with, the registrant's GHG emissions attestation provider that are similar to the disclosure requirements in Item 4.01 of Form 8-K and 17 CFR 229.304 ("Item 304 of Regulation S-K").<sup>1538</sup> A few commenters stated that they would support such a requirement.<sup>1539</sup> One commenter stated that the "level of detail" in Item 304 of Regulation S-K "is excessive for non-accountants," but indicated it would support a "slimmed down" version of this requirement.<sup>1540</sup>

### c. Final Rules

The Commission is adopting the requirement for registrants to disclose certain additional information related to the attestation of a registrant's GHG emissions with significant modifications from the proposal.<sup>1541</sup> To reduce the burdens on issuers that would have arisen under the proposed rules, and in response to certain commenter feedback described above, we are not adopting a requirement for registrants to disclose (1) whether the attestation provider has a license from any licensing or accreditation body to provide assurance; and (2) whether the attestation provider is subject to record-keeping requirements with respect to the work performed for the GHG emissions attestation engagement. However, consistent with the proposal, the final rules (Item 1506(d)) require registrants to disclose whether the GHG emission attestation engagement is subject to any oversight inspection program, subject to certain modifications.<sup>1542</sup> In addition, in a modification from the proposal, the final rules require registrants to disclose certain information when there is a change in, and disagreement with, the registrant's GHG emissions attestation provider as discussed in greater detail below.<sup>1543</sup>

requirement since the Commission did not propose to establish minimum standards for limited assurance engagements).

<sup>1538</sup> See Proposing Release, section II.H.2.

<sup>1539</sup> See, e.g., letters from CII; PwC (recommending that the disclosures be modeled after the requirements of Item 304 of Regulation S-K); and RSM US LLP. See also letter from CFA Institute (stating that it would not object to a requirement to disclose a change in attestation provider).

<sup>1540</sup> See letter from ERM CVS (stating that it would particularly support a requirement to disclose the "most likely circumstances" for dismissal or disagreement between the registrant and the GHG emissions attestation provider and identifying examples).

<sup>1541</sup> See 17 CFR 229.1506(d).

<sup>1542</sup> See 17 CFR 229.1506(d)(1).

<sup>1543</sup> See 17 CFR 229.1506(d)(2).

The decision not to adopt a requirement for a registrant to disclose whether its GHG emissions attestation provider has a license from any licensing or accreditation body will eliminate the potential for confusion about when disclosure is required, thus reducing the burden associated with the final rules. Although the existence of a license for a GHG emissions attestation provider that is a certified public accountant is straightforward to determine because certified public accountants and their firms must be registered with state boards of accountancy,<sup>1544</sup> it may be more difficult for a registrant to determine if a non-accountant GHG emissions attestation provider holds a license. Furthermore, although accreditation and certification organizations exist for GHG emissions attestation providers that are not accountants,<sup>1545</sup> it may be difficult for registrants and even GHG emissions attestation providers themselves to determine whether the credential conferred by such organization constitutes a "license," or if it is some other type of accreditation or certification. Therefore, we agree with the commenter that pointed out the "absence of a universal certification or credential" likely would make it difficult for registrants to determine whether disclosure is required.<sup>1546</sup>

We decided not to require a registrant to disclose whether the attestation provider is subject to record-keeping requirements with respect to the work performed for the GHG emissions attestation engagement to reduce burdens on registrants. Upon further consideration, this proposed requirement would seem to have marginal benefit to investors making investment or voting decisions while adding complexity to issuer disclosures. Instead, the final rules focus the disclosure requirements on the more significant disclosure of the existence of an oversight inspection program.<sup>1547</sup>

The proposed rules would have required a registrant to disclose whether the GHG emissions attestation engagement is subject to any oversight inspection program, and if so, which

<sup>1544</sup> See, e.g., National Association of State Boards of Accountancy, Getting a License, available at <https://nasba.org/licensure/gettingacplicense/> (explaining the licensure process for certified public accountants and accounting firms by state boards of accountancy).

<sup>1545</sup> See, e.g., letter from ANSI NAB (describing itself as the "only peer recognized accreditation body operating an accreditation program for oversight of greenhouse gas (GHG) validation and verification bodies (attestation providers) in the United States.").

<sup>1546</sup> See letter from ABA.

<sup>1547</sup> See 17 CFR 229.1506(d).

program (or programs).<sup>1548</sup> We are adopting this requirement as proposed.<sup>1549</sup> In response to commenters,<sup>1550</sup> we are clarifying, for purposes of the final rules, that we would consider a GHG emissions attestation engagement to be subject to an oversight inspection program if it is possible that the assurance services could be inspected pursuant to the oversight program, even if it is not certain that the services will be inspected in a particular inspection cycle. An example of such an oversight inspection program is the AICPA's peer review program, which includes within its scope attestation engagements performed by a certified public accountant in accordance with AICPA standards.<sup>1551</sup> Commenters did not offer any examples of oversight inspection programs that would include within their scope GHG emissions attestation engagements performed by *non-accountants*. Even if no such programs currently exist, it is possible that they could develop in the future given the evolving nature of GHG emissions assurance practices. Accordingly, we continue to believe that the existence of an oversight inspection program will help investors better understand the qualifications of the GHG emissions attestation provider, which in turn will help them determine whether the assurance services have enhanced the reliability of the GHG emissions disclosure.

In addition to requiring a registrant to disclose whether the GHG emissions attestation engagement is subject to any oversight inspection program as proposed, the final rules also require a registrant to disclose whether the GHG emissions attestation provider is subject to any oversight inspection program, and if so, which program (or programs).<sup>1552</sup> To be clear, this requirement is not limited to oversight inspection programs that include within their scope, or require the inspection of, the GHG emissions attestation engagement. Rather, the final rules

<sup>1548</sup> See Proposing Release, section II.H.4.

<sup>1549</sup> See 17 CFR 229.1506(d).

<sup>1550</sup> See *supra* notes 1532 and 1533 and accompanying text.

<sup>1551</sup> Under the AICPA Peer Review Program, firms that are members of the AICPA are required to have a peer review of their accounting and auditing practice once every three years in accordance with the AICPA Standards for Performing and Reporting on Peer Reviews. The peer review is conducted by an independent evaluator, known as a peer reviewer, who reviews a sample of the firm's work against the requirements of applicable professional standards in all material respects. See Summary of AICPA Peer Review Program, available at <https://us.aicpa.org/research/standards/peerreview/peer-review-summary.html>.

<sup>1552</sup> See 17 CFR 229.1506(d).

require the disclosure of “any” oversight inspection program that applies to the GHG emissions attestation provider.<sup>1553</sup> Therefore, a registrant must disclose any oversight inspection program the GHG emissions attestation provider is subject to for any type of engagement (e.g., a financial statement audit or other review).<sup>1554</sup> This additional requirement will provide investors with a better understanding of the qualifications of the GHG emissions attestation provider because such oversight can provide a check on a provider’s overall activities and drive improvements in the quality of their services.<sup>1555</sup>

We considered whether to only require disclosure about the existence of oversight inspections programs from registrants who engage GHG emission attestation providers that are not registered with the PCAOB, as suggested by some commenters.<sup>1556</sup> However, we are concerned that requiring this disclosure only with respect to certain GHG emission attestation providers could result in confusion and believe that requiring registrants to provide such disclosure with respect to all GHG emissions attestation providers will enhance the consistency and

comparability of disclosures. Moreover, to the extent that a particular GHG emissions attestation provider is registered with the PCAOB, we would not expect it to be time consuming or difficult for a registrant to make this disclosure, which would presumably remain the same from year-to-year absent any changes to PCAOB rules.

We also considered whether to require such disclosure to be included in the attestation report as recommended by one commenter,<sup>1557</sup> instead of requiring the registrant to disclose this information in the filing that includes the attestation report as proposed. We understand that whether the attestation provider is subject to any oversight inspection program is in the first instance known by the attestation provider rather than the registrant, and therefore it may seem reasonable to require the attestation provider to make the disclosure rather than the registrant. However, we do not expect it would be difficult or burdensome for a registrant to obtain this information from the GHG emissions attestation provider, and in fact, we expect that most registrants would want to know about the existence of an oversight inspection program before retaining an attestation provider in most instances and therefore likely will already have such information in their possession. Moreover, we continue to believe that requiring such disclosure to be included in the attestation report may create confusion because this disclosure may not be required by existing attestation standards.

As stated above, the Commission included a request for comment in the Proposing Release asking if it should require disclosure when there is a change in, or disagreement with, the registrant’s GHG emissions attestation provider that is similar to the disclosure requirements in Item 4.01 of Form 8–K and Item 304 of Regulation S–K.<sup>1558</sup> The commenters that responded to the request for comment generally agreed with including such a requirement in the final rules.<sup>1559</sup> Because we believe that requiring the disclosure of information regarding changes in, and disagreements with, a GHG emissions attestation provider would provide investors with important information about the provider and the conduct of the attestation engagement, which investors need to help them assess the reliability of the registrant’s GHG emissions disclosures, we have included a provision in the final rules that will require AFs and LAFs subject

to Item 1506(a) to disclose certain information when the registrant’s GHG emissions attestation provider resigns (or indicates that it declines to stand for re-appointment after completion of the attestation engagement) or is dismissed.<sup>1560</sup>

We have generally modeled this aspect of the final rules on the disclosure requirements in Item 4.01 of Form 8–K and Item 304 of Regulation S–K, tailored to fit the context of a GHG emissions attestation engagement and to limit additional burdens.<sup>1561</sup> In particular, our decision to require the disclosure in the filing that contains the GHG emissions disclosures and attestation report (e.g., a registration statement or an annual report that requires disclosure pursuant to Item 1506), instead of an alternative such as requiring a registrant to provide the disclosure in a Form 8–K, should serve to limit additional burdens associated with this provision. We believe that requiring similar disclosure for GHG emissions attestation providers to be included in the annual report or registration statement that contains the attestation report is appropriate because it will provide investors with the essential information they need to evaluate the assurance services provided while minimizing the need for additional filings by a registrant.

Specifically, the final rules (Item 1506(d)(2)) will require an AF or LAF subject to Item 1506(a) to disclose whether its former GHG emissions attestation provider resigned or was dismissed and the date thereof.<sup>1562</sup> If so, the registrant must state whether during the performance of the attestation engagement for the fiscal year covered by the attestation report there were any disagreements with the former GHG emissions attestation provider over any measurement or disclosure of GHG emission or attestation scope of procedures.<sup>1563</sup> The final rules will

<sup>1560</sup> See 17 CFR 229.1502(d)(2).

<sup>1561</sup> Although we have generally modeled these aspects of the final rules on existing requirements, in addition to the substantive differences discussed herein, we have also made several non-substantive changes and updates for readability. For the avoidance of doubt, neither the final rules nor this discussion should be construed as a modification or interpretation of the existing requirements on which they were modeled.

<sup>1562</sup> See 17 CFR 229.1506(d)(2)(i). Therefore, the registrant will be required to provide disclosure in circumstances where: (1) a GHG emissions attestation provider resigns or is dismissed during the fiscal year covered by the attestation report but it does not issue the attestation report; and (2) a GHG emissions attestation provider issues an opinion or conclusion on GHG emissions disclosure for the relevant fiscal year but is dismissed or resigns before the attestation report is filed.

<sup>1563</sup> See 17 CFR 229.1506(d)(2)(i)(B).

<sup>1553</sup> See *id.*

<sup>1554</sup> Examples of such oversight inspection programs include the AICPA’s peer review program or the PCAOB’s inspection program. The AICPA’s peer review program and PCAOB’s inspection program are two examples of types of oversight inspection programs that a GHG emissions attestation provider may be subject to generally; however, only the AICPA’s peer review program would include within its scope the GHG emissions attestation engagement. The PCAOB’s inspection jurisdiction is limited to audits of issuers and registered brokers and dealers and does not include attestation engagements for GHG emissions disclosure within its scope. See 15 U.S.C. 7214 (setting forth the PCAOB’s inspection jurisdiction). Consistent with our explanation above, commenters did not offer any examples of oversight inspection programs that apply to non-accountant GHG emissions attestation providers.

<sup>1555</sup> For example, in the context of inspections of PCAOB-registered public accounting firms, academic literature suggests that engagement-specific PCAOB inspections may have spillover effects on non-inspected engagements. See, e.g., Daniel Aobdia, *The Impact of the PCAOB Individual Engagement Inspection Process—Preliminary Evidence*, 93 *Acct. Rev.* 53, 53–80 (2018) (concluding that “engagement-specific PCAOB inspections influence non-inspected engagements, with spillover effects detected at both partner and office levels” and that “the information communicated by the PCAOB to audit firms is applicable to non-inspected engagements”); Daniel Aobdia, *The Economic Consequences of Audit Firms’ Quality Control System Deficiencies*, 66 *Mgmt. Sci.* (2020) (concluding that “common issues identified in PCAOB inspections of individual engagements can be generalized to the entire firm, despite the PCAOB claiming its engagement selection process targets higher risk clients” and that “[PCAOB quality control] remediation also appears to positively influence audit quality”).

<sup>1556</sup> See *supra* note 400 and accompanying text.

<sup>1557</sup> See *supra* note 402 and accompanying text.

<sup>1558</sup> See Proposing Release, Section II.H.2.

<sup>1559</sup> See *supra* note 1539 and accompanying text.

require the registrant to describe each such disagreement and state whether the registrant has authorized the former GHG emissions attestation provider to respond fully to the inquiries of the successor GHG emissions attestation provider concerning the subject matter of each such disagreement.<sup>1564</sup> Like the other elements of the disclosure requirement, this is modeled on the requirement to disclose disagreements between a registrant and its independent auditor in connection with the auditor's dismissal or resignation in Item 304 of Regulation S–K, and just as in that context, it is important that significant disagreements are brought to the attention of investors.<sup>1565</sup> The disclosure of the existence of a disagreement in the event of the resignation or dismissal of the GHG emissions attestation provider will enable investors to assess the possible effects of such disagreement and whether it could have impacted the reliability of the GHG emissions disclosure, which, as discussed above, provides investors with information about a registrant's business, results of operations, and financial condition. The final rules also include two instructions defining the term "disagreements" for purposes of the disclosure and explaining the circumstances in which it is sufficient to conclude that a disagreement has been communicated to the registrant.<sup>1566</sup> This definition and explanation is consistent with Item 304 of Regulation S–K and its Instructions, with minor modifications to take into account the circumstances of a GHG emissions attestation engagement.<sup>1567</sup>

We have determined to take an incremental approach to requiring disclosure about the resignation or dismissal of a GHG emissions attestation provider and therefore have not included a requirement for the registrant to request the former GHG emissions attestation provider to furnish the registrant with a letter addressed to the Commission stating whether it agrees with the statements made by the registrant with respect to the resignation or dismissal and disagreement (if applicable). The final rules, however, do not preclude a registrant from disclosing its explanation of the dismissal or resignation to its former GHG emissions attestation provider, and although not required, we encourage any GHG

emissions attestation provider to convey concerns it has with the registrant's description of those events to the Commission's Office of the Chief Accountant.

The requirement to disclose certain information when a GHG emissions attestation provider resigns or is dismissed only applies to AFs and LAFs that are required to obtain an attestation report pursuant to Item 1506(a). It does not apply if an AF or LAF is not required to disclose its GHG emissions (and therefore is not required to obtain an attestation report) because the AF or LAF determines that its GHG emissions are not material for a particular fiscal year. In addition, for the avoidance of doubt, Item 1506(d)(2) does not apply to registrants that voluntarily obtain assurance over their GHG emissions disclosure and provide certain information about the engagement pursuant to Item 1506(e). We expect that the documentation regarding resignations and dismissals and any disagreements between the registrant and the GHG emissions attestation provider will be readily available to the registrant such that it would not be difficult or costly to comply with this requirement.

## 5. Disclosure of Voluntary Assurance (Item 1506(e))

### a. Proposed Rules

The Commission proposed to require a registrant that was not required to include a GHG emissions attestation report under the proposed rules to disclose certain information if the registrant's GHG emissions disclosures were voluntarily subjected to third-party attestation or verification.<sup>1568</sup> Specifically, the Commission proposed new Item 1505(e) of Regulation S–K to require a registrant to disclose within the separately captioned "Climate-Related Disclosure" section in the filing the following information if the registrant's GHG emissions disclosures were subject to third-party attestation or verification:

- (i) Identify the provider of such assurance or verification;
- (ii) Describe the assurance or verification standard used;
- (iii) Describe the level and scope of assurance or verification provided;
- (iv) Briefly describe the results of the assurance or verification;
- (v) Disclose whether the third-party service provider has any other business relationships with or has provided any other professional services to the registrant that may lead to an

impairment of the service provider's independence with respect to the registrant; and

(vi) Disclose any oversight inspection program to which the service provider is subject (*e.g.*, the AICPA's peer review program).<sup>1569</sup>

The Commission explained that, taken together, these proposed disclosure items should help investors understand the nature and reliability of the attestation or verification provided and help them assess whether the voluntary assurance or verification has enhanced the reliability of the GHG emissions disclosure.<sup>1570</sup>

### b. Comments

Many of the commenters that specifically addressed the proposed requirement to provide disclosures regarding voluntary attestation or verification supported the proposal.<sup>1571</sup> One commenter stated, "[i]f a registrant receives assurance for their GHG emissions, regardless of whether they are required to do so under the final [Commission] rule, they should be required to disclose this information . . . as proposed."<sup>1572</sup> Alternatively, one commenter stated that registrants that obtained voluntary assurance should follow the same proposed attestation requirements that would apply to mandatory assurance over Scope 1 and Scope 2 disclosures (*e.g.*, proposed Items 1505(a) through (d)) to protect investors from attestation reports provided under standards that did not meet a minimum set of criteria established by the Commission.<sup>1573</sup>

Several commenters supported the proposed requirements to: identify the provider of such assurance or verification; disclose the assurance or verification standard used; describe the level and scope of assurance or verification provided; and briefly describe the results of the assurance or verification.<sup>1574</sup> A few commenters supported the proposed requirement to disclose whether the third-party service provider had any other business relationships with or has provided any other professional services to the registrant that may lead to an impairment of the service provider's independence with respect to the

<sup>1569</sup> See *id.*

<sup>1573</sup> See letter from KPMG.

<sup>1574</sup> See, *e.g.*, letters from Amer. for Fin. Reform, Sunrise Project *et al.*; CEMEX; and C. Howard.

<sup>1564</sup> See 17 CFR 229.1506(d)(2)(i)(B)(1)–(2).

<sup>1565</sup> See *Registrants and Independent Accountants Amended Rules for Increased Disclosure of Relationships*, Release No. 33–5550 (Dec. 20, 1974) [40 FR 1010, 1011 (Jan. 6, 1975)].

<sup>1566</sup> See 17 CFR 229.1506(d)(2)(ii)–(iii).

<sup>1567</sup> See 17 CFR 229.304(a)(1)(iv); and Instructions 4 and 5 to Item 304.

<sup>1568</sup> See Proposing Release, section II.H.5.

registrant.<sup>1575</sup> However, one commenter stated that it did not support such a disclosure requirement because it did “not believe the third-party provider should be independent.”<sup>1576</sup> A few commenters supported the requirement to disclose any oversight program to which the service provider is subject,<sup>1577</sup> while one commenter suggested aligning with the Science Based Targets Initiative.<sup>1578</sup> One commenter stated that it did not support requiring attestation providers to disclose any oversight inspection programs to which they are subject because investors could, in its view, wrongly assume that attestation providers that are subject to oversight are necessarily more qualified than those that are not.<sup>1579</sup> One commenter stated it is not clear what any oversight inspection program would include.<sup>1580</sup>

The Proposing Release included a request for comment asking whether registrants should be required to furnish a copy of, or provide a link to, the assurance or verification report.<sup>1581</sup> One commenter stated that registrants should be asked to provide a copy of the attestation or verification report when available.<sup>1582</sup> Another commenter stated that if summarizing the report in accordance with proposed Item 1505(e) effectively means that the report is filed, then furnishing the report would, in the commenter’s view, be a more appropriate alternative.<sup>1583</sup> The Proposing Release also asked whether, instead of requiring a registrant to disclose whether the third-party service provider has any other business relationships with or has provided any other professional services to the registrant that may lead to an impairment of the service provider’s independence with respect to the registrant as proposed, the Commission should require the third-party service provider to be independent, according

to the standard proposed under Item 1505(b) with respect to mandatory attestation over Scope 1 and Scope 2 emissions.<sup>1584</sup> In response, one commenter stated that it supported such a requirement,<sup>1585</sup> and one commenter stated that it did not support such a requirement, explaining that it would severely narrow the options registrants have to hire such providers.<sup>1586</sup> Finally, some commenters requested clarification on the use of the terminology “assurance” and “verification,” and the difference between the two.<sup>1587</sup>

### c. Final Rules

We are adopting final rules (Item 1506(e)) that require any registrant that is not required to include a GHG emissions attestation report pursuant to Item 1506(a) to disclose certain information about the assurance engagement if the registrant’s GHG emissions disclosure was voluntarily subject to assurance.<sup>1588</sup> Under the final rules, a registrant will be required to disclose the following information if the registrant’s GHG emissions disclosure was subject to third-party assurance:

- (i) Identification of the service provider of such assurance;
- (ii) Description of the assurance standard used;
- (iii) Description of the level and scope of assurance services provided;
- (iv) Brief description of the results of the assurance services;
- (v) Whether the service provider has any material business relationships with or has provided any material professional services to the registrant; and

<sup>1584</sup> See Proposing Release, section II.H.5.

<sup>1585</sup> See letter from Futurepast.

<sup>1586</sup> See letter from CEMEX.

<sup>1587</sup> See, e.g., letters from CEMEX; C. Howard; and IECA.

<sup>1588</sup> See 17 CFR 229.1506(e). Under the proposed rules, all registrants would have been subject to the requirement to disclose Scopes 1 and 2 emissions, but only AFs and LAFs would have been subject to the proposed requirement to obtain attestation. Therefore, under the proposed rules, there would have been a category of registrants that were required to disclose GHG emissions in their filings but were not required to obtain an attestation report. The situation is different under the final rules because only AFs and LAFs are required to disclose Scopes 1 and/or 2 emissions in certain circumstances, and these categories of registrants are also required to obtain an attestation report. Thus, under the final rules, there is no category of registrants that is required to disclose GHG emissions but not obtain an attestation report. As a result, Item 1506(e), which requires disclosure of voluntary assurance, only applies to (i) non-AF and non-LAF registrants that voluntarily disclose their GHG emissions in a Commission filing and voluntarily obtain assurance over such disclosure; and (ii) as explained above in section II.I.1, filings made by AFs and LAFs after the compliance date for the GHG emissions disclosure requirements but before Item 1506(a) requires limited assurance.

(vi) Whether the service provider is subject to any oversight inspection program, and if so, which program (or programs) and whether the assurance services over GHG emissions are included within the scope of authority of such oversight inspection program.<sup>1589</sup>

The final rules require disclosure of this information whenever assurance services are voluntarily obtained by the registrant. Although we considered requiring a registrant to provide disclosure only when the registrant chooses to disclose the results of the assurance services, we decided not to adopt this alternative because it could incentivize a registrant not to disclose unfavorable results from voluntary assurance services when that information would be meaningful to an investor evaluating the reliability of a registrant’s GHG emissions disclosure. If a registrant chooses to voluntarily obtain assurance over its GHG emissions disclosure, it is important that investors be made aware of the fact that assurance was obtained, the nature of the services provided, and the results of those assurance services so that they can evaluate how much reliance to place upon the disclosed GHG emissions data when making investment decisions.

Although the proposed rules would have required a registrant to disclose certain information if its GHG emissions disclosure was voluntarily subject to third-party “attestation” or “verification,” the final rules are narrower in scope in that they only require a registrant to disclose certain information about “assurance” services a registrant voluntarily obtains over its GHG emissions disclosure.<sup>1590</sup> For purposes of the final rules, assurance services are services performed in accordance with professional standards that are designed to provide assurance, which would include, for example, an examination providing reasonable assurance or a review providing limited assurance.<sup>1591</sup> Certain “attestation” engagements may be designed to provide limited or reasonable assurance over identified information and therefore such services would fall within the scope of the final rules, but in many cases “verification” services are not designed to provide assurance.

<sup>1589</sup> See 17 CFR 229.1506(e).

<sup>1590</sup> See *id.*

<sup>1591</sup> For examples of attestation engagements designed to provide assurance, see, e.g., PCAOB AT section 101; AICPA SSAE No. 21 AT–C sections 205 and 206 and AICPA SSAE No. 22 AT–C section 210; and IAASB ISAE 3000 (Revised) and ISAE 3410. See also Proposed ISSA 5000. The Proposing Release discussed the differences between limited and reasonable assurance. See Proposing Release, section II.H.1.

<sup>1575</sup> See, e.g., letters from Amer. for Fin. Reform, Sunrise Project *et al.*; C. Howard; and CII.

<sup>1576</sup> See letter from CEMEX.

<sup>1577</sup> See, e.g., letters from Amer. for Fin. Reform, Sunrise Project *et al.*; C. Howard; and Morningstar.

<sup>1578</sup> See, e.g., letter from CEMEX. Science Based Targets Initiative (“SBTi”) is a partnership between CDP, the United Nations Global Compact, World Resources Institute, and the World Wide Fund for Nature, which seeks to define and promote best practices in emissions reductions and net zero targets in line with climate science, among other objectives. See SBTi, *Who We Are/What We Do*, available at <https://sciencebasedtargets.org/about-us>.

<sup>1579</sup> See letter from Futurepast.

<sup>1580</sup> See letters from IECA. *But see* letter from CEMEX (stating that “the oversight inspection program is clear”).

<sup>1581</sup> See Proposing Release, section II.H.5.

<sup>1582</sup> See letter from CEMEX.

<sup>1583</sup> See letter from KPMG.

In contrast to assurance services, non-assurance services are services that are not designed to provide assurance, which would include, for example, agreed upon procedures engagements and, as indicated above, in many cases, verification engagements.<sup>1592</sup>

We have decided to focus the final rules on requiring disclosure of assurance services because investors are likely to place greater reliance on GHG emissions disclosure that has been subject to assurance than disclosure that has not been subject to assurance.<sup>1593</sup> Current voluntary ESG assurance practices have been varied with respect to the levels of assurance provided (e.g., limited versus reasonable), the assurance standards used, the types of service providers, and the scope of disclosure covered by the assurance.<sup>1594</sup>

<sup>1592</sup> For examples of engagements that are not designed to provide assurance, see, e.g., PCAOB AT section 201, Agreed-Upon Procedures Engagements, available at <https://pcaobus.org/oversight/standards/attestation-standards/details/AT201>; AICPA SSAE No. 19 AT-C section 215, Agreed-Upon Procedures Engagements, available at <https://us.aicpa.org/content/dam/aicpa/research/standards/auditattest/downloadabledocuments/at-c-00215.pdf>; and IAASB International Standard on Related Services 4400 (Revised) Agreed-Upon Procedures Engagements, available at <https://www.iaasb.org/flysystem/azure-private/publications/files/ISRS-4400-Revised-Agreed-Upon-Procedures-final.pdf>. It is possible that a service identified or described as a “verification” could be designed to provide assurance (either limited or reasonable). See, e.g., ISO 14064-3 (defining “reasonable assurance” as the “level of assurance where the nature and extent of the verification activities have been designed to provide a high but not absolute level of assurance on historical data and information” and “limited assurance” as the “level of assurance where the nature and extent of the verification activities have been designed to provide a reduced level of assurance on historical data and information”) (emphasis added). The key factor for purposes of determining whether disclosure is necessary under Item 1506(e) is whether the third-party services are designed to provide assurance.

<sup>1593</sup> A number of commenters on the proposed mandatory attestation requirements stated that they supported the proposal because it would help increase the reliability of the disclosure. See *supra* note 1106 and accompanying text. Relatedly, academic research suggests that investors prefer audited to non-audited information. See J. Cohen, et al., *Retail investors’ perceptions of the decision-usefulness of economic performance, governance, and corporate social responsibility disclosures*, 23(1) Behavioral Research in Accounting 127 (2011) (“Auditing appears to be of use in lending credibility to the disclosure of nonfinancial information, in the view of most respondents.”); F.D. Hodge, *Investors’ perceptions of earnings quality, auditor independence, and the usefulness of audited financial statements*, 17 Accounting Horizons-Supplement 42 (2003) (“Retail investors recognize the agency problems related to their investment and prefer audited financial information because of that.”). A financial statement audit is a type of “reasonable assurance” engagement. See, e.g., PCAOB AS 1015, *Due Professional Care in the Performance of Work*, paragraph 10, available at <https://pcaobus.org/oversight/standards/auditing-standards/details/AS1015>.

<sup>1594</sup> See Proposing Release, section II.H.1. The Commission explained in the Proposing Release

Therefore, we believe it is appropriate to require registrants to provide investors with some basic information about the assurance services voluntarily obtained to help them understand the nature of the services provided and to help investors determine whether the assurance services have enhanced the reliability of the GHG emission disclosure. Similarly, requiring a brief description of the results of the voluntary assurance services will provide transparency about the reliability of any disclosed GHG emissions data, which in turn will help investors weigh how much importance to give that data when making investment decisions. Since non-assurance services are not designed to provide assurance, they do not connote the same degree of reliability as assurance services. Based on our experience, investors likely do not rely upon non-assurance services to the same degree as assurance services. Therefore, the final rules will not require a registrant to provide Item 1506(e) information about any voluntary non-assurance services (e.g., agreed upon procedures) obtained over its GHG emissions disclosure to avoid the potential for confusion.<sup>1595</sup> Finally, we think these changes to the final rules respond to several commenters who requested that the Commission clarify

that this fragmentation has diminished the comparability of assurance provided and may require investors to become familiar with many different assurance standards and the varying benefits of different levels of assurance. See *id.* For example, investors may see that a service provider has produced an assurance report for a registrant’s GHG emissions disclosure and have an expectation that such assurance will enhance the reliability of the disclosure, without always understanding, for example, what level of assurance (e.g., limited versus reasonable) is being provided or what scope of assurance (e.g., the disclosure covered by the assurance) is being provided with respect to the registrant’s GHG emissions disclosure. See *id.* As noted above, the consequences of such fragmentation have also been highlighted by certain international organizations, including IOSCO. See *supra* note 1089 and accompanying text.

<sup>1595</sup> One commenter, which supported requiring mandatory attestation over Scope 1 and Scope 2 emissions for AFs and LAFs as proposed, expressed concerns that, among other things, “inconsistencies in the nature and extent of procedures performed in voluntary attestation may detract from the benefits of the required attestations” and also stated that “[d]isclosing that the data was ‘verified’ would compound the confusion.” See letter from PwC. This commenter’s proposed solution was to subject any attestation—voluntary or required—to the proposed requirements that applied to the proposed mandatory attestation requirements. Although we are not adopting this commenter’s recommendation, we think the approach we are taking in the final rules to require disclosure of certain information about assurance services voluntarily obtained by a registrant will reduce the potential for confusion while providing investors with information to help them evaluate whether the assurance services have enhanced the reliability of the GHG emissions disclosure.

the terminology “assurance” and “verification” and the differences between the two.<sup>1596</sup>

To the extent that registrants voluntarily provide more disclosure to investors than what is required under Item 1506(e), registrants should remain cognizant of their obligation to provide investors with truthful and accurate information and to avoid making any materially misleading statements or omissions.<sup>1597</sup> Importantly, this includes ensuring that any description or characterization of any assurance or any other type of services obtained with respect to GHG emissions disclosure is accurate.

Consistent with the general support expressed by commenters, registrants are required to disclose each of the proposed categories of information in the final rules with respect to voluntary assurance services with some minor modifications.<sup>1598</sup> The final rules require registrants to identify the provider of such assurance services.<sup>1599</sup> The identity of the assurance provider is a basic, but important, piece of information for investors, particularly considering the broad spectrum of providers that may provide assurance services (e.g., public accounting firms registered with the PCAOB, unregistered public accounting firms, and potentially other types of service providers).

If voluntary assurance services are obtained, the final rules also require registrants to disclose the assurance standard used.<sup>1600</sup> As noted above, the assurance landscape is currently evolving and there is diversity in practice.<sup>1601</sup> Identification of the

<sup>1596</sup> See *supra* note 1587 and accompanying text.

<sup>1597</sup> See, e.g., Securities Act section 17(a) [15 U.S.C. 77q(a)], Exchange Act section 10(b) [15 U.S.C. 78j(b)], and Exchange Act Rule 10b-5 [17 CFR 240.10b-5].

<sup>1598</sup> See 17 CFR 229.1506(e). In the Proposing Release, the Commission included a request for comment asking if registrants should be required to disclose the voluntary assurance or verification fees associated with the GHG emissions disclosure. One commenter responded to the request for comment and stated that it believed requiring the disclosure of such fees is unnecessary because the disclosure would not be useful for investors and would burden registrants. See letter from CEMEX. We have decided not to require the disclosure of voluntary assurance fees and instead focus on requiring the disclosure of the general categories of information specified in the final rules, which will be most useful to investors.

<sup>1599</sup> See 17 CFR 229.1506(e)(1).

<sup>1600</sup> See 17 CFR 229.1506(e)(2). See also *supra* note 1591 and accompanying text (citing examples of attestation engagements providing assurance and applicable standards).

<sup>1601</sup> See, e.g., CAQ, *S&P 500 and ESG Reporting* (Updated June 2023) (pointing to the use of assurance methodologies such as AICPA AT-C 205, Assertion-Based Examination Engagements, AICPA AT-C 210, Review Engagements; and IAASB ISAE 3000 (Revised), and ISAE 3410, Assurance Engagements on Greenhouse Gas Statements).

assurance standard would enable investors to better understand the service that has been provided and to assess whether the standard is sufficiently developed, which may be particularly important given that some service providers may use standards that are developed by accreditation bodies with notice and public comment and other robust due processes for standard setting in the public interest, while other service providers may use standards that do not have these characteristics.

In addition, if voluntary assurance services are obtained, the final rules require registrants to describe the level and scope of assurance provided and to briefly describe the results of the assurance services.<sup>1602</sup> Registrants must clearly identify the level of assurance provided. Identifying the scope of the assurance provided will help investors understand whether the scope of the engagement aligns with the scope of the registrant's GHG emissions disclosure (e.g., Scope 1 or 2). Providing investors with clear and transparent disclosure about the level and scope of assurance obtained is necessary to help investors weigh the level of reliance they should place on assurance services and determine whether the assurance services have enhanced the reliability of the GHG emissions disclosure. In addition, as noted above, requiring disclosure of the results of the assurance will provide transparency about the reliability of any disclosed GHG emissions data so that investors can weigh how much importance to give that data when making investment decisions.

As explained above, with respect to voluntary assurance, the proposed rules would have required a registrant to disclose whether the third-party service provider has any other business relationships with or has provided any other professional services to the registrant that may lead to an impairment of the service provider's independence with respect to the registrant.<sup>1603</sup> In a modification to the proposed rules, Item 1506(e)(5) requires a registrant to disclose whether the service provider has any material business relationships with or has provided any material professional services to the registrant.<sup>1604</sup> We have decided not to adopt the requirement for a registrant to determine whether any business relationships or other

professional services "may lead to an impairment of the service provider's independence" (emphasis added) because of the variety of independence standards that could apply to the services. The assurance standard dictates the requirements for independence for engagements conducted in accordance with the standard. The final rules do not prescribe a particular assurance standard that third-party service providers must use with respect to the disclosure required under Item 1506(e).<sup>1605</sup> This could result in registrants and third-party providers applying different standards, which may not be apparent to investors and could reduce comparability. The modifications we have made in the final rules, however, will help avoid potential confusion and will enhance transparency related to the independence and objectivity of the third-party service provider by requiring registrants to disclose material business relationships and material professional services while also disclosing the assurance standard used by the service provider.<sup>1606</sup> Accordingly, the final rules serve much the same purpose as the proposed rules; namely, providing investors with information to evaluate the impartiality and objectivity of the service provider, which will in turn enable investors to determine whether the voluntary assurance services have enhanced the reliability of the GHG emissions disclosure. We continue to believe that assurance of GHG emissions disclosure by independent assurance providers improves the reliability of, and investor confidence in, such disclosure.<sup>1607</sup>

One commenter recommended that the Commission require a provider to be independent instead of simply requiring disclosure of the relevant facts;<sup>1608</sup> however, in keeping with the approach we are taking in the final rules with respect to voluntary assurance, which is focused on requiring the disclosure of information regarding the voluntary assurance services provided rather than imposing requirements addressing what the services must entail, the final rules require registrants to provide disclosure of material business relationships or

other material professional services and the assurance standard used to enable investors to determine how much reliance to place on the assurance services.<sup>1609</sup>

Consistent with the proposed rules, the final rules require registrants to disclose any oversight inspection program to which the service provider is subject.<sup>1610</sup> This is the same requirement that applies to AFs and LAFs in Item 1506(d). As we explained in the discussion of Item 1506(d) in section II.I.4 above, the requirement to disclose any oversight inspection program to which the service provider is subject is not limited to oversight inspection programs that include within their scope, or require the inspection of, the assurance services provided for the GHG emissions disclosure. Rather, the final rules require the disclosure of "any" oversight inspection program, which includes any oversight program the service provider is subject to for any type of engagement (e.g., a financial statement audit or other review).<sup>1611</sup> Examples of such oversight inspection programs include the AICPA's peer review program and the PCAOB's inspection program.<sup>1612</sup> As explained in section II.I.4 above, this information will help investors better understand the qualifications of an assurance provider, which in turn will help them determine whether the assurance services have enhanced the reliability of the GHG emissions disclosure.<sup>1613</sup>

However, to provide investors with a more complete understanding of such oversight inspection program, in a modification to the proposed rules, the final rules also require a registrant to disclose whether such oversight inspection program includes within its scope the assurance services over GHG emissions disclosure obtained by the registrant.<sup>1614</sup> Again, this is the same requirement that applies to AFs and LAFs in Item 1506(d). As explained above, we would consider assurance

<sup>1609</sup> See 17 CFR 229.1506(e)(2), (5).

<sup>1610</sup> See 17 CFR 229.1506(e)(6).

<sup>1611</sup> See *id.*

<sup>1612</sup> See *id.* The PCAOB's oversight inspection program is another non-exhaustive example of an oversight inspection program that would fall within the scope of the required disclosure, which, along with the additional explanation we are providing, will help clarify this requirement for commenters. See *supra* note 1580 and accompanying text.

<sup>1613</sup> As stated above in section II.I.4, this is true even in circumstances where the oversight inspection program does not include within its scope the assurance services for the GHG emissions disclosure because such oversight can provide a check on a provider's overall activities and drive improvements in the quality of their services overall. See *supra* note 1555 and accompanying text.

<sup>1614</sup> See 17 CFR 229.1506(e)(6).

<sup>1605</sup> For examples of independence standards, see, e.g., PCAOB Ethics and Independence Rules and Standards; AICPA Code of Professional Conduct; and International Ethics Standards Board for Accountants (IESBA) International Code of Ethics for Professional Accountants (including International Independence Standards).

<sup>1606</sup> See 17 CFR 229.1506(e)(2), (5).

<sup>1607</sup> See Proposing Release, sections II.H.2 and II.H.5.

<sup>1608</sup> See letter from Futurepast.

<sup>1602</sup> See 17 CFR 229.1506(e)(3), (4).

<sup>1603</sup> See Proposing Release, section II.H.5.

<sup>1604</sup> See 17 CFR 229.1506(e)(5). A GHG emissions assurance engagement, by itself, does not trigger the requirement to provide disclosure under Item 1506(e)(5).

services over GHG emissions disclosure to be within the scope of an oversight inspection program if it is possible for the assurance services to be inspected pursuant to the oversight program, even if it is not certain that the services will be inspected in a particular inspection cycle. Requiring registrants to disclose the existence of an oversight inspection program provides investors with valuable information about the qualifications of a GHG emissions attestation provider regardless of whether the oversight inspection program includes the inspection of assurance over GHG emissions disclosure within its scope. Similarly, requiring disclosure of whether the GHG emission assurance services would fall within the scope of such program would further facilitate investors' evaluation of the reliability of the assurance results and GHG emissions disclosure.<sup>1615</sup> One commenter stated that the Commission should not require the disclosure of oversight inspection programs because it could wrongly suggest that attestation providers that are subject to oversight are necessarily more qualified than those that are not.<sup>1616</sup> We agree with the commenter that it is not necessarily true that an assurance provider that is subject to oversight is more qualified than a provider that is not.<sup>1617</sup> But whether a provider is subject to oversight is one relevant factor for investors to consider when assessing the reliability of assurance results and GHG emissions disclosure and such oversight can provide a check on a provider's activities and drive improvements in quality as explained above.

The proposed rules would have required a registrant to include the proposed disclosure regarding voluntary attestation within the separately captioned "Climate-Related Disclosure" section in the Commission filing where the GHG emissions data is disclosed.<sup>1618</sup> Since the final rules leave the placement of climate-related disclosures, other than the financial statement disclosures, largely up to the registrant, a registrant will not be required to include the disclosure regarding voluntary assurance within a separately captioned "Climate-Related Disclosure" section in

the Commission filing.<sup>1619</sup> Rather, registrants should provide the disclosure required by this section in the same Commission filing and alongside the GHG emissions disclosure to which the voluntary assurance services relate.

Under the final rules, a registrant is responsible for disclosing the required information about the voluntary assurance services in its Commission filings. In these circumstances, we do not view the assurance provider as having prepared or certified the filing or any information contained therein. In addition, Item 1506(e) will not require registrants to file or furnish any voluntary assurance reports to the Commission.

Although the final rules do not require a registrant that has obtained voluntary assurance over its GHG emissions disclosure to file or furnish an assurance report to the Commission, for the avoidance of doubt, and in response to commenters,<sup>1620</sup> we are amending Rule 436 to provide that any description of assurance services regarding a registrant's GHG emissions disclosure provided in accordance with Item 1506(e) of Regulation S-K will not be considered a part of the registration statement prepared or certified by an expert or person whose profession gives authority to the statements made within the meaning of sections 7 and 11 of the Securities Act.<sup>1621</sup> Therefore, a registrant is not required to obtain and include the written consent of the GHG emissions attestation provider pursuant to Securities Act section 7 or Rule 436.<sup>1622</sup> Even though we believe that accountability for experts under section 11 is a central tenet of the Securities Act,<sup>1623</sup> this limited exception should

encourage registrants to voluntarily obtain assurance over their GHG emission disclosure, which will benefit investors because assurance helps to enhance the reliability of a registrant's GHG emissions disclosure.

As discussed above in section II.I.2.c, we are also amending Rule 436 to provide that a report by a GHG emissions attestation provider covering Scope 1, Scope 2, and/or Scope 3 emissions at a limited assurance level shall not be considered a part of the registrant statement that is prepared or certified by an expert or person whose profession gives authority to the statements made within the meaning of sections 7 and 11 of the Securities Act.<sup>1624</sup> To the extent that a registrant that voluntarily obtains assurance over its GHG emissions disclosures decides to voluntarily file or furnish an assurance report to the Commission at the limited assurance level, the GHG emissions attestation provider would be entitled to rely on this amendment to Rule 436 if its terms are met. In these circumstances, a registrant would be required to submit a letter from the GHG emissions attestation provider that acknowledges their awareness of the use in certain registration statements of any of their reports which are not subject to the consent requirement of section 7 pursuant to the amendments to Item 601 of Regulation S-K.<sup>1625</sup> However, if a registrant voluntarily chooses to file or furnish an assurance report to the Commission that does not meet the requirements of Rule 436(i)(1) (e.g., the assurance report is provided at a reasonable assurance level), or if the registrant chooses to voluntarily disclose more information than is required under Item 1506(e) of Regulation S-K, then, by its terms, the exception in Rule 436 would not apply, and the assurance provider may be required to provide a consent in accordance with applicable statutory provisions and rules and would be subject to Section 11 liability.<sup>1626</sup>

<sup>1619</sup> See *supra* section II.A.3.

<sup>1620</sup> See *supra* note 1345 and accompanying text.

<sup>1621</sup> See 17 CFR 230.436(i)(2).

<sup>1622</sup> See 15 U.S.C. 77g; 17 CFR 230.436. For the avoidance of doubt, a registrant would not have to obtain and include the written consent of the GHG emissions attestation provider pursuant to 17 CFR 229.601(b)(23), which is the Regulation S-K provision requiring a registrant to file the written consent of an expert as an exhibit to a Securities Act registration statement or Exchange Act report that incorporates by reference a written expert report attached to a previously filed Securities Act registration statement.

<sup>1623</sup> See 15 U.S.C. 77k(a)(4). See also 77 Cong. Rec. 2910, 2934 (1933) (Statement of Rep. Chapman) ("Under its provisions the issuer, the underwriter, and the technical expert (including the engineer, the lawyer, the appraiser, the accountant, in connection with the issuance of securities) are held responsible for making a full disclosure of every material fact in connection with an issue of corporate securities. The burden of proof is placed on them to show that after the exercise of the degree of diligence expected of reasonably prudent men they 'had reasonable ground to believe and did believe . . . that such statement was true or that there was no such omission.'")

<sup>1624</sup> See 17 CFR 230.436(i)(1).

<sup>1625</sup> See 17 CFR 229.601(b)(27). See also *supra* section II.I.2.c. for further discussion of the amendments to Item 601 of Regulation S-K.

<sup>1626</sup> Although the amendments to Rule 436 will clarify that assurance providers will not be liable to shareholders in actions under section 11 of the Securities Act (to the extent the provider qualifies for the exception), we remind registrants and providers that there are other remedies available to shareholders and the Commission, such as section 10(b) of the Exchange Act and Rule 10b-5 thereunder, which are not affected by the amendments to Rule 436.

<sup>1615</sup> The PCAOB's inspection jurisdiction is limited to audits of issuers and broker-dealers registered with the Commission and would not include engagements for the assurance of GHG emissions disclosures within its scope. See *supra* note 1357. However, as stated in the Proposing Release, an example of an oversight inspection program that includes within its scope assurance engagements is the AICPA peer review program. See Proposing Release, section II.H.4.

<sup>1616</sup> See letter from Futurepast.

<sup>1617</sup> See *supra* note 1579.

<sup>1618</sup> See Proposing Release, section II.H.5.

*J. Safe Harbor for Certain Climate-Related Disclosures (Item 1507)*

1. Proposed Rules

The Commission proposed a safe harbor for Scope 3 emissions data to mitigate potential liability concerns that registrants may have about providing emissions information derived largely from third parties in a registrant's value chain. The proposed safe harbor provided that disclosure of Scope 3 emissions by or on behalf of the registrant would be deemed not to be a fraudulent statement unless it is shown that such statement was made or reaffirmed without a reasonable basis or was disclosed other than in good faith.<sup>1627</sup> As proposed, the safe harbor would extend to any statement regarding Scope 3 emissions that is disclosed pursuant to proposed Items 1500 through 1506 of Regulation S–K and made in a document filed with the Commission. For purposes of the proposed safe harbor, the term “fraudulent statement” was defined to mean a statement that is an untrue statement of material fact, a statement false or misleading with respect to any material fact, an omission to state a material fact necessary to make a statement not misleading, or that constitutes the employment of a manipulative, deceptive, or fraudulent device, contrivance, scheme, transaction, act, practice, course of business, or an artifice to defraud as those terms are used in the Securities Act or the Exchange Act or the rules or regulations promulgated thereunder.<sup>1628</sup>

Although the proposed safe harbor only applied to Scope 3 emissions disclosures, the Commission solicited comment on whether the safe harbor should apply to other climate-related disclosures, such as Scopes 1 and 2 emissions disclosures, any targets and goals disclosures, or the proposed financial statement metrics disclosures.<sup>1629</sup> The Commission also solicited comment on whether to provide a safe harbor for disclosures related to a registrant's use of internal carbon pricing, scenario analysis,<sup>1630</sup> and a transition plan.<sup>1631</sup> The Commission further requested comment on whether it should adopt a provision similar to 17 CFR 229.305(d) that would apply the PSLRA safe harbors to forward-looking statements made in response to specified climate-related disclosure items, such as proposed Item

1502 pertaining to impacts of climate-related risks on strategy.<sup>1632</sup> Finally, the Commission solicited comment on whether the safe harbor should apply indefinitely or, instead, should sunset after the passage of a certain number of years or after certain conditions are satisfied.<sup>1633</sup>

2. Comments

Several commenters supported the adoption of a Scope 3 emissions safe harbor in the form proposed.<sup>1634</sup> These commenters stated that the proposed safe harbor for Scope 3 emissions disclosure was appropriate because of the uncertainties involved in the calculation of those emissions due to the need to rely on estimates<sup>1635</sup> and data from third parties.<sup>1636</sup> Some of these commenters also stated that the proposed safe harbor would encourage more robust disclosure of a registrant's Scope 3 emissions.<sup>1637</sup> A few commenters specifically supported basing the Scope 3 emissions safe harbor on the proposed standard that a registrant's Scope 3 emissions disclosure would not be deemed to be a fraudulent statement unless it is shown that such statement was made or reaffirmed without a reasonable basis or was disclosed other than in good faith.<sup>1638</sup>

Many other commenters recommended strengthening and/or broadening the scope of the proposed safe harbor to include other types of climate-related disclosures.<sup>1639</sup> In this regard several commenters stated that a more robust safe harbor for climate-related disclosures than what was proposed would encourage registrants to

provide more robust and “higher quality” disclosures for investors while the proposed safe harbor would potentially chill climate reporting.<sup>1640</sup>

For example, some commenters stated that the proposed Scope 3 emissions safe harbor appeared to be based on a negligence liability standard, which would provide protection that was too weak to be of much use for many registrants.<sup>1641</sup> Some commenters recommended that the Commission remove the proposed “reasonable basis” requirement, condition the safe harbor only on a registrant acting in good faith when calculating and reporting its Scope 3 emissions, and, for loss of the safe harbor, require knowing or intentional fraud in the sense that the registrant must have actual knowledge that the third-party information it is utilizing is unreliable.<sup>1642</sup>

Some commenters, as well as the Commission's Small Business Capital Formation Advisory Committee,<sup>1643</sup> recommended adoption of a safe harbor that would cover any climate risk-related statement, historical or forward-looking, required by the final rules.<sup>1644</sup> Some commenters stated that the safe harbor should cover all forward-looking climate-related disclosures, including disclosure of forward-looking impacts.<sup>1645</sup> Other commenters stated that a safe harbor for Scope 3 emissions and other climate-related disclosures should provide protection at least as strong as that provided by the PSLRA safe harbors.<sup>1646</sup> In this regard some commenters stated that the safe harbor should be modeled on the market risk disclosure safe harbor under 17 CFR 229.305(d).<sup>1647</sup> Some commenters stated

that the Commission should adopt a forward-looking statement safe harbor for climate-related disclosures made in connection with initial public offerings (“IPOs”)<sup>1648</sup> or by partnerships, limited liability companies, and direct participation investment programs, which are excluded from the PSLRA safe harbors.<sup>1649</sup> Commenters stated that excluding climate-related disclosures made in connection with IPOs or by entities such as partnerships from safe harbor protections could potentially impede capital formation and discourage private companies from going public.<sup>1650</sup>

Several commenters recommended including specific disclosure items, in addition to Scope 3 emissions disclosures, within the scope of the safe harbor, such as Scopes 1 and 2 emissions disclosures,<sup>1651</sup> financial impact disclosures,<sup>1652</sup> and disclosures related to a registrant’s use of internal carbon pricing,<sup>1653</sup> scenario analysis,<sup>1654</sup> and a transition plan,<sup>1655</sup> or the setting of targets and goals.<sup>1656</sup> Other commenters stated that the safe harbor should cover any climate-related disclosures based on third-party data or estimates.<sup>1657</sup> Commenters stated that because many of the required climate-related disclosures will involve complex assessments that are substantially based on estimates, assumptions, still-evolving science and analytical methods, and the use of third-party data, the safe harbor

(stating that, in comparable circumstances, when the Commission adopted novel and complex disclosure requirements regarding market risk, “the Commission recognized the challenges companies would face in preparing this novel information and specifically provided PSLRA safe-harbor protection for it,” and recommending that the Commission adopt a similar safe harbor for GHG emissions disclosure).

should cover all such climate-related disclosures.<sup>1658</sup> Still other commenters stated that the safe harbor should protect against not only private rights of action but Commission enforcement proceedings as well.<sup>1659</sup>

Some commenters opposed adoption of a safe harbor for Scope 3 emissions disclosure.<sup>1660</sup> A few commenters indicated that it would be inappropriate to adopt a safe harbor for Scope 3 emissions disclosure or any other climate-related disclosure that provided historical or current information.<sup>1661</sup> These commenters further stated that a separate forward-looking statement safe harbor for climate-related disclosures was not necessary because the PSLRA safe harbor is available to protect forward-looking climate-related disclosures.<sup>1662</sup> One other commenter stated that providing a safe harbor for Scope 3 emissions disclosure would disincentivize registrants from providing accurate disclosures.<sup>1663</sup>

Several commenters supported adoption of a Scope 3 emissions safe harbor but only if it was subject to a sunset provision.<sup>1664</sup> These commenters stated that the Scope 3 emissions safe harbor should eventually be phased out because of an expectation that Scope 3 reporting methodologies will be refined, Scope 3 tools and resources will improve, and the cost of Scope 3 emissions reporting will decline, which should reduce the uncertainties and difficulties in connection with Scope 3 emissions reporting.<sup>1665</sup> Commenters recommended various time horizons before sunset, such as one year,<sup>1666</sup> three years,<sup>1667</sup> five years,<sup>1668</sup> and five to seven years.<sup>1669</sup> By contrast, several other commenters stated that the Scope 3 emissions safe harbor should not be subject to a sunset.<sup>1670</sup> One commenter

stated that the Scope 3 emissions safe harbor should be indefinite because the underlying data will always be under the control of third parties.<sup>1671</sup> Another commenter stated that there should be a meaningful safe harbor for the entirety of any final rule considering the “unique” challenges that registrants must overcome to meet the proposed climate-related disclosure obligations.<sup>1672</sup>

### 3. Final Rules

Because the final rules will not require the disclosure of Scope 3 emissions from any registrant,<sup>1673</sup> we are not adopting a safe harbor for such disclosures in the final rules. Instead, for the reasons discussed below and consistent with the feedback from commenters that asked the Commission to promulgate a safe harbor for certain climate-related disclosures (in addition to the Scope 3 emissions disclosure safe harbor that was proposed),<sup>1674</sup> we are adopting a provision (Item 1507) stating that disclosures (other than historic facts) provided pursuant to the following subpart 1500 provisions constitute “forward-looking statements” for purposes of the PSLRA safe harbors:

- 17 CFR 229.1502(e) (transition plans);
- 17 CFR 229.1502(f) (scenario analysis);
- 17 CFR 229.1502(g) (internal carbon pricing); and
- 17 CFR 229.1504 (targets and goals).<sup>1675</sup>

In addition, as discussed in more detail below, the final rules provide that the PSLRA safe harbors will apply to these forward-looking statements in connection with certain transactions and disclosures by certain issuers notwithstanding that these transactions and issuers are excluded from the PSLRA safe harbors in subparagraphs (a) and (b) of section 27A of the Securities Act and section 21E of the Exchange Act.

When proposing the climate disclosure rules, the Commission indicated that, because transition planning, scenario analysis, and internal carbon pricing involve assumptions, judgments, and predictions about future events, the PSLRA safe harbors would be applicable to forward-looking statements concerning transition plans, scenario analysis, and internal carbon

Bankers; and Nikola Corporation (June 17, 2022) (“Nikola”).

<sup>1671</sup> See letter from CEMEX.

<sup>1672</sup> See letter from AXPC.

<sup>1673</sup> See *supra* section II.H.3.

<sup>1674</sup> See *supra* note 1639 and accompanying text.

<sup>1675</sup> See 17 CFR 229.1507(a)(1).

pricing.<sup>1676</sup> Moreover, because the proposed targets and goals disclosure provision would require a registrant to disclose how it intends to achieve its climate-related targets or goals, the Commission similarly stated that the PSLRA safe harbors would apply to forward-looking statements made in the context of such targets and goals disclosure.<sup>1677</sup> Because estimates and assumptions based on future events are intrinsically involved in disclosures concerning a registrant's transition plan, use of scenario analysis or internal carbon pricing, and targets and goals, we continue to believe that such disclosures constitute "forward-looking statements" for purposes of the PSLRA safe harbors.

The PSLRA statutory provisions define "forward-looking statement" to include a number of different types of statements.<sup>1678</sup> Several of these definitional provisions are potentially applicable to statements made in the context of disclosures regarding transition plans, scenario analysis, and internal carbon pricing made pursuant to Item 1502 and regarding targets and goals made pursuant to Item 1504. To the extent that disclosures made in response to these Items or to any other subpart 1500 provision contain one or more of the following statements, they will fall within the PSLRA statutory definition of "forward-looking statement":

- A statement containing a projection of revenues, income (including income loss), earnings (including earnings loss) per share, capital expenditures, capital structure, or other financial items;<sup>1679</sup>
- A statement of the plans and objectives of management for future operations, including plans or objectives relating to the products or services of the issuer;<sup>1680</sup>
- A statement of future economic performance, including any such statement contained in a discussion and analysis of financial condition by the

management, made pursuant to Commission rules;<sup>1681</sup>

- Any statement of the assumptions underlying or relating to the above statements;<sup>1682</sup> and
  - A statement containing a projection or estimate of items specified by Commission rule or regulation.<sup>1683</sup>
- If a forward-looking statement falls squarely within any of the above-described forward-looking statements, certain parties may rely on the existing PSLRA safe harbors for disclosures made pursuant to any of the subpart 1500 provisions, assuming the other requirements of the PSLRA provisions are met.<sup>1684</sup> We recognize, however, the concern of some commenters that the PSLRA safe harbors may not be applicable to disclosures related to transition plans, scenario analysis, internal carbon price, and targets and goals to the extent the disclosures consist of a complex mix of factual and forward-looking statements and because the PSLRA safe harbors do not apply to certain parties and certain transactions.<sup>1685</sup>

In addition to the forward-looking statement exemptions expressly provided under the PSLRA, the Commission has authority under the PSLRA to provide exemptions from liability for other statements based on projections or other forward-looking information if the Commission determines that such exemption is consistent with the public interest and the protection of investors.<sup>1686</sup> The

<sup>1681</sup> See 15 U.S.C. 77z-2(i)(1)(C) and 15 U.S.C. 78u-5(i)(1)(C). For example, a statement of future economic performance made pursuant to Items 1502(d), Item 1504, or Item 303 of Regulation S-K would likely constitute a forward-looking statement.

<sup>1682</sup> See 15 U.S.C. 77z-2(i)(1)(D) and 15 U.S.C. 78u-5(i)(1)(D).

<sup>1683</sup> See 15 U.S.C. 77z-2(i)(1)(F) and 15 U.S.C. 78u-5(i)(1)(F). For example, a projection or estimate of a registrant's future GHG emissions made pursuant to Item 1504 would likely constitute a forward-looking statement.

<sup>1684</sup> Other safe harbors, such as Securities Act Rule 175 and Exchange Act Rule 3b-6 and the bespeaks caution doctrine may also continue to apply to disclosures made pursuant to any of the subpart 1500 provisions, depending on specific facts and circumstances.

<sup>1685</sup> See, e.g., letters from BOA; and Chamber. For example, the PSLRA safe harbors do not apply to statements made in connection with an IPO, see 15 U.S.C. 77z-2(b)(2)(D) and 15 U.S.C. 78u-5(b)(2)(D), or made in connection with an offering by, or related to the operations of, a partnership, limited liability company, or a direct participation investment program, see 15 U.S.C. 77z-2(b)(2)(E) and 15 U.S.C. 78u-5(b)(2)(E).

<sup>1686</sup> 15 U.S.C. 77z-2(g) and 15 U.S.C. 78u-5(g). The PSLRA also provides that it does not limit, "either expressly or by implication, the authority of the Commission to exercise similar authority or to adopt similar rules and regulations with respect to forward-looking statements under any other statute under which the Commission exercises rulemaking

Commission previously exercised this authority when it adopted a rule providing a forward-looking statement safe harbor for certain statements made concerning market risk.<sup>1687</sup>

After considering feedback from commenters, we have concluded that using the authority provided by the PSLRA to extend its protections to disclosures (other than historical facts) concerning transition plans, scenario analysis, internal carbon pricing, and targets and goals is consistent with the public interest and the protection of investors. We expect that the disclosures required by these items will include a complex mixture of both forward-looking and factual information related to climate-related risks and assumptions concerning those risks. Thus, we are providing a safe harbor for these disclosures to avoid having to disentangle the information to claim protection for forward-looking statements under the PSLRA safe harbors, which would increase the compliance burden under the final rules and potentially reduce the usefulness of those disclosures for investors. We also believe that a safe harbor for these disclosures will help incentivize more comprehensive disclosures on these matters to the benefit of investors.<sup>1688</sup>

Statements made by issuers and/or in connection with transactions<sup>1689</sup> currently excluded from the PSLRA statutory safe harbor for forward-looking statements that will be eligible for the final rules' safe harbor include forward-looking statements: made in connection with an offering of securities by a blank check company;<sup>1690</sup> made with respect to the business or operations of an issuer of penny stock; made in connection with a rollup transaction; or

authority." 15 U.S.C. 77z-2(h) and 15 U.S.C. 78u-5(h).

<sup>1687</sup> 17 CFR 229.305; see Disclosure of Market Risk Sensitive Instruments Release.

<sup>1688</sup> See *supra* note 1640 and accompanying text.

<sup>1689</sup> In addition to issuers, consistent with the PSLRA safe harbors, the safe harbor will apply to: a person acting on behalf of the issuer; an outside reviewer retained by the issuer making a statement on behalf of the issuer; or an underwriter, with respect to information provided by the issuer or information derived from information provided by the issuer. See 15 U.S.C. 77z-2(a)(2)-(4) and 15 U.S.C. 78u-5(a)(2)-(4); see also *infra* note 1691.

<sup>1690</sup> The Commission recently amended Securities Act Rule 405 and Exchange Act Rule 12b-2 to define "blank check company" for purposes of Securities Act Section 27A and Exchange Act Section 21E to mean a company that has no specific business plan or purpose or has indicated that its business plan is to engage in a merger or acquisition with an unidentified company or companies, or other entity or person. See *Special Purpose Acquisition Companies, Shell Companies, and Projections*, Release No. 33-11265 (Jan. 24, 2024), [89 FR 14158 (Feb. 26, 2024)].

<sup>1676</sup> See Proposing Release, sections II.C and E.

<sup>1677</sup> See Proposing Release, section II.I.

<sup>1678</sup> See 15 U.S.C. 77z-2(i)(1) and 15 U.S.C. 78u-5(i)(1).

<sup>1679</sup> See 15 U.S.C. 77z-2(i)(1)(A) and 15 U.S.C. 78u-5(i)(1)(A). For example, a statement of potential capital expenditures made in response to Item 1502(e) (transition plans) and Item 1502(d) (narrative discussion of material impacts of climate-related risks) would likely constitute a forward-looking statement.

<sup>1680</sup> See 15 U.S.C. 77z-2(i)(1)(B) and 15 U.S.C. 78u-5(i)(1)(B). For example, a statement of plans to transition to more efficient operations or a different mix of products or services made in response to Item 1502(d), Item 1502(e), or Item 1504 (targets and goals) would likely constitute a forward-looking statement.

made in connection with an IPO,<sup>1691</sup> or in connection with an offering by, or relating to the operations of, a partnership, limited liability company, or a direct participation investment program.<sup>1692</sup>

We have determined that it is consistent with the public interest and the protection of investors to extend the safe harbor to these entities, such as partnerships and limited liability companies, and to transactions, such as IPOs, all of which are currently excluded from the PSLRA statutory safe harbor for forward-looking statements, because such entities may be subject to material climate-related risks that will require them to provide the disclosures pursuant to Items 1502(e), (f), or (g), or Item 1504. Extending the PSLRA safe harbor to these specified disclosures will encourage more comprehensive disclosures under these Items and help limit any negative effects to capital formation that may result from the perceived compliance costs associated with these provisions of the final rules.<sup>1693</sup>

Because the disclosure items pertaining to transition plans, scenario analysis, internal carbon pricing, and targets and goals are likely to involve a complex mixture of estimates and assumptions, some of which may be based on a combination of facts and projections, the safe harbor we are adopting provides that all information required by the subpart 1500 provisions concerning transition plans, scenario analysis, internal carbon pricing, and targets and goals is considered forward-

looking statements for purposes of the statutory PSLRA safe harbors, except for historical facts.<sup>1694</sup> This provision should encourage more comprehensive disclosures regarding these subpart 1500 items, to the benefit of investors, despite their novelty and complexity.

Consistent with the operation of the PSLRA safe harbor, the final rules' forward-looking safe harbor will not be available for statements consisting solely of historical fact because such information does not involve the assumptions, judgments, and predictions about future events that necessitates additional protections.<sup>1695</sup> The safe harbor provision provides as non-exclusive examples of historical facts that are excluded from the safe harbor information related to carbon offsets or RECs described pursuant to a target or goal and a registrant's statements in response to Item 1502(e) (transition plan disclosure) or Item 1504 (targets and goals disclosure) about material expenditures actually incurred.<sup>1696</sup> Like the terms of a material contract, parties covered by the safe harbor should know with reasonable certainty information about a purchased carbon offset or REC, such as the amount of carbon avoidance, reduction, or removal represented by the offset or the amount of generated renewable energy represented by the REC, as well as the nature and source of the offset or REC, and should not need the protection of a forward-looking safe harbor if those items are required to be disclosed pursuant to Item 1504.<sup>1697</sup> Similarly, statements in response to Item 1502(e) (transition plan disclosure) and Item 1504 (targets and goals disclosure) about material expenditures actually incurred will not be eligible for the Item 1507 safe harbor because those statements consist of historical facts.

The PSLRA safe harbor does not apply to forward-looking statements included in financial statements prepared in accordance with generally accepted accounting principles ("GAAP").<sup>1698</sup> Consistent with this, the final rules' safe harbor will not be available for forward-looking statements included in a registrant's consolidated financial statements. In addition, any such forward-looking statements that are incorporated by reference from the financial statements into a registrant's

subpart 1500 disclosures will not be eligible for the Item 1507 safe harbor.

Notwithstanding deeming certain disclosures to be "forward-looking statements" and expanding the PSLRA protections to include certain issuers and transactions under Item 1507, the rest of the PSLRA requirements apply to the Item 1507 safe harbor. For example, in order for the safe harbor protections to apply, a forward-looking statement must be accompanied by a meaningful cautionary statement that identifies important factors that could cause actual results to differ materially from those in the forward-looking statement.<sup>1699</sup>

Although some commenters asked the Commission to include Scopes 1 and 2 emissions disclosures within the scope of any safe harbor, we decline to follow this recommendation.<sup>1700</sup> Because the methodologies underlying the calculation of those scopes are fairly well-established,<sup>1701</sup> we do not believe that it is necessary to provide a safe harbor from private litigation for such disclosures. We also decline to extend the safe harbor to Commission enforcement actions because existing Securities Act Rule 175 and Exchange Act Rule 3b-6 already provide a suitable safe harbor from liability for forward-looking statements in certain Commission enforcement actions.<sup>1702</sup>

Although some commenters recommended that we sunset any safe harbor,<sup>1703</sup> we decline to follow this recommendation at this time. The Commission may determine at a future date, after assessing how disclosure practices have evolved, whether it makes sense to amend or remove the safe harbor.

## K. Financial Statement Effects (Article 14)

### 1. Introduction

The Commission proposed amendments to Regulation S-X that would require certain disclosures in registrants' financial statements. Specifically, the Commission proposed that if a registrant is required to file the disclosure required by proposed subpart 1500 in a filing that also requires audited financial statements, then the registrant would be required to disclose in a note to its financial statements certain disaggregated financial

<sup>1691</sup> The limitation in 15 U.S.C. 77z-2(a)(1) and 15 U.S.C. 78u-5(a)(1) is not applicable. See Item 1507(a)(3). Thus, notwithstanding 15 U.S.C. 77z-2(a)(1) and 15 U.S.C. 78(u)(a)(1), the safe harbor will apply where an issuer that, at the time the statement is made, is not subject to the reporting requirements of section 13(a) or section 15(d) of the Exchange Act.

<sup>1692</sup> See 17 CFR 229.1507(a)(2).

<sup>1693</sup> See 15 U.S.C. 77z-2(b)(1)(B)-(D) and 77z-2(b)(2)(C)-(E); and 15 U.S.C. 78u-5(b)(1)(B)-(D) and 78u-5(b)(2)(C)(E). We are not using our exemptive authority to extend the PSLRA safe harbors to: (i) issuers specified in Securities Act section 27A(b)(1)(A) and Exchange Act section 21E(b)(1)(A) (specified "bad actors"); (ii) forward looking-statements contained in a registration statement of, or otherwise issued by, an investment company as specified in Securities Act section 27A(b)(2)(B) and Exchange Act section 21E(b)(2)(B); and (iii) forward-looking statements made by an issuer in a going-private transaction, see section 27A(b)(2)(E) and Exchange Act section 21E(b)(1)(E), in connection with a tender offer, see Securities Act section 27A(b)(2)(C) and Exchange Act section 21E(b)(2)(C), or in a beneficial ownership report required to be filed pursuant to section 13(d) of the Exchange Act, see Securities Act section 27A(b)(2)(F) and Exchange Act section 21E(b)(2)(F). See also the discussion below of forward-looking statements made in consolidated financial statements, which are excluded from both the PSLRA and Item 1507 safe harbors.

<sup>1694</sup> See 17 CFR 229.1507(b). The Commission adopted a similar provision in the market risk disclosure context. See 17 CFR 229.305(d)(2)(i).

<sup>1695</sup> See 15 U.S.C. 77z-2(a) and 15 U.S.C. 78u-5(a).

<sup>1696</sup> See 17 CFR 229.1507(b).

<sup>1697</sup> See 17 CFR 229.1504(d).

<sup>1698</sup> See 15 U.S.C. 77z-2(b)(2)(B) and 15 U.S.C. 78u-5(b)(2)(B).

<sup>1699</sup> See 15 U.S.C. 77z-2(c)(1)(A) and 15 U.S.C. 78u-5(c)(1)(A).

<sup>1700</sup> See *supra* note 1651 and accompanying text.

<sup>1701</sup> See, e.g., *supra* note 916 and accompanying text.

<sup>1702</sup> Securities Act Rule 175 and Exchange Act Rule 3b-6 also apply to private litigation.

<sup>1703</sup> See *supra* note 1664 and accompanying text.

statement metrics.<sup>1704</sup> The proposed rules would have required disclosure falling under three categories of information:

- Financial Impact Metrics;<sup>1705</sup>
- Expenditure Metrics; and
- Financial Estimates and

Assumptions.<sup>1706</sup>

The proposed Financial Impact Metrics would have required disclosure of the impacts of severe weather events and other natural conditions and any efforts to reduce GHG emissions or otherwise mitigate exposure to transition risks on the line items in a registrant's financial statements.<sup>1707</sup>

Disclosure of the Financial Impact Metrics would have been required if the sum of the absolute value of all impacts on the line item was one percent or more of the total line item for the relevant fiscal year.<sup>1708</sup> The proposed Expenditure Metrics would have required registrants to disclose expenditures expensed and costs incurred to mitigate risks related to the same severe weather events and other natural conditions and transition activities.<sup>1709</sup> Under the Expenditure Metrics, disclosure would have been required if the aggregate amount of expenditures expensed or the aggregate amount of capitalized costs was one percent or more of the total expenditure expensed or total capitalized costs incurred, respectively, for the relevant fiscal year.<sup>1710</sup> In addition, the proposed rules would have required disclosure of Financial Estimates and Assumptions impacted by severe weather events and other natural conditions and transition activities and would have permitted a registrant to include the impact of any opportunities arising from these events and activities on any of the financial metrics disclosed.<sup>1711</sup>

Although commenters' views were mixed, a number of commenters supported adoption of the proposed financial statement disclosure requirements.<sup>1712</sup> Commenters stated

that the proposed requirements would promote consistency across reporting and would satisfy investor demand for reliable information about the financial impacts of climate-related risks.<sup>1713</sup> One commenter stated that "integrating climate risk information into financial statements goes to the very purpose of disclosures—helping investors understand how climate-related risks impact the profitability and resilience of a company and its financial position."<sup>1714</sup> Some commenters asserted that it was important to include the disclosures in the notes to the financial statements so that the information is subject to independent audit and registrants' internal control over financial reporting ("ICFR").<sup>1715</sup> Another commenter stated that although existing regulations are clear that registrants must incorporate material climate considerations into the financial statements, this is not being done consistently, and therefore the proposed rules are important to help prevent companies from misrepresenting their financial positions.<sup>1716</sup> Some

commenters supported including some climate-related disclosures in the audited financial statements subject to certain revisions as described below.<sup>1717</sup> One of these commenters stated that the linkage of the climate-related risks disclosed elsewhere in the filing to the financial statements is essential.<sup>1718</sup> This commenter explained that "[a]nchoring the disclosures outside the financial statements will have a focusing effect and increase the reliability and consistency of both."<sup>1719</sup>

Conversely, many commenters expressed the view that the proposed rules would be difficult to implement and would require registrants to make costly and burdensome adjustments to their controls, procedures, and accounting records to provide the disclosures.<sup>1720</sup> Many commenters asserted that the proposed requirements would result in the disclosure of a potentially overwhelming volume of information that would be immaterial to investors.<sup>1721</sup> Some commenters stated

the Commission should instead update or issue new guidance addressing climate-related risk disclosure<sup>1727</sup> or consider requiring disclosure of the financial impacts in a separate report published outside of the financial statements.<sup>1728</sup> Finally, some commenters stated that the proposed financial statement metrics should only apply to registrants in certain sectors or industries, such as the energy sector.<sup>1729</sup>

After consideration of the feedback received from commenters, we are adopting rules that require certain financial statement effects to be disclosed in a note to the financial statements, but with modifications. We appreciate the significant concerns raised by commenters with respect to the potential burdens resulting from the proposed financial statement disclosures, including the adjustments that registrants stated they would need to make to their controls, processes, and accounting records in order to comply with the proposed requirements.<sup>1730</sup> Therefore, we are adopting rules that require registrants to provide decision-useful information to investors but that are significantly narrower in scope than the proposed rules, which should help to mitigate concerns about the potential burdens of the disclosure.

The Commission is not adopting the proposed Financial Impact Metrics and is modifying the scope of the proposed Expenditure Metrics and proposed Financial Estimates and Assumptions in the final rules, including by narrowing several aspects of the final rules as compared to the proposal. Declining to adopt the Financial Impact Metrics will reduce costs and ease many of the burdens that commenters stated would arise as a result of a requirement to disclose financial impacts on a line item basis.<sup>1731</sup> As discussed in greater detail below, the final rules are focused on requiring the disclosure of capitalized costs, expenditures expensed, charges, and losses<sup>1732</sup> incurred as a result of

transparent standard-setting process and advising the Commission to "consider whether it is ideally positioned to establish new accounting rules on this topic."

<sup>1727</sup> See, e.g., letters from BIO; and EMC.

<sup>1728</sup> See, e.g., letters from AFEP (June 17, 2022); AHLA; McCormick; and BIO.

<sup>1729</sup> See, e.g., letters from ACLI; and Soros Fund ("While we believe it is valuable for all companies to evaluate how climate impacts and expenditures are tied to line items in their financial statements, we believe only companies in high emitting industries and large accelerated filers should be required to disclose the proposed financial statement metrics, and we do not believe it should be pursuant to Regulation S-X.").

<sup>1730</sup> See *supra* note 1720 and accompanying text.

<sup>1731</sup> See *supra* note 1730 and accompanying text.

<sup>1732</sup> While the final rules use the terms "charges" and "losses" in the disclosure requirements related

severe weather events and other natural conditions, and capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs, subject to disclosure thresholds.<sup>1733</sup> These capitalized costs, expenditures expensed, charges, and losses represent quantitative information that is derived from transactions and amounts recorded in a registrant's books and records underlying the financial statements. The final rules require registrants to disclose where on the balance sheet and income statement these capitalized costs, expenditures expensed, charges, and losses are presented.<sup>1734</sup> However, the balance sheet and income statement line items where these capitalized costs, expenditures expensed, charges, and losses are presented will be far fewer in number as compared to the number of line items that would have been impacted by the proposed Financial Impact Metrics, which, for example, would have required registrants to disclose changes in revenues due to disruptions of business operations.<sup>1735</sup> To narrow the scope further, the final rules do not require the disclosure of any impacts on the statement of cash flows, as would have been required under the proposed rules.<sup>1736</sup>

In addition, although we are retaining a one percent disclosure threshold in the final rules, registrants will not be required to apply it on a line item basis to determine whether disclosure is required since we are not adopting the proposed Financial Impact Metrics. Instead, as discussed in greater detail below, the final rules require the application of the one percent

to expenditures, these terms represent impacts that would have been disclosed under the proposed Financial Impact Metrics and, accordingly, we do not consider these to be an expansion of the proposed disclosure requirements. See *infra* note 1735 for an explanation of the overlap between the proposed Financial Impact Metrics and the proposed Expenditure Metrics.

<sup>1733</sup> See 17 CFR 210.14-02(c), (d), and (e).

<sup>1734</sup> See *id.* See *infra* section K.3.c.i for further discussion of the requirement to disclose where on the balance sheet and income statement the required capitalized costs, expenditures expensed, charges, and losses are presented.

<sup>1735</sup> See Proposing Release, section II.F.2. In response to a request for comment included in the Proposing Release, commenters stated that the Financial Impact Metrics and Expenditure Metrics, as proposed, potentially would result in some overlapping disclosures with respect to costs and expenditures (*i.e.*, certain costs included in the aggregate disclosures required by the proposed Expenditure Metrics would also have been captured by the proposed Financial Impact Metrics line item disclosures).

<sup>1736</sup> See Proposing Release, section II.F.2 ("A registrant would be required to determine the impacts of severe weather events, other natural conditions, transition activities, and identified climate-related risks described above on each consolidated financial statement line item.").

disclosure threshold to only two categories of aggregate amounts: (1) expenditures expensed as incurred and losses; and (2) capitalized costs and charges, in both cases incurred as a result of severe weather events and other natural conditions. The final rules use different denominators for the disclosure thresholds as compared to the proposal and include de minimis thresholds to help respond to commenters' concerns about burdens.<sup>1737</sup> The requirement to disclose capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs is not subject to a one percent disclosure threshold. Rather, disclosure is only required if carbon offsets and RECs have been used as material component of a registrant's plans to achieve its disclosed climate-related targets or goals.<sup>1738</sup> As discussed in greater detail above, instead of requiring the disclosure of expenditures related to transition activities in the financial statements as proposed, the final rules will require registrants to disclose material expenditures related to (1) activities to mitigate or adapt to climate-related risk (in management's assessment), (2) disclosed transition plans, and (3) disclosed targets and goals, outside of the financial statements as part of the amendments to Regulation S–K.<sup>1739</sup> The final rules we are adopting seek to realize many of the benefits of the proposed rules in terms of enhanced financial statement disclosure while minimizing the likelihood that issuers will need to undertake costly updates to their internal systems and processes. Physical risks, such as severe weather events and other natural conditions, can significantly affect public companies' financial performance or position.<sup>1740</sup>

<sup>1737</sup> See *infra* section II.K.3.c.ii for further discussion of the disclosure threshold requirement. In addition, in response to commenters' concerns, we are adopting a principle for attributing an expenditure to a severe weather event or other natural condition and for determining the amount to be disclosed. See *infra* section II.K.3.c.iii.

<sup>1738</sup> See *infra* section II.K.3.c.vi for further discussion of this requirement.

<sup>1739</sup> See *supra* sections II.D.1.c, II.D.2.c, and II.G.3.a.

<sup>1740</sup> See, e.g., Richard Vanderford, *A Punishing Year of Thunderstorms has Led to Record-Breaking Losses*, *The Wall Street Journal* (Nov. 24, 2023) (stating that thunderstorms (formally known as severe convective storms) “have so far led to at least \$55.67 billion in insured damages in the U.S. this year through Nov. 13 . . . Insured damages from the storms had never before topped \$50 billion.”). See also NOAA National Centers for Environmental Information, *U.S. Billion-Dollar Weather and Climate Disasters (2024)*, available at <https://www.ncei.noaa.gov/access/billions/> (stating that, in 2023, 28 confirmed weather/climate disaster events with losses exceeding \$1 billion each affected the United States, including 1 drought event, 4 flooding events, 19 severe storm events, 2 tropical cyclone events, 1 wildfire event, and 1 winter storm event,

Investors need disaggregated disclosure of capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions to better understand the effect such events have on the financial statements.<sup>1741</sup> By expanding on the information provided in the financial statements, the final rules will help investors “assess a registrant’s exposure to physical risks,”<sup>1742</sup> and “better understand the overall vulnerability of assets . . . [and] loss experience.”<sup>1743</sup> In addition, the requirement to provide disaggregated disclosure of capitalized costs, expenditures expensed, and losses incurred in connection with the purchase and use of carbon offsets and RECs will provide investors with needed transparency about the financial statement effects of a registrant’s purchase and use of carbon offsets and RECs as part of its climate-related business strategy. As such, the disclosure required by the final rules will help investors make better informed investment or voting decisions by eliciting more complete disclosure of financial statement effects and improving the consistency, comparability, and reliability of such disclosures. In this way, the final rules appropriately balance the need for enhanced financial statement disclosures with the potential costs entailed to produce such disclosures given the current state of financial reporting practices.

Consistent with the proposed rules, the final rules require a registrant to include the financial statement disclosures in any filing that is required

with damages totaling at least \$92.9 billion); Form Letter F (stating that increasingly severe weather events “affect numerous corporate assets and operations, putting pressure on essential supply chains, posing harm to facilities, and undermining the ability of businesses to meet targets” and therefore investors need to be aware of how companies are impacted by these financial risks).

<sup>1741</sup> See, e.g., letters from As You Sow (stating its support for requiring the disclosure of “costs of physical risks,” among other things, in the financial statements); Boston Trust (supporting the disclosure of expenditures related to severe weather events); CalPERS (stating that it is important to require the disclosure of the impact of “extreme temperatures, flooding, drought, [and] wildfires” in the financial statements); ICGN (supporting the disclosure of how physical impacts are accounted for in the financial statements); Maple Brown (stating that requiring disclosures in the financial statements would make it “better equipped to price in potential risks” such as “the physical risks associated with more frequent and extreme weather events”); MNSBI (stating a need for disaggregated physical and transition risk-related impacts on the financial statements); and UCS (“Requiring issuers to disclose disaggregated financial metrics that will be subject to audit must remain in the rule.”).

<sup>1742</sup> See letter from Boston Trust.

<sup>1743</sup> See letter from IAA.

to include disclosure pursuant to subpart 1500 and that also requires the registrant to include its audited financial statements.<sup>1744</sup> For the avoidance of doubt, this means that a registrant is required to comply with the requirements in Article 14 even if it does not have information to disclose pursuant to subpart 1500, as long as the applicable Commission filing requires the registrant to comply with subpart 1500. Including disclosure of the financial statement effects in a note to the financial statements, as proposed, as opposed to including them outside of the financial statements, such as exclusively in the MD&A section of registrants' filings as recommended by some commenters,<sup>1745</sup> will subject these disclosures to the same financial statement audit and ICFR as similar financial disclosures, which will improve their consistency, quality, and reliability and thereby provide an important benefit to investors.

In addition, the disclosure requirements we are adopting will apply to public companies generally as opposed to only requiring companies in certain industries or sectors to comply with the final rules. The final rules are focused on requiring the disclosure of capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions, which are occurrences that can happen to public companies in any sector or industry, and therefore it would not be appropriate to only require public companies in certain sectors or industries to comply with the rules. The decision not to limit the scope of Article 14 to only public companies in certain sectors or industries is consistent with the approach we are taking with respect to the amendments to Regulation S–K, which similarly are not limited to public companies in certain sectors or industries.

Furthermore, the financial statement disclosure requirements included in the final rules will apply to SRCs and EGCs. A few commenters raised concerns about the application of the proposed

<sup>1744</sup> See 17 CFR 210.14–01(a). For example, the note to the financial statements will not be required in a Form 10–Q filing. Similarly, the note to the financial statements will not be required for unaudited interim financial statements included in a registration statement. See, e.g., 17 CFR 210.3–01, 3–02, 8–03, 10–01. See also *infra* note 2380 and section II.L.3, which discuss the applicability of the rules to foreign private issuers.

<sup>1745</sup> See *supra* note 1724 and accompanying text. Registrants are reminded that they may nonetheless have an obligation to discuss climate-related information in MD&A if the information meets the requirements for disclosure under Item 303 of Regulation S–K. See 17 CFR 229.303; 2010 Guidance.

financial statement disclosure requirements to smaller companies, including SRCs.<sup>1746</sup> We considered whether it would be appropriate to exempt SRCs and EGCs from the financial statement disclosure requirements. We recognize that SRCs generally may avail themselves of the scaled disclosure requirements in Article 8 of Regulation S–X. However, as the Commission expressed in the Proposing Release, we determined that it is appropriate to apply the financial statement disclosure requirements to SRCs and EGCs because severe weather events and other natural conditions can pose significant risks to the operations and financial conditions of all registrants. We expect that the narrower scope of the final rules we are adopting will significantly mitigate the costs and burdens for registrants of all sizes as compared to the proposed rules, including certain aspects of the final rules that may particularly benefit SRCs and EGCs, such as a de minimis disclosure threshold, which is discussed in further detail below. The final rules also provide SRCs and EGCs with a longer phased-in compliance period than other registrants, which will give them more time to prepare to comply with the final rules.<sup>1747</sup> In addition, as explained in greater detail below in section II.L.3, the final rules, including the amendments to Regulation S–X, will not apply to a private company that is a party to a business combination transaction, as defined by Securities Act Rule 165(f), involving a securities offering registered on Form S–4 or F–4.

We do not agree with those commenters who stated that the Commission should not adopt the amendments and instead refer the matter to the FASB.<sup>1748</sup> Although the Commission has recognized the FASB's financial accounting and reporting standards as “generally accepted” for purposes of the Federal securities laws, as explained above in section II.B, the Securities Act and the Exchange Act (as confirmed by the Sarbanes-Oxley Act of 2002) make it clear that the Commission has the ultimate responsibility and broad authority to set accounting standards, principles, and financial statement disclosure requirements for

registrants.<sup>1749</sup> The Commission is exercising its authority to prescribe the financial statement disclosure requirements included in the final rules in response to the need expressed by investors for information related to the financial statement impacts of severe weather events as discussed elsewhere in this release.<sup>1750</sup> Significantly, the rules we are adopting amend both Regulation S–K, which prescribes the narrative disclosure requirements for registrants' periodic filings with the Commission, and Regulation S–X, which prescribes the requirements for the financial statements included in those filings. Therefore, adopting financial statement requirements as part of this rulemaking will provide for consistent disclosure of information across registrants' public filings and avoid potential inconsistencies that could arise through an approach that requires both Commission and independent FASB action.<sup>1751</sup> In

<sup>1749</sup> See, e.g., 15 U.S.C. 77s(a) (Among other things, the Commission shall have authority, for the purposes of this subchapter, to prescribe the form or forms in which required information shall be set forth, the items or details to be shown in the balance sheet and earning statement, and the methods to be followed in the preparation of accounts, in the appraisal or valuation of assets and liabilities, in the determination of depreciation and depletion, in the differentiation of recurring and nonrecurring income, in the differentiation of investment and operating income, and in the preparation, where the Commission deems it necessary or desirable, of consolidated balance sheets or income accounts of any person directly or indirectly controlling or controlled by the issuer, or any person under direct or indirect common control with the issuer. The rules and regulations of the Commission shall be effective upon publication in the manner which the Commission shall prescribe); 15 U.S.C. 7218(c) (Nothing in this Act, including this section and the amendment made by this section, shall be construed to impair or limit the authority of the Commission to establish accounting principles or standards for purposes of enforcement of the securities laws.); and *Policy Statement: Reaffirming the Status of the FASB as a Designated Private-Sector Standard Setter*, Release No. 33–8221 (Apr. 25, 2003) [68 FR 23333, 23334 (May 1, 2003)] (While the Commission consistently has looked to the private sector in the past to set accounting standards, the securities laws, including the Sarbanes-Oxley Act, clearly provide the Commission with authority to set accounting standards for public companies and other entities that file financial statements with the Commission.). See also FASB Accounting Standards Codification (“FASB ASC”) Topic 105–10–10–1 (“Rules and interpretive releases of the Securities and Exchange Commission . . . are also sources of authoritative GAAP for SEC registrants.”).

<sup>1750</sup> See *supra* note 1741 and accompanying text.

<sup>1751</sup> The final rules establish presentation and disclosure requirements; they do not alter or establish recognition and measurement requirements. As discussed in greater detail above in section II.B, the Commission has previously adopted presentation and disclosure requirements regarding the form and content of the financial statements. For example, Rule 5–02 of Regulation S–X prescribes the various line items and certain additional disclosures that should appear on the

addition, the final rules will apply regardless of whether the registrant applies U.S. GAAP, IFRS, or local GAAP, and therefore rulemaking by the Commission ensures that registrants are subject to the same requirements since the adoption of standards by the FASB would be limited to registrants that apply U.S. GAAP to their financial statements. Under each of these circumstances, it is appropriate for the Commission to adopt rules to ensure that investors are receiving the consistent, comparable, and reliable information they need to make timely investing and voting decisions.<sup>1752</sup>

## 2. Financial Impact Metrics

### a. Proposed Rules

The Commission proposed to amend Regulation S–X to require a registrant to disclose Financial Impact Metrics. More specifically, the Financial Impact Metrics would have required a registrant to disclose the financial impacts from severe weather events and other natural conditions and transition activities on any relevant line item in the registrant's consolidated financial statements during the fiscal years presented.<sup>1753</sup> The Commission explained in the Proposing Release that this proposed requirement was intended to complement the proposed requirement in Item 1502(d) of Regulation S–K that called for a registrant to provide a narrative discussion of whether and how any of its identified climate-related risks have affected or are reasonably likely to affect the registrant's consolidated financial statements.<sup>1754</sup> The Commission also explained in the Proposing Release that requiring disclosure of the impacts from severe weather events and other natural conditions and transition activities would capture a broad spectrum of physical and transition risks.<sup>1755</sup> To aid in the comparability of disclosures and to assist issuers, the proposed rules identified flooding, drought, wildfires, extreme temperatures, and sea level rise as non-exclusive examples of severe weather events and other natural conditions that may require

face of the balance sheet or related notes. See 17 CFR 210.5–02.

<sup>1752</sup> See *General Revision of Regulation S–X*, Release No. 6233 (Sept. 25, 1980) [45 FR 63660, 63661 (Sept. 25, 1980)] (explaining, in connection with amendments to Regulation S–X, that the Commission does not believe “any decision to require particular disclosures . . . through rulemaking in [Regulation] S–X, conflicts with the basic policy of relying on the FASB for leadership in establishing financial accounting and reporting standards”).

<sup>1753</sup> See Proposing Release, section II.F.2.

<sup>1754</sup> See *id.*

<sup>1755</sup> See *id.*

<sup>1746</sup> See, e.g., letters from Abrasca; Cohn Rez.; Henry H. Huang (Apr. 16, 2022) (“H. Huang”); NAM; US SBA; and Volta.

<sup>1747</sup> See *infra* section ILO.3 for a discussion of the compliance dates for the final rules.

<sup>1748</sup> See *supra* note 1726 and accompanying text.

Some commenters, however, stated that the Commission should not defer to the FASB. See, e.g., letters from Ceres; and CFA Institute.

disclosure.<sup>1756</sup> The Commission further noted that there has been an increased recognition of the current and potential effects, both positive and negative, of these events and associated physical risks on a registrant's business as well as its financial performance and position.<sup>1757</sup> With respect to transition risks, the Commission proposed to require a registrant to disclose the financial impact of any identified transition risks and any efforts to reduce GHG emissions or otherwise mitigate exposure to transition risks (collectively, "transition activities") on any relevant line items in the registrant's consolidated financial statements during the fiscal years presented.<sup>1758</sup>

The proposed rules prescribed a specific quantitative disclosure threshold for the Financial Impact Metrics. Specifically, a registrant would have been required to disclose the impacts of severe weather events, other natural conditions, and transition activities on the consolidated financial statements included in the relevant filing unless the aggregated impact of the severe weather events, other natural conditions, and transition activities was less than one percent of the total line item for the relevant fiscal year.<sup>1759</sup> The Commission stated that this quantitative threshold would provide a bright-line standard for registrants and should reduce the risk of underreporting such information.<sup>1760</sup> The Commission further stated that the proposed quantitative threshold could promote comparability and consistency among a registrant's filings over time and among different registrants compared to a more principles-based approach.<sup>1761</sup> The Commission also pointed out that it has used similar one-percent thresholds in other contexts (within the financial statements and without),<sup>1762</sup> and that, more generally, other rules such as 17

CFR 229.103 and 17 CFR 229.404 use quantitative disclosure thresholds to facilitate comparability, consistency, and clarity in determining when information must be disclosed.<sup>1763</sup>

Under the proposed rules, impacts would have, at a minimum, been required to be disclosed on an aggregated, line-by-line basis for all negative impacts and, separately, on an aggregated, line-by-line basis for all positive impacts.<sup>1764</sup> For purposes of determining whether the disclosure threshold has been met, a registrant would be required to aggregate the absolute value of the positive and negative impacts on a line-by-line basis, which the Commission explained would better reflect the significance of the impact of severe weather events, other natural conditions, and transition activities on a registrant's financial performance and position.<sup>1765</sup>

To provide additional clarity, the proposed rules included the following examples of disclosures that may be required to reflect the impact of the severe weather events and other natural conditions on each line item of the registrant's consolidated financial statements (e.g., line items of the consolidated income statement, balance sheet, or cash flow statement):

- Changes to revenues or costs from disruptions to business operations or supply chains;
- Impairment charges and changes to the carrying amount of assets (such as inventory, intangibles, and property, plant, and equipment) due to the assets being exposed to severe weather, flooding, drought, wildfires, extreme temperatures, and sea level rise;
- Changes to loss contingencies or reserves (such as environmental reserves or loan loss allowances) due to impact from severe weather events; and

<sup>1763</sup> See Proposing Release, section II.F.2 (citing 17 CFR 229.103(b)(2) (requiring disclosure of a legal proceeding primarily involving a claim for damages if the amount involved, exclusive of interest and costs, exceeds 10 percent of the current assets of the registrant and its subsidiaries on a consolidated basis), (c)(3)(iii) (requiring disclosure of a judicial proceeding that has been enacted or adopted regulating the discharge of materials into the environment or primarily for the purpose of protecting the environment, if a governmental authority is a party to such proceeding and such proceeding involves potential monetary sanctions, unless the registrant reasonably believes that such proceeding will result in no monetary sanctions or monetary sanctions, exclusive of interest and costs, of less than \$300,000) and 17 CFR 229.404(a) (requiring disclosure of any transaction, since the beginning of the registrant's last fiscal year, or any currently proposed transaction, in which the registrant was or is to be a participant and the amount involved exceeds \$120,000, and in which any related person had or will have a direct or indirect material interest).

<sup>1764</sup> See *id.*

<sup>1765</sup> See *id.*

- Changes to total expected insured losses due to flooding or wildfire patterns.<sup>1766</sup>

With respect to the financial impacts of transition activities, the proposed rules included the following examples of potential impacts:

- Changes to revenue or cost due to new emissions pricing or regulations resulting in the loss of a sales contract;
- Changes to operating, investing, or financing cash flow from changes in upstream costs, such as transportation of raw materials;
- Changes to the carrying amount of assets (such as intangibles and property, plant, and equipment), for example, due to a reduction of the asset's useful life or a change in the asset's salvage value by being exposed to transition activities; and
- Changes to interest expense driven by financial instruments such as climate-linked bonds issued where the interest rate increases if certain climate-related targets are not met.<sup>1767</sup>

The Commission noted in the Proposing Release that an analogous approach to disaggregated, or separately stated, disclosure has been taken in other contexts within the financial statements and elsewhere, including in segment reporting,<sup>1768</sup> and that the importance of disaggregated disclosure in a registrant's financial statements is also supported by concepts set forth in FASB ASC Topic 606 *Revenue from Contracts with Customers* and IFRS 15 *Revenue from Contracts with Customers*.<sup>1769</sup> The Commission further noted that disaggregation of certain financial statement line items is also

<sup>1766</sup> See *id.*

<sup>1767</sup> See *id.*

<sup>1768</sup> For example, in segment reporting, a registrant must present within its consolidated financial statements a separate presentation of certain financial statement line items for each segment. See FASB ASC Topic 280 *Segment Reporting* and IFRS 8 *Operating Segments* (requiring segment reporting disclosures to be included in the audited financial statements). The Commission has noted the importance of disaggregated disclosure in the segment reporting context, stating that it "has long been aware of the importance of meaningful segment information to reasoned investment decision-making." See *Industry and Homogenous Geographic Segment Reporting*, Release No. 33-6514 (Feb. 15, 1984) [49 FR 6737, 6738 (Feb. 23, 1984)]. For simplicity, we do not refer to the corresponding IFRS in each instance where we reference the FASB ASC. Accordingly, references in this release to the FASB ASC should be read to refer also to the corresponding IFRS for foreign private issuers applying those standards.

<sup>1769</sup> See Proposing Release, section II.F.2. FASB ASC Topic 606 and IFRS 15 require, among other things, disclosure of disaggregated revenue recognized from contracts with customers into categories that depict how the nature, amount, timing, and uncertainty of revenue and cash flows are affected by economic factors.

<sup>1756</sup> See *id.* With the exception of wildfires, all of these examples were identified by the Commission more than a decade ago in its 2010 Guidance as events that could potentially affect a registrant's operations and results.

<sup>1757</sup> See *id.* (citing, among other sources, the FSOC's Report on Climate Related Financial Risk 2021, which discussed significant costs from the types of events identified in the proposed rule).

<sup>1758</sup> See *id.*

<sup>1759</sup> See *id.*

<sup>1760</sup> See *id.*

<sup>1761</sup> See *id.*

<sup>1762</sup> See, e.g., 17 CFR 210.5-03.1(a) (stating that if the total of sales and revenues reported under this caption includes excise taxes in an amount equal to 1% or more of such total, the amount of such excise taxes shall be shown on the face of the statement parenthetically or otherwise) and 17 CFR 210.12-13 (requiring disclosure of open option contracts by management investment companies using a 1% of net asset value threshold, based on the notional amounts of the contracts).

required by Article 5 of Regulation S–X, which calls for separate disclosure of specific balance sheet and income statement line items when practicable or when certain percentage thresholds are met, depending on the nature of the information.<sup>1770</sup>

Finally, the Commission proposed to require registrants to disclose the impacts of any climate-related risks identified pursuant to proposed Item 1502(a) of Regulation S–K—both physical risks and transition risks—on any of the financial statement metrics.<sup>1771</sup>

## b. Comments

### i. General Comments

Some commenters supported the proposal to require disclosure of Financial Impact Metrics.<sup>1772</sup> These commenters generally indicated that the proposed disclosures would be used by investors to make investment and voting decisions.<sup>1773</sup> Specifically, one commenter stated that the Financial Impact Metrics would be used by investors in voting, engaging, buying, and selling decisions and would help

<sup>1770</sup> See Proposing Release, section II.F.2. The analogies presented in this paragraph are not intended to imply that FASB ASC Topic 280, IFRS 8 or other concepts would have to be applied when accounting for and disclosing the financial statement effects required by the final rules. The analogies are also not intended to imply that the determination of when disclosure may be required and how that determination is made is the same across all these concepts.

<sup>1771</sup> See Proposing Release, section II.F.2.

(June 17, 2022) (“Xpansiv”). Certain of these commenters stated they also would support requiring registrants to disclose changes to the cost of capital resulting from climate-related events. See, e.g., letters from Carbon Tracker; Eni SpA; and ICGN. *But see* letter from TotalEnergies (stating that the Commission should not require disclosure of changes to cost of capital).

<sup>1773</sup> See, e.g., letters from Anthesis; Better Markets; BMO Global Asset Mgmt.; Church Grp.; ICGN; Morningstar; Parnassus; PGIM; PRI; SKY Harbor; and Terra Alpha.

investors determine whether the company is “properly oriented to manage for the long-term.”<sup>1774</sup> Some commenters asserted that the proposed Financial Impact Metrics would provide investors with the information they need in a standardized or comparable way<sup>1775</sup> and that the level of detail required would be helpful for investors.<sup>1776</sup>

Commenters also asserted that the proposed Financial Impact Metrics are necessary to fill a void in the information currently provided to investors. For example, one commenter stated that requiring disclosure on a line item basis would “overcome the longstanding problem of registrant climate risk disclosure that is too generic and boilerplate, or non-existent, despite repeated efforts by the [Commission] to encourage more detailed information in this broad area of risk.”<sup>1777</sup> Some of these commenters suggested that the Commission provide additional guidance to facilitate the disclosure of the Financial Impact Metrics.<sup>1778</sup>

Some commenters generally supported requiring the disclosure of climate-related impacts in the financial statements, but they identified certain challenges and recommended certain revisions to the proposed Financial Impact Metrics.<sup>1779</sup> For example, as discussed in greater detail below, a number of these commenters recommended that the Commission replace the one percent disclosure threshold with a requirement to disclose the financial impacts if material.<sup>1780</sup> Several commenters recommended revising the line-by-line disclosures to take a less granular or less disaggregated approach.<sup>1781</sup>

Some commenters stated that the Commission should require disclosure of climate-related events and transition activities on a separate basis as

<sup>1774</sup> See letter from CalPERS.

<sup>1775</sup> See, e.g., letters from Carbon Tracker; RMI; and UCS.

<sup>1776</sup> See letter from PGIM; and SKY Harbor (stating that it would avail itself of “the additional detail and metrics” to further assess impacts on a registrant’s financial condition).

<sup>1777</sup> See letter from Center Amer. Progress. *See also* letter from Amer. Academy Actuaries.

<sup>1778</sup> See, e.g., letters from Miller/Howard; and RMI. *See also, e.g.*, letters from Eni SpA; and TotalEnergies.

<sup>1779</sup> See, e.g., letters from AFG (June 17, 2022); BC IM Corp.; BHP; Calvert; CEMEX; Ceres; CFA Institute; CO PERA; Dell; Eni SpA; Eversource; IAA; Inclusive Cap.; PwC; TIAA; and TotalEnergies.

<sup>1780</sup> See, e.g., letters from AFG; BC IM Corp.; BHP; CEMEX; CO PERA; Dell; Eni SpA; Eversource; IAA; and TotalEnergies.

<sup>1781</sup> See, e.g., letters from BHP; Eni SpA; ICAEW; PIMCO; and TotalEnergies.

proposed.<sup>1782</sup> One commenter stated that it supported the proposed requirement to separately report climate-related events and transition activities because it would be consistent with the TCFD framework and facilitate investors’ understanding of the disclosures.<sup>1783</sup> One commenter stated that the Commission should instead require climate impacts to be considered in the aggregate, rather than distinguishing between those attributable to severe weather events versus transition activities since the distinction between the two may not always be clear.<sup>1784</sup> Other commenters recommended limiting the proposed disclosure to the impacts of severe weather events and other natural conditions and eliminating the proposed requirements related to identified climate-related risks and transition activities.<sup>1785</sup> One of these commenters explained that this would be consistent with an approach that only requires disclosure of impacts that would be recognized under GAAP.<sup>1786</sup> Another commenter stated that it would not support a rule that only required disclosures for severe weather events because this would result in other climate risks remaining “hidden to investors.”<sup>1787</sup>

Conversely, many of the commenters who provided feedback on the proposed Financial Impact Metrics did not support the proposed requirements.<sup>1788</sup>

<sup>1782</sup> See, e.g., letters from Anthesis; Eni SpA; H. Huang; Morningstar; and TotalEnergies. One commenter recommended that the Commission highlight elements of the proposed financial statement metrics where one specific type of transition activity—carbon offsets—may be relevant. *See* letter from D. Hileman Consulting (similarly suggesting the Commission highlight insurance).

<sup>1783</sup> See letter from ISS ESG.

<sup>1784</sup> See letter from Deloitte & Touche. *See also* letter from KPMG (noting that the separation between physical and transition risks may not always be feasible and recommending “the final rule allow for a hybrid categorization, with the distinction being explained in the contextual information”).

<sup>1785</sup> See, e.g., letters from BPI (stating that the proposed amendments to Regulation S–X “should be removed, or, at a minimum, significantly narrowed”); Climate Risk Consortia (generally opposing the proposed amendments to Regulation S–X but recommending revisions if retained in the final rules); Dell (recommending revisions to the proposed rules to enhance the operation of the requirements while ensuring that investors receive material disclosure); Eversource; and SIFMA (generally opposing the proposed amendments to Regulation S–X but recommending revisions if retained in the final rules).

<sup>1786</sup> See letter from SIFMA.

<sup>1787</sup> See letter from Sarasin.

Commenters generally asserted that it would not be feasible to provide the disclosures as proposed.<sup>1789</sup> Several commenters explained that companies currently do not track climate-related impacts by financial statement line item and companies do not have processes in place to do so under current accounting systems.<sup>1790</sup> A number of commenters stated that registrants would be required to create new accounting systems, processes, controls, and infrastructure to track, quantify, and disclose the proposed Financial Impact Metrics.<sup>1791</sup> Many commenters stated that the proposed Financial Impact Metrics would be burdensome and costly.<sup>1792</sup>

Some commenters questioned whether the proposed Financial Impact Metrics would benefit investors. For example, a number of commenters stated that the proposed Financial Impact Metrics would likely result in non-comparable or inconsistent data across registrants and therefore would not be useful or relevant to investors.<sup>1793</sup> In addition, one registrant stated that investors have not asked them to provide the level of detail that the Financial Impact Metrics would require.<sup>1794</sup> Some commenters pointed out that requiring registrants to disclose the Financial Impact Metrics on every line item could disincentivize companies from voluntarily disaggregating information in their financial statements, which would result in a loss of information for investors.<sup>1795</sup> One commenter asserted that the proposed Financial Impact Metrics are not included in the TCFD framework and it is unclear that these requirements would be adopted globally, which, in this commenter’s view, would limit their usefulness for global investors and potentially undermine investment in U.S. registrants.<sup>1796</sup>

Other commenters expressed accounting-related concerns with respect to the Financial Impact Metrics. For example, some commenters asserted that certain of the disclosures that would be required by the proposal, such as disclosures regarding changes to revenue, would not be consistent with GAAP.<sup>1797</sup> Similarly, some commenters asserted that no accounting principles or guidance exist for certain of the

<sup>1794</sup> See letter from Corvea.

<sup>1795</sup> See, e.g., letters from ABA; BDO USA LLP; and Energy Infrastructure.

<sup>1796</sup> See letter from Dow. Several commenters more generally asserted that registrants should not be required to disclose information that exceeds the scope of the TCFD framework, such as the proposed Financial Impact Metrics. See, e.g., letters from BlackRock; and MFA.

<sup>1797</sup> See, e.g., letters from AAR; ABA; AFEP; Alphabet *et al.*; Amazon; APCIA; Autodesk; BOA; Business Roundtable; CCR; Chamber; Grant Thornton; IADC; INGAA; JLL; KPMG; Nutrien; Sullivan Cromwell; Tapestry Network; Transocean; Travelers; Tucson Electric; and Unilever. See also letter from Deloitte & Touche (stating that the Commission should consider providing further guidance on how to calculate the estimated loss of revenue from disruptions to business operations).

proposed Financial Impact Metrics, which would make it difficult for auditors to opine on this information.<sup>1798</sup> In addition, a few commenters stated that the proposed Financial Impact Metrics would require public companies to seek information from the private companies they do business with and that private companies may not have the capabilities to respond to those inquiries.<sup>1799</sup>

Further, a number of commenters stated that it would be very difficult or impossible to accurately estimate the potential future or unrealized impacts of severe weather events and transition activities by financial statement line item.<sup>1800</sup> Some commenters also raised concerns about a registrant’s ability to include indirect effects of climate-related events when disclosing financial impacts.<sup>1801</sup>

## ii. Disclosure Threshold

Several commenters specifically expressed their support for the one percent disclosure threshold.<sup>1802</sup> Some of these commenters stated that a one percent disclosure threshold would reduce the risk of underreporting.<sup>1803</sup> For example, one commenter explained that setting the disclosure threshold too high could result in companies failing to undertake the necessary inquiry because they may conclude there is no way the threshold would be triggered.<sup>1804</sup> A few commenters explained that a percentage threshold is beneficial because it provides registrants and auditors with bright-line guidance.<sup>1805</sup> Other commenters asserted the Commission acted within its authority in prescribing a particular percentage disclosure threshold.<sup>1806</sup>

Conversely, many commenters stated that they did not support the proposed

disclosure threshold of one percent.<sup>1807</sup> A number of these commenters asserted that the threshold was too low<sup>1808</sup> and it would result in an excessive amount of detail, which would be immaterial and not useful to investors.<sup>1809</sup> Several commenters stated that it could confuse investors because investors could equate the level of detail that would be disclosed with a level of precision that is not consistent with the nature of the disclosures.<sup>1810</sup> Some commenters asserted that requiring disclosure at a one percent threshold would give disproportionate prominence to the proposed financial statement metrics relative to other risks addressed in the financial statements.<sup>1811</sup>

<sup>1807</sup> See, e.g., letters from American Apparel & Footwear Association (June 17, 2022) (“AAFA”); ABA; AFPA; AFPM; Airlines for America; Amer. Bankers; Amer. Chem.; API; Beller *et al.*; B. Other commenters were concerned that a one percent disclosure threshold would not result in consistent and comparable disclosure because the reported line items in the financial statements can vary significantly across registrants.<sup>1812</sup> A few commenters stated that applying the one percent disclosure threshold on a line item basis could result in only partial disclosure of expenditures related to a climate-related event since the total impact could be recorded in multiple financial statement line items, which would diminish the usefulness of the information to investors.<sup>1813</sup> In addition, some commenters asserted that registrants would not be able to calculate the monetary value for the one percent disclosure threshold until the end of the relevant period, which would require registrants to evaluate each transaction to determine if it counts towards the threshold.<sup>1814</sup>

Other commenters stated that one percent is significantly below the five percent “rule of thumb” for materiality used by many registrants and auditors,<sup>1815</sup> and that, in their view, a one percent disclosure threshold is not consistent with existing guidance from the Commission staff.<sup>1816</sup> Several commenters stated that the examples provided in the Proposing Release of other one percent disclosure thresholds were not comparable.<sup>1817</sup> For example, with respect to the one percent disclosure threshold applicable to excise taxes, one commenter asserted that, unlike excise taxes, registrants would not be able to precisely measure the impacts of severe weather events and transition activities, and therefore the two situations are distinguishable.<sup>1818</sup> A few commenters

questioned the Commission’s authority to establish a one percent disclosure threshold.<sup>1819</sup> Several commenters also stated that the proposed line item disclosure threshold is not aligned with the TCFD framework,<sup>1820</sup> and another commenter stated that the TCFD framework provides registrants with more flexibility to describe financial impacts.<sup>1821</sup>

Other commenters asserted that a one percent threshold would place an unreasonable burden on smaller companies.<sup>1822</sup> For example, one commenter asserted that it is more likely that smaller companies’ impacts would exceed the one percent disclosure threshold.<sup>1823</sup> In addition, some commenters stated that the Commission did not adequately justify or explain its rationale for using a one percent disclosure threshold.<sup>1824</sup>

Other commenters raised concerns about the ability to audit the disclosures triggered by the one percent threshold or that the threshold could increase inefficiencies and costs associated with the audit.<sup>1825</sup> Specifically some of these commenters stated that the proposed one percent threshold may lead registrants to conclude that the one percent threshold is a de facto materiality threshold and should be applied to other financial statement disclosures that are triggered by materiality.<sup>1826</sup>

Due to these and other concerns, many commenters stated that if the proposed Financial Statement Metrics are retained in the final rules, then the Commission should require disclosure only if the impacts are material.<sup>1827</sup> One

<sup>1819</sup> See, e.g., letters from Amer. commenter stated that a materiality standard would better align with how registrants track and view impacts internally,<sup>1828</sup> while another commenter stated that applying a materiality standard could mitigate operational challenges presented by the proposed rules.<sup>1829</sup> Another commenter stated that a materiality standard would strike a better balance between anticipated benefits to investors and the cost of and burden of the reporting on registrants.<sup>1830</sup> A few commenters noted that aligning with existing materiality concepts may elicit disclosure above or below the one percent disclosure threshold.<sup>1831</sup>

On the other hand, some of the commenters who supported the requirement to apply a one percent disclosure threshold also specifically disagreed with moving to a materiality standard.<sup>1832</sup> A few of these commenters stated that applying a materiality standard would result in underreporting<sup>1833</sup> or would not provide investors with as much decision-useful information.<sup>1834</sup> One commenter pointed out that Regulation S-X is composed of requirements to disclose specific financial information in a specific format and stated that the Commission did not need to establish the materiality of every one of those items for all registrants.<sup>1835</sup> Similarly,

<sup>1835</sup> See letter from Amer. for Fin. Reform, Sunrise Project *et al.*

another commenter explained that registrants have experience disclosing information in their financial statements without applying materiality, such as information regarding executive compensation, related-party transactions, and share repurchases.<sup>1836</sup>

Several commenters suggested that the Commission should apply a different percentage threshold, such as five percent<sup>1837</sup> or ten percent.<sup>1838</sup> A few commenters asserted that the appropriateness of a particular percentage disclosure threshold may depend on the line item that is used as the denominator.<sup>1839</sup> For example, one of the commenters that recommended using a five percent threshold acknowledged that a percentage lower than five percent may be appropriate if the threshold is anchored to one of the larger line items in the financial statements, such as total operating expenses.<sup>1840</sup> Another commenter suggested using a percentage disclosure threshold based on total assets or income instead of individual line items.<sup>1841</sup> A couple of commenters stated that increasing the threshold to a higher percentage would not be an improvement because registrants still would not know the results of each line item until the end of the reporting period and therefore registrants would still have to track essentially all transactions.<sup>1842</sup> Another commenter emphasized the need for consistency over the desire for any particular percentage.<sup>1843</sup>

Some commenters offered their views on the appropriateness of using a dollar-based disclosure threshold. A few commenters stated that, to the extent the Commission does not adopt a principles-based approach, the Commission should consider adopting a combination of a higher percentage threshold along with a dollar threshold.<sup>1844</sup> Another commenter stated that if the Commission incorporates a dollar amount into the threshold it should be significantly

higher than \$1 million.<sup>1845</sup> One commenter suggested a materiality standard combined with a dollar-based disclosure threshold.<sup>1846</sup> A couple of commenters stated that they did not support applying a dollar threshold.<sup>1847</sup>

One commenter stated that the Commission should not apply a disclosure threshold and instead should require disclosure of any impacts.<sup>1848</sup> A couple of commenters asserted that the Commission should also require registrants to determine whether an impact that falls below the prescribed one percent threshold would nevertheless be material given its nature and, if so, to require disclosure of that impact.<sup>1849</sup> One commenter suggested setting a basic principle based on materiality and backstopping the materiality standard with a numerical disclosure threshold set at five percent in the short- and medium-term or ten percent in the long term.<sup>1850</sup> Alternatively, one commenter stated that relying on a one percent disclosure threshold alone could create a “loophole” for larger companies and therefore the Commission should clarify that disclosure would still be required for impacts that fall below one percent if they are material.<sup>1851</sup>

Commenters also provided feedback on the proposed requirement for registrants to aggregate the absolute value of the positive and negative impacts on a line-by-line basis before determining whether the disclosure threshold has been met. A number of commenters disagreed with the proposal to aggregate the absolute value of impacts.<sup>1852</sup> Some of these commenters

stated that it would be a significant departure from typical accounting practices,<sup>1853</sup> and others asserted it would be unworkable and would result in the disclosure of individually immaterial information.<sup>1854</sup> One commenter suggested that any aggregation requirements should allow a registrant to set a minimum materiality threshold for individual items.<sup>1855</sup> On the other hand, some commenters supported aggregating the absolute value of impacts, with one commenter stating it better reflects the significance of the impact on a registrant's financial performance and position.<sup>1856</sup>

A few commenters stated that the Commission should instead use a net value.<sup>1857</sup> For example, some commenters stated that the proposed rules fail to take into account mitigation efforts such as insurance, which would net against the gross value of any loss.<sup>1858</sup> Specifically, one commenter asserted that disclosure of losses, net of insurance proceeds, is appropriate if it is probable that the insurance recovery would be realized and if the provision for the loss and the insurance receivable are recognized in the same period in accordance with FASB ASC 450–20.<sup>1859</sup> In addition, one commenter asserted that using absolute values would not accurately reflect the economics of the (re)insurance industry, which manages its weather risks through reinsurance.<sup>1860</sup> On the other hand, some commenters opposed the netting of positive and negative impacts.<sup>1861</sup> One commenter asserted that netting would involve many assumptions and

there is more value for investors in absolute numbers.<sup>1862</sup> Other commenters stated that netting could incentivize greenwashing.<sup>1863</sup> Finally, some commenters asserted that registrants should be required to determine if the disclosure threshold has been met or exceeded separately for physical events and transition activities.<sup>1864</sup>

### iii. Terminology and Attribution

A number of commenters pointed out that “severe weather events and other natural conditions” is not defined in the proposal and they asserted that additional clarification or guidance is needed.<sup>1865</sup> Some commenters stated that the proposed amendments to Regulation S–X refer to “severe weather events,” while the proposed amendments to Regulation S–K refer to “extreme weather events,” and that the amendments provided overlapping, but different, examples.<sup>1866</sup> A few commenters suggested that the Commission should limit any required disclosures to a specified list of severe weather events and other natural conditions.<sup>1867</sup> For example, one commenter suggested that the Commission could establish a list of weather events and update it on a monthly or quarterly basis,<sup>1868</sup> but another commenter stated that maintaining a list of events would be impractical.<sup>1869</sup> A few commenters suggested that the Commission could borrow or refer to a list of severe weather events and other natural conditions prepared by a third party.<sup>1870</sup>

Other commenters suggested specific additions to the list of non-exclusive examples included in the proposed rules.<sup>1871</sup> Many of these commenters stated that registrants will likely have different views on what constitutes a severe weather event, which will reduce comparability.<sup>1872</sup>

In addition, a number of commenters stated that it was unclear whether registrants would need to determine that a severe weather event or other natural condition was, in fact, caused by climate change before disclosure would be required, while other commenters assumed that such a determination was required.<sup>1873</sup> Some commenters stated that registrants would not have the ability to determine whether a weather event or natural condition was caused by climate change,<sup>1874</sup> and other commenters stated that the Commission failed to provide guidance on this issue.<sup>1875</sup>

Several commenters stated that it was unclear whether the proposed financial statement metrics are intended to capture all severe weather events or only those above a historical baseline.<sup>1876</sup> Specifically, one commenter asked the Commission to provide guidance on how registrants should distinguish “events and conditions that are severe and relate to climate risks from those that are consistent with historical patterns.”<sup>1877</sup> Other commenters stated that it is not clear how the severity of a weather event should be assessed.<sup>1878</sup> For

example, one commenter questioned whether the severity of a hurricane should be assessed by looking to factors such as the wind speed categorization or the financial impact on the registrant itself.<sup>1879</sup> Another commenter suggested that the Commission should clarify that what is considered to be a severe weather event in one region may not be considered severe in a different region.<sup>1880</sup> One commenter asked for guidance on how to identify the beginning and ending dates of severe weather events because the impact from a weather event can continue even after the meteorological event has itself passed.<sup>1881</sup> Similarly, another commenter asked the Commission to provide additional examples of how to disclose a weather event like a hurricane or wildfire, both in the year that the event happened and for future years where the impacts may continue to manifest on the financial statements.<sup>1882</sup>

In addition, commenters asked the Commission to clarify what constitutes “other natural conditions,”<sup>1883</sup> and in particular, some commenters asserted that it would be difficult to identify chronic risks.<sup>1884</sup> For example, one commenter stated that the impact of sea level rise may be difficult to discern in a particular reporting period and might only be apparent over substantially longer periods.<sup>1885</sup> In addition, a few commenters raised concerns about the inclusion of “wildfires” in the list of severe weather events and natural conditions, pointing out, among other things, that wildfires have many different causes, including humans, or the cause of a wildfire may not be known for some time.<sup>1886</sup> One commenter asked the Commission to provide additional examples of “other natural conditions.”<sup>1887</sup>

On the other hand, some commenters stated that registrants should have flexibility to determine what constitutes a severe weather event or other natural condition.<sup>1888</sup> Several commenters

asserted that the Commission should not limit climate risk disclosures to a specified set of severe weather events because companies will face different climate risks.<sup>1889</sup> Other commenters suggested that the Commission should require disclosure of “unusual climate events” instead of “severe weather events” and allow registrants to define what they consider to be unusual for the area in which they operate.<sup>1890</sup>

A number of commenters also raised concerns about the definition and scope of transition activities.<sup>1891</sup> Commenters expressed concerns that the scope of transition activities could broadly encompass ordinary business activities that are motivated by the intent to be more efficient.<sup>1892</sup> Other commenters were concerned that registrants would be required to disclose competitively sensitive information.<sup>1893</sup> In addition, a number of commenters stated that registrants are unlikely to interpret transition activities in a consistent manner and therefore the proposed disclosures would not result in decision-useful information for investors.<sup>1894</sup>

Some commenters requested that the Commission provide additional guidance related to transition activities.<sup>1895</sup> For example, one commenter urged the Commission to clarify when a transition activity ends, asserting that it was not clear if a registrant’s disclosure obligation would cease once the registrant achieves its stated transition goal.<sup>1896</sup> Another commenter asked the Commission to clarify the scope of transition activities included in proposed Rule 14–02(d) because, in the commenter’s view, the

proposed provision could be read to mean that a registrant is only required to disclose the financial impact of activities or efforts of the registrant, and not the “broad range of climate-related changes in technology, market forces and other occurrences instituted by entities not related to the registrant that may nonetheless impact the registrant’s financials.”<sup>1897</sup> This commenter pointed out that proposed Rule 14–02(f), which would require the disclosure of expenditures related to transition activities, already covers disclosure of the financial impact of activities or efforts of the registrant.<sup>1898</sup>

Other commenters suggested potential alternatives to the proposed requirements related to transition activities. A couple of commenters stated that the Commission should only require registrants to disclose the impact of certain specified transition activities, such as efforts taken exclusively to reduce GHG emissions.<sup>1899</sup> Another commenter suggested “that the Commission instead require companies to track and report on transition activities that management has identified and reported on under the proposed [amendments to] Regulation S–K.”<sup>1900</sup> One commenter suggested that the Commission could issue sector-specific guidance for industries where most registrants’ balance sheets reflect expenditures related to clean energy, decarbonization, or resilience, to help companies determine what constitutes transition-related expenses.<sup>1901</sup>

Many commenters raised concerns about registrants’ abilities to isolate or attribute the effects of severe weather events and other natural conditions and transition activities on the financial statements.<sup>1902</sup> Commenters pointed out that some events may have multiple contributing causes or that the cause

may not be clear.<sup>1903</sup> For example, several commenters stated that companies incur many expenses for core business purposes that may also be characterized as helping to mitigate climate-related risks.<sup>1904</sup> Another commenter pointed out that if a registrant's insurance costs increase, it will be difficult for a registrant to attribute this increase, or a portion of this increase, to climate-related risks.<sup>1905</sup> In addition, one commenter noted that there may be circumstances where financial impacts are attributable to both physical risks and transition risks, such as when a facility is destroyed in a storm and the registrant decides to rebuild it with storm-protection features and LEED-certification, and the commenter questioned how the impacts should be attributed in those circumstances.<sup>1906</sup> Many commenters also stated that it would be difficult to quantify climate-related events, conditions, and activities.<sup>1907</sup> For example, where an expenditure is made in part for a climate-related purpose, commenters questioned whether registrants should attribute the entire cost or only an incremental portion of the cost to climate-related events.<sup>1908</sup> A number of other commenters questioned how registrants would be expected to quantify indirect financial impacts such as those affecting a registrant's supply or value chain.<sup>1909</sup> Some commenters stated that there are currently no accounting principles or guidance to help registrants make these determinations<sup>1910</sup> and another commenter pointed out that it may require the expertise of a climate specialist.<sup>1911</sup> Commenters generally

requested additional guidance to address these issues.<sup>1912</sup>

Commenters suggested various possibilities for addressing concerns about attribution and quantification. A few commenters stated that registrants should be permitted to make a reasonable estimate and disclose the assumptions that resulted in the estimate.<sup>1913</sup> Commenters suggested that disclosing the relevant assumptions would help investors interpret any estimations that may be required.<sup>1914</sup> One commenter recommended that any final rules should allow registrants to disclose either a single amount or a range, along with appropriate contextual information. This commenter noted that if the Commission proceeds with a single amount, registrants would require guidance on how the amount should be determined.<sup>1915</sup> Another commenter suggested that a registrant should be allowed to explain that it was unable to disclose the required information on a disaggregated basis due to impacts that were caused by a mixture of factors.<sup>1916</sup> Other commenters suggested that when disaggregation is not possible due to multiple contributing factors, registrants should provide qualitative information to explain the factors.<sup>1917</sup>

One commenter asserted that applying an entity-specific allocation methodology would not result in decision-useful information, and instead recommended attributing a financial statement impact or expenditure to climate risk only when the climate risk is a "significant contributing factor," and otherwise requiring registrants to provide contextual information to explain the impact, which would help avoid accusations of greenwashing that might occur if registrants were required to attribute substantially all events, conditions, and activities to climate risk.<sup>1918</sup> Another commenter urged the Commission to clarify that disclosure is only required where the relevant impacts can be reasonably determined to be primarily or entirely driven by physical or transition risk activities, are material to the business, and are reasonably estimable.<sup>1919</sup>

On the other hand, a few commenters stated that the Commission does not

need to prescribe a particular approach to attribution or allocation.<sup>1920</sup> One of these commenters pointed out that registrants already are required to allocate costs across multiple risks when preparing their financial statements.<sup>1921</sup>

#### iv. Alternatives

Commenters suggested a number of potential alternatives to the proposed financial statement metrics.<sup>1922</sup> Several commenters recommended that the Commission limit any requirement to disclose climate-related impacts to "first order effects" or direct impacts only.<sup>1923</sup> Specifically with respect to severe weather events, some commenters stated that it would be operationally possible to track specific, direct costs incurred due to severe weather events and natural conditions.<sup>1924</sup> For example, one commenter noted that certain property damage and related repair costs sustained as a result of severe weather could "easily be segregated, analyzed, and quantified within our current processes."<sup>1925</sup> Another commenter stated that calculating direct costs incurred due to severe weather events might be straightforward because the costs are recorded in the registrant's financial records.<sup>1926</sup> One commenter recommended that the "Commission consider limiting Article 14 of Regulation S-X requirements to

<sup>1920</sup> See, e.g., letters from Amer. for Fin. Reform, Sunrise Project *et al.*; and TotalEnergies.

<sup>1921</sup> See letter from Amer. for Fin. Reform, Sunrise Project *et al.*

<sup>1922</sup> In many cases, the commenters discussed in this section expressed a stronger preference for other approaches discussed above, such as not adopting or reducing the proposed disclosure requirements but offered these alternatives to the proposed rules as well.

<sup>1923</sup> See, e.g., letters from BOA; C2ES; Citigroup; and SIA.

<sup>1924</sup> See, e.g., letters from Autodesk (noting that if a fire or storm destroys a registrant's facilities, the associated costs, impairments, and contingencies would be accounted for and, if material, disclosed under U.S. GAAP); Crowe; Dow; and Nutrien (noting that it would be operationally possible to track specific costs incurred to mitigate transition risks or costs incurred due to severe weather events and natural conditions).

<sup>1925</sup> See letter from Dow (explaining, however, that "[q]uantifying the indirect impact of [severe weather events] on sales and cost of sales would be exceedingly difficult and require significant judgment, estimates and assumptions, thereby limiting the comparability of such information with other registrants and the usefulness of such information to investors").

<sup>1926</sup> See letter from Crowe. See also letter from PwC (stating that the financial impact of some climate-related risks—for example, losses arising from asset impairments or operations and maintenance expenses associated with site restoration—may already be disclosed under existing GAAP, although the disclosures may not clearly link to the impact of climate).

physical impacts and related expenditures only.”<sup>1927</sup> More generally, another commenter recommended streamlining the proposed rules to focus on “what issuers can easily produce.”<sup>1928</sup>

A few commenters recommended alternative approaches that focused on requiring the disclosure of discrete expenditures. For example, one commenter recommended that the Commission require a table in a note to the financial statements that presents discrete and separable expenditures, both expensed and capitalized, in three distinct categories: (i) climate-related events, (ii) transition activities for publicly-disclosed climate-related targets and goals, and (iii) all other transition activities.<sup>1929</sup> Similarly, another commenter recommended that the Commission should require disclosure of “identifiable direct costs and capital expenditures incurred for the express purpose of addressing climate events and transition issues,” which “could be produced and audited with a level of certainty and comparability that is consistent with GAAP financial statements.”<sup>1930</sup>

Other commenters recommended taking a more aggregated approach to disclosure. For example, one commenter suggested aggregating costs and benefits relating to climate-related events into categories (revenues, expenditures, and profits), and aggregating impacts on the balance sheet into the categories (assets, liabilities, and equity), which the commenter stated would ensure investors are able to identify the magnitude of the impacts affecting the company without unnecessary complication and cost for registrants.<sup>1931</sup> Another commenter recommended requiring disclosure at the event or activity level rather than disclosing impacts on financial statement line items, and focusing on discrete, material climate-related events

and transition activities.<sup>1932</sup> Similarly, another commenter recommended analyzing potential impacts by broad accounting topics, such as impairments or useful life of assets, which would simultaneously cover several lines of the income statement, balance sheet, and cash flow statement.<sup>1933</sup> One commenter suggested that the Commission could enhance comparability by identifying a minimum set of line items for which disclosure is required while permitting registrants to present disclosure on additional line items in order to better reflect their business model and industry.<sup>1934</sup> On the other hand, one commenter recommended a more disaggregated approach to disclosure.<sup>1935</sup>

Additionally, one commenter recommended that the Commission adopt a “top down approach” by linking disclosure of short-term risks identified under the proposed amendments to Regulation S–K to financial statement impacts that would be required to be disclosed at a specified threshold, and supplemented by the disclosure of other material impacts.<sup>1936</sup> Another commenter suggested requiring the disclosure of climate-related cash-flow metrics, focused on providing gross cash flows of climate-related expenditures, with an indication of which cash flows have been capitalized, which the commenter stated would provide an understanding of real cash-flow impacts that could be more directly linked to the Regulation S–K disclosures and would be more useful for investors.<sup>1937</sup> One commenter stated that the Commission should consider amending its industry guides for the oil and gas industry, among others, to require better disclosure of the financial statement impacts of climate change.<sup>1938</sup>

<sup>1927</sup> See letter from Alphabet *et al.*

### c. Final Rules

After consideration of the comments, including those expressing significant concerns about the burdens associated with this aspect of the proposal, we are not adopting the proposed Financial Impact Metrics.<sup>1939</sup> While the proposed Financial Impact Metrics would have provided additional transparency for investors, we were persuaded by those commenters that stated the proposed Financial Impact Metrics would be burdensome and costly for registrants because of the updates that would be necessary to internal systems and processes.<sup>1940</sup> Therefore, at this time, we have chosen not to adopt these disclosures. These concerns led us to adopt a significantly narrower set of requirements that are focused on requiring the disclosure of a discrete set of actual expenses that registrants incur and can attribute to severe weather events and other natural conditions. In line with the views of certain commenters,<sup>1941</sup> we expect these requirements to be more feasible for registrants to disclose under current financial reporting processes. Moreover, given the overlapping nature of some of the disclosures that would have been required by the proposed Financial Impact Metrics and the capitalized costs, expenditures expensed, charges, and losses that are required to be disclosed under the final rules,<sup>1942</sup> the requirements we are adopting will provide many of the same benefits of transparency and insights that the proposed Financial Impact Metrics would have provided, albeit without as much detail, which should reduce the burden on registrants.

In addition, as discussed in greater detail below in section II.K.3.c.ii, we emphasize that registrants currently have an obligation under GAAP to consider material impacts on the financial statements, and the fact that the impact may be driven by climate-related matters does not alter registrants’

(mining); and 17 CFR 229.1401 through 1406 (bank and savings and loan).

<sup>1939</sup> As discussed in greater detail below, since we are not adopting the proposed Financial Impact Metrics, a registrant will not have the option to disclose the impact of any climate-related opportunities on the Financial Impact Metrics. See *infra* section II.K.5.c. For the same reason, we are not adopting the requirement set forth in proposed Rule 14–02(i) requiring a registrant to include the impacts of any climate-related risks identified pursuant to proposed Item 1502(a) on the Financial Impact Metrics.

<sup>1940</sup> See *supra* note 1791 and accompanying text.

<sup>1941</sup> See *supra* notes 1924 and 1926 and accompanying text.

<sup>1942</sup> See *supra* notes 1732 and 1735.

<sup>1927</sup> See letter from Dell.

<sup>1928</sup> See letter from MFA. See also letter from Ceres, *et al.* (“Disclosure of financial impacts from climate-related activities should be derived from transactions and amounts recorded in the books and records underlying the financial statements.”).

<sup>1929</sup> See letter from Amazon. See also letter from C2ES (Feb. 13, 2023) (describing the expenditure table included in Amazon’s comment letter as a more workable alternative but reiterating concerns with other aspects of the proposed rules, such as the disclosure threshold).

<sup>1930</sup> See letter from ABA. See also letter from Ceres (recommending disclosure of current period and planned capital expenditures to show the portion of investments attributable to addressing transition risks and opportunities and the adaptation to or mitigation of physical risks associated with climate change).

<sup>1931</sup> See letter from PIMCO.

financial reporting obligations.<sup>1943</sup> Therefore, a registrant should consider whether it currently has an obligation to disclose information that would have been covered by the proposed Financial Impact Metrics. Our decision not to adopt the proposed Financial Impact Metrics does not affect registrants' ongoing responsibility to consider material impacts, including those that may be climate-related, when preparing their financial statements and related disclosures.

Although we are not adopting the proposed Financial Impact Metrics at this time, certain aspects of the proposed rules discussed at length above also applied to, or were substantially similar to, the proposed Expenditure Metrics. For example, the proposed one percent disclosure threshold and terminology such as "severe weather events and other natural conditions" were included in the proposals for both proposed metrics.<sup>1944</sup> A number of commenters provided feedback on these issues generally, without indicating that their comments were limited to only the proposed Financial Impact Metrics or to only the proposed Expenditure Metrics.<sup>1945</sup> In addition, some of the alternatives discussed above are relevant to the proposed Expenditure Metrics.<sup>1946</sup> As such, we also considered these comments with respect to the proposed Expenditure Metrics. Below, our discussion focuses on additional issues that commenters raised with respect to the proposed Expenditure Metrics. As a result, our rationale for the final rules takes into consideration all of the commenter feedback we received on the proposed rules.

### 3. Expenditure Effects

#### a. Proposed Rules

The Commission proposed to amend Regulation S-X to require a registrant to disclose Expenditure Metrics. As proposed, the Expenditure Metrics referred to the positive and negative impacts associated with the same severe

weather events, other natural conditions, transition activities, and identified climate-related risks as the proposed Financial Impact Metrics.<sup>1947</sup> Registrants would have been required to separately aggregate the amounts of (i) expenditures expensed and (ii) capitalized costs incurred during the fiscal years presented.<sup>1948</sup> For each of those categories, a registrant would have been required to disclose separately the amount incurred during the fiscal years presented (i) toward positive and negative impacts associated with the climate-related events and (ii) toward transition activities.<sup>1949</sup> The proposed rules provided that the registrant could also choose to disclose the impact of efforts to pursue climate-related opportunities.<sup>1950</sup> As discussed above, under the proposal, if a registrant elected to disclose the impact of an opportunity, it would have been required to do so consistently and would have been required to follow the same presentation and disclosure threshold requirements applicable to the required disclosures of the Expenditure Metrics.<sup>1951</sup> The Proposing Release explained that the amount of expenditure disclosed pursuant to the proposed Expenditure Metrics would be a portion, if not all, of the registrant's total recorded expenditure (expensed or capitalized), as calculated pursuant to the accounting principles applicable to the registrant's financial statements.<sup>1952</sup>

The proposed Expenditure Metrics were subject to the same disclosure threshold as the Financial Impact Metrics, which the Commission explained would promote comparability, consistency, and clarity in determining when information must be disclosed.<sup>1953</sup> The Commission explained in the Proposing Release that for purposes of calculating the disclosure thresholds for the Expenditure Metrics, a registrant could separately determine the amount of expenditure expensed and the amount of expenditure capitalized; however, a registrant would have been required to aggregate expenditure related to climate-related events and transition activities within the categories of expenditure

(i.e., amount capitalized and amount expensed).<sup>1954</sup> This approach was designed to better reflect the significance of climate-related expenditure compared to a calculation approach that allowed for a disclosure threshold to be measured at the individual event or activity level, which may result in more limited disclosures.

The Proposing Release provided examples of how a registrant would evaluate and disclose the proposed Expenditure Metrics, including examples of contextual information that could require disclosure, such as information about the specific climate-related events and transition activities that were aggregated for purposes of determining the impacts on the capitalized and expensed amounts.<sup>1955</sup> To provide additional clarity, the proposed rules clarified that a registrant may be required to disclose the amount of expenditure expensed or capitalized costs, as applicable, incurred for the climate-related events to increase the resilience of assets or operations, retire or shorten the estimated useful lives of impacted assets, relocate assets or operations at risk, or otherwise reduce the future impact of severe weather events and other natural conditions on business operations.<sup>1956</sup> The proposed rules also clarified that a registrant may be required to disclose the amount of expenditure expensed or capitalized costs, as applicable, incurred for climate-related transition activities related to research and development of new technologies, purchase of assets, infrastructure, or products that are intended to reduce GHG emissions, increase energy efficiency, offset emissions (purchase of energy credits), or improve other resource efficiency.<sup>1957</sup>

The Commission stated in the Proposing Release that separate disclosure of total expense and total capitalized costs incurred toward the climate-related events and transition activities should provide important information to help investors make better informed investment or voting decisions.<sup>1958</sup> The Commission pointed out that the financial impacts of expenditure typically appear in different places within the financial statements (e.g., in an asset line item(s) on the balance sheet or in an expense line item(s) in the income statement), and therefore the proposed approach, which would require registrants to first identify the relevant climate-related

<sup>1943</sup> See *infra* notes 2068 and 2069 and accompanying text.

<sup>1944</sup> See Proposing Release, sections II.F.2 and 3.

<sup>1945</sup> See, e.g., letters from B. Herron (opposing the 1% disclosure threshold generally without distinguishing between the proposed Financial Impact Metrics and the proposed Expenditure Metrics); Moody's ("[W]e therefore suggest the Commission dispense with the one-percent rule in favor of a more principles-based approach for reporting any financial statement metrics."); and Sens. J. Reed *et al.* (stating its support for the 1% disclosure threshold without distinguishing between the proposed Financial Impact Metrics and the proposed Expenditure Metrics).

<sup>1946</sup> See *supra* section II.K.2.b.iv.

<sup>1947</sup> See Proposing Release, section II.F.3.

<sup>1948</sup> The Proposing Release explained that these metrics are focused on expenditures (spending) incurred in each reported fiscal year(s), and it stated that the number of periods of the expenditure metrics should correspond to the number of years of income statement or cash flow statement presented in the consolidated financial statements. expenditures and then compile those impacts in one location, was intended to address this dispersed presentation.<sup>1959</sup>

#### b. Comments

As discussed above, some commenters generally stated that they supported the proposed amendments to Regulation S–X, including the financial statement disclosures.<sup>1960</sup> Other commenters specifically stated that they supported the proposed Expenditure Metrics.<sup>1961</sup> As previously noted, some of the commenters who supported the proposed amendments to Regulation S–X, including the Expenditure Metrics, recommended revising certain aspects of the proposal,<sup>1962</sup> such as the one percent disclosure threshold.<sup>1963</sup>

Many of the commenters that supported the proposed Expenditure Metrics stated that the disclosure requirement would provide useful information to investors.<sup>1964</sup> For example, one commenter stated that the proposed Expenditure Metrics would allow investors to gauge whether the qualitative discussions included in a registrant’s periodic report match the substance of the registrant’s expenditures.<sup>1965</sup> Another commenter stated that requiring the reporting of expenses associated with climate-related events would allow investors to “better understand the overall vulnerability of assets, loss experience, and long term investment in asset resiliency or adaptation.”<sup>1966</sup> Several

commenters noted that the proposed Expenditure Metrics would help investors understand a registrant’s ability to meet stated GHG emissions reduction targets or other climate-related targets and goals.<sup>1967</sup> One commenter stated that understanding the quantification of costs such as operating and capital expenditures enables it to improve its valuation models.<sup>1968</sup> Another commenter noted favorably that the proposed Expenditure Metrics were similar to one of the TCFD’s seven cross-sector metrics, and that the ISSB’s exposure draft similarly included language requiring “the amount of capital expenditure, financing, or investment deployed towards climate-related risks and opportunities.”<sup>1969</sup> A few commenters specifically stated that they supported applying the one percent disclosure threshold to the proposed Expenditure Metrics.<sup>1970</sup>

On the other hand, consistent with the feedback the Commission received on the proposed Financial Impact Metrics, and as discussed at length above, many of the commenters who provided feedback on the proposed Expenditure Metrics did not support the proposed requirements. Many commenters generally stated that they did not support the proposed amendments to Regulation S–X for the feasibility and other reasons described above.<sup>1971</sup> Other commenters

specifically stated that they disagreed with the proposed Expenditure Metrics.<sup>1972</sup> For example, some commenters stated that the proposed Expenditure Metrics would be time intensive and costly for companies.<sup>1973</sup> One of these commenters stated that registrants “do not measure capital expenditures by climate purpose” and therefore the proposed disclosures would require “the implementation of costly controls and procedures organization wide.”<sup>1974</sup> Similarly, another commenter stated that many smaller issuers use accounting software packages that offer limited expenditure tracking functionality and therefore the proposed Expenditure Metrics would likely require significant upgrades to cash outflow tracking infrastructure.<sup>1975</sup> Some commenters stated that they opposed the use of a one percent disclosure threshold in the context of the Expenditure Metrics.<sup>1976</sup> Other commenters raised concerns about registrants’ abilities to separately identify the cost of climate risk mitigation activities.<sup>1977</sup> A few commenters stated that the proposed Expenditure Metrics would not provide decision-useful information to investors because, among other things, the information is unlikely to be comparable among registrants.<sup>1978</sup>

Some commenters asserted that the proposed Financial Impact and Expenditure Metrics would require overlapping disclosure.<sup>1979</sup> These commenters generally stated that registrants should only be required to disclose the relevant information once.<sup>1980</sup> One of these commenters recommended that the proposed Expenditure Metrics focus on actions related to transition plans and the mitigation of physical risks.<sup>1981</sup> On the other hand, one commenter stated that

the Commission should require both the proposed Financial Impact and Expenditure Metrics in the final rules because they provide different perspectives and are both decision-useful for investors.<sup>1982</sup>

Some commenters agreed that it would be appropriate to require separate disclosure of capitalized costs and expenditures expensed.<sup>1983</sup> One of these commenters explained that capitalized costs and expenditures expensed have different effects on the value of assets and are recorded separately elsewhere in the financial statements.<sup>1984</sup> Another commenter stated that requiring the disclosures of expenditures expensed would be particularly helpful because otherwise they may not be subject to the same scrutiny or disclosure requirements as capitalized costs.<sup>1985</sup> Several commenters stated that additional examples or guidance would be useful.<sup>1986</sup>

Some commenters requested clarification regarding the proposed Expenditure Metrics. One commenter suggested that the Commission should provide an accounting definition of “expenditures.”<sup>1987</sup> Another commenter asked the Commission to clarify what it meant by a “capitalized cost,” for example, whether it only includes costs associated with purchases of Property, Plant and Equipment (PP&E) or if the definition is broader and also includes costs initially recognized as a debit on the balance sheet such as prepaid expenses.<sup>1988</sup> The commenter also noted that costs could be both capitalized and expensed in the same period, and therefore the rules should address how the costs should be presented in that circumstance.<sup>1989</sup> Similarly, one commenter asserted that whether something is identified as an expenditure or a capitalized cost would require registrants to make subjective judgments that are unlikely to be uniform across industries.<sup>1990</sup> Another commenter warned that a registrant could “game” the rules by classifying costs as expenditures, rather than capitalizing the costs, to avoid triggering the disclosure threshold.<sup>1991</sup> Some commenters generally asked the

Commission to provide additional examples and guidance for calculating the proposed Expenditure Metrics.<sup>1992</sup>

#### c. Final Rules

##### i. Scope (Rules 14–02(c) and (d))

The proposed Expenditure Metrics would have required registrants to disclose expenditures expensed and capitalized costs to mitigate the risks of severe weather events and other natural conditions and related to transition activities.<sup>1993</sup> After consideration of the comments, we are adopting a requirement (Rules 14–02(c) and (d)) to disclose expenditures expensed and capitalized costs with a number of changes from the proposed rules based on commenter feedback.<sup>1994</sup> In response to the concerns identified by commenters above, we have modified the proposed requirements and are adopting final rules that require disclosures that significantly reduce the burdens for registrants while providing investors with decision-useful information.

The final rules focus on requiring the disclosure of capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions, which is similar to certain of the alternatives suggested by commenters.<sup>1995</sup> Having considered the various alternatives presented by commenters, we concluded that focusing on the disclosure of discrete expenditures related to severe weather events and other natural conditions strikes an appropriate balance between providing investors with useful information and limiting the burdens on registrants.

Under the final rules, a registrant must disclose:

(1) The aggregate amount of expenditures expensed as incurred and losses, excluding recoveries, incurred during the fiscal year as a result of severe weather events and other natural conditions, and

(2) The aggregate amount of capitalized costs and charges, excluding recoveries, recognized during the fiscal year as a result of severe weather events and other natural conditions.<sup>1996</sup>

The proposed rules would have required registrants to disclose costs and expenditures incurred to “mitigate the risks from severe weather events and other natural conditions.”<sup>1997</sup> Some commenters indicated that it would be feasible, and significantly less burdensome, to instead segregate and quantify discrete costs incurred due to severe weather events.<sup>1998</sup> Requiring disclosure of expenditures related to mitigation activities would present challenges for registrants in terms of forecasting and determining their expectations about future severe weather events at the time they are making expenditure decisions. In addition, costs and expenditures related to mitigation activities may present similar issues to transition activities, which are discussed in further detail below, because the mitigation of the risks of severe weather events may be only one of several reasons why a company makes a business decision to incur a particular expenditure. Therefore, we have decided to require registrants to disclose capitalized costs, expenditures expensed, charges, and losses incurred “as a result of” severe weather events and other natural conditions.<sup>1999</sup> The capitalized costs,

<sup>1996</sup> See 17 CFR 210.14–02(c), (d). Under the final rules, disclosure must be provided for the registrant’s most recently completed fiscal year, and to the extent previously disclosed or required to be disclosed, for the historical fiscal year(s) included in the consolidated financial statements in the filing. See 17 CFR 210.14–01(d). In addition, foreign private issuers that file consolidated financial statements under home country GAAP and reconcile to U.S. GAAP, would be required to use U.S. GAAP (including the provisions of the final rules) as the basis for calculating and disclosing this information. Foreign private issuers that file consolidated financial statements under IFRS as issued by the IASB, would apply IFRS and the final rules as the basis for calculating and disclosing the financial statement effects. See also *infra* note 2380 which discusses proposed amendments to Form 20–F.

<sup>1995</sup> See *supra* section II.K.2.b.iv. See also letter from Dell (requesting that the “Commission consider limiting Article 14 of Regulation S–X requirements to physical impacts and related expenditures only”).

expenditures expensed, charges, and losses that will be disclosed under the final rules are already captured in a registrant's income statement or balance sheet and measured and reported in accordance with U.S. GAAP or IFRS.<sup>2000</sup> Thus, this approach will be less costly and burdensome for registrants as compared to the proposed rules.

In response to commenter requests for additional clarity,<sup>2001</sup> we are prescribing an attribution principle that registrants must use to determine whether a capitalized cost, expenditure expensed, charge, or loss is "as a result of" a severe weather event or other natural condition.<sup>2002</sup> The attribution principle will also simplify the determination of the amount required to be disclosed by eliminating the need to allocate portions of costs and expenditures, which will reduce compliance costs for registrants.<sup>2003</sup>

Under the final rules, the requirement to disclose capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions remains subject to a one percent disclosure threshold; however, we are modifying the denominators used for the threshold and adopting de minimis thresholds that exempt disclosure of amounts that aggregate to less than \$100,000 in the income statement or less than \$500,000 in the balance sheet, as explained in greater detail below.<sup>2004</sup> In addition, under the final rules, registrants must separately disclose, as part of the required contextual information, any recoveries resulting from severe weather events and other natural conditions to reflect the net effect that severe weather events and other natural conditions have on a registrant's financial statements.<sup>2005</sup>

As proposed, the Expenditure Metrics would have required registrants to disclose separately the aggregate amount

conditions because those costs would have constituted line-item impacts to a registrant's financial statements. Therefore, the requirement to disclose costs and expenditures incurred as a result of severe weather events and other natural conditions is a subset of the information that was included in the proposal.

<sup>2000</sup> See, e.g., letter from KPMG ("We recommend that the final rule clarify that the required disclosures are indeed a disaggregation of amounts already recognized in the financial statements.").

<sup>2001</sup> See *supra* note 1912 and accompanying text.

<sup>2002</sup> The attribution principle is discussed in greater detail below in section II.K.3.c.iii. See also 17 CFR 210.14–02(g).

<sup>2003</sup> See *id.* The attribution principle will also apply to recoveries, which are discussed in greater detail below in section II.K.3.c.iv. See also 17 CFR 210.14–02(f) and (g).

<sup>2004</sup> See 17 CFR 210.14–02(b).

<sup>2005</sup> See 17 CFR 210.14–02(f). See *infra* section II.K.6.a.iii for further discussion of the requirement to disclose contextual information.

of expenditure expensed and the aggregate amount of capitalized costs.<sup>2006</sup> In a shift from the proposal, the final rules require registrants to separately disclose where on the income statement and balance sheet, as applicable, the capitalized costs, expenditures expensed, charges, and losses are presented.<sup>2007</sup> As explained above, significantly fewer line items are impacted by the final rules we are adopting than would have been impacted by a requirement to disclose the proposed Financial Impact Metrics. Only those line items that reflect capitalized costs, expenditures expensed, charges, and losses fall within the scope of the disclosures, as is further illustrated below in section II.K.3.c.vii. For example, we do not expect that gross revenues would be impacted under the final rules. In addition, we do not believe that requiring registrants to disclose in which line item each of the required capitalized costs, expenditures expensed, charges, and losses are presented will increase the burden as compared to the proposed Expenditure Metrics because the disclosures required under the final rules are simply a disaggregation of financial statement line items. Requiring registrants to separately disclose in which line item the capitalized costs, expenditures expensed, charges, and losses are presented will enhance the usefulness of the disclosures for investors by allowing them to understand the effects of severe weather events and other natural conditions on a registrant's financial position and performance. This information will facilitate their analyses and cash flow projections year-on-year and across registrants.

The proposed rules would have required registrants to disclose expenditures expensed and capitalized costs incurred to reduce GHG emissions or otherwise mitigate exposure to transition risks.<sup>2008</sup> With respect to transition activities, many commenters pointed out that registrants make business decisions, such as incurring an expenditure to purchase a piece of machinery that is more energy efficient, for multiple reasons, and as a result, a registrant's transition activities may be inextricably intertwined with its ordinary business activities.<sup>2009</sup>

Consequently, commenters raised concerns about registrants' abilities to identify, attribute, and quantify the impact of transition activities on the

financial statements.<sup>2010</sup> In addition, requiring disclosure for transition activities would present challenges for registrants in terms of forecasting and determining their expectations about transition activities at the time they are making expenditure decisions. Taking these comments into consideration, we have determined not to require registrants to disclose costs and expenditures related to general transition activities in the financial statements at this time.

Although we are not adopting the broader requirement for disclosure of transition activities in the financial statements, registrants will be required to disclose capitalized costs, expenditures expensed, and losses related to the purchase and use of carbon offsets and RECs in the financial statements.<sup>2011</sup> The proposed rules identified the amount of expensed or capitalized cost, as applicable, related to "offset emissions (purchase of energy credits)" as one example of the disclosures that may be required<sup>2012</sup> and the purchase and use of carbon offsets and RECs is a type of transition activity that does not present the definitional or scoping concerns presented by transition activities more generally. In addition, carbon offsets and RECs that are expensed or capitalized are discrete transactions that are currently captured in a registrant's income statement or balance sheet.<sup>2013</sup> Moreover, requiring the disclosure of capitalized costs, expenditures expensed, and losses related to the acquisition and use of carbon offsets and RECs will complement the disclosures regarding carbon offsets and RECs required by the amendments to Regulation S–K that we are adopting in this release.<sup>2014</sup>

Furthermore, although the final rules under Article 14 do not require registrants to disclose costs and expenditures incurred to reduce GHG emissions or otherwise mitigate exposure to transition risks in the financial statements, the final rules under subpart 1500 of Regulation S–K will require registrants to provide quantitative and qualitative disclosure of material expenditures in certain circumstances as described in greater

<sup>2012</sup> See Proposing Release, section II.F.3.

<sup>2013</sup> There is currently a diversity in practice in accounting for carbon offsets and RECs. See *infra* note 2110.

<sup>2014</sup> See *supra* note 2023.

<sup>2006</sup> See Proposing Release, section II.F.3.

<sup>2007</sup> See 17 CFR 210.14–02(c), (d), and (e)(1).

<sup>2008</sup> See Proposing Release, section II.F.3.

<sup>2009</sup> See *supra* note 1892 and accompanying text.

detail above,<sup>2015</sup> which should result in the disclosure of some of the information for expenditures related to transition activities that we would have expected to be disclosed under the proposed rules, albeit outside of the financial statements. Requiring the disclosure of these expenditures outside of the financial statements and subject to materiality rather than a bright-line threshold, among other things, should mitigate the compliance burden and related concerns raised by commenters with respect to the proposed requirement to disclose transition expenditures in the financial statements.<sup>2016</sup> While we are adopting the requirements to disclose expenditures related to transition activities outside the financial statements, we remind registrants that current accounting standards may require the disclosure of material expenditures within the financial statements,<sup>2017</sup> which may include material expenditures incurred in furtherance of a registrant's transition activities, depending upon the application of these current accounting standards. Current accounting standards specify minimum presentation and disclosure requirements. Importantly, however, the FASB's Conceptual Framework provides additional guidance for evaluating whether financial information is representationally faithful. In particular, the Conceptual Framework states "[t]o be a perfectly faithful representation," a depiction "would be complete, neutral and free from error." The Conceptual Framework further states, "[a] complete depiction includes *all* information necessary for a user to understand the phenomenon being depicted, including *all* necessary descriptions and explanations"<sup>2018</sup> (emphasis added).

<sup>2015</sup> See *supra* sections II.D.2.c (transition plan disclosure) and II.G.3.a (targets and goals disclosure).

<sup>2016</sup> See *supra* section II.D.2.c. for additional discussion of how these revisions mitigate the compliance burdens.

<sup>2017</sup> See, e.g., ASC 230 *Statement of Cash flows* (requiring classification of cash receipts and cash payments as resulting from operating, investing, and financing activities); ASC 280 *Segments* (noting that a registrant "shall disclose both of the following about each reportable segment if the specified amounts are included in the determination of segment assets reviewed by the chief operating decision maker or are otherwise regularly provided to the chief operating decision maker, even if not included in the determination of segment assets . . . (b) total expenditures for additions to long-lived assets . . .") (ASC 280–10–50–25); and ASC 730 *Research and Development* (requiring disclosure of the total research and development costs charged to expense in each period for which an income statement is presented) (ASC 730–10–50–1).

<sup>2018</sup> See FASB, *Statement of Financial Accounting Concepts No. 8—Conceptual Framework for*

Accordingly, additional disaggregation and disclosure of material expenditures, whether on the face of the primary financial statements or in the notes to the financial statements, may be needed to meet the objective of the financial reporting as explained by the Conceptual Framework.<sup>2019</sup> For example, a registrant may consider whether disaggregating material cash outflows to acquire property, plant, and equipment<sup>2020</sup> purchased to meet the registrant's transition plans, targets, or goals on the statement of cash flows or in a related note is appropriate to provide complete information about the entity's cash flows for the period.

Under the final rules, registrants are required to disclose the aggregate amounts of (1) carbon offsets and RECs expensed, (2) carbon offsets and RECs capitalized, and (3) losses incurred on the capitalized carbon offsets and RECs during the fiscal year.<sup>2021</sup> This disclosure requirement is not subject to the one percent disclosure threshold that applies to the disclosure of severe weather events and other natural conditions. Instead, disclosure is required if carbon offsets or RECs have been used as a material component of a registrant's plan to achieve disclosed climate-related targets or goals,<sup>2022</sup> which is consistent with the requirement to disclose information about carbon offsets and RECs included in the amendments to Regulation S–K that we are adopting in this release and therefore will help limit the burden for registrants and avoid confusion for investors.<sup>2023</sup> In addition, registrants are required to disclose the beginning and ending balances of capitalized carbon offsets and RECs on the balance sheet for the fiscal year.<sup>2024</sup> The beginning and ending balances are currently existing information in a registrant's balance sheet that will provide investors with information to help them understand the registrant's activity related to the purchase and use of carbon offsets and RECs, further illustrating how a registrant is using

<sup>2020</sup> ASC 230–10–45–13.

<sup>2021</sup> See 17 CFR 210.14–02(e).

<sup>2022</sup> See 17 CFR 210.14–02(e)(1).

<sup>2023</sup> See 17 CFR 229.1504(d) (requiring the disclosure of certain information regarding carbon offsets or RECs "if carbon offsets or RECs have been used as a material component of a registrant's plan to achieve climate-related targets or goals"). See *also supra* section II.G.3.b.

<sup>2024</sup> See 17 CFR 210.14–02(e)(1).

carbon offsets and RECs as a material component of its plan to achieve a target or goal. Registrants are also required to disclose where on the income statement or balance sheet the capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs are presented under the final rules.<sup>2025</sup>

One commenter stated that the proposed rules would likely require many smaller issuers to make significant upgrades to their cash outflow tracking infrastructure.<sup>2026</sup> The commenter identified upgrades that would be needed to cash outflow tracking infrastructure to capture the costs and investments for each separate risk, transition activity, and weather event.<sup>2027</sup> However, as discussed above, the final rules will not require disclosure of the proposed Financial Impact Metrics or costs and expenditures related to transition activities in the financial statements. Rather, the amendments to Regulation S–X have been narrowed to focus on severe weather events and other natural conditions and carbon offsets and RECs, which will be less burdensome for registrants. Furthermore, the final rules do not require any disclosure of the impacts to the statement of cash flows.

We did not include in the final rules the proposed requirement for a registrant to disclose the impact of any climate-related risks identified by the registrant pursuant to proposed Item 1502(a) on any of the financial metrics included in the proposed rules, including the proposed Expenditure Metrics.<sup>2028</sup> A few commenters sought clarification about the scope of this proposed requirement or questioned what disclosure objective it was intended to achieve.<sup>2029</sup> Because the final rules we are adopting are more narrowly focused on requiring the disclosure of capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions, we do not think it would be in keeping with this approach to also require a registrant to disclose the impacts from any climate-related risks identified by the registrant pursuant to Item 1502(a).

<sup>2025</sup> See *id.*

<sup>2026</sup> See *supra* note 1975 and accompanying text.

<sup>2027</sup> See *id.*

<sup>2028</sup> See *Proposing Release*, section II.F.2.

<sup>2029</sup> See, e.g., letters from ABA; Amer. for Fin. Reform, *Sunrise Project et al.*; and Deloitte & Touche. See *also* letter from Travelers (Mar. 10, 2023) (objecting to the proposed requirement for a registrant to disclose the impact of any climate-related risks identified by the registrant pursuant to proposed Item 1502(a) on any of the financial metrics included in the proposed rule).

We recognize that a number of commenters expressed support for the Expenditure Metrics as proposed, including some who stated that the proposed requirements would provide investors with important information about “long term investments in asset resiliency” or would help investors understand a registrant’s ability to meet its climate-related targets and goals.<sup>2030</sup> Although the final rule is more narrow in scope than the proposal, the information elicited by the final rules will provide investors with comparable, reliable, and decision-useful information about registrants’ capitalized costs, expenditures expensed, charges, and losses related to severe weather events and other natural conditions, which will serve to protect investors, while minimizing costs and burdens on registrants.

ii. Disclosure Threshold (Rule 14–02(b))

In the final rules, we are retaining a quantitative disclosure threshold for capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions.<sup>2031</sup> Providing a bright-line standard for registrants will simplify compliance compared to a more principles-based standard, reduce the risk of underreporting such information, and promote comparability and consistency among a registrant’s filings over time and among different registrants.<sup>2032</sup> Accordingly, the final rules require disclosure of:

(1) Expenditures expensed as incurred and losses if the aggregate amount of such expenditures expensed as incurred and losses equals or exceeds one percent of the absolute value of income or loss before income tax expense or benefit for the relevant fiscal year; and

(2) Capitalized costs and charges recognized if the aggregate amount of the absolute value of capitalized costs and charges recognized equals or exceeds one percent of the absolute value of stockholders’ equity or deficit, at the end of the relevant fiscal year.<sup>2033</sup>

Such disclosure is not required, however, if the aggregate amount of expenditures expensed and losses as incurred in the income statement is less than \$100,000 for the relevant fiscal year.<sup>2034</sup> With respect to the balance sheet, registrants are not required to provide disclosure if the aggregate amount of capitalized costs and charges

is less than \$500,000 for the relevant fiscal year.<sup>2035</sup>

In a shift from the proposal, we are using different denominators for the disclosure thresholds. Specifically, the denominators we are adopting are: (1) income or loss before income tax expense or benefit, and (2) stockholders’ equity or deficit.<sup>2036</sup> Income or loss before income tax expense or benefit is a frequently disclosed line item on the income statement that provides an accounting-based measure of financial performance. Stockholders’ equity or deficit is a disclosed line item in the balance sheet that reflects stockholders’ ownership interest in the book value of the registrant and represents the net difference between the assets and liabilities of the registrant.

Although we did not receive commenter feedback specifically objecting to the denominators for the proposed Expenditure Metrics (*i.e.*, “total expenditure expensed” or “total capitalized costs”), we have decided to use these alternative denominators because income or loss before income tax expense or benefit and stockholders’ equity or deficit are well known and understood by registrants and investors and are easily calculable based on line items in the financial statements that are defined under U.S. GAAP and IFRS.<sup>2037</sup> These alternative denominators are broadly responsive to commenters who raised concerns that the proposed rules would be inconsistent with existing GAAP<sup>2038</sup> or would not result in comparable disclosure,<sup>2039</sup> although neither of these concerns was specifically directed at the proposed denominators for the disclosure threshold. Since the line items we have chosen for the denominators in the final rules are well known and represent aggregated financial activity, we expect at least some companies will have insight into the expected amount or magnitude of these denominators in advance of the end of the fiscal year, which could help facilitate the establishment of internal accounting controls related to the required

disclosure and support the establishment of ICFR and accurate and timely disclosure.<sup>2040</sup> In addition, as mentioned above, income or loss before income tax expense or benefit is a measure of profitability, and requiring a registrant to disclose expenditures expensed and losses incurred as a result of severe weather events and other natural conditions will help investors understand the impact these events and conditions had on the registrant’s profitability. Likewise, stockholders’ equity or deficit represents shareholders’ interest in the book value of an entity, and requiring a registrant to disclose the capitalized costs and charges incurred as a result of severe weather events and other natural conditions will help investors understand the impact these events and conditions have on assets attributable to shareholders.

The final rules provide that the disclosure thresholds should be calculated using the absolute values of the relevant denominator.<sup>2041</sup> We think it is appropriate to use the absolute values because the balances for these line items may represent debit or credit balances (which are not inherently either positive or negative) in the books and records, and thus using an absolute value will avoid any confusion that could arise from using a negative number resulting from an accounting convention for the disclosure threshold.<sup>2042</sup>

In addition, the final rules require registrants to use the absolute value of capitalized costs and charges recognized for the numerator to determine whether the applicable disclosure threshold is triggered for the balance sheet disclosures since capitalized costs and charges can offset one another.<sup>2043</sup> Expenditures expensed as incurred and losses in the income statement do not offset one another and therefore the use of absolute values is unnecessary to

<sup>2040</sup> Some commenters raised concerns that registrants would not be able to calculate the monetary value for the 1% disclosure threshold until the end of the relevant period, which would require registrants to evaluate every transaction to determine if it counts towards the threshold. See *supra* note 1814 and accompanying text. Our decision to use income or loss before income tax expense or benefit and shareholders’ equity or deficit as the denominators in the final rules should mitigate this concern to some extent for registrants because we expect that many registrants will have insight into the magnitude of these denominators prior to the end of the fiscal year.

<sup>2041</sup> See 17 CFR 210.14–02(b).

<sup>2042</sup> Other rules in Regulation S–X use absolute values in determining whether a threshold has been exceeded. See 17 CFR 210.1–02(w) (setting forth the income test for determining whether a subsidiary is a significant subsidiary).

<sup>2043</sup> See 17 CFR 210.14–02(b)(2).

<sup>2035</sup> See 17 CFR 210.14–02(b)(2).

<sup>2036</sup> See 17 CFR 210.14–02(b).

<sup>2037</sup> For example, while some registrants are not explicitly required to present income or loss before income tax expense or benefit in accordance with 17 CFR 210.5–03.10 in their financial statements, U.S. GAAP includes presentation and disclosure requirements that result in information sufficient to calculate income or loss before income tax expense or benefit, and registrants often do present this amount. In addition, while IFRS does not explicitly require income or loss before income tax expense or benefit, the standards do require disclosure of profit or loss and income tax expense.

<sup>2038</sup> See *supra* note 1797 and accompanying text.

<sup>2039</sup> See *supra* note 1793 and accompanying text.

<sup>2030</sup> See *supra* notes 1966 and 1967 and accompanying text.

<sup>2031</sup> See 17 CFR 210.14–02(b).

<sup>2032</sup> See Proposing Release, section II.F.2.

<sup>2033</sup> See 17 CFR 210.14–02(b).

<sup>2034</sup> See 17 CFR 210.14–02(b)(1).

determine whether the applicable disclosure threshold is triggered. Although the proposed Expenditure Metrics did not use absolute values in the numerator to determine whether the applicable disclosure threshold was triggered,<sup>2044</sup> the proposed Financial Impact Metrics did, and commenter feedback on the use of absolute values in that context was varied. A few commenters supported using the absolute value, and one investor stated that the absolute value would better reflect the significance of the impact on a registrant's financial performance and position.<sup>2045</sup> On the other hand, a few commenters objected to using the absolute value and stated it could result in the disclosure of individually immaterial information.<sup>2046</sup> We agree with the commenter that stated using the absolute value to determine whether the disclosure threshold is triggered will better reflect the significance of the impact on a registrant's financial position because the absolute value takes into account each of the relevant capitalized costs or charges (*i.e.*, the full magnitude of the costs or charges), whereas a net amount would not necessarily reflect the total effect on the registrant.

In a further shift from the proposal, we have included de minimis thresholds in the final rules.<sup>2047</sup> As discussed above, some commenters expressed the view that the proposed one percent disclosure threshold would place an unreasonable burden on smaller companies because it is more likely that the impacts on smaller companies would exceed the one percent disclosure threshold.<sup>2048</sup> In addition, a few commenters mentioned a de minimis exception in their letters.<sup>2049</sup> We recognize the possibility that a one percent disclosure threshold could be disproportionately burdensome for smaller companies or companies in the early stages of developing a product or business line for which one percent of income or loss before income tax expense or benefit or

stockholders' equity or deficit could be a very small amount. In addition to smaller companies, we think de minimis thresholds will also be helpful for companies that have income or loss before income tax expense or benefit near breakeven in a particular year, perhaps due to anomalous circumstances. Therefore, we have included in the final rules de minimis thresholds of: (1) \$100,000 for expenditures expensed as incurred and losses in the income statement, and (2) \$500,000 for capitalized costs and charges recognized on the balance sheet.<sup>2050</sup> As a practical matter, this means that, under the final rules, registrants for which one percent of the absolute value of income or loss before income tax expense or benefit is less than \$100,000 will not have to provide disclosure until the aggregate amount of expenditures expensed and losses incurred as a result of severe weather events and other natural conditions equals or exceeds \$100,000.<sup>2051</sup> Similarly, under the final rules, registrants for which one percent of the absolute value of stockholders' equity or deficit is less than \$500,000 will not have to provide disclosure until the absolute value of the aggregate amount of capitalized costs and charges incurred as a result of severe weather events and other natural conditions equals or exceeds \$500,000.<sup>2052</sup> We have decided to use a higher de minimis threshold for capitalized costs and charges recognized on the balance sheet because generally the disclosure threshold applicable to the balance sheet—one percent of the absolute value of stockholders' equity or deficit—will result in larger numbers than the

disclosure threshold applicable to the income statement, and therefore a larger de minimis threshold is appropriate and proportionate. Moreover, as noted below in section IV, in 2022 the \$100,000 de minimis value for the income statement would have exceeded one percent of income or loss before income tax expense or benefit for approximately 17% of registrants, and the \$500,000 de minimis value for the balance sheet would have exceeded one percent of stockholders' equity or deficit for approximately 24% of registrants. Thus, approximately the same number of companies will benefit from the de minimis thresholds by using these values.

While a number of commenters asserted that requiring disclosure at a one percent threshold would result in an excessive amount of immaterial detail for investors, the changes we have made from the proposal address this concern.<sup>2053</sup> Specifically, the final rules require disclosure of specific categories of discrete capitalized costs, expenditures expensed, charges, and losses, which in our view is unlikely to result in immaterial disclosure. As discussed in greater detail below, the final rules also include an attribution principle that limits the required disclosure to circumstances where the severe weather event or other natural condition was a significant contributing factor in incurring the capitalized cost, expenditure expensed, charge, or loss.<sup>2054</sup> The final rules include de minimis thresholds, and the denominators used in the final rules—stockholders' equity or deficit and income or loss before income tax expense or benefit—are aggregated amounts and therefore we expect that in many instances they will result in a larger denominator than what was included in the proposal. Given the narrower scope of the final rules, the one percent threshold should not result in an excessive amount of detail or immaterial disclosure. Some commenters also raised concerns that the one percent disclosure threshold could confuse investors by giving too much prominence to the climate-related disclosures relative to the impacts of other risks disclosed in the financial statements or could suggest a level of precision that does not exist.<sup>2055</sup> However, the final rules require disclosure of capitalized costs, expenditures expensed, charges, and

<sup>2050</sup> See 17 CFR 210.14–02(b). There is precedent in Regulation S–X for using \$100,000 as a de minimis threshold. See 17 CFR 210.3–11 (permitting a registrant to submit unaudited financial statements if gross receipts and expenditures are not in excess of \$100,000).

<sup>2051</sup> See 17 CFR 210.14–02(b)(1). For example, if a registrant had \$5 million in income or loss before income tax expense or benefit for the relevant fiscal year, the registrant's disclosure threshold for the income statement would be \$50,000 ( $\$5,000,000 \times .01 = \$50,000$ ). Since \$50,000 falls below the \$100,000 de minimis threshold, the registrant would not be required to provide the disclosure required by Rule 14–02(b)(1) and (c) until the aggregate amount of expenditures expensed as incurred and losses equals or exceeds \$100,000 (*i.e.*, the de minimis threshold).

<sup>2052</sup> See 17 CFR 210.14–02(b)(2). For example, if a registrant had \$25 million in stockholders' equity or deficit for the relevant fiscal year, the registrant's disclosure threshold for the balance sheet would be \$250,000 ( $\$25,000,000 \times .01 = \$250,000$ ). Since \$250,000 falls below the \$500,000 de minimis threshold, the registrant would not be required to provide the disclosure required by Rule 14–02(b)(2) and (d) until the aggregate amount of capitalized costs and charges equals or exceeds \$500,000 (*i.e.*, the de minimis threshold).

<sup>2044</sup> As explained above, the proposed Expenditure Metrics did not require the disclosure of charges, and therefore there was no potential for offsetting, although charges would have been required disclosures under the proposed Financial Impact Metrics. See *supra* note 1732.

<sup>2045</sup> See *supra* note 1856 and accompanying text.

<sup>2046</sup> See *supra* note 1854 and accompanying text.

<sup>2047</sup> See 17 CFR 210.14–02(b).

<sup>2048</sup> See *supra* note 1823 and accompanying text.

<sup>2049</sup> See letter from NAM (“The extreme burden of building new processes and systems to track quantitative climate impacts, with no materiality threshold or even a de minimis exception for minor events or immaterial impacts, would impose colossal costs and strain resources at all public companies.”). See also letter from Cleveland Cliffs (stating a similar view).

<sup>2053</sup> See *supra* note 1809 and accompanying text.

<sup>2054</sup> See 17 CFR 210.14–02(g) and *infra* Section II.K.3.c.iii.

<sup>2055</sup> See *supra* notes 1810 and 1811 and accompanying text.

losses that are currently recorded in a registrant's financial statements in accordance with GAAP, and therefore the disclosures should have the same degree of precision as the other information provided in the financial statements. Moreover, the required disclosures will be in a note to the financial statements along with other disaggregated disclosures addressing a variety of topics, and therefore its placement will be on equal footing with other information included in such notes.

Other commenters stated that applying the one percent disclosure threshold on a line-item basis could result in only partial disclosure of expenditures related to a climate-related event since the impact could be recorded in multiple financial statement line items—for which the disclosure threshold may not be triggered—which would diminish the usefulness of the information to investors.<sup>2056</sup> Our decision not to adopt the proposed Financial Impact Metrics should alleviate this concern to a great extent. However, it remains true that, under the final rules, the application of the disclosure threshold separately to (i) capitalized costs and charges in the balance sheet, and (ii) expenditures expensed and losses in the income statement could result in a situation where the threshold for only one of the financial statements is triggered and certain costs related to a particular severe weather event or other natural condition may not be required to be disclosed. We acknowledge that in some circumstances this may result in investors only receiving a partial picture of the financial statement effects of a particular event or condition; however, applying the disclosure threshold separately to the income statement and the balance sheet will be more straightforward for registrants to implement and therefore will help to limit the overall burden of the final rules. Moreover, registrants are not prohibited from disclosing how the severe weather event or other natural condition affected both the income statement and balance sheet, even if the disclosure threshold for one of the financial statements is not triggered. One commenter suggested that a registrant could “game” the rules by classifying costs as expenditures, rather than capitalizing costs, to avoid triggering the disclosure threshold.<sup>2057</sup> We think the likelihood of this occurring is low because registrants are required to follow GAAP in determining

whether to expense a cost or capitalize it and these amounts will be subject to audit.

Certain commenters argued that the Commission should apply a different percentage threshold, such as five or ten percent.<sup>2058</sup> Although we considered those options, in light of the other changes we are making to the disclosure threshold, such as using an aggregated denominator and including a de minimis threshold, we think one percent will generally not result in immaterial disclosure nor result in undue burdens on registrants. In this regard, we agree with those commenters who stated that the appropriate percentage threshold depends upon what is used as the denominator.<sup>2059</sup> For the same reason, we considered, but are not adopting, the other alternative disclosure thresholds that commenters suggested, such as only using a dollar threshold or requiring the disclosure of all relevant expenditures.<sup>2060</sup>

Certain commenters stated that the examples provided in the Proposing Release of other one percent disclosure thresholds were not analogous.<sup>2061</sup> Generally, these commenters suggested that the examples were not analogous, at least in part, because they involved amounts that are knowable under current accounting practice and have discrete impacts on a smaller number of larger line items (as opposed to every line item).<sup>2062</sup> Although the alignment with other disclosure thresholds is not dispositive of whether a threshold elicits appropriate disclosure for investors, the final rules' focus on requiring the disclosure of amounts that are currently recorded in a registrant's financial statements in accordance with GAAP and that pertain to a significantly smaller number of line items (as well as

the revisions made to the denominators for the disclosure thresholds) should align the final rules more closely with other instances where the Commission has used a one percent or other numerical disclosure threshold.<sup>2063</sup>

We have considered the feedback we received from commenters urging the Commission to forgo the one percent disclosure threshold and instead require disclosure only if material.<sup>2064</sup> We agree that the concept of materiality plays an important role in the Federal securities laws. As such, as discussed above, we have significantly modified the scope of the proposed disclosures and the proposed disclosure threshold and have included de minimis exceptions to focus the final requirements on eliciting material information for investors. We are not, however, eliminating the threshold entirely and moving to a more principles-based disclosure standard because, as discussed in the Proposing Release,<sup>2065</sup> the proposed quantitative disclosure threshold provides registrants with greater clarity in implementing the rules, reduces the risk of underreporting, and increases consistency and comparability. This approach is consistent with the feedback we received from some commenters that expressed concerns about the risks of underreporting in the context of the financial statements, as evidenced by the limited climate-related disclosure under current accounting standards despite increasing demand by investors for such disclosure.<sup>2066</sup>

We agree with, and further emphasize, the point made by those commenters who asserted that registrants are already required to disclose the financial statement effect of material climate risks under existing rules.<sup>2067</sup> Registrants currently have an

<sup>2058</sup> See *supra* notes 1837 and 1838 and accompanying text.

<sup>2059</sup> See *supra* note 1839 and accompanying text.

<sup>2060</sup> See *supra* notes 1846 and 1848 and accompanying text.

<sup>2061</sup> See *supra* note 1817.

<sup>2062</sup> See, e.g., letters from BHP (“Further, while we acknowledge that the Commission currently uses a specific 1% threshold for certain disclosures, we note that the disclosure examples provided by the Commission are generally narrow in scope, factual in nature and limited to certain line items in the financial statements (for example, the amount of excise taxes included in revenue)”; Ernst & Young LLP (“But we note that, unlike the climate-related impacts, excise taxes are discrete event charges that are easily calculated and tracked in a registrant’s accounting books and records.”); and IADC (“The Commission argues that a 1% quantitative threshold is used in other contexts, but the examples the Commission cites are circumstances where the quantitative amounts involved are knowable under current accounting practice, have discrete impacts on specific financial line items, and address scenarios in which more detailed disclosure is appropriate.”).

<sup>2063</sup> As noted in the Proposing Release, Regulation S-X (and other aspects of the Federal securities laws) includes a variety of different percentage thresholds prescribing disaggregated disclosure—rather than relying only on principles-based materiality thresholds. See, e.g., 17 CFR 210.5–03.1(a) (stating that if the total sales and revenues reported under this caption includes excise taxes in an amount equal to 1% or more of such total, the amount of such excise taxes shall be shown on the face of the statement parenthetically or otherwise); 17 CFR 210.5–02.8 (requiring registrants to state separately, in the balance sheet or a note thereto, any amounts in excess of 5% of total current assets).

<sup>2064</sup> See *supra* note 1827 and accompanying text.

<sup>2065</sup> See Proposing Release, section I.F.2.

<sup>2066</sup> See *supra* note 1833. *But see, e.g.*, letter from M. Winden (suggesting increased enforcement to the extent underreporting exists).

<sup>2067</sup> See *supra* note 1716 and accompanying text. See also letter from CFA Institute (“We would also observe that existing U.S. GAAP and IFRS standards—as highlighted in publications by the FASB and IASB, as noted by the SEC in the

<sup>2056</sup> See *supra* note 1813.

<sup>2057</sup> See *supra* note 1991.

obligation to consider material impacts on the financial statements, and the fact that a material impact may be driven by climate-related matters does not alter a registrant's obligation.<sup>2068</sup> The Commission and accounting standard-setting bodies and their staff have all reminded registrants, through the issuance of guidance, of existing accounting and disclosure requirements that may apply to climate-related matters when there is a material impact on the financial statements.<sup>2069</sup> Although the final rules require registrants to disclose certain expenditures if they exceed the one percent disclosure threshold, that requirement does not affect registrants' ongoing responsibility to consider material impacts, whether climate-related or not, when preparing their financial statements and related disclosures.<sup>2070</sup> This may include determining whether costs and expenditures that do not trigger the disclosure threshold may be material to the registrant, taking into consideration

Proposal—require consideration of climate-related risks in the measurement of various financial statement estimates.”)

<sup>2068</sup> For example, although U.S. GAAP and IFRS Accounting Standards do not refer explicitly to climate-related matters, registrants have an obligation to consider material impacts when applying, for example, FASB ASC Topic 330 *Inventory* (IAS 2 *Inventories*) and FASB ASC Topic 360 *Property, Plant, and Equipment* (IAS 36 *Impairment of Assets*). See also *supra* note 2069.

<sup>2069</sup> See, e.g., 2010 Guidance (stating that “registrants must also consider any financial statement implications of climate change issues in accordance with applicable accounting standards, including [FASB ASC] Topic 450, Contingencies, and [FASB ASC] Topic 275, Risks and Uncertainties.”); FASB Staff Educational Paper, *Intersection of Environmental, Social, and Governance Matters with Financial Accounting Standards* (Mar. 2021), available at [https://www.fasb.org/Page/ShowPdf?path=FASB\\_Staff\\_ESG\\_Educational\\_Paper\\_FINAL.pdf](https://www.fasb.org/Page/ShowPdf?path=FASB_Staff_ESG_Educational_Paper_FINAL.pdf) (“When applying the financial accounting standards, an entity must consider the effects of certain material ESG matters, similar to how an entity considers other changes in business and operating environment that have a material direct or indirect effect on the financial statements and notes thereto.”); IFRS, *Effects of climate-related matters on financial statements* (Nov. 2020 and July 2023), available at <https://www.ifrs.org/content/dam/ifrs/supporting-implementation/documents/effects-of-climate-related-matters-on-financial-statements.pdf> (stating that the IFRS has re-published “this educational material to remind stakeholders of the long-standing requirements in IFRS Accounting Standards to report on the effects of climate-related matters in the financial statements when those effects are material.”).

<sup>2070</sup> See *id.* Notwithstanding the final rules' 1% disclosure threshold, registrants have a fundamental obligation not to make materially misleading statements or omissions in their disclosures and may need to provide such additional information as is necessary to keep their disclosures from being misleading. See 17 CFR 230.408 and 17 CFR 240.12b-20.

all relevant quantitative and qualitative factors.<sup>2071</sup>

### iii. Attribution Principle (Rule 14–02(g))

A number of commenters raised concerns about the ability of registrants to isolate, attribute, and quantify expenditures related to severe weather events and other natural conditions.<sup>2072</sup> In response to these concerns, we are adopting a principle for attributing a cost, expenditure, charge, loss, or recovery to a severe weather event or other natural condition and for determining the amount to be disclosed. The final rules (Rule 14–02(g)) require a registrant to attribute a cost, expenditure, charge, loss, or recovery to a severe weather event or other natural condition and disclose the entire amount of the expenditure or recovery when the event or condition is a significant contributing factor in incurring the cost, expenditure, charge, loss, or recovery.<sup>2073</sup>

Some commenters suggested that registrants should be permitted to make a reasonable estimate and disclose the assumptions that resulted in the estimate, or suggested that the Commission did not need to prescribe a particular approach to attribution or quantification because registrants already have experience allocating costs across risks when preparing financial statements.<sup>2074</sup> Although we considered those possibilities, we are adopting “significant contributing factor” as the attribution principle for the final rules, which was recommended by a commenter.<sup>2075</sup> We think it is appropriate to do so for a number of reasons. First, it is important to establish an attribution principle because allowing a registrant to apply an entity-specific methodology may not result in consistent or comparable information from one registrant to another which would limit the usefulness of the disclosures to investors. Second, the “significant contributing factor” principle will strike an appropriate balance by requiring disclosure when a severe weather event or other natural condition was a

<sup>2071</sup> See Concept Release (discussing materiality in the context of, among other matters, restating financial statements). See also Staff Accounting Bulletin No. 99 (Aug. 12, 1999), available at <https://www.sec.gov/intersp/account/sab99.htm> (emphasizing that a registrant or an auditor may not substitute a percentage threshold for a materiality determination that is required by applicable accounting principles).

<sup>2072</sup> See *supra* notes 1902 and 1907 and accompanying text.

<sup>2073</sup> See 17 CFR 210.14–02(g).

<sup>2074</sup> See *supra* notes 1913 and 1921 and accompanying text.

<sup>2075</sup> See *supra* note 1918 and accompanying text.

significant factor resulting in the registrant incurring the expenditure or receiving the recovery, while not requiring disclosure where a severe weather event or other natural condition was only a minor factor, thereby reducing the cost burden on registrants. Moreover, many areas of U.S. GAAP currently require a registrant to apply the concept of significance (even though U.S. GAAP does not define the term “significant”),<sup>2076</sup> which should help facilitate registrants' use of this attribution principle. Although the application of this attribution principle may require the exercise of judgment, financial statement preparers are accustomed to applying judgment in many circumstances under U.S. GAAP, and, as stated above, preparers have experience applying the concept of significance.<sup>2077</sup> Finally, in addition to enhancing consistency and comparability of how the disclosures are developed, specifying an attribution and quantification principle in the final rules will reduce the burden associated with attributing (since there is no allocation involved) and quantifying costs and expenditures.

### iv. Recoveries (Rule 14–02(f))

In addition, the final rules (Rule 14–02(f)) provide that, if a registrant is required to disclose capitalized costs, expenditures expensed, charges, or losses incurred as a result of severe weather events and other natural conditions, then it must separately disclose the aggregate amount of any recoveries recognized during the fiscal year as a result of the severe weather events and other natural conditions for which capitalized costs, expenditures expensed, charges, or losses have been disclosed.<sup>2078</sup> Registrants would have been required to disclose the financial impacts of severe weather events and

<sup>2076</sup> See, e.g., FASB ASC Topic 280 Segment Reporting, FASB ASC 323 Equity Method and Joint Ventures, FASB ASC 810 Consolidations, and FASB ASC 820 Fair Value Measurement.

<sup>2077</sup> To illustrate the application of the attribution principle, if a tornado damages the roof of a registrant's factory and the registrant incurs costs to repair the damage, the tornado would be a significant contributing factor in incurring the costs to repair the roof and the registrant would be required to disclose the entire cost incurred (if the applicable disclosure threshold is triggered), notwithstanding the fact that if the roof had been in place for some period of time there could be other factors that contributed to the roof's condition after the tornado.

<sup>2078</sup> See 17 CFR 210.14–02(f). We expect most recoveries to consist of insurance proceeds; however, we appreciate that other transactions or agreements may result in recovery of amounts as a result of severe weather events and other natural conditions, such as guarantees or indemnifications, and therefore have not limited the disclosure to only insurance proceeds.

other natural conditions, including the receipt of insurance proceeds, as part of the Financial Impact Metrics included in the proposed rules. Although we are not adopting the proposed Financial Impact Metrics, along the lines of the proposal, the final rules provide that any recoveries should be disclosed as part of the contextual information required by the rules.<sup>2079</sup> Several commenters raised concerns about the treatment of mitigation efforts, such as insurance, under the proposed rules.<sup>2080</sup> Relatedly, other commenters asserted that registrants should not be permitted to use “net” amounts to determine whether disclosure is required under the rules.<sup>2081</sup> Having considered those comments, we are persuaded that permitting a registrant to use a net amount to determine whether capitalized costs, expenditures expensed, charges, and losses have exceeded the disclosure threshold would be inconsistent with the intent of the rules because the net amount could obscure the magnitude of the financial effects of severe weather events and other natural conditions experienced by the registrant. For example, obtaining insurance is a risk mitigation activity that may ultimately result in payment to the registrant for costs and expenditures incurred, but it does not mean that the financial effects did not occur in the first place. The existence of recoveries, such as insurance proceeds, is important information for investors because without it, investors could be under the misperception that severe weather events and other natural conditions have a greater effect on a registrant’s operations than is the case. Therefore, requiring registrants to disclose whether they have recognized any recoveries, such as insurance proceeds, as a result of the severe weather events and natural conditions for which capitalized costs, expenditures expensed, charges, or losses have been disclosed, will provide investors with information that is important to understand the financial statement effects of the capitalized costs, expenditures expensed, charges, and losses.<sup>2082</sup> In addition, such

<sup>2079</sup> See *id.* See *infra* section II.K.6.a.iii for further discussion of the requirement to disclose contextual information.

<sup>2080</sup> See *supra* note 1858 and accompanying text.

<sup>2081</sup> See *supra* note 1861 and accompanying text.

<sup>2082</sup> One commenter appeared to suggest that it would be contrary to accounting principles to require registrants to disclose costs and expenditures that are not net of insurance proceeds. See letter from Prologis. However, the final rules do not prescribe how a registrant must account for insurance proceeds in its financial statements, and registrants should prepare their financial statements in accordance with GAAP. Rather, the final rules

disclosure will complement other contextual information that may be disclosed by a registrant such as a discussion of the composition of the capitalized costs, expenditures expensed, charges, or losses.<sup>2083</sup> Similar to the final rules’ other disclosure requirements, a registrant will be required to identify where the recoveries are presented in the income statement and the balance sheet.<sup>2084</sup>

#### v. Severe Weather Events and Other Natural Conditions (Rules 14–02(c) and (d))

A number of commenters requested that the Commission provide additional guidance to help registrants apply the meaning and scope of “severe weather events and other natural conditions.”<sup>2085</sup> Some commenters pointed out that the proposed amendments to Regulation S–K used the phrase “extreme weather events,” and that the examples of extreme weather events provided in the Proposing Release were different, but overlapping, with the examples of severe weather events included in the proposed amendments to Regulation S–X.<sup>2086</sup> In response to these comments and to provide greater clarity, the final amendments to Regulation S–K and Regulation S–X both use the phrase

require a registrant to disaggregate certain costs and expenditures in the notes to the financial statements and require a registrant to disclose separately whether it has recognized any recoveries, such as insurance proceeds, as part of the contextual information that must be provided to help investors understand the financial statement effect.

<sup>2083</sup> See 17 CFR 210.14–02(a).

<sup>2084</sup> See 17 CFR 210.14–02(f). Under the final rules it is possible that the disclosure threshold could be triggered for a registrant’s balance sheet, but not its income statement, and vice versa, resulting in only partial disclosure of capitalized costs, expenditures expensed, charges, and losses related to severe weather events and other natural conditions incurred during the fiscal year. See *supra* section II.K.3.c.ii. The final rules require a registrant to disclose the aggregate amount of any recoveries recognized during the fiscal year as a result of the severe weather events and other natural conditions for which capitalized costs, expenditures expensed, charges, or losses have been disclosed. See 17 CFR 210.14–02(f). We acknowledge that in some circumstances this may result in a registrant only disclosing a portion of its expenditures corresponding to the event or condition that resulted in the recovery, which could create the impression that a registrant’s recoveries for a particular fiscal year exceed its expenditures related to severe weather events and other natural conditions. However, as explained above, to the extent this is a concern for an issuer, there is nothing in the final rules that would prevent a registrant from disclosing how the severe weather event or other natural condition affected both the income statement and balance sheet, even if the disclosure threshold for one of the financial statements is not triggered. See *supra* section II.K.3.c.ii.

<sup>2085</sup> See *supra* note 1865 and accompanying text.

<sup>2086</sup> See *supra* note 1866 and accompanying text.

“severe weather events.”<sup>2087</sup> In addition, both include the same examples; specifically, in a change from the proposal, the examples of severe weather events included in the final amendments to Regulation S–X include hurricanes and tornadoes.<sup>2088</sup> These revisions are consistent with our expectation that there will be significant overlap between the severe weather events and other natural conditions a registrant identifies for purposes of disclosure under Rule 14–02 and the types of physical risks (*i.e.*, acute risks (including severe weather events) and chronic risks) a registrant identifies for purposes of disclosure under the amendments to Regulation S–K.

However, in response to questions raised by commenters,<sup>2089</sup> we are clarifying that a registrant is not required to make a determination that a severe weather event or other natural condition was, in fact, caused by climate change in order to trigger the disclosure required by Rule 14–02 related to such event or condition. Requiring such a determination for severe weather events or other natural conditions was not the intent of the proposed amendments to Regulation S–X, and it is not required by Rule 14–02.<sup>2090</sup> In this way, although there is

<sup>2087</sup> See 17 CFR 229.1500 (defining “physical risks” to include “acute risks” (including severe weather events) and “chronic risks”); and 17 CFR 210.14–02 (c), (d), and (h). Although we do not believe there was any confusion about this issue, for the avoidance of doubt, we are confirming that “severe” modifies both the weather events and other natural conditions. See 17 CFR 210.14–02(c), (d), and (h).

<sup>2088</sup> See 17 CFR 229.1500; and 17 CFR 210.14–02 (c), (d), and (h). The proposed amendments to Regulation S–K included hurricanes, floods, tornadoes, and wildfires as examples of “acute risks” and included sustained higher temperatures, sea level rise, and drought as examples of “chronic risks.” These remain unchanged in the final amendments to Regulation S–K. See 17 CFR 229.1500. As noted above, the final amendments to Regulation S–X include hurricanes and tornadoes as examples of severe weather events and other natural conditions, in addition to the following examples that were included in the proposed amendments to Regulation S–X and remain unchanged in the final rules: flooding, drought, wildfires, extreme temperatures, and sea level rise. We have retained the “extreme temperatures” terminology in the final amendments to Regulation S–X instead of using the “sustained higher temperatures” terminology included in the final amendments to Regulation S–K because we want to emphasize that disclosure under Rule 14–02 is only required if the weather event or other natural condition is “severe.”

<sup>2089</sup> See *supra* note 1873 and accompanying text.

<sup>2090</sup> Similarly, a few commenters raised concerns about determining the cause of a wildfire, see *supra* note 1886 and accompanying text, but as we have stated, registrants will not be required to determine the cause of the severe weather event or natural condition for purposes of providing disclosure under Rule 14–02. The cause of a severe weather event or natural condition is irrelevant in

significant overlap between the disclosure of climate-related physical risks pursuant to Regulation S-K and the severe weather events and other natural conditions that a registrant identifies pursuant to Rule 14-02, the events covered by Rule 14-02 would also cover severe weather events and other natural conditions that are not necessarily related to climate.<sup>2091</sup>

Since Rule 14-02 requires event-based disclosure, the decision not to require a registrant to determine whether a severe weather event or other natural condition was caused by climate change should simplify the analysis that a registrant has to undertake to determine whether disclosure is required. We expect that the final rules will elicit disclosure appropriately aligned with the corresponding risk-based Regulation S-K disclosure without presenting the financial-statement specific challenges associated with making a determination about whether particular events relate to climate or climate change.

The list of examples of severe weather events and other natural conditions included in Rule 14-02 is not intended to be exclusive or exhaustive, nor are the examples intended to create a presumption about whether disclosure is required for those events in every circumstance.<sup>2092</sup> Rather, under the final rules, registrants will have the flexibility to determine what constitutes a severe weather event or other natural condition based on the particular risks faced by the registrant, taking into consideration the registrant's geographic location, historical experience,<sup>2093</sup> and the financial impact of the event on the registrant, among other factors. We do not agree with those commenters who suggested that we should provide a comprehensive list of severe weather events, or refer to a list from another

determining whether disclosure is required under Rules 14-01 and 14-02.

<sup>2091</sup> For example, the "natural conditions" referenced in Rule 14-02 need not be climate-related, and therefore may include types of non-climate-related occurrences, such as earthquakes, if severe and depending on the registrant's particular facts and circumstances. See letter from Chamber. In addition to simplifying the analysis for registrants, as discussed below, disclosure of these non-climate-related severe weather events and other natural conditions is consistent with the other event-based disclosure reflected in the final amendments to Regulation S-X and will elicit material information for investors.

<sup>2092</sup> We believe providing examples of severe weather events and other natural conditions will aid in the comparability of the resulting disclosure while assisting issuers in making the disclosures. See Proposing Release, section II.F.2.

<sup>2093</sup> For example, in determining whether high temperatures constitute a severe natural condition, a relevant factor may include average seasonal temperatures.

source, because doing so would be inconsistent with the dynamic nature of these events.<sup>2094</sup> Furthermore, a particular weather event may be "severe" in one region but not in another region.

We considered whether the non-exclusive list of examples should be expanded to include other types of severe weather events or other natural conditions identified by commenters in their comment letters;<sup>2095</sup> however, we designed the list as non-exhaustive and non-exclusive because we think it is more appropriate to take a flexible approach to enable registrants to exercise judgment in identifying severe weather events or other natural conditions based on the impacts those events have on their financial condition.

Some commenters asserted that allowing registrants to exercise judgment about which severe weather events or natural conditions to analyze would reduce comparability.<sup>2096</sup> Although more prescriptive requirements can increase comparability, our view is that greater flexibility for registrants to determine which severe weather events and other natural conditions affect them in light of their particular facts and circumstances will yield better disclosures for investors compared to a static list of potential events that may or may not be relevant to every registrant now and in future years. Additionally, requiring registrants to use a prescribed list of events could lead to significant gaps in disclosure over time. We expect that the final rules will give registrants the flexibility to adopt reasonable approaches to identifying severe weather events and other natural conditions and adapt to changing circumstances. As a result, the final rules provide a level of flexibility that even a regularly updated, prescribed list of events would be unable to match—resulting in what we believe is appropriate, decision-useful information to investors.

Some commenters raised questions about how to identify the beginning and ending dates of severe weather events and how to disclose weather events where the impact from the weather event may continue into the future.<sup>2097</sup> We have streamlined the final rules to focus on requiring the disclosure of

<sup>2094</sup> See *supra* notes 1867 and 1870 and accompanying text.

<sup>2095</sup> See, e.g., letters from Anthesis (cyclones, water stress, severe participation, and severe wind); Chamber (earthquakes); Climate Advisers (deforestation); and WSP (water stress).

<sup>2096</sup> See *supra* note 1872 and accompanying text.

<sup>2097</sup> See *supra* notes 1881 and 1882 and accompanying text.

expenditures for specific transactions that are recorded in a registrant's books and records during the fiscal year, and that are attributable to severe weather events or other natural conditions. This more straightforward approach will make it clearer when disclosure is required and avoid many of the questions raised by commenters in this regard.

#### vi. Carbon Offsets and Renewable Energy Credits (Rule 14-02(e))

If carbon offsets or RECs have been used as a material component of a registrant's plan to achieve its disclosed climate-related targets or goals, the final rules (Rule 14-02(e)) require registrants to disclose (1) the aggregate amount of carbon offsets and RECs expensed, (2) the aggregate amount of capitalized carbon offsets and RECs recognized, and (3) the aggregate amount of losses<sup>2098</sup> incurred on the capitalized carbon offsets and RECs, during the fiscal year.<sup>2099</sup> As explained above, although the final rules do not include a requirement for registrants to disclose costs and expenditures related to transition activities in the financial statements as proposed,<sup>2100</sup> we think it is appropriate to require registrants to disclose costs, expenditures, and losses related to one type of transition activity—the acquisition<sup>2101</sup> and use of carbon offsets and RECs—because the acquisition and use of carbon offsets and RECs do not present the definitional or scoping concerns raised by commenters with respect to transition activities generally.<sup>2102</sup> Significantly, requiring disclosure of capitalized costs, expenditures expensed, and losses recognized in the notes to the financial statements when carbon offsets or RECs have been used as a material component of a registrant's plan to achieve its disclosed climate-related targets or goals will complement the disclosures required by the amendments to Regulation S-K<sup>2103</sup> and will anchor the

<sup>2098</sup> For example, an impairment could result in the recognition of a loss on a capitalized carbon offset.

<sup>2099</sup> See 17 CFR 210.14-02(e)(1). The final rules do not prevent registrants from disclosing additional information about other transactions involving their carbon offsets and RECs.

<sup>2100</sup> See Proposing Release, section II.F.3. Proposed Rule 14-02(f), which would have required the disclosure of expenditures related to transition activities, provided that a registrant may be required to disclose the amount of expense or capitalized cost, as applicable related to "offset emissions (purchase of energy credits)," among other things. See *supra* note 2012.

<sup>2101</sup> Carbon offsets and RECs may be acquired in various ways. For example, they may be purchased or granted.

<sup>2102</sup> See *supra* note 1891 and accompanying text.

<sup>2103</sup> See 17 CFR 229.1504(d).

disclosures required outside the financial statements to those required within the financial statements, making a connection which one commenter generally described as having “a focusing effect” and increasing “the reliability and consistency of both.”<sup>2104</sup> Although we considered applying the one percent disclosure thresholds applicable to severe weather events and other natural conditions to carbon offsets and RECs, using the same trigger for disclosure in the amendments to Regulation S–K and the amendments to Regulation S–X will provide investors with a comprehensive understanding of the registrant’s use of carbon offsets and RECs, which will help investors evaluate the role of these instruments in a registrant’s climate-related strategy and help them assess the likely financial effects of a disclosed material transition risk.<sup>2105</sup>

In addition, the final rules require registrants to disclose the beginning and ending balances of capitalized carbon offsets and RECs on the balance sheet for the fiscal year.<sup>2106</sup> The beginning and ending balances of carbon offsets and RECs are an important data point for investors to understand as they assess a registrant’s transition risks. Specifically, while the disclosure of expenditures related to the acquisition and use of carbon offsets and RECs will provide information about the registrant’s activity throughout the fiscal period, it does not provide information about the carbon offsets still available to the registrant for use in future periods, which some commenters indicated is important information.<sup>2107</sup> The

requirement to provide the beginning and ending balances will help provide a more complete picture of the financial impact of a registrant’s use of carbon offsets and RECs as a material component of its plan to achieve a disclosed target or goal. While this particular data point was not part of the proposal, which would have required disclosure of costs and expenditures related to transition activities more generally, the beginning and ending balances are currently existing information in a registrant’s balance sheet and therefore we expect the cost and burdens of disclosing this information to be minimal. The final rules also require a registrant to disclose where on the balance sheet and income statement these capitalized costs, expenditures expensed, and losses are presented.<sup>2108</sup> If a registrant is required to disclose capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs, the final rules provide that a registrant must also state, as part of the contextual information required, the registrant’s accounting policy for carbon offsets and RECs.<sup>2109</sup> We understand there is currently a diversity in practice in how registrants account for carbon offsets and RECs, and therefore an explanation of the registrant’s accounting policy will help enhance the usefulness and comparability of this disclosure for investors.<sup>2110</sup>

#### vii. Presentation of Disclosure (Rules 14–02(c) and (d))

As discussed above, the final rules (Rule 14–02(c) and (d)) require disclosure of the amount of (1) capitalized costs and charges on the

balance sheet, and (2) expenditures expensed as incurred and losses in the income statement, during the fiscal year, as a result of severe weather events and other natural conditions.<sup>2111</sup> Under the final rules, registrants must separately aggregate the (1) capitalized costs and charges on the balance sheet, and (2) expenditures expensed as incurred and losses in the income statement to determine whether the applicable disclosure threshold is triggered and for purposes of disclosure.<sup>2112</sup> The capitalized costs, expenditures expensed, charges, and losses must be segregated between the balance sheet and the income statement depending on which financial statement they are recorded within upon recognition in accordance with applicable GAAP. For each of the balance sheet and income statement disclosures, if the applicable disclosure threshold is met, a registrant is required to disclose the aggregate amount of expenditures expensed and losses and the aggregate amount of capitalized costs and charges incurred during the fiscal year and separately identify where on the income statement and balance sheet these amounts are presented as illustrated in greater detail below.<sup>2113</sup>

With respect to capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs, registrants must disclose these amounts if carbon offsets or RECs have been used as a material component of a registrant’s plan to achieve its disclosed climate-related targets or goals.<sup>2114</sup> Unlike the disclosures related to severe weather events and other natural conditions, a registrant is not required to separately determine whether the disclosure threshold is triggered for costs, expenditures, and losses that are recorded on the balance sheet versus the income statement for disclosures related to carbon offsets and RECs.<sup>2115</sup> If disclosure is required because carbon offsets or RECs have been used as a material component of a registrant’s plan to achieve its disclosed climate-related targets or goals, then a registrant must separately disclose the following: (1) the aggregate amount of each of the capitalized costs, expenditures expensed, and losses related to carbon

<sup>2104</sup> See *supra* note 1718 and accompanying text. This commenter was referring generally to the Commission’s proposal to amend both Regulation S–K and Regulation S–X when it stated its support for anchoring disclosures required outside the financial statements to disclosures required inside the financial statements and was not directly addressing the requirement to disclose expenditure related to carbon offsets or RECs. See *id.* However, this commenter’s general assertion is equally applicable to the requirements in the final rules to disclose certain information about carbon offsets and RECs inside and outside the financial statements.

<sup>2105</sup> See letter from J. McClellan (stating that a registrant’s intent to meet its climate-related targets or goals through any purchase of offsets or RECs “is directly connected to climate related financial metrics” and “[t]here is consensus that significant capital expenditures will be required to meet the most ambitious targets, and investors will want to understand how a registrant is deploying capital against its target.”).

<sup>2106</sup> See 17 CFR 210.14–02(e)(1).

<sup>2107</sup> See, e.g., letters from Rockefeller Asset Mgmt. (“It would be helpful to understand a company’s intended utilization of carbon offsets and the corresponding quantification of carbon credits that may need to be purchased.”); and Carbon Direct (“Accurate and separate disclosure of . . . the procurement and retirement of carbon offset credits

to attempt to compensate for these emissions, are critical for informed investment decisions.”).

<sup>2108</sup> See 17 CFR 210.14–02(e)(1).

<sup>2109</sup> See 17 CFR 210.14–02(e)(2). See *infra* section II.K.6.a.iii for further discussion of the requirement to disclose contextual information.

<sup>2110</sup> On Dec. 15, 2021, the FASB Chair added a research project to explore accounting for regulatory credits (such as carbon offsets and RECs among others). Respondents provided feedback on this project indicating that the lack of guidance in GAAP for accounting for regulatory credits results in a significant diversity in practice. In May 2022, the FASB added a project to its technical agenda on regulatory credits (such as carbon offsets and RECs among others). See 2021 FASB Agenda Consultation Report, available at <https://fasb.org/Page/ShowPdf?path=2021%20FASB%20Agenda%20Consultation%20Report.pdf>. In addition, in July 2022, the IASB added a pollutant pricing mechanisms project to their reserve list as a result of its Third Agenda Consultation. The project aims to develop specific requirements for pollutant pricing mechanisms. See Third Agenda Consultation Feedback Statement, available at <https://www.ifrs.org/content/dam/ifrs/project/third-agenda-consultation/thirdagenda-feedbackstatement-july2022.pdf>.

<sup>2111</sup> See 17 CFR 210.14–02(c) and (d).

<sup>2112</sup> See 17 CFR 210.14–02(b), (c), and (d). Similarly, the proposed Expenditure Metrics would have required a registrant to separately aggregate the amount of expenditures expensed and the amount of capitalized costs to determine whether the applicable disclosure threshold was triggered. See Proposing Release, section II.F.3.

<sup>2113</sup> See 17 CFR 210.14–02(c) and (d).

<sup>2114</sup> See 17 CFR 210.14–02(e)(1).

<sup>2115</sup> See *id.*

offsets and RECs during the fiscal year; (2) the beginning and ending balances of capitalized carbon offsets and RECs on the balance sheet for the fiscal year; and (3) where on the balance sheet and the income statement the capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs are presented, as illustrated in greater detail below.<sup>2116</sup>

We are providing the following example to help illustrate the operation of the final rules. Assume a registrant (1) capitalized \$1,200,000 of expenditures related to Severe Weather Event A; (2) incurred an impairment charge of \$750,000 in the income statement to

write-off \$750,000 of inventory from the balance sheet related to Natural Condition B; (3) capitalized \$1,000,000 of expenditures to replace the inventory written off related to Natural Condition B; (4) expensed \$2,000,000 of expenditures related to Severe Weather Event C; and (5) received \$400,000 in insurance recoveries related to Severe Weather Event A. The registrant determined that Severe Weather Events A and C and Natural Condition B were significant contributing factors in incurring the capitalized costs, expenditures expensed, charges, losses, and recovery described above. In addition, the registrant used carbon

offsets and RECs as a material component of its plan to achieve a disclosed climate-related target or goal, and it capitalized \$1,000,000 and expensed \$3,000,000 of carbon offsets or RECs during the period. The registrant had a beginning balance of capitalized carbon offsets or RECs of \$2,500,000 and ended the year with \$500,000 in capitalized carbon offsets or RECs remaining on its balance sheet. The registrant would determine whether the financial statement effects as a result of severe weather events and other natural conditions would trigger the disclosure requirements based on the thresholds, as illustrated below:

Expenditure category	Current fiscal year balances (stockholders' equity from balance sheet, income or loss before income tax expense or benefit from income statement)	Severe weather event A	Natural condition B	Severe weather event C	Percentage impact
Balance Sheet (capitalized costs and charges) .....	\$150,000,000	\$1,200,000	\$1,750,000	.....	1.97
Income Statement (expenditures expensed as incurred and losses) .....	75,000,000	.....	750,000	\$2,000,000	3.67

In the above example, the expenditures incurred toward Severe Weather Event A was \$1,200,000 (capitalized on balance sheet), the capitalized cost, charge, and loss incurred as a result of Natural Condition B was \$1,750,000 (charge on balance sheet and loss in income statement of \$750,00 and capitalized cost of \$1,000,000 on the balance sheet), and the expenditures incurred toward Severe Weather Event C was \$2,000,000 (expense in the income statement). The aggregate amount of the absolute value

of capitalized costs and charges on the balance sheet (\$2,950,000) exceeded the one percent threshold of stockholders' equity, and therefore disclosure would be required for these costs and charges. The aggregate amount of expenditures expensed as incurred and losses in the income statement (\$2,750,000) exceeded the one percent threshold of income or loss before income tax expense or benefit, and therefore disclosure would be required for the expenses and loss. In addition, the registrant used carbon offsets and RECs as a material

component of its plan to achieve a disclosed climate-related target or goal, and therefore disclosure would be required for the carbon offsets and RECs. The registrant's resulting disclosure of such costs and expenditures may be provided, for example, as illustrated in the following table (excluding disclosure of contextual information):

Note X. Financial statement effects related to severe weather events and other natural conditions and carbon offsets and renewable energy credits:

Category	Balance sheet		Income statement		
	Year ended Dec. 31,		Year ended Dec. 31,		
	20X2	20X3	20X1	20X2	20X3
Severe Weather Events and Other Natural Conditions.					
Capitalized Costs and Charges:					
Inventory .....	\$-	<sup>a</sup> \$250,000	.....	.....	.....
PP&E .....	\$-	1,200,000	.....	.....	.....
Expenditures Expensed as Incurred and Losses:					
General & Administrative .....	.....	.....	\$-	\$-	\$(2,000,000)
Other Income/(Loss) .....	.....	.....	\$-	\$-	(750,000)

<sup>a</sup> \$1,000,000 + (\$750,000) = \$250,000.

In this example, the required contextual information may include disclosure such as the specific severe weather events, natural conditions, and transactions that were aggregated for purposes of determining the effects on

the balance sheet and income statement amounts and, if applicable, policy decisions made by a registrant, such as any significant judgments made to determine the amount of capitalized costs, expenditures expensed, charges,

<sup>2116</sup> See *id.*

and losses.<sup>2117</sup> Also, as part of the contextual information, a registrant would be required to disclose the

\$400,000 in insurance recoveries recognized in the consolidated financial statements as a result of Severe Weather

Event A, including identification of where it is presented in the income statement or balance sheet.

CARBON OFFSETS AND RECS

Carbon Offsets and RECs at Jan. 1, 20X3 .....	\$2,500,000
Capitalized Carbon Offsets and RECs .....	1,000,000
Expensed Carbon Offsets and RECs .....	(3,000,000)
Carbon Offsets and RECs at Dec. 31, 20X3 .....	\$500,000

Carbon offsets and RECs are presented in the Intangible Assets line item on the balance sheet and expensed in the General and Administrative line item on the income statement.<sup>a</sup>

<sup>a</sup> As noted above, there is diversity in practice in accounting for carbon offsets and RECs. See *supra* note 2110 and accompanying text. In this example, the entity capitalizes all of its costs of carbon offsets and RECs and presents these amounts within the intangible assets line item. We are providing this example for illustrative purposes only and this is not meant to indicate a preferred method of accounting or presentation. Registrants should consider their specific facts and circumstances when determining the appropriate accounting treatment and disclose their accounting policy in accordance with 17 CFR 210.14–02(e)(2).

In this example, the required contextual information would include the registrant’s accounting policy for the carbon offsets and RECs.<sup>2118</sup>

Currently, expenditures, costs, charges, losses, and recoveries may appear in different places within the financial statements (e.g., in one or more asset line items or expense line items on the balance sheet or income statement, respectively). The final rules address this dispersed presentation by requiring registrants to first identify the relevant expenditures, costs, charges, losses, and recoveries and then separately disclose where on the balance sheet and income statement these costs and expenditures are presented.<sup>2119</sup> Such an approach should provide insight into, and context for understanding, the nature of a registrant’s business, and provide consistency and comparability for users of the financial statements.

Similar to the examples of disclosure that were included in the proposed rules, the final rules state that a registrant may be required to disclose the aggregate amount of expenditures expensed and losses as incurred as a result of severe weather events and other natural conditions, for example, to restore operations, relocate assets or operations affected by the event or condition, retire affected assets, repair affected assets, recognize impairment loss of affected assets, or otherwise respond to the effect that severe weather events and other natural conditions had on business operations.<sup>2120</sup> The final

rules also state that a registrant may be required to disclose the aggregate amount of capitalized costs and charges incurred as a result of severe weather events and other natural conditions, for example, to restore operations, retire affected assets, replace or repair affected assets, recognize an impairment charge for affected assets, or otherwise respond to the effect that severe weather events and other natural conditions had on business operations.<sup>2121</sup>

4. Financial Estimates and Assumptions (Rule 14–02(h))

a. Proposed Rules

The Commission proposed to require registrants to disclose whether the estimates and assumptions used to produce their consolidated financial statements were impacted by exposures to risks and uncertainties associated with, or known impacts from, severe weather events and other natural conditions or any climate-related risks identified by the registrant pursuant to Item 1502(a) of Regulation S–K.<sup>2122</sup> For such impacts, registrants would have been required to provide a qualitative description of how these events impacted the development of the estimates and assumptions used in the preparation of their financial statements.<sup>2123</sup>

Like the other proposed financial statement metrics, the proposed rules also included a provision that would have required separate disclosure

focused on transition activities, including identified transition risks.<sup>2124</sup> If the estimates and assumptions the registrant used to produce the consolidated financial statements were impacted by risks and uncertainties associated with, or known impacts from, a potential transition to a lower carbon economy or any climate-related targets it disclosed, the registrant would have been required to provide a qualitative description of how the development of the estimates and assumptions were impacted by such a potential transition or the registrant’s disclosed climate-related targets.<sup>2125</sup> If a registrant elected to disclose the impact of an opportunity on its financial estimate and assumptions, then it would have been required to do so consistently and would have been required to follow the same applicable presentation and disclosure requirements.<sup>2126</sup>

The Commission explained in the Proposing Release that estimates and assumptions are currently required for accounting and financial reporting purposes (e.g., projected financial information used in impairment calculations, estimated loss contingencies, estimated credit risks, commodity price assumptions) and expressed its belief that the proposed disclosures could provide decision-useful information and transparency to investors about the impact of climate-related events and transition activities, including disclosed targets and goals, on

<sup>2117</sup> See 17 CFR 210.14–02(a). See *infra* section II.K.6.a.iii for further discussion of the requirement to disclose contextual information.

<sup>2118</sup> See 17 CFR 210.14–02(a) and (e)(2).

<sup>2119</sup> See 17 CFR 210.14–02(c), (d), (e)(1), and (f).

<sup>2120</sup> See 17 CFR 210.14–02(c). In response to a question raised by a commenter, with respect to the capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions, we are clarifying that the final rules do not require a

registrant to disclose both the capitalization of expenditures and subsequent expense of expenditures in the same period. See *supra* note 1989. Rather, the final rules require the disclosure of expenditures expensed and losses “as incurred.” See 17 CFR 210.14–02(c). For example, a registrant that purchased new machinery to replace machinery that was damaged due to a severe weather event would be required to disclose the cost to purchase the new machinery (assuming the relevant disclosure threshold is met), but the

registrant would not be required to disclose (or include in the numerator for purposes of calculating the disclosure threshold) the subsequent depreciation associated with the machinery.

<sup>2121</sup> See 17 CFR 210.14–02(d).

<sup>2122</sup> See Proposing Release, section II.F.4.

<sup>2123</sup> See *id.*

<sup>2124</sup> See *id.*

<sup>2125</sup> See *id.*

<sup>2126</sup> See *id.*

such estimates and assumptions.<sup>2127</sup> In addition, the Commission stated that such disclosure could allow investors to evaluate the reasonableness of the registrant's estimates and assumptions, which are used to prepare the registrant's financial statements.<sup>2128</sup> The Proposing Release noted that current accounting standards require registrants to consider how climate-related matters may intersect with and affect the financial statements, including their impact on estimates and assumptions. However, the Proposing Release explained that the nature of climate-related events and transition activities discussed in the proposed rules may manifest over a longer time horizon, and therefore targeted disclosure requirements may be necessary to elicit decision-useful information for investors in a consistent manner.<sup>2129</sup>

In addition, the Commission noted in the Proposing Release that some registrants have already provided disclosure along the lines of the proposed requirements, which the Commission said provided support for the feasibility of making such disclosures.<sup>2130</sup> The Proposing Release provided examples of financial statement estimates and assumptions that may require disclosure pursuant to the proposed rules, such as those related to the estimated salvage value of certain assets, estimated useful life of certain assets, projected financial information used in impairment calculations, estimated loss contingencies, estimated reserves (such as environmental reserves or loan loss allowances), estimated credit risks, fair value measurement of certain assets, and commodity price assumptions.<sup>2131</sup>

#### b. Comments

A number of commenters stated that they supported the proposal to require the disclosure of whether and how the estimates and assumptions the registrant used to produce the consolidated financial statements were impacted by exposures to risks and uncertainties associated with, or known impacts from, severe weather events and other natural conditions and a potential transition to a lower carbon economy, or any climate-related targets disclosed by the registrant.<sup>2132</sup> Several commenters

stated that the proposed rules would provide useful information for investors.<sup>2133</sup> For example, one commenter asserted that disclosures of registrants' estimates and assumptions are "[e]qually if not more important" than the line item disclosures themselves.<sup>2134</sup> Another commenter stated that requiring the disclosure of impacts on estimates and assumptions is necessary because for financial risk to be assessed and quantified using financial metrics, investors need to understand the degree of uncertainty of projections and be able to use that information to alter investment choices.<sup>2135</sup> One commenter stated that it would use disclosures about impacts on estimates and assumptions to uncover emerging trends affecting the registrant or other companies similarly situated with respect to the climate related event.<sup>2136</sup>

The Commission included a request for comment in the Proposing Release asking if it should require disclosure of only significant or material estimates and assumptions that were impacted by climate-related events and transition activities, or whether it should require disclosure of only estimates and assumptions that were materially impacted by climate-related events and transition activities.<sup>2137</sup> A number of commenters recommended that the Commission only require the disclosure of estimates and assumptions that were materially impacted by climate-related events.<sup>2138</sup> On the other hand, a few commenters recommended that the Commission only require the disclosure of material estimates and assumptions impacted by climate-related events.<sup>2139</sup> A few commenters recommended that the Commission require disclosure of material estimates and assumptions that were materially impacted by climate-related events.<sup>2140</sup> At least two commenters more generally stated that the proposed estimates and assumptions disclosure should be qualified by

materiality.<sup>2141</sup> Some of these commenters asserted that if not qualified by materiality, the proposed rules would result in a large volume of immaterial information.<sup>2142</sup> On the other hand, one commenter stated that the requirement should not be limited to only significant or material estimates and assumptions because it would create a risk that registrants would fail to produce decision-useful information for investors.<sup>2143</sup>

A few commenters stated that they did not support the proposed disclosures of estimates and assumptions.<sup>2144</sup> For example, some commenters pointed out that existing accounting standards already require the disclosure of material financial estimates and related assumptions, which would include those impacted by climate-related risks.<sup>2145</sup> Another commenter stated that amending Regulation S-X to require these disclosures when, in its view, existing standards already require this disclosure could lead registrants to include a statement in their reports that climate-related events were not considered (if they were not a key assumption in calculating estimates), which could imply a negative connotation that, in fact, they should have been considered.<sup>2146</sup>

Some commenters stated that it would be challenging to provide the disclosures,<sup>2147</sup> or stated that additional guidance was needed.<sup>2148</sup> For example, one commenter stated that without additional guidance it would be

<sup>2141</sup> See, e.g., letters from SIFMA AMG; and T. Rowe Price. Similarly, one commenter suggested that the disclosure of financial estimates and assumptions impacted by climate-related opportunities should only be required where the opportunities are highly likely to occur or a core element of the registrant's strategy, but if the opportunity is otherwise uncertain, it should not be factored into the estimates or assumptions. See letter from Sarasin.

challenging for registrants to develop estimates to isolate the relevant exposures.<sup>2149</sup> Another commenter stated that it would be helpful to provide additional guidance about when the disclosures would be triggered when there may be more than one contributing factor.<sup>2150</sup> This commenter suggested focusing on changes to estimates and assumptions primarily or solely due to climate rather than instances when changes “are inextricably linked to other contributing factors.”<sup>2151</sup> Another commenter suggested that the Commission should clarify that registrants have an existing obligation to disclose climate-related financial estimates and assumptions and the proposed rule is providing guidance on the form and location of the already required disclosure.<sup>2152</sup>

Some commenters stated that the scope of the proposed disclosures should be limited to critical accounting estimates.<sup>2153</sup> In particular, one commenter suggested it would be more meaningful if the proposed requirements were included in a registrant’s MD&A section of its periodic reports along with the other critical accounting estimates.<sup>2154</sup> One commenter stated that the Commission should not limit disclosure to whether and how climate-related events and transition activities affected critical accounting estimates.<sup>2155</sup> This same commenter also stated that the Commission should not limit the disclosures of impacts to financial estimates and assumptions to only a subset of risks.<sup>2156</sup>

The Commission included a request for comment in the Proposing Release

Critical accounting estimates are those estimates made in accordance with generally accepted accounting principles that involve a significant level of estimation uncertainty and have had or are reasonably likely to have a material impact on the financial condition or results of operations of the registrant. See 17 CFR 229.303(b)(3).

<sup>2154</sup> See letter from RSM US LLP.

<sup>2155</sup> See letter from Amer. for Fin. Reform, Sunrise Project *et al.* See also letter from Sarasin (“We believe the critical accounting estimate disclosure requirement terminology is appropriate to capture the need for climate-related disclosures, but should not limit the disclosure needed to understand fully how climate considerations have been incorporated into the critical assumptions and estimates.”).

<sup>2156</sup> See letter from Amer. for Fin. Reform, Sunrise Project *et al.*

asking if, for the proposed financial statement metrics, it should require a registrant to disclose material changes in estimates, assumptions, or methodology among fiscal years and the reasons for those changes, and if so, whether the Commission should require the material changes disclosure to occur on a quarterly, or some other, basis.<sup>2157</sup> Some commenters stated that registrants should be required to disclose material changes in estimates and assumptions for the proposed financial statement metrics.<sup>2158</sup> A few of these commenters noted that current regulations already require disclosure of material changes in estimates and assumptions.<sup>2159</sup> However, some commenters asserted that current regulations may not be effectively eliciting this disclosure.<sup>2160</sup> One commenter suggested that the Commission should require material changes in estimates and assumptions to be provided on a quantitative basis by financial statement caption because the information would be useful in showing the variability of key estimates and assumptions going forward and their future impact on cash flows.<sup>2161</sup> With respect to timing, one commenter suggested that disclosures regarding material changes in estimates and assumptions could be made on an annual basis with prior year changes and adjustments noted.<sup>2162</sup> Conversely, one commenter stated that registrants should not be required to disclose material changes in estimates and assumptions.<sup>2163</sup> In addition, one commenter asked the Commission to clarify that nothing in the proposed rules would create an affirmative obligation for a foreign private issuer to provide interim updates for any material changes beyond what they would already be required to disclose on Form 6-K.<sup>2164</sup>

### c. Final Rules

We are adopting the proposed requirements (Rule 14–02(h)) for registrants to disclose impacts on financial estimates and assumptions with some modifications.<sup>2165</sup> First, the Commission proposed to require a registrant to disclose whether the

<sup>2165</sup> See 17 CFR 210.14–02(h).

estimates and assumptions the registrant used to produce the consolidated financial statements were impacted by risks and uncertainties associated with, or known impacts from, a potential transition to a lower carbon economy or any climate related targets disclosed by the registrant.<sup>2166</sup> The final rules, instead of requiring disclosures related to “a potential transition to a lower carbon economy,” require registrants to disclose financial estimates and assumptions related to a narrower category of transition activities, specifically, “any . . . transition plans disclosed by the registrant.”<sup>2167</sup> As noted above, commenters, including registrants, raised concerns about the scope of transition activities and potential difficulties with identifying and quantifying their impacts when they overlapped with a registrant’s ordinary business decisions.<sup>2168</sup> To reduce the potential burden on registrants, we have decided to narrow the scope of transition activities covered by this aspect of the final rule to only those transition plans disclosed by the registrant.<sup>2169</sup> Consistent with the proposed rules, the final rules also require a registrant to disclose whether the estimates and assumptions the registrant used to produce the consolidated financial statements were impacted by risks and uncertainties associated with, or known impacts from, any climate-related targets disclosed by the registrant.<sup>2170</sup>

Second, consistent with commenters’ suggestion,<sup>2171</sup> we are modifying the proposed requirements by adding a materiality qualifier in the final rules. The final rules require registrants to disclose whether the estimates and assumptions used to prepare the consolidated financial statements were materially impacted by exposures to risks and uncertainties associated with, or known impacts from, severe weather events and other natural conditions, such as hurricanes, tornadoes,<sup>2172</sup> flooding, drought, wildfires, extreme temperatures, and sea level rise, or any climate-related targets or transition

<sup>2166</sup> See Proposing Release, section II.F.4.

<sup>2167</sup> See 17 CFR 210.14–02(h).

<sup>2168</sup> See *supra* note 1892 and accompanying text.

<sup>2169</sup> See 17 CFR 210.14–02(h).

<sup>2170</sup> See *id.*

<sup>2171</sup> See *supra* notes 2138–2141 and accompanying text.

<sup>2172</sup> We have added hurricanes and tornadoes to the list of severe weather events and other natural conditions included in Rule 14–02(h) to be consistent with the addition of these two types of severe weather events or natural conditions in Rule 14–02(c) and (d). See *supra* section II.K.3.c.v.

plans disclosed by the registrant.<sup>2173</sup> If so, then consistent with the proposed rules, the final rules require registrants to provide a qualitative description of how the development of such estimates and assumptions were impacted by the events, conditions, and disclosed targets or transition plans identified above.<sup>2174</sup>

As described above, a number of commenters indicated that if we adopted a requirement to disclose impacts on estimates and assumptions, then it would be appropriate to include a materiality qualifier in the final rules, and those commenters recommended various permutations related to the materiality qualifier.<sup>2175</sup> After considering this feedback, we have modified the final rules to focus on estimates and assumptions that have been materially impacted because a registrant may use numerous inputs and assumptions, including qualitative considerations, when developing accounting estimates. Focusing on estimates and assumptions that were materially impacted by the events, conditions, and disclosed targets and plans will help to reduce operational challenges and burdens that could arise if registrants were required to assess all impacts when determining the disclosures that would be required. We considered whether it would be appropriate to instead include two materiality qualifiers and require the disclosure of material estimates and assumptions that were materially impacted. However, we think that adding a second materiality qualifier is unnecessary because the disclosures that would result from the two different alternatives would likely be the same. Namely, we think it is unlikely that there could be “material” impact to an estimate or assumption if the estimate or assumption itself was not material to the

financial statements.<sup>2176</sup> We also considered whether to require disclosure of any impacts to material estimates and assumptions or to not include any materiality qualifiers in the final rules, but we think the approach we are taking appropriately balances investors’ need for decision-useful information with a desire to reduce operational challenges for registrants.

We continue to believe that disclosure of whether and how climate-related events impacted the development of financial estimates and assumptions will provide important information to investors. As the Commission stated in the Proposing Release, such disclosure will provide insight into the impacts described above on the registrant’s financial statements and will allow investors to assess the reasonableness of the registrant’s estimates and assumptions.<sup>2177</sup> Among other things, these disclosures will allow investors to evaluate material impacts on future cash flows, which will help investors make more informed investing decisions. We also agree with those commenters that stated disclosure of impacts on financial estimates and assumptions would enable investors to evaluate a registrant’s “physical risk resilience,”<sup>2178</sup> or would inform investors “of the scope, likelihood, and magnitude of potential risks as perceived by the company” and enable “comparative analysis against peers.”<sup>2179</sup>

Some commenters stated that they did not support the proposed requirement to disclose financial estimates and assumptions because existing accounting standards already require the disclosure of this information and therefore this additional requirement would be unnecessary or could be confusing for investors.<sup>2180</sup> Although we agree with commenters that U.S. GAAP and IFRS require the disclosure of material estimates and assumptions in many circumstances,<sup>2181</sup> including significant inputs associated with material estimates and assumptions, the final rules will enhance transparency and consistency by requiring registrants to disclose how estimates and assumptions are materially impacted by severe weather events, natural conditions, and disclosed targets and transition plans, which may require more specific disclosures in certain

situations than is currently required under applicable accounting standards.

In addition, although we agree with commenters that the proposed requirements share similarities with critical accounting estimates,<sup>2182</sup> we do not think those disclosures obviate the need for this requirement because the final rules go further by requiring specific disclosure about how estimates and assumptions are materially impacted by risks and uncertainties associated with, or known impacts from, severe weather events and other natural conditions and any climate-related targets or transition plans disclosed by the registrant. While critical accounting estimates are often presented outside of the financial statements, the disclosure regarding material impacts to estimates and assumptions will be located in a single note to the financial statements along with the other financial statement disclosures we are adopting, which will enhance the usefulness of the disclosure to investors. Furthermore, we do not think the required disclosure will be confusing to investors. To the contrary, it will provide investors with more decision-useful information about the estimates and assumptions used to prepare the financial statements than is required under applicable accounting standards. Registrants are presumably making business decisions and taking actions to achieve their disclosed transition plans and targets and these decisions may have material impacts on their estimates and assumptions. Providing investors with an understanding of these impacts will help them better evaluate a registrant’s financial position, performance, and future cash flows. Other commenters raised concerns about registrants’ abilities to isolate the relevant impacts when there may be more than one contributing factor.<sup>2183</sup> We expect these concerns to be mitigated to some extent by the final rules, which include a materiality qualifier and thereby focus management on a narrower category of impacts for which management should have greater insight. In addition, the final rules require registrants to provide a qualitative description of the impacts, which generally is less burdensome to produce than if management had to identify a specific amount.

In addition, we are reiterating a few examples that were included in the Proposing Release where severe weather events, natural conditions, or a registrant’s disclosed targets or transition plans could affect a

<sup>2173</sup> See 17 CFR 210.14–02(h). As previously discussed, the final rules include similar requirements under subpart 1500 of Regulation S–K to disclose material impacts on financial estimates and assumptions as a direct result of disclosed actions under a transition plan or as a direct result of a disclosed target or goal or actions taken to make progress toward meeting the target or goal. See 17 CFR 229.1502(e), discussed *supra* section II.D.2, and 17 CFR 229.1504(c)(2), discussed *supra* section II.G.3. When responding to these Regulation S–K provisions, a registrant may cross-reference from the disclosure provided under 17 CFR 210.14–02(h) to the extent such disclosure is responsive to these subpart 1500 provisions.

<sup>2174</sup> See 17 CFR 210.14–02(h). For the avoidance of doubt, if the registrant’s estimates and assumptions were not materially impacted by exposures to risks and uncertainties associated with, or known impacts from, severe weather events and other natural conditions, or any climate-related targets or transition plans disclosed by the registrant, then no disclosure is required under Rule 14–02(h).

<sup>2175</sup> See *supra* notes 2138–2141 and accompanying text.

<sup>2176</sup> See *supra* note 381 and accompanying text.

<sup>2177</sup> See Proposing Release, section II.F.4.

<sup>2178</sup> See letter from Morningstar.

<sup>2179</sup> See letter from BMO Global.

<sup>2180</sup> See *supra* notes 2145 and 2146 and accompanying text.

<sup>2181</sup> See *supra* note 2145.

<sup>2182</sup> See *supra* notes 2153 and 2154 and accompanying text.

<sup>2183</sup> See *supra* note 2150 and accompanying text.

registrant's financial estimates and assumptions.<sup>2184</sup> For example, a registrant's climate-related targets and related commitments, such as a disclosed commitment to achieve net-zero emissions by 2040, may impact certain accounting estimates and assumptions. Also, for example, if a registrant disclosed a commitment that would require decommissioning an asset by a target year, then the registrant's useful life and salvage value estimates used to compute depreciation expense as well as its measurement of asset retirement obligation should reflect alignment with that commitment. Financial statement estimates and assumptions that may require disclosure pursuant to the final rules may include those related to the estimated salvage value of certain assets, estimated useful life of certain assets, projected financial information used in impairment calculations, estimated loss contingencies, estimated reserves (such as environmental reserves, asset retirement obligations, or loan loss allowances), estimated credit risks, fair value measurement of certain assets, and commodity price assumptions.

Finally, although we considered whether it would be appropriate to require disclosure of material changes in estimates, assumptions, or methodology among fiscal years and the reasons for those changes,<sup>2185</sup> at this time we are not including such a requirement in the final rules. The narrower scope of the final rules, which is focused on discrete transactions that are currently recognized in a registrant's financial statements in accordance with GAAP, reduces the need for explicit requirements regarding material changes in estimates and assumptions underlying the financial disclosures. Current requirements under GAAP would continue to apply to material changes in estimates and assumptions.<sup>2186</sup> In addition, in response to the commenter that asked for clarification about whether foreign private issuers would have to provide interim updates,<sup>2187</sup> we are clarifying that the final rules will not affect existing filing obligations under Form 6-K.

<sup>2187</sup> See *supra* note 2164 and accompanying text.

## 5. Opportunities

### a. Proposed Rules

The proposed rules would have permitted a registrant, at its option, to disclose the impact of any opportunities arising from severe weather events and other natural conditions, any impact of efforts to pursue climate-related opportunities associated with transition activities, and the impact of any other climate-related opportunities, including those identified by the registrant pursuant to proposed Item 1502(a) of Regulation S-K, on any of the financial statement metrics.<sup>2188</sup> The Proposing Release explained that if a registrant makes a policy decision to disclose the impact of a climate-related opportunity on the proposed financial statement metrics, it must do so consistently (*e.g.*, for each fiscal year presented in the consolidated financial statements, for each financial statement line item, for all relevant opportunities identified by the registrant) and must follow the same presentation and disclosure threshold requirements applicable to the required disclosures related to the financial impact metrics and expenditure metrics.<sup>2189</sup>

### b. Comments

A number of commenters stated that they supported the proposal to make the disclosure of climate-related opportunities optional.<sup>2190</sup> Commenters stated that investors would benefit from this information about positive impacts,<sup>2191</sup> including because it is key for investors to understand how a company is reducing its climate-related financial risks.<sup>2192</sup> However, a few of these commenters explained that concerns about requiring the sharing of sensitive or competitive business information weighed in favor of making the proposed disclosure optional.<sup>2193</sup> In addition, some commenters stated that they supported the proposal to require the disclosure of opportunities to be made consistently.<sup>2194</sup>

One commenter asserted that the disclosure of opportunities in the financial statements should be limited

<sup>2188</sup> See Proposing Release, sections II.F.2, 3, and 4.

<sup>2189</sup> See Proposing Release, section II.F.2.

<sup>2190</sup> See, *e.g.*, letters from Anthesis; BC IM Corp.; Bloomberg; C2ES; Eni Spa; ERM CVS; ICGN; Miller/Howard; Moody's; NY City Comptroller; Reinsurance AA; Sarasin; TotalEnergies; and T. Peterson.

<sup>2191</sup> See, *e.g.*, letters from Anthesis; C2ES; and Mazars.

<sup>2192</sup> See letter from C2ES.

<sup>2193</sup> See, *e.g.*, letters from Anthesis; C2ES; and Reinsurance AA.

<sup>2194</sup> See, *e.g.*, letters from ICGN; RSM US LLP; and Sarasin.

to amounts that can be objectively verified and reliably quantified.<sup>2195</sup> Similarly, another commenter stated it should be limited to "virtually certain opportunities" to avoid misleading investors.<sup>2196</sup> A few commenters expressed concerns about potential greenwashing related to the disclosure of opportunities.<sup>2197</sup> However, one commenter explained that, although there is a risk that the disclosure of opportunities could lead to greenwashing, by including the information in a filing with the Commission, registrants would be subject to liability and would be required to disclose their assumptions and methodologies.<sup>2198</sup>

Other commenters stated that the disclosure of opportunities should not be permitted in the audited financial statements.<sup>2199</sup> For example, one commenter explained that opportunities should not be disclosed in the financial statements because opportunities appear to be forward-looking and speculative and may be subject to management bias.<sup>2200</sup> Some commenters stated that it may be difficult to develop internal controls for the disclosure of opportunities<sup>2201</sup> or that opportunities may be complex to audit.<sup>2202</sup> A few commenters suggested that registrants could address opportunities in the MD&A section of their periodic reports.<sup>2203</sup>

Some commenters stated that they would support the Commission mandating the disclosure of opportunities.<sup>2204</sup> One of these commenters stated that mandated disclosure of opportunities would facilitate an understanding of the strategic or competitive advantages a company may have in terms of furthering physical risk resilience.<sup>2205</sup> Another commenter expressed support for mandatory disclosure of climate-related opportunities except when such opportunities are unrelated to the registrant's core or existing lines of

<sup>2195</sup> See letter from PwC.

<sup>2196</sup> See letter from CEMEX.

<sup>2197</sup> See, *e.g.*, letters from Bloomberg; D. Higgins; R. Bentley; and R. Burke.

<sup>2198</sup> See letter from Anthesis.

<sup>2199</sup> See, *e.g.*, letters from McCormick; and Nutrien.

<sup>2200</sup> See letter from Nutrien.

<sup>2201</sup> See, *e.g.*, letters from CEMEX; and Nutrien.

<sup>2202</sup> See, *e.g.*, letters from CEMEX; and RSM US LLP.

<sup>2203</sup> See, *e.g.*, letters from Eni Spa; Mazars (recommending that opportunities would be discussed in the financial statements and in MD&A); and RSM US LLP.

<sup>2204</sup> See, *e.g.*, letters from BHP; Morningstar; and We Mean Business.

<sup>2205</sup> See letter from Morningstar.

business.<sup>2206</sup> Relatedly, one commenter requested that the Commission clarify that the disclosure of opportunities is optional because the interaction between proposed rules 14–02(b) and (j) could give the impression that disclosure of opportunities is required if the impact is greater than one percent.<sup>2207</sup>

A few commenters recommended revisions or clarifications to the definition of opportunities. For example, one commenter pointed out that financial statements typically include backward-looking financial results and therefore the use of the term opportunities in the financial statements should be clarified.<sup>2208</sup> Another commenter asserted that the definition of “climate-related opportunities” provided in proposed Item 1500(b) is confusing when applied to the disclosure of opportunities in the financial statements, which would be made on a line item basis, because the definition refers to the actual or potential positive impacts of climate-related conditions and events on a registrant’s consolidated financial statements “as a whole.”<sup>2209</sup> Other commenters suggested that the definition of climate-related opportunities should be revised to include activities in the forestry and forest products sector<sup>2210</sup> and the positive impacts of a company’s competitive positioning, brand strength, and reputation.<sup>2211</sup> One commenter asserted that the disclosure of opportunities should not impact the reporting relevant for the disclosure thresholds because it could potentially discourage companies from disclosing impacts from opportunities and triggering the threshold.<sup>2212</sup> One commenter requested that the Commission provide additional guidance around the definition of climate-related opportunities.<sup>2213</sup>

### c. Final Rules

In light of the changes to other aspects of the final rules, we have decided not to adopt the proposed rules related to the disclosure of opportunities. First, as discussed above, we have decided not to adopt: (1) the proposed Financial Impact Metrics,<sup>2214</sup> (2) the proposed

requirement to disclose costs and expenditures related to general transition activities in the financial statements (e.g., a portion of the proposed Expenditure Metrics), and (3) the proposed requirement to disclose the impacts of any climate-related risks identified pursuant to proposed Item 1502(a) of Regulation S–K. The proposed rules would have permitted a registrant to disclose the impact of any opportunities with respect to each of these disclosure items.<sup>2215</sup> Because these disclosure items will not be included in the final rules, there is no reason to adopt final requirements regarding the disclosure of opportunities with respect to these items.

Second, as discussed above in section K.3.c, in a modification from the proposed rules, the final rules require the disclosure of capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events.<sup>2216</sup> Unlike the proposed rules, the final rules do not make a distinction between “risks” and “opportunities” in the financial statement disclosure requirements. Therefore, we do not think it is necessary to retain a provision related to the disclosure of opportunities. To the extent that a registrant incurs costs and expenditures as a result of a severe weather event (applying the final rules’ attribution principle), the registrant would be required to disclose these costs and expenditures under the final rules regardless of the reason for the expenditure (assuming the disclosure threshold is met). However, we do not expect that registrants will commonly incur costs, expenditures, charges, and losses as a result of severe weather events or other natural conditions in furtherance of an opportunity. In this regard, our expectation is consistent with the Proposing Release, which did not provide any examples of opportunities associated with severe weather events and other natural conditions in the discussion of the proposed Expenditure Metrics.<sup>2217</sup> To

Financial Impact Metrics and the proposed Expenditure Metrics.

<sup>2215</sup> See Proposing Release, sections II.F.2, 3, and 4.

<sup>2216</sup> See 17 CFR 210.14–02(c) and (d). The proposed rules would have required the disclosure of costs and expenditures to “mitigate the risks from severe weather events and other natural conditions.” See Proposing Release, section II.F.3.

<sup>2217</sup> See Proposing Release, section II.F.3 (stating, in the discussion of the proposed Expenditure Metrics, that a registrant may choose to disclose the impact of efforts to pursue climate-related opportunities associated with transition activities but remaining silent with respect to opportunities for costs and expenditures related to severe weather events and other natural conditions).

the extent that a registrant identifies a cost or expenditure incurred as a result of severe weather events or other natural conditions that it believes was incurred in furtherance of an opportunity, disclosure of the cost or expenditure would be required (assuming the other requirements of the final rules are satisfied) as explained above. However, the registrant would not be required to identify any costs or expenditures disclosed under Article 14 as related to an “opportunity” as explained in greater detail below.<sup>2218</sup>

The same analysis applies to opportunities related to carbon offsets and RECs. The requirement in the final rules to disclose capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs was not included in the proposed rules because the proposed rules required the disclosure of costs and expenditures related to transition risks more generally, and therefore the proposed rules did not separately address opportunities related to carbon offsets and RECs. Under the final rules, a registrant is required to disclose capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs regardless of the reason for the expenditure (assuming the disclosure threshold is met) for the same reasons as discussed in the previous paragraph with respect to severe weather events. We expect that registrants will most commonly incur costs, expenditures, and losses in connection with the acquisition and use of carbon offsets and RECs as part of a strategy to mitigate transition risk as opposed to in furtherance of an opportunity. However, to the extent that a registrant incurs such costs, expenditures, and losses in furtherance of an opportunity, the registrant would not be required to identify any amounts disclosed under the final rules as related to an “opportunity” as explained in greater detail below.

Third, as discussed above in section K.4, we are adopting Rule 14–02(h),

<sup>2218</sup> The same analysis applies to opportunities related to carbon offsets and RECs. The requirement in the final rules to disclose capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs was not included in the proposed rules because the proposed rules required the disclosure of costs and expenditures related to transition risks more generally, and therefore the proposed rules did not separately address opportunities related to carbon offsets and RECs. Under the final rules, a registrant is required to disclose capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs regardless of the reason for the expenditure (assuming the disclosure threshold is met) for the same reasons as discussed in this paragraph with respect to severe weather events. See 17 CFR 210.14–02(e).

<sup>2206</sup> See letter from We Mean Business.

<sup>2207</sup> See letter from Deloitte & Touche.

<sup>2208</sup> See letter from CFA Institute.

<sup>2209</sup> See letter from Chamber.

<sup>2210</sup> See letter from NAFO.

<sup>2211</sup> See letter from Moody’s.

<sup>2212</sup> See letter from Morningstar.

<sup>2213</sup> See letter from PwC.

<sup>2214</sup> See *supra* note 1735 for an explanation regarding the overlap between the proposed

which we have modified from the proposal, to require registrants to disclose whether the estimates and assumptions the registrant used to produce the consolidated financial statements were materially impacted by exposures to risks and uncertainties associated with, or known impacts from, severe weather events and other natural conditions or any climate-related targets or transition plans disclosed by the registrant.<sup>2219</sup> After further consideration, we believe that including a provision regarding the disclosure of the impact of opportunities on the financial estimates and assumptions is also unnecessary. That is because Rule 14–02(h) requires a registrant to disclose the “known impacts” on its financial estimates and assumptions and “impacts” is not limited to negative impacts.<sup>2220</sup> Nor does “known impacts” draw a distinction between the impacts resulting from “risks” or “opportunities.” In other words, to the extent that a registrant’s financial estimates and assumptions are materially impacted by severe weather events or other natural conditions or disclosed targets or transition plans, the registrant would be required to disclose this material impact under the final rules regardless of the reason for the impact.<sup>2221</sup> Therefore, we are not adopting the proposed rules related to the voluntary disclosure in the financial statements of the impact of any opportunities related to financial estimates and assumptions.

The approach we are taking in the final rules will mitigate many of the concerns that commenters raised about the disclosure of opportunities, while still providing investors with decision-useful information about a registrant’s capitalized costs, expenditures expensed, charges, losses, and material impacts to estimates and assumptions. As discussed above, the final rules do not distinguish between “risks” and “opportunities” in requiring the disclosure of capitalized costs, expenditures expensed, charges, losses, and material impacts to estimates and assumptions, and registrants will not be required to identify any amounts disclosed under the final rules as related to a “risk” or “opportunity.” Furthermore, any capitalized costs, expenditures expensed, charges, losses, and material impacts to financial estimates and assumptions required to be disclosed under the final rules are limited to those that a registrant has actually incurred and recorded in its

books and records. These aspects of the final rules should alleviate commenters’ concerns about the potential for greenwashing,<sup>2222</sup> issues regarding auditability,<sup>2223</sup> and concerns that registrants could be required to disclose sensitive or competitive business information related to opportunities.<sup>2224</sup> Similarly, commenters’ concerns about the definition of “opportunities” as applied to the financial statement disclosures<sup>2225</sup> are rendered moot because, as explained above, the final rules will not require registrants to identify particular capitalized costs, expenditures expensed, charges, losses, or material impacts to estimates and assumptions as derived from an opportunity, and furthermore the final rules no longer include a definition of opportunities.<sup>2226</sup>

## 6. Financial Statement Disclosure Requirements

### a. Contextual Information (Rule 14–02(a)) and Basis of Calculation (Rule 14–01(c))

#### i. Proposed Rules

In the Proposing Release, the Commission explained that because the proposed financial statement metrics would involve estimation uncertainties driven by the application of judgments and assumptions, similar to other financial statement disclosures, registrants would be required to disclose contextual information to enable a reader to understand how it derived the financial statement metrics, including a description of significant inputs and assumptions used, and if applicable, policy decisions made by the registrant to calculate the metrics.<sup>2227</sup>

To avoid potential confusion, maintain consistency with the rest of the financial statements, and to aid comparability, the Commission proposed that registrants would be required to calculate the financial statement metrics using financial information that is consistent with the scope of the rest of the registrant’s consolidated financial statements included in the filing.<sup>2228</sup> Therefore,

registrants would have to include in any such calculation financial information from subsidiaries.<sup>2229</sup>

The Commission also proposed basis of calculation requirements providing that a registrant would be required to apply the same set of accounting principles that it is required to apply in preparation of the rest of its consolidated financial statements included in the filing, whenever applicable.<sup>2230</sup>

#### ii. Comments

Many of the commenters that specifically addressed the proposed requirement to provide contextual information supported it.<sup>2231</sup> Commenters who supported the proposal generally stated that contextual information would provide important information to investors and would help them understand the financial statement disclosures.<sup>2232</sup> One commenter stated that the requirement to provide contextual information would make comparisons easier across registrants.<sup>2233</sup> Another commenter confirmed that it would use contextual information in evaluating a registrant’s securities.<sup>2234</sup>

A few commenters specifically disagreed with the proposal to require contextual information.<sup>2235</sup> One commenter expressed concern that a registrant would be required to make many assumptions and policy decisions in order to disclose contextual information and asserted that the proposed requirement could result in inconsistent and incomparable information that is not useful for

<sup>2229</sup> See *id.* (citing 17 CFR 210.3–01(a) (“There shall be filed, for the registrant and its subsidiaries consolidated, audited balance sheets as of the end of each of the two most recent fiscal years.”)).

<sup>2230</sup> See *id.* 17 CFR 210.4–01(a)(1) states that financial statements filed with the Commission that are not prepared in accordance with GAAP will be presumed misleading or inaccurate unless the Commission has otherwise provided. The Commission stated in the Proposing Release that, for the avoidance of doubt, it was clarifying the application of this concept to the proposed rules by requiring a registrant to apply the same set of accounting principles that it is required to apply in the preparation of the rest of its consolidated financial statements included in the filing, whenever applicable. See Proposing Release, section II.F.1 (citing 17 CFR 210.4–01(a)(2) (discussing the application of U.S. GAAP, IFRS, and the use of other comprehensive sets of accounting principles (with reconciliation to U.S. GAAP))).

<sup>2232</sup> See, e.g., letters from Mazars; PwC; and SKY Harbor.

<sup>2233</sup> See letter from Amer. For Fin. Reform, Evergreen Action, *et al.*

<sup>2234</sup> See letter from SKY Harbor.

<sup>2235</sup> See, e.g., letters Corteva; and Energy Transfer.

<sup>2219</sup> See 17 CFR 210.14–02(h).

<sup>2220</sup> See *id.*

<sup>2221</sup> See *id.*

<sup>2222</sup> See *supra* note 2197 and accompanying text.

<sup>2223</sup> See *supra* note 2202 and accompanying text.

<sup>2224</sup> See *supra* note 2193 and accompanying text.

<sup>2225</sup> See *supra* note 2208 and accompanying text.

<sup>2226</sup> See *supra* section II.C.1.c.

<sup>2227</sup> See Proposing Release, section II.F.1. In the Proposing Release, the Commission explained that inputs and assumptions may include the estimation methodology used to disaggregate the amount of impact on the financial statements between the climate-related events and activities and other factors. The Proposing Release also stated that policy decisions may include a registrant’s election to disclose the impacts from climate-related opportunities. See Proposing Release, section II.F.1.

<sup>2228</sup> See *id.*

investors.<sup>2236</sup> Another commenter stated that the Proposing Release does not provide any guidance on the necessary level of detail required for contextual information and that contextual information will not help registrants distinguish between climate and non-climate related activities or help registrants determine how to allocate impacts to particular line items.<sup>2237</sup> One commenter stated that while it supported the need for transparency in definitions and methodologies used, it believed it would be possible to simplify the requirement to provide contextual information, in particular, by making the information required in the audited financial statements less prescriptive.<sup>2238</sup> Finally, in the Proposing Release, the Commission requested comment on whether providing additional examples or guidance would assist registrants in disclosing contextual information. Commenters had different views on whether additional examples or guidance would be helpful, but generally did not provide the Commission with any specific recommendations.<sup>2239</sup>

Commenters who addressed the issue generally agreed with the proposal to require registrants to calculate the financial statement metrics using financial information that is consistent with the scope of the rest of the registrant's consolidated financial statements and to use the same accounting principles that the registrant is required to apply in preparing the rest of its consolidated financial statements including in the filing.<sup>2240</sup> One commenter stated that applying the same set of accounting principles consistently throughout a registrant's consolidated financial statements is important and would aid comparability.<sup>2241</sup> Another commenter asked the Commission to clarify the phrase "whenever applicable" as used in proposed Rule 14-01(c)(2), which directs a registrant to, "whenever applicable, apply the same accounting principles that it is required to apply in the preparation of the rest of its consolidated financial statements . . . ." <sup>2242</sup> This commenter stated that the phrase "whenever applicable" is confusing because it is presumed that

GAAP applies to the proposed financial statement metrics and therefore the Commission should clarify any circumstances it is aware of where the accounting principles would conflict with, or be inconsistent with, GAAP.<sup>2243</sup> With respect to the proposed requirement to use financial information that is consistent with the scope of the rest of the registrant's consolidated financial statements, one commenter stated that the proposed rule "makes no allowance for wholly-owned subsidiaries, which may lead to duplication and double counting."<sup>2244</sup>

In addition, most commenters supported requiring the application of existing GAAP to the proposed financial statement metrics.<sup>2245</sup> However, a number of commenters raised concerns that certain of the proposed financial statement metrics would not necessarily comport with GAAP, including amounts for lost revenues, cost savings, or cost reductions.<sup>2246</sup> In addition, in response to a question in the Proposing Release, certain commenters stated that the proposed financial statement metrics should be calculated at a reportable segment level when a registrant has more than one reportable segment, as defined by FASB ASC Topic 280 *Segment Reporting*, or presented by geographic areas that are consistent with the registrant's reporting pursuant to FASB ASC Topic 280-10-50-41.<sup>2247</sup> On the other hand, some commenters stated that they did not support calculating and presenting the disclosures at a segment or geographic level because it would be too complex or would result in the disclosure of irrelevant information.<sup>2248</sup>

### iii. Final Rules

After consideration of the comments, we are adopting the requirement (Rule 14-02(a)) to provide contextual information with certain clarifying modifications. We have decided to include in the text of the final rules two additional types of contextual information a registrant is required to disclose.<sup>2249</sup> In addition to the types of contextual information included in the proposed rules, registrants will also be required to disclose significant judgments made and other information

that is important to an investor's understanding of the financial statement effect.<sup>2250</sup> Therefore, under the final rules, a registrant must "[p]rovide contextual information, describing how each specified financial statement effect . . . was derived, including a description of significant inputs and assumptions used, significant judgments made, [and] other information that is important to understand the financial statement effect and, if applicable, policy decisions made by the registrant to calculate the specified disclosures."<sup>2251</sup> Similar to the Proposing Release, in the discussion of the financial statement disclosures above, we provided certain non-exclusive examples of the types of contextual information that registrants may be required to disclose depending on the particular facts and circumstances. We agree with the commenters who stated that contextual information will help investors understand the required financial statement effects.<sup>2252</sup> The financial statement disclosures we are adopting may involve estimation uncertainties that are driven by the application of judgments and assumptions, like certain other financial statement disclosures,<sup>2253</sup> and therefore disclosure of contextual information will facilitate investors' understanding of the financial statement effects and will be an integral part of the financial statements.

In response to certain commenters' requests for clarification or additional guidance,<sup>2254</sup> as noted above, we decided to include in the final rules two additional types of contextual information that will enhance investors' understanding of the financial statement disclosures. We have decided to include "significant judgments" as an additional type of contextual information in the final rules because registrants will need to exercise judgment when preparing their disclosures, and disclosing contextual information about those judgments will help investors understand and evaluate the reasonableness of the disclosures.<sup>2255</sup>

<sup>2250</sup> See *id.*

<sup>2251</sup> See *id.*

<sup>2252</sup> See *supra* note 2232 and accompanying text.

<sup>2253</sup> For example, the application of FASB ASC Topic 606 *Revenue from Contracts with Customers* and ASC Topic 326 *Financial Instruments—Credit Losses* require the application of judgment when applying GAAP to the financial statements. FASB ASC 275-10-50-6 through 50-15A require the disclosure of information about certain significant estimates. In addition, FASB ASC 235-10-05-3, 05-4, and 50-1 require the disclosure of information about accounting policies.

<sup>2254</sup> See *supra* note 2239 and accompanying text.

<sup>2255</sup> See 17 CFR 210.14-02(a). Registrants are regularly required to exercise judgment when

<sup>2241</sup> See letter from IAA.

<sup>2242</sup> See letter from Deloitte & Touche.

<sup>2243</sup> See *id.*

<sup>2244</sup> See letter from PPL.

<sup>2245</sup> See, e.g., letters from Chamber; Eni Spa; KPMG; and Mazars.

<sup>2246</sup> See letter from Chamber. See also, e.g., letters from KPMG; PwC; SIFMA; and Soc. Corp. Gov.

<sup>2247</sup> See, e.g., letters from Eni Spa; ICGN; Mazars; Moody's; Morningstar; and Sarasin.

<sup>2248</sup> See, e.g., letters from Abrasca; BHP; and SEC Professionals.

<sup>2249</sup> See 17 CFR 210.14-02(a).

Given the narrower scope of the disclosure requirements that we are adopting, we expect that the final rules require fewer inputs and assumptions than would have been required under the proposal; however, we are retaining the references to inputs and assumptions in the final rules because it is possible, though less likely, that preparation of the financial statement disclosures could involve estimation uncertainty and require the registrant to exercise judgment in the selection of inputs and assumptions.<sup>2256</sup> In addition, to enhance understanding of the financial statement disclosures, the final rules explicitly require disclosure of other information that is important to understand the financial statement effects.<sup>2257</sup> In section II.K.3.c.iv above, we have specified one instance where the final rules require registrants to disclose this type of contextual information because we think the information is important to understand the financial statement effects of the disclosed capitalized costs, expenditures expensed, charges, or losses.<sup>2258</sup> By requiring the disclosure of information that is important to understand the financial statement effects, the requirement to provide contextual information will also help registrants avoid having incomplete and potentially misleading disclosures.

We disagree with the commenters who stated that requiring disclosure of contextual information would result in inconsistent and incomparable information that is not useful for investors.<sup>2259</sup> On the contrary, the requirement to provide contextual information will improve the comparability of disclosures by enabling investors to understand how registrants have exercised judgment and made assumptions in determining the financial statement effect. This will enable investors to compare judgments and assumptions made by registrants, including across industries, which will provide investors with useful

applying GAAP to prepare their financial statements and therefore the fact that the final rules will require registrants to exercise judgment is not unusual. For example, FASB ASC Topic 606 *Revenue from Contracts with Customers* requires an entity to disclose significant judgments in the application of the guidance (ASC 606–10–50–17), FASB ASC Topic 820 *Fair Value Measurement* requires an entity to disclose judgments and assumptions about assets and liabilities measured at fair value in the financial statements, and FASB ASC Topic 842 *Leases* requires a lessee to disclose information about significant assumptions and judgments made in applying the requirements of Topic 842.

<sup>2256</sup> See 17 CFR 210.14–02(a).

<sup>2257</sup> See *id.*

<sup>2258</sup> See *id.*

<sup>2259</sup> See *supra* note 2236 and accompanying text.

information for purposes of their investment and voting decisions. Furthermore, although we are clarifying aspects of the contextual information requirement, we disagree with the commenters who stated that the requirement to provide contextual information should be simplified and that more guidance is needed with respect to the level of detail required.<sup>2260</sup> The final rules intentionally provide flexibility to registrants to allow them to include contextual information that is tailored to their particular circumstances thereby improving the usefulness for investors of the disclosures. One commenter stated that a registrant would be required to make many assumptions and policy decisions to disclose contextual information.<sup>2261</sup> As noted above, the final rules focus on requiring the disclosure of capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions, which require fewer assumptions and policy decisions by the registrant than would have been required under the proposed rules. As a result, we expect the extent of contextual information provided under the final rules will be reduced as compared to the proposal.

We are also adopting the requirements (Rule 14–01(c)) for registrants to calculate the financial statement effects using financial information that is consistent with the scope of the rest of the registrant’s consolidated financial statements and to apply the same set of accounting principles that a registrant is required to apply in preparation of the rest of its consolidated financial statements, consistent with the proposal.<sup>2262</sup> As the Commission explained in the Proposing Release, requiring registrants to calculate the financial statement disclosures using financial information that is consistent with the scope of the rest of the registrant’s consolidated financial statements will avoid potential confusion, maintain consistency, and aid comparability.<sup>2263</sup> In addition, we

<sup>2260</sup> See *supra* notes 2237 and 2238 and accompanying text.

<sup>2261</sup> See *supra* note 2236 and accompanying text.

<sup>2262</sup> See 17 CFR 210.14–01(c).

<sup>2263</sup> See Proposing Release, section II.F.1. As noted above, one commenter stated that the proposed rule “makes no allowance for wholly-owned subsidiaries, which may lead to duplication and double counting.” See *supra* note 2244 and accompanying text. Although the comment letter does not provide additional context for this statement, we think the commenter may have the misimpression that the proposed disclosure threshold would have been evaluated at the parent and subsidiary level separately. On the contrary,

agree with the commenter who stated that applying the same set of accounting principles to the financial statement disclosures will aid comparability.<sup>2264</sup> We are not aware of any circumstances where the final rules will require a registrant to deviate from GAAP, and therefore we are striking the words “[w]henever applicable” from the final rules, in response to the commenter who stated that this phrase was confusing because it could imply that the Commission is aware of circumstances where the applicable accounting principles would be inconsistent with GAAP.<sup>2265</sup> In addition, it is important for investors to be provided with information that is consistent across financial statements.

As discussed above, the Commission also received feedback about whether registrants should be required to calculate the proposed financial statement metrics at a reportable segment level or to present the metrics by geographic areas.<sup>2266</sup> The Commission did not propose such requirements and—although we do not necessarily agree with those commenters that stated requiring disclosure at a segment or geographic level would be too complex or result in the disclosure of irrelevant information<sup>2267</sup>—we think the approach to disclosure we are adopting strikes an appropriate balance between providing consistent, comparable, and decision-useful information to investors and the associated burdens to registrants.

Finally, several areas of commenter question or concern related to the requirements discussed above are addressed by our decision to not adopt the proposed Financial Impact Metrics and to focus on the disaggregation and disclosure of discrete transactions that are recorded in the financial statements. For example, concerns about the interaction between GAAP and the proposed Financial Impact Metrics will not apply to the final rules.<sup>2268</sup> For the sake of clarity, however, we reiterate that the rules the Commission is adopting require registrants to apply existing GAAP recognition and

and as proposed, the final rules will require registrants to calculate the financial statement disclosure using financial information that is consistent with the scope of the rest of its consolidated financial statements included in the filing, which we do not believe would result in any double-counting or duplication.

<sup>2264</sup> See *supra* note 2241 and accompanying text.

<sup>2265</sup> See *supra* note 2242 and accompanying text.

<sup>2266</sup> See *supra* notes 2247 and 2248 and accompanying text.

<sup>2268</sup> See *supra* note 2246 and accompanying text.

measurement requirements to the financial statement disclosures.

b. Historical Periods (Rule 14–01(d))

i. Proposed Rules

The Commission proposed to require a registrant to provide disclosure for the registrant's most recently completed fiscal year and for the historical fiscal year(s) included in the registrant's consolidated financial statements in the applicable filing.<sup>2269</sup> The Proposing Release stated that a registrant would not need to provide a corresponding historical metric for a fiscal year preceding its current reporting fiscal year if it is eligible to take advantage of the accommodation in 17 CFR 230.409 ("Rule 409") or 17 CFR 240.12b–21 ("Rule 12b–21").<sup>2270</sup> The Commission explained that requiring disclosure of current and, when known or reasonably available to the registrant without unreasonable effort or expense, historical periods, should allow investors to analyze trends in relevant impacts on the consolidated financial statements and to better evaluate the narrative trend disclosure provided pursuant to proposed subpart 1500 of Regulation S–K.<sup>2271</sup>

ii. Comments

A few commenters supported the requirement as proposed.<sup>2272</sup> One commenter indicated that the accommodation in Rule 409 or Rule 12b–21 would be sufficient for issuers to rely upon when historical information subject to disclosure is unknown or not reasonably available.<sup>2273</sup> On the other hand, some commenters stated that it was not clear when a registrant could take advantage of the accommodations provided by these rules or that the requirements applicable to these rules made it difficult for registrants to rely upon them.<sup>2274</sup>

Most commenters that provided feedback on the proposed financial statement metrics did not support requiring registrants to provide disclosure for historical period(s) that occurred prior to the compliance date of the rule and instead recommended requiring disclosure on a prospective basis and phasing in disclosure for historical periods over time.<sup>2275</sup> These

commenters generally observed that it would be challenging and burdensome for registrants to provide disclosure for historical periods that occurred prior to the compliance date because many registrants do not currently collect or report the information that would have been required under the proposal.<sup>2276</sup> One commenter stated that issuers would have to "retroactively estimate their historical data," which would be "burdensome and unlikely to produce reliable and consistent disclosures for investors."<sup>2277</sup> Other commenters pointed out that even if historical information is available, issuers may not be able to conclude that they had adequate controls in place prior to the compliance date for the rule.<sup>2278</sup> As an alternative, some commenters recommended that the Commission delay the effective date of the proposed rule to help facilitate the disclosure of information for historical periods.<sup>2279</sup>

Several commenters stated that disclosure of historical information on a prospective basis would be useful information for investors.<sup>2280</sup> These commenters generally observed that the disclosure of historical information would be valuable for illuminating material changes to estimates and assumptions and historical trends.<sup>2281</sup>

The Commission included a request for comment in the Proposing Release asking if information for all periods in the consolidated financial statements should be required for registrants that are filing an initial registration statement.<sup>2282</sup> A few commenters supported requiring a registrant to provide disclosure for all periods in the consolidated financial statements for registrants filing an initial registration statement.<sup>2283</sup> On the other hand, one

<sup>2282</sup> See Proposing Release, section II.F.1.

<sup>2283</sup> See, e.g., letters from Center Amer. Progress; and Sarasin.

commenter recommended that, for newly public companies on an ongoing basis, the Commission require disclosure only for the most recent fiscal year for which audited financial statements are included in the initial registration statement to "reduce the barriers to market."<sup>2284</sup> In addition, one commenter asked whether the proposed financial statement metrics would need to be restated or adjusted for historical periods if climate-related impacts (both physical and transition events) are not identifiable and do not occur until after the metrics are first reported.<sup>2285</sup>

iii. Final Rules

After consideration of comments, we have decided to require a registrant to provide disclosure for historical fiscal year(s) included in a registrant's consolidated financial statements on a prospective basis only.<sup>2286</sup> Under the final rules (Rule 14–01(d)), disclosure must be provided for the registrant's most recently completed fiscal year, and to the extent previously disclosed or required to be disclosed, for the historical fiscal year(s), for which audited consolidated financial statements are included in the filing.<sup>2287</sup> Subject to the compliance date discussed below,<sup>2288</sup> registrants will be required to provide disclosure for the registrant's most recently completed fiscal year for which audited financial statements are included in the filing in any filings to which the final rules apply; however, registrants are not required to provide disclosure for historical fiscal year(s) included in that filing. For example, subject to the compliance date, a registrant that files its annual report will only be required to provide the applicable disclosure for the registrant's most recently completed fiscal year for which audited financial statements are included in the filing. For each subsequent fiscal year's annual report, the registrant will be required to provide the applicable disclosure for an additional fiscal year until the required disclosure is provided for the entire period covered by the registrant's financial statements.<sup>2289</sup> Initial

<sup>2284</sup> See letter from KPMG.

<sup>2285</sup> See letter from Climate Risk Consortia.

<sup>2286</sup> See 17 CFR 210.14–01(d).

<sup>2287</sup> See *id.*

<sup>2288</sup> See *infra* section II.O for a discussion of the compliance date for the rules.

<sup>2289</sup> As discussed in more detail above in section II.K.3.c.ii, the final rules call for disclosure triggered off both the balance sheet and the income statement. A registrant that is required to include balance sheets as of the end of its two most recent fiscal years and income statements as of the end of its three most recent fiscal years would be required to disclose two years of the financial statement effects that correspond to the balance sheet and

<sup>2269</sup> See Proposing Release, section II.F.1.

<sup>2270</sup> See *id.*

<sup>2271</sup> See *id.*

<sup>2272</sup> See, e.g., letters from Center Amer. Progress; Morningstar; and Sarasin.

<sup>2273</sup> See letter from Center Amer. Progress.

<sup>2274</sup> See, e.g., letters from BOA; CAQ; Cleary Gottlieb; INGAA; RSM US LLP; Soc. Corp. Gov.; TRC; and Western Midstream.

<sup>2275</sup> See, e.g., letters from ABA; AEP; AFPA; AFPM; Allstate; Alphabet *et al.*; API; Autodesk;

registration statements are subject to the final rules to the same extent as the other Commission filings to which the rules apply.<sup>2290</sup> Specifically, a registrant engaged in an IPO that has a fiscal year that is subject to the final rules is required to provide disclosure for the registrant's most recently completed fiscal year for which audited financial statements are included in the filing. However, such registrant will not be required to provide disclosure for any preceding fiscal years included in the initial registration statement because as new entrants to the public markets such registrants would not have previously disclosed or been required to disclose the information required by the final rules.<sup>2291</sup>

We agree with those commenters who stated that the disclosure of historical information would be useful for investors because it would illuminate changes to the financial statement disclosures and trends.<sup>2292</sup> However, we recognize that it may be difficult for registrants to compile and produce the required disclosures for periods that occurred prior to the compliance date of the rules. Therefore, we are modifying the proposed rules to require registrants to provide disclosure for historical fiscal year(s) only on a prospective basis, which will further limit the burdens on reporting companies or companies considering an IPO without unduly compromising the intended benefit to investors. This modification, when combined with the phased in compliance dates for the final rules, will

three years of the financial statement effects that correspond to the income statement. See 17 CFR 210.3-01(a), 210.3-02(a). An EGC may, in a Securities Act registration statement for the IPO of its equity securities, "provide audited statements of comprehensive income and cash flows for each of the two fiscal years preceding the date of the most recent audited balance sheet (or such shorter period as the registrant has been in existence)." See 17 CFR 210.3-02(a). A smaller reporting company is required to "file an audited balance sheet as of the end of each of the most recent two fiscal years, or as of a date within 135 days if the issuer has existed for a period of less than one fiscal year, and audited statements of comprehensive income, cash flows and changes in stockholders' equity for each of the two fiscal years preceding the date of the most recent audited balance sheet (or such shorter period as the registrant has been in business)." See 17 CFR 210.8-02.

<sup>2290</sup> See 17 CFR 210.14-01(d). See *infra* section II.L.3 for further discussion of the decision not to provide an exemption or transitional relief for registrants engaged in an IPO.

<sup>2291</sup> See 17 CFR 210.14-01(d). See, e.g., letter from KPMG ("[F]or initial public offerings of securities, we recommend that the Commission permit newly public companies on an ongoing basis to provide the proposed information only for the most recent fiscal year for which audited financial statements are included in the initial registration statement.").

<sup>2292</sup> See *supra* note 2280.

provide registrants with sufficient time to prepare their disclosures.

Finally, in response to a question raised by a commenter about whether the proposed financial statement disclosures would need to be restated or adjusted for historical periods if climate-related impacts are not identifiable until after the metrics are first reported,<sup>2293</sup> we are clarifying that registrants should apply the principles in FASB ASC Topic 250 *Accounting Changes and Error Corrections* or IFRS International Accounting Standard ("IAS") 8 *Accounting Policies, Changes in Accounting Estimates and Errors*, as appropriate, in these circumstances.

## 7. Inclusion of Disclosures in the Financial Statements (Rule 14-01(a))

### a. Proposed Rules

The Commission proposed to require registrants to include the proposed financial statement metrics in the financial statements, which would result in the metrics being (i) included in the scope of any required audit of the financial statements in the relevant disclosure filing, (ii) subject to audit by an independent registered public accounting firm, and (iii) within the scope of the registrant's ICFR.<sup>2294</sup> The proposed disclosures shared many characteristics with other financial statement disclosures, and the proposed financial statement metrics would reflect financial data that is derived from the registrant's consolidated balance sheets, income statements, and statements of cash flows, and would be presented in a similar way to existing financial statement disclosures.<sup>2295</sup> The Commission explained in the Proposing Release that requiring the proposed financial statement metrics to be included in a note to the financial statements, and therefore subject to audit and within the scope of ICFR, should enhance the reliability of the proposed financial statement metrics.<sup>2296</sup>

### b. Comments

As discussed above, a number of commenters stated that the proposed financial statement metrics should be included in the financial statements and subject to audit.<sup>2297</sup> One commenter

<sup>2293</sup> See *supra* note 2285.

<sup>2294</sup> See Proposing Release, section II.F.5.

<sup>2295</sup> See *id.*

<sup>2296</sup> See *id.*

<sup>2297</sup> See *supra* note 1715 and accompanying text. See also, e.g., letters from Anthesis; BC IM Corp.; Climate Accounting Audit Project; I. Millenaar; PwC (recommending that the Commission provide additional flexibility with respect to the placement of the disclosures within the notes to the financial statements because in some cases information may

explained that subjecting the disclosures to audit would be important because "[a]s investors, we look to auditors to provide robustly independent challenge to ensure the assumptions and estimates underpinning the financial statements are sound, and the statements themselves provide a fair representation of the entity's economic health."<sup>2298</sup> Another commenter stated that requiring the disclosures to be audited "will result in more decision useful information because investors can presume it to be accurate, truthful, and complete."<sup>2299</sup> In response to a request for comment included in the Proposing Release, a few commenters stated that the proposed financial metrics should not be included in a separate or supplemental document instead of the financial statements.<sup>2300</sup> One of these commenters said that doing so "could send a perverse message that climate impacts are not financial or material for corporate earnings and financial condition, which would, in our view, be misleading."<sup>2301</sup> One commenter suggested that the Commission apply the ICFR requirements set forth in Item 308 of Regulation S-K to the proposed financial statement metrics, if finalized.<sup>2302</sup>

Conversely, a number of commenters were opposed to including the financial impact of climate-related risks in the financial statements.<sup>2303</sup> As discussed above, many commenters asserted the disclosures should instead be included in the MD&A section of a registrant's periodic reports.<sup>2304</sup> Other commenters stated that the proposed disclosures should be included alongside the

be more effectively presented together with other related disclosures instead of a climate-related footnote); and Third Coast.

<sup>2298</sup> See letter from Sarasin.

<sup>2299</sup> See letter from Sens. J. Reed, *et al.*

<sup>2300</sup> See, e.g., letters from Center Amer. Progress; CFA Institute; Sarasin ("While we can support a separate climate report that brings together all the material climate-related financial impacts, this should not replace the disclosures within the financial statements (including in the Notes) that appropriately reflect the financial consequences of these climate factors."); and TotalEnergies. See also letter from CalSTRS ("We prefer the information to be included in existing reports instead of additional reports; companies already publish sustainability-related reports or web pages with climate information that is disconnected from financial data.").

<sup>2301</sup> See letter from Sarasin (noting that there could be an argument for companies to both include climate impacts in their existing financial statements as proposed and publish a stand-alone audited climate report, which aggregates climate impacts).

<sup>2302</sup> See letter from RSM US LLP.

<sup>2303</sup> See, e.g., letters from ACLI; AFEP; APCIA; Cleveland Cliffs; Cohn Rez.; D. Burton, Heritage Fdn.; NAFO; Nutrien; and Western Midstream.

<sup>2304</sup> See *supra* note 1724 and accompanying text.

proposed amendments to Regulation S-K in the new climate-related discussion section.<sup>2305</sup> A few commenters stated that if the Commission adopts the proposed financial statement metrics, then they should be provided in supplemental information or a schedule outside of the financial statements,<sup>2306</sup> although some of these commenters had different views about whether disclosure in a supplemental schedule should be subject to audit and ICFR requirements.<sup>2307</sup> Some commenters stated that the Commission should consider including the proposed disclosures outside of Form 10-K in an alternative report.<sup>2308</sup>

Other commenters generally stated that if the Commission adopts the proposed financial statements metrics they should be exempted from the audit requirement.<sup>2309</sup> One of these commenters noted that “[d]ata processes and controls over climate-related information are not as mature as financial reporting processes and controls” and “[t]o mature these processes and controls to a level of audit readiness will take significant time.”<sup>2310</sup> A few commenters stated that the proposed disclosure requirements did not have to be included in an audited note to the financial statements to be “valid and reliable.”<sup>2311</sup> Similarly, one commenter stated that disclosures included in a Commission filing but outside of the audited financial statements would be subject to “the existing level of oversight, regulation, and liability associated with [Commission] filings.”<sup>2312</sup> One commenter stated that the Commission should exclude the proposed rules from ICFR requirements

<sup>2305</sup> See letter from AFPA; Autodesk; D. Burton, Heritage Fdn.; NAFO; NAM; GPA Midstream; and Southwest Air.

<sup>2306</sup> See, e.g., letters from AutoDesk; BIO; Eni Spa (noting that the financial assumptions impacted by climate-related events should nevertheless be included in the notes to the financial statements); McCormick; Nutrien; and Soros Fund.

<sup>2307</sup> See letters from CEMEX (disclosures should be subject to audit and ICFR requirements); Eni Spa (disclosures should not be subject to audit but should be subject to ICFR requirements); and BIO (disclosures should not be subject to audit or ICFR requirements).

<sup>2308</sup> See letters from AAFA; AHLA; Allstate; Eversource; FedEx; and NRF. See also letter from ICI (recommending that the Commission require a registrant to provide material climate-related disclosures in Commission filings and require a registrant to furnish any additional mandated information that the registrant determines is not material in a new climate report).

<sup>2311</sup> See letter from Cleco; and EEI & AGA.

<sup>2312</sup> See letter from Connor Grp.

until the Commission has established appropriate guidelines for audit and assurance.<sup>2313</sup>

Other commenters suggested that the Commission defer making a determination about audit and ICFR requirements for the proposed financial statement disclosures. For example, one commenter suggested that the Commission defer making a determination until after issuers have had an opportunity to familiarize themselves with any new requirements.<sup>2314</sup> In addition, one commenter stated that the Commission should not impose any financial statement disclosure requirements or require certifications pursuant to the Sarbanes-Oxley Act until generally accepted accounting rules have been established by the FASB.<sup>2315</sup> A few commenters suggested including the proposed financial statement metrics outside of the financial statements initially with a transition to the financial statements.<sup>2316</sup>

A few commenters stated that PCAOB auditing standards would be applicable or should be applied to the proposed financial statement metrics.<sup>2317</sup> A number of commenters asserted that it would be necessary to develop additional guidance regarding the application of PCAOB auditing standards to the proposed financial statement metrics.<sup>2318</sup> One commenter stated that guidance would be helpful to registrants because it would “better enable them to effectively obtain or prepare necessary data, information and analysis, and for auditors to obtain sufficient appropriate audit evidence related to these metrics.”<sup>2319</sup> Some commenters suggested particular standards for which additional specific guidance would be needed for the proposed financial statement metrics.<sup>2320</sup> For example, one

<sup>2313</sup> See letter from BIO.

<sup>2314</sup> See letter from TIAA.

<sup>2315</sup> See letter from RILA. See also letter from Climate Risk Consortia (stating it would be premature to require an audit because the FASB “has not yet developed climate accounting standards for GAAP”).

<sup>2316</sup> See letters from CFA Institute; and USGBC.

<sup>2318</sup> See, e.g., letters from ABA; Baker Tilly; BOA; CalPERS (“The Commission would have to instruct the PCAOB to prioritize the development and adoption of standards for auditing such metrics.”); Climate Accounting Audit Project (noting that additional guidance may be required with respect to already existing auditor obligations as well); Eni Spa; ERM CVS; Mazars; RSM US LLP; Sarasin; and Williams Cos.

<sup>2319</sup> See letter from Mazars.

<sup>2320</sup> See, e.g., letters from Baker Tilly (identifying PCAOB Auditing Standards (AS) 2105); ERM CVS (identifying AS 1200, AS 1201, AS 1205, AS 1210,

commenter asserted additional guidance was needed regarding PCAOB Auditing Standard (AS) 2105, *Consideration of Materiality in Planning and Performing an Audit*, because “if the proposed one percent disclosure threshold for disclosure of climate-related impacts on the financial statement line items is not considered material, current PCAOB auditing standards may not require the auditor to perform audit procedures for those disclosures.”<sup>2321</sup>

Some commenters agreed that additional guidance and auditing standards may be needed, but did not identify particular standards for which guidance is needed.<sup>2322</sup> More generally, one commenter stated that the PCAOB should provide guidance to auditors regarding what is expected and then should undertake reviews to ensure proper implementation.<sup>2323</sup> Another commenter suggested that the PCAOB should issue guidance confirming existing audit requirements regarding the consideration of material climate risk and should increase its focus on this issue during the auditor inspection process.<sup>2324</sup> Conversely, one commenter asserted that the proposed financial impact disclosures would leave auditors open to “second guessing” during the PCAOB inspection process.<sup>2325</sup>

Another commenter suggested that the audits of any expenditures and costs related to severe weather events and other natural conditions should be a separate assurance engagement outside of the scope of the current financial statement and internal controls audits and that these separate engagements should be governed by clearly defined weather-related cost accounting standards and an appropriately tailored PCAOB assurance standard that provides implementation examples.<sup>2326</sup> One commenter suggested that the Commission consider allowing

AS 2100, AS 2101, AS 2105, AS 2200, AS 2400, and AS 2800); and RSM US LLP (identifying AS 2105).

<sup>2321</sup> See letter from RSM US LLP. See also letters from CAQ (noting that there could be a situation where the climate-related metrics are in scope for the audit, but the underlying financial statement line items ordinarily would not be because of the risk assessment judgments made by the auditor and therefore auditors may decide to scope in these lower risk accounts, which could create significant inefficiencies and increased audit costs with minimal benefits for investors); and Baker Tilly (stating that some of the items within the proposed financial statement metrics might not be part of significant, in-scope accounts subject to PCAOB auditing standards).

sustainability consultants or experts outside of the traditional accounting sector to audit the proposed financial statement metrics.<sup>2327</sup> Another commenter stated that it may be necessary for an auditor to tailor its audit opinion to explain that the note to the financial statements was not prepared in accordance with IFRS disclosure requirements, but in accordance with Commission disclosure requirements and based upon financial statement information prepared in accordance with IFRS.<sup>2328</sup>

Alternatively, some commenters asserted that there are no clearly established auditing standards for registrants with respect to the proposed financial statement metrics.<sup>2329</sup> One commenter argued that “[g]iven the subjectivity inherent in assigning the required quantitative financial impacts, it is unclear how auditors will evaluate and subsequently provide assurance with respect to these decisions and the associated disclosures.”<sup>2330</sup> Another commenter suggested that it would be preferable to include the proposed financial statement metrics outside of the financial statements to avoid “distracting” the PCAOB from its “core mission.”<sup>2331</sup>

With respect to timing, one commenter stated that any changes to PCAOB standards would need to be implemented and effective before the proposed disclosures are required to be included in the audited financial statements.<sup>2332</sup> Another commenter stated that the Commission will have to instruct the PCAOB to prioritize the development and adoption of standards for auditing the proposed financial statement metrics.<sup>2333</sup> Another commenter asserted that the proposed timeline for adoption of final rules would not provide issuers with enough time to integrate a robust ICFR framework for the proposed financial impact metrics that would be auditable.<sup>2334</sup>

In the Proposing Release, the Commission solicited comment on whether it would be clear that the proposed climate-related financial statement metrics would be included in the scope of the audit when the registrant files financial statements prepared in accordance with IFRS as issued by the IASB, and whether it

would be clear that the proposed rules would not alter the basis of presentation of financial statements as referred to in an auditor’s report.<sup>2335</sup> The Commission also solicited comment on whether it should amend Form 20–F, or other forms, to clarify the scope of the audit or the basis of presentation.<sup>2336</sup> In response, one commenter asserted that disclosure of the basis of presentation is important for understanding and comparability, and noted that since the basis of presentation of climate-related financial metrics may be different from the basis of presentation of the financial statements due to boundary differences, there should be disclosure when these differ.<sup>2337</sup> One commenter stated that the Commission should amend Form 20–F and other forms to make it clear that the scope of the audit must include the proposed financial statement footnote.<sup>2338</sup> On the other hand, one commenter stated that the scope of the audit is clear, and therefore it did not believe it was necessary to amend Form 20–F.<sup>2339</sup> One commenter asserted that the proposed climate-related financial statement metrics and related audit requirements for foreign filers should align with those for domestic filers.<sup>2340</sup> Another commenter stated that foreign private issuers should be allowed to disclose the proposed financial statement metrics as unaudited supplemental financial information.<sup>2341</sup>

Some commenters stated that the audit and ICFR assessment required for the proposed financial statement metrics would result in significant costs for registrants<sup>2342</sup> or would result in an increase in audit fees for registrants.<sup>2343</sup> A few commenters stated that they expected the audit costs would be higher than the estimated amount included in the proposal.<sup>2344</sup> For example, a registrant stated that its auditors estimated the cost of the audit to be within the range of \$70,000 to \$225,000 per year.<sup>2345</sup> One commenter stated that registrants’ audit fees would increase “due to the significant level of assurance required based on the low

thresholds applied.”<sup>2346</sup> Another commenter stated that the costs of the audit will depend on the granularity and complexity of the information required.<sup>2347</sup> One commenter stated if specialists are needed this would increase the cost of the audit for companies.<sup>2348</sup> Another commenter stated that the costs would be out of proportion to the value of the information to investors.<sup>2349</sup> Other commenters stated that it is likely that the costs of auditing the proposed financial statement footnotes would decrease<sup>2350</sup> or stabilize<sup>2351</sup> over time like other areas of audit work.

Finally, some commenters observed that the safe harbor established by the Private Securities Litigation Reform Act (PSLRA) does not apply to forecasting information in the financial statements and urged the Commission to include a safe harbor for any forward-looking financial disclosures included in the financial statements and footnotes.<sup>2352</sup> Other commenters generally recommended including a safe harbor for the proposed financial statement metrics and did not appear to limit their recommendation to only forward-looking statements.<sup>2353</sup> Commenters generally claimed that a safe harbor was necessary to protect registrants from liability in light of the estimates, judgments, and assumptions that would be required to disclose the proposed financial statement metrics.<sup>2354</sup>

### c. Final Rules

As explained above, we believe it is appropriate to require that the financial statement effects disclosure we are adopting be presented in a note to the financial statements (Rule 14–01(a)).<sup>2355</sup> Identifying a specific location for the disclosures—a note to the financial statements—will make the information more accessible for investors.<sup>2356</sup> In

addition, we agree with the commenter that stated that including the disclosure of the financial statement effects in the financial statements will facilitate investor decision-making.<sup>2357</sup> As is true of any disclosures included in the financial statements, subjecting the required disclosures to a financial statement audit and registrants' ICFR will enhance the reliability of that information. The scope of the final rules is significantly narrower than the proposal and requires the disclosure of costs and expenditures for transactions that are currently recorded in registrants' books and records and materially impacted financial estimates and assumptions. These modifications will ease many of the burdens that registrants identified with respect to requiring the disclosures to be subject to audit and ICFR.

We considered the various alternatives suggested by commenters, including whether to require the disclosure of financial statement effects to be provided in supplemental information or a schedule outside of the financial statements.<sup>2358</sup> The financial statement disclosures we are adopting, however, present financial information that is derived from registrants' books and records and is already included in registrants' financial statements. Therefore, presenting this information in a note to the financial statements, consistent with other financial statement disclosures, will enhance its accessibility and usefulness for investors. We do not think it would be appropriate to exempt these financial statement disclosures from audit or ICFR requirements. Providing an exemption from audit or ICFR for the financial statement disclosure requirements in the final rules could confuse investors about which parts of the financial statements are covered by audit and ICFR. Nevertheless, the phase in periods provided for in the final rules should give registrants and their auditors time to familiarize themselves with the new requirements before the compliance date and should help to mitigate the concerns raised by commenters.

With respect to auditing standards, PCAOB standards can and will apply to the financial statement disclosures included in a note to the financial statements. We understand that a number of commenters raised concerns about applying PCAOB standards and

consistent dissemination of this important information").

<sup>2357</sup> See letter from Sarasin.

<sup>2358</sup> See *supra* notes 2306 and 2308 and accompanying text.

stated that additional guidance would be needed.<sup>2359</sup> The modifications made to the final rules to narrow their scope to capitalized costs, expenditures expensed, charges, and losses derived from transactions and amounts recorded in registrant's books and records underlying the financial statements and materially impacted estimates and assumptions, along with the Commission's adoption of an attribution principle, will help to mitigate commenters' concerns about the auditability of the disclosures. In light of these modifications, we expect that including the financial statement note as part of the audited financial statements will allow the disclosures to be readily incorporated into the scope of the financial statement and ICFR audits that registrants currently obtain and that existing PCAOB auditing standards will readily apply.

Several commenters raised concerns about how auditors would address the one percent disclosure threshold when considering materiality in planning and performing an audit.<sup>2360</sup> Auditors should apply the concepts of materiality in PCAOB AS 2105, *Consideration of Materiality in Planning and Performing an Audit*, to the rules we are adopting. In applying the concept of materiality, auditors should remain alert for misstatements that could be material due to quantitative or qualitative factors and lesser amounts of misstatement could influence the judgment of a reasonable investor because of qualitative factors.<sup>2361</sup> Under PCAOB Auditing Standards, auditors should also evaluate whether, in light of particular circumstances, there are certain accounts or disclosures for which there is a substantial likelihood that misstatements of lesser amounts than the materiality level established for the financial statements as a whole would influence the judgment of a reasonable investor. If so, the Auditing Standards provide that the auditor should establish separate materiality levels for those accounts or disclosures to plan the nature, timing, and extent of audit procedures for those accounts or disclosures.<sup>2362</sup> Additionally, there are numerous rules in Regulation S–X as well as other disclosure requirements within GAAP that include a percentage disclosure threshold.<sup>2363</sup> Based on staff

<sup>2359</sup> See, e.g., *supra* note 2318 and accompanying text.

<sup>2360</sup> See *supra* note 2321 and accompanying text.

<sup>2361</sup> See PCAOB AS 2105, paragraph .03.

<sup>2362</sup> See *id.*, paragraph .07.

<sup>2363</sup> See, e.g., *supra* note 2063 and accompanying text; FASB ASC 280–10–50–12 (requiring the reporting of separate information about an operating segment that meets certain quantitative thresholds),

experience, we understand that auditors have developed procedures for auditing such disclosures and have not claimed an inability to audit that information. We expect auditors similarly will be able to apply the concepts of materiality and to audit the financial statement disclosures included in the final rules, particularly given the final rules' narrower scope. Therefore, there is no need to delay the requirement to obtain an audit or exclude the financial statement disclosures from the scope of the audit or the registrants' ICFR. The rules we are adopting will provide the suitable criteria necessary for the disclosures to be subject to audit. Nevertheless, the Commission will work with the PCAOB to address any issues that come to light regarding the auditing of this information and will consider issuing additional guidance to the extent needed and helpful.

Finally, we do not agree with the commenter who suggested that consultants or experts outside of the traditional accounting sector should be allowed to audit the proposed financial statement disclosures.<sup>2364</sup> The auditor's unqualified opinion contains an expression of opinion on the financial statements, taken as a whole, which refers to a complete set of financial statements, including the related financial statements notes and any related schedules.<sup>2365</sup> As stated above, we expect that the audit procedures applied to the financial statement note will be incorporated into the scope of registrants' current financial statement and internal controls audit and therefore PCAOB-registered public accounting firms will be able to apply sufficient,

280–10–50–14 (stating that if total of external revenue reported by operating segments constitutes less than 75% of total consolidated revenue, additional operating segments shall be identified as reportable segments (even if they do not meet the criteria in paragraph 280–10–50–12) until at least 75% of total consolidated revenue is included in reportable segments), 280–10–50–42 (stating, among other things, that if revenues from transactions with a single external customer amount to 10% or more of a public entity's revenues, the public entity shall disclose that fact, the total amount of revenues from each such customer, and the identity of the segment or segments reporting the revenues), and 323–10–50–3 (requiring, among other things, disclosure of the names of any significant investee entities in which the investor holds 20% or more of the voting stock, but the common stock is not accounted for on the equity method, together with the reasons why the equity method is not considered appropriate, and the names of any significant investee corporations in which the investor holds less than 20% of the voting stock and the common stock is accounted for on the equity method, together with the reasons why the equity method is considered appropriate).

<sup>2364</sup> See *supra* note 2327 and accompanying text.

<sup>2365</sup> See PCAOB AS 3101, paragraph .08, The Auditor's Report on an Audit of the Financial Statements When the Auditor Expresses an Unqualified Opinion.

appropriate audit procedures to these disclosures as required by law.<sup>2366</sup> Moreover, PCAOB-registered accounting firms are subject to periodic inspection by the PCAOB and are required to comply with PCAOB rules, including a requirement to establish a system of quality control that is implemented throughout the accounting firm, which will enhance investors' confidence in the accuracy of registrants' disclosures.

However, this does not mean that the auditor cannot use the work of an auditor specialist while performing its work if the auditor determines doing so would be appropriate in accordance with applicable auditing standards. PCAOB AS 2101, paragraph .16, *Audit Planning*, states that auditors should determine whether specialized skill or knowledge, such as an auditor specialist, is needed to perform the appropriate risk assessments, plan or perform audit procedures, or evaluate audit results. Auditors may use the work of auditors' specialists to assist in their evaluation of significant accounts and disclosures, including accounting estimates. In doing so, auditors consider the requirements within PCAOB AS 1201, *Supervision of the Audit Engagement*, when using the work of auditor-employed specialists, and AS 1210, *Using the Work of an Auditor-Engaged Specialist*, when using the work of an auditor engaged specialist, as appropriate.

The Commission received mixed feedback about whether it would be clear that: (i) the financial statement disclosure requirements would be included in the scope of the audit when a registrant files financial statements prepared in accordance with IFRS as issued by the IASB, and (ii) the proposed rules would not alter the basis of presentation of financial statements as referred to in an auditor's report.<sup>2367</sup> Therefore, we are clarifying that the financial statement disclosure requirements we are adopting in this release must be included in the scope of the audit when a registrant files financial statements in accordance with IFRS as issued by the IASB. We believe that these disclosures are important and should be required regardless of the GAAP followed. Furthermore, registrants that file financial statements prepared using IFRS as issued by the

<sup>2366</sup> See 15 U.S.C. 7212 ("It shall be unlawful for any person that is not a registered public accounting firm to prepare or issue, or to participate in the preparation or issuance of, any audit report with respect to any issuer, broker, or dealer."). See also letter from CalPERS ("We expect that the regular auditor will do the audit.").

<sup>2367</sup> See *supra* notes 2337–2339 and accompanying text.

IASB are subject to the existing requirement to comply with Regulation S–X,<sup>2368</sup> and we are not aware of any policies that would prevent registrants from including the financial statement disclosures in a note in the financial statements prepared in accordance with IFRS as issued by the IASB. Further, the final rules will not alter the basis of presentation of financial statements referred to in an auditor's report. The instructions to Form 20–F make it clear that the issuer's financial statements must be audited in accordance with PCAOB standards.<sup>2369</sup> PCAOB AS 3101.08 states that the first section of the auditor's report must include a "statement identifying each financial statement and any related schedule(s) that has been audited" and a "statement indicating that the financial statements, including the related notes and any related schedule(s), identified and collectively referred to in the report as the financial statements, were audited."<sup>2370</sup> As the disclosure requirements we are adopting will be included in a note to the foreign private issuer's financial statements and based on information that is recognized and measured in the foreign private issuer's financial statements in accordance with IFRS as issued by the IASB, they will be within the scope of the statement by the registrant's auditor that the financial statements "including any related notes" were audited.

A number of commenters provided feedback on the cost of the audit for the proposed financial statement metrics and some of these commenters suggested that the estimate included in the proposal was too low<sup>2371</sup> or that the proposed financial statement metrics would result in significant fees or an increase the cost of the audit.<sup>2372</sup> Given the narrower scope of the final rules and their focus on costs and expenditures for transactions that are currently recorded in registrants' books and records and material impacts to financial estimates and assumptions

<sup>2368</sup> See Acceptance from Foreign Private Issuers of Financial Statements Prepared in Accordance with International Financial Reporting Standards Without Reconciliation to U.S. GAAP, Rel. No. 33–8879 (Dec. 21, 2007) [73 FR 986, 999 n.136 (Jan. 4, 2008)] (stating that "Regulation S–X will continue to apply to the filings of all foreign private issuers, including those who file financial statements prepared using IFRS as issued by the IASB," but providing that such issuers "will comply with IASB requirements for form and content within the financial statements, rather than with the specific presentation and disclosure provisions in Articles 4, 5, 6, 7, 9, and 10 of Regulation S–X").

<sup>2369</sup> See, e.g., General Instruction E(c)(2) and Instruction 2 to Item 8.A.2 of Form 20–F.

<sup>2370</sup> See PCAOB AS 3101, paragraph .08.

<sup>2371</sup> See *supra* note 2344 and accompanying text.

<sup>2372</sup> See *supra* notes 2343 and accompanying text.

rather than the proposed Financial Impact Metrics, we expect any increases to the cost of the audit due to the financial statement disclosures will be relatively modest for most companies.<sup>2373</sup> In addition, we agree with those commenters that stated the costs of auditing the proposed note to the financial statements would likely decrease or stabilize over time like other areas of audit work.<sup>2374</sup> The financial statement disclosures we are adopting share many similarities with other disclosures in the financial statements, in particular because they are based in transactions currently recorded in registrants' books and records, and therefore the cost trajectory for auditing should be similar over time.

Finally, a number of commenters argued that the Commission should adopt a safe harbor for the financial statement metrics.<sup>2375</sup> Some of these commenters limited their request to forward-looking financial disclosures included in the financial statements, while other commenters did not appear to limit their request for a safe harbor to forward-looking financial disclosures. By narrowing the scope of financial statement disclosures and focusing on costs and expenditures for transactions that are currently recorded in registrants' books and records and material financial estimates and assumptions, the final rules avoid many of the complexities associated with the proposed rules and therefore we do not think it would be necessary or appropriate to adopt a safe harbor for the financial statement disclosures.

#### L. Registrants Subject to the Climate-Related Disclosure Rules and Affected Forms

##### 1. Proposed Rules

The Commission proposed to apply the proposed climate-related disclosure rules to a registrant with Exchange Act reporting obligations pursuant to Exchange Act section 13(a)<sup>2376</sup> or section 15(d)<sup>2377</sup> and companies filing a Securities Act or Exchange Act registration statement.<sup>2378</sup> The Commission proposed to require such registrants to include climate-related disclosures, including the proposed financial statement metrics,<sup>2379</sup> in

<sup>2373</sup> See *infra* section IV.C.3.b.v.

<sup>2374</sup> See *supra* notes 2350–2351 and accompanying text.

<sup>2375</sup> See *supra* notes 2353 and accompanying text.

<sup>2376</sup> 15 U.S.C. 78m(a).

<sup>2377</sup> 15 U.S.C. 78o(d).

<sup>2378</sup> See Proposing Release, section II.J.

<sup>2379</sup> See Form 20–F, General Instruction B(d)

(stating that Regulation S–X applies to the presentation of financial information in the form).

Securities Act or Exchange Act registration statements (Securities Act Forms S-1, F-1, S-3, F-3, S-4, F-4, and S-11, and Exchange Act Forms 10 and 20-F)<sup>2380</sup> and Exchange Act annual reports (Forms 10-K and 20-F). Similar to the treatment of other important business and financial information, the proposed rules also required registrants to disclose any material change to the climate-related disclosures provided in a registration statement or annual report in their Form 10-Q (or, in certain circumstances, Form 6-K for a registrant that is a foreign private issuer that does not report on domestic forms).<sup>2381</sup>

Although Item 17 and 18 of Form 20-F, and the forms that refer to Form 20-F (including Forms F-1 and F-3) permit a foreign private issuer to file financial statements prepared in accordance with IFRS as issued by the IASB, proposed Article 14 disclosure was nevertheless required (similar to disclosure required by Article 12 of Regulation S-X). See *Acceptance from Foreign Private Issuers of Financial Statements Prepared in Accordance with International Financial Reporting Standards Without Reconciliation to U.S. GAAP*, Rel. No. 33-8879 (Dec. 21, 2007) [73 FR 986 (Jan. 4, 2008)], 999, note 136 (stating that “Regulation S-X will continue to apply to the filings of all foreign private issuers, including those who file financial statements prepared using IFRS as issued by the IASB,” but providing that such issuers “will comply with IASB requirements for form and content within the financial statements, rather than with the specific presentation and disclosure provisions in Articles 4, 5, 6, 7, 9, and 10 of Regulation S-X”).

<sup>2380</sup> Form 20-F is the Exchange Act form used by a foreign private issuer for its annual report or to register a class of securities under section 12 of the Exchange Act. We proposed to amend Part I of Form 20-F to require a foreign private issuer to provide the climate-related disclosures pursuant to the proposed rules either when registering a class of securities under the Exchange Act or when filing its Exchange Act annual report. The proposed rules further required a foreign private issuer to comply with the proposed rules when filing a Securities Act registration statement on Form F-1. Because Form F-1 requires a registrant to include the disclosures required by Part I of Form 20-F, the proposed amendment to Form 20-F rendered unnecessary a formal proposed amendment to Form F-1. We similarly did not propose to formally amend Forms S-3 and F-3 because the climate-related disclosure would be included in a registrant’s Form 10-K or 20-F annual report that is incorporated by reference into those Securities Act registration statements.

<sup>2381</sup> Form 6-K is the form furnished by a foreign private issuer with an Exchange Act reporting obligation if the issuer: (i) makes or is required to make the information public pursuant to the law of the jurisdiction of its domicile or in which it is incorporated or organized, or (ii) files or is required to file the information with a stock exchange on which its securities are traded and which was made public by that exchange, or (iii) distributes or is required to distribute the information to its security holders. See General Instruction B to Form 6-K. That instruction currently lists certain types of information that are required to be furnished pursuant to subparagraphs (i), (ii), and (iii), above. While we proposed to amend Form 6-K to add climate-related disclosure to the list of the types of information to be provided on Form 6-K, we explained that a foreign private issuer would not be required to provide the climate-related disclosure if such disclosure is not required to be furnished pursuant to subparagraphs (i), (ii), or (iii) of General Instruction B.

The Commission proposed to amend Form 20-F and the Securities Act forms that a foreign private issuer may use to register the offer and sale of securities under the Securities Act to require the same climate-related disclosures as proposed for a domestic registrant.<sup>2382</sup> The Commission explained that, because climate-related risks potentially impact both domestic and foreign private issuers regardless of the registrant’s jurisdiction of origin or organization, requiring that foreign private issuers provide this disclosure is important to achieving the Commission’s goal of more consistent, reliable, and comparable information across registrants.<sup>2383</sup> The Proposing Release further noted that Form 20-F imposes substantially similar disclosure requirements as those required for Form 10-K filers on matters that are similar and relevant to the proposed climate-related disclosures, such as risk factors and MD&A.<sup>2384</sup>

The Commission proposed to exempt SRCs from the proposed Scope 3 emissions disclosure requirement. SRCs would otherwise be subject to all of the proposed rules. The Commission did not propose to exempt EGCs from the proposed rules noting that, due to their broad impact across industries and jurisdictions, climate-related risks may pose a significant risk to the operations and financial condition of registrants, both large and small.<sup>2385</sup> The Commission did, however, solicit comment on whether the proposed rules should apply to EGCs or to other issuers, such as business development companies (“BDCs”).<sup>2386</sup>

The proposed climate-related disclosure rules would not have applied to asset-backed issuers. The proposed rules also would not have required the proposed disclosures on the following forms, although the Commission solicited comment regarding such application:

- Form 40-F, the Exchange Act form used by a Canadian issuer eligible to report under the Multijurisdictional Disclosure System (“MJDS”) to register securities or to file its annual report under the Exchange Act;

- Form S-8, the Securities Act form used to register securities pursuant to an employee benefit plan; and

- Form 11-K, the Exchange Act form used for annual reports with respect to employee stock purchase, savings, and similar plans.<sup>2387</sup>

The Commission also requested comment on whether the Commission should exclude Securities Act registration statements filed in connection with a registrant’s IPO from the scope of the proposed climate-related disclosure rules instead of including them, as proposed.<sup>2388</sup> The Commission further solicited comment on whether to require climate-related disclosure on Forms S-4 and F-4, as proposed. Specifically, the Commission requested comment on whether it should provide transitional relief for recently acquired companies such that registrants would not be required to provide the climate-related disclosures for a company that is the target of a proposed acquisition under Form S-4 or F-4 until the fiscal year following the year of the acquisition if the target company is not an Exchange Act reporting company and is not the subject of foreign or alternative climate-related disclosure requirements that are substantially similar to the Commission’s proposed requirements.

## 2. Comments

Many commenters supported the proposal to include the climate-related disclosures in Securities Act and Exchange Act registration statements and Exchange Act annual reports.<sup>2389</sup> One commenter stated that it supported the placement of the climate-related disclosures in a company’s annual report or registration statement instead of in a separate report because of its belief in integrated reporting, which facilitates a better understanding of a business.<sup>2390</sup> Another commenter stated that inclusion of the proposed climate-related disclosures in registrants’ annual reports and registration statements will dramatically improve the transparency of climate-related issues that affect registrants to the securities markets and drive consistency with which such data is prepared, presented, and audited.<sup>2391</sup>

Many other commenters opposed requiring the climate-related disclosures to be included in existing forms and recommended that some or all of the

<sup>2382</sup> See Proposing Release, section II.J.

<sup>2383</sup> See *id.*

<sup>2384</sup> See *id.*

<sup>2385</sup> See Proposing Release, section II.J.

<sup>2386</sup> A BDC is a closed-end investment company that has a class of its equity securities registered under, or has filed a registration statement pursuant to, section 12 of the Exchange Act, and elects to be regulated as a business development company. See section 54 of the Investment Company Act, 15 U.S.C. 80a-53. Like other section 12 registrants, BDCs are required to file Exchange Act annual reports.

<sup>2387</sup> See Proposing Release, section II.J.

<sup>2388</sup> See *id.*

<sup>2389</sup> See, e.g., letters from Amer. for Fin. Reform, Sunrise Project *et al.*; Bloomberg; Boston Common Asset Mgmt.; CalPERS; CalSTRS; CEMEX; CFA; NY SIF; TotalEnergies; Unilever; and Xpansiv.

<sup>2390</sup> See letter from Unilever.

<sup>2391</sup> See letter from Xpansiv.

climate-related disclosures be included in a new and separately furnished form.<sup>2392</sup> Some commenters stated that GHG emissions disclosures should be furnished on a separate form, which would be due after the deadline for a registrant's Exchange Act annual report, among other reasons, to better align this disclosure with GHG emissions reporting pursuant to the EPA's Greenhouse Gas Reporting Program ("GHGRP").<sup>2393</sup> Other commenters asserted that climate information that was "beyond that traditionally required for other risk factors" should be furnished supplementally on a new form.<sup>2394</sup> Still other commenters, pointing to what they characterized as the rules' novelty and complexity, stated that most of the required climate disclosures should be furnished on one or more separate forms.<sup>2395</sup>

One commenter opposed requiring climate-related disclosures in Securities Act registration statements unless the disclosures are incorporated by reference from another filing (e.g., from Form 10-K or 20-F).<sup>2396</sup> This commenter stated that excluding climate disclosures from these registration statements would prevent the climate disclosure rules from acting as a barrier to entry to the capital markets or unnecessarily delaying a pending merger and/or acquisition ("M&A") transaction.<sup>2397</sup>

Commenters offered varied input on the application of the proposed rules to SRCs. Some commenters supported exempting SRCs from all of the proposed climate-related disclosure requirements<sup>2398</sup> on the grounds that the compliance burden would be disproportionately greater for SRCs, as a proportion of overall revenue.<sup>2399</sup> One commenter suggested that SRCs should be allowed to opt-out of climate

disclosures for a period of ten years following an evaluation of certain factors, including the proportion of public investors and other metrics related to the registrant's climate impact.<sup>2400</sup> Many commenters<sup>2401</sup> supported the proposed exemption for Scope 3 emissions included in the proposed rules, asserting that SRCs will face significant data collection and reporting costs<sup>2402</sup> and that SRCs need time to implement new technologies that will aid data collection and reporting.<sup>2403</sup> Other commenters further stated that the Commission was underestimating these compliance costs and the resultant burdens it would impose on SRCs.<sup>2404</sup> A number of commenters supported the proposed exemption for SRCs given the risk that the reporting burden would be passed to smaller downstream companies and urged the Commission to consider the impact of its climate disclosure requirements on those entities when considering exemptions for SRCs.<sup>2405</sup>

Some commenters stated that the proposed rules would discourage private companies from joining the public markets due to the high cost of complying with climate disclosures.<sup>2406</sup> Other commenters urged the Commission to ameliorate the compliance costs for newly public companies by implementing exemptions for EGCs<sup>2407</sup> and recommended that the Commission offer a phase in for newly public companies until the end of the first full fiscal year after going public.<sup>2408</sup> Others recommended scaling and delaying the compliance requirements for both EGCs and SRCs.<sup>2409</sup>

A number of commenters opposed providing exemptions for SRCs, in particular for some or all of the

proposed GHG requirements.<sup>2410</sup> Some of these commenters instead favored longer compliance deadlines to ease the compliance burden for registrants, including SRCs,<sup>2411</sup> while other commenters asserted that it was important not to exempt SRCs indefinitely from the requirement to disclose GHG emissions, particularly because this class of registrants is a significant portion of public companies.<sup>2412</sup> Another commenter stated that SRCs have disproportionately higher exposure to climate-related risk, and indicated that while it may be appropriate to mitigate their compliance burden, disclosure would provide necessary transparency into the operations and financial condition of these registrants.<sup>2413</sup> A different commenter stated that the ability of large filers to disclose Scope 3 emissions depended in part on smaller registrants disclosing Scope 1 and 2 emissions.<sup>2414</sup> In addition, as discussed below,<sup>2415</sup> commenters weighed in on the phase in periods that should apply to SRCs.<sup>2416</sup>

Some commenters recommended that the Commission exempt EGCs from the proposed rules or at least provide them with the same accommodations as SRCs.<sup>2417</sup> Commenters stated that the large compliance costs of the proposed rules may deter many potential EGCs

from going public.<sup>2418</sup> Other commenters opposed exempting EGCs from the proposed rules because such companies, like SRCs, may be exposed to climate-related risks.<sup>2419</sup> Some commenters recommended providing EGCs with a longer phase in period rather than exempting them from the proposed rules.<sup>2420</sup>

Several commenters recommended that the Commission exempt BDCs from the proposed rules.<sup>2421</sup> Commenters stated that subjecting BDCs to the proposed rules would be inappropriate because they are pooled investment vehicles that are more like registered investment companies than operating companies, which would also make the disclosure of GHG emissions difficult.<sup>2422</sup> Commenters further stated that BDCs would be subject to the Commission's proposed rules regarding ESG disclosures for certain investment advisers and investment companies,<sup>2423</sup> if adopted, which the commenters asserted is a more suitable regulation for BDCs than proposed subpart 1500.<sup>2424</sup> Some commenters similarly recommended the exemption of other registered collective investment vehicles, such as real estate investment trusts ("REITs"),<sup>2425</sup> and exchange-traded products (*i.e.*, pooled investment vehicles listed on securities exchanges that are not investment companies registered under the Investment Company Act),<sup>2426</sup> and issuers of non-variable insurance contracts<sup>2427</sup> because of their differences with registered operating companies.

Several commenters supported requiring foreign private issuers to provide the same climate disclosures as domestic registrants, as proposed.<sup>2428</sup> Commenters stated that because foreign private issuers are exposed to climate-

related risks in much the same way as domestic registrants, they should be subject to the same disclosure requirements.<sup>2429</sup> Commenters also stated that applying the same climate-related disclosure requirements to domestic and foreign registrants would enhance the comparability of such disclosure.<sup>2430</sup>

Other commenters stated that the Commission should permit foreign private issuers to follow the climate disclosure requirements of their home jurisdiction or of an alternative reporting regime to which they are subject.<sup>2431</sup> Commenters stated that such treatment would alleviate the burden of having to comply with more than one set of climate disclosure requirements and would help prevent the Commission's climate disclosure rules from deterring foreign private issuers from becoming or remaining U.S. registrants.<sup>2432</sup> One commenter recommended that the Commission exempt foreign private issuers from the proposed climate disclosure rules in order to discourage foreign private issuers from delisting from U.S. securities exchanges.<sup>2433</sup>

Some commenters supported the rule proposal to require a registrant to disclose any material changes to the climate disclosures provided in its Exchange Act annual report in a subsequently filed Form 10-Q or furnished Form 6-K.<sup>2434</sup> In this regard, one commenter stated that because climate-related risks are financial risks, they should be subject to the same disclosure requirements as other financial risks.<sup>2435</sup> Another commenter stated that the proposed requirement should apply to any material change in a registrant's disclosure related to governance, strategy, risk management, and targets and goals, and not just to changes in previously reported quantitative information.<sup>2436</sup>

<sup>2429</sup> See, *e.g.*, letters from Amer. for Fin. Reform, Sunrise Project *et al.*; and WBCSD.

<sup>2432</sup> See, *e.g.*, letter from Davis Polk.

<sup>2433</sup> See letter from Soc. Corp. Gov.

<sup>2434</sup> See, *e.g.*, letters from Amer. for Fin. Reform, Sunrise Project *et al.*; CEMEX; D. Hileman Consulting; J. Herron; and TotalEnergies; *see also* letter from Morningstar (stating that any changes that would materially impact a company's GHG emissions disclosure should be reported at least in its Form 10-K, if not in its quarterly reports, as this information could significantly impact an investor's decision-making).

<sup>2435</sup> See letter from Amer. for Fin. Reform, Sunrise Project *et al.*

<sup>2436</sup> See letter from D. Hileman Consulting.

Other commenters, however, opposed the disclosure of climate-related information on a quarterly basis.<sup>2437</sup> One commenter stated that an interim updating requirement to report a material change in climate-related disclosures is not necessary because Form 10-Q already requires an update to risk factor disclosure provided by registrants other than SRCs and related material financial impacts disclosure would be required in an interim MD&A.<sup>2438</sup> This commenter further stated that intra-year updates on climate-related disclosures would create meaningful incremental costs for registrants but offer little additional value to investors.<sup>2439</sup> Another commenter that opposed quarterly updating stated that "many, if not most, climate metrics, risks, opportunities, and strategies are long-term in nature and cannot meaningfully be assessed on a quarter-to-quarter basis."<sup>2440</sup> Other commenters asserted that requiring the disclosure of climate-related information in Form 10-Q, in addition to Form 10-K, would overwhelm investors with information of limited usefulness and, due to its novelty, should not be required to be disclosed in Commission periodic reports.<sup>2441</sup>

Many commenters supported not subjecting MJDS filers to the proposed climate disclosure rules, as proposed.<sup>2442</sup> Commenters stated that excluding MJDS filers from the Commission's climate disclosure rules would be consistent with the purpose of the MJDS, which is to enhance the efficiency of cross-border capital raising between the United States and Canada by in part permitting Canadian registrants to follow their home jurisdiction laws and rules when registering securities in the United States and satisfying their reporting obligations under the Exchange Act.<sup>2443</sup> Commenters also noted that in October 2021, the Canadian Securities Administrators proposed a specific climate-related disclosure framework

(“CSA Proposed Instrument”)<sup>2444</sup> that is primarily modeled on the TCFD framework.<sup>2445</sup> According to commenters, once the CSA Proposed Instrument is adopted, MJDS filers will provide climate-related disclosures pursuant to the CSA Instrument that is similar to the disclosures required pursuant to the Commission’s proposed rules.<sup>2446</sup> One commenter, however, opposed excluding MJDS filers from the Commission’s disclosure rules at least until the CSA Proposed Instrument is finalized and the Commission has determined that the CSA final Instrument is substantially similar to the Commission’s climate-related rules.<sup>2447</sup>

Many commenters supported excluding asset-backed issuers from the proposed rules, as proposed.<sup>2448</sup> One commenter stated that application of the proposed rules to asset-backed issuers would be inappropriate because of the unique market structure of asset-backed securities, regarding which the relevant disclosures for most investors relate to matters tied to credit quality and payment performance of the securitized pools, and not to commitments of the sponsoring company relating to climate.<sup>2449</sup> Another commenter stated that any climate-related disclosure requirements would need to be based on a framework that is particularly suited for asset-backed issuers, such as the ABS Climate Disclosure Framework that is being developed by the Structured Finance Association.<sup>2450</sup> Other commenters stated that, because asset-backed securitizations are essential for making home mortgages and car loans available to Americans, including those in low-income communities, and because application of the proposed rules to asset-backed issuers would motivate them to exclude such loans from their financed emissions, such application would result in disproportionate and negative impacts on low-income communities.<sup>2451</sup>

One commenter expressly opposed excluding asset-backed issuers from the proposed rules.<sup>2452</sup> This commenter

stated that asset-backed issuers are subject to many of the same climate risks as other issuers and require similar disclosure. As an example of the need for such disclosure, this commenter stated that there are growing concerns that asset-backed issuers are not fully disclosing that properties within the asset pools that they securitize are located in areas particularly vulnerable to increased risk of sea-level rise and extreme flooding.<sup>2453</sup> Another commenter supported excluding asset-backed issuers from the Commission’s climate disclosure rules at this time, but encouraged the Commission to consider, in due time, separate rules requiring climate-related disclosures from such issuers.<sup>2454</sup> This commenter stated that, while it believed that all financial and nonfinancial corporations should be expected to provide consistent climate-related disclosures with respect to their equity or debt (or debtlike) issuances, a more tailored, risk-based approach may be more appropriate for climate-related disclosures with respect to securitizations.<sup>2455</sup>

One commenter opposed applying the Commission’s climate disclosure rules to Form S–8 filings without stating the reasons why.<sup>2456</sup> No commenter addressed whether the proposed rules should apply to Form 11–K filings.

Several commenters raised concerns about the application of the proposed disclosure requirements to newly public companies.<sup>2457</sup> For example, commenters stated that application of the proposed rules to IPOs could deter many companies from going public due to the increased compliance costs and litigation risks associated with providing the climate-related disclosures, which would run counter to the Commission’s mission of facilitating capital formation.<sup>2458</sup> One commenter further stated that because private companies already face complex, lengthy, and costly processes to prepare for an IPO, the additional compliance burden imposed by the proposed climate disclosure rules would have a chilling effect on the use of the public securities markets to raise capital and on the broader U.S. economy.<sup>2459</sup>

Commenters raised similar concerns about the proposed rules in the context of M&A transactions. For example, one commenter stated that, given the scale

of the disclosure and work necessary to comply with the proposed climate disclosure rules, having to prepare this disclosure for a private target on a stand-alone basis before the acquiring registrant can file its Form S–4 or F–4 to register the securities being issued in connection with the business combination would materially delay those filings and significantly extend the overall transaction timeline.<sup>2460</sup> According to this commenter, public companies could be placed at a competitive disadvantage when bidding to acquire a private target company under the proposal because it would be necessary to screen prospective acquisitions for the ability to produce climate-related disclosures.<sup>2461</sup> Another commenter stated that a private target may not have collected climate-related data prior to its acquisition, and it could be “incredibly burdensome” for the private company to go back in time and measure the impact of climate-related events during a period when it was not collecting such data.<sup>2462</sup> Commenters noted that integrating a recently acquired company takes considerable time and resources, and the Commission should allow for delayed reporting so that an acquiring company need not alter its acquisition schedule to account for the difficulties in assuming responsibility for climate-related disclosures.<sup>2463</sup> Because of the above concerns, commenters urged the Commission not to adopt compliance deadlines for the proposed climate disclosure requirements that would substantially influence the probability or timing of M&A transactions and IPOs.<sup>2464</sup>

Some commenters opposed excluding IPO registrants from the scope of the proposed climate disclosure rules.<sup>2465</sup> After stating that companies that are going public should be held to the same reporting and disclosure requirements of all other public companies, one commenter noted that the rule proposal already contains a number of accommodations for filers, which should not be expanded.<sup>2466</sup> Another commenter opposed exempting IPO registrants from the proposed rules because that would lower investor

protections in the public markets, which is contrary to the Commission's mission and purpose.<sup>2467</sup> One other commenter stated that because investors need information about a registrant's climate-related risks at every stage of capital formation, it supported requiring a registrant to provide climate-related disclosures about a target company in its Form S-4 or F-4.<sup>2468</sup>

### 3. Final Rules

The final rules will apply to Exchange Act periodic reports<sup>2469</sup> and Securities Act and Exchange Act registration statements largely as proposed, with some modifications as described below. As we stated above when discussing our reasons for amending Regulations S-K and S-X,<sup>2470</sup> we are requiring climate-related disclosures in most Securities Act or Exchange Act registration statements and Exchange Act periodic reports. We believe disclosures about climate-related risks and their financial impacts should be treated like other business and financial information because they are necessary to understand a company's operating results and prospects and financial condition.<sup>2471</sup>

We are taking this approach instead of adopting a new form for climate-related disclosures as suggested by commenters because it is more consistent with the Commission's integrated disclosure system for business and financial reporting and will improve the transparency and comparability of climate-related disclosures for investors as they will be included and incorporated into forms with which registrants and investors alike are familiar, and alongside information regarding a registrant's business, results of operations, and financial condition, which will facilitate an understanding of the impacts of climate-related risks.<sup>2472</sup> While we understand the concern of commenters that

recommended the creation of a new form for climate-related disclosures,<sup>2473</sup> revisions to the proposed rules<sup>2474</sup> and strengthened accommodations regarding certain types of disclosures<sup>2475</sup> and for certain issuers<sup>2476</sup> will address many of these concerns.

The final rules require registrants that file their Exchange Act annual reports on Forms 10-K, as well as their Exchange Act and Securities Act registration statements on Form 10 and Form S-1, S-4 (except as provided below), or S-11, as applicable, to include the climate-related disclosures required by the final rules in these forms.<sup>2477</sup> The final rules will also require foreign private issuers that file their Exchange Act annual reports or registration statements on Form 20-F and their Securities Act registration statements on Form F-1 or Form F-4 (except as provided below) to provide the same climate-related disclosures as domestic registrants.<sup>2478</sup> As commenters

<sup>2473</sup> See *supra* notes 2392–2395 and accompanying text.

<sup>2474</sup> See, e.g., the adoption of less prescriptive requirements and a materiality qualifier for several of the final rule provisions.

<sup>2475</sup> See, e.g., *supra* section II.J (discussing the adoption of an expanded safe harbor provision).

<sup>2476</sup> See, e.g., *supra* section II.H (discussing the exemption from Scopes 1 and 2 emissions reporting for both SRCs and EGCs); and *infra* section II.O (discussing the adoption of different compliance dates for different types of filers).

<sup>2477</sup> Registrants may incorporate by reference the climate-related disclosures required by the final rules to the extent they are permitted to do so under Forms S-1, S-4, and S-11. See, e.g., Form S-1, General Instruction VII (setting forth the requirements a registrant must meet in order to incorporate by reference certain information required by Form S-1). If a registrant is eligible and elects to incorporate by reference certain information required by Forms S-1, S-4, and S-11, those forms also require the registrant to incorporate by reference its latest Form 10-K and all other Exchange Act reports filed since the end of the fiscal year covered by that Form 10-K. See Form S-1, Item 12; Form S-4, Items 11 and 13; Form S-11, Item 29. In addition to those filings that a registrant is required to incorporate by reference, a registrant may also incorporate by reference its required emissions disclosure, if applicable, from the prior filing that contained such disclosure to satisfy its Item 1505 disclosure obligations under Form S-1, S-4, or S-11 if (1) such Form S-1, S-4, or S-11 becomes effective after filing its Form 10-K for its latest fiscal year but before filing a Form 10-K/A or its Form 10-Q for the second quarter of its current fiscal year containing the prior year's emissions disclosure and (2) the registrant, pursuant to Item 1505(c)(1), discloses the information required by Item 1505 in either a Form 10-K/A or its second quarter Form 10-Q rather than in its Form 10-K (in both the prior and current fiscal year). See also 17 CFR 230.411 and 17 CFR 240.12b-23.

<sup>2478</sup> Forms S-3 and F-3 are not being amended to reference subpart 1500 because the required climate-related disclosures would be included in a registrant's Form 10-K or 20-F annual report that is incorporated by reference into those Securities Act registration statements. See Proposing Release, section J, note 690. However, as discussed in

noted, because foreign private issuers are exposed to climate-related risks in the same way as domestic registrants, they should be subject to the same disclosure requirements.<sup>2479</sup> Applying the same climate-related disclosure requirements to domestic and foreign registrants will also help achieve the Commission's goal of providing more consistent, reliable, and comparable information across registrants for investors. While we acknowledge commenters who suggested that foreign private issuers be permitted to substitute compliance with the final rules through disclosures made in response to requirements of other jurisdictions, we are not adopting substituted compliance at this time. We believe it makes sense to observe how reporting under international climate-related reporting requirements and practices develop before making a determination whether such an approach would result in consistent, reliable, and comparable information for investors. The Commission may consider such accommodations in the future depending on developments in the international climate reporting practices and our experience with disclosures under the final rules.<sup>2480</sup>

In a change from the proposed rules, the final rules will not apply to private companies that are parties to business combination transactions, as defined by Securities Act Rule 165(f),<sup>2481</sup> involving a securities offering registered on Forms S-4 and F-4.<sup>2482</sup> We acknowledge the concerns of commenters about the difficulties and costs associated with private target companies complying with the proposed disclosure requirements in the business combination context in addition to complying with certain other disclosure requirements under Regulation S-K and Regulation S-X,<sup>2483</sup> as well as concerns that the application of those

section II.H.3 above, we are amending these forms to clarify the date as of which disclosure required by Item 1505(a) must be incorporated.

<sup>2479</sup> See *supra* note 2429 and accompanying text.

<sup>2480</sup> See also discussion *infra* section IV.A.4 and IV.C.3.

<sup>2481</sup> See 17 CFR 230.165.

<sup>2482</sup> While Form S-1 may be used for business combination transactions, climate-related disclosure will also be required for reporting companies that are parties to the transaction.

<sup>2483</sup> See, e.g., Form S-4, Part I.C, Item 17(b) (requiring, with respect to a company being acquired that is not subject to the reporting requirements of Section 13(a) or 15(d) of the Exchange Act, a brief description of its business, disclosure pursuant to Item 2-01 of Regulation S-K (market price of and dividends on the company's equity), disclosure pursuant to Item 303 of Regulation S-K (MD&A), disclosure pursuant to Item 304 of Regulation S-K (changes in and disagreements with accountants), and, in certain circumstances, financial information).

<sup>2467</sup> See letter from AGs of Cal. *et al.*

<sup>2468</sup> See letter from Amer. for Fin. Reform, Sunrise Project *et al.*

<sup>2469</sup> Although we generally refer to the final rules applying to Exchange Act periodic reports, the only time a registrant will disclose climate-related information responsive to the final rules in a Form 10-Q is when it elects to disclose its Scopes 1 and/or 2 emissions pursuant to Item 1505 of Regulation S-K. A foreign private issuer that is subject to the GHG emissions reporting requirement, however, is required to provide the GHG emissions disclosure in its annual report on Form 20-F, although it may provide such emissions disclosure on a delayed basis in an amendment to that filing. See *supra* section II.H. The other portions of the final rules are not applicable to Exchange Act periodic reports other than annual reports.

<sup>2470</sup> See *supra* section II.A.3.

<sup>2471</sup> See *id.*

<sup>2472</sup> See, e.g., *supra* notes 2390 and 2391 and accompanying text.

requirements to private target companies could impact the timing of or discourage business combination activity in U.S. public markets.<sup>2484</sup> Disclosure pursuant to subpart 1500 of Regulation S–K and Article 14 of Regulation S–X will only be required for a registrant or company being acquired that is subject to the reporting requirements of Section 13(a) or 15(d) of the Exchange Act.<sup>2485</sup>

In another change from the proposed rules, the final rules will not require registrants to disclose any material change to the climate-related disclosures provided in a registration statement or annual report in its Form 10–Q or, in certain circumstances, Form 6–K for a registrant that is a foreign private issuer that does not report on domestic forms. This is consistent with the annual reporting requirement adopted by the Commission in other

<sup>2484</sup> See, e.g., letters from Shearman Sterling (stating that private targets are “unlikely to have the extensive climate change disclosure prepared in advance of entering into a business combination with a public company.”); and Sullivan Cromwell (stating that, “in addition to having the resources necessary to collect emissions data from the target company, acquirors would need to expend significant resources to ensure that (1) it has appropriate controls and procedures in place to assess the quality of the information and (2) such information is being collected and measured on a basis consistent with the emissions calculations throughout its organization.”).

<sup>2485</sup> The discussion throughout this release regarding the application of the subpart 1500 disclosure requirements to business combination transactions involving a securities offering registered on Forms S–4 and F–4 also applies to certain business combination transactions for which a proxy statement on Schedule 14A or an information statement on Schedule 14C is required to be filed. See 17 CFR 240.14a-101, Item 14(c)(1) (requiring, for certain business combination transactions, disclosure of “the information required by Part B (Registrant Information) of Form S–4 . . . or Form F–4 . . . , as applicable, for the acquiring company”) and Item 14 (c)(2) (requiring, for certain business combination transactions, disclosure of “the information required by Part C (Information with Respect to the Company Being Acquired) of Form S–4 . . . or Form F–4 . . . , as applicable”); and 17 CFR 240.14c-101, Item 1 (“Furnish the information called for by all of the items of Schedule 14A . . . which would be applicable to any matter to be acted upon at the meeting if proxies were to be solicited in connection with the meeting.”). The information required by Parts B and C of Forms S–4 and F–4 includes the information required by General Instructions B.3 and C.3 to those forms. See Form S–4, General Instruction B.3 (“If the registrant is subject to the reporting requirements of Section 13(a) or 15(d) of the Exchange Act, then . . . the information required by subpart 1500 of Regulation S–K . . . must be provided with respect to the registrant . . . .”); Form F–4, General Instruction B.3 (same); Form S–4, General Instruction C.3 (“If the company being acquired is subject to the reporting requirements of Section 13(a) or 15(d) of the Exchange Act, then . . . the information required by subpart 1500 of Regulation S–K . . . must be provided with respect to the company being acquired . . . .”); Form F–4, General Instruction C.3 (same).

contexts.<sup>2486</sup> We are mindful of the concern expressed by many commenters about the potential compliance costs of the proposed rules, including the proposed interim updating requirement.<sup>2487</sup> This change will help to mitigate the compliance burden.<sup>2488</sup>

Also as proposed, the final rules will not apply to Canadian registrants that use the MJDS and file their Exchange Act registration statements and annual reports on Form 40–F. As many commenters stated, excluding MJDS filers from the Commission’s climate disclosure rules is consistent with the purpose of the MJDS and will continue to allow MJDS registrants to follow their home jurisdiction laws and rules when registering securities in the United States and satisfying their reporting obligations under the Exchange Act.<sup>2489</sup>

The proposed rules would have required SRCs to comply with all of the proposed climate-related disclosure requirements, except for disclosure pertaining to Scope 3 emissions, from which they were proposed to be exempted.<sup>2490</sup> Similarly, most of the final rules will apply to SRCs, except for the disclosures requiring Scopes 1 and 2 emissions, from which SRCs will be exempted.<sup>2491</sup> Although some commenters asked the Commission to exclude SRCs from all of the Commission’s climate disclosure rules,<sup>2492</sup> we do not believe that such a blanket exemption would be appropriate in light of the fact that, as some commenters noted, SRCs are exposed to climate-related risks to the same extent as other registrants.<sup>2493</sup> For similar reasons, the final rules will apply to EGCs, as proposed, except for the exemption regarding Scopes 1 and 2 emissions disclosure. However, we acknowledge that some aspects of the final rules could impose significant burdens on smaller and early growth stage registrants, particularly if the costs of compliance do not scale with the size of the firm and divert resources that are needed to expand the registrant’s

<sup>2486</sup> See, e.g., Modernization of Property Disclosures for Mining Registrants, Release No. 33–10570 (Oct. 31, 2018) [83 FR 66344 (Dec. 26, 2018)]; and Cybersecurity Risk Management, Strategy, Governance, and Incident Disclosure, Release No. 33–11216 (Jul. 26, 2023) [88 FR 51896 (Aug. 4, 2023)].

<sup>2487</sup> See, e.g., letter from Sullivan Cromwell.

<sup>2488</sup> See *supra* note 2469.

<sup>2489</sup> See *supra* note 2443 and accompanying text.

<sup>2490</sup> See Proposing Release, section II.J.

<sup>2491</sup> As discussed in section II.H.3 above, the final rules will not require any registrant to disclose its Scope 3 emissions.

<sup>2492</sup> See *supra* notes 2398 and 2417 and accompanying text.

<sup>2493</sup> See *supra* notes 948 and 2419 and accompanying text.

business. Because we expect the compliance burden and costs for the GHG emissions disclosure requirement to be proportionally greater for such registrants, not requiring SRCs and EGCs to disclose their Scopes 1 and/or 2 emissions will help address these concerns. For these reasons, we find that it is necessary and appropriate in the public interest and consistent with the protection of investors to not include SRCs and EGCs within the scope of the GHG emissions disclosure requirement,<sup>2494</sup> but to include them within the scope of the other aspects of the final rules.<sup>2495</sup> Moreover, the streamlined requirements and disclosure accommodations we are adopting, which will help limit the compliance burden of the final rules for all registrants, should further alleviate commenters’ concerns about the impact of the proposed rules on SRCs and EGCs. In particular, adding materiality qualifiers and making several of the disclosure provisions less prescriptive should enable registrants, including SRCs and EGCs, to provide disclosure that better fit their particular facts and circumstances, which should lessen the need for scaled disclosure for SRCs and EGCs. Additionally, as discussed below, we are providing extended phase ins based on filer status, which will provide SRCs and EGCs with additional time to prepare for the final rules.

Similarly, we are not providing an exemption or transitional relief for registrants engaged in an IPO, as recommended by some commenters, because of these streamlined requirements and other accommodations.<sup>2496</sup> In addition, we note that exempting EGCs from the GHG emissions disclosure requirement will significantly reduce the compliance burden of the final rules for most new registrants, as historically EGCs have accounted for almost 90% of IPO companies.<sup>2497</sup> Moreover, providing a longer transition period before SRCs and EGCs must first comply with the final rules should help those entities that go public to develop the appropriate

<sup>2494</sup> All registrants subject to the final rules, including SRCs and EGCs, are not required to disclose GHG emissions metrics other than as required by Item 1505, including where GHG emissions are included as part of a transition plan, target or goal.

<sup>2495</sup> See 15 U.S.C. 77z-3 and 15 U.S.C. 78mm.

<sup>2496</sup> See *supra* note 2457 and accompanying text.

<sup>2497</sup> Wilmer Hale, *2023 IPO Report*, 2 (Mar. 31, 2023), available at <https://www.wilmerhale.com/insights/publications/2023-ipo-report> (“IPOs by emerging growth companies (EGCs) accounted for 87% of the year’s IPOs, a share modestly lower than the 93% in 2021 and the 89% average that has prevailed since enactment of the JOBS Act in 2012.”).

controls and procedures for providing the required climate-related disclosures. We further note that initial filings from registrants that are not SRCs or EGCs and that determine that they have material Scope 1 and/or Scope 2 emissions will only be required to provide emissions data for one year because they will not have previously provided such disclosure in a Commission filing.<sup>2498</sup>

The final rules also will not apply to asset-backed securities issuers, as proposed. Although we recognize that, as one commenter noted, climate-related risks may be relevant for some of the pooled assets that comprise certain asset-backed securities,<sup>2499</sup> we believe that adoption of climate-related disclosure requirements for certain types of securities, such as asset-backed securities, should consider the unique structure and characteristics of those securities, consistent with other Commission disclosure requirements applicable to asset-backed securities issuers.<sup>2500</sup> Accordingly, while the Commission may consider climate-related disclosure requirements for asset-backed securities issuers in a future rulemaking, we decline to adopt such requirements as part of this rulemaking.

We are not exempting other registrants, such as BDCs, REITs, or issuers of registered non-variable insurance contracts from the final rules. As with operating companies, these entities may face material climate-related risks that would impact an investment or voting decision and will have only limited disclosure obligations to the extent climate-related risks are not material in a given case. We acknowledge commenters that noted that certain registered collective investment vehicles have differences from operating companies, but, in our view, those differences are not significant enough in this context to warrant the differential treatment we are applying to asset-backed securities issuers. Further, because the final rules have been modified and streamlined from proposed, as described above, to the extent a climate-related risk is not material to such registrants the information required to be disclosed would be limited. Likewise, we are not exempting BDCs as suggested by other commenters. While we acknowledge that, if the Commission's proposed rules regarding ESG disclosures for certain

investment advisers and investment companies were adopted, there may be some overlap in the required disclosures, we nonetheless believe that the climate-related information required to be disclosed by the final rules in a registrant's Securities Act registration statements and Exchange Act reports will be important to investors and should apply to BDCs and REITs. Finally, with respect to issuers of registered non-variable insurance contracts, if the final rules would otherwise apply solely as a result of a registrant's offerings of registered index-linked annuities, the final rules may not apply prior to required compliance.<sup>2501</sup> To the extent such a registrant is subject to the final rules in connection with offerings of other types of registered non-variable insurance contracts, as noted above, to the extent a climate-related risk is not material to such registrants the information required to be disclosed would be limited.

Finally, as proposed, the final rules will not apply to Forms S-8 and 11-K.

#### *M. Structured Data Requirement (Item 1508)*

##### 1. Proposed Rules

The proposed rules would have required a registrant to tag the proposed climate-related disclosures in a structured, machine-readable data language. Specifically, the proposed rules would have required a registrant to tag climate-related disclosures in Inline eXtensible Business Reporting Language ("Inline XBRL") in accordance with 17 CFR 232.405 (Rule 405 of Regulation S-T) and the EDGAR Filer Manual. The proposed requirements would include block text tagging and detail tagging of narrative and quantitative disclosures provided pursuant to subpart 1500 of Regulation S-K and Article 14 of Regulation S-X.

<sup>2501</sup> See Division AA, Title I of the Consolidated Appropriations Act, 2023, Public Law 117-328; 136 Stat. 4459 (Dec. 29, 2022) and Registration for Index-Linked Annuities; Amendments to Form N-4 for Index-Linked and Variable Annuities ("RILA Act"), Release No. 33-11250 (Sept. 29, 2023) [17 FR 71088 (Oct. 13, 2023)]. If the Commission adopts this proposal substantially as proposed, or insurers are able to register offerings of registered index-linked annuities on Form N-4 pursuant to a provision in the RILA Act, the registration statement for a registered-index linked annuity would not be required to include the information required by the final rules adopted in this release. We also anticipate that in these circumstances insurance companies generally will rely on Exchange Act Rule 12h-7 if they would otherwise be subject to Exchange Act reporting obligations solely by reason of their offerings of registered index-linked annuities.

##### 2. Comments

Commenters that addressed this aspect of the proposal largely supported requiring registrants to tag climate-related disclosures, including block text tagging and detail tagging of narrative and quantitative disclosures in Inline XBRL, as proposed.<sup>2502</sup> Commenters indicated that Inline XBRL is a functional tool familiar to most investors and that it would be a useful tool for climate-related disclosures.<sup>2503</sup> Some commenters questioned the utility of climate-related disclosures without digital tagging and asserted that the benefit to end users of this information far outweighed the costs to issuers, particularly given that issuers should already have established the necessary software, skills, and processes to comply with the proposed requirements.<sup>2504</sup>

One commenter questioned how many investors use this functionality and suggested that tagging should instead be voluntary.<sup>2505</sup> Another commenter stated that tagging of climate-related disclosures under subpart 1500 of Regulation S-K should not be required because currently registrants only tag their financial statements including any footnotes and schedules set forth in Article 12 of Regulation S-X.<sup>2506</sup> This commenter also asserted that, if the Commission

<sup>2502</sup> See, e.g., letters from Impact Capital Managers, Inc.; ISS ESG; Crowe LLP; Eni SpA; CFA (noting that "Even retail investors who do not have the same capacity to conduct that analysis directly would still benefit from tagging if, as we expect, independent third parties use the data to analyze companies' performance on climate-related criteria and communicate their findings broadly to the investing public"); Ceres; The Deep South Center for Environmental Justice (June 17, 2022) ("Deep South"); London Stock Exchange Group (June 17, 2022) ("LSEG") Earthjustice; Data Foundation (June 17, 2022) ("Data Fnd"); TotalEnergies; John Turner, CEO, XBRL US (June 23, 2023) ("XBRL US"); Eric Pedersen, Head of Responsible Investments in Nordea Asset Management (June 17, 2022) ("Nordea Asset Mgmt"); Church Grp.; Bloomberg; BHP; CalPERS; Ethic; Harvard Mgmt.; Can. Coalition GG; Morningstar, Inc.; Patrick Callery, XBRL International, Inc.; Prime Buchholz, LLC; Treehouse Investments, LLC; Trakref, Xpansiv Ltd.; Seattle City ERS; Asia Investor Group on Climate Change, Asia Investor Group on Climate Change; Clara Miller; M. Hadick; R. Palacios. *But see* Alliance Resource ("Requiring XBRL tagging of information would increase costs and impose time constraints on registrants. Requiring the use of XBRL would be a departure from other areas of Securities and Exchange Act filings outside the financial statements and given the differences in the estimates and assumptions used to calculate Scope 1, 2, and 3 emissions, we believe the use of XBRL for these disclosures would not be meaningful to investors.").

<sup>2503</sup> See, e.g., letters from ISS ESG; Ceres.

<sup>2504</sup> See, e.g., letters from XBRL International; Ceres.

<sup>2505</sup> See, e.g., letters from Sky Harbor.

<sup>2506</sup> See, e.g., letter from American Fuel & Petrochemical Manufacturers.

<sup>2498</sup> See *supra* section II.H.3.

<sup>2499</sup> See *supra* notes 2452 and 2453 and accompanying text.

<sup>2500</sup> See *supra* note 2450 and accompanying text. See also 17 CFR 229.1100 through 229.1125 (Regulation AB).

were to adopt an Inline XBRL tagging requirement as proposed, it should approve and update a taxonomy prior to compliance, otherwise registrants would create custom tags which would reduce the comparability and utility of the required disclosures. One supportive commenter stated that the Commission should consider developing guidance to help standardize climate-related custom tags “to foster comparability and faster access across corporate disclosures.”<sup>2507</sup> Yet another supportive commenter recommended that “the Commission avoid custom tags within the Inline XBRL schema because they erode the comparability of the climate-related disclosures.”<sup>2508</sup>

Commenters largely supported the proposal to require tagging of both quantitative climate-related metrics and qualitative climate-related disclosures, stating that tagging will maximize efficiency and make the information easier to consume.<sup>2509</sup> One of these commenters stated that detail and block text tagging “of all disclosure, as opposed to only quantitative metrics, expedites aggregation, filtering, and synthesis of corporate reporting in addition to making the reporting more accessible and usable in the first place.”<sup>2510</sup> Another commenter stated that tagging of both narrative and quantitative information is necessary to increase efficiencies in the capital markets as a new volume of information becomes available.<sup>2511</sup>

The Commission also solicited comment on whether there are any third-party taxonomies the Commission should consider in connection with the proposed tagging requirements.<sup>2512</sup> While one commenter<sup>2513</sup> suggested the registrant should have the ability to select the structured data language it wanted to use, most commenters stated that the Commission should require tagging in Inline XBRL, as proposed.<sup>2514</sup> One commenter noted the importance of interoperability with international regulators and organizations when considering alternatives.<sup>2515</sup> Another commenter emphasized that machine-readable data that are interoperable with international standards was necessary to ensure effective usage in the current

international regulatory environment.<sup>2516</sup> A different commenter similarly stated that the ISSB has been refining the XBRL climate risk disclosure taxonomy since its inception and recommended that the Commission build its taxonomy based on this work, which would further facilitate global alignment of disclosure standards.<sup>2517</sup> Other commenters stated that the existing XBRL taxonomy is both familiar and available to issuers and consumers of financial data.<sup>2518</sup>

### 3. Final Rules

After considering comments, we are adopting the structured data requirements as proposed.<sup>2519</sup> For registrants that are LAFs, compliance with the structured data requirements for disclosures under subpart 1500 of Regulation S–K will be required for all disclosures beginning one year after initial compliance with the disclosure requirements.<sup>2520</sup> Other categories of filers will be required to comply with the tagging requirements upon their initial compliance with subpart 1500. Likewise, with respect to any specific provisions that have an extended compliance date that begins on or after the initial tagging compliance date for LAFs, filers will be required to tag such information at initial compliance.<sup>2521</sup> Because non-LAF registrants will have a later date than LAF registrants to comply overall with the final rules, we are not adopting a separate later compliance date regarding the structured data requirements for non-LAF registrants.

Since all issuers that will be subject to the final rules must currently tag disclosures in Inline XBRL,<sup>2522</sup> the requirement will not unduly add to companies’ burden, and we believe any incremental costs are appropriate given

the significant benefits to investors, as detailed by commenters, including improving the usefulness and comparability of disclosures, as well as making such disclosures easier to locate and review. With respect to the commenter that stated that registrants should not be required to tag climate-related disclosures because they currently only tag financial statement disclosures, we note that all issuers, including smaller reporting companies, must tag in Inline XBRL cover page disclosures and financial statement disclosures, which includes both detail and block text tagging. In addition, we note that the limited incremental additional cost associated with tagging additional disclosures results in a significant benefit to investors in terms of the ability to readily find and analyze disclosures. As the Commission stated in the Proposing Release and as confirmed by commenters, Inline XBRL tagging will enable automated extraction and analysis of the information required by the final rules, allowing investors and other market participants to more efficiently identify responsive disclosure, as well as perform large-scale aggregation, comparison, filtering, and other analysis of this information across registrants, as compared to requiring a non-machine readable data language such as HTML.<sup>2523</sup> The Inline XBRL requirement will also enable automatic comparison of tagged disclosures against prior periods. If we were not to adopt the Inline XBRL requirement as suggested by some commenters, some of these benefits would be diminished, in particular the enhanced comparability of the disclosures required under the final rules. We are not allowing for voluntary tagging, as suggested by one commenter, because to do so would likely negatively impact the completeness of the data, thereby diminishing the usefulness of the information.

With respect to the commenter that suggested registrants should have the ability to select a structured data language, we have concluded that leaving the particular structured data language unspecified could lead to

<sup>2523</sup> These considerations are generally consistent with objectives of the recently enacted Financial Data Transparency Act of 2022, which directs the establishment by the Commission and other financial regulators of data standards for collections of information, including with respect to periodic and current reports required to be filed or furnished under Exchange Act sections 13 and 15(d). Such data standards must meet specified criteria relating to openness and machine-readability and promote interoperability of financial regulatory data across members of the Financial Stability Oversight Council. See James M. Inhofe National Defense Authorization Act for Fiscal Year 2023, Public Law 117–263, tit. LVIII, 136 Stat. 2395, 3421–39 (2022).

<sup>2516</sup> See, e.g., letter from Data Fnd, urging the Commission to consider adopting international standards to ensure the highest possibility for data comparability across reporting regimes and international regulatory bodies.

<sup>2517</sup> See, e.g., letter from Ceres (also noting that the ISSB released a Sustainability Disclosure Taxonomy for public comment on May 25, 2022).

<sup>2518</sup> See, e.g., letter from ISS ESG.

<sup>2519</sup> Item 1508 of Regulation S–K and Rule 405(b)(4)(vii) of Regulation S–T (requiring disclosures filed pursuant to subpart 1500 of Regulation S–K to be submitted as an Interactive Data File). Because financial statements are already structured in Inline XBRL, no new regulatory text is necessary to structure the disclosures filed pursuant to Article 14 of Regulation S–X. See Rule 405(b)(1)(i) of Regulation S–T.

<sup>2520</sup> See *infra* at section II.O.3 for a more detailed discussion of compliance dates.

<sup>2521</sup> This includes Item 1502(d)(2), Item 1502(e)(2), Item 1504(c)(2), Item 1505, and Item 1506.

<sup>2522</sup> See Rules 405, 406, and 408 of Regulation S–T.

<sup>2507</sup> See, e.g., letter from ISS ESG.

<sup>2508</sup> See, e.g., letter from Morningstar.

<sup>2509</sup> See, e.g., letters from CalPERS; ISS ESG; and Morningstar, Inc. See also, e.g., XBRL US; and XBRL International, Inc.

<sup>2510</sup> See, e.g., letter from ISS ESG.

<sup>2511</sup> See, e.g., letter from Morningstar.

<sup>2512</sup> See Proposing Release, section II.L.

<sup>2513</sup> See, e.g., letter from TotalEnergies.

<sup>2514</sup> See, e.g., letters from ISS ESG; XBRL US, Morningstar US, XBRL International.

<sup>2515</sup> See, e.g., letter from Eni Spa.

different issuers using different data languages for the same disclosure, thus hindering the interoperability and usability of the data. We agree with commenters that stated that the existing Inline XBRL data language is familiar to registrants and investors, and therefore continued use of this structured data language will ease registrants' cost of compliance and burdens on investors.

We acknowledge commenters that noted the importance of interoperability with international standards. The staff will keep this consideration in mind as it develops a draft taxonomy for the final rules and will seek to incorporate elements from third-party taxonomies whenever appropriate to do so. With respect to the commenter who called for the Commission to approve a taxonomy prior to compliance, consistent with the Commission's common practice, a draft taxonomy will be made available for public comment, and the Commission will incorporate a final taxonomy into an updated version of EDGAR before the tagging requirements take effect. We acknowledge commenters who expressed concerns about the potential for extensive custom tagging, and the possible resulting effect on data quality and usefulness. In order to address these concerns and provide sufficient time for the adoption of a final taxonomy that will take into consideration initial disclosures that will be provided in response to the final rules, we are delaying compliance with the structured data requirements for one year beyond initial compliance with the disclosure requirements for LAF registrants, which have the earliest compliance date regarding the final rules.<sup>2524</sup> This approach should both help lessen any compliance burden and improve data by reducing the need for extensive custom tagging.

#### *N. Treatment for Purposes of the Securities Act and the Exchange Act*

##### 1. Proposed Rules

The Commission proposed to treat the proposed required climate-related disclosures as "filed" and therefore subject to potential liability under Exchange Act section 18,<sup>2525</sup> except for disclosures furnished on Form 6-K.<sup>2526</sup> The proposed filed climate-related disclosures would also be subject to potential section 11 liability<sup>2527</sup> if included in, or incorporated by reference into, a Securities Act registration statement. This treatment would apply both to the disclosures in

response to proposed subpart 1500 of Regulation S-K and to proposed Article 14 of Regulation S-X.

The Commission proposed that Form 6-K disclosures would not be treated as "filed" because the form, by its own terms, states that "information and documents furnished in this report shall not be deemed to be 'filed' for the purposes of section 18 of the Act or otherwise subject to the liabilities of that section."<sup>2528</sup> As the Commission explained when proposing the climate-related disclosure rules,<sup>2529</sup> the treatment of disclosures on Form 6-K as furnished is a long-standing part of the foreign private issuer disclosure system.<sup>2530</sup>

##### 2. Comments

Commenters expressed differing views on whether we should treat Commission-mandated climate-related disclosures as filed or furnished. Several commenters supported the proposed treatment of disclosures required by both proposed subpart 1500 of Regulation S-K and proposed Article 14 of Regulation S-X as filed.<sup>2531</sup> One commenter stated that because climate-related disclosures will provide information that is important for investors in securities analysis and the management of investment risk, these disclosures should be treated the same as other critical information filed under Regulations S-X and S-K that is material and necessary for investors' assessment of registrants' financial performance and future prospects.<sup>2532</sup> Other commenters stated that the treatment of climate-related disclosures as filed, which would allow liability under section 18 to attach to false or misleading statements, will communicate to registrants the importance of these disclosures and deter them from greenwashing or otherwise making misleading statements.<sup>2533</sup> Still other commenters stated that the proposed treatment of climate-related disclosures as filed would help ensure that the disclosures are accurate and consistent.<sup>2534</sup> One

<sup>2528</sup> Form 6-K, General Instruction B.

<sup>2529</sup> See Proposing Release at section II.L.

<sup>2530</sup> See *Periodic Report of Foreign Issuer*, Release No. 34-8069 (Apr. 28, 1967) [32 FR 7853 (May 30, 1967)]. Form 6-K's treatment as furnished for purposes of section 18 has existed since the Commission adopted the form.

<sup>2531</sup> See, e.g., letters from Amer. for Fin. Reform, Sunrise Project *et al.*; AGs of Cal. *et al.*; CalPERS; Ceres; CFA; Engine No. 1; Franklin Templeton; PwC; SKY Harbor; and TotalEnergies.

<sup>2532</sup> See letter from Amer. for Fin. Reform, Sunrise Project *et al.*

<sup>2533</sup> See letters from AGs of Cal. *et al.*; and CFA.

<sup>2534</sup> See, e.g., letters from Ceres; Franklin Templeton; PwC; and SKY Harbor.

such commenter stated that the treatment of climate-related disclosures as filed could substitute for the proposed requirement to provide assurance for certain GHG emissions disclosures, which the commenter opposed.<sup>2535</sup>

Several other commenters opposed the proposed treatment of climate-related disclosures as filed.<sup>2536</sup> Some of these commenters stated that the Commission should treat climate-related disclosures as furnished rather than filed because of the complexities and uncertainties involved in such disclosures, particularly regarding those pertaining to GHG emissions disclosures.<sup>2537</sup> In this regard one commenter stated that the "evolving and uncertain nature of Scope 3 measurement and tracking capabilities (and, for some smaller companies, the novelty of Scope 1 and Scope 2 reporting) could make it difficult for [registrants] to reach the degree of certainty necessary to assume the liability burden associated with reports filed with the [Commission]."<sup>2538</sup> Other commenters stated that the proposed treatment would deter registrants from providing expansive climate-related disclosures because of the potential liability under Exchange Act section 18 and Securities Act section 11.<sup>2539</sup>

Several commenters supported the proposed treatment of climate-related disclosures on a Form 6-K as furnished.<sup>2540</sup> One commenter stated that it saw no reason to disrupt the well-established treatment of information provided on a Form 6-K.<sup>2541</sup> Other commenters supported the proposed Form 6-K treatment because they believed that all climate-related disclosures should be treated as furnished.<sup>2542</sup>

##### 3. Final Rules

As proposed, the climate-related disclosures provided pursuant to the

<sup>2535</sup> See letter from SKY Harbor.

<sup>2536</sup> See, e.g., letters from Amer. Chem.; AGC; BlackRock; Chevron; D. Burton, Heritage Fdn.; GPA Midstream; HP; MFA; Nareit; Nasdaq; NAM; RILA; Soc. Corp. Gov.; UPS; and Williams Cos.

<sup>2537</sup> See, e.g., letters from Alphabet *et al.*; Chevron; D. Burton, Heritage Fdn.; GPA Midstream; HP; NAM; RILA; UPS; and Williams Cos.

<sup>2538</sup> See letter from NAM; see also letter from Alphabet *et al.*

<sup>2539</sup> See, e.g., letters from BlackRock; J. Herron; and Nareit.

<sup>2540</sup> See, e.g., letters from BHP; CEMEX; and J. Herron.

<sup>2541</sup> See letter from BHP.

<sup>2542</sup> See, e.g., letters from CEMEX; and J. Herron; see also letter from Nasdaq (stating that the Commission should treat all climate-related disclosures as furnished while also stating that the Commission has "not explained why it has discriminated between foreign and domestic companies in this regard").

<sup>2524</sup> See *infra* at section II.O.3.

<sup>2525</sup> 15 U.S.C. 78r.

<sup>2526</sup> See Proposing Release, section II.L.

<sup>2527</sup> 15 U.S.C. 77k.

final rules will be treated as filed. Climate-related disclosures will therefore be subject to potential liability pursuant to Exchange Act section 18 and, if included or otherwise incorporated by reference into a Securities Act registration statement, Securities Act section 11 as well. Treating climate-related disclosures as filed will help promote the accuracy and consistency of such disclosures. In this regard, we believe climate-related disclosures should be subject to the same liability as other important business or financial information that the registrant includes in its registration statements and periodic reports. While we acknowledge commenters' concerns regarding the complexities and evolving nature of climate data methodologies, particularly with regard to GHG emissions metrics,<sup>2543</sup> the modifications we have made to the proposed rules should help to mitigate this concern. These modifications include: limiting the scope of the GHG emissions disclosure requirement;<sup>2544</sup> revising several provisions regarding the impacts of climate-related risks on strategy, targets and goals, and climate-related

metrics so that registrants will only be required to provide the disclosures in certain circumstances, such as when material to the registrant;<sup>2545</sup> and providing an additional PSLRA safe harbor for several types of climate-related disclosures.<sup>2546</sup> We also are providing registrants with a transition period based on filer status and the content of the required information to afford registrants additional time to prepare to provide the climate-related disclosures.<sup>2547</sup> For these reasons, we are requiring the climate-related disclosures to be filed rather than furnished.

O. Compliance Date

1. Proposed Rules

The Commission proposed phase in dates for complying with the proposed rules that differed based on a registrant's filing status or status as an SRC.<sup>2548</sup> In proposing the different compliance dates, the Commission recognized that many registrants may require time to establish the necessary systems, controls, and procedures to comply with the proposed climate-related disclosure

requirements. The Commission also indicated that it was appropriate to apply the rules first to LAFs because many LAFs are already collecting and disclosing climate-related information, have already devoted resources to these efforts, and have some levels of controls and processes in place for such disclosure.<sup>2549</sup> In addition, by providing AFs and NAFs with additional time, and SRCs with the greatest amount of time, to prepare for complying with the proposed rules, the Commission sought to provide registrants, especially smaller registrants, with additional time to prepare for the proposed climate-related disclosures.<sup>2550</sup>

The Commission summarized the proposed phase ins for compliance in the following table, which was included in the Proposing Release. The table assumed, for illustrative purposes, that the proposed rules would be adopted with an effective date in December 2022, and that the registrant has a December 31 fiscal year-end. The proposed compliance dates in the table applied to both annual reports and registration statements.

COMPLIANCE DATES UNDER PROPOSED RULES

Registrant type	Disclosure compliance date		Financial statement metrics audit compliance date
	All proposed disclosures, including GHG emissions metrics: Scope 1, Scope 2, and associated intensity metric, but excluding Scope 3	GHG emissions metrics: Scope 3 and associated intensity metric	
LAFs .....	Fiscal year 2023 (filed in 2024) .....	Fiscal year 2024 (filed in 2025) .....	Same as disclosure compliance date.
AFs and NAFs .....	Fiscal year 2024 (filed in 2025) .....	Fiscal year 2025 (filed in 2026).	
SRCs .....	Fiscal year 2025 (filed in 2026) .....	Exempted.	

2. Comments

Many responsive commenters supported different compliance dates based on a registrant's status as an LAF, AF, NAF, or SRC.<sup>2551</sup> Some commenters supported the phase in schedule, as proposed.<sup>2552</sup> One commenter stated that the proposed phase in periods

would give sufficient lead time for registrants to prepare while also not unduly delaying the disclosures for investors.<sup>2553</sup>

Several commenters stated that the proposed phase in schedule would be challenging even for LAFs to meet and that additional time would be needed

for registrants to develop the reporting controls and procedures necessary to prepare disclosures that are high quality and reliable for investors.<sup>2554</sup>

Commenters recommended that the proposed compliance dates be extended by various periods, such as by: one year;<sup>2555</sup> two years;<sup>2556</sup> three years;<sup>2557</sup>

<sup>2543</sup> See *supra* notes 2537 and 2538 and accompanying text.

<sup>2544</sup> See *supra* section II.H.3.

of disclosure in addition to filer status); Northern Trust; NRF; PwC; SKY Harbor; Soros Fund; TotalEnergies; US SIF; and XBRL.

<sup>2552</sup> See, e.g., letters from ISS; SKY Harbor; and TotalEnergies.

<sup>2553</sup> See letter from SKY Harbor.

<sup>2554</sup> See, e.g., letters from Alphabet *et al.*; ConocoPhillips; HP; PwC; RILA; Shearman Sterling; SIFMA; and Williams Cos.

<sup>2555</sup> See, e.g., letters by HP; ICI (recommending extending the compliance date for financial metrics disclosure by at least one year); Microsoft (requesting one-year extension of the compliance date for GHG emissions, financial metrics, and impact disclosures); Nikola; Northern Trust (recommending extending by one year the

compliance date for GHG emissions); PwC (recommending a one year delayed effective date); and Shearman Sterling.

<sup>2556</sup> See, e.g., letters from Alphabet *et al.*; AXPC; KPMG (recommending extending the phase in periods by two-three years); NRF; RILA; SIFMA (recommending two-year extension of the compliance date for Scope 3 emissions disclosure); and US TAG TC207.

<sup>2557</sup> See, e.g., letters from CEMEX (recommending extending the compliance date for Scope 3 emissions disclosure by LAFs by three-five years); SIFMA (recommending three-four year extension for compliance with financial metrics disclosure); and Williams Cos. (recommending three-five year extension for all registrants, including LAFs).

or five years.<sup>2558</sup> Some commenters opposed the proposed compliance dates without specifying what dates would be appropriate.<sup>2559</sup> Other commenters recommended that the Commission shorten the proposed phase in periods.<sup>2560</sup>

3. Final Rules

Similar to the proposed rules, we are adopting delayed and staggered compliance dates for the final rules that vary according to the filing status of the registrant.<sup>2561</sup> We continue to believe that initially applying the disclosure requirements to LAFs is appropriate because many LAFs are already collecting and disclosing climate-related information,<sup>2562</sup> and therefore will have devoted resources to these efforts and have some levels of controls and processes in place for such disclosure. In comparison, registrants that are not LAFs may need more time to develop the systems, controls, and processes necessary to comply with the climate disclosure rules and may face proportionately higher costs. Accordingly, we are providing such registrants additional time to comply,

with SRCs, EGCs, and NAFs receiving the longest phase in period. Although we recognize that some SRCs and EGCs may technically be classified as AFs, such registrants may face the same difficulties as other SRCs and EGCs in complying with the final rules, and accordingly, the extended compliance date applies to them based on their status as SRCs or EGCs.

To address the concerns of many commenters that the proposed compliance schedule was too challenging even for LAFs to meet, we are providing an extended and phased in compliance period for each type of registrant and for certain types of disclosures. For example, we are providing a further phased in compliance date for registrants that may be required to disclose their Scopes 1 and 2 emissions that differs from the proposed compliance schedule, which would have required registrants to provide those emissions disclosures by the same deadline as for the other climate disclosures. This will help address the concern of commenters that additional time is required for registrants, including many LAFs, to

enhance or implement new policies, processes, controls, and system solutions in order to provide the GHG emissions disclosures if required. We are also providing a further phased-in compliance date for the requirements to provide quantitative and qualitative disclosures about material expenditures and material impacts to financial estimates and assumptions required by Item 1502(d)(2), Item 1502(e)(2), and Item 1504(c)(2) until the fiscal year immediately following the fiscal year of the registrant's initial compliance date for subpart 1500 disclosures based on its filer status, for the reasons discussed above.<sup>2563</sup>

The following table summarizes the phased in compliance dates of the final rules, both for subpart 1500 of Regulation S–K and Article 14 of Regulation S–X. The compliance dates in the table apply to both annual reports and registration statements; in the case of registration statements, compliance would be required beginning in any registration statement that is required to include financial information for the full fiscal year indicated in the table.

COMPLIANCE DATES UNDER THE FINAL RULES <sup>1</sup>

Registrant type	Disclosure and financial statement effects audit		GHG emissions/assurance			Electronic tagging
	<i>All Reg. S–K and S–X disclosures, other than as noted in this table</i>	<i>Item 1502(d)(2), Item 1502(e)(2), and Item 1504(c)(2)</i>	<i>Item 1505 (Scopes 1 and 2 GHG emissions)</i>	<i>Item 1506— Limited assurance</i>	<i>Item 1506— Reasonable assurance</i>	<i>Item 1508—Inline XBRL tagging for subpart 1500<sup>2</sup></i>
LAFs .....	FYB 2025 .....	FYB 2026 .....	FYB 2026 .....	FYB 2029 .....	FYB 2033 .....	FYB 2026.
AFs (other than SRCs and EGCs) .....	FYB 2026 .....	FYB 2027 .....	FYB 2028 .....	FYB 2031 .....	N/A .....	FYB 2026.
SRCs, EGCs, and NAFs .....	FYB 2027 .....	FYB 2028 .....	N/A .....	N/A .....	N/A .....	FYB 2027.

<sup>1</sup> As used in this chart, “FYB” refers to any fiscal year beginning in the calendar year listed.

<sup>2</sup> Financial statement disclosures under Article 14 will be required to be tagged in accordance with existing rules pertaining to the tagging of financial statements. See Rule 405(b)(1)(i) of Regulation S–T.

For example, an LAF with a January 1 fiscal-year start and a December 31 fiscal year-end date will not be required to comply with the climate disclosure rules (other than those pertaining to GHG emissions and those related to Item 1502(d)(2), Item 1502(e)(2), and Item 1504(c)(2), if applicable) until its Form 10–K for fiscal year ended December 31, 2025, due in March 2026. If required to disclose its Scopes 1 and/ or 2 emissions, such a filer will not be required to disclose those emissions

until its Form 10–K for fiscal year ended December 31, 2026, due in March 2027, or in a registration statement that is required to include financial information for fiscal year 2026. Such emissions disclosures would not be subject to the requirement to obtain limited assurance until its Form 10–K for fiscal year ended December 31, 2029, due in March 2030, or in a registration statement that is required to include financial information for fiscal year 2029. The registrant would be required

to obtain reasonable assurance over such emissions disclosure beginning with its Form 10–K for fiscal year ended December 31, 2033, due in March 2034, or in a registration statement that is required to include financial information for fiscal year 2033. If required to make disclosures pursuant to Item 1502(d)(2), Item 1502(e)(2), or Item 1504(c)(2), such a filer will not be required to make such disclosures until its Form 10–K for fiscal year ended December 31, 2026, due in March 2027,

<sup>2558</sup> See, e.g., letters from API; and ConocoPhillips (recommending extending the compliance date for Scopes 1 and 2 emissions disclosures to at least five years from date of adoption).

<sup>2559</sup> See, e.g., letters from AGCA; Crowe LLP (June 16, 2022) (“Crowe”) (recommending extending the phase in periods for GHG emissions and financial metrics disclosures); Eni SpA (recommending a phase in for financial metrics disclosure); IADC; and Nasdaq.

<sup>2560</sup> See, e.g., letters from AGs of Cal. *et al.* (recommending shortening the phase in period for all registrants other than LAFs by one year); CalSTRS (recommending setting the phase in periods to the earliest possible dates); and Ceres (recommending moving up disclosure proposed to be required for fiscal year 2025 by one year).

<sup>2561</sup> For the avoidance of doubt, notwithstanding the fact that we generally use the term “registrant” in this section, the compliance dates discussed herein also apply to the information required to be

provided pursuant to new General Instruction C.3 of Forms S–4 and F–4 with respect to a company being acquired.

<sup>2562</sup> See *infra* section IV.A.5. See also, e.g., letters from Amazon; Dell; and Microsoft.

<sup>2563</sup> See *supra* sections II.D.1.c, II.D.2.c, and II.G.3.a.

or in a registration statement that is required to include financial information for fiscal year 2026.

As another example, an AF that is not an SRC or EGC with a January 1 fiscal-year start and December 31 fiscal year-end date will not be required to comply with the climate disclosure rules (other than those pertaining to GHG emissions and those related to Item 1502(d)(2), Item 1502(e)(2), and Item 1504(c)(2), if applicable) until its Form 10-K for the fiscal-year ending December 31, 2026, due in March 2027. If required to disclose its Scopes 1 and 2 emissions, such a filer will not be required to disclose those emissions until its Form 10-K for fiscal year ending December 31, 2028, due in March 2029, or in a registration statement that is required to include financial information for fiscal year 2028, and it would not be required to obtain limited assurance over such disclosure until its Form 10-K for fiscal year ending December 31, 2031, due in March 2032, or in a registration statement that is required to include financial information for fiscal year 2031. If required to make disclosures pursuant to Item 1502(d)(2), Item 1502(e)(2), or Item 1504(c)(2), such a filer will not be required to make such disclosures until its Form 10-K for fiscal year ended December 31, 2027, due in March 2028, or in a registration statement that is required to include financial information for fiscal year 2027.

We are adopting a separate compliance date for the structured data (electronic tagging) requirements of the final rules that is one year following the earliest compliance date (which applies to LAFs) under the final rules.<sup>2564</sup> We are adopting a later compliance date for the structured data requirements to improve the quality of the structured data, as discussed above.<sup>2565</sup> Accordingly, LAFs will not be required to comply with the structured data requirements when first complying with the climate disclosure rules in subpart 1500 required in 2025 but will be required to do so when complying with the climate disclosure rules in subpart 1500 for fiscal year 2026; tagging of disclosures provided in response to Item 1502(d)(2), Item 1502(e)(2), Item 1504(c)(2), Item 1505, and Item 1506 will be required at the time of initial

<sup>2564</sup> We note that the final rules do not alter the requirements for registrants to tag their financial statement disclosures in Inline XBRL. Accordingly, financial statement disclosures provided pursuant to new Article 14 of Regulation S-X will be required to be tagged in accordance with those requirements at the time they are first required. See Rule 405(b)(1)(i) of Regulation S-T.

<sup>2565</sup> See discussion *supra* at section ILM.3.

compliance with these provisions. AFs (other than SRCS and EGCs) will be required to comply with the structured data requirements when first complying with the relevant provisions of subpart 1500 for the fiscal year that begins in 2026. Similarly, SRCs, EGCs, and NAFs will be required to comply with the structured data requirements when first complying with the climate disclosure rules for the fiscal year that begins in 2027. For these non-LAF registrants, we are not adopting a later compliance date for the structured data requirements because we are adopting later compliance dates regarding the final rules overall for these registrants, which will provide them with additional time to meet the final rules' structured data requirements.

### III. Other Matters

The Commission considers the provisions of the final rules to be severable to the fullest extent permitted by law. "If parts of a regulation are invalid and other parts are not," courts "set aside only the invalid parts unless the remaining ones cannot operate by themselves or unless the agency manifests an intent for the entire package to rise or fall together." *Bd. of Cnty. Commissioners of Weld Cnty. v. EPA*, 72 F.4th 284, 296 (D.C. Cir. 2023); see *K Mart Corp. v. Cartier, Inc.*, 486 U.S. 281, 294 (1988). "In such an inquiry, the presumption is always in favor of severability." *Cnty. for Creative Non-Violence v. Turner*, 893 F.2d 1387, 1394 (D.C. Cir. 1990). Consistent with these principles, while the Commission believes that all provisions of the final rules are fully consistent with governing law, if any of the provisions of these rules, or the application thereof to any person or circumstance, is held to be invalid, the Commission intends that such invalidity shall not affect other provisions or application of such provisions to other persons or circumstances that can be given effect without the invalid provision or application. For instance, but without limitation, each of the following portions of the final rules serves distinct but related purposes and is capable of operating independently: (1) climate-related risk disclosures, (2) targets and goals disclosures, (3) GHG emissions disclosures and assurance, and (4) Article 14 financial statement disclosures. Moreover, many of the required disclosure items in the final rules operate independently in that not all registrants are required to provide each of the required disclosures, and some disclosures will only be provided to the extent applicable. For example, disclosures related to a registrant's use

of transition plans, scenario analysis, or internal carbon prices would depend upon a registrant's activities, if any, to mitigate or adapt to material climate-related risks. Similarly, governance disclosures would only be required to the extent that a registrant has information responsive to the disclosure requirements. In addition, the GHG emissions disclosure requirements will apply only with respect to LAFs and AFs (other than SRCs and EGCs). Thus, while the final rules are each intended to improve the overall consistency, comparability, and reliability of climate-related disclosures as discussed throughout this release, the invalidity of any particular disclosure requirement would not undermine the operability or usefulness of other aspects of the final rules.

Pursuant to the Congressional Review Act,<sup>2566</sup> the Office of Information and Regulatory Affairs has designated these rules a "major rule," as defined by 5 U.S.C. 804(2).

### IV. Economic Analysis

We are mindful of the economic effects that may result from the final rules, including the benefits, costs, and the effects on efficiency, competition, and capital formation.<sup>2567</sup> This section analyzes the expected economic effects of the final rules relative to the current baseline, which consists of the regulatory framework of disclosure requirements in existence today, the current disclosure practices of registrants, and the use of such disclosures by investors and other market participants. Where possible, we have attempted to quantify these economic effects. In many cases, however, we are unable to reliably quantify the potential benefits and costs of the final rules because we lack information necessary to provide a reasonable estimate. For example, existing empirical evidence does not allow us to reliably quantify how enhancements in climate-related disclosure may improve information processing by investors, or company

<sup>2566</sup> 5 U.S.C. 801 *et seq.*

<sup>2567</sup> Section 2(b) of the Securities Act, 15 U.S.C. 77b(b), and section 3(f) of the Exchange Act, 17 U.S.C. 78c(f), require the Commission, when engaging in rulemaking where it is required to consider or determine whether an action is necessary or appropriate in the public interest, to consider, in addition to the protection of investors, whether the action will promote efficiency, competition, and capital formation. Further, section 23(a)(2) of the Exchange Act, 17 U.S.C. 78w(a)(2), requires the Commission, when making rules under the Exchange Act, to consider the impact that the rules would have on competition, and prohibits the Commission from adopting any rules that would impose a burden on competition not necessary or appropriate in furtherance of the Exchange Act.

monitoring of climate-related risks. Where quantification of the economic effects of the final rules is not practical or possible, we provide a qualitative assessment of the effects.

The final rules will provide investors with more consistent, comparable, and reliable disclosures with respect to registrants' climate-related risks that have materially impacted, or are reasonably likely to have a material impact on, the registrant's business strategy, results of operations, or financial condition, the governance and management of such risks, and the financial statement effects of severe weather events and other natural conditions, which will enable investors to make more informed investment and voting decisions.<sup>2568</sup> Many investors have expressed concern that the current landscape of primarily voluntary climate-related disclosures is inadequate.<sup>2569</sup> By requiring registrants to provide climate-related information in a more standardized format in Commission filings, the final rules will mitigate the challenges that investors currently confront in obtaining consistent, comparable, and reliable information, assessing the nature and extent of the climate-related risks faced by registrants and their impact on registrants' business operations and financial condition, and making comparisons across registrants. Further, a mandatory disclosure regime will generally provide investors with access to climate-related disclosures on a more timely and regular basis than a voluntary disclosure regime.<sup>2570</sup> As a result, the final rules will reduce information asymmetry between investors and registrants, which can

reduce investors' uncertainty about estimated future cash flows. This effect contributes to a lowering of the risk premium that investors demand and therefore registrants' cost of capital. The final rules will also reduce information asymmetry among investors by narrowing the informational gap between informed and uninformed traders, which can reduce adverse selection problems and improve stock liquidity.<sup>2571</sup> Further, by enabling climate-related information to be more fully incorporated into securities prices, the final rules will allow climate-related investment risks to be borne by those investors who are most willing and able to bear them. Taken together, the final rules are expected to promote investor protection, the efficient allocation of capital, and, for some registrants, capital formation.<sup>2572</sup>

We recognize that the final rules will impose additional costs on registrants, investors, and other parties. Registrants will face increased compliance burdens, with the extent of these burdens varying based on a registrant's filer status, existing climate-related disclosure practices (if any), and other characteristics. For example, additional compliance burdens could be significant for registrants that are not already collecting climate-related information and providing climate-related disclosures. In other cases, the compliance burden could be more modest, such as for registrants that are already collecting climate-related information and providing information similar to what is required by the rules we are adopting. Additionally, the requirements will pose a comparatively smaller compliance burden for those registrants that do not have material climate-related risks. Other potential costs for registrants include increased litigation risk and the potential disclosure of proprietary information about a registrant's operations, business, and/or production processes.<sup>2573</sup> Beyond registrants, certain third parties, such as market participants, customers, and suppliers, could face reduced demand for their services or higher prices for their inputs as a result of the final rules' required disclosures.

#### A. Baseline and Affected Parties

The baseline against which the costs, benefits, and the effects on efficiency, competition, and capital formation of the final rules are measured consists of current requirements for climate-related disclosures and current market practice

as it relates to such disclosures. The economic analysis considers existing regulatory requirements, including recently adopted rules, as part of its economic baseline against which the benefits and costs of the final rules are measured.<sup>2574</sup>

One commenter stated that our analysis should account for the “[s]taggering aggregate costs and unprecedented operational challenges” of recently proposed rules in three categories, including “[c]orporate governance.”<sup>2575</sup> Another commenter identified two specific rules with which these final amendments could “interact in obvious or non-obvious ways that raise costs for businesses.”<sup>2576</sup> Implementation of one of these, adopted in the Cybersecurity Disclosures Adopting Release,<sup>2577</sup> could involve the

<sup>2574</sup> See, e.g., *Nasdaq v. SEC*, 34 F.4th 1105, 1111–15 (D.C. Cir. 2022). This approach also follows Commission staff guidance on economic analysis for rulemaking. See SEC Staff, *Current Guidance on Economic Analysis in SEC Rulemaking* (Mar. 16, 2012), available at [https://www.sec.gov/divisions/riskfin/rsfi\\_guidance\\_econ\\_analy\\_secrulemaking.pdf](https://www.sec.gov/divisions/riskfin/rsfi_guidance_econ_analy_secrulemaking.pdf) (“SEC Guidance on Economic Analysis (2012)”) (“The economic consequences of proposed rules (potential costs and benefits including effects on efficiency, competition, and capital formation) should be measured against a baseline, which is the best assessment of how the world would look in the absence of the proposed action.”); see *id.* (“The baseline includes both the economic attributes of the relevant market and the existing regulatory structure.”). The best assessment of how the world would look in the absence of the proposed or final action typically does not include recently proposed actions, because that would improperly assume the adoption of those proposed actions.

<sup>2575</sup> See letter from Member of the U.S. House of Representatives Patrick McHenry and 28 other House Members (Sept. 26, 2023). Although the commenter did not identify specific rules that should be considered as part of this analysis, we considered the “corporate governance” category noted by the commenter (because the final rules include disclosure provisions related to governance of climate-related risks) and identified *Cybersecurity Risk Management, Strategy, Governance, and Incident Disclosure*, *supra* note 2486 (“Cybersecurity Disclosures Adopting Release”) as a rule with potentially overlapping implementation costs (discussed *infra* note 2577 and accompanying text).

<sup>2576</sup> See Overdahl exhibit to letter from Chamber (citing Mandel and Carew (2013)). In addition to the Cybersecurity Disclosures Adopting Release, discussed *infra*, this commenter identified *Share Repurchase Disclosure Modernization*, Release Nos. 34–97424, IC–34906 (May 3, 2023) [88 FR 36002 (June 1, 2023)]. That rule was vacated by the U.S. Court of Appeals for the Fifth Circuit in December 2023. See Chamber of Com. of the U.S. v. SEC, 88 F.4th 1115 (Dec. 19, 2023).

<sup>2577</sup> See Cybersecurity Disclosures Adopting Release. The Cybersecurity Disclosures Adopting Release requires current disclosure about material cybersecurity incidents, and periodic disclosures about a registrant's processes to assess, identify, and manage material cybersecurity risks, management's role in assessing and managing material cybersecurity risks, and the board of directors' oversight of cybersecurity risks. For a full discussion of compliance dates for these amendments, see *id.* at section III.

<sup>2568</sup> See *infra* section IV.C.1.

<sup>2569</sup> See *infra* section IV.B.

<sup>2570</sup> As industry observers have noted, many companies do not disclose their climate and other sustainability data until more than 12 months after the end of their fiscal year. See, e.g., Corporate Knights, *Measuring Sustainability Disclosure* (2019), available at [https://www.corporateknights.com/wp-content/uploads/2021/08/CK\\_StockExchangeRanking\\_2020.pdf](https://www.corporateknights.com/wp-content/uploads/2021/08/CK_StockExchangeRanking_2020.pdf). See letter from Morningstar (stating that “Currently, a lack of clear disclosure standards for the timing of ‘sustainability reports,’ which is the primary source for emissions data, greatly hinders investor knowledge. For example, some registrants released 2021 reports—detailing 2020 data—as late as November 2021.”); see also letters from Miller/Howard (stating that requiring disclosure in filings with the Commission will provide users with confidence that they are receiving the “most recent” climate-related information); and Calvert (stating that “57% of 2,207 companies disclosed their Scope 1 and 2 emissions with a one or two year delay.”). Furthermore, a voluntary regime may allow registrants to provide disclosures at irregular or multi-year intervals. In contrast, the final rules will generally require disclosures on an annual basis, which will allow investors to make better comparisons across time.

<sup>2571</sup> See Corporate Knights, *supra* note 2570.

<sup>2572</sup> See *infra* section IV.D.

<sup>2573</sup> See *infra* section IV.C.2.

same staff and resources as implementation of the final climate disclosure rules. However, we expect minimal overlap in the implementation periods of the two rules because the only remaining compliance dates for the rules adopted in the Cybersecurity Disclosures Adopting Release are for cybersecurity incident disclosure by smaller reporting companies by June 15, 2024, structured data requirements for Form 8-K and Form 6-K disclosures by December 18, 2024, and structured data requirements for Item 106 of Regulation S-K and Item 16K of Form 20-F disclosures beginning with annual reports for fiscal years ending on or after December 15, 2024. By contrast, the earliest compliance date for these final rules covers activities occurring in fiscal year 2025.

This section describes the current regulatory and economic landscape with respect to climate-related disclosures. It discusses the parties likely to be affected by the final rules, current trends in registrants' voluntary reporting on climate risks, related assurance practices, and existing mandatory disclosure rules under state and other Federal laws as well as from other jurisdictions in which registrants may operate.

### 1. Affected Parties

The disclosure requirements being adopted in this release will apply to Securities Act and Exchange Act registration statements as well as Exchange Act annual and quarterly reports. Thus, the parties that are likely to be affected by the final rules include: registrants subject to the disclosure requirements imposed by these forms, as detailed below; consumers of the climate-related risk information, such as investors, analysts, and other market participants; and third-party service providers who may collect and process this information, including assurance providers and ratings providers.

The final rules will affect both domestic registrants and foreign private issuers, but will not apply to Canadian registrants that use the MJDS and file their Exchange Act registration statements and annual reports on Form 40-F.<sup>2578</sup> We estimate that during

<sup>2578</sup> The number of domestic registrants and foreign private issuers affected by the final rules is estimated as the number of companies, identified by Central Index Key ("CIK"), that filed a unique Form 10-K or Form 20-F during calendar year 2022, excluding asset-backed securities issuers. For the purposes of this economic analysis, these estimates do not include registrants that did not file a unique annual report. This approach avoids including entities whose reporting obligation would be satisfied by a parent or other company, such as co-issuers of debt securities or guarantors, or who

calendar year 2022, excluding registered investment companies, there were approximately 6,870 registrants that filed on domestic forms,<sup>2579</sup> and approximately 920 foreign private issuers that filed on Form 20-F. Among domestic registrants, approximately 34 percent were LAFs, 10 percent were AFs, and 56 percent were NAFs. In addition, we estimate that approximately 57 percent of domestic registrants and 37 percent of foreign private issuers were either SRCs, EGCs, or both.

The final rules will require disclosures in registered offerings, except with respect to business combination transactions involving a company not subject to the reporting requirements of Section 13(a) or 15(d) of the Exchange Act. In many cases, registrants will be able to meet these requirements by incorporating by reference from their periodic reports. Registrants that have not previously filed periodic reports, such as companies conducting IPOs, will not have previously filed such reports to incorporate by reference. In 2022, there were approximately 390 such companies that conducted registered offerings on Form S-1 or F-1.<sup>2580</sup>

### 2. Current Commission Disclosure Requirements

As discussed above and in the Proposing Release, existing disclosure

otherwise have a suspended reporting obligation. The estimates for the percentages of SRCs, EGCs, AFs, LAFs, and NAFs are based on data obtained by Commission staff using a computer program that analyzes SEC filings, with supplemental data from Ives Group Audit Analytics and manual review of filings by Commission staff. Because this manual review takes a substantial amount of time, the Commission staff performs this process at the end of each calendar year rather than at the end of each quarter. Data for the 2023 filings is not yet available and fully reviewed, so the release includes 2022 numbers. Additionally, there are no 2023 updates for several sections of the baseline (such as those that rely on data or reports from third parties that have not completed their reviews of 2023), so the release includes 2022 data to provide for comparability across the release.

<sup>2579</sup> This number includes approximately 50 foreign private issuers that filed on domestic forms in 2022, approximately 120 BDCs, and 300 REITs.

<sup>2580</sup> This estimate was calculated by searching EDGAR for all registrants who filed a Form S-1 or F-1 in the year 2022. If multiple registration statements were filed in 2022 by the same registrant, the earliest was used. This list of registrants was then compared to a list of periodic reports (Forms 10-K, 10-Q, 20-F, 8-K) in EDGAR dating back to 2015. Approximately 390 registrants filed registration statements in 2022 that had not previously filed a Form 10-K, 10-Q, 20-F, or 8-K. Of those, approximately 180 did not subsequently file a Form 10-K, 10-Q, 20-F, or 8-K in 2022 or 2023, for example by operation of 17 CFR 240.12h-5 or 12hndash;7, indicating that they may incur lower or no cost of ongoing compliance because they are exempt from ongoing Exchange Act reporting obligations.

requirements may, depending on circumstance, require the disclosure of climate-related risk.<sup>2581</sup> The 2010 Guidance describes how the Commission's existing disclosure requirements can encompass climate-related risk.<sup>2582</sup> The 2010 Guidance emphasized that certain existing disclosure requirements in Regulation S-K and Regulation S-X may require disclosure related to climate change. With respect to the most pertinent non-financial statement disclosure rules, the Commission noted that: Item 101 (Description of Business) expressly requires disclosure regarding certain costs of compliance with environmental laws;<sup>2583</sup> Item 103 (Legal Proceedings) requires disclosure regarding any material pending legal proceeding to which a registrant or any of its subsidiaries is a party; Item 105 (Risk Factors) requires disclosure regarding the most significant factors that would make an investment in the registrant speculative;<sup>2584</sup> and Item 303 (MD&A) of Regulation S-K requires material historical and prospective narrative disclosure enabling investors to assess the financial condition and results of

<sup>2581</sup> See discussion *supra* section I.A.; Proposing Release sections I.A., IV.A.2; see also *supra* section II.B. for discussion of the historical evolution of Commission rules requiring registrant disclosure. The Commission considers the current disclosure of climate risk-related information as part of the baseline against which the benefits and costs of the final rules are measured. We disagree with the commenter who said that the baseline discussion in the Proposing Release was "in effect suggesting that anything climate-related should be presumed to be material." (Overdahl exhibit to letter from Chamber). The baseline includes both the required disclosure of material information under Commission regulation, as well as requirements under other laws that may apply to registrants, and current market practices which may include voluntary disclosures. See also section IV.F.1. discussing the benefits and costs of a principles-based approach.

<sup>2582</sup> For an overview of how climate change issues may be required to be disclosed under existing rules, primarily Regulation S-K and Regulation S-X, see 2010 Guidance, section III.

<sup>2583</sup> Item 101 of Regulation S-K was amended in 2019. See Release No. 33-10618. When the 2010 Guidance was issued, Item 101(c)(1)(xii) required disclosure "as to the material effects that compliance with Federal, state and local provisions which have been enacted or adopted regulating the discharge of materials into the environment, or otherwise relating to the protection of the environment, may have upon the capital expenditures, earnings and competitive position of the registrant and its subsidiaries. The registrant shall disclose any material estimated capital expenditures for environmental control facilities for the remainder of its current fiscal year and its succeeding fiscal year and for such further periods as the registrant may deem material."

<sup>2584</sup> Risk Factors disclosure was required by Item 503(c) of Regulation S-K at the time of the 2010 Guidance. It was moved to Item 105 of Regulation S-K in 2019. See Release No. 33-10618.

operations of a registrant.<sup>2585</sup> While these provisions elicit some decision-useful climate-related disclosure,<sup>2586</sup> they have not resulted in consistent and comparable information about the actual and potential material impacts of climate-related risks on a registrant's business or financial condition, which many investors have increasingly stated that they need in order to make informed investment and voting decisions.<sup>2587</sup>

### 3. Existing State and Other Federal Laws

Existing state and other Federal laws require certain climate-related disclosures or reporting. For instance, within the insurance industry there are requirements for mandatory climate risk disclosure for any domestic insurers that write more than \$100 million in annual net written premium.<sup>2588</sup> As of 2022, 14 states<sup>2589</sup> and the District of Columbia require these domestic insurers to disclose their climate-related risk assessment and strategy via the NAIC Climate Risk Disclosure Survey, which the NAIC revised in 2022 to align with the TCFD framework.<sup>2590</sup> Survey question topics include climate risk

<sup>2585</sup> The 2010 Guidance also discusses corollary provisions applicable to foreign private issuers not filing on domestic forms and states that, in addition to the Regulation S-K items discussed therein, registrants must also consider any financial statement implications of climate-related matters in accordance with applicable accounting standards, including FASB ASC Topic 450, Contingencies, and FASB ASC Topic 275, Risks and Uncertainties. Finally, the 2010 Guidance noted the applicability of Securities Act Rule 408 and Exchange Act Rule 12b-20, which require a registrant to disclose, in addition to the information expressly required by Commission regulation, "such further material information, if any, as may be necessary to make the required statements, in light of the circumstances under which they are made, not misleading."

<sup>2586</sup> See, e.g., Jeong-Bon Kim, Chong Wang & Feng Wu, *The Real Effects of Risk Disclosures: Evidence from Climate Change Reporting in 10-Ks*, 28 Rev. Acct. Stud. 2271 (2023) (finding that the 2010 Guidance resulted in a large increase in the number of firms providing climate-related disclosures).

<sup>2587</sup> See *supra* section I.A.

<sup>2588</sup> "Net written premium" is defined as the premiums written by an insurance company, minus premiums paid to reinsurance companies, plus any reinsurance assumed.

<sup>2589</sup> The 14 states are California, Connecticut, Delaware, Maine, Maryland, Massachusetts, Minnesota, New Mexico, New York, Oregon, Pennsylvania, Rhode Island, Vermont, and Washington. Colorado enacted legislation requiring insurers to participate beginning in 2024. Co. Rev. Stat. 10-3-244 (enacted May 11, 2023).

<sup>2590</sup> NAIC News Release, *U.S. Insurance Commissioners Endorse Internationally Recognized Climate Risk Disclosure Standard for Insurance Companies* (Apr. 8, 2022), available at <https://content.naic.org/article/us-insurance-commissioners-endorse-internationally-recognized-climate-risk-disclosure-standard>; NAIC, *Redesigned State Climate Risk Disclosure Survey* (adopted Apr. 6, 2022), available at <https://www.insurance.ca.gov/0250-insurers/0300-insurers/0100-applications/ClimateSurvey/upload/2022RevisedStateClimateRiskSurvey.pdf>.

governance, climate risk management, and modeling. For reporting year 2021, 62 registrants provided climate risk disclosures in response to the NAIC survey.<sup>2591</sup> For reporting year 2022, insurers were allowed to submit a completed TCFD report or a survey response: 96 registrants provided either a TCFD report or a survey response.<sup>2592</sup>

Federal and state reporting requirements related to GHG emissions also exist. At the Federal level, the GHGRP requires that each facility that directly emits more than 25,000 metric tons of CO<sub>2</sub>e per year report these direct emissions to the EPA.<sup>2593</sup> Additionally, facilities that supply certain products that would result in over 25,000 metric tons of CO<sub>2</sub>e per year if those products were released, combusted, or oxidized must similarly report these "supplied" emissions to the EPA.<sup>2594</sup> The resulting emissions data are then made public

<sup>2591</sup> This estimate is based on 20-F and 10-K filings in calendar year 2021 and 2021 NAIC survey results available at [https://interactive.web.insurance.ca.gov/apex\\_extprd/f?p=201:1](https://interactive.web.insurance.ca.gov/apex_extprd/f?p=201:1) (last visited Jan. 16, 2024). See *supra* note 2578 for more information on how the Commission staff estimated the number of registrants.

<sup>2592</sup> This estimate is based on 20-F and 10-K filings in calendar year 2022, and 2022 NAIC survey results, available at [https://interactive.web.insurance.ca.gov/apex\\_extprd/f?p=201:1](https://interactive.web.insurance.ca.gov/apex_extprd/f?p=201:1) (last visited Jan. 16, 2024).

<sup>2593</sup> See 40 CFR part 98 (2022); see also EPA Fact Sheet. The EPA's emissions data does not include emissions from agriculture, land use, or direct emissions from sources that have annual emissions of less than 25,000 metric tons of CO<sub>2</sub>e per year. See also letter from EPA (describing differences between the GHGRP and the SEC's proposed rule and noting the "Clean Air Act authority for reporting and the purpose of the GHGRP are distinct from those of the SEC's proposed rule.")

<sup>2594</sup> See EPA Fact Sheet; see also EPA, *Learn About the Greenhouse Gas Reporting Program (GHGRP)*, available at <https://www.epa.gov/ghgreporting/learn-about-greenhouse-gas-reporting-program-ghgrp> (Updated June 20, 2023). According to the EPA, "direct emitters" are facilities that combust fuels or otherwise put GHGs into the atmosphere directly from their facility. See EPA, *Greenhouse Gas Search User Guide*, available at <https://www.epa.gov/enviro/greenhouse-gas-search-user-guide> (Updated Jan. 17, 2024). An example of a direct emitter is a power plant that burns coal or natural gas and emits CO<sub>2</sub> directly into the atmosphere. *Id.* "Suppliers" are those entities that supply products into the economy which if combusted, released, or oxidized emit GHGs into the atmosphere. *Id.* An example of a supplier is a gasoline importer or distributor, which sells gasoline in the U.S. that is burned in cars throughout the country. *Id.* While the GHGRP does not represent the total GHG emissions in the U.S., it is the only dataset containing facility-level data for large sources of direct emissions, thus including the majority of U.S. GHG emissions. See EPA, *2022 GHGRP Overview Report*, available at <https://www.epa.gov/system/files/documents/2023-10/ghgrp-2022-overview-profile.pdf>. The EPA estimates that the GHGRP data reported by direct emitters covers about half of all U.S. emissions. *Id.* When including the greenhouse gas information reported by suppliers to the GHGRP, emissions coverage reaches approximately 85–90% of U.S. GHG emissions. *Id.*

through the EPA's website. The EPA estimates that the reporting required under the GHGRP covers 85 to 90 percent of all GHG emissions from over 8,000 facilities in the United States,<sup>2595</sup> and we estimate that approximately 365 registrants had an ownership stake in facilities that reported to the GHGRP in 2022.<sup>2596</sup> Gases that must be reported under the GHGRP include all those referenced by the GHG Protocol, which are also included within these final rules' definition of "greenhouse gases."<sup>2597</sup>

In light of the existence of the GHGRP, some commenters questioned the need for the proposed rules.<sup>2598</sup> One commenter stated "[t]he natural question is why the SEC feels compelled to require its own GHG emissions disclosures when the EPA already has a public reporting program that covers 85 to 90 percent of all GHG emissions from over 8,000 facilities in the United States."<sup>2599</sup> While we acknowledge that the GHGRP and the final rules both address reporting of GHGs, there are distinct and significant differences between both the goals and requirements of the GHGRP and the final rules. As the EPA noted in its comment letter: "[T]he GHGRP . . . informs the development of greenhouse gas policies and programs under the Clean Air Act, and serves as an important tool for the Agency and the public to understand greenhouse gas emissions from facilities covered by the GHGRP nationwide. This is distinct from the purposes of the SEC's Proposed

<sup>2595</sup> See EPA Fact Sheet.

<sup>2596</sup> This estimate is based on parent company data provided by the EPA (*GHGRP Reported Data* (2022), *supra* note 2594), as well as registrant data gathered by Commission staff from Commission filings. Parent companies from the GHGRP reporting data were matched to registrants based on company name using Levenshtein Distance, as well as the reported city and state of the parent company. Matches were then manually reviewed by Commission staff.

<sup>2597</sup> The EPA also requires reporting on some gases (e.g., fluorinated ethers, perfluoropolyether) that are considered optional under the GHG Protocol and that are not included within this final rules' definition of "greenhouse gases."

<sup>2598</sup> See letter from Andrew N. Vollmer (May 9, 2022); see also letters from D. Burton; Heritage Fdn. ("The very limited increase in actual information that will be achieved by the proposed rule will make virtually no difference. And, if it is thought that it will, by far the most efficient and effective means of increasing the information available would be to amend the EPA rules"); and ConocoPhillips ("We believe GHG disclosure regimes established by the EPA and regulators in other jurisdictions with broad existing GHG emissions coverage should form the basis of GHG emissions disclosure and do not believe additional and duplicative Scope 1 and 2 emissions disclosures will be useful or material to investors in many instances.")

<sup>2599</sup> See letter from Andrew N. Vollmer (May 9, 2022).

Rules, which are intended to enhance and standardize climate-related disclosures to address investor needs and help issuers more efficiently and effectively disclose climate-related risks, benefitting both investors and issuers.”<sup>2600</sup> In addition to the difference in goals, there are several significant differences in the requirements between the GHGRP and the final rules. First, the entities required to report under the EPA regime may differ from the entities required to report under the final rules.<sup>2601</sup> Second, the EPA requires emissions reporting only for U.S. facilities, while the final rules are not limited to U.S. facilities. Third, the EPA emissions data do not allow a precise disaggregation across the different scopes of emissions for a given registrant. In particular, the EPA requires reporting of facility-level direct emissions, which may be a subset of the relevant registrant’s Scope 1 emissions. Finally, the EPA does not require reporting of Scope 2 emissions.<sup>2602</sup>

Many state laws also impose specific GHG emissions reporting requirements.<sup>2603</sup> States’ rules vary with respect to reporting thresholds and emissions calculation methodologies, but most tend to focus on direct emissions, with certain exceptions. For example, in New York, any owner or operator of a facility that is a “major source” must report its annual actual emissions of certain air contaminants to the New York State Department of Environmental Conservation.<sup>2604</sup> Colorado requires GHG-emitting entities to report their emissions to the state in support of Colorado’s GHG inventory and reduction efforts.<sup>2605</sup> California and Washington require annual reporting of GHG emissions by industrial sources

that emit more than 10,000 metric tons of CO<sub>2</sub>e, transportation and natural gas fuel suppliers, and electricity importers.<sup>2606</sup>

California also recently enacted two laws requiring additional climate-related disclosures and reporting for certain companies doing business in the state.<sup>2607</sup> The Climate Corporate Data Accountability Act (Senate Bill 253), which will require companies making over \$1 billion in gross annual revenue to disclose their GHG emissions to the state on an annual basis and to obtain independent third-party assurance over such disclosures,<sup>2608</sup> is expected to apply to an estimated 5,300 companies doing business in the state.<sup>2609</sup> The Climate-Related Financial Risk Act (Senate Bill 261),<sup>2610</sup> which will require companies with total annual revenue above \$500 million to publish a biennial report on the company’s website disclosing such company’s climate-related financial risk in accordance with the TCFD framework or a comparable disclosure regime,<sup>2611</sup> and describing

what measures have been adopted to reduce and adapt to such risk, is expected to apply to an estimated 10,000 companies doing business in the state.<sup>2612</sup> Companies subject to the Climate Corporate Data Accountability Act will be required to disclose their Scope 1 and Scope 2 emissions beginning in 2026 and their Scope 3 emissions beginning in 2027.<sup>2613</sup> Companies subject to the Climate-Related Financial Risk Act will be required to begin reporting their climate-related financial risks and measures in 2026.<sup>2614</sup> We estimate that approximately 1,980 Commission registrants meet the \$1 billion revenue threshold for Climate Corporate Data Accountability Act and approximately 2,520 Commission registrants meet the \$500 million revenue threshold for the Climate-Related Financial Risk Act.<sup>2615</sup>

As a result of these Federal- and state-level climate-related disclosure and reporting requirements, some registrants subject to the final rules may already have in place, or may be developing, certain processes and systems to track and disclose aspects of their climate-related risks.

#### 4. International Disclosure Requirements

Issuers that are listed or operate in jurisdictions outside the United States may also be subject to those jurisdictions’ disclosure and reporting requirements. As discussed in section I.B. above, many jurisdictions’ current or proposed requirements for climate-risk disclosure are aligned with the TCFD’s framework for climate-related financial reporting.<sup>2616</sup> Several

a framework that meets the requirements of the Climate-Related Financial Risk Act or is in compliance with ISSB standards. *See* SB-261, *supra* note 155.

<sup>2612</sup> *See* Thompson, *supra* note 2609; *see also* letter from Chamber (Dec. 6, 2023) (describing the California laws and highlighting differences in purpose, scope, and timing between the California laws and the proposed rules) (“letter from Chamber II”); *see also infra* note 3112 and accompanying text discussing this comment and the inclusion of California state law in the baseline.

<sup>2613</sup> *See* Thompson, *supra* note 2609.

<sup>2614</sup> *See id.*

<sup>2615</sup> Estimates are based on Compustat data for 2022 registrants. We do not have readily accessible data that could be used to reliably estimate the subset of these registrants doing business in California. One commenter estimated that 73% of Fortune 1000 companies would need to comply with both California laws. *See* letter from Amer. for Fin. Reform, Public Citizen and Sierra Club (Oct. 26, 2023) (using a list of companies registered with the California Secretary of State for their estimate, but describing in their methodology discussion why that does not directly correspond to “doing business” in the state).

<sup>2616</sup> *See* note 46 and accompanying text; *see also* TCFD, Task Force on Climate-Related Financial

Continued

<sup>2600</sup> *See* letter from EPA.

<sup>2601</sup> The EPA requirements apply to facility owners and operators, and suppliers, while these final rules apply to registrants.

<sup>2602</sup> “The GHGRP does not include emissions from . . . reporting of data on electricity purchases or indirect emissions from energy consumption, which falls under Scope 2 emissions.” (footnote omitted). EPA, *Greenhouse Gas Reporting Program (GHGRP)* (Updated June 20, 2023), available at <https://www.epa.gov/ghgreporting/learn-about-greenhouse-gas-reporting-program-ghgrp>.

<sup>2603</sup> *See, e.g.,* CA Health & Safety Code § 38530; CO Rev. Stat. § 25–7–140; HI Rev. Stat. § 342B–72; MA Gen. Laws ch. 21N, sec. 2; NJ Rev. Stat. § 26:2C–41; OR Rev. Stat. § 468A.050; *see also* NCSL, *Greenhouse Gas Emissions Reduction Targets and Market-Based Policies* (updated Sept. 5, 2023), available at <https://www.ncsl.org/research/energy/greenhouse-gas-emissions-reduction-targets-and-market-based-policies.aspx>.

<sup>2606</sup> *See* 17 Cal. Code Regs. § 95100–95163; WAC 173–441–010–173–441–070; *see also* Cal. Air Res. Bd., *Mandatory Greenhouse Gas Reporting 2020 Emissions Year Frequently Asked Questions* (2021), available at <https://www.arb.ca.gov/cc/reporting/ghg-rep/reported-data/2020mrrfaqs.pdf>; *see also* Was. Dept. of Ecology, *Mandatory Greenhouse Gas Reports*, available at <https://ecology.wa.gov/Air/Climate/Reducing-Greenhouse-Gas-Emissions/Tracking-greenhouse-gases/Mandatory-greenhouse-gas-reports>.

<sup>2607</sup> The California Air Resources Board (“CARB”) will need to develop and adopt regulations by January 1, 2025 for the disclosure requirements under the Climate Corporate Data Accountability Act to become effective. *See supra* note 156. These regulations are expected to provide further details regarding the law’s compliance requirements, including the content of the disclosure, the methodology for calculating emissions that are required to be disclosed and what qualifies as “doing business” in California. The requirements of the Climate-Related Financial Risk Act are self-effectuating, such that additional regulations are not required to implement the law’s reporting requirements; however, the law requires the CARB to adopt regulations that authorize it to seek administrative penalties from covered entities for failing to make the required reports publicly available or publishing inadequate or insufficient information in the report. *See* SB–253, *supra* note 156.

<sup>2608</sup> *See* SB–253, *supra* note 156.

<sup>2609</sup> *See* Brent W. Thompson, *California’s Climate Disclosure Requirements: An Overview of Senate Bills 253 and 261*, Ca. Lawyers Assoc. (Nov. 2023), available at <https://calawyers.org/business-law/californias-climate-disclosure-requirements-an-overview-of-senate-bills-253-and-261/>.

<sup>2610</sup> *See* SB–261, *supra* note 155.

<sup>2611</sup> A company will satisfy the requirements of the Climate-Related Financial Risk Act if it prepares a publicly accessible biennial report that includes climate-related financial risk disclosure information by any of the following methods: (1) pursuant to a law, regulation or listing requirement by any regulated exchange or government entity, incorporating the disclosure requirements that are consistent with the requirements of the Climate-Related Financial Risk Act or (2) voluntarily using

jurisdictions also have announced plans or support for adopting climate disclosure requirements that are consistent with the TCFD recommendations, and some jurisdictions already require climate-related disclosures aligned with the TCFD recommendations.<sup>2617</sup> The UK, for example, has TCFD-aligned disclosure requirements for certain issuers.<sup>2618</sup> Insofar as Commission registrants are listed or have operations in these other jurisdictions, they may already be subject to these other jurisdictions' disclosure requirements, policies, and guidance on reporting certain information about climate-related financial risk.

Additionally, the ISSB released its climate-related disclosure standards in

Disclosure: 2023 Status Report, Table D1 (Oct. 2023), available at <https://assets.bbhub.io/company/sites/60/2023/09/2023-Status-Report.pdf> ("TCFD 2023 Status Report"). For more detail on the TCFD recommendations, see Proposing Release, section I.D; see also TCFD, *Overview* (Mar. 2021), available at [https://assets.bbhub.io/company/sites/60/2020/10/TCFD\\_Booklet\\_FNL\\_Digital\\_March-2020.pdf](https://assets.bbhub.io/company/sites/60/2020/10/TCFD_Booklet_FNL_Digital_March-2020.pdf). Concurrent with the release of its 2023 status report, the TCFD fulfilled its remit and transferred to the ISSB its responsibility for tracking company activities on climate-related disclosure. Fin. Stability Bd., *supra* note 151. As discussed *infra*, the TCFD recommendations are incorporated into the ISSB standards. Although the TCFD has disbanded, in this release we continue to refer to "TCFD recommendations" as distinct from ISSB standards, both for clarity and because not all jurisdictions that implemented TCFD-aligned disclosure requirements have implemented the broader and more recent ISSB standards.

<sup>2617</sup> See Proposing Release, section IV.A.4 (discussing disclosure requirements implemented, for example in the United Kingdom, Japan, and New Zealand). Commission staff determined that in 2022, approximately 1,961 Commission registrants traded in the U.K., 52 in Japan, and 2 in New Zealand; however, individual requirements in each country determine whether these registrants are subject to the climate-related disclosure laws of that country. See also TCFD 2023 Status Report, *supra* note 2616, at Part D.

<sup>2618</sup> See Financial Conduct Authority, *Climate-related Reporting Requirements*, available at <https://www.fca.org.uk/firms/climate-change-sustainable-finance/reporting-requirements> (updated June 10, 2022); see also further discussion *infra* section IV.C.3.a.

June 2023.<sup>2619</sup> These standards incorporate the TCFD recommendations, such that companies that apply the ISSB standards will satisfy the TCFD recommendations, although the ISSB standards include some additional disclosure requirements.<sup>2620</sup> The ISSB provisions relating to GHG emissions also align with the GHG Protocol.<sup>2621</sup> Several jurisdictions have announced plans or support for implementing the ISSB standards, or local standards based on ISSB standards.<sup>2622</sup>

In the EU, the CSRD will apply to approximately 50,000 companies when implemented.<sup>2623</sup> Companies required to report under the CSRD beginning on January 1, 2024, will report according to ESRS, adopted in July 2023,<sup>2624</sup> that are

<sup>2619</sup> See *supra* section II.A. describing the standards.

<sup>2620</sup> IFRS, *IFRS Foundation Publishes Comparison of IFRS S2 with the TCFD Recommendations* (July 24, 2023), available at <https://www.ifrs.org/news-and-events/news/2023/07/ifrs-foundation-publishes-comparison-of-ifrs-s2-with-the-tcfd-recommendations/>.

<sup>2621</sup> See *supra* section II.A. In the U.S. and other jurisdictions, GHG emissions quantification and reporting are generally based on the widely-used GHG Protocol, see *supra* notes 51 and 1011 and accompanying text. See also Patrick Bolton & Marcin Kacperczyk, *Global Pricing of Carbon-Transition Risk*, 78 J. of Fin. 3677 (Dec. 2023) (using the GHG Protocol to measure firm-level GHG emissions across 77 countries). However, we recognize that there exist other standards, e.g., ISO standards, as noted *supra* note 1011 and in letters from ISO and Futurepast.

<sup>2622</sup> See *supra* section II.A.

<sup>2623</sup> European Parliament, *Sustainable Economy: Parliament Adopts New Reporting Rules for Multinationals* (Nov. 10, 2022), available at <https://www.europarl.europa.eu/news/en/press-room/20221107IPR49611/sustainable-economy-parliament-adopts-new-reporting-rules-for-multinationals>; see also *EU Commission's New Proposals Aim to Simplify Sustainability Reporting Rules*, FinTech Global (June 13, 2023), available at <https://fintech.global/2023/06/13/eu-commissions-new-proposals-aim-to-simplify-sustainability-reporting-rules/>. See *supra* section II.A.3, at note 154 and accompanying text for discussion of the CSRD.

<sup>2624</sup> EU Commission Delegated Regulation of July 31, 2023, supplementing Directive 2013/34/EU, and Annexes, available at <https://finance.ec.europa.eu/regulation-and-supervision/financial-services-legislation/implementing-and-delegated-acts/>

closely aligned with the TCFD framework<sup>2625</sup> and ISSB standards, although the CSRD includes some additional disclosure requirements.<sup>2626</sup> This first stage of CSRD implementation will primarily affect companies that have more than 500 employees and are listed on an EU-regulated market. Subsequent stages will encompass other large EU-based companies,<sup>2627</sup> and later, certain small to medium-sized companies and certain non-EU companies operating in the EU.<sup>2628</sup> Finally, in the last stage of CSRD implementation, certain non-EU companies operating in the EU would report sustainability impacts to the EU,<sup>2629</sup> but because the ESRS for that stage are not yet developed, we cannot assess the extent to which disclosures made under this last stage would overlap with either the TCFD framework or these final rules.

*corporate-sustainability-reporting-directive\_en*. ESRS for later stages of the CSRD are not yet developed.

<sup>2625</sup> See EFRAG, *Draft European Sustainability Reporting Standards: Appendix IV—TCFD Recommendations and ESRS Reconciliation Table* (Nov. 2022), available at <https://www.efrag.org/Assets/Download?assetUrl=%2Fsites%2Fwebpublishing%2FsiteAssets%2F21%2520Appendix%2520IV%2520-%2520TCFD-EFRAG%2520Comparative%2520analysis%2520final.pdf>.

<sup>2626</sup> European Commission, *Questions and Answers on the Adoption of European Sustainability Reporting Standards* (July 31, 2023), available at [https://ec.europa.eu/commission/presscorner/detail/en/qanda\\_23\\_4043](https://ec.europa.eu/commission/presscorner/detail/en/qanda_23_4043) ("CSRD Q&A"). See also EFRAG, *Interoperability Between ESRS and ISSB Standards*, Discussion Paper 04–02 (Aug. 23, 2023) ("Companies that are required to report in accordance with ESRS will to a very large extent report the same information as companies that use ISSB standards.").

<sup>2627</sup> For purposes of the CSRD, a "large" company is one that meets at least two of the following criteria: balance sheet total greater than €25 million; net turnover greater than €50 million; or more than 250 employees. See Directive (EU) 2023/2775 amending Directive 2013/34/EU as regards the adjustments of the size criteria for micro, small, medium-sized and large undertakings or groups (Dec. 21, 2023), available at <https://eur-lex.europa.eu/legal-content/EN/ALL/?uri=CELEX:32023L2775>.

<sup>2628</sup> See CSRD Q&A, *supra* note 2626.

<sup>2629</sup> See *id.*

We estimate that there are approximately 3,700 Commission registrants that are traded on a European exchange; however, we understand that most of these companies do not trade on an EU-regulated market, in which case they may not be impacted by the initial stage of CSRD implementation.<sup>2630</sup> We estimate that approximately 70 Commission registrants (fewer than 10 of which are U.S.-based) are listed on EU-regulated markets and could therefore be subject to reporting under the initial set of ESRS in fiscal year 2024.<sup>2631</sup> Additional registrants may have EU subsidiaries or operations that fall within the scope of the CSRD, including in later compliance years. Although the number of Commission registrants subject to CSRD reporting in 2024 may be relatively low, we expect that once the CSRD is fully implemented, it could apply to many of the 3,700 Commission registrants that trade on a European exchange, as well as other non-EU companies, provided that they meet the required turnover and presence thresholds.<sup>2632</sup> This assessment aligns with another estimate, which found that U.S. companies could make up 31 percent of an estimated 10,000 U.S., Canadian, and British companies required to begin complying

with the CSRD between 2025 and 2029.<sup>2633</sup> However, the number of registrants affected cannot be determined with specificity because the CSRD implementing standards are not fully developed yet, and because the number will depend on factors such as, for example, how many Commission registrants trade on an exchange defined as an EU-regulated market.

Despite uncertainty as to the parameters of other jurisdictions' requirements, the information described above indicates that a meaningful number of Commission registrants may be subject to the climate-related disclosure and reporting requirements of one or more additional jurisdictions. As a result, some registrants subject to the final rules may already have in place, or may be developing, processes and systems to track and disclose aspects of their climate-related risks.

5. Current Market Practices

This section describes current market practices with regard to climate-related disclosure, including disclosures made in Commission filings and in other contexts. This section then describes the use of third-party frameworks in current disclosures; the disclosure of climate-related targets, goals, and transition

plans; and the use of third-party assurance.

We recognize that some aspects of the final rules may overlap with existing disclosure requirements and practices. The incremental costs of the final rules to a specific registrant will depend on the extent to which its disclosures resulting from the final rules overlap with disclosures that would have occurred in the absence of the final rules, as discussed in further detail below.<sup>2634</sup>

a. Climate-Related Disclosures in SEC Filings

The Commission staff reviewed 52,778 annual reports (Forms 10-K and 20-F) submitted from January 1, 2016, until December 31, 2022, to determine how many contain any of the following keywords: "climate change," "climate risk," or "global warming," collectively referred to as "climate-related keywords" throughout this section.<sup>2635</sup> The presence of any of the climate-related keywords in any part of the annual report is indicative of some form of climate-related disclosure.<sup>2636</sup> Table 1 shows the portion of climate-related keywords used in Form 10-Ks and 20-Fs from 2021 through 2022.

TABLE 1—FILINGS WITH CLIMATE-RELATED KEYWORDS BY FORM TYPE

Form	Has keyword	All filings	Percent
10-K .....	4,521	12,846	35
20-F .....	662	1,721	38
Total .....	5,183	14,567	36

This table presents the analysis of annual filings submitted to the Commission between Jan. 1, 2021, and Dec. 31, 2022. For each form type, the table indicates how many contain any of the climate-related keywords.

Figure 1 shows that the percentage of Form 10-K and Form 20-F filings with

climate-related keywords<sup>2637</sup> has increased between 2016 and 2022. As

reflected in Table 1, in more recent filings (*i.e.*, those submitted in calendar

<sup>2630</sup> "European exchange" refers to an exchange located in the EU. The first stage of CSRD implementation is specific to companies trading on an "EU-regulated market," where "regulated market" is a defined term under EU securities law, distinct from an organized trading facility or multilateral trading facility. See Directive 2014/65/EU of the European Parliament and of the Council (May 15, 2014), available at <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex%3A32014L0065> (updated Mar. 23, 2023).

<sup>2631</sup> This analysis is based on listing status data from Refinitiv. We note that this figure may not reflect all registrants that would be subject to the CSRD rules, as listing status is just one of the conditions for required disclosure under the EU rules. Fiscal year 2024 reporting is required of companies already subject to another EU reporting directive known as the Non-Financial Reporting Directive, including large U.S. companies with more than 500 employees and listed on an EU-regulated market. Among the approximately 70 registrants listed on EU-regulated markets, we are unable to determine how many are "large" as

defined in the CSRD, as many registrants do not provide geographic breakdowns of turnover or assets needed to identify turnover or assets attributable to the EU, so it is possible that the lower bound is fewer than 70 registrants. Even if not subject to CSRD reporting in fiscal year 2024, however, we anticipate that all or nearly all registrants listed on an EU-regulated exchange, and many not listed on such an exchange, will be required to report in subsequent compliance years as the CSRD phases in. We are not aware of any official analysis from European authorities regarding the number of Commission-registered issuers which will be subject to CSRD reporting.

<sup>2632</sup> See generally CSRD Q&A, *supra* note 2626; Thibault Meynier, *et al.*, *EU Finalizes ESG Reporting Rules with International Impacts*, Harvard L. Sch. Forum on Corp. Gov. (Jan. 30, 2023), available at <https://corpgov.law.harvard.edu/2023/01/30/eu-finalizes-esg-reporting-rules-with-international-impacts/>.

<sup>2633</sup> Dieter Holger, *At Least 10,000 Foreign Companies to be Hit by EU Sustainability Rules*, Wall St. J. (Apr. 5, 2023), available at <https://>

[www.wsj.com/articles/at-least-10-000-foreign-companies-to-be-hit-by-eu-sustainability-rules-307a1406](https://www.wsj.com/articles/at-least-10-000-foreign-companies-to-be-hit-by-eu-sustainability-rules-307a1406) (retrieved from Factiva database).

<sup>2634</sup> See section IV.C.3.c, "Factors that Influence Direct Costs." The same point applies similarly to the more general costs imposed by the final rules: those registrants that currently provide (or plan to provide) climate-related disclosures irrespective of the final rules will incur lower incremental costs to the extent that these disclosures overlap with the final rules' requirements.

<sup>2635</sup> We follow the approach used in the Proposing Release except we have excluded 40-F filers because they are not subject to the final rules.

<sup>2636</sup> One limitation of using this climate-related keyword search is that it is unable to discern the extent or decision-usefulness of climate-related disclosures, nor can it determine specific sub-topics within climate-related disclosures. For these reasons, the analysis was supplemented by natural language processing ("NLP") analysis, as described later in this section.

<sup>2637</sup> See *supra* note 2636.

years 2021 and 2022) 36 percent of all annual reports contain some climate-related keywords, with a slightly greater proportion (38 percent) among foreign private issuers filing on Form 20-F.<sup>2638</sup> These figures are consistent with data from Bloomberg, which focuses on

registrants listed on NYSE and NASDAQ, on ESG reporting. Specifically, using this data, we find that 39 percent of registrants include a discussion of climate related risks in their MD&A section.<sup>2639</sup> Figure 1 shows that the percentage of Form 10-K and 20-F filings with

climate-related keywords<sup>2640</sup> has been increasing between 2016 and 2022. We note that Table 1 reflects the averages of the last two years of the time-series shown in Figure 1.  
BILLING CODE 8011-01-P

**Figure 1. Percentage of Filings with Climate-related Keywords by Form Type**

This figure presents the analysis of annual filings on Form 10-K and Form 20-F submitted to the Commission between Jan. 1, 2016, and Dec. 31, 2022. For each form type, the figure plots the percentage of filings containing climate-related keywords.

**BILLING CODE 8011-01-C**

Table 2 provides a breakdown of more recent filings by accelerated filer status. Among LAFs, 68 percent provided

climate-related keywords in 2022, while only 50 percent did so in 2021. Discussions by AFs and NAFs also saw

increases over the same period (from 40 to 49 percent and from 16 to 23 percent, respectively).

<sup>2638</sup> Some foreign private issuers may elect to file their annual report on Form 10-K and would thus be classified as “domestic filers” in the following analysis.

<sup>2639</sup> Bloomberg reports “[w]hether the Management Discussion and Analysis (MD&A) or its equivalent risk section of registrant’s annual report discusses business risks related to climate change.” As with other summary statistics presented in this release, these figures may not be

representative of all Commission registrants. For example, registrants that are not listed on NYSE or NASDAQ may be less likely to include discussions of climate related risks in their MD&A section.

<sup>2640</sup> See *supra* note 2636.

TABLE 2—FILINGS WITH CLIMATE-RELATED KEYWORDS BY ACCELERATED FILER STATUS

Year	Filer status	Has keyword	All filings	Percent
2021	LAF	1,063	2,126	50
	AF	373	936	40
	NAF	635	3,883	16
	All	2,071	6,945	30
2022	LAF	1,726	2,520	68
	AF	425	863	49
	NAF	961	4,241	23
	All	3,112	7,622	41

This table presents the analysis of annual filings submitted to the Commission between Jan. 1, 2021, and Dec. 31, 2022. For each filer status, the table indicates how many contain any of the climate-related keywords.

Similarly, Table 3 indicates that the inclusion of climate-related keywords by SRCs and EGCs also increased from

2021 to 2022, but that climate change discussions remain less common among

these registrants than among registrants that are not SRCs or EGCs.

TABLE 3—FILINGS WITH CLIMATE-RELATED KEYWORDS BY SRC/EGC STATUS

Year	Filer status	Has keyword	All filings	Percent
2021	SRC & EGC	184	2,400	8
	SRC	744	4,142	18
	EGC	198	984	20
	Neither	3,016	6,364	47
2022	SRC & EGC	440	3,180	14
	SRC	912	3,724	24
	EGC	424	1,226	35
	Neither	4,448	7,114	63

This table presents the analysis of annual filings submitted to the Commission between Jan. 1, 2021, and Dec. 31, 2022. Filer status SRC, EGC, small emerging growth companies (“SRC & EGC”), and large non-EGC and non-SRC companies (“Neither”). For each filer status, the table indicates how many contain any of the climate-related keywords.

Table 4 (presented as a graph in Figure 2) provides a breakdown of the recent filings by industry and shows that the industries with the highest

percentage of annual reports containing climate-related disclosure include electric services, maritime transportation, steel manufacturing,

paper and forest products, and oil and gas, among others.

TABLE 4—FILINGS WITH CLIMATE-RELATED KEYWORDS BY INDUSTRY

Industry	Has keyword	All filings	Percent
Electric Services	144	157	92
Maritime Transportation	114	127	90
Steel Manufacturing	29	33	88
Paper and Forest Products	44	52	85
Oil and Gas	350	445	79
Rail Transportation	14	18	78
Passenger Air and Air Freight	50	66	76
Trucking Services	32	44	73
Insurance	189	272	69
Real-Estate Investment Trusts	292	483	60
Beverages, Packaged Foods and Meats	138	243	57
Construction Materials	128	234	55
Automotive	34	67	51
Capital Goods	123	243	51
Mining	154	332	46
Agriculture	32	72	44
Other	622	1,454	43
Textiles and Apparel	31	74	42
Banking	558	1,460	38
Technology Hardware and Equipment	618	1,725	36
Consumer Retailing	392	1,229	32
Total	5,188	14,593	36

This table presents the analysis of annual filings submitted to the Commission between Jan. 1, 2021, and Dec. 31, 2022. For each industry, the table indicates how many contain any of the climate-related keywords.

Figure 2 provides a breakdown by industry of use of climate-related keywords.

BILLING CODE 8011-01-P

**Figure 2.** Percentage of Filings with Climate-related Keywords by Industry

Using the same sample of recent annual reports, Commission staff conducted additional analysis using NLP, which can provide insight on the semantic meaning of individual sentences within registrants' climate-related disclosures and classify them into topics (*i.e.*, clusters).<sup>2641</sup> The NLP

<sup>2641</sup> The specific NLP method used in this analysis is word embedding, which utilizes Google's publicly available, pre-trained word vectors that are then applied to the text of climate-related disclosures within regulatory filings. While this NLP analysis can be used to identify the

analysis suggests that climate-related disclosures can be broadly organized into four topics: business impact, emissions, international climate accords, and physical risks. The analysis finds significant variation, both within the quantity and content, of climate-related disclosures across industries, as shown in Figures 3 and 4.

general topic and the extent of disclosures, it is limited in its ability to discern the decision-usefulness of disclosures from investors' perspective.

Figure 3 presents the intensity of disclosure for domestic annual report filings (Form 10-K). The intensity refers to sentences per registrant, which is calculated by taking the aggregate number of sentences in an industry and dividing it by the total number of registrants within the industry (including those that do not include any climate-related keywords). Thus, the intensity represents a more comparable estimate across industries. Figure 3 shows that registrants in the following industries have the highest intensity of

disclosures: oil and gas, electric services, and mining. The majority of these disclosures addressed business impact, followed by emissions, international climate accords, and physical risks. Figure 4 presents the corresponding information for foreign annual report filings (Form 20-F). The

foreign filings contain considerably higher intensity of climate-related keywords. For example, Form 10-K filers in the oil and gas industry have approximately 12 sentences per filing containing climate-related keywords while foreign filers in the same industry devote approximately 75 sentences per

filing containing climate-related keywords. Overall, the analysis indicates that the majority of the disclosure for both domestic and foreign filings is focused on transition risks, with comparatively fewer mentions of physical risk.

**Figure 3.** Clustered Intensity by Industry for Domestic Filings (Form 10-K)

This figure presents the analysis of Form 10-K annual filings submitted to the Commission between Jan. 1, 2021, and Dec. 31, 2022. NLP was used to analyze sentences contained within the annual filings and classify them into four broad topics (i.e., clusters): business impact, emissions, international climate accords, and physical risks. Intensity refers to the average number of sentences per registrant, which is calculated by taking the aggregate number of relevant sentences in an industry and dividing it by the total number of registrants within the industry.

**Figure 4.** Clustered Intensity by Industry for Foreign Filings (Form 20-F)

This figure presents the analysis of Form 20-F annual reports submitted to the Commission between Jan. 1, 2021, and Dec. 31, 2022. We exclude any Form 20-Fs that were not annual reports. NLP was used to analyze sentences contained within the annual filings and classify them into four broad topics (i.e., clusters): business impact, emissions, international climate accords, and physical risks. Intensity refers to the average number of relevant sentences per registrant, which is calculated by taking the aggregate number of sentences in an industry and dividing it by the total number of registrants within the industry.

**BILLING CODE 8011-01-C**

The Commission staff’s findings are consistent with one academic study that looked at the extent of climate-related disclosures by Commission registrants.<sup>2642</sup> In this study, a review of

Form 10-K filings from Russell 3000 companies over the last 12 years found that the majority of climate-related disclosure is focused on transition risks,<sup>2643</sup> consistent with the above

Commission staff analysis that finds that annual filings contain more discussion on emissions and international climate accords relative to physical risks. This study further found that while 35 percent of Russell 3000 Index companies provided climate-related information in 2009, this figure grew to

<sup>2642</sup> See Parker Bolstad, Sadie Frank, Erick Gesick & David Victor, *Flying Blind: What Do Investors Really Know About Climate Change Risks in the*

*U.S. Equity and Municipal Debt Markets* (Hutchins Center Working Paper 67, 2020) (“Hutchins Center Working Paper”).

<sup>2643</sup> See *id.*

60 percent in 2020.<sup>2644</sup> The study also found that the extent of disclosure for a given report has increased.<sup>2645</sup> In 2009, companies mentioned climate risks 8.4 times on average in their Form 10–K.<sup>2646</sup> This figure grew to 19.1 times in 2020.<sup>2647</sup>

The Proposing Release included a similar analysis of climate-related disclosures in Commission filings using data from earlier years.<sup>2648</sup> That analysis also found that filings by registrants in the electric services and oil and gas industries have the most robust climate-related discussions.<sup>2649</sup> In response to this finding, one commenter suggested that the current “principles-based approach is working successfully, as these are industries where climate-related factors are more likely to have a material impact on the present value of future cash flows.”<sup>2650</sup> We disagree. The Commission staff’s analysis focuses on the incidence of climate-related discussion in annual reports (Forms 10–K and 20–F).<sup>2651</sup> The fact that the incidence of disclosures may be correlated with the likelihood that climate-related risks are material to a particular company does not demonstrate that registrants are fully disclosing their material climate-related risks to investors. For instance, registrants may strategically omit information that could be perceived as negative or adverse,<sup>2652</sup> and some studies point to the potential for substantial underreporting of material climate-related information within the current principles-based reporting regime.<sup>2653</sup>

<sup>2644</sup> See *id.* The methodology uses a series of keywords to determine whether a company provides climate-related disclosures. Some keywords may occur in non-climate contexts, which the authors note may introduce some bias into the statistics.

<sup>2645</sup> See *id.*

<sup>2646</sup> See *id.*

<sup>2647</sup> See *id.*

<sup>2648</sup> See Proposing Release, section IV.A.5.a.

<sup>2649</sup> See *id.*

<sup>2650</sup> See Overdahl exhibit to letter from Chamber.

<sup>2651</sup> See also section IV.A.5 for an update of the analysis in the Proposing Release.

<sup>2652</sup> A recent analysis, for example, showed that absent mandatory requirements from regulators, voluntary disclosures following third-party frameworks were generally of poor quality and that companies making these disclosures cherry-picked to report primarily non-material climate risk information. See Julia Bingler, Mathias Kraus, Markus Leippold & Nicolas Webersinke, *Cheap Talk and Cherry-Picking: What ClimateBert Has to Say on Corporate Climate Risk Disclosures*, 47 Fin. Rsch. Letters, Article 102776 (June 2022) (“Bingler *et al.*”) (reviewing annual reports for fiscal years 2014–2019—*i.e.*, before and after the introduction of TCFD recommendations—for a sample of 818 TCFD-supporting firms).

<sup>2653</sup> Lee Reiners & Charlie Wovk, *Climate Risk Disclosures & Practices* (2021), available at <https://econ.duke.edu/sites/econ.duke.edu/files/>

In addition, one commenter suggested the Commission examine analyst reports and interactions involving analysts to assess “the significance of ESG factors relative to other factors for determining the value of securities.”<sup>2654</sup> There is academic research that considers analyst reports; this literature has found that, while very few analyst reports traditionally discuss topics related to climate, climate-related disclosures can offer useful predictive signals about future financial performance for firms whose industries are most exposed to climate-related risk and can influence analysts to revise their target prices for these firms.<sup>2655</sup> Other research has found that Form 10–K disclosures on material climate risks are associated with increased precision and lower dispersion in analysts’ earnings forecasts.<sup>2656</sup> Similarly, in the context of earnings conference calls involving analysts, discussions concerning exposure to climate-related risks have been shown to contain important information that is priced in stocks and options.<sup>2657</sup> Relatedly, the same commenter suggested that the Commission conduct an event study to study price or volume responses to climate-related disclosures.<sup>2658</sup> We decline to follow the suggestion in light

*documents/Climate-Risk-Disclosures-and-Practices.pdf*; Bingler *et al.*; Morningstar, *Corporate Sustainability Disclosures* (2021), available at <https://www.morningstar.com/en-uk/lp/corporate-sustainability-disclosures> (“Companies will disclose the good and hide the bad while disclosure remains voluntary.”).

<sup>2654</sup> See Overdahl exhibit to letter from Chamber.

<sup>2655</sup> See Jesse Yuen-Fu Chan, *Climate Change Information and Analyst Expectations* (July 29, 2022) (Ph.D. dissertation, University of Texas, Austin), available at <https://repositories.lib.utexas.edu/items/092f6e82-c4b1-4d61-a83b-207643cbb62d>.

<sup>2656</sup> See Walid Ben-Amar *et al.*, *Do Climate Risk Disclosures Matter to Financial Analysts?*, J. of Bus. Fin. & Acct. (2023), available at <https://online.library.wiley.com/doi/10.1111/jbfa.12778> (using the Materiality Map provided by the Sustainability Accounting Standards Board (SASB) to show that the association between improvements to forecast precision and climate risk disclosure is present only when climate risk is deemed financially material at the industry level according to SASB).

<sup>2657</sup> See Zacharias Sautner, *et al.*, *Firm-Level Climate Change Exposure*, 78 J. of Fin. 1449 (Feb. 2023) (“Sautner, *et al.* (2023)”); Qing Li, Hongyu Shan, Yuehua Tang & Vincent Yao, *Corporate Climate Risk: Measurement and Responses* (forthcoming Rev. Fin. Stud., 2020), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=3508497](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3508497) (retrieved from SSRN Elsevier database). Additionally, researchers have noted that, although the frequency of such climate-related discussions have historically been low, there has been an increase in recent years. See Michał Dzielniński, Florian Eugster, Emma Sjöström & Alexander F. Wagner, *Climate Talk in Corporate Earnings Calls* (Swiss Fin. Inst. Rsch. Paper Series 22–14, 2022), available at <https://ideas.repec.org/p/chf/rpseri/rp2214.html>.

<sup>2658</sup> See Overdahl exhibit to letter from Chamber.

of the support in peer reviewed literature for the importance of climate-related disclosures to investors.<sup>2659</sup> Existing research finds an increase in stock price volatility around the day when GHG or carbon emissions are disclosed in a Form 8–K filing.<sup>2660</sup> This suggests that investors find such disclosures to be informative.

## b. Additional Trends in Climate-Related Disclosures

As discussed below, a number of industry and advocacy groups have examined the scope of voluntary climate-related disclosures, and their findings are relevant to assess the economic impact of the final rules.

### i. Prevalence and Scope of Climate-Related Disclosures

As discussed in the Proposing Release,<sup>2661</sup> one organization, in collaboration with several other organizations, conducted a survey of a sample of 436 U.S. public companies across 17 industries that range from small to large in terms of market capitalization.<sup>2662</sup> According to the survey, over half of the companies (52 percent) published a CSR, sustainability, or a similar report, the contents of which commonly include information regarding climate-related risks. The most frequently discussed topics in such reports were energy (74 percent), emissions (70 percent), environmental policy (69 percent), water (59 percent), climate mitigation strategy (57 percent), and supplier environmental policies (35 percent). Among the registrants that reported climate-related information to the public, the majority disclosed such information via external reports or company websites rather than through regulatory filings. Similar to the Commission staff’s review, the survey found that about a third (34 percent) of the respondents disclosed information regarding “risks related to climate change, greenhouse gas emissions, or energy sourcing” in their Commission filings.<sup>2663</sup> Among these companies, 82

<sup>2659</sup> See also discussions in sections IV.B.1 and IV.C.1.a.

<sup>2660</sup> See Paul A. Griffin, David H. Lont & Estelle Y. Sun, *The Relevance to Investors of Greenhouse Gas Emission Disclosures*, 34 Contemp. Acct. Rsch. 1265 (2017).

<sup>2661</sup> See Proposing Release, section IV.A.5.b.

<sup>2662</sup> See Center for Capital Markets, *2021 Survey Report: Climate Change & ESG Reporting from the Public Company Perspective*, available at [https://www.centerforcapitalmarkets.com/wp-content/uploads/2021/08/CCMC\\_ESG\\_Report\\_v4.pdf](https://www.centerforcapitalmarkets.com/wp-content/uploads/2021/08/CCMC_ESG_Report_v4.pdf). Sixty-seven percent of survey respondents have market capitalization below \$5 billion, while 32% are below \$700 million.

<sup>2663</sup> See *id.*

percent disclosed such information in Risk Factors, 26 percent in MD&A, 19 percent in the Description of Business, and 4 percent in Legal Proceedings.<sup>2664</sup>

One institute issues annual analyses of sustainability reports by the companies belonging to the Russell 1000 Index.<sup>2665</sup> The institute found that in calendar year 2022, a record high of 90 percent of these companies published sustainability reports, which commonly include climate-related information—up from 60 percent in 2018.<sup>2666</sup> In particular, sustainability reporting reached an all-time high of 98 percent for companies in the top half of the Russell 1000 Index (which roughly comprises the S&P 500 Index). However, the most significant change was among companies in the bottom half of the Russell 1000 Index, where sustainability reporting percentage increased to 82 percent, up from 34 percent in 2018. The percentage of companies from each Global Industry Classification Standard (“GICS”) sector<sup>2667</sup> that published a sustainability report in 2021 were: Communications (56 percent), Consumer Discretionary (81 percent), Consumer Staples (91 percent), Energy (94 percent), Financials (85 percent), Health Care (69 percent), Industrials (89 percent), Information Technology (71 percent), Materials (95 percent), Real

Estate (90 percent), and Utilities (100 percent).

Notwithstanding these investor-led initiatives, disclosures currently vary considerably in terms of coverage, location, and presentation across companies,<sup>2668</sup> making it difficult for investors to navigate through different information sources and filings to identify, compare, and analyze climate-related information.<sup>2669</sup> For example, one commenter submitted a survey reporting that institutional investors spend an average of \$257,000 and \$357,000 on “collecting climate data related to assets” and “internal climate-related investment analysis,” respectively.<sup>2670</sup> An academic study similarly finds that “there exists considerable heterogeneity in what and how firms report about their CSR activities . . . . The heterogeneity in reported CSR topics makes it difficult for users to compare disclosures and to benchmark firms’ underlying CSR performance.”<sup>2671</sup> Some studies and commenters have asserted that current disclosures are often vague and boilerplate, creating challenges for investors.<sup>2672</sup> Industry observers and some commenters also report that many registrants that currently provide voluntary climate-related disclosures through sustainability reports often take longer than 12 months after their fiscal

year end to disclose decision-relevant data, raising concerns about the timeliness of these reports for investors.<sup>2673</sup> As noted in section II.A.2, many commenters stated that the Commission’s current reporting requirements do not yield adequate or sufficient information regarding climate-related risks.<sup>2674</sup>

## ii. GHG Emissions Reporting

Commission staff also analyzed the number of registrants that recently reported Scope 1 and 2 emissions data. In this analysis, Commission staff utilized a database that compiles emissions data (among other ESG-related information) from companies’ annual filings, sustainability reports, or other public disclosures.<sup>2675</sup> The number of registrants that are covered in this database is 5,535, which comprises the matched sample. From this matched sample, about 20 percent of registrants (1,125 out of 5,535) reported their Scope 1 and Scope 2 emissions in fiscal year 2021, with the highest disclosure rate found among LAFs (50 percent).<sup>2676</sup> In fiscal year 2022, about 18% of registrants (870 out of 5,535) reported their Scope 1 and 2 emissions, with the disclosure rate among LAFs at 42 percent. These and other statistics are presented in Table 5.

<sup>2664</sup> See *id.*

<sup>2665</sup> See G&A, *Sustainability Reporting Trends*, available at <https://www.ga-institute.com/research/ga-research-directory/sustainability-reporting-trends>; see also Proposing Release, section IV.A.5.b.

<sup>2667</sup> For more information on GICS sector categories, see MSCI, *The Global Industry Classification Standard (GICS)*, available at <https://www.msci.com/our-solutions/indexes/gics> (last visited Feb. 28, 2024).

<sup>2668</sup> See, e.g., TCFD Report, *supra* note 46, at 16; see also IOSCO Report, *supra* note 1089; GAO, *Climate-Related Risks* (2018), available at <https://www.gao.gov/assets/gao/18-188.pdf> (reporting that “investors may find it difficult to navigate through the filings to identify, compare, and analyze the climate-related disclosures across filings”); letter from Bloomberg.

<sup>2669</sup> See letters from Calvert (“Calvert purchases third party vendor data to support our ability to assess companies on their ESG factors and that provide specific data related to climate change, where available. Often vendor information is estimated when a company has not disclosed information on its climate-related risks. Sometimes the estimates are made across industries, based on what other more proactive peers have disclosed. We are concerned about the lack of accuracy fostered by estimation methodologies, and also the trend for these methodologies to under-estimate actual emissions.”); Boston Trust Walden (“our analysts

examine quantitative and qualitative climate-related corporate disclosure to enhance our understanding of the existing and potential financial outcomes associated, ranging from risks (e.g., losing the license to operate) to opportunities (e.g., generating new sources of revenue). In the absence of mandated disclosure requirements, we rely on the data of third-party research providers, which includes a mix of issuer provided data and estimates. Our analysts then seek to fill data gaps through additional research and analysis, outreach via written requests, meetings, and shareholder resolutions seeking the expanded disclosure we require. These processes for gathering necessary climate-related disclosures are inefficient and resource intensive.”); NY Office of the State Comptroller; and State of Vermont Pension Investment Commission.

<sup>2670</sup> See ERM survey attached to letter from ERM (June 16, 2022) (“ERM survey”).

<sup>2671</sup> See Hans B. Christensen, Luzi Hail & Christian Leuz, *Mandatory CSR and Sustainability Reporting: Economic Analysis and Literature Review*, 26 Rev. of Acct. Stud. 1176 (2021) (“Christensen et al. (2021)”) at 1194.

<sup>2672</sup> See SASB, *The State of Disclosure: An Analysis of the Effectiveness of Sustainability Disclosure in SEC Filings* (2017), available at <https://www.sasb.org/wp-content/uploads/2019/08/StateofDisclosure-Report-web112717.pdf> (reporting that about 50% of Commission registrants provide generic or boilerplate sustainability information in their regulatory filings); see also letter from The Institute for Policy Integrity at New York University School of Law, Environmental Defense Fund, and Professor Madison Condon (“Inst. Policy Integrity et al.”) (“Existing disclosure regulations and guidance have proved insufficient to address this asymmetry.

In a 2020 study of climate risk disclosures in 10-K filings, the Brookings Institution concluded that though “[d]isclosure has risen sharply, ‘[m]ore firms are disclosing more general information that is essentially of no utility to the marketplace.’”).

<sup>2673</sup> See *supra* note 2570; see also letter from Calvert (“Last year, when evaluating disclosure rates of companies in our equities portfolios, we found 57% of 2,207 companies disclosed their Scope 1 and 2 emissions with a one to two year delay . . . [B]y the time this data is gathered, there may be a long lag time to the point of disclosure—it is not uncommon that GHG emissions disclosure is already 12–18 months out of date once it is actually published.”).

<sup>2674</sup> See *supra* section II.A.2.

<sup>2675</sup> Commission staff used the Refinitiv ESG database, which covers over 88% of global market capitalization, across more than 700 different ESG metrics. The U.S. coverage broadly includes listed companies belonging to the Russell 3000 Index. The emissions data used in this analysis was extracted from Refinitiv on Feb 11, 2024. See Refinitiv, *Environmental, Social And Governance Scores From Refinitiv* (May 2022), available at [https://www.lseg.com/content/dam/marketing/en\\_us/documents/methodology/refinitiv-esg-scores-methodology.pdf](https://www.lseg.com/content/dam/marketing/en_us/documents/methodology/refinitiv-esg-scores-methodology.pdf).

<sup>2676</sup> These percentages may be understated to the extent that Refinitiv may not be able to fully track all emissions disclosures made by Commission registrants. Conversely, compared to the full sample of Commission registrants, these figures may be overstated given that smaller firms outside of Refinitiv’s coverage universe (*i.e.*, those outside of the Russell 3000) are less likely to report emissions.

TABLE 5—NUMBER OF REGISTRANTS THAT DISCLOSE SCOPE 1 AND 2 EMISSIONS USING THIRD-PARTY DATA <sup>1</sup>

Filer status  (1)	SEC registrants <sup>2</sup>  (2)	Registrants covered in third-party database <sup>3</sup>  (3)	Coverage rate <sup>4</sup> (%)  (4)	Scope 1 and 2 emissions disclosures			
				FY 2021		FY 2022 <sup>6</sup>	
				Disclosed  (5)	Disclosure rate <sup>5</sup> (%)  (6)	Disclosed  (7)	Disclosure rate <sup>7</sup> (%)  (8)
LAF .....	2,528	2,059	81	1,026	50	870	42
AF .....	444	334	75	57	17	50	15
NAF .....	507	154	30	8	5	15	10
SRC/EGC .....	4,265	2,988	70	34	1	50	2
Total .....	7,744	5,535	71	1,125	20	985	18

<sup>1</sup> Commission staff used the Refinitiv ESG database. See *supra* note 2675.  
<sup>2</sup> These statistics are based on SEC registrants filing annual reports in calendar year 2022. See *supra* note 2578. For LAF, AF, and NAF registrant counts, only those that are not SRCs or EGCs are included. We note that several non-SRC/EGC registrants did not disclose their filer status, thus the total registrant count in Table 5 is not the same as what is indicated in section IV.A.1.  
<sup>3</sup> The matched sample consists of the number of registrants that are covered in the Refinitiv ESG database.  
<sup>4</sup> Column (4) = (Column (3))/(Column (2)).  
<sup>5</sup> Column (6) = (Column (5))/(Column (3)).  
<sup>6</sup> Data collection of GHG emissions disclosure can lag by 18 months or longer. As a result, the number of disclosers for FY 2022 may not be complete and thus understated.  
<sup>7</sup> Column (8) = (Column (7))/(Column (3)).

We note that the number of registrants providing disclosure in fiscal year 2022 may be understated given that data collection of GHG emissions can lag by up to 18 months.<sup>2677</sup> To estimate how this number could potentially increase upon the completion of data collection, we consider the following assumption: for those registrants that disclosed only in fiscal year 2021 (but not in fiscal year 2022), we assume that their fiscal year 2022 disclosures are forthcoming.<sup>2678</sup> Within the matched sample, there are 263 LAFs that disclosed in fiscal year 2021 but not in fiscal year 2022. The corresponding number for AFs is 17. If we assume that these registrants subsequently provide their fiscal year 2022 disclosures, the fiscal year 2022 disclosure rate for LAFs would increase from 42% to 55%<sup>2679</sup> and that of AFs would increase from 15% to 20%.<sup>2680</sup> We recognize, however, that the above assumption may not hold true for all of these registrants.

Commission staff also analyzed U.S. companies that voluntarily responded to CDP’s questionnaire and publicly

<sup>2677</sup> The Commission understands that data collection of GHG emissions for FY 2022 is ongoing. In addition, some industry observers have noted that “many companies still take more than 12 months after their fiscal year to disclose their sustainability data.” see, e.g., Corporate Knights, *supra* note 2570; letter from Morningstar (“Currently, a lack of clear disclosure standards for the timing of ‘sustainability reports,’ which is the primary source for emissions data, greatly hinders investor knowledge. For example, some registrants released 2021 reports—detailing 2020 data—as late as November 2021.”)

<sup>2678</sup> These registrants have demonstrated that they have Scope 1 and 2 emissions measurement and disclosure processes in place. It is therefore plausible that they have forthcoming disclosures for FY 2022 that is not yet in the dataset.

<sup>2679</sup> (870 + 263)/2059 = 55%.

<sup>2680</sup> (50+17)/334 = 20%.

disclosed their responses.<sup>2681</sup> In 2022, 1,311 domestic companies provided responses to CDP’s questionnaire. Approximately 610 of these were Commission registrants,<sup>2682</sup> suggesting that 10 percent of the approximately 5,860 domestic registrants that will be subject to the final rules provided responses to CDP’s questionnaire in 2022. The response rate was higher

<sup>2681</sup> This analysis is based on data provided to the Commission from CDP, available at <https://www.sec.gov/comments/s7-10-22/s71022-206599-416182.xlsx>. CDP operates a global disclosure system that enables companies, cities, states and regions to measure and manage their environmental risks, opportunities and impacts. Despite not being a framework like GRI, SASB and TCFD, CDP’s questionnaires gather both qualitative and quantitative information from across governance, strategy, risk, impact and performance. To aid comparability and ensure comprehensiveness, CDP includes sector-specific questions and data points. In 2018, CDP aligned its climate change questionnaire with the TCFD. Companies’ participation in the CDP questionnaire is voluntary. If a company decides to respond to the questionnaire and disclose its information to the CDP, it then has the option to mark its response as either “Public” or “Private.” Importantly, responses marked as “Private” are available only to the signatory investors of the CDP (non-signatory investors and the general public cannot access this information). Responses marked as “Public” can be accessed by the general public at no cost. See CDP, available at <https://www.cdp.net/en/info/about-us>. In a meeting with CDP officials, the Commission staff was informed that the number of public companies that respond to the CDP questionnaire but do not publicly disclose their responses is negligible. See SEC Meeting Memorandum dated June 15, 2023, available at <https://www.sec.gov/comments/s7-10-22/s71022-206619-416182.pdf>.

<sup>2682</sup> This estimate is based on matching CDP survey respondents to registrants on ticker, company name, and industry. Five-hundred seventy matches were made on ticker. Approximately 40 more matches were made on company name using Levenshtein Distance. The matches were then manually reviewed by Commission staff to ensure the industry description provided by CDP aligned with the SIC code assigned to the matched registrant.

among companies with higher market capitalizations. For example, CDP lists 351 respondents as included in its S&P 500 sample, suggesting that approximately 70 percent of S&P 500 companies provided responses. Of these 351 respondents, 95 percent provided Scope 1 and Scope 2 emissions data. In addition, a 2022 report examines Russell 1000 companies and finds that 57% disclose Scope 1 and 2 emissions.<sup>2683</sup>

c. Use of Third-Party Frameworks

Multiple third-party reporting frameworks and data providers have emerged over the years to facilitate and encourage the reporting of climate-related information by companies.<sup>2684</sup> Due to the voluntary nature of third-party frameworks, however, companies often disclose some but not all components of those frameworks, and the components that are disclosed may not be the same across companies,<sup>2685</sup> resulting in reporting fragmentation.

Some companies follow existing third-party reporting frameworks when developing climate-related disclosures

<sup>2683</sup> See Just Capital, *The Current State of Environment Disclosure in Corporate America: Assessing What Data Russell 1000 Companies Publicly Share*, available at [https://justcapital.com/wp-content/uploads/2022/04/JUST-Capital-Environment-State-of-Disclosure-Report\\_2022.pdf](https://justcapital.com/wp-content/uploads/2022/04/JUST-Capital-Environment-State-of-Disclosure-Report_2022.pdf).

<sup>2684</sup> The TCFD, the SASB, the GRI, the Principles for Responsible Investment, the PCAF, and the CDP (among others), have all developed standards and systems that aim to help firms and investors identify, measure, and communicate climate-related information and incorporate that information into their business practices. Multiple frameworks have emerged, in part, because each seeks to provide different information or fulfill different functions when it comes to disclosing information related to climate-related risks or other ESG factors that may be important to investors.

<sup>2685</sup> See Reiners *et al.*, *supra* note 2653.

for Commission filings or to be included in CSR, sustainability, ESG, or similar reports. As described in the Proposing Release, for instance, one survey found that 59 percent of respondents follow one or more such frameworks.<sup>2686</sup> Among these respondents, 44 percent used SASB, 31 percent used the Global Reporting Initiative GRI, 29 percent used the TCFD, and 24 percent used the CDP.<sup>2687</sup> Broadly similar statistics on the usage of different reporting frameworks are also provided by other studies. For example, another report<sup>2688</sup> found that 78 percent of sustainability reports from Russell 1000 companies aligned with SASB reporting standards,<sup>2689</sup> 54 percent utilized GRI reporting standards,<sup>2690</sup> 50 percent

aligned with the TCFD recommendations,<sup>2691</sup> and 53 percent responded to the CDP Climate Change questionnaire.<sup>2692</sup> A review of website sustainability disclosures by 80 small- and mid-cap companies across five different industries found comparable numbers.<sup>2693</sup>

While these various frameworks are distinct, they overlap in their alignment with the TCFD recommendations. According to one report,<sup>2694</sup> the GRI standards exhibit “Reasonable” alignment with the TCFD, while the SASB standards generally exhibit “Moderate” or “Reasonable” alignment with the majority of the TCFD disclosure items. Additionally, the CDP Climate Change questionnaire fully

incorporates the TCFD framework and thus exhibits full alignment.<sup>2695</sup> Thus, companies that report following the GRI, SASB, or CDP frameworks are, to varying degrees, producing disclosures that are in line with the TCFD. However, because each framework takes different approaches (e.g., different intended audience and/or reporting channel) and because certain differences exist in the scope and definitions of certain elements, investors may find it difficult to compare disclosures under each framework. One organization analyzed the rate of disclosure for each TCFD disclosure element for a sample of 659 U.S. companies in 2020 and 2021, presented in Table 6.<sup>2696</sup>

TABLE 6—THIRD-PARTY ANALYSIS OF TCFD DISCLOSURE RATES FROM A SAMPLE OF U.S. COMPANIES<sup>1</sup>

TCFD disclosure element	Rate of disclosure (%)
<b>Governance:</b>	
(a) Describe the board’s oversight of climate-related risks and opportunities .....	17
(b) Describe management’s role in assessing and managing climate-related risks and opportunities .....	10
<b>Strategy:</b>	
(a) Describe the climate-related risks and opportunities the organization has identified over the short, medium, and long term .....	45
(b) Describe the impact of climate-related risks and opportunities on the organization’s businesses, strategy, and financial planning .....	34
(c) Describe the resilience of the organization’s strategy, taking into consideration different climate-related scenarios, including a 2 °C or lower scenario .....	5
<b>Risk Management:</b>	
(a) Describe the organization’s processes for identifying and assessing climate-related risks .....	15
(b) Describe the organization’s processes for managing climate-related risks .....	17
(c) Describe how processes for identifying, assessing, and managing climate-related risks are integrated into the organization’s overall risk management .....	16
<b>Metrics and Targets:</b>	
(a) Describe the metrics used by the organization to assess climate-related risks and opportunities in line with its strategy and risk management process .....	21
(b) Disclose Scope 1, Scope 2, and, if appropriate, Scope 3 GHG emissions, and the related risks .....	19
(c) Describe the targets used by the organization to manage climate-related risks and opportunities and performance against targets .....	25

<sup>1</sup> The source of this table is Moody’s Analytics. See *supra* note 2696.

<sup>2686</sup> See *supra* note 2662; see also Proposing Release, section IV.A.5.

<sup>2687</sup> See Proposing Release at nn.768–770 and accompanying text.

<sup>2688</sup> See *supra* note 2666.

<sup>2689</sup> See *id.* Sixty-seven percent of companies in the smaller half of the Russell 1000 index (by market capitalization) report according to SASB standards. The corresponding statistic for companies in the larger half is 88%.

<sup>2690</sup> See *id.* Forty percent of companies in the smaller half of the Russell 1000 index (by market capitalization) report according to GRI standards. The corresponding statistic for companies in the larger half is 66%.

<sup>2691</sup> See *id.* Thirty-two percent of companies in the smaller half of the Russell 1000 index (by market capitalization) report according to the TCFD recommendations. The corresponding statistic for companies in the larger half is 65%.

<sup>2692</sup> See *id.* Thirty-two percent of companies in the smaller half of the Russell 1000 index (by market capitalization) responded to the CDP Climate Change questionnaire. The corresponding statistic for companies in the larger half is 74%.

<sup>2693</sup> See White & Case and the Soc. Corp. Gov., *A Survey and In-Depth Review of Sustainability Disclosures by Small- and Mid-Cap Companies* (Feb. 18, 2021), available at <https://www.whitecase.com/publications/article/survey-and-depth-review-sustainability-disclosures-small-and-mid-cap-companies> (Among the companies reviewed, 41 companies (51%) provided some form of voluntary sustainability disclosure on their websites. Further, nine of those 41 companies indicated the reporting standards with which they aligned their reporting, with the majority of the nine companies not following any one set of standards completely. Additionally, six companies followed the GRI standards, while three companies stated that they follow both the TCFD recommendations and SASB standards).

<sup>2694</sup> The Corporate Reporting Dialogue is a platform, convened by the Value Reporting Foundation, to promote greater coherence, consistency, and comparability between corporate reporting frameworks, standards, and related requirements. See *Driving Alignment in Climate-related Reporting, Corporate Reporting Dialogue* (2019), available at [https://www.integratedreporting.org/wp-content/uploads/2019/09/CRD\\_BAP\\_Report\\_2019.pdf](https://www.integratedreporting.org/wp-content/uploads/2019/09/CRD_BAP_Report_2019.pdf) (providing a detailed assessment of the various frameworks’ degrees of alignment with each TCFD disclosure item, ranging from maximum to minimum alignment as follows: Full, Reasonable, Moderate, Very Limited, and None).

<sup>2695</sup> See CDP, *supra* note 52.

<sup>2696</sup> See Moody’s Analytics, TCFD-Aligned Reporting by Major U.S. and European Corporations (Feb. 2022), available at <https://www.moodyanalytics.com/articles/pa/2022/tcfaligned-reporting-by-major-us-and-european-corporations>. The sample for analysis was provided to Moody’s Analytics by the TCFD and includes 659 companies domiciled in the United States. To arrive at these statistics, Moody’s conducted an artificial intelligence (“AI”) based review of all public filings, including financial filings, annual reports, integrated reports, sustainability reports, and other publicly available reports that were associated with companies’ annual reporting on sustainability. Non-public disclosures, such as responses to the CDP questionnaire, were not included in the analysis.

The variety of disclosure frameworks in use, and their varying rates of overlap with the TCFD disclosure elements, demonstrates the low rate of consistency and comparability among existing climate disclosures.

#### d. Climate-Related Targets, Goals, and Transition Plan Disclosures

Carbon reduction targets or goals have become an increasing focus for both companies and countries.<sup>2697</sup> For example, 195 parties, including the United States, the EU, and the UK, have signed the Paris Climate Agreement as of December 2023.<sup>2698</sup> The agreement aims to strengthen the global response to climate change by keeping a rise in global temperatures to well below 2° Celsius above pre-industrial levels this century, as well as pursue efforts to limit the temperature increase even

further to 1.5° Celsius.<sup>2699</sup> A 2022 report, which examined approximately 5,300 companies across the globe, found that over one-third of these companies announced plans to curb their Scope 1 or Scope 2 emissions.<sup>2700</sup> Of these 5,300 companies that also responded to the CDP climate survey, the same report found that about one-fourth of these companies had established a target to achieve net-zero carbon emissions.<sup>2701</sup> In addition, a growing number of companies and organizations have signed on to The Climate Pledge, indicating a commitment to achieve net-zero emissions by 2040.<sup>2702</sup> According to data from another source, as of August 2023, 5,728 companies had established climate targets.<sup>2703</sup> Of these companies, 710 were located in the United States, about half of which were Commission registrants.<sup>2704</sup> The trend

in companies disclosing other climate-related targets has also been increasing over time.<sup>2705</sup>

An increasing number of companies are adopting transition plans, according to a 2023 report.<sup>2706</sup> This report finds that 4,100 organizations<sup>2707</sup> across the globe reported having transition plans aligned with reaching a temperature change of no more than 1.5° Celsius above pre-industrial levels.<sup>2708</sup> Approximately 43 percent of these transition plans are publicly available.<sup>2709</sup>

Commission staff compared these figures to data related to targets and goals on the Bloomberg ESG database, which is focused on registrants listed on NYSE and NASDAQ. The results are reported in Table 7 below. These results are generally consistent with data from the sources discussed above.

TABLE 7—REGISTRANTS WITH TARGETS OR GOALS ACCORDING TO BLOOMBERG ESG DATA

	Climate change policy <sup>1</sup> (%)	Emission reduction initiatives <sup>2</sup> (%)	Science-based targets <sup>3</sup> (%)	Net zero plans <sup>4</sup> (%)

Sources: Bloomberg, SEC filings.

<sup>1</sup> Bloomberg defines this field as indicating: “Whether the registrant has disclosed its intention to help reduce global GHG emissions through its ongoing operations and/or the use of its products and services in its annual report or CSR report. Examples might include efforts to reduce GHG emissions, efforts to improve energy efficiency, efforts to derive energy from cleaner fuel sources, investment in product development to reduce emissions generated or energy consumed in the use of the company’s products etc.”

<sup>2</sup> Bloomberg defines this field as indicating: “Whether the registrant has disclosed the implementation of any initiative to reduce its emissions, such as GHGs, SO<sub>x</sub>, NO<sub>x</sub>, or other air pollutants in its annual report or CSR report.”

<sup>3</sup> Bloomberg defines this field as indicating: “Whether the registrant has disclosed its ambition and engagement related to setting science-based GHG emissions reduction targets. Emissions targets are considered science-based if they align with the goals of the Paris Climate Agreement to limit warming to well below 2 degrees Celsius above pre-industrial levels. That is, whether the company has explicitly disclosed that they have either committed to setting or have set science-based targets. This information is sourced from a company’s CSR report.”

<sup>4</sup> Bloomberg defines this field as indicating: “Whether the registrant has disclosed its ambition and engagement related to achieving Net Zero GHG emissions. Net Zero refers to a state in which GHG emissions released into the atmosphere are balanced by removal of emissions from the atmosphere. This information is sourced from a company’s CSR report.”

<sup>2697</sup> See, e.g., UNFCCC COP28 Agreement, *supra* note 34; Press Release, United Nations Framework Convention on Climate Change, Commitments to Net Zero Double in Less Than a Year, (Sept. 21, 2020), available at <https://unfccc.int/news/commitments-to-net-zero-double-in-less-than-a-year>.

<sup>2698</sup> See United Nations, Multilateral Treaties Deposited with the Secretary General ch. XXVII, 7.d Paris Agreement (treaty status updated Feb. 2024), available at [https://treaties.un.org/Pages/ViewDetails.aspx?src=TREATY&mtdsg\\_no=XXVII-7-d&chapter=27&clang=en](https://treaties.un.org/Pages/ViewDetails.aspx?src=TREATY&mtdsg_no=XXVII-7-d&chapter=27&clang=en) treaty collection; see also EU Press Release, *Corporate Sustainability Due Diligence: Council and Parliament Strike a Deal to Protect Environment and Human Rights* (Dec. 14, 2023), available at <https://www.consilium.europa.eu/en/press/press-releases/2023/12/14/corporate-sustainability-due-diligence-council-and-parliament-strike-deal-to-protect-environment-and-human-rights/> (announcing a provisional agreement to adopt the Corporate Sustainability Due Diligence

Directive, which includes a requirement that companies ensure their business strategies are compatible with limiting global warming to 1.5° Celsius).

<sup>2699</sup> See section I.

<sup>2700</sup> *The Sustainability Yearbook 2022*, S&P Global (Feb. 2022), available at [https://www.spglobal.com/esg/csa/yearbook/2022/downloads/spglobal\\_sustainability\\_yearbook\\_2022.pdf](https://www.spglobal.com/esg/csa/yearbook/2022/downloads/spglobal_sustainability_yearbook_2022.pdf).

<sup>2701</sup> *Id.*

<sup>2702</sup> As of February 20, 2024, The Climate Pledge had acquired 468 signatories, 146 of which are from the United States. See *The Climate Pledge*, available at <https://www.theclimatepledge.com/us/en/Signatories> (last visited Feb. 20, 2024).

<sup>2703</sup> See *Target Dashboard*, available at <https://sciencebasedtargets.org/> (as visited Aug. 16, 2023).

<sup>2704</sup> See *id.*

<sup>2705</sup> For example, the percentage of both global and U.S. companies with water reduction targets grew by 4% in 2019 on a year-over-year basis. This

represented 28% of major global companies (*i.e.*, those listed on the S&P Global 1200 index) and 27% of major (*i.e.*, those listed in the S&P 500 index) U.S. companies publicly disclosing these targets. See *State of Green Business 2021*, S&P Global (Feb. 4, 2021), available at <https://www.spglobal.com/marketintelligence/en/news-insights/research/state-of-green-business-2021>.

<sup>2706</sup> CDP, *Are Companies Developing Credible Climate Transition Plans?* (Feb. 2023), available at [https://cdn.cdp.net/cdp-production/cms/reports/documents/000/006/785/original/Climate\\_transition\\_plan\\_report\\_2022\\_%2810%29.pdf](https://cdn.cdp.net/cdp-production/cms/reports/documents/000/006/785/original/Climate_transition_plan_report_2022_%2810%29.pdf).

<sup>2707</sup> See *id.* According to the CDP’s Transition Plan report, “Nearly 20,000 organizations around the world disclosed data through CDP in 2022, including more than 18,700 companies worth 50% of global market capitalization, and over 1,100 cities, states and regions.”

<sup>2708</sup> See *id.*

<sup>2709</sup> See *id.*

The results suggest that smaller registrants (NAFs, EGCs, and SRCs) are much less likely to have developed climate-related targets and goals. For example, the portion of companies that have “Net Zero Plans” is approximately 1 percent for EGCs and approximately 22 percent for non-EGCs.

#### e. Third-Party Assurance of Climate-Related Disclosures

Among the companies that provide climate-related disclosures, a considerable portion include some form of third-party assurance of the accuracy of these disclosures. One report finds that 40 percent of Russell 1000 Index companies, nearly all of which are LAFs, obtained third-party assurance for their sustainability reports in 2022, up from 24 percent in 2019.<sup>2710</sup> Among the companies that obtained assurance, however, only three percent obtained assurance for the entire report, with 58 percent obtaining assurance only with respect to GHG emissions. Regarding the level of assurance, the overwhelming majority (92 percent) obtained limited assurance while only 5 percent obtained reasonable assurance. Regarding service providers, 17 percent of companies received assurance from an accounting firm, 15 percent from small consultancy/boutique firms, and 68 percent from engineering firms.<sup>2711</sup> Because these statistics are limited to Russell 1000 Index companies, corresponding figures for the full sample of U.S. registrants may differ depending on the extent to which the practice of obtaining third-party assurance is concentrated in large companies.<sup>2712</sup> Indeed, based on

<sup>2710</sup> See *supra* note 2666.

<sup>2711</sup> One study finds that assurance service providers that are not financial auditors are reported to be not applying the AICPA assurance standards. See Brandon Gipper, Samantha Ross & Shawn Shi, *ESG Assurance in the United States* (Aug. 14, 2023), Stanford Univ. Grad. Sch. of Bus. Rsch Paper No. 4263085, UC San Francisco Rsch. Paper No. Forthcoming, available at <https://ssrn.com/abstract=4263085> (retrieved from SSRN Elsevier database) (“Gipper *et al.* (2023)”); see also *supra* note 1363 (explaining that non-CPAs are unable to use AICPA or PCAOB attestation standards).

<sup>2712</sup> Other studies also report evidence of third-party assurance among smaller samples of companies analyzed. For example, according to a recent study by the International Federation of Accountants (“IFAC”), in 2019, 99 out of the 100 largest U.S. companies by market capitalization provided some form of sustainability disclosure, which may contain climate-related information among other sustainability-related topics. Seventy of those companies obtained some level of third-party assurance, with the vast majority being “limited assurance” according to the study. Of the 70 companies that obtained assurance, the study reports that 54 obtained “limited assurance,” eight obtained “reasonable assurance,” five obtained “moderate assurance,” and three did not disclose

Commission staff’s analysis of Bloomberg ESG data, which focuses on registrants listed on NYSE and NASDAQ, approximately 15 percent obtained some type of third-party assurance or verification<sup>2713</sup> on their environmental policies and data, nearly all of which are non-SRCs and non-EGCs.<sup>2714</sup> Based on analysis of S&P 500 companies from 2010 through 2020, a 2023 study finds that the most common form of assurance standard used for GHG emissions is the ISO 14064,<sup>2715</sup> which is the assurance standard typically applied by assurance providers who are not accountants.<sup>2716</sup>

Specifically, across Scopes 1, 2, and 3 GHG emissions, approximately 40 percent of the assurance performed utilizes ISO 14064–3. Application of other assurance standards are reported to be also consistent across Scopes 1, 2, and 3 GHG emissions: around 10 percent for AICPA, around 10 percent for AccountAbility’s AA1000, around 16 percent for IAASB ISAE, and around 30 percent for miscellaneous in-house assurance standards and protocols.<sup>2717</sup> An analysis of S&P 500 firms in 2021 reveals a similar finding with ISO 14064–3 being the most common assurance standard referenced in ESG reporting followed by the IAASB ISAE, which experienced an increase of 41 more references compared to the previous year (*i.e.*, 54 percent increase).<sup>2718</sup>

any assurance. Of the 81 unique assurance reports examined in the study, nine were found to be issued by an auditing firm, while 72 were issued by another service provider. See IFAC, *supra* note 1089. Among the sample of 436 companies included in the CCMC Survey, 28% disclosed that they engaged a third party to provide some form of auditing or assurance regarding their climate-related or ESG disclosure.

<sup>2713</sup> As discussed in section III.5.c, assurance services are services performed in accordance with professional standards that are designed to provide assurance, while in many cases verification services are not designed to provide assurance.

<sup>2714</sup> Consistent with rates of voluntary GHG emissions disclosures, the percentages become much smaller when the sample analyzed is expanded to include smaller registrants. The breakdown for LAF, AFs, and NAFs is as follows: 25%, 4%, and 1%, respectively.

<sup>2715</sup> See Gipper *et al.* (2023).

<sup>2716</sup> See Center for Audit Quality, *S&P 500 ESG Reporting and Assurance Analysis* (2023), available at <https://www.thecaq.org/sp-500-and-esg-reporting> (stating, in the context of the study, that the most common standard used by non-accountant providers was ISO 14064–3).

<sup>2717</sup> Percentages do not add up to 100% because assurance statements can sometimes reference multiple assurance standards.

<sup>2718</sup> Center for Audit Quality, *supra* note 2716.

## B. Broad Economic Considerations

### 1. Investor Demand for Additional Climate Information

Comments received in response to the Proposing Release, previously discussed in section II.A.2, indicate that there is broad support from investors for more reliable, consistent, and comparable information on how climate-related risks can impact companies’ operations and financial conditions.<sup>2719</sup> The results of multiple recent surveys<sup>2720</sup> and evidence in academic studies<sup>2721</sup> also indicate strong demand from investors

<sup>2719</sup> This includes support for climate-related disclosure in the form of numerous letters from individuals as well as letters from investment managers and investment advisers. See *supra* section II.A.

<sup>2720</sup> See, e.g., Morrow Sodali, *Institutional Investor Survey* (2021), available at <https://morrowssodali.com/uploads/INSTITUTIONAL-INVESTOR-SURVEY-2021.pdf> (“Morrow Sodali (2021)”). This survey solicited the views of 42 global institutional investors managing over \$29 trillion in assets (more than a quarter of global assets under management). Results show that 85% of surveyed investors cited climate change as the leading issue driving their engagements with companies, and 61% indicated that they would benefit from disclosures that more clearly link climate-related risks to financial risks and opportunities. See also, e.g., El Ilhan, *et al.*, *Climate Risk Disclosure and Institutional Investors*, 36 Rev. Fin. Stud. 2617 (2023) (“Ilhan *et al.* (2023)”) (“Through a survey and analyses of observational data, we provide systematic evidence that institutional investors value and demand climate risk disclosures”). The sample consists of 439 institutional investor respondents. Results show that 68% of respondents either agreed or strongly agreed that management discussions on climate risk are not sufficiently precise. Also, 74% either agreed or strongly agreed that investors should demand that portfolio companies disclose their exposure to climate risk, while 59% engaged (or planned to engage) portfolio companies to provide disclosures in line with the TCFD. Lastly, 73% of institutional investors surveyed either agreed or strongly agreed that standardized and mandatory reporting on climate risk is necessary. The authors state that “respondents are likely biased toward investors with a high ESG awareness.”

<sup>2721</sup> See also Christensen *et al.* (2021), at 1–73; see also Shira Cohen, Igor Kadach & Gaizka Ormazabal, *Institutional Investors, Climate Disclosure, and Carbon Emissions*, 76 J. of Acct. & Econ., Article 101640 (2023); Juan Castillo, *et al.*, *Does Talking the Climate Change Talk Affect Firm Value? for multiple types for disclosures of climate-related risks faced by companies.<sup>2722</sup> Commenters identified various channels by which climate risks can impact financial performance<sup>2723</sup> and why this information is important for their investment decisions. These commenters agreed with the Commission's assessment in the Proposing Release that the current set of voluntary disclosures are inadequate to meet investor needs. Accordingly, these commenters expressed support for new rules to enhance the consistency, comparability, and reliability of climate-related disclosures.

Other commenters questioned both the Commission's rationale for the proposed rules and the views of supportive commenters. Some of these commenters characterized the demand for climate-related information as being concentrated among a small set of institutional investors, who did not represent investors more broadly.<sup>2724</sup> Other commenters expressed the view that institutional investors are influenced by motives other than the desire to obtain the best financial return for their clients.<sup>2725</sup> Relatedly, one

<sup>2722</sup> See discussion *supra* sections I and II.A.; see also Christensen *et al.* (2021) (stating "it is clear that capital-market participants have a demand for CSR information, not least because of the potential performance, risk or valuation implications"); Investor Agenda, 2021 Global Investor Statement to Governments on the Climate Crisis, available at <https://theinvestoragenda.org/wp-content/uploads/2021/09/2021-Global-Investor-Statement-to-Governments-on-the-Climate-Crisis.pdf> (statement signed in 2021 by 733 investors collectively managing over \$52 trillion in assets).

<sup>2723</sup> See *infra* notes 2738–2745 and accompanying text.

<sup>2724</sup> See, e.g., letter from Business Roundtable; Nasdaq, *The SEC's proposal on Climate Change Disclosure: a Survey of U.S. Companies* (2022) (letter and accompanying survey report), available at [https://nd.nasdaq.com/rs/303-QKM-463/images/1497-Q22\\_SEC-Climate-Change-Survey-Findings-Report-Listings-CP-v3.pdf](https://nd.nasdaq.com/rs/303-QKM-463/images/1497-Q22_SEC-Climate-Change-Survey-Findings-Report-Listings-CP-v3.pdf); and Overdahl exhibit to letter from Chamber (citing BCG Investor Perspectives Series Pulse Check #19 Mar. 18–22, 2022, available at <https://web-assets.bcg.com/7e/19/4b86c63541b78f1c9ffa82e42804/bcg-investor-pulse-check-series-19.pdf>). From that BCG study, the commenter cites a footnote (slide 17): "However, most of the investors BCG recently surveyed indicated that ESG is not currently a primary consideration in day-to-day investment decisions and recommendations." Simply because a matter is not a *day-to-day* consideration does not imply that disclosure relating to it is unimportant to an investor.

<sup>2725</sup> See, e.g., letters from Cunningham *et al.*; David R. Burton; Domestic Energy Producers' Alliance; National Fuel Corporation; Western Energy Alliance and U.S. Oil & Gas Association; and Competitive Enterprise Institute. See also letter from Boyden Gray (June 2022), citing Paul G. Mahoney & Julia D. Mahoney, *The New Separation of Ownership and Control: Institutional Investors and ESG*, 2 Colum. Bus. L. Rev. 840, 851 (2021), which discusses cases in which some institutional investors may act for purposes that are contrary to those of their investors but noting that such

commenter expressed the view that climate-related information would not better inform investor decision-making beyond what is found in current financial disclosures, while also stating that the risks that it highlighted were too far in the future to matter for current valuation.<sup>2726</sup>

We disagree with the commenters who stated that the demand for climate-related information is concentrated among a small group of institutional investors. We received numerous comment letters from investors, both institutional and individual, expressing a need for more reliable, consistent, and comparable climate-related information.<sup>2727</sup> Furthermore, institutional managers' demand for climate-related disclosures likely reflects what they believe to be in the best interests of their investors and clients, including individuals.<sup>2728</sup> Institutional investors have strong incentives to earn financial returns on behalf of their clients.

Moreover, climate risk information can be informative about financial performance in a way that goes beyond current accounting numbers. As stock prices reflect profits potentially years in the future, even long-term climate-related risks can affect profitability, though not all climate risks are necessarily long-term. In any case, risks to cash flows, even those that are far in the future, can still be important for investors today.<sup>2729</sup>

concerns may not apply to all institutional investors.

<sup>2726</sup> See Overdahl exhibit to letter from Chamber.

<sup>2727</sup> See *supra* section II.A.2.

<sup>2728</sup> See, e.g., letters from PIMCO and ICI. For evidence on retail investors using ESG-related information in their decisions; see also Q. Li, E. Watts & C. Zhu, *Retail Investors and ESG News*, Jacobs Levy Equity Mgmt. Center for Quantitative Fin. Rsch. Paper (2023), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=4384675](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4384675) (retrieved from SSRN Elsevier database); A. Amel-Zadeh, R. Lustermaans & M. Pieterse-Bloem, *Do Sustainability Ratings Matter? Evidence from Private Wealth Investment Flows* (Mar. 9, 2022).

<sup>2729</sup> See J. van Binsbergen, *Duration-Based Stock Valuation: Reassessing Stock Market Performance and Volatility* (2021), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=3611428](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3611428) (retrieved from SSRN Elsevier database); D. Greenwald, M. Leombroni, H. Lustig & S. van Nieuwerburgh, *Financial and Total Wealth Inequality with Declining Interest Rates* (2021), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=3789220](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3789220) (retrieved from SSRN Elsevier database). Both of these papers find that the Macauley duration of equity, the weighted average length of time which investors will receive the cash flows from the asset, is in excess of 35 years as of 2019. This indicates that changes in cash flows in the future can impact equity prices today. See E. Ilhan, Z. Sautner & G. Vilkov, *Carbon Tail Risk*, 34 Rev. of Fin. Stud. 1540 (2021), for evidence of the market reflecting expectations about future climate events, even the rarest ones. See Kölbel, *et al.*, *supra* note 2721, for evidence of

## 2. Current Impediments to Climate Disclosures

In the Proposing Release, the Commission stated that, in practice, investors' demand for climate-related information is often met by inconsistent and incomplete disclosures due to the considerable variation in the coverage, specificity, location, and reliability of information related to climate risk.<sup>2730</sup> Furthermore, the Commission noted that multiple third-party reporting frameworks and data providers have emerged over the years but these resources lack mechanisms to ensure compliance and have contributed to reporting fragmentation.<sup>2731</sup> Many commenters supported these observations.<sup>2732</sup>

The Commission also described a set of conditions that could contribute to the market failing to achieve an optimal level of climate disclosure from the point of view of investors.<sup>2733</sup> Briefly put, these market failures stemmed from the existence of information externalities (implying that registrants may fully internalize the costs of disclosure but not the benefits, which may lead them to under-disclose relative to what is optimal from investors' perspective), from agency problems in that managers may not be motivated to disclose information due to agency concerns, and the fact that disclosures may not elicit uniform responses from investors. In articulating these market failures, the Commission drew on a long-standing literature in economics regarding insufficient private incentives for disclosure.<sup>2734</sup> Academic literature that focuses on climate disclosures acknowledges these to be applicable market failures, though there

climate risks being priced in CDS contracts with distant maturities. See also David C. Ling, Spenser J. Robinson, Andrew Sanderford & Chongyu Wang, *Climate Change and Commercial Property Markets: The Role of Shocks, Retail Investors, and Media Attention* (Apr. 7, 2023), available at SSRN: <https://ssrn.com/abstract=4412550> (retrieved from SSRN Elsevier database).

<sup>2730</sup> Proposing Release, section IV.B.2.a.

<sup>2731</sup> *Id.*

<sup>2732</sup> See *supra* section II.A.

<sup>2733</sup> See Proposing Release, section IV.B.2.a.

<sup>2734</sup> See *id.*; see also S.J. Grossman, *The Informational Role of Warranties and Private Disclosure About Product Quality*, 24 J. L. & Econ. 461 (1981); P. Milgrom, *Good News and Bad News: Representation Theorems and Applications*, 17 Bell J. Econ. 18 (1981); S.A. Ross, *Disclosure Regulation in Financial Markets: Implications of Modern Finance Theory and Signaling Theory*, Issues in Financial Regulation (McGraw Hill, F.K. Edwards Ed., 1979); Anne Beyer, *et al.*, *The Financial Reporting Environment: Review of the Recent Literature*, 50 J. Acct. & Econ. 296 (2010).

is a debate over whether these failures justify official sector action.<sup>2735</sup>

One commenter argued that the Commission must empirically establish the existence of a market failure and that the Proposing Release “failed to demonstrate that a market failure exists with respect to the current principles-based approach.”<sup>2736</sup> As discussed in section IV.B.1, however, investors have expressed a need for the information provided by these disclosures and have stated there is a lack of consistency in current disclosures. In addition, there are several conditions that inhibit an optimal level of climate-related disclosure in the current market, as described above. It is widely accepted that such conditions demonstrate barriers to voluntary disclosure, namely, a market failure in this context. These together establish the basis for Commission action.

### C. Benefits and Costs

We begin with a general discussion of the final rules’ benefits and costs (section IV.C.1). We then turn to the benefits and costs that are specific to particular provisions of the final rules (section IV.C.2). Finally, we discuss estimates of quantifiable direct costs of

<sup>2735</sup> See Christensen *et al.* (2021); Richard M. Frankel, S.P. Kothari & Aneesh Raghunandan, *The Economics of ESG Disclosure Regulation* (Nov. 29, 2023), available at <https://ssrn.com/abstract=4647550> (retrieved from SSRN Elsevier database). See also Overdahl exhibit to letter from Chamber (critiquing a rules-based approach).

<sup>2736</sup> See Overdahl exhibit to letter from Chamber. This commenter also pointed to a statement from a set of economists that considered how the Commission should approach disclosures of environmental and social issues. The commenter cites to the groups’ recommendation that, “that the SEC should not mandate disclosure of the firm’s impacts on environmental and social (E&S) outcomes.” See Jonathan M. Karpoff, Robert Litan, Catherine Schrand & Roman L. Weil, *What ESG-Related Disclosures Should the SEC Mandate?*, 78 *Fin. Analysts J.* 8 (2022); *Fin. Economists Roundtable, Statement on SEC Regulation of ESG Issues: SEC Should Mandate ESG Disclosure Limited to Matters that Directly Affect the Firm’s Cash Flows*, (2021) (“FER Statement”), available at <https://static1.squarespace.com/static/61a4492358cbd07dda5dd80f/t/61e8d6dd8c22c04330637bc9/1642649310539/2021.pdf>. Although the final rules require some disclosure of GHG emissions, contrary to the FER Statement’s concerns, those disclosures are not intended to promote an “understanding [of] how the firm’s activities affect society.” *Id.* Instead, consistent with the FER Statement’s suggestion, the GHG emissions disclosure requirements are intended to help investors understand the risks to which registrants are subject so that they can make better-informed investment and voting decisions. Moreover, the commenter neglected to reference the group’s recommendation that “[t]he SEC should mandate disclosure of E&S-related cash flow effects, including investments that alter E&S outcomes.” Overall, therefore, we believe our approach is broadly consistent with the FER Statement’s recommendation to focus on “understanding the impact of E&S activities on the firm’s value through their effects on a firm’s cash flows.”

compliance with the final rules (section IV.C.3).

### 1. General Discussion of Benefits and Costs

#### a. Benefits

The final rules will require comprehensive and standardized climate-related disclosures, including disclosure on governance, business strategy, targets and goals, GHG emissions, risk management, and financial statement metrics. This information will enable investors to better assess material risks in climate-related reporting and facilitate comparisons across firms and over time.

Academic literature shows a well-established link between climate-related risks and firm fundamentals.<sup>2737</sup> In an international study of over 17,000 firms from 1995 to 2019, researchers found that increased exposure to higher temperatures, a form of physical climate risk, reduces firm revenues and operating income.<sup>2738</sup> Another study found that drought risk, another form of physical climate risk, predicts poor

<sup>2737</sup> One commenter said that the Commission did not explain “why climate-related information would often be material to investors when other information, such as cash flows, profitability and industry, are likely to be much more relevant to an investment decision.” See Overdahl exhibit to letter from Chamber (citing BCG Investor Perspectives Series Pulse Check #19, *supra* note 2724). We disagree with the premise underlying this comment. Indeed, as other commenters have expressed, understanding the impact of climate-related risks is important, for investors to assess current financial information such as cash flows and profitability and thus to make informed investment decisions. See *supra* section IV.B.1. Moreover, disclosure regarding the potentially likely material impacts of a registrant’s climate-related risks may be more informative about future cash flows than disclosure regarding its current cash flows. This commenter cites as evidence an academic study, A. Moss, J.P. Naughton & C. Wang, *The Irrelevance of Environmental, Social, and Governance Disclosure to Retail Investors*, *Mgmt. Sci.* (2023) (also submitted to the comment file by the authors, see letter from James P. Naughton). This study suggests that the portfolios of retail investors on one trading platform are not different on days of ESG press releases. We received numerous comments speaking to difficulties in analyzing current climate disclosures, and this paper’s findings are consistent with this feedback. We acknowledge, however, that this study is subject to certain limitations, such as the fact that its findings center around disclosures on social issues more generally (rather than specifically focusing on climate-related risks). Also, voluntary disclosures are analytically subject to a dual selection problem. See Christensen *et al.* (2021), at 1208. The dual selection problem refers to two concurrent issues that pose challenges in determining causality. The first stems from the fact that observable ESG disclosures are from companies that voluntarily choose to disclose, reflecting a selection bias. The second is the challenge of disentangling the effects of disclosure by itself from the effects of the underlying CSR activities.

<sup>2738</sup> See Nora Pankratz, Rob Bauer & Jeroen Derwall, *Climate Change, Firm Performance, and Investor Surprises*, 69 *Mgmt. Sci.* 7352 (2023).

profit growth.<sup>2739</sup> A third study found that exposure to physical climate risk leads firms to choose capital structures with less debt due to higher expected distress costs and greater operating costs.<sup>2740</sup> Researchers have found that banks with financial exposure in their lending portfolios to extreme climate-related hazards (e.g., hurricanes) experience higher loan losses and lower long-run profitability.<sup>2741</sup> Other studies document effects of climate-related transition risks on innovation, employment and investment policies.<sup>2742</sup>

Relatedly, research shows that publicly available climate-related information is reflected in asset prices, which is an indication that such information affects the prices at which investors are willing to buy or sell assets (i.e., their investment decisions).<sup>2743</sup> For example, some studies document a carbon emissions premium: investors demand compensation (higher expected returns) for bearing exposure to firms with higher carbon emissions.<sup>2744</sup>

<sup>2739</sup> See Harrison Hong, Frank Weikai Li & Jiangmin Xu, *Climate Risks and Market Efficiency*, 208 *J. of Econometrics* 265 (Jan. 2019); Claudia Custodio, *et al.*, *How Does Climate Change Affect Firm Sales? Identifying Supply Effects* (June 30, 2022), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=3724940](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3724940) (retrieved from SSRN Elsevier database) (describing decline in labor and sales due to extreme temperatures in manufacturing and other heat-sensitive industries).

<sup>2740</sup> See Edith Ginglinger & Quentin Moreau, *Climate Risk and Capital Structure*, 69 *Mgmt. Sci.* 7492 (2023). Similar evidence also appears in the context of transition risk where researchers find that firms with higher carbon emissions exhibit lower leverage when their banks through commitments to decarbonize are found to supply less credit to these firms. See Marcin T. Kacperczyk & José-Luis Peydró, *Carbon Emissions and the Bank-lending Channel* (Aug. 2022), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=3915486](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3915486) (retrieved from SSRN Elsevier database).

<sup>2741</sup> See Yao Lu & Valeri V. Nikolaev, *The Impact of Climate Hazards on Banks’ Long-Run Performance* (Sept. 2023), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=4569935](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4569935) (retrieved from SSRN Elsevier database).

<sup>2742</sup> See Sautner, *et al.* (2023); Li, *supra* note 2657.

<sup>2743</sup> Although the literature shows that financial motivations play a central role in driving investor interest in information regarding climate- and sustainability-related issues, we acknowledge that there coexist investors who exhibit nonpecuniary preferences involving this type of information. See S.M. Hartzmark & A.B. Sussman, *Do Investors Value Sustainability? A Natural Experiment Examining Ranking and Fund Flows*, 74 *J. of Fin.* 2789 (Aug. 2019); A. Riedl & P. Smeets, *Why Do Investors Hold Socially Responsible Mutual Funds?* 72 *J. of Fin.* 2505 (Aug. 2017); L. Pástor, R.F. Stambaugh, & L.A. Taylor, *Sustainable Investing in Equilibrium*, 142 *J. of Fin. Econ.* 550 (Nov. 2021).

<sup>2744</sup> See Patrick Bolton & Marcin T. Kacperczyk, *Do Investors Care about Carbon Risk?* 142 *J. of Fin. Econ.* 517 (2021). Similar evidence on the pricing of information regarding climate-related risks more generally, see Sautner, *et al.* (2023); Griffin, *et al.*,

Similar evidence is found in debt and financial derivatives markets where climate-related risks are found to be priced in corporate bonds, options, credit default swaps, and futures contracts.<sup>2745</sup> Recent academic research also concludes that climate disclosures can be used in constructing efficient “climate-hedging” portfolios, by allowing investors to better identify firms with positive or negative climate exposure and adjust their portfolios in response to that information.<sup>2746</sup> Collectively, this research indicates that disclosures about climate-related risks, when they are made, become priced into the value of a firm, thereby demonstrating that the disclosure provides relevant information to investors as they make investment decisions.

Given the usefulness of climate disclosures to investors in accurately valuing a company and assessing its risks, the use of a standardized disclosure framework will mitigate agency problems arising from registrants

being able to selectively disclose (*i.e.*, “cherry pick”) information, which reduces transparency and impairs investors’ ability to effectively assess the potential financial impacts of a registrant’s climate-related risks. Providing better information to investors will, in turn, reduce information asymmetries between managers and investors as well as amongst investors<sup>2747</sup> (*i.e.*, reduce any informational advantages), which will improve liquidity and reduce transaction costs for investors (*i.e.*, reduce adverse selection), and may lower firms’ cost of capital.<sup>2748</sup>

The final rules will also integrate climate-related risk disclosures into the existing Regulation S–K and S–X disclosure frameworks. Investors will therefore find information about all the material risks that companies face—not just climate-related risks—within a centralized source (*i.e.*, Commission filings, as opposed to sustainability reports, brochures, or company websites), thereby reducing search costs,

and will receive this information in a more timely manner and on a regular schedule.<sup>2749</sup> These benefits should be especially pronounced for financial institutions with significant exposure to climate-related risks through their portfolio companies since any enhancements in the portfolio companies’ disclosures will better position the institutions to assess their portfolio-level risks.<sup>2750</sup>

Furthermore, by treating the climate-related disclosures as “filed,” these disclosures will be subject to potential liability under the Exchange Act and the Securities Act, which will incentivize registrants to take additional care to ensure the accuracy of the disclosures, thereby resulting in more reliable disclosures.<sup>2751</sup> Several commenters expressed support for treating climate-related disclosures as filed, noting that it would help improve investor confidence in the accuracy and completeness of such disclosures.<sup>2752</sup>

For disclosures other than financial statement disclosures, the final rules will provide registrants with the flexibility to determine the appropriate placement within their filing of climate-related disclosures. While this could affect investors’ ability to easily locate and compare those disclosures, we believe that this concern is largely

<sup>2745</sup> *supra* note 2660; E.M. Matsumura, R. Prakash & S.C. Vera-Munoz, *Firm-value Effects of Carbon Emissions and Carbon Disclosures*, 89 *Acct. Rev.* 695 (March 2014); E.M. Matsumura, R. <sup>2746</sup> For evidence within the market for corporate bonds, *see, e.g.*, Thanh D. Huynh & Ying Xia, *Climate Change News Risk and Corporate Bond Returns*, 56 *J. of Fin. & Quant. Analysis* 1985 (Sept. 2021) (“Huynh & Xia (2021)”). For evidence within the market for options, *see, e.g.*, E. Ilhan, Z. Sautner, & G. Vilkov, *Carbon Tail Risk*, *supra* note 2729; Sautner *et al.* (2023). For evidence within the market for credit default swaps, *see* Kölbl *et al.*, *supra* note 2721. For evidence within the market for futures contracts, *see* Wolfram Schlenker & Charles A. Taylor, *Market Expectations of a Warming Climate*, 142 *J. of Fin. Econ.* 627 (Nov. 2021). *But see* Hong, *supra* note 2739 (finding asset prices may not fully price in climate related risks); and evidence finding a lack of relation between climate-related risks and asset prices, J. Aswani, A. Raghunandan & S. Rajgopal, *Are Carbon Emissions Associated with Stock Returns?* 28 *Rev. of Fin.* 75 (Jan. 2024); R. Faccini, R. Matin & G. Skiadopoulos, *Dissecting Climate Risks: Are They Reflected in Stock Prices?* 155 *J. of Banking & Fin.*, Article 106948 (Oct. 2023); J. Murfin & M. Spiegel, *Is the Risk of Sea Level Rise Capitalized in Residential Real Estate?*, 33 *Rev. of Fin. Stud.* 1217 (March 2020). For a discussion of seemingly contradictory empirical results found in studies involving stock returns and carbon emissions, *see* Patrick Bolton, Zachery Halem & Marcin T. Kacperczyk, *The Financial Cost of Carbon*, 34 *J. of Applied Corp. Fin.* 17 (June 2022). For further evidence in real estate and municipal bonds, *see* D.D. Nguyen, S. Ongena, S. Qi & V. Sila, *Climate Change Risk and the Cost of Mortgage Credit*, 26 *Rev. of Fin.* 1509 (2022); P. Goldsmith-Pinkham, M.T. Gustafson, R.C. Lewis & M. Schwert, *Sea-level Rise Exposure and Municipal Bond Yields*, 36 *The Rev. of Fin. Stud.* 4588 (2023); M. Painter, *An Inconvenient Cost: The Effects of Climate Change on Municipal Bonds*, 135 *J. of Fin. Econ.* 468 (2020).

<sup>2747</sup> *See, e.g.*, Robert F Engle, *et al.*, *Hedging Climate Change News*, 33 *Rev. Fin. Stud.* 1184 (2020).

<sup>2748</sup> This information asymmetry can result from the fact that it currently requires considerable resources to infer a registrant’s exposure to or management of climate-related risks using the existing publicly available information provided through voluntary disclosures. *See, e.g.*, letters from Vermont Pension Investment Commission; CalSTERS; and Wellington (describing how these commenters currently glean such information, incurring costs related to development of proprietary models, devoting considerable resources to reviews of public information, and subscribing to services from other data providers).

<sup>2749</sup> *See* section IV.E. for more information on capital market benefits; *see also* Christensen *et al.* (2021), at 1202, 1208; Yakov Amihud & Haim Mendelson, *Liquidity and Stock Returns*, 42 *Fin. Analysts J.* 43 (May-June 1986); Lawrence R. Glosten & Paul R. Milgrom, *Bid, Ask and Transaction Prices in a Specialist Market with Heterogeneously Informed Traders*, 14 *J. of Fin. Econ.* 71 (March 1985); R.E. Verrecchia, *Essays on Disclosure*, 32 *J. of Acct. & Econ.* 97 (Dec. 2001). More recently, researchers use international evidence to find that mandatory ESG disclosures improves stock liquidity, *see* P. Krueger, Z. Sautner, D.Y. Tang & R. Zhong, *The Effects of Mandatory ESG Disclosure Around the World*, *Euro. Corp. Gov. Inst.—Finance Working Paper No. 754/2021* (Jan. 12, 2024). Asymmetric information occurs when one party to an economic transaction possesses greater material knowledge than the other party. Adverse selection occurs when the more knowledgeable party only chooses to transact in settings that, based on their private information, is advantageous for them. Less informed parties, aware of their informational disadvantage, might be less inclined to transact at all for fear of being taken advantage of. *See* George Akerlof, *The Market for Lemons, Quality Uncertainty and the Market Mechanism*, 84 *Q. J. of Econ.* 488 (Aug. 1970). One commenter claimed that the final rules could result in adverse selection if companies with the most exposure to climate risks choose to de-register or opt out of registration (*see* letter from Chamber). We disagree with this claim. We believe the benefits of being a public registered company are sufficiently strong such that it is unlikely many companies will choose to avoid becoming or continuing as a public registered company as a result of the final rules. *See* section IV.E.3 for more information.

<sup>2749</sup> *See supra* note 2570.

<sup>2750</sup> *See Report on Climate-Related Financial Risk 2021*, FSOC, available at <https://home.treasury.gov/system/files/261/FSOC-Climate-Report.pdf> (“Demand for information about climate-related risks and opportunities has grown significantly, driven by investors and financial institutions that are interested in managing their exposure to climate risks . . . . Further, it is important to note that to assess and quantify their own climate-related financial risks, particularly transition risks, financial institutions need access to climate-related risk information from the companies they are financing and investing in.”); CDP, *CDP Non-Disclosure Campaign: 2021 Results (2021)*, available at [https://cdn.cdp.net/cdp-production/cms/reports/documents/000/006/069/original/CDP\\_2021\\_Non-Disclosure\\_Campaign\\_Report\\_10\\_01\\_22\\_%281%29.pdf](https://cdn.cdp.net/cdp-production/cms/reports/documents/000/006/069/original/CDP_2021_Non-Disclosure_Campaign_Report_10_01_22_%281%29.pdf); *see also* letter from BNP Paribas (“Given the increasing awareness of corporates and the financial community about the need to accelerate the transition to a low carbon economy, establishing robust and comparable climate related disclosure standards is critical to providing investors decision-useful information. In particular, this information is essential for banks and asset managers to assess climate-related risks for lending purposes and making investment decisions, to define portfolio alignment strategies in the context of a registrant’s net zero commitments . . .”).

<sup>2751</sup> However, we note that these benefits will be mitigated for certain forward-looking statements, including those related to transition plan disclosures, scenario analysis, internal carbon pricing, and climate-related targets and goals, as these statements will have the benefit of safe harbor protections if the safe harbor requirements are satisfied.

<sup>2752</sup> *See, e.g.*, letters from Amer. For Fin. Reform, Sunrise Project *et al.*; Ags of Cal. *et al.*; CalPERS; Ceres; CFA; Engine No. 1; Franklin Templeton; PwC; SKY Harbor; and TotalEnergies.

mitigated by the final rules' structured data requirement. The structured disclosure requirements we are adopting, including the requirement to tag such disclosures using XBRL, will enable search and retrieval of the disclosures on an automated and large-scale basis, allowing investors, and the market, to process information much more effectively and efficiently as compared to manual searches through unstructured formats. This will improve investors' assessment of companies' estimated future cash flows, leading to more accurate company valuations and lowering companies' cost of capital.<sup>2753</sup>

Additionally, having access to more reliable information could result in cost savings for those investors who collect or organize information about climate-related risks. Several commenters emphasized the scale of the resources required to render the currently available information on climate-related disclosures useful to their decisions.<sup>2754</sup>

Similarly, investors also may benefit from the final rules if the required disclosures change the nature and degree to which investors rely on third parties that provide ESG ratings or scores. To the extent there is overlap between the disclosures required by the final rules and the types of information considered by ESG ratings providers, the final rules may reduce reliance on these third parties, thereby reducing costs incurred by investors to obtain decision-useful information. ESG ratings are not necessarily standardized or transparent with respect to their underlying methodologies, and several studies have found that different ESG ratings providers often assign inconsistent ratings for the same registrant.<sup>2755</sup> To the extent the final

rules reduce reliance on these ratings, registrants and investors could benefit by saving money that would otherwise be spent on obtaining third-party ESG ratings.<sup>2756</sup> Alternatively, the disclosures elicited by the final rules may increase the value of these third-party services to the extent that the third-party services are able to leverage the enhanced disclosures to provide investors with greater market insights. The disclosures may also allow registrants to better monitor ESG ratings, which could reduce the risk of greenwashing.

#### b. Costs

The final rules will impose direct costs of compliance on registrants. We use the term "direct costs" or "compliance costs" to include (1) any costs related to developing or maintaining systems for collecting information to comply with the final rules, (2) costs of preparing and presenting the resulting disclosures for Commission filings, which we refer to as "reporting costs,"<sup>2757</sup> (3) costs associated with assuring the accuracy of the disclosures, such as audit and attestation costs, and (4) any legal or disclosure review costs incurred to support management's assertion that the disclosures comply with the final rules. These costs could be incurred internally (e.g., through employee hours or hiring additional staff) or externally (e.g., via third-party service providers, such as auditors or consultants). Numerous commenters expressed concerns over the direct costs of compliance on registrants of the proposed rules.<sup>2758</sup> As

authors found that the correlations between six different ESG ratings are on average 0.54, and range from 0.38 to 0.71, while the correlations between credit ratings were 0.99. See also Scott Robinson *et al.*, *supra* note 2721; Dane Christensen, George Serafeim & Anywhere Sikochi, *Why is Corporate Virtue in the Eye of the Beholder? The Case of ESG Ratings*, *Acct. Rev.* (Feb. 26, 2021), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=3793804](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3793804) (retrieved from SSRN Elsevier database).

<sup>2756</sup> Because ESG ratings encompass information beyond climate-related matters, registrants and investors may still obtain ESG ratings for reasons unrelated to climate-related information.

<sup>2757</sup> Specifically, "reporting costs" refer to the costs of preparing information to be presented in Commission filings, separate from any prior costs or resources expended in obtaining or developing such information. For example, the final rules will require some registrants to disclose their Scope 1 and 2 emissions. For registrants that already disclose them, the incremental cost will only be the reporting cost, distinct from any costs they have previously voluntarily incurred related to developing emissions measurement/estimation systems and processes in order to quantify their emissions.

<sup>2758</sup> See, e.g., letters from Chamber; Nutrien; Williams Companies; Energy Transfer LP; Hess; PPL; NRF; RILA; ConocoPhillips; NASDAQ; API; and SCG.

discussed in section II.A, the final rules include certain modifications relative to the proposed rules that reduce overall costs and help address commenters' concerns about the time and resources required to comply with the final rules' requirements.<sup>2759</sup> This concern could further be mitigated for certain registrants to the extent that the final rules generally align with the disclosure frameworks that they are already using for their voluntary disclosures or disclosures that are, or will be, required by state, Federal, or other laws.<sup>2760</sup> Many commenters submitted cost estimates for the proposed rules that varied considerably depending on a given company's size, industry, complexity of operations, and other characteristics. We review these comments and discuss cost estimates in detail in sections IV.C.2 and IV.C.3. The remainder of this section focuses on other costs that may result from the final rules.

The final rules may result in additional litigation risk for registrants.<sup>2761</sup> However, the final rules include several changes from the proposal to mitigate these concerns. For example, certain forward-looking statements, including those related to transition plan disclosures, scenario analysis, internal carbon pricing, and climate-related targets and goals, will have the benefit of certain liability protections if the adopted safe harbor requirements are satisfied. Another example is the inclusion of phase in periods after the effective date to provide registrants with additional time to become familiar with and meet the final rules' disclosure requirements. In addition, Scope 3 emissions disclosure is no longer required and the amendments to Regulation S-X have been modified to lessen the compliance requirements, among other examples.

<sup>2759</sup> See, e.g., letter from Chamber.

<sup>2760</sup> See section IV.A.3 for discussion of existing state and Federal laws.

<sup>2761</sup> See letter from NAM (expressing concern about treating climate-related disclosures as "filed," noting the "evolving and uncertain nature" of GHG emissions disclosures could make it difficult for registrants to reach the degree of certainty necessary to assume the liability burden associated with reports filed with the Commission); see also letter from Chamber (noting that the complexity of the proposed rules could increase the likelihood of nuisance lawsuits that are intended to extract a settlement thereby increasing the cost of compliance with the rules). This commenter also pointed out that audit costs could increase if auditors were also subject to increased litigation risk. See also letter from Cunningham *et al.* (noting that "The SEC recognizes that a major cost of the Proposal concerns litigation risk."); Overdahl exhibit to letter from Chamber (noting the increase in litigation risk can also result in higher insurance costs for registrants and auditors).

<sup>2753</sup> See Christensen *et al.* (2021), at 1187; R. Lambert, C. Leuz & R.E. Verrecchia, *Accounting Information, Disclosure, and the Cost of Capital*, 45 *J. of Acct. Rsch.* 385 (May 2007); D. Easley & M. O'Hara, *Information and the Cost of Capital*, 59 *J. of Fin.* 1553 (Aug. 2004); R. Lambert, C. Leuz & R.E. Verrecchia, *Information Asymmetry, Information Precision, and the Cost of Capital*, 16 *Rev. of Fin.* 1 (Jan. 2012).

<sup>2754</sup> See, e.g., letter from CalSTRS (stating, "The current reporting requirements are insufficient for investors to assess corporate climate risk and the related financial impacts to execute investment decisions. CalSTRS spends approximately \$2,200,000 per year to access climate research, analyze available data, and develop methods to estimate climate risks and opportunities for assets in our portfolio. In addition to two full-time investment staff members, CalSTRS consults external advisors to learn how other global asset owners determine climate risk exposures to their portfolios given the lack of reliable, consistent, and comprehensive data. A conservative estimate of the variable cost of these combined human resources is \$550,000 annually.").

<sup>2755</sup> Florian Berg, Julian Kölbel & Roberto Rigobon, *Aggregate Confusion: The Divergence of ESG Ratings*, 26 *Rev. Fin.* 1315 (Nov. 2022). The

Some commenters expressed concerns that the proposed disclosures would over-emphasize climate risks relative to other types of risks that investors might find important.<sup>2762</sup> A related concern that commenters raised is that potentially voluminous disclosures could obscure the information that investors deem most relevant to their investment or voting decisions.<sup>2763</sup> To mitigate such concerns (in addition to concerns related to the compliance costs) the final rules are less prescriptive in certain places relative to the proposed rules. The final rules also have additional materiality qualifiers such that registrants that determine climate risks to be immaterial will have fewer disclosure obligations relative to the proposal. These costs also are expected to be mitigated by the structured data requirements of the final rules, which will make it easier for investors to find and analyze relevant information in filings. These changes also address other commenters' concerns that mandatory climate disclosure requirements that are too prescriptive or granular may lead to inefficient changes in business strategies and limit or halt innovation in the market for voluntary climate disclosures.<sup>2764</sup>

We also acknowledge the concerns expressed by several commenters that the proposed rules would have required the disclosure of confidential or proprietary information,<sup>2765</sup> which can

<sup>2762</sup> See, e.g., Overdahl exhibit to letter from Chamber, stating, "because climate-related information is just one factor among many other (potentially more relevant) factors, climate-related information is often not material;" see also letters from API; Western Energy Alliance and the U.S. Oil & Gas Association; Matthew Winden; American Council of Engineering Companies; Chamber; and Wisconsin Manufacturers & Commerce.

<sup>2763</sup> See, e.g., letters from Chamber; Soc. Corp. Gov.; and ConocoPhillips. For example, investors may be unable to review all potentially relevant information, resulting in suboptimal decisions. See, e.g., H.A. Simon, *A Behavioral Model of Rational Choice*, 69 Q. J. of Econ. 99 (Feb. 1955); H.A. Simon, *Rationality As Process and As Product of Thought*, 68 a.m. Econ. Rev. 1 (May 1978); K.L. Chapman, N. Reiter & H.D. White, et al., *Information Overload and Disclosure Smoothing*, 24 Rev. Acct. Stud. 1486 (Dec. 2019).

<sup>2764</sup> See, e.g., letters from API; Matthew Winden; Footwear Distributors & Retailers of America; Petrol. OK.; and Chamber.

<sup>2765</sup> See, e.g., supra notes 479, 596, and surrounding text. Proprietary costs are generally relevant for reporting that involves information about a companies' business operations or production processes and disclosures that are specific, detailed and process-oriented. See, e.g., C. Leuz, A. Triantis & T.Y. Wang, *Why Do Firms Go Dark? Causes and Economic Consequences of Voluntary SEC Deregistrations*, 45 J. of Acct. & Econ. 181 (Aug. 2008); D.A. Bens, P.G. Berger & S.J. Monahan, *Discretionary Disclosure in Financial Reporting: An Examination Comparing Internal Firm Data to Externally Reported Segment Data*, 86 Acct. Rev. 417 (March 2011).

put affected registrants at a competitive disadvantage. This consequence could alter registrants' incentives to develop strategies to manage climate-related risks where it would otherwise be beneficial to do so.<sup>2766</sup> The final rules have been narrowed relative to the proposed rules to provide additional flexibility to limit costs associated with the disclosure of competitively sensitive information, while retaining disclosures that will help investors understand registrants' climate-related risks. In particular, we have eliminated certain prescriptive requirements from the proposal that commenters identified as potentially revealing competitively sensitive information and for which the benefits to investors were less apparent.<sup>2767</sup> For example, by providing registrants with flexibility to determine how best to describe their strategy towards managing climate-related risks, the final rules may enable them to avoid disclosure of competitively sensitive information.<sup>2768</sup> Furthermore, while we have eliminated the requirement to disclose ZIP code level information, the final rules continue to require location disclosures sufficient to understand a registrants' exposure to physical risks. We also have eliminated the requirement to disclose interim targets or goals. At the same time, we acknowledge that, in some instances, a more flexible approach may also result in less comparable disclosures. While this has the possibility of reducing the value of the disclosures to investors, we believe this approach appropriately balances investor protection with concerns raised by commenters.

Relatedly, the final rules may have indirect cost implications for third-party service providers, such as ESG ratings providers. For example, the increased disclosures may reduce institutional investors' reliance on ESG ratings providers, which could negatively impact these providers.<sup>2769</sup> Conversely, more comprehensive disclosures could reduce the cost of producing ESG ratings or may improve the informational content of the ratings, thereby increasing demand. This could benefit not only the ratings providers, but also investors that rely on ESG ratings.

Many commenters raised concerns about costs to third parties from the

<sup>2766</sup> See section IV.D.

<sup>2767</sup> See, e.g., letter from Business Roundtable (June 17, 2022).

<sup>2768</sup> See, e.g., discussion in section II.C.1.c.

<sup>2769</sup> We note that this "cost" is from the perspective of the ratings providers and could be offset by the efficiency gain that renders their intermediation less necessary; as such, it reflects more of a transfer than a net economic "cost."

proposed rules,<sup>2770</sup> with one commenter stating that "measuring and reporting of GHG emissions would be a prerequisite for doing business with registrants and most retailers under this proposal."<sup>2771</sup> Compared to the proposed rules, the final rules do not impose such costs because they do not include Scope 3 disclosure requirements. Other disclosure items under the final rules may continue to result in registrants seeking input from third parties, such as those disclosure items requiring disclosure of material impacts from climate-related risks on purchasers, suppliers, or other counterparties to material contracts with registrants. However, the final rules limit the compliance burden of this requirement by limiting information that should be disclosed to that which is "known or reasonably available," thereby eliminating any potential need for registrants to undertake unreasonable searches or requests for information from such third parties. Given the more flexible and tailored approach in the final rules, such consultations will pertain only to parties whose relationship with the registrant is most likely to materially impact the registrant's strategy, business model and outlook, as well as parties from whom the registrant may be best positioned to request information, thus lowering these costs.

Some commenters asserted that a registrant's compliance costs could be passed on to other parties such as consumers (via higher prices), workers (through reduced wages or benefits), or shareholders (in the form of lower earnings).<sup>2772</sup> Other commenters stated that compliance costs could vary across industries.<sup>2773</sup> We acknowledge that third parties could bear some of the increased costs of compliance arising from the final rules and that this effect may be more pronounced in certain industries than in others. The final rules include significant changes from the proposal that lower the burdens on registrants. To the extent that these changes result in lower compliance costs, they also will help mitigate any adverse effects on other parties.

There is some existing academic literature on costs related to mandatory climate-related disclosures in other

<sup>2770</sup> See letter from the Heritage Foundation, which estimates compliance costs of the proposed rules on non-registrants would total \$14 billion.

<sup>2771</sup> See letter from International Dairy Foods Association.

<sup>2772</sup> See, e.g., letters from National Fuel Corporation; Petrol. OK; Footwear Distributors & Retailers of America; Truth in Energy and Climate; ASA; and David R. Burton.

<sup>2773</sup> See letters from API; and Matthew Winden.

jurisdictions.<sup>2774</sup> Some studies report lower profitability and costly operational adjustments for firms affected by mandatory CSR disclosure and GHG emissions reporting in China and the United Kingdom, respectively.<sup>2775</sup> However, other studies do not find an impact on financial operating performance from mandating climate-related disclosures.<sup>2776</sup> Another study showed aggregate stock price movement associated with mandatory climate-related disclosure; while the study found, on average, a negative market reaction, the negative stock returns were concentrated in firms with weak ESG performance and disclosure, while firms with above-median ESG performance and disclosure exhibited a positive abnormal return.<sup>2777</sup> We note that differences between the final rules and these other mandates (e.g., materiality qualifiers) suggest that similar costs associated with the final rules may be lower.

As discussed in sections IV.C.2.f and IV.C.3.c, the final rules may have implications for assurance providers or, more generally, for third parties with climate-related expertise. In the short run, the rules may increase demand (and accordingly, the cost) for climate-related expertise and/or assurance of emissions disclosures. Over time, we expect the supply of third parties with climate-related expertise will adjust to correspond with the increased demand, leading to reduced costs.

Finally, the modifications made in the final rules to reduce overall costs will

<sup>2774</sup> Commenters stated that there is limited evidence on the overall economic impact of mandatory climate-related disclosure regimes in other jurisdictions. See letter from Committee on Capital Markets Regulation (June 16, 2022) (“CCMR”); and Overdahl exhibit to letter from Chamber; see also Christensen *et al.* (2021).

<sup>2775</sup> See Y. Chen, M. Hung & Y. Wang, *The Effect of Mandatory CSR Disclosure on Firm Profitability and Social Externalities: Evidence from China*, 65 *J. of Acct. & Econ.* 169 (2018); see also letter from CCMR (citing, as evidence of negative effects to firm financial performance from mandatory climate-related disclosures, Jouvenot & P. Krueger, *Mandatory Corporate Carbon Disclosure: Evidence from a Natural Experiment* (Aug. 8, 2019), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=3434490](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3434490) (retrieved from SSRN Elsevier database)).

<sup>2776</sup> See B. Downar, J. Ernstberger, S. Reichelstein, S. Schwenen & A. Zaklan, *The Impact of Carbon Disclosure Mandates on Emissions and Financial Operating Performance*, 26 *Rev. of Acct. Stud.* 1137 (2021).

<sup>2777</sup> See letter from CCMR. See also Proposing Release, section IV.C.1., at n. 848, citing Jody Grewal, Edward J. Riedl & George Serafeim, *Market Reaction to Mandatory Nonfinancial Disclosure*, 65 *Mgmt Sci.* 3061 (2019). We note that the study’s findings are based on the assumption that the only news disproportionately affecting the treated companies was the policy at issue, as opposed to some other event(s) impacting the treated companies.

help address, to an extent, some commenters’ concerns that costs associated with the proposed rules could factor into a company’s decision to become or remain a public reporting company.<sup>2778</sup> In response to other commenters’ concerns,<sup>2779</sup> the final rules also provide EGCs and SRCs with a longer phase in period for climate-related disclosures (including financial statement disclosures under Regulation S–X) and exempt EGCs and SRCs from GHG emissions disclosure requirements. And, while climate-related disclosures will be required in registration statements for firms conducting IPOs, we are not applying the subpart 1500 and Article 14 disclosure requirements to a private company that is a party to a business combination transaction, as defined by Securities Act Rule 165(f), involving a securities offering registered on Form S–4 or F–4.<sup>2780</sup>

## 2. Analysis of Specific Provisions

The costs incurred by any particular registrant may vary significantly depending upon which, if any, of the disclosures required under the final rules are applicable to that registrant’s operations and circumstances. We discuss the costs of specific components of the rules below.

### a. Disclosure of Climate-Related Risks

The final rules require registrants to identify any climate-related risks that have materially impacted or are reasonably likely to have a material impact on the registrant, including on its strategy, results of operations, or financial condition.<sup>2781</sup> For any risks identified, registrants are required to provide information necessary to an understanding of the nature of the risk presented and whether the risk is a physical or transition risk. Registrants

<sup>2778</sup> See, e.g., letter from Chamber and section I.L.2. For example, private companies might decide to defer a public offering, and existing public companies might decide to deregister from U.S. securities markets or not pursue mergers that would subject the merged company to reporting requirements. Other provisions that will reduce costs for conducting an IPO include (i) registrants will only have to provide Article 14 disclosure for historical fiscal years on a prospective basis, and (ii) the PSLRA statutory safe harbor for forward-looking statements (with respect to transition plans, scenario analysis, targets and goals) will apply to registration statements in IPOs.

<sup>2779</sup> See sections II.H.2 and II.O.2 for a discussion of commenters’ concerns on GHG emissions disclosures and phase in periods, respectively.

<sup>2780</sup> See *supra* section I.L.3. While this approach avoids imposing additional costs on companies engaged in business combination transactions involving a private company, we note that investors will not have the benefit of the disclosures required by the final rules with respect to such private company.

<sup>2781</sup> See 17 CFR 229.1502(a).

are also required to classify whether these risks are reasonably likely to manifest in the short-term and in the long-term. For both physical and transition risks, registrants are required, as applicable, to provide detailed information on these risks (e.g., the particular type of transition risk as well as the geographic location and nature of the properties, processes, or operations subject to the physical risk).

This aspect of the final rules will improve investors’ understanding of what a registrant considers to be the relevant short-term and long-term climate-related risks that have materially impacted or are reasonably likely to have a material impact on its business. As a number of commenters have noted, climate-related risks often translate into material financial risks with implications for firm growth and profitability, and therefore investors would benefit from a disclosure regime that requires registrants to provide information on climate-related risks that is accurate and more comparable to each other.<sup>2782</sup>

Academic research has found that retail investors as well as institutional investors value and utilize information on climate-related risks in decision-making.<sup>2783</sup> As numerous commenters stated,<sup>2784</sup> climate-related risks and

<sup>2782</sup> See, e.g., letters from PIMCO (“[W]e believe climate risks often pose a material financial risk, and therefore, investors need disclosure of climate risks that is complete, reliable, and consistent in order to analyze how climate-related risks may affect a company’s business or overall financial performance.”); Wellington (“Accurate and comparable information about climate risk is critical to Wellington Management’s ability to make informed investment decisions on behalf of our clients. Because climate change will continue to profoundly impact society, economies and markets, investors need more information to better price these risks and fully assess the value of an issuer’s securities.”); and AllianceBernstein (“[M]aterial risks and opportunities associated with climate change as fundamental financial factors that impact company cash flows and the valuation investors attribute to those cash flows. Regulatory changes, physical risks, and changing consumer decision criteria and preferences are all factors that asset managers need to understand and integrate into their investment processes to make optimal investment decisions on behalf of their clients.”)

<sup>2783</sup> See *supra* section IV.B.1. One commenter suggested that institutional investors and retail investors may have different preferences for climate-related information, especially when the former consider investment portfolios and the latter consider individual companies. See letter from Society for Corp. Gov. The commenter further argued that retail investors are unlikely to care about climate-related information given their investment horizon. Because of the documented impact of climate-related risks, including distant ones, on asset prices, we disagree with these assertions.

<sup>2784</sup> See section IV.B; see also, e.g., letters from BlackRock (“Compared to the existing voluntary framework, the Commission’s detailed analytical and disclosure roadmap . . . is more likely to increase the comparability and consistency of

their impacts on businesses are often not reported in a way that is useful to investors. Commenters noted that with the limitations to the currently available climate-related disclosures, extensive costs in the form of data gathering, research and analysis are needed to process them and to fill data gaps where possible in forming investment decisions.<sup>2785</sup> We expect the final rules to reduce these information processing costs for investors.<sup>2786</sup>

We expect the final rules will help investors gain a more accurate and complete understanding of the climate-related risks that a registrant determines have materially impacted or are reasonably likely to materially impact its strategy, results of operations, or financial condition. By distinguishing between climate-related risks that manifest in the short-term and long-term, the final rules will help inform investors about which risks are salient to their investment decision-making and which are not, depending on the time horizon investors are focused on. For instance, longer term risks may be less certain and are less likely to have impacts on cash flows in the short-term. As such, some investors may choose to focus more on short-term risks.

issuers' climate-related disclosures."); Calvert ("Currently, climate change disclosures are largely voluntary, unverified, and idiosyncratic."); CFA ("The current voluntary climate-related disclosure regime has resulted in inadequate and inconsistent information which falls short of investor demands and prevents market participants from reasonably assessing the risks of climate change."); and Wellington ("Currently, our evaluation of the positive and negative impacts of climate change on issuers is limited by inadequate information and the absence of a standardized framework for disclosure." and that "For a significant number of issuers, information is not sufficient to support equivalent analysis.").

<sup>2785</sup> See letter from Wellington ("We were able to make these and other determinations based on available information (including internal and external estimates), and only after extensive research and analysis. For a significant number of issuers, information is not sufficient to support equivalent analysis."); Boston Trust Walden ("Evaluation of climate risk across investment portfolios represents a cost to investors and results in the gathering of data that is often incomplete and not comparable. At Boston Trust Walden, our analysts examine quantitative and qualitative climate-related corporate disclosure to enhance our understanding of the existing and potential financial outcomes associated, ranging from risks (e.g., losing the license to operate) to opportunities (e.g., generating new sources of revenue). In the absence of mandated disclosure requirements, we rely on the data of third-party research providers, which includes a mix of issuer provided data and estimates. Our analysts then seek to fill data gaps through additional research and analysis, outreach via written requests, meetings, and shareholder resolutions seeking the expanded disclosure we require. These processes for gathering necessary climate-related disclosures are inefficient and resource intensive.").

<sup>2786</sup> The final rules may also lead to a lower cost of capital for some registrants, as we discuss below.

Conversely, an investor with a long investment horizon may choose to focus on the risks that match its investment horizon.<sup>2787</sup> This temporal standard is consistent with an existing MD&A disclosure requirement and therefore should provide a degree of familiarity to registrants and investors as they prepare and analyze these disclosures.<sup>2788</sup> This aspect of the final rules will impose additional costs on registrants (e.g., direct compliance costs and indirect costs resulting from, for example, increased litigation risk). These costs are discussed in greater detail in sections IV.C.1 and IV.C.3.

#### b. Disclosure Regarding Impacts of Climate-Related Risks on Strategy, Business Model, and Outlook

The final rules require registrants to describe the actual and potential material impacts of any climate-related risks identified in response to Item 1502(a) on the registrant's strategy, business model, and outlook.<sup>2789</sup> With respect to their strategy, business model, and outlook, the final rules specify that registrants are required to assess, as applicable, any material impacts on a non-exclusive list of items: business operations; products or services; suppliers, purchasers, or counterparties to material contracts (to the extent known or reasonably available); activities to mitigate or adapt to climate-related risks; and expenditure for research and development. Registrants are also required to discuss whether and how the registrant considers these impacts as part of its strategy, financial planning, and capital allocation.

We expect the resulting disclosures to provide investors with a better understanding of how climate-related risks have materially impacted or are reasonably likely to have a material impact on the registrant. Such disclosures will directly benefit investors who use this information to evaluate the financial prospects of the firms in which they are looking to invest.<sup>2790</sup> Discussions of material

<sup>2787</sup> See letter from Vanguard ("climate risks to be material and fundamental risks for investors and the management of those risks is important for price discovery and long-term shareholder returns.").

<sup>2788</sup> See, e.g., letter from ABA ("We believe that climate-related matters should be addressed within the same time short- and long-term time frames used in MD&A."); 17 CFR 229.303(b)(1) ("Analyze the registrant's ability to generate and obtain adequate amounts of cash to meet its requirements and its plans for cash in the short-term (i.e., the next 12 months from the most recent fiscal period end required to be presented) and separately in the long-term (i.e., beyond the next 12 months)."); see also section II.C.2.

<sup>2789</sup> See 17 CFR 1502(b)-(g).

<sup>2790</sup> See P. Krueger, Z. Sautner & L.T. Starks, *The Importance of Climate Risks for Institutional*

impacts on strategy, business model, or outlook will help investors determine whether and how registrants are addressing identified material climate-related risks. This type of disclosure could be particularly useful when comparing the approaches taken by similarly situated registrants. For example, one registrant may disclose that it is actively shifting assets away from exposure to flood zones, while another might disclose that it is investing in such assets as they are considered currently undervalued. These disclosures will allow an investor to choose to invest in the company with climate-related risk strategies that best align with the investor's investment objectives.

Under the final rules, if a registrant has adopted a transition plan to manage a material transition risk, it must describe the plan. The registrant must also provide an annual update about any actions taken during the year under the plan, including how these expenditures have impacted the registrant's financial condition, or results of operations, along with quantitative and qualitative disclosure of material expenditures incurred and material impacts on financial estimates and assumptions as a direct result of the transition plan. We expect these disclosures to provide investors with more complete and reliable information about how registrants plan to address material transition risks. A number of commenters indicated that these disclosures would help investors assess the registrant's approach to managing climate-related risks and achieving its climate-related targets and goals.<sup>2791</sup> This benefit could be reduced if these disclosures provide opportunities for greenwashing. However, we expect this risk to be reduced given that these disclosures will include quantitative and qualitative information on expenditures that are filed with the Commission and are subject to the

*Investors*, 33 Rev. of Fin. Stud. 1067 (March 2020); Ilhan *et al.* (2023).

<sup>2791</sup> See, e.g., letters from CalPERS; Morningstar; Change Finance; see also letter from ICI ("We support [transition plan] disclosure as it would inform investors of the nature of the risks and the company's actions or plans to mitigate or adapt to them."); and the CFA Institute ("We support the Proposed Rule's requirement that a registrant disclose, if it has adopted a transition plan (i.e., a strategy and implementation plan to reduce climate-related risks) as part of its climate-related risk management strategy. We agree with the view that it will facilitate investor understanding of whether the company has a plan and whether it may be effective in the short, medium, and long term in achieving such a transition. Presently, many companies have made net-zero commitments by 2050 but have made little if any disclosures regarding how they plan to get there. This requirement would necessitate that they do so.")

applicable liability provisions under the Securities Act and Exchange Act. The requirement to provide annual updates should further mitigate these concerns. The updating requirement will be particularly beneficial to investors as it will allow them to analyze the impacts of transition plans on a registrant's operations and financial condition over time.

The requirement to describe quantitatively and qualitatively the material expenditures incurred and material impacts on financial estimates and assumptions as a direct result of the transition plan will help investors better understand a registrant's approach to managing climate-related risks so they have information necessary to assess how those actions have impacted the registrant. Including a quantitative description of material expenditures incurred will discourage boilerplate disclosures and, to some extent, facilitate comparisons across registrants. However, we acknowledge commenters who raised concerns about the difficulties of attributing expenditures to these types of activities.<sup>2792</sup> We recognize that similarly situated registrants may take different approaches in their determination of which expenditures to include and whether to quantitatively or qualitatively identify portions of expenditures specifically tied to these activities. To the extent that registrants take different approaches to identifying such expenditures, the comparability benefits of the disclosure will be diminished. Nevertheless, the qualitative discussion accompanying the disclosures should provide the context necessary for investors to understand the registrant's approach to these activities and provide an assessment of the impact of these activities on the registrant's financial condition.

If a registrant uses scenario analysis to assess the impact of climate-related risks on its business, results of operations, or financial condition, and if, based on the results of such scenario analysis, the registrant determines that a climate-related risk is reasonably likely to have a material impact on its business, results of operations, or financial condition, the registrant must describe each such scenario. This description must include a brief description of the parameters, assumptions, and analytical choices used, as well as the expected material impacts on the registrant under each such scenario. Disclosures about the use

<sup>2792</sup> See *supra* notes 1891 and 1892, and accompanying text.

of scenario analysis to stress test businesses across a range of possible future climate and climate policy scenarios can vary significantly.<sup>2793</sup> As such, the final rules will inform investors about whether a registrant is using scenario analysis to manage a material climate risk, and for those investors who view scenario analysis as an important tool for climate risk management, allow them to factor this information into their investment decisions.<sup>2794</sup> The required disclosures around parameters, assumptions, and analytical choices used by a registrant when conducting scenario analysis will allow investors to better understand the methodology underlying the scenario analysis and thereby improve investors' assessment of the appropriateness of a registrant's strategy and business model in light of foreseeable climate-related risks.<sup>2795</sup>

If a registrant's use of an internal carbon price is material to how it evaluates and manages climate-related risks disclosed in response to Item 1502(a), then the registrant must disclose in units of the registrant's reporting currency information about the price per metric ton of CO<sub>2</sub>e, and the total price, including how the total price is estimated to change over the short-term and long-term, as applicable. For registrants that use more than one internal carbon price to evaluate and manage a material climate-related risk, these disclosures apply to each internal carbon price and the registrant must disclose reasons for using different prices. If the scope of entities and operations involved in the use of an internal carbon price described is materially different from the organizational boundaries used for the purpose of calculating GHG emissions pursuant to Item 1505, the final rules require registrants to describe the difference. We expect this disclosure will provide investors with more

<sup>2793</sup> See *Using Scenarios to Assess and Report Climate-Related C2ES 20 Financial Risk*, C2ES (Aug. 2018), <https://www.c2es.org/document/using-scenarios-to-assess-and-report-climate-related-financial-risk/>; FRB of New York, *Climate Stress Testing*, Staff Report No. 1059 (2023).

<sup>2794</sup> See, e.g., Council of Institutional Investors; Boston Common Asset Management; Boston Walden Trust; Domini; University Network for Investor Engagement; AllianceBernstein.

<sup>2795</sup> See, e.g., letter from Bloomberg (stating "scenario analysis is a useful tool to describe the resilience of a company's strategy to the risks and opportunities of climate change and to develop a more informed view of implications for enterprise value and value chains"); see also *supra* notes 540–542 and accompanying text; see also letter from Wellington ("[i]nformation concerning scenario analysis would also help investors evaluate the resilience of the registrant's business strategy in the face of various climate scenarios that could impose potentially different climate-related risks.").

standardized and decision-useful information regarding whether a registrant's use of an internal carbon price is material and, if so, how it impacts its strategy, results of operations, and financial condition. This is important to address issues with increased voluntary corporate disclosures of internal carbon pricing.<sup>2796</sup> By mandating that registrants disclose any material differences in their boundaries used for internal carbon pricing and GHG emissions measurement, the final rules will help clarify for investors the scope of entities and operations included in a registrant's application of internal carbon pricing and improve the transparency about the methodology underlying the use of internal carbon pricing so that investors may better compare such use across registrants.

In addition to the general cost considerations discussed in section IV.C.1.b, these provisions may have certain unintended effects on registrants and investors. In particular, as some commenters noted, it is possible that requiring registrants to disclose specific facts about their use of transition plans, scenario analysis, and internal carbon prices to address climate-related risks could deter registrants from utilizing these methods or cause them to abandon them, for example because of perceived litigation risk or because of the direct costs of preparing such disclosure.<sup>2797</sup> This could have negative consequences for investors if the use of these methods would have helped registrants better manage climate-related risks and therefore make value-maximizing decisions in light of those risks. However, if registrants' use of these methods becomes a common practice,<sup>2798</sup> due to investor demand or otherwise, this deterrence effect is likely to be limited.

There are potential costs that could result from scenario analysis disclosures under the final rules. First, commenters expressed concern that the disclosure of the scenario analysis results could confuse investors to the extent they inadvertently suggest that the chance of a loss occurring due to a rare event is more likely.<sup>2799</sup> The commenters' concern could materialize if, for

<sup>2796</sup> See CDP, *supra* note 608.

<sup>2797</sup> See, e.g., letters from OMERS; Cemex; and NAM.

<sup>2798</sup> See, e.g., Climate Action 100+, *Progress Update 2022* (2022), available at <https://www.climateaction100.org/wp-content/uploads/2023/01/CA-100-Progress-Update-2022-FINAL-2.pdf> (stating that "91% of focus companies have now aligned with TCFD recommendations, either by supporting the TCFD principles or by employing climate scenario planning").

<sup>2799</sup> See, e.g., letter from the BPI.

instance, a scenario analysis suggests a heightened risk of a once-in-a-hundred-year flood over the next 30 years, and disclosure of this causes certain investors, particularly those not familiar with such analysis, not to invest in the registrant despite the fact that the registrant actually has the same risk profile as other companies that have not made this disclosure. However, we expect any potential investor confusion in such a case will be mitigated because, under the final rules, the registrant would not be required to disclose this information if it determines that this scenario, like other very remote scenarios, are not likely to have a material impact on its business or financial condition. In addition, when disclosure is required, information accompanying the scenario analysis results—such as the assumptions and parameters underlying the analysis—should help provide investors the necessary context for understanding the import of the disclosed analysis.<sup>2800</sup> Second, in disclosing scenario analysis assumptions and inputs as well as information about internal carbon prices, a registrant may face competitive harm to the extent that the disclosures reveal competitively sensitive information, such as asset allocation decisions. However, we expect that the degree of flexibility offered by the disclosure requirements in the final rules will help avoid the exposure of confidential or proprietary information, though they may make the disclosures less comparable.

Overall, by focusing on climate-related risks that are material to the registrant's business, the final rules seek to avoid imposing costs associated with disclosing large amounts of detailed information that may be less relevant to investors. Finally, some of the required disclosures (e.g., forward-looking statements concerning transition plans, scenario analysis, and internal carbon pricing) will be subject to PSLRA safe harbors, which may reduce litigation costs where the safe harbors are applicable.<sup>2801</sup>

### c. Governance Disclosure

The final rules require a registrant to disclose information concerning the board's oversight of climate-related risks as well as management's role in assessing and managing the registrant's

<sup>2800</sup> We note that other disclosure requirements, such as those relating to market risk disclosures, convey to investors complex information about uncertain future risks that registrants face.

<sup>2801</sup> See *supra* section II.J.3 for a discussion of the disclosures required under the final rules that will be subject to PSLRA safe harbors. See also 17 CFR 229.1507.

material climate-related risks.<sup>2802</sup> The final rules require a registrant to identify, if applicable, any board committee or subcommittee responsible for the oversight of climate-related risks and to describe the processes by which the board or such committee or subcommittee is informed about such risks. Additionally, if there is a disclosed climate-related target or goal or transition plan, the registrant must describe whether and how the board oversees progress against the target or goal or transition plan. In describing management's role in assessing and managing the registrant's material climate-related risks, the registrant should address, as applicable, the following non-exclusive list of disclosure items: (1) whether and which management positions or committees are responsible for assessing and managing climate-related risks and the relevant expertise of the position holders or committee members; (2) the processes by which such positions or committees assess and manage climate-related risks; and (3) whether such positions or committees report information about such climate-related risks to the board of directors or a committee or subcommittee of the board of directors. Like other parts of the final rules, these provisions provide some flexibility for registrants to tailor their disclosures to suit their particular facts and circumstances while helping to ensure that investors receive information regarding the board's and management's role in addressing and managing climate-related risks.<sup>2803</sup>

The disclosures required by the final rules will enable investors to better understand how the company's leadership (i.e., its board of directors and management) is informed about climate-related risks and how the company's leadership considers such factors as part of its business strategy, risk management, and financial oversight. Managers and directors

<sup>2802</sup> See 17 CFR 229.1501.

<sup>2803</sup> See, e.g., letters from Wellington ("The proposed enhancements to disclosure on governance would help investors assess whether the issuer is appropriately considering risks and provide investors with valuable information about how the issuer plans to address these risks. This disclosure, in turn, gives investors insight into potential future capital allocation, expansion plans, and potential vulnerabilities associated with the issuer's business model (e.g., significant exposure to the impact of a carbon price)."); and Institute of Internal Auditors ("The board is accountable for the success of the organization and needs assurance from an independent source to fulfill its duties. . . . Effective governance inspires stakeholders' confidence and trust that a company's decisions, actions, and outcomes can address priorities and achieve the organization's desired purpose.").

typically play a key role in identifying and addressing these risks.<sup>2804</sup> Commenters stated that governance-focused information on how such risks are being overseen by the board is "fundamental" for investors, and supported "full disclosure with respect to how and to whom within the company's organization accountability for climate-related risks is assigned" so that investors may assess a registrant's risk management systems in this context.<sup>2805</sup> The disclosures required by the final rules will inform investors about whether the organization has assigned climate-related responsibilities to management-level positions and/or to the board and, if so, whether those responsibilities include assessing and/or managing climate-related risks. As a result, investors will be better able to understand and evaluate the processes, if any, by which the registrant assesses and manages material climate-related risks.

Information regarding whether and how the board oversees progress on material climate-related targets or goals or transition plans will provide useful context for the final rules' other targets or goals or transition plan disclosure requirements. Researchers have found that oversight systems at the board level can provide an important signal about how directors of the registrants recognize and address relevant climate-related risks.<sup>2806</sup>

The final rules require disclosure of board-level governance, if any, of climate-related risks irrespective of the materiality of those risks. This disclosure will allow investors to understand whether climate-risks are among those that are significant enough to be considered at the board level and how management and the board collectively oversee such risks. Regardless of the potential impact of such risks to the company, the decision to oversee climate-related risks at the board level as opposed to delegating

<sup>2804</sup> See Henry He Huang, Joseph Kerstein, Chong Wang & Feng Wu, *Firm Climate Risk, Risk Management, and Bank Loan Financing*, 43 Strategic Management Journal 2849 (June 2022); see also Walid Ben-Amar & Philip McLlkenney, *Board Effectiveness and the Voluntary Disclosure of Climate Change Information*, 24 Business Strategy and the Environment 704 (2015).

<sup>2805</sup> See, e.g., letter from Canadian Coalition for Good Governance (noting that "If a company cannot articulate how material climate-related risks are identified and clearly integrated into its governance philosophy and approach, this is a significant red flag for investors."); see also GHGSAT who state that "A challenge to the implementation of the TCFD framework has been a lack of education on the topic at the board level and a shortage of time for boards to consider the issues."

<sup>2806</sup> V. Ramani & B. Ward, *How Board Oversight Can Drive Climate and Sustainability Performance*, 31 J. of Applied Corp. Fin. 80 (2019).

entirely to management can provide useful information for understanding the company's overall approach to risk management and how climate-related risks factor into such processes.

Commenters asserted that the proposed rules may disproportionately burden small registrants that may not have the internal management organizations and processes in place to assess and manage climate-related risks.<sup>2807</sup> This provision of the final rules does not require registrants to disclose any information when such internal management organizations and processes are absent. In these cases, registrants will not incur any direct costs associated with producing these disclosures. As with any other disclosure requirement, smaller registrants that are required to disclose governance information under the final rules may be disproportionately affected in terms of costs relative to larger registrants because of the direct fixed costs associated with producing disclosure.

Finally, we recognize that the disclosure requirements may either prompt or deter companies from overseeing climate-related risks at the board or management level. To the extent that the final rules lead companies to alter their governance structures in ways that are less efficient (e.g., by diverting board or management attention from other pressing corporate matters or devoting internal resources and expertise to climate-related risks at the expense of other concerns), investors could incur costs in the form of diminished shareholder value. One commenter noted that the adverse effects could be particularly pronounced for smaller registrants that may be less likely to have internal management organizations and processes in place to assess and manage climate-related risks.<sup>2808</sup> We acknowledge these potential costs but also note that several changes from the proposal help to mitigate such effects. For example, by adopting less prescriptive disclosure requirements compared to the those in the proposal and only requiring disclosure of management's role in overseeing material climate related risks, the final rules are less likely to have such unintended effects on the registrant's governance structure and processes. Finally, we reiterate that the final rules are focused on disclosure and do not require registrants to change their governance or other business practices.

Other commenters expressed concern that the proposed requirement to disclose board members' climate

expertise would impose costs by placing pressure on registrants to fill limited numbers of board seats with individuals with a narrow skillset, rather than those with wide ranging expertise or skillsets that may be better suited to the company's needs.<sup>2809</sup> Some commenters also noted the limited number of climate-risk experts compared to the demand for such individuals for board seats, which could increase costs for registrants that feel pressured to appoint climate-risk experts to the board as a result of the final rules.<sup>2810</sup> Similar concerns were raised with respect to the proposed requirement to disclose management's relevant expertise.<sup>2811</sup> In light of the comments, the Commission is not requiring the disclosure of board expertise. We are, however, adopting the requirement to disclose the relevant expertise of management to provide investors with useful information about the expertise of those responsible for identifying material climate risks and communicating those risks to the board.<sup>2812</sup> We acknowledge the incremental cost of making this disclosure and the potential for indirect costs if registrants decide to hire climate experts in response to the disclosure requirement. While acknowledging these costs, we reiterate that the Commission remains agnostic about whether and/or how registrants govern climate-related risks. Registrants remain free to establish or retain the procedures and practices that they determine best fit their business. Overall, we agree with commenters that stated that investors will benefit from this disclosure given the direct role that management plays in overseeing any material climate-related risks.<sup>2813</sup>

#### d. Targets and Goals Disclosure

The final rules will require a registrant to disclose any climate-related target or goal if such target or goal has materially affected or is reasonably likely to materially affect the registrant's business, results of operations, or financial condition.<sup>2814</sup> Under the final rules, a registrant must provide any additional information or explanation necessary to an understanding of the material impact or reasonably likely material impact of the target or goal, including, as applicable, a description of: (1) the scope of activities included in the target; (2) the unit of measurement;

(3) the defined time horizon by which the target is intended to be achieved and whether the time horizon is based on goals established by a climate-related treaty, law, regulation, policy, or organization; (4) if the registrant has established a baseline for the target or goal, the defined baseline time period and the means by which progress will be tracked; and (5) a qualitative description of how the registrant intends to meet these climate-related targets or goals. Registrants are also required to provide certain information if carbon offsets or RECs have been used as a material component of a registrant's plan to achieve climate-related targets or goals. Furthermore, registrants must disclose any progress made toward meeting the target or goal, how any such progress has been achieved, any material impacts to the registrant's business, results of operations, or financial condition as a direct result of the target or goal (or actions taken to make progress toward meeting the target or goal), and include quantitative and qualitative disclosure of any material expenditures and material impacts on financial estimates and assumptions as a direct result of the target or goal (or actions taken to make progress toward meeting the target or goal). This disclosure must be updated each fiscal year by describing the actions taken during the year to achieve its targets or goals.<sup>2815</sup>

The final rules will help investors to understand how a registrant's target or goal impacts its business and financial condition. Such disclosure will enable investors to better understand the costs associated with pursuing these objectives as well as the benefits associated with achieving them. While some registrants may currently provide disclosure about their climate-related targets or goals, those voluntary disclosures generally do not provide investors with an understanding of whether and how the climate-related targets or goals materially impact or are reasonably likely to materially impact the registrant's business, results of operations, or financial condition. In addition, without a requirement to disclose material targets or goals, investors have no way of knowing if there are nonpublic targets or goals that could be relevant to their investment decisions, or if the registrant has simply not set any such targets or goals. Furthermore, voluntary disclosures

<sup>2809</sup> See *supra* note 637 and accompanying text.

<sup>2810</sup> See, e.g., *supra* note 650.

<sup>2811</sup> See, e.g., *supra* note 695 and accompanying text.

<sup>2812</sup> See *supra* section II.E.2.c.

<sup>2813</sup> See section II.E.2.ii.

<sup>2814</sup> See 17 CFR 229.1504.

<sup>2815</sup> As with forward-looking statements concerning transition plans, scenario analysis, and internal carbon pricing, forward-looking statements related to targets and goals will be covered by the PSLRA safe harbor, which may reduce litigation costs.

<sup>2808</sup> See letter from Chamber.

about climate-related targets or goals are often missing key pieces of information that investors need to understand them, such as the plan for achieving them.<sup>2816</sup> The final rules will address these knowledge gaps by supplementing the existing publicly available information.

The final rules will allow for greater comparability across registrants. However, we recognize that the requirement to disclose targets and goals may prompt registrants to forgo establishing targets or goals that may be or may become material in order to avoid the disclosure requirements. This effect may be mitigated to the extent that registrants also consider other factors (e.g., investor demand) for having or not having climate-related targets and goals when making such decisions.

The greater transparency from the required disclosure of specific details related to these targets and goals in Commission filings may help alleviate concerns regarding the issue of greenwashing in existing voluntary disclosures, as noted by commenters.<sup>2817</sup> Academic studies have found that existing information about climate-related targets and goals can suffer from considerable imprecision and inaccuracy despite efforts by certain organizations to create more accountability and transparency.<sup>2818</sup> As a result, under the current voluntary framework, investors may not be able to distinguish between targets and goals that are material and those that are more akin to puffery and are unlikely to be material to a registrant. For example, disclosures that explicitly link a target to a material impact on a registrant's financial condition will both inform investors about the potential costs and benefits of the target, while also lending credibility towards the registrant's efforts to achieve the target. Thus, by requiring disclosures about material targets and goals in Commission filings, the final rules should enhance the reliability and utility of such information for investors.<sup>2819</sup> In addition, since any greenwashing under

the current voluntary disclosure regime could lead investors to over- or underestimate the potential impact of targets or goals on a registrant's business strategy, results of operations, or financial conditions, the disclosures required by the final rules will further enable investors to draw more informed conclusions about how targets and goals may impact the business.

We are not adopting the proposed requirement to disclose metrics quantifying a registrant's progress towards its target or goal. By not requiring registrants to provide quantification of its targets and goals metrics, we avoid some of the cost concerns raised by comments associated with such disclosure, including Scope 3 emissions disclosures and other potentially difficult-to-calculate metrics.<sup>2820</sup> Nevertheless, we expect the final rules to result in some costs associated with developing systems for measuring progress made on targets or goals because registrants may still have to track their progress for purposes of providing the required disclosures, if they do not already have those processes in place. Further, the final rules' more flexible approach may limit the usefulness of targets and goals disclosures relative to the proposed rules. In particular, if a registrant provides boilerplate qualitative disclosures, then it would be harder for investors to assess the disclosures' credibility. However, the final rules requirement to provide quantitative and qualitative disclosures of material expenditures and material impacts on financial estimates and assumptions related to targets and goals will mitigate this concern to some extent. This disclosure will also inform investors about the financial implications of pursuing these targets and goals. For instance, investment in achieving targets could be value-enhancing in the long run but reduce cash flow in the short run. By facilitating a better understanding of these impacts, investors will be better positioned to value companies and make investment and voting decisions.

Quantitative disclosures of expenditures and impacts may facilitate comparisons across registrants; although, as noted in section IV.C.2.b above, the comparability benefits of this quantitative disclosure depend on the degree of variation in management determinations of which portion of their expenditures can be directly attributable

to targets and goals. In addition, as discussed above, these disclosures may lead some registrants to report figures that overstate the impact of targets and goals (if, for example, the registrant determines not to deduct the portion of expenditures that are unrelated to pursuit of the target or goal). However, we expect that accompanying qualitative discussion should provide investors the context necessary to draw informed conclusions.

In a change from the proposal, the final rules do not require disclosure of interim targets set by the registrant. Rather, registrants have flexibility to determine whether to disclose their interim targets, if any, in describing their plans to achieve their targets and goals or in the context of describing their progress towards such targets or goals.

If carbon offsets or RECs have been used as a material component of a registrant's plan to achieve climate-related targets or goals, the final rules require registrants to separately disclose the amount of carbon avoidance, reduction, or removal represented by the offsets or the amount of generated renewable energy represented by the RECs, the nature and source of the offsets or RECs, a description and location of the underlying projects, any registries or other authentication of the offsets or RECs, and the costs of the offsets or RECs. Describing the features of RECs will help investors understand how registrants are managing their climate-related risks.<sup>2821</sup> For example, one commenter said that "not all offsets or RECs are equal" and that information on RECs would "allow investors to better assess the use of capital, the integrity and validity of such offsets or RECs, and the degree that the registrants emissions profile and offsets or RECs could be at risk due to policy or regulation changes."<sup>2822</sup> These disclosures also will provide context for any required disclosures of Scope 1 or Scope 2 GHG emissions (i.e., if such emissions are material for an LAF or an AF). In addition, more complete disclosures about carbon offsets and RECs may help deter potential greenwashing that results from a lack of reliable basic information. Because these disclosures comprise basic facts associated with the registrant's purchased carbon offsets and RECs, we do not expect that collecting and reporting this information will constitute a significant burden.

<sup>2816</sup> See, e.g., Kenji Watanabe, Antonios Panagiotopoulos & Siyao He, *Assessing Science-Based Corporate Climate Target-Setting*, (June 9, 2023), at Appendix 4, available at <https://www.msci.com/www/research-report/assessing-science-based/03881548607>.

<sup>2819</sup> See, e.g., letter from Center Amer. Progress ("Disclosures around management's plans to address climate risks, including how management is meeting or not meeting the targets or goals in those plans, are essential for investors and other market participants.").

<sup>2820</sup> See section II.H.2. As noted above, the final rules will not require disclosure of Scope 3 emissions information, including in the context of a registrant's targets or goals.

<sup>2821</sup> See, e.g., letters from AllianceBernstein; Carbon Direct; CarbonPlan; and Ceres.

<sup>2822</sup> See letter from CalPERS.

#### e. GHG Emissions Metrics

The final rules will require LAFs and AFs (that are not SRCs or EGCs) to disclose Scope 1 and/or Scope 2 emissions, if such emissions are material, for their most recently completed fiscal year and, to the extent previously disclosed in a Commission filing, for the historical fiscal year(s) included in the consolidated financial statements in the filing.<sup>2823</sup> By specifying that these registrants must provide information on material GHG emissions, the final rules will give investors access to a more comprehensive set of emissions data than under the baseline. Investors can use this data to assess exposures to certain types of climate-related risks and provide quantitative contextual data to supplement a registrant's description of the material climate-related risks it faces, as well as progress on the management of those risks, as a part of assessing the registrant's overall business and financial condition. Because the value of a company's equity is derived from expected future cash flows, disclosure of GHG emissions can help investors understand whether those emissions are likely to subject the registrant to a transition risk that will materially impact its business, results of operations, or financial condition in the short- or long-term and incorporate risks associated with such future cash flows into asset values today. Indeed, academic literature shows that risks both in the near term and far into the future are priced into current asset valuations.<sup>2824</sup> Thus, for many registrants, GHG emissions can be helpful to assess the registrants' exposure to climate-related risks, particularly to material transition risks.<sup>2825</sup>

As noted in section IV.A, many registrants currently do not provide quantitative disclosures on their Scope 1 and 2 emissions. This lack of information on emissions makes it more difficult for investors to assess the degree of risk in individual companies,

to compare those risks across companies, and to value securities. By requiring disclosure of GHG emissions for specified registrants for the same historical periods as those included in the financial statements in the relevant filing, the final rules will help investors develop a more accurate assessment of those registrants' exposure and approach to climate-related risks over time. For example, Scope 1 and Scope 2 emissions disclosure may be relevant to investors' assessment of a registrant's progress made on targets or goals or towards its transition plan.<sup>2826</sup>

The final rules will provide informational benefits beyond those associated with the voluntary disclosure of emissions that may be found in sustainability reports or other places, such as company websites. In particular, the overall mix of information disclosed to the market can be distorted when only a certain subset of companies (e.g., those with lower emissions or those that face lower costs of emissions measurement) have stronger incentives to make voluntary disclosures. The final rules may offset this distortion because disclosure is only required if a registrant determines that its Scope 1 and Scope 2 emissions are material. The materiality qualifier will allow registrants that determine that their emissions are immaterial to avoid the full costs of emissions measurement and disclosure. It will also mitigate the risk that investors could be burdened with large amounts of information that is less relevant for their investment and voting decisions. In addition, mandatory disclosure of Scope 1 and Scope 2 emissions data in Commission filings may deter potential greenwashing that could occur with voluntary disclosures.<sup>2827</sup>

Some commenters questioned the value of GHG disclosures in light of

existing requirements for some registrants to report emissions pursuant to the GHGRP.<sup>2828</sup> As previously discussed,<sup>2829</sup> the data available from the GHGRP is generally not suited to help investors understand how a registrant's exposure and approach to managing climate-related risks may impact its future cash flows and profitability for several reasons. First, the GHGRP requires that emissions are reported at the facility-level rather than the registrant-level. Second, suppliers of certain products must report their "supplied emissions," conditional on these emissions exceeding a specified threshold.<sup>2830</sup> Third, GHGRP reporting is limited to U.S. facilities. Some commenters asserted that the GHGRP could not be substituted for the proposed rules given the different disclosure requirements and the different objectives of the two reporting regimes.<sup>2831</sup>

While there are differences between the EPA's GHGRP and the Scope 1 and 2 emissions disclosures in the final rules, we expect that registrants subject to both reporting regimes would face reduced costs of compliance with the final rules to the extent there is overlap between the reporting requirements of the GHGRP and the final rules. As discussed in section IV.A, the GHGRP covers 85 to 90 percent of all GHG emissions in the U.S. and includes those emissions referenced by the GHG Protocol and included in the final rules' definition of "greenhouse gasses."<sup>2832</sup> As such, we expect that entities subject to the GHGRP disclosure and reporting requirements may consequently have lower incremental information gathering costs under the final rules for those emissions already required to be calculated and reported by a registrant pursuant to the GHGRP. For example, because both the GHGRP and the final rules require companies to collect information to report and disclose their Scope 1 emissions, to the extent that the information and reporting activities overlap, registrants subject to both the

<sup>2828</sup> See *supra* section IV.A.3 and letters from Chamber; Elaine Henry; BOK Financial; David R. Burton; Permian Basin; and Petroleum Association.

<sup>2829</sup> See *supra* section IV.A.3.

<sup>2830</sup> In addition, as previously discussed, the EPA emissions data only reflects a portion of emissions. See *supra* section IV.A.3. The EPA's emissions data therefore presents challenges for investors to use, especially as the data are made public by facility and not by company. While each facility is matched to its parent company, this company may not be the entity registered with the SEC and thus the reported information may be less relevant to investors. See also letter from EPA (containing a tabular comparison of the EPA disclosures to the proposed disclosures).

<sup>2831</sup> See, e.g., letters from EPA; and Marathon Oil.

<sup>2832</sup> See *supra* section IV.A.3.

<sup>2823</sup> See 17 CFR 229.1505.

<sup>2824</sup> For evidence that points to the pricing of short-term climate-related risks, see R. Faccini, R. Matin & G. Skiadopoulos, *Dissecting Climate Risks: Are They Reflected in Stock Prices?* 155 J. of Banking & Fin., Article 106948 (Oct. 2023); Huynh & Xia (2021). For evidence that points to the pricing of long-term climate-related risks, see M. Painter, *An Inconvenient Cost: The Effects of Climate Change on Municipal Bonds*, 135 J. of Fin. Econ. 468 (2020); D.D. Nguyen, S. Ongena, S. Qi & V. Sila, *Climate Change Risk and the Cost of Mortgage Credit*, 26 Rev. of Fin. 1509 (2022); Huynh & Xia (2021).

<sup>2825</sup> See letters from CALSTRS; Vanguard; Fidelity; BlackRock; CALPERS; and State of NY Office of the Comptroller.

<sup>2826</sup> Research has shown that issuers tend to "cherry-pick" the baseline year (i.e., pick the year with highest emissions within the past few years) when forming an emissions target so that any progress appears in the most favorable light. See P. Bolton & M. Kacperczyk, *Firm Commitments*, National Bureau of Economic Research, No. w31244 (May 2023). The final rules will thus benefit investors by helping them identify when such cherry-picking occurs so as to arrive at a more informed assessment about the registrant's progress towards meeting its targets or goals.

<sup>2827</sup> R. Yang, *What Do We Learn from Ratings About Corporate Social Responsibility? New Evidence of Uninformative Ratings*, 52 J. of Fin. Intermediation, Article 100994 (Oct. 2022); Soh Young In & Kim Schumacher, *Carbonwashing: A New Type of Carbon Data-related ESG Greenwashing* (2021), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=3901278](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3901278) (retrieved from SSRN Elsevier database); V. Kalesnik, M. Wilkens & J. Zink, *Do Corporate Carbon Emissions Data Enable Investors to Mitigate Climate Change?*, 48 J. of Portfolio Mgmt. 119 (2022) ("Kalesnik et al.').

final rules and the GHGRP may face lower incremental information gathering costs. However, as one commenter noted, “[t]he Commission-proposed regulation is not completely in alignment with the US EPA regulation. Thus, an assessment, plan of action, and implementation of changes will be needed for many companies to be compliant with the requirements of both agencies.”<sup>2833</sup> In addition as noted above, this lower incremental cost would only apply to direct emissions from U.S.-based facilities, not registrants’ international facilities or operations.

Limiting the disclosure requirement to larger companies (*i.e.*, those with greater resources that tend to be already calculating emissions, as noted in section IV.A) will help to balance the concerns of commenters who stated that the evolving nature of current emissions measurement technologies could impose significant compliance costs on registrants, especially those not currently familiar with reporting this information.<sup>2834</sup>

Although the final rules limit disclosures to circumstances in which emissions are material for registrants, we expect most, if not all, LAFs and AFs that are not EGCs or SRCs will need to assess or estimate their Scope 1 and 2 emissions to reach a materiality determination. As a result, we expect these registrants will, to some extent, need to adopt controls and procedures to assess the materiality of their Scope 1 and 2 emissions and determine whether disclosure is required if they do not already have them in place. Registrants that determine that their Scope 1 and 2 emissions are material may likewise need to adopt further controls and procedures, including measurement technologies and other tools to track and report the information to the extent they do not already do so. The final rules may also affect registrants that currently track and/or report this information.<sup>2835</sup> For example, some registrants may only be measuring some Scope 1 or Scope 2 emissions.<sup>2836</sup> Any investments in systems or technologies to better measure Scope 1 and Scope 2 emissions will improve the quality of available

data<sup>2837</sup> on emissions but will also contribute to the direct costs of compliance.<sup>2838</sup>

The benefits of this component of the final rules depend on the extent to which Scope 1 and 2 emissions disclosures are accurate and thus provide reliable reflections of registrants’ exposure to material climate-related risks, their management of that risk, and their progress on transition plans and/or targets and goals (to the extent they have them). Several commenters noted that many registrants have had more experience measuring and disclosing Scope 1 and 2 emissions than Scope 3 emissions, and that those methodologies, from their experiences, are well-established and are considered fairly robust.<sup>2839</sup> Nevertheless, according to studies as well as commenter feedback, there may be issues with errors and inconsistencies in voluntary Scope 1 and 2 emissions disclosures.<sup>2840</sup> The final rules will benefit investors by improving the accuracy and reliability of this information—first through requiring registrants to subject GHG emissions disclosures, to the extent they are required to make them, to disclosure controls and procedures; and second, by requiring assurance. The final rules also permit the disclosure of reasonable estimates for Scope 1 and 2 emissions provided that such estimates are accompanied by disclosure of underlying assumptions and reasons for using estimates, which will help

investors better understand the metrics that registrants are disclosing.

Scope 1 and 2 emissions may not fully reflect a registrant’s exposure to transition risks because some of those risks would only be captured through other metrics such as Scope 3 emissions.<sup>2841</sup> For example, registrants facing similar exposure to emissions-related climate risks may report different Scope 2 emissions levels depending on, for example, whether they pay directly for their utilities (counted as Scope 2) or their leases provide for utilities expenses (counted as Scope 3), or, as another example, whether they have employees who work from home and therefore who do not contribute directly to utilities expenses. Recognizing these limitations, the final rules also require disclosures on methodology, significant inputs, significant assumptions, organizational boundaries, operational boundaries, and reporting standard used with respect to Scope 1 and 2 emissions. These disclosures will provide additional context to help investors understand the disclosures and will enable investors to draw more reliable comparisons across registrants. For example, disclosure of operational boundaries will help distinguish registrants that rely on utilities provided by third parties from those that pay directly for their utilities, which will assist investors in accounting for this difference when comparing reported emissions and thus climate-related risk across registrants.

In a change from the proposal, we are exempting SRCs and EGCs from the GHG emissions disclosure requirements in order to limit the costs of this disclosure requirement for such registrants. This exemption should also mitigate the risk of deterring prospective EGCs or SRCs from conducting IPOs or inducing EGCs or SRCs to deregister under the Exchange Act as a result of the costs associated with compliance with the requirements to disclose material Scopes 1 and 2 emissions. Registrants that already measure their GHG emissions tend to be larger companies (with greater exposure to various climate-related transition risks by virtue of their size and economic footprint) as observed in our own baseline analysis (see Table 5) and in the assessments of commenters, many of whom supported exemptions for SRCs and EGCs as they would be disproportionately impacted by the requirement.<sup>2842</sup> While these

<sup>2837</sup> A number of studies have raised concerns about the quality of existing emissions data. For example, one study found that third-party estimates of emissions, which represent a significant fraction of the emissions data available in several existing databases, are materially less accurate than self-reported emissions data by issuers. See Kalesnik *et al.*, *supra* note 2827. Another study examined emissions data reported to CDP between 2010 and 2019 and found that 38.9% of the reports exhibited disparities between the reported total emissions and sum of reported emissions by various sub-categories. See S. Garcia-Vega, A.G. Hoepner, J. Rogelj & F. Schiemann, *Abominable Greenhouse Gas Bookkeeping Casts Serious Doubts On Climate Intentions of Oil and Gas Companies* (working paper, Mar. 2023), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=4451926](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4451926) (retrieved from SSRN Elsevier database).

<sup>2838</sup> See sections IV.C.1.b and IV.C.3 for additional information on the associated compliance costs.

<sup>2839</sup> See letters from National Retail Federation; AHLA; and Aerospace Industries Association.

<sup>2840</sup> See Kalesnik *et al.*, *supra* note 2827; Garcia-Vega *et al.*, *supra* note 2837; see also letter from Calvert (“Research demonstrates about 30% of companies that disclose such information in their own reporting make errors on a regular to periodic basis, despite the well-established rules and systems that already exist to ensure proper reporting of such emissions. In many cases, this appears to stem from a lack of effective internal controls or well-functioning monitoring systems.”).

<sup>2833</sup> Letter from Marathon Oil.

<sup>2834</sup> See letters from Blackrock; Business Roundtable; and Chevron. See also Kalesnik, *et al.*, *supra* note 2827.

<sup>2835</sup> As we discuss below, the costs for existing registrants who track and disclose emissions will be limited because the final rules enable registrants to continue to use the operational and organizational boundaries they already use to track emissions.

<sup>2836</sup> See Kalesnik, *et al.*, *supra* note 2827 (noting that many registrants do not fully measure their Scope 1 emissions).

<sup>2841</sup> See letters from Wellington; and Calvert.

<sup>2842</sup> See, *e.g.*, letters from U.S. SBA (“Small entities will need to allocate larger shares of their

exemptions may limit the benefit of achieving greater consistency and comparability across registrants, exempting SRCs and EGCs from this disclosure requirement at this time is appropriate given the relatively larger burden GHG emissions reporting requirements could have on these firms<sup>2843</sup> and the differences in the existing levels of climate-related disclosure between larger companies and smaller companies.

Commenters raised concerns about the costs of providing GHG emissions on a disaggregated basis.<sup>2844</sup> However, many commenters also explained that disaggregated disclosures could be decision useful, as emissions from specific constituent gases could have differential effects on a company's cash flows or business operations.<sup>2845</sup> For example, a registrant may be subject to methane fees by the EPA, in which case information about the registrant's methane emissions could factor into investors' decision making. To balance these views, some commenters suggested that the final rules should require constituent gases to be disclosed on a disaggregated basis only when individually material.<sup>2846</sup> We agree with those commenters and believe that this approach will provide investors with decision-useful information about GHG

technological, financial, and staff resources to comply with the proposed rules. Representatives from the biotechnology, plastics, and equipment manufacturing industries have reported to Advocacy that small businesses in their industries have not traditionally tracked GHG emissions or other climate-related metrics. These businesses would either need to develop modeling software to track climate metrics in-house or hire third-party consultants to do so . . . Small private companies have also voiced that the costs of collecting and analyzing GHG emissions data could be prohibitive.”); Soros Fund (suggesting that EGCs and SRCs should be allowed additional time to adjust to climate disclosure requirements, be afforded an additional safe harbor and be exempt from financial statement metrics disclosure); and SBCFAC Recommendation (recommending “scaling and delaying the compliance requirement for emerging growth companies, along with smaller reporting companies.”).

<sup>2843</sup> Even for SRCs and EGCs that are currently calculating GHG emissions, there could be certain fixed costs associated with preparing this information for disclosure in Commission filings that would not scale with the size of the registrant and would therefore be more burdensome to these entities. We expect benefits to scale with the size of the firm.

<sup>2844</sup> See, e.g., letters from ABA; ERM CVS; Sullivan Cromwell; and T. Rowe Price.

<sup>2845</sup> See, e.g., letters from PwC; and WRI.

<sup>2846</sup> See, e.g., letter from Deloitte & Touche (“Many emissions category calculation methods are estimate-based and rely on proxy data; the potential variance in actual can be significant and is largely unknown in many instances. Especially given these challenges, the Commission may consider whether the disaggregated data by each constituent greenhouse gas should only be required to be disclosed when individually material.”).

emissions without imposing undue compliance costs on registrants to produce disaggregated data in circumstances in which the disaggregation may not be particularly useful for investors.<sup>2847</sup>

The final rules also permit registrants to calculate and disclose GHG emissions according to the methodology that best matches their particular facts and circumstances. The benefit of this flexible approach is that registrants will have the opportunity to provide investors with information about their GHG emissions using the latest and most suitable methodology as measurement technologies and standards continue to develop. For example, while many companies calculate their GHG emissions pursuant to the GHG Protocol, others utilize different approaches, such as certain ISO standards.<sup>2848</sup> This flexibility, which may include registrants' ability to round as appropriate, will serve to limit costs.<sup>2849</sup> Conversely, it could also make comparisons less straightforward, which may attenuate some of the expected benefits of the final rules. However, there are several reasons to believe that this reduction in comparability will not significantly undermine the utility of the required disclosures. First, the required disclosures will expand upon and enhance the quality of the existing set of GHG emissions disclosures that investors already find useful despite the variation in methodologies that produce existing emission disclosures.<sup>2850</sup> Second, the contextual disclosures (e.g., operational boundaries) will enable investors to better understand the quantitative disclosures and make adjustments to facilitate comparisons with other registrants that are otherwise not possible under the baseline. Third, to the extent that industry-specific approaches to disclosing emissions continue to develop and evolve, the final rules will permit registrants within those industries to adopt those approaches, which will help investors to compare peer companies within an industry. Finally, as we discuss in the

<sup>2847</sup> *Id.*

<sup>2848</sup> See letters from Futurepast (referencing ISO 14064–1, Specification with Guidance at the Organization Level for Quantification and Reporting of Greenhouse Gas Statements; and ISO 14067, Carbon Footprint of Products—Requirements and Guidelines for Quantification); and ISO Comm. GHG; see also, e.g., letters from Alphabet *et al.*; As You Sow; Beller *et al.*; CalSTRS; CFA; Dell; Deloitte & Touche; Engine No. 1; ERM CVS; KPMG; Morningstar; Soc. Corp. Gov.; and WRI.

<sup>2849</sup> See letter from AGs of TX *et al.*

<sup>2850</sup> See, e.g., letters from Vanguard; Fidelity; BlackRock; CALSTRS; and CALPERS for investors who derive utility from existing emissions disclosures.

next subsection, obtaining assurance over GHG emissions disclosure provides investors with an additional degree of reliability regarding not only the figures that are disclosed, but also the key assumptions, methodologies, and data sources the registrant used to arrive at those figures.

These disclosures complement the other required disclosures about the organizational boundaries (used to calculate emissions versus those used in their financial statements) as well as carbon offsets and RECs, which offer important context for facilitating comparisons between companies as discussed above. In fact, by not requiring organizational boundaries to necessarily conform to those used in the company's consolidated financial statements, the final rules permit the development of a standardized framework (e.g., control approach) for measuring emissions across registrants. Commenters supported this approach as it would allow registrants to continue to measure emissions using their current approach and procedures.<sup>2851</sup> That is, by not imposing a prescriptive methodology for GHG emissions disclosures, the final rules provide space for the continued development of a shared reporting framework for issuers to disclose information that ultimately may enhance the degree of comparability of registrant-level GHG emissions data, to the benefit of investors, registrants and the market (relative to the baseline).<sup>2852</sup>

Finally, as discussed in section II.I above, we are following the suggestions of many commenters and allowing registrants more time to report emissions given the inherent challenges with reporting sooner that commenters highlighted.<sup>2853</sup> By delaying the requirement to disclose GHG emissions until later in the year, the final rules will provide additional time to prepare the information for filing (more consistent with current voluntary reporting practices),<sup>2854</sup> which should improve its accuracy and reduce costs for registrants but may result in delayed disclosure in some instances. The delay in annual reporting may also allow registrants to leverage disclosures they may have already prepared for other reporting regimes. Nonetheless, even with the extended filing deadline for

<sup>2851</sup> See, e.g., letters from API; ACORE; AHLA; and Chevron.

<sup>2852</sup> See, e.g., letters from Alphabet *et al.*; and Alliance-Bernstein.

<sup>2853</sup> See, e.g., letters from Morningstar; and American Banker.

<sup>2854</sup> See, e.g., *supra* note 2570 (stating “many companies still take more than 12 months after their fiscal year to disclose their sustainability data”).

registrants, investors will still benefit from receiving this information in a more timely and predictable manner than they currently do.<sup>2855</sup>

#### f. Attestation Over GHG Emissions Disclosure

The proposed rules would have required LAFs and AFs to provide an attestation report covering the disclosure of its Scope 1 and Scope 2 emissions at the limited assurance level for the second and third fiscal years after the Scopes 1 and 2 emissions disclosure compliance date, and at the reasonable assurance level beginning in fiscal year four. In a change from the proposal, the final rules require LAFs and AFs to provide an attestation report at the limited assurance level for Scope 1 and/or Scope 2 emissions disclosures beginning the third fiscal year after the compliance date for GHG emissions reporting and require an LAF to provide an attestation report at the reasonable assurance level for Scope 1 and/or Scope 2 emissions disclosures beginning the seventh fiscal year after the compliance date for GHG emissions reporting.<sup>2856</sup>

Many commenters stated that the proposed assurance requirements would be too costly.<sup>2857</sup> In response to these commenters' concerns, and in a shift from the proposal, the final rules will exempt SRCs and EGCs from the requirement to obtain assurance, since SRCs and EGCs will not be required to disclose GHG emissions. In addition, the final rules do not require AFs to provide attestation reports at the reasonable assurance level. We have determined that it is appropriate to apply the reasonable assurance requirement to a more limited pool of registrants—LAFs—at this time because a number of LAFs are already collecting

<sup>2855</sup> See, e.g., letter from Morningstar ("Currently, a lack of clear disclosure standards for the timing of 'sustainability reports,' which is the primary source for emissions data, greatly hinders investor knowledge. For example, some registrants released 2021 reports—detailing 2020 data—as late as November 2021.")

<sup>2856</sup> See 17 CFR 229.1506.

<sup>2857</sup> See, e.g., letters from AFPM; AHLA; Amer. Chem.; Bipartisan Policy ("While emissions data is no doubt important for companies to evaluate, especially those that are large emitters, attesting or certifying this data as accurate is far more costly than with financial data because the market for emissions is not at all well-developed."); Eversource; Business Roundtable; Chamber; ConocoPhillips ("the availability of assurance providers is currently insufficient to meet demand and will likely trigger a surge in costs"); McCormick ("While unknown at this time, due to the fact that these types of disclosures have never been required by the SEC in the past and in this form, these added costs must be well understood and measured against the benefit."); NOIA; PPL; SBCFAC Recommendation; SIFMA; Soc. Corp. Gov.; Sullivan Cromwell; and Travelers.

and disclosing climate-related information, including GHG emissions data and larger issuers generally bear proportionately lower compliance costs than smaller issuers due to the fixed cost components of such compliance.

For both LAFs and AFs, the extended phased in compliance dates will further address concerns about the immediate costs of compliance under the final rules.<sup>2858</sup> Specifically, the final rules provide registrants with two phased in compliance periods—one phased in compliance period before GHG emissions disclosures are required, and another, later phased in compliance period before assurance over GHG emissions disclosures is required. These phased in compliance periods will give registrants time to develop and implement processes and controls to produce high quality GHG emissions data and disclosures. In addition, the phased in compliance periods will provide existing GHG emissions assurance providers with time to train additional staff and undertake other preparations for these engagements as necessary, as well as facilitate the entry of new GHG emissions attestation providers into the market to meet demand.<sup>2859</sup> As the availability of assurance providers increases and the quality of registrants' reporting improves, we expect the costs of assurance will decrease.

Many commenters also pointed out the benefits of attestation reports covering the disclosure of registrants' Scope 1 and Scope 2 emissions, including increased investor protection<sup>2860</sup> and mitigation against the risk of potential greenwashing.<sup>2861</sup>

<sup>2858</sup> See letter from BOA (stating that a delay in the compliance date "would give additional time to attestation providers to obtain the necessary staff and resources to meet future demand and could help to reduce costs for registrants"); see also letter from Corteva (stating that a minimum one-year extension to the implementation deadlines set forth in the proposal "would reduce the risk of reporting delays, give registrants further opportunities to improve data quality and internal control processes, and work with assurance providers to ensure a more productive assurance process").

<sup>2859</sup> There can be barriers to entry due to consolidation around a few major assurance providers. See Gipper *et al.* (2023); see also discussion of similar concerns raised in the context of recent California laws, discussed *infra* note 3118 and accompanying text.

<sup>2860</sup> See, e.g., letters from Better Markets; CAQ; and SFERS.

<sup>2861</sup> See, e.g., letters from BNP Paribas; and UAW Retiree. In response to one commenter who asserted a lack of factual evidence on the extensiveness of greenwashing (see Overdahl exhibit to letter from Chamber), we note that recent analysis shows greenwashing risk has accelerated. See RepRisk, *On the Rise: Navigating the Wave of Greenwashing and Social Washing* (Oct. 2023), available at <https://www.reprisk.com/news-research/reports/on-the-rise-navigating-the-wave-of-greenwashing-and-social-washing>.

Academic research shows that voluntary assurance improves the quality of GHG emissions disclosures and CSR disclosures more generally,<sup>2862</sup> and that investors perceive CSR disclosures to be more credible when they are accompanied by the assurance reports, regardless of the assurance level.<sup>2863</sup> Broadly, academic research also suggests that the market values voluntary audits<sup>2864</sup> and due to this demand firms voluntarily submit to audits.<sup>2865</sup> Furthermore, practitioner evidence suggests that the demand for voluntary ESG assurance is increasing.<sup>2866</sup> And while some registrants may meet this demand by obtaining voluntary assurance; others may not. Indeed, research shows that many firms do not obtain voluntary assurance,<sup>2867</sup> and that assurance provided on a voluntary basis may vary widely in form and content.<sup>2868</sup> Hence, we expect there to be benefits from requiring LAFs and AFs to provide the attestation reports covering their Scope 1 and/or Scope 2 emission

<sup>2862</sup> See, e.g., letter from F. Berg; Brandon Gipper, *et al.*, *Carbon Accounting Quality: Measurement and the Role of Assurance*, *supra* note 1243; B. Ballou, P.C. Chen, J.H. Paper (revised Feb. 2023), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=3837593](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3837593).

<sup>2866</sup> See Center for Audit Quality, *supra* note 2716.

<sup>2867</sup> As of 2020, the voluntary assurance rate of ESG reports in the U.S. was 46%. Gipper *et al.* (2023).

<sup>2868</sup> For example, there was significant heterogeneity in the content of voluntary assurance reports over financial statements provided in the U.S. prior to the adoption of the mandatory audit requirements of the Exchange Act. See Bourveau, *et al.*, *supra* note 2865; Gipper *et al.* (2023) also document that there is a heterogeneity of the types of metrics being voluntarily assured, depending on the type of the assessor. For example, financial auditors tend to assure slightly more metrics (93%) than non-financial assurers (89%). See Gipper *et al.* (2023), at Table IA–2.

disclosures.<sup>2869</sup> The assurance requirement in the final rules will require an independent third-party to provide a check on the accuracy and completeness of a registrant's GHG emissions disclosures before the information is provided to investors, which as explained above, will likely contribute to lowering the cost of capital and analyst forecast errors.<sup>2870</sup> While the academic accounting literature, as one commenter has noted, has traditionally found that "auditing assurance for corporate social responsibility in the US has not led to positive market effects,"<sup>2871</sup> more recent evidence on specifically carbon emissions assurance has revealed a positive link between external assurance of carbon emissions and market value.<sup>2872</sup>

Other commenters stated that there is a lack of expertise to meet the demand for required attestation services.<sup>2873</sup> These commenters raised concerns that this lack of expertise, coupled with the proposed rules' requirements for assurance providers, would increase costs of obtaining assurance. Other commenters stated that they were opposed to the proposed assurance requirements because the requirements would preclude assurance providers from applying the ISO 14064–3 standards, which is the most common standard used by non-accountant assurance providers.<sup>2874</sup> As discussed in the baseline, most companies that currently obtain some type of third-party verification or assurance do not obtain these services from accounting firms.<sup>2875</sup> The proposed requirements

would not have limited the scope of providers to accounting firms. However, the proposed requirements regarding the attestation standards would have prevented providers from using certain attestation standards widely used by non-accounting firm providers, such as ISO 14064–3, which could have resulted in providers needing to become familiar with different standards or registrants needing to change assurance providers, which would have increased the costs of obtaining assurance. The final rules address these concerns by modifying the requirements for the attestation standards such that an attestation report pursuant to the ISO 14064–3 standards will satisfy the requirements in the final rule.

Commenters also asserted that assurance standards and methodologies are still evolving.<sup>2876</sup> Consistent with these commenters' assertions, prior research shows that the field of sustainability assurance—which presumably encompasses the assurance over emissions disclosures—is fairly new and thus may not provide the same benefits as decades of financial audit practice.<sup>2877</sup> While we acknowledge that

are the primary service provider. See IFAC, *supra* note 1089 (approximately 57% of engagements assurance reports were conducted by audit firms in 2021).

<sup>2876</sup> See, e.g., letters from ABA ("As the reporting and attestation standards develop further, a single standards-setting body emerges as the clear leader, and third parties begin to become qualified under these standards, the Commission can then assess whether an attestation standard is appropriate."); Mid-Size Bank; Nasdaq ("To encourage disclosures while the attestation industry continues to mature, the Commission should eliminate the attestation requirement for Scope 1 and 2 emissions, and permit all issuers to disclose a voluntary attestation in accordance with proposed Item 1505(e)(1–3) of Regulation S-K."); SIFMA; and Tata Consultancy Services (June 17, 2022) ("We do not subscribe to the view that an attestation of reported emissions would be appropriate at such a nascent stage of adoption of climate-related disclosure standards and practices.")

<sup>2877</sup> See K. Hummel, C. Schlick & M. Fifka, The Role of Sustainability Performance and Accounting Assurors in Sustainability Assurance Engagements, 154 J. of Bus. Ethics 733 (2019); M.B. Farooq & C. De Villiers, Sustainability Assurance: Who Are The Assurance Providers and What Do They Do?, Challenges in Managing Sustainable Business: Reporting, Taxation, Ethics, & Governance (S. Arvidsson, ed., 2019) ("Farooq and Villiers (2019)"); C. Larrinaga, *et al.*, Institutionalization of the Contents of Sustainability Assurance Services: A Comparison Between Italy and United States, 163 J. of Bus. Ethics 67 (2020). Academic evidence also suggests that sustainability report restatements are positively associated with the presence of sustainability assurance reports. See G. Michelon, D.M. Patten & A.M. Romi, *Creating Legitimacy for Sustainability Assurance Practices: Evidence from Sustainability Restatements*, 28 European Acct. Rev. 395 (2019). This finding is more pronounced "for error restatements than for restatements due to methodological updates." See also R. Hoitash & U. Hoitash, *Measuring Accounting Reporting Complexity with XBRL*, 93 Acct. Rev. 259 (2018)

the field of GHG emission assurance is still maturing, as discussed elsewhere, a number of registrants currently obtain voluntary assurance over their GHG emissions disclosures, which presumably they would not do if existing assurance standards were unworkable or did not meaningfully enhance the reliability of those disclosures. The final rules permit registrants to follow any attestation standards that are publicly available at no cost or that are widely used for GHG emissions assurance and that are established by a body or group that has followed due process procedures including the broad distribution of the framework for public comment. These conditions will help ensure that any standards used for GHG assurance services under the final rules are sufficiently developed to provide meaningful investor protection benefits, while still providing a degree of flexibility to registrants given the emerging nature of GHG assurance services. In addition, the final rules include a longer phase in period before LAFs and AFs are required to comply with the assurance requirements, which also provides additional time for standards and methodologies to further develop.

The final amendments also require the GHG emissions attestation report be prepared and signed by a GHG emissions attestation provider who is an expert in GHG emissions by virtue of having significant experience in measuring, analyzing, reporting, or attesting to GHG emissions. This provider must be independent with respect to the registrant, and any of its affiliates, for whom it is providing the attestation report, during the attestation and professional engagement period.

The final rule's expertise requirement for attestation providers should enhance the overall benefits of obtaining GHG emissions assurance, consistent with academic research showing that industry specialist auditors deliver higher quality financial statement audits than non-specialist auditors<sup>2878</sup> and that audit clients are willing to pay more for audit services of more experienced audit partners.<sup>2879</sup>

(finding misstatements are more likely in areas of reporting complexity).

<sup>2873</sup> See, e.g., letters from ABA; Amer. Chem.; Eversource; PPL; Soc. Corp. Gov.; Soros Fund ("Financial audits are different than climate disclosure audits and auditors do not have specific expertise to ensure the best outcomes."); SouthState; and Sullivan Cromwell ("The number of qualified providers would likely be insufficient to meet the demand for their services prompted by the Proposed Rules, at least in the near term.")

<sup>2874</sup> See, e.g., letter from Futurepast; see also section IV.A.5.e.

<sup>2875</sup> While this is true in the U.S., we note that in Europe and other parts of the world, accountants

Similarly, the final rules' independence requirement for attestation providers is consistent with the similar requirement that has long existed for financial statement auditors and will enhance the perceived credibility of the GHG emissions assurance.<sup>2880</sup> Attestation providers that are not accountants may incur additional costs to familiarize themselves with these requirements.

The final rules also require LAFs and AFs to disclose, after requesting relevant information from any GHG emissions attestation provider as necessary, whether the GHG emissions attestation provider is subject to any oversight inspection program, and if so, which program (or programs) and whether the GHG emissions attestation engagement is included within the scope of authority of such oversight inspection program. While the final rules do not require that the GHG emissions attestation provider be subjected to mandatory oversight and inspection processes, disclosure of whether this is the case will provide investors with a better understanding of the qualifications of the GHG emissions attestation provider, which in turn will help them determine whether the assurance services have enhanced the reliability of the GHG emissions disclosure. For example, academic research shows that oversight inspections of financial statement audits by the PCAOB have significantly increased the credibility of the financial statement audits.<sup>2881</sup> Similarly, in the context of inspections of PCAOB-registered public accounting firms, academic literature suggests that engagement-specific PCAOB inspections may have spillover effects on non-inspected engagements.<sup>2882</sup>

Furthermore, the final rules require AFs and LAFs subject to Item 1506(a) to

<sup>2880</sup> See, e.g., M. DeFond & J. Zhang, *A Review of Archival Auditing Research*, 38 J. of Acct. & Econ. 275 (2014); W.R. Knechel *et al.*, *supra* note 1206.

<sup>2881</sup> See, e.g., B. Gipper, C. Leuz & M. Maffett, *Public Oversight and Reporting Credibility: Evidence from the PCAOB Audit Inspection Regime*, 33 Rev. of Fin. Stud. 4532 (2020); P.T. Lamoreaux, *Does PCAOB Inspection Access Improve Audit Quality? An Examination of Foreign Firms Listed in the United States*, 61 J. of Acct. & Econ. 313 (2016).

<sup>2882</sup> See, e.g., Aobdia, *Impact*, *supra* note 1555 (concluding that "engagement-specific PCAOB inspections influence non-inspected engagements, with spillover effects detected at both partner and office levels" and that "the information communicated by the PCAOB to audit firms is applicable to non-inspected engagements"); Aobdia, *Economic Consequences*, *supra* note 1555 (concluding that "common issues identified in PCAOB inspections of individual engagements can be generalized to the entire firm, despite the PCAOB claiming its engagement selection process targets higher risk clients" and that "[PCAOB quality control] remediation also appears to positively influence audit quality").

disclose whether any GHG emissions attestation provider that was previously engaged to provide attestation over the registrant's GHG emissions disclosure for the fiscal year covered by the attestation report resigned (or indicated that it declined to stand for re-appointment after the completion of the attestation engagement) or was dismissed. If so, the registrant is required to disclose certain information about whether there were any disagreements with the former GHG emissions attestation provider and to describe the disagreement. The registrant also must disclose whether it has authorized the former GHG emissions attestation provider to respond fully to the inquiries of the successor GHG emissions attestation provider concerning the subject matter of the disagreement. Due to the readily available nature of this information for registrants, we do not expect that it would be costly for registrants to include these disclosures in the filing that contains the GHG emissions disclosures and attestation report, when applicable. The disclosure of the existence of a disagreement in the event of the resignation or dismissal of the GHG emissions attestation provider will enable investors to assess the possible effects of such disagreement and whether it could have impacted the reliability of the GHG emissions disclosure, which, as discussed in Section II.H above, provides investors with information about a registrant's business, results of operations, and financial condition. This disclosure requirement also may limit a registrant's incentive to dismiss attestation providers that it views as unfavorable.<sup>2883</sup>

In addition, the final rules require any registrant that is not required to include a GHG emissions attestation report pursuant to Item 1506(a) to disclose certain information if the registrant's GHG emissions disclosure were voluntarily subjected to third-party assurance, which is consistent with the proposed rules and with the feedback provided by several commenters.<sup>2884</sup> There is some academic evidence

<sup>2883</sup> Registrants may have incentives to search for a favorable assurance conclusion or opinion, similar to those previously documented in the market for credit ratings. See P. Bolton, X. Freixas, & J. Shapiro, *The Credit Ratings Game*, 67 J. of Fin. 85 (2012).

<sup>2884</sup> See, e.g., letters from Amer. for Fin. Reform; Sunrise Project *et al.*; CEMEX; and C. Howard; see also letter from Chamber (opposing any mandatory assurance requirements but stating "to the extent companies are obtaining assurances, the SEC's alternative that registrants disclose what types of assurance, if any, they are obtaining may be appropriate").

suggesting that the assurance approaches of accountants and non-accountants differ (thus potentially reducing comparability across what is being assured),<sup>2885</sup> that firms choose accountants vs. non-accountants as their GHG emissions assurance providers depending on their internal objectives,<sup>2886</sup> and that market participants draw inferences from the attributes of the assurance providers.<sup>2887</sup> We expect that greater disclosures about the nature of voluntarily obtained Scope 1 and Scope 2 emissions attestation reports will help investors determine whether the assurance services have enhanced the reliability of the GHG emissions disclosure.<sup>2888</sup> However, the liability and accompanying litigation risk associated with including these disclosures in Commission filings could disincentivize some registrants from voluntarily obtaining assurance, particularly if they have lower confidence in the quality of the services performed. These concerns are mitigated to some extent with respect to liability under section 11 of the Securities Act by the final rules' amendment to Rule 436, which provides that any description of assurance regarding a registrant's GHG emissions disclosures provided in accordance with Item 1506(e) (*i.e.*, assurance voluntarily obtained over GHG emissions disclosures) shall not be considered part of the registration statement prepared or certified by a person within the meaning of sections 7 and 11 of the Securities Act.<sup>2889</sup>

<sup>2885</sup> Farooq and Villiers (2019), *supra* note 2877.

<sup>2886</sup> R. Datt, L. Luo & Q. Tang, *Corporate Choice of Providers of Voluntary Carbon Assurance*, 24 Int'l J. of Auditing 145 (2020).

<sup>2887</sup> G. Pflugrath, P. Roebuck & R. Simnett, *Impact of Assurance and Assurer's Professional Affiliation on Financial Analysts' Assessment of Credibility of Corporate Social Responsibility Information*, 30 Auditing: A J. of Practice & Theory 239 (2011). However, another study did not find that the investors cared whether a sustainability assurance provider was affiliated with the audit profession or not (see, e.g., R. Simnett, A. Vanstraelen & W.F. Chua, *Assurance on Sustainability Reports: An International Comparison*, 84 Acct. Rev. 937 (2009)).

<sup>2888</sup> Academic research shows that the market trusts more voluntary disclosures by managers with established reputations for better accuracy or "forthcomingness" of such past disclosures. See, e.g., H.I. Yang, *Capital Market Consequences of Managers' Voluntary Disclosure Styles*, 53 J. of Acct. and Econ. 167 (2012); A. Beyer & R.A. Dye, *Reputation Management and the Disclosure of Earnings Forecasts*, 17 Rev. of Acct. Stud. 877 (2012); P.C. Stocken, *Credibility of Voluntary Disclosure*, RAND J. of Econ. 359 (2000).

<sup>2889</sup> See 17 CFR 230.436(j)(2); *supra* section II.L.5.c; see also *supra* section II.L.2.c. But see *supra* note 1397 (noting that amending Rule 436 to eliminate potential section 11 liability could "reduce the incentives for GHG emissions attestation providers to perform a thorough analysis and ensure that their attestation report . . . is true

### g. Risk Management Disclosure

The final rules require a registrant to describe any processes it has for identifying, assessing, and managing material climate-related risks.<sup>2890</sup> A registrant with such a process should address, as applicable, the following non-exclusive list of disclosure items: (1) how it identifies whether it has incurred or is reasonably likely to incur a material physical or transition risk; (2) how it decides whether to mitigate, accept, or adapt to the particular risk; and (3) how it prioritizes whether to address the climate-related risk. Furthermore, the final rules specify that registrants who manage a material climate-related risk must disclose whether and how their processes for identifying, assessing, and managing climate-related risks have been integrated into their overall risk management system or processes.

These disclosures will allow investors to better assess the risk management processes registrants use to evaluate and address material climate-related risks that may have or are reasonably likely to have an impact on companies' operations and financial conditions. Climate-related risks could impact companies' financial performance in a number of ways. For example, physical risks could result in asset impairments and business interruptions. Regulatory changes could render certain business plans less or unprofitable. Shifts in consumer preferences could increase or decrease demand for certain types of products. While some of these risks may be relatively straightforward to evaluate, others may require expertise and detailed knowledge about a company's business partners and operations. The risk management disclosures in the final rules will provide investors with a more detailed understanding of how a registrant's risk management systems identify, evaluate, and address climate-related risks, which could contribute to better-informed investment and voting decisions.<sup>2891</sup>

and that there was no omission to state a material fact required to be stated therein or necessary to make the statements therein not misleading").

<sup>2890</sup> See 17 CFR 229.1503.

<sup>2891</sup> See letters from the Investment Company Institute ("We also support companies being required to disclose whether and how climate-related risks are integrated into the company's overall risk management system or processes. This disclosure should help investors assess how the company handles climate-related risk as compared to other risks."); Vanguard ("We consider climate risks to be material and fundamental risks for investors and the management of those risks is important for price discovery and long-term shareholder returns."); and Calvert ("We support the SEC's mandated approach for registrants to describe processes for identifying, assessing and managing climate-related risks, including both

As one example of how investors could use risk management disclosure, one commenter explained: "[we] identified a semi-conductor manufacturer as a more attractive investment when we learned it was diversifying its manufacturing locations to diversify its water sourcing."<sup>2892</sup> However, a commenter also noted that "[f]or a significant number of issuers, information is not sufficient to support equivalent analysis."<sup>2893</sup> In this respect, requiring a registrant to describe its process for identifying, assessing, and managing material climate-related risks, such as water sourcing risks, will allow investors to more fully evaluate the drivers and outcomes of the registrant's risk management decisions. These disclosures will also benefit investors by providing context for the other disclosures required by the final rules. For example, investors can use these disclosures to better understand the steps a registrant took to identify material climate-related risks in the context of the registrant's disclosures about the types of material climate-related risks it faces.

The requirement to disclose the extent to which a registrant's processes for identifying, assessing, and managing climate-related risks have been integrated into its overall risk management system or processes provision will help investors understand and assess the effectiveness of those climate risk management processes.

There are many climate risk management approaches available to firm managers, ranging from divestment from certain suppliers to engagement with their business partners to hedging to incorporating climate risk into their financial planning.<sup>2894</sup> To the extent that there is variation in risk management practices across registrants or such practices change over time, the final rules will allow investors to

physical and transition risks. In order for us to evaluate issuer risks properly, we need transparent disclosure that allows us to assess how companies are determining the materiality of climate-related risks, including how they measure the potential scope and impact of an identified climate-related risk and how the risks identified in the disclosures relate back to that issuer's strategy, business model and outlook.").

<sup>2892</sup> See letter from Wellington.

<sup>2893</sup> *Id.*

<sup>2894</sup> See, e.g., Keely Bosn, Amelia Brinkerhoff, Katherine Cunningham & Shirui Li, *Climate Risk Management: Strategies for Building Resilience to Climate Change in the Private Sector* (2020), available at <https://deepblue.lib.umich.edu/bitstream/handle/2027.42/154987/370%20Climate%20Risk%20Management%20Zurich.pdf> (documenting various divestment and planning strategies in managing climate-related risk among companies in the insurance and financial services industries).

compare those risk management practices when making investment decisions.

As discussed in section IV.C.3, we expect registrants to incur some additional compliance costs as a result of these disclosures; however, to limit the costs associated with these disclosures, we are not requiring several of the prescriptive elements found in the proposed rules, including a separate disclosure item on how a registrant determines how to mitigate any high priority risks.<sup>2895</sup> While these disclosures may have been low cost to produce for some registrants that already create TCFD-compliant sustainability reports, we opted for a more flexible approach for the reasons discussed above. In providing that registrants only need to describe the process for identifying, assessing, and managing material climate-related risks, the final rules further limit the compliance costs for registrants. Nonetheless, registrants may still choose to include the details set forth in the proposed rules if they are relevant to their risk management practices.

Under the approach taken in the final rules, investors will benefit from a discussion tailored to the registrant's facts and circumstances. For example, registrants will be able to exclude information that they deem to be less relevant or useful to understanding the registrant's approach to managing material climate-related risks. However, this flexibility could potentially result in disclosures that are not fully comparable across registrants, which could reduce the benefits of this provision. The more flexible approach we are adopting could also reduce the risk that a registrant would have to disclose confidential information, a concern raised by some commenters.<sup>2896</sup>

The benefits of the final rules will be lessened to the extent that this existing voluntary reporting overlaps in content with the required disclosures.<sup>2897</sup> However, even in these cases, investors will benefit from having this

<sup>2895</sup> For instance a registrant will not be required to disclose, as applicable, how it: (1) determines the relative significance of climate-related risks compared to other risks; (2) considers existing or likely regulatory requirements or policies, such as GHG emissions limits, when identifying climate-related risks; (3) considers shifts in customer or counterparty preferences, technological changes, or changes in market prices in assessing potential transition risks; or (4) determines the materiality of climate-related risks.

<sup>2896</sup> See, e.g., letters from Cemex; Chief Execs. (noting that registrants may simply start making generic disclosures); AFP; American AALA *et al.*; IADC; and Sullivan Cromwell.

<sup>2897</sup> See *supra* section IV.A., particularly IV.A.5., for a discussion of existing trends in voluntary disclosure.

information set forth in a Commission filing, which will improve its reliability of this information and reduce search costs for investors. We also expect the final rules to address concerns expressed by commenters that existing voluntary disclosures are often deficient in terms of understandability, transparency, and detail.<sup>2898</sup> Therefore, we expect the final rules will result in more consistent, comparable, and reliable information about registrants' risk management processes as compared to the baseline.

#### h. Financial Statement Disclosures

##### i. Expenditure Disclosures

The final rules require an issuer to disclose the following categories of expenditures: (1) expenditures expensed as incurred and losses resulting from severe weather events and other natural conditions; (2), capitalized costs and charges resulting from severe weather events and other natural conditions; and (3) if carbon offsets or RECs or certificates have been used as a material component of a registrant's plans to achieve its disclosed climate-related targets or goals, the aggregate amount of carbon offsets and RECs expensed, the aggregate amount of capitalized carbon offsets and RECs recognized, and the aggregate amount of losses incurred on the capitalized carbon offsets and RECs.<sup>2899</sup> Under the final rules, a capitalized cost, expenditure expensed, charge, loss, or recovery results from a severe weather event or other natural condition when the event or condition is a "significant contributing factor" in incurring the capitalized costs, expenditure expensed, charge, loss, or recovery.<sup>2900</sup>

The final rules require financial statement disclosures only if the capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions exceed certain thresholds.<sup>2901</sup> Specifically, a registrant will be required to disclose capitalized costs and charges incurred as a result of severe weather events or other natural conditions if the aggregate amount of the absolute value of capitalized costs and charges incurred is one percent or more of the absolute value of shareholders' equity or deficit, but no disclosure will be required if such amount is less than \$500,000 for the relevant fiscal year.<sup>2902</sup> Similarly, a registrant will be required to disclose

expenditures expensed and losses incurred as a result of severe weather events and other natural conditions if the aggregate amount of such expenditures expensed and losses is one percent or more of the absolute value of income or loss before income tax expense ("pretax income"), but no disclosure will be required if such amount is less than \$100,000 for the relevant fiscal year.<sup>2903</sup> If the disclosure threshold is triggered, registrants will be required to disclose the aggregate amount of the capitalized costs, expenditures expensed, charges, and losses and identify where the amounts are presented in the income statement and the balance sheet.

We expect that disclosure of capitalized costs, expenditures expensed, charges, and losses incurred resulting from severe weather events and other natural conditions will enable investors to better assess the effects of these events and conditions (*i.e.*, types of physical risks) on a registrant's financial position and financial performance. Better disclosures of physical risks can provide decision-useful information to investors.<sup>2904</sup> For example, one study found that a one standard deviation increase in exposure to heat stress is associated with a 40 basis point increase in yields on corporate bonds.<sup>2905</sup> Another study found that stock price reactions to climate-related risk disclosures in earnings calls are more negative for companies that have experienced a severe weather event in the quarter.<sup>2906</sup>

We anticipate that these financial statement disclosures will result in increased consistency and comparability relative to registrants' current disclosure practices. In particular, our decision to use a bright-line threshold will ensure that investors have access to decision-useful information for all registrants that have been meaningfully impacted by severe weather-related events and other natural conditions. Comparisons across registrants may enable investors to assess how different registrants manage and respond to severe weather events and other natural conditions, while comparisons over time will enable investors to evaluate how registrants are

adapting to these types of events and conditions.

A better understanding of registrants' exposure to severe weather events and other natural conditions will help individual investors manage their portfolio-level exposure to climate-related physical risks. Whereas some climate-related risks may be company-specific, others may be correlated across different registrants and across time.<sup>2907</sup> The financial statement disclosures required by the final rules will provide investors with information to help assess which types of climate-related physical risks are company-specific, and therefore diversifiable, and which are not. This will better equip investors to limit their portfolio-level exposure to non-diversifiable climate-related physical risks by selecting companies less sensitive to any non-diversifiable risks related to severe weather events and other natural conditions.

The value of this financial statement information to assessing risk exposure depends in part on the extent to which past exposure to severe weather events or other natural conditions predicts future exposure to those events or conditions.<sup>2908</sup> For example, commenters questioned the benefits of disclosures related to physical risks given their view that there is inherent uncertainty of trends in exposure.<sup>2909</sup> However, other commenters indicated that a better understanding of the impact of past severe weather events would help them assess a registrant's exposure to physical risks going forward, and some commenters highlighted the value of having quantitative estimates of impacts.<sup>2910</sup>

<sup>2907</sup> See Acharya, *et al.*, *supra* note 2905 (finding "evidence that other dimensions of physical climate risk—estimated damages due to droughts, floods, hurricanes and sea level rise—have systematic asset pricing effects in these three asset classes. This is consistent with these risks being smaller economically and more idiosyncratic (*i.e.*, diversifiable and/or insurable) compared to heat stress.").

<sup>2908</sup> See, *e.g.*, Harrison Hong, Neng Wang & Jinqiang Yang, *Mitigating Disaster Risks in the Age of Climate Change*, Nat'l Bur. of Econ. Rsch. <sup>2901</sup> See 17 CFR 210.14–02(b).

<sup>2902</sup> See 17 CFR 210.14–02(b)(2).

We agree that discussion of past impacts could be informative. The required expenditure disclosures will help investors identify the relative magnitude of different risk trends in various types of risk over time. Moreover, historical data may help investors assess a company's response to severe weather events or other natural conditions. This will help investors assess a registrant's risk management and risk mitigation. This information will allow investors to better tailor their decisions to their own risk-tolerance.

In the context of the proposal, commenters expressed concern that these benefits will be lessened if reporting companies choose to apply the final rules in different ways.<sup>2911</sup> For example, investors may mistakenly conclude that a registrant has a very high level of exposure to climate-related physical risks simply because the registrant takes a very inclusive approach to identifying "severe weather events or other natural conditions." Different interpretations of which "capitalized costs," "expenditures expensed," "charges," or "losses" are required to be disclosed by the final rules could similarly reduce the comparability benefits.<sup>2912</sup> The final rules address this concern by narrowing the scope of the disclosures (as discussed below). Any differences in application may be relatively benign or they may be used strategically to highlight or downplay certain aspects of the effects on the registrant's financial statements. We expect the inclusion of these disclosures in the financial statements to mitigate these types of concerns, as the disclosures will be subject to ICFR and an audit by an independent registered public accounting firm. Moreover, we believe the final rules' requirement to disclose contextual information, such as a description of significant inputs and assumptions used, significant judgments made, and if applicable, policy decisions made by the registrant to calculate the specified disclosures, alongside the expenditures disclosures should help to mitigate the concerns discussed above by providing additional transparency and facilitating

not benefit investors, so investors want to understand the relative magnitude of various climate risks, track the size of various climate risks over time, and compare the climate risk of different registrants.").

<sup>2911</sup> See, e.g., letter from ACLI.

<sup>2912</sup> See, e.g., letter from Grant Thornton LLP ("The Final Rule should explain whether (a) capitalized costs consist only of costs associated with purchases of property, plant, and equipment, or (b) the definition is broader, including any costs initially recognized as a debit on the registrant's balance sheet, such as prepaid expenses.").

comparability,<sup>2913</sup> although we note that some commenters were skeptical about the added value of contextual information in this respect.<sup>2914</sup>

Several commenters highlighted comparability concerns resulting from ambiguities and uncertainty related to the definition of transition activities and the proposal's approach to attribution. For example, one commenter asked whether replacing a light bulb with an LED bulb would constitute a transition expense.<sup>2915</sup> Another commenter asked how a registrant should identify the portion of a cost that could be attributable to drought.<sup>2916</sup> These hypotheticals, and many others raised by commenters, are addressed by limiting the financial statement disclosures to the capitalized costs, expenditures expensed, charges, and losses incurred as a result of severe weather events and other natural conditions and the capitalized costs, expenditures expensed, and losses related to carbon offsets and RECs (instead of requiring the disclosure of expenditures related to transition activities generally in the financial statements)<sup>2917</sup> and by the revised approach to attribution. However, we recognize that some issuers will apply the final rules differently than others. For example, several commenters pointed out that some registrants might consider a hurricane to be a severe weather event regardless of whether hurricanes are common to the area while others might base this assessment on whether a weather event is uncharacteristic or more severe than usual.<sup>2918</sup> Although a more prescriptive requirement could increase comparability, it may do so at the expense of disclosure that is more decision-useful for investors for the reasons stated above.<sup>2919</sup> We also expect comparability of the disclosures to improve over time as registrants gain more experience applying the disclosure thresholds and attribution standards and consensus emerges among

<sup>2913</sup> See 17 CFR 210.14–02(a).

<sup>2915</sup> See letter from Amazon.

<sup>2916</sup> See letter from ABA, Securities Law Comm.

<sup>2917</sup> Although we are requiring disclosure of material expenditures incurred and material impacts on financial estimates and assumptions that (i) "in management's assessment, directly result from activities to mitigate or adapt to climate-related risks, including adoption of new technologies or processes" (See 17 CFR 229.1502(d)(2)); or (ii) "occur as a direct result of the target or goal or the actions taken to make progress toward meeting the target or goal." (See 17 CFR 229.1504(c)(2)).

<sup>2918</sup> See, e.g., letter from PwC.

<sup>2919</sup> See *id.*

registrants regarding best practices for compliance with the final rules.

In addition to reducing information asymmetry about the impact of severe weather events and other natural conditions, these disclosures will improve consistency and comparability relative to registrants' current disclosure practices. We are unable to quantify these benefits, and we are cognizant that registrants will exercise discretion in making their disclosures. Nevertheless, we expect comparability of the disclosures to improve over time as consensus emerges among registrants on best practices for compliance with the final rules.

The benefits of the disclosures will also be reduced if the final rules result in disclosures that are not decision-useful to investors, for example if they represent a small portion of capitalized costs, expenditures expensed, charges, and/or losses. We believe that the final rules mitigate this risk by not requiring disclosure if the aggregate amount of the absolute value of the effects of severe weather events or other natural conditions is less than one percent of pretax income for income statement effects or of shareholders' equity for balance sheet effects.<sup>2920</sup> However, we recognize the possibility that these thresholds may nonetheless result in some disclosure of information that is not decision-useful for investors, depending upon the facts and circumstances of the particular company, especially for companies with limited pretax income or shareholders' equity. Some commenters took issue with the use of absolute values for determining whether the disclosure threshold is triggered, explaining that if the net effect of an event is not material, it is not clear why the positive and negative components would be material.<sup>2921</sup> Others had a contrary view and thought it was important to delineate the positive and negative effects to help protect against greenwashing.<sup>2922</sup> Many commenters viewed a one percent threshold in the context of the financial statement disclosure to be too low.<sup>2923</sup> The de minimis thresholds partially address this concern. For example, we estimate that in 2022, the de minimis value of \$100,000 exceeded one percent of the absolute value of pretax income for approximately 17 percent of companies

<sup>2920</sup> The choice of a 1% threshold is consistent with what the Commission currently uses in other contexts for disclosure of certain items within the financial statements (e.g., §§ 210.5–03.1(a) and 210.12–13).

<sup>2921</sup> See, e.g., letter from Cemex.

<sup>2922</sup> See, e.g., letter from ClientEarth.

<sup>2923</sup> See, e.g., letter from Moody's.

and the de minimis value of \$500,000 exceeded one percent of the absolute value of shareholders' equity for approximately 24 percent of companies.<sup>2924</sup> Conversely, it is also possible that some disclosures that would have been decision-useful to investors may not meet the disclosure thresholds and therefore will not be required to be included in the note to the financial statements under the final rules.

The disclosure thresholds may also result in partial disclosures of the financial effects of severe weather events and other natural conditions. For example, if a registrant exceeds the income statement threshold, but not the balance sheet threshold, it is only required to disclose expenditures expensed as incurred and losses on the income statement and it need not disclose the effects on the balance sheet, if any. Some registrants may find it simplest to disclose how the severe weather event or natural condition affected both the income statement and balance sheet while others might limit their disclosure to the rules' requirements. If so, the disclosures could lead to confusion about, for example, how and whether the severe weather event affected the financial statements for which disclosure is not required. We acknowledge that in some circumstances this may result in investors only receiving a partial picture of the financial statement effects of a particular event or condition; however, we think that applying the disclosure threshold separately to the income statement and the balance sheet will be more straightforward for registrants to implement and therefore will help to limit the overall burden of the final rules. To the extent this is a concern for an issuer, there is nothing in the final rules that would prevent a registrant from disclosing how the severe weather event or other natural condition affected both the income statement and balance sheet, even if the disclosure threshold for one of the financial statements is not triggered.

Some commenters raised the possibility that the financial statement disclosures could confuse or distract investors from other factors that contribute meaningfully to the financial statements.<sup>2925</sup> We believe our decision to limit the scope of disclosure to

expenditures resulting from severe weather events and other natural conditions should mitigate these concerns.<sup>2926</sup> Furthermore, the fact that the information is tagged in Inline XBRL will facilitate an investor's ability to extract and sort the information that the investor deems more useful.<sup>2927</sup>

Many commenters raised concerns about registrants' ability to isolate or attribute particular costs or expenses to severe weather events and other natural conditions or to transition activities, explaining it would be complicated and costly.<sup>2928</sup> We believe that this cost is largely mitigated by the attribution principle included in the final rules, which requires registrants to disclose the entire capitalized cost, expenditure expensed, charge, or loss, provided that a severe weather event or other natural condition was a "significant contributing factor" to incurring the expense.

The requirement in the final rules to disclose where in the income statement or the balance sheet the disclosed expenditures expensed, capitalized costs, charges, and losses are presented could result in some incremental compliance costs. However, the expenditures expensed, capitalized costs, charges, and losses subject to disclosure are all captured in the books and records of the registrant and are measured and recognized in accordance with GAAP, such that concerns commenters raised about needing to develop and test new systems to track line-item impacts of climate-related expenses should be substantially mitigated under the final rules, relative to the proposed rules.<sup>2929</sup>

Many commenters expressed concerns with the proposed one percent disclosure thresholds as discussed in detail in section II.K.2.b.ii. Some of these commenters specifically highlighted that registrants would have challenges estimating or determining one percent of the individual line items before period end, which would require the tracking of all financial impacts and expenditures throughout the reporting

period.<sup>2930</sup> In response to these commenters' feedback,<sup>2931</sup> the final rules do not require the disclosure of the proposed Financial Impact Metrics, which would have required the disclosure of financial impacts (and the determination of whether the disclosure threshold was met) on a line-by-line basis. Instead, the final rules focus on the disclosure of discrete expenditures and require the disclosure threshold to be calculated once for impacts to the income statement and once for impacts to the balance sheet using as the denominator income or loss before income tax expense or benefit and shareholders' equity or deficit, respectively. In addition to reducing the number of calculations that are necessary to determine whether disclosure is required as compared to the proposal, as discussed above in section II.K.3.c.ii, we believe that simplifying the threshold in this manner will give registrants the ability to estimate the amount or magnitude of these denominators earlier in the fiscal year, as compared to the proposed rules. As a result, the burdens on registrants associated with the final rules will be much less than they would have been under the proposed disclosure thresholds. That said, we recognize that registrants may need to track their expenditures expensed, capitalized costs, charges, and losses incurred as a result of severe weather events throughout the year to comply with the final rules.

Any differences in application of the rules that are not fully addressed by subjecting the disclosures to third-party audits could also introduce some incremental legal and compliance costs. For example, registrants may face some litigation risk stemming from their classification of expenditures. As above, we expect some of these costs to decrease over time as registrants gain experience applying the final rules and best practices emerge for application of the final rules.

The final rules also require that a registrant disclose, as part of the required contextual information, recoveries resulting from severe weather events and natural conditions, if they are required to disclose capitalized costs, expenditures expensed, charges, or losses incurred resulting from the same severe weather events or natural conditions. This provision will allow investors to better understand the net impact of severe weather events.

<sup>2924</sup> Estimates are based on 2022 registrants (*supra* note 2578) and data from Compustat.

<sup>2925</sup> See, e.g., letter from API stating ("The flood of information and the presumed importance that would attach to it by virtue of the SEC's mandate could easily distract investors from equally important or more topically relevant material information that a registrant discloses.")

<sup>2926</sup> The final rules are not the only place where disaggregated disclosure is required. We note that U.S. GAAP and IFRS require the disaggregation of certain information on the face of the financial statements or in the notes to the financial statements. For example, FASB ASC Topic 220 *Income Statement—Reporting Comprehensive Income* requires the nature and financial effects of each event or transaction that is unusual in nature or occurs infrequently to be presented separately in the income statement or in the notes to the financial statements. See ASC 220–20–50–1.

<sup>2927</sup> See *infra* section IV.C.2.ix.

<sup>2928</sup> See, e.g., letter from BOA.

<sup>2929</sup> See, e.g., letter from Amer. Bankers.

<sup>2930</sup> See, e.g., letter from ABA, Securities Law Comm.

<sup>2931</sup> See section II.K.c.2.

Finally, the rules also require disclosure of expenditures expensed, capitalized costs, and losses resulting from the purchase and use of carbon offsets and RECs if carbon offsets or RECs have been used as a material component of a registrant's plans to achieve its disclosed climate-related targets or goals. As discussed in more detail in section IV.C.2.d, providing investors with disclosure regarding expenditures resulting from a registrant's purchase and use of carbon offsets and RECs will allow investors to better understand the registrant's approach to meeting its targets or goals and any applicable requirements set by other regulators.<sup>2932</sup> These disclosures could introduce some incremental compliance and audit costs, but we expect these costs to be relatively small as these expenditures expensed, capitalized costs, and losses are discrete and easily identifiable.

#### ii. Contextual Information, Historical Periods, and Other Requirements

The final rules require registrants to provide contextual information, to accompany the financial statement disclosures of expenditures expensed as incurred losses and resulting from severe weather events and other natural conditions, capitalized costs and charges resulting from severe weather events and other natural conditions, and, if carbon offsets or renewable energy credits or certificates have been used as a material component of a registrant's plans to achieve its disclosed targets or goals, the aggregate amount of carbon offsets and renewable energy credits or certificates expensed, the aggregate amount of capitalized carbon offsets and renewable energy credits or certificates recognized, and the aggregate amount of losses incurred on the capitalized carbon offsets and renewable energy certificates or credits.<sup>2933</sup> This information will explain the basis for the financial statement disclosures, including a description of any significant inputs and assumptions used, significant judgments made to calculate the disclosures, and other information that is important to an investor's understanding of the financial statement effects. The rules further require that a registrant use financial information that is consistent with the scope of its consolidated financial statements and apply the same accounting principles that it is required

<sup>2932</sup> See, e.g., letters from Amer. For Fin. Reform; and Sunrise Project *et al.*

<sup>2933</sup> See 17 CFR 210.14–02(a).

to apply in the preparation of its consolidated financial statements.

Collectively, the inclusion of contextual information and the presentation of financial statement disclosures that are consistent with the rest of the financial statements should improve investors' ability to understand and compare registrants' financial statement effects. Several commenters agreed with this rationale for providing contextual information.<sup>2934</sup>

It is possible that some disclosures of contextual information may be of limited usefulness to investors in understanding the financial statement effects. Likewise, some registrants may provide disclosures with a level of detail that investors deem immaterial. Ultimately, the level of detail important to understand a particular registrant's disclosure of the financial statement effects and thus necessary for compliance with the final rules will depend on the specific facts and circumstances faced by that registrant. We therefore believe that the flexibility provided in the final rules achieves the benefits of eliciting disclosures that are both comparable and most likely to be relevant to investors' understanding of the registrant's financial statement disclosures, without imposing significant additional costs on registrants and the investors who use the disclosures. This conclusion is supported by commenters' reactions to the proposal, which were generally supportive of the requirement to provide contextual information.<sup>2935</sup>

In a change from the proposal, the final rules require the presentation of the financial statement disclosures on a prospective basis only. That is, the final rules require registrants to provide disclosure for the registrant's most recently completed fiscal year, and to the extent previously disclosed or required to be disclosed, for the historical fiscal year(s) included in the consolidated financial statements in the filing. This approach will lower the initial compliance costs of the rule, although investors will not immediately benefit from the ability to make year-over-year comparisons of the financial statement effects.

#### iii. Financial Estimates and Assumptions

The final rules require registrants to disclose whether the estimates and assumptions the registrant used to produce the consolidated financial statements were materially impacted by

<sup>2934</sup> See, e.g., letters from Airlines for America; and IATA.

<sup>2935</sup> See section II.K.6.a

exposures to risks and uncertainties associated with, or known impacts from, severe weather events and other natural conditions, such as hurricanes, tornadoes, flooding, drought, wildfires, extreme temperatures, and sea level rise, or any climate-related targets or transition plans disclosed by the registrant.<sup>2936</sup>

These disclosures will provide investors with information as to the sensitivity of the financial information to climate-related risks, as explained by some commenters.<sup>2937</sup> Consider, for example, a registrant that recently disclosed a net-zero emissions target. Investors could benefit from understanding how that target impacted the assumptions and estimates that went into the preparation of the registrant's financial statements. This benefit, as well as any costs of the provision, will be lessened if registrants would have disclosed the impact of these events, conditions, targets, or plans on their financial estimates and assumptions regardless of the adoption of the final rules.<sup>2938</sup>

#### iv. Inclusion of Climate-Related Disclosures in the Financial Statements

The required disclosures must be included in a note to the financial statements and thus audited by an independent registered public accounting firm in accordance with existing Commission rules and PCAOB auditing standards.<sup>2939</sup> Subjecting these financial statement disclosures to reasonable assurance pursuant to an audit will subject these disclosures to the same financial statement audit and ICFR as similar financial disclosures, which will alleviate possible concerns about the consistency, quality, and reliability of the financial statement disclosures and thereby provide an important benefit to investors.<sup>2940</sup> Assurance can increase the relevance and reliability of disclosures.<sup>2941</sup> In addition, by including the required disclosures in the financial statements,

<sup>2936</sup> See 17 CFR 210.14–02(b)(h).

<sup>2937</sup> See, e.g., letter from IAA.

<sup>2938</sup> See, e.g., letter from TotalEnergies.

<sup>2939</sup> See 17 CFR 210.14–01(a).

<sup>2940</sup> See section II.K.1.

<sup>2941</sup> See DeFond *et al.*, *supra* note 2880; V.K. Krishnan, *The Association Between Big 6 Auditor Industry Expertise and the Asymmetric Timeliness of Earnings*, 20 J. of Acct., Auditing and Fin. 209 (2005); W. Kinney & R. Martin, *Does Auditing Reduce Bias in Financial Reporting? A Review of Audit-Related Adjustment Studies*, 13 Auditing: A J. of Practice & Theory 149 (1994); K.B. Behn, J.H. Choi & T. Kang, *Audit Quality and Properties of Analyst Earnings Forecasts*, 83 Acct. Rev. 327 (2008). Some commenters expressed similar views. See, e.g., letters from CAQ; Ceres; Impax Asset Mgmt.; San Francisco Employees' Retirement System; and UNEP–FI.

they will be subject to a registrant's ICFR and the requirement for management to establish and maintain an adequate control structure and provide an annual assessment of the effectiveness of ICFR.<sup>2942</sup> Furthermore, for AFs and LAFs, the registrant's independent auditor must attest to, and report on, management's assessment of the effectiveness of the registrant's ICFR.<sup>2943</sup> Effective ICFR can reduce the risk of material misstatements to the financial statements and thereby enhance the reliability and improve investor confidence in the disclosure.

Inclusion of these disclosures in the financial statements will increase the compliance costs of the final rules as audit firms will need to apply sufficient appropriate audit procedures to the application of the rules to each registrant's circumstances. However, we believe these increased costs will be limited because the final rules will require disclosure of capitalized costs, expenditures expensed, charges, and losses that are already required to be recorded in a registrant's financial statements. The incremental compliance costs will be due to the requirement to separately disaggregate and disclose these costs, expenditures, charges, and losses in the notes to the financial statements.<sup>2944</sup> Over time, we expect audits of these disclosures will become more streamlined and therefore the costs associated with these disclosures should also decrease. We discuss these costs in detail in section IV.C.3.

#### i. Structured Data Requirement

Under the final rules, the new climate-related disclosures will be required to be tagged in the Inline XBRL structured data language on a phased basis.<sup>2945</sup> The provision requiring Inline XBRL tagging of climate-related disclosures will benefit investors by making those disclosures more readily available for aggregation, comparison, filtering, and other enhanced analytical

methods.<sup>2946</sup> These benefits are expected to reduce search costs and substantially improve investors' information-processing efficiency.<sup>2947</sup> Structured data requirements for public company financial statement disclosures have been observed to reduce information-processing costs, thereby decreasing information asymmetry and increasing transparency by incorporating more company-specific information into the financial markets.<sup>2948</sup> In addition, the Inline XBRL requirement for the climate-related disclosures will further limit agency problems, as requirements for financial statement tagging have been observed to facilitate external monitoring of registrants through the aforementioned reduction of information processing costs.<sup>2949</sup>

<sup>2946</sup> See Darren Bernard, Elizabeth Blankespoor, Ties de Kok & Sara Toynbee, *Confused Readers: A Modular Measure of Business Complexity* (June 15, 2023), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=4480309](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4480309) (retrieved from SSRN Elsevier database) (developing an algorithm mimicking a sophisticated general user of financial statements by training it on a random sample of sentences with inline XBRL tags to understand a large corpus of numerical concepts based on surrounding text).

<sup>2947</sup> The findings on XBRL cited in the following paragraphs are not necessarily focused on climate-related disclosures and metrics, but we expect the findings to be generally applicable and to result in similar benefits for investors.

<sup>2948</sup> See, e.g., Y. Cong, J. Hao & L. Zou, *The Impact of XBRL Reporting on Market Efficiency*, 28 J. Info. Sys. 181 (2014) (finding support for the hypothesis that "XBRL reporting facilitates the generation and infusion of idiosyncratic information into the market and thus improves market efficiency"); Y. Huang, J.T. Parwada, Y.G. Shan & J. Yang, *Insider Profitability and Public Information: Evidence From the XBRL Mandate* (working paper, 2019) (finding XBRL adoption levels the informational playing field between insiders and non-insiders); J. Efendi, J.D. Park & C. Subramaniam, *Does the XBRL Reporting Format Provide Incremental Information Value? A Study Using XBRL Disclosures During the Voluntary Filing Program*, 52 Abacus 259 (2016) (finding XBRL filings have larger relative informational value than HTML filings); J. Birt, K. Muthusamy & P. Bir, *XBRL and the Qualitative Characteristics of Useful Financial Information*, 30 Acct. Res. J. 107 (2017) (finding "financial information presented with XBRL tagging is significantly more relevant, understandable and comparable to non-professional investors"); S.F. Cahan, S. Chang, W.Z. Siqueira & K. Tam, *The Roles of XBRL and Processed XBRL in 10-K Readability*, J. Bus. Fin. Acct. (2021) (finding Form 10-K file size reduces readability before XBRL's adoption since 2012, but increases readability after XBRL adoption, indicating "more XBRL data improves users' understanding of the financial statements").

<sup>2949</sup> See, e.g., P.A. Griffin, H.A. Hong, J.B. Kim & J.H. Lim, *The SEC's XBRL Mandate and Credit Risk: Evidence on a Link Between Credit Default Swap Pricing and XBRL Disclosure*, 2014 American Accounting Association Annual Meeting (2014) (attributing the negative association between XBRL information and credit default swap spreads to "(i) a reduction in firm default risk from better outside monitoring and (ii) an increase in the quality of information about firm default risk from lower information cost"); J.Z. Chen, H.A. Hong, J.B. Kim

Investors with access to XBRL analysis software may directly benefit from the availability of the climate-related disclosures in Inline XBRL, whereas other investors may indirectly benefit from the processing of Inline XBRL disclosures by asset managers and by information intermediaries such as financial analysts.<sup>2950</sup> In that regard, XBRL requirements for public company financial statement disclosures have been observed to increase the number of companies followed by analysts, decrease analyst forecast dispersion, and, in some cases, improve analyst forecast accuracy.<sup>2951</sup> Should similar impacts on the analysts' informational environment arise from climate-related disclosure tagging requirements, this will likely benefit retail investors, who have generally been observed to rely on analysts' interpretation of financial disclosures rather than directly

& J.W. Ryou, *Information Processing Costs and Corporate Tax Avoidance: Evidence from the SEC's XBRL Mandate*, 40 J. Acct. Pub. Pol. (2021) (finding XBRL reporting decreases likelihood of company tax avoidance, because "XBRL reporting reduces the cost of IRS monitoring in terms of information processing, which dampens managerial incentives to engage in tax avoidance behavior").

<sup>2950</sup> Additional information intermediaries that have used XBRL disclosures may include financial media, data aggregators and academic researchers. See, e.g., Nina Trentmann, *Companies Adjust Earnings for Covid-19 Costs, But Are They Still a One-Time Expense?*, The Wall Street Journal (2020), available at <https://www.wsj.com/articles/companies-adjust-earnings-for-covid-19-costs-but-are-they-still-a-one-time-expense-11600939813> (retrieved from Factiva database) (citing XBRL research software provider Calcbench as data source); *Bloomberg Lists BSE XBRL Data*, XBRL (2018), available at <https://www.xbrl.org/news/bloomberg-lists-bse-xbrl-data/>; R. Hoitash & U. Hoitash, *supra* note 2877. See 2019 Pension Review First Take: Flat to Down, Goldman Sachs Asset Management (2020) (an example of asset manager use of XBRL data), available at [https://www.gsam.com/content/dam/gsam/pdfs/common/en/public/articles/2020/2019\\_Pension\\_First\\_Take.pdf](https://www.gsam.com/content/dam/gsam/pdfs/common/en/public/articles/2020/2019_Pension_First_Take.pdf) (citing XBRL research software provider Idaciti as a data source).

<sup>2951</sup> See, e.g., A.J. Felo, J.W. Kim & J. Lim, *Can XBRL Detailed Tagging of Footnotes Improve Financial Analysts' Information Environment?*, 28 Int'l J. Acct. Info. Sys. 45 (2018); Y. Huang, Y.G. Shan & J.W. Yang, *Information Processing Costs and Stock Price Informativeness: Evidence from the XBRL Mandate*, 46 Aust. J. Mgmt. 110 (2020) (finding "a significant increase of analyst forecast accuracy post-XBRL"); M. Kirk, J. Vincent & D. Williams, *From Print to Practice: XBRL Extension Use and Analyst Forecast Properties* (working paper, 2016) (finding "the general trend in forecast accuracy post-XBRL adoption is positive"); C. Liu, T. Wang & L.J. Yao, *XBRL's Impact on Analyst Forecast Behavior: An Empirical Study*, 33 J. Acct. Pub. Pol. 69 (2014) (finding "mandatory XBRL adoption has led to a significant improvement in both the quantity and quality of information, as measured by analyst following and forecast accuracy"). But see S.L. Lambert, K. Krieger & N. Mauck, *Analysts' Forecasts Timeliness and Accuracy Post-XBRL*, 27 Int'l. J. Acct. Info. Mgmt. 151 (2019) (finding significant increases in frequency and speed of analyst forecast announcements, but no significant increase in analyst forecast accuracy post-XBRL).

<sup>2942</sup> See 17 CFR 210.13a-15, 210.15d-15.

<sup>2943</sup> See 15 U.S.C. 7262.

<sup>2944</sup> The incremental costs include the disclosure of financial statement estimates and assumptions materially impacted by severe weather events and other conditions or disclosed targets or transition plans; however, we believe these incremental costs will be minimal.

<sup>2945</sup> See 17 CFR 229.1508; 17 CFR 232.405. LAFs must begin complying with the disclosure requirements in filings covering fiscal year 2025 and must comply with the tagging requirements in filings covering fiscal year 2026. Other categories of filers must comply with the tagging requirements upon their initial compliance with the climate disclosure rules. For example, AFs must comply with tagging requirements when they first provide climate disclosures in filings covering fiscal year 2026. See section II.N.

analyzing those disclosures themselves.<sup>2952</sup>

With respect to the Inline XBRL tagging requirements, various preparation solutions have been developed and used by operating companies to fulfill their structuring requirements, and some evidence suggests that, for smaller companies, XBRL compliance costs have decreased over time.<sup>2953</sup> One commenter, in opposing the proposed Inline XBRL requirements, stated that the requirements would increase costs for registrants.<sup>2954</sup> While we acknowledge that costs for registrants will increase as a result of the tagging requirements, this increase should be mitigated by the fact that filers subject to the final rules are already subject to Inline XBRL requirements for other disclosures in Commission filings, including financial statement disclosures and disclosures outside the financial statements.<sup>2955</sup> As such, the final rules do not impose Inline XBRL compliance requirements on filers that would otherwise not be subject to such requirements, and filers

<sup>2952</sup> See, e.g., A. Lawrence, J. Ryans & E. Sun, *Investor Demand for Sell-Side Research*, 92 *Acct. Rev.* 123 (2017) (finding the “average retail investor appears to rely on analysts to interpret financial reporting information rather than read the actual filing”); D. Bradley, J. Clarke, S. Lee & C. Ornathanalai, *Are Analysts’ Recommendations Informative? Intraday Evidence on the Impact of Time Stamp Delays*, 69 *J. Fin.* 645 (2014) (concluding “analyst recommendation revisions are the most important and influential information disclosure channel examined”).

<sup>2953</sup> An AICPA survey of 1,032 reporting companies with \$75 million or less in market capitalization in 2018 found an average cost of \$5,476 per year, a median cost of \$2,500 per year, and a maximum cost of \$51,500 per year for fully outsourced XBRL creation and filing, representing a 45% decline in average cost and a 69% decline in median cost since 2014. See AICPA, *XBRL Costs for Small Reporting Companies Have Declined 45% Since 2014* (2018), available at <https://us.aicpa.org/content/dam/aicpa/interareas/frc/accounting/financialreporting/xbrl/downloadabledocuments/xbrl-costs-for-small-companies.pdf>; see also letter from Nasdaq; Request for Comment on Earnings Releases and Quarterly Reports, Release No. 33–10588 (Dec. 18, 2018) [83 FR 65601 (Dec. 21, 2018)] (stating that a 2018 Nasdaq survey of 151 listed registrants found an average XBRL compliance cost of \$20,000 per quarter, a median XBRL compliance cost of \$7,500 per quarter, and a maximum, XBRL compliance cost of \$350,000 per quarter in XBRL costs).

<sup>2954</sup> See letter from Alliance Resource.

<sup>2955</sup> See 17 CFR 229.601(b)(101); 17 CFR 232.405; see also 17 CFR 229.601(b)(104); 17 CFR 232.406 for requirements related to tagging cover page disclosures in Inline XBRL. Beginning in July 2024, filers of most fee-bearing forms will also be required to structure filing fee information in Inline XBRL. The Commission will provide an optional web tool that will allow filers to provide those tagged disclosures without the use of Inline XBRL compliance services or software; see 17 CFR 229.601(b)(107); 17 CFR 232.408; Filing Fee Disclosure and Payment Methods Modernization, Release No. 33–10997 (Oct. 13, 2021) [86 FR 70166 (Dec. 9, 2021)].

may be able to leverage existing Inline XBRL preparation processes and/or expertise in complying with the climate-related disclosure tagging requirements.

Many commenters agreed that the proposed structuring requirement would enable more efficient data processing and more informed investment decisions.<sup>2956</sup> One commenter noted that tagging the new disclosures in Inline XBRL would, by allowing the disclosed information to be more readily incorporated into investors’ analyses, promote the efficiency of the U.S. capital markets.<sup>2957</sup> Another commenter stated that tagging the new disclosures would offer significant benefits to both institutional and retail investors.<sup>2958</sup> A different commenter indicated that the tagging requirement should enable investors to compare the adequacy of risk analysis and mitigation planning among registrants in the same economic sector.<sup>2959</sup>

One commenter questioned the benefits of requiring the new disclosures to be structured by asserting that investors and market participants who need to extract and analyze the disclosures required under subpart 1500 of Regulation S–K can perform the same search manually by using the appropriate Item reference as is done for current searches.<sup>2960</sup> However, the availability of such disclosures in a machine-readable form will allow for search and retrieval of disclosures on an automated, large-scale basis, greatly increasing the efficiency of information acquisition as compared to manual searches through unstructured formats.<sup>2961</sup>

Other commenters expressed concern that the potential for excessive use of extensions (*i.e.*, custom tags) would

<sup>2957</sup> See letter from Climate Advisers.

<sup>2958</sup> See letter from CFA.

<sup>2959</sup> See letter from IATP.

<sup>2960</sup> See letter from AFPM.

<sup>2961</sup> See, e.g., Joungh W. Kim & Jee Hae Lim, *The Impact of XBRL-tagged Financial Notes on Information Environment*, The 2015 Annual Summer/International Conference-Korean Accounting Association (2015) (finding block and detail tagging of financial statement footnotes in XBRL filings improve the readability of 10–K filings and the explanatory power of certain accounting figures like net income and book value of equity on stock price).

detract from the aforementioned benefits of structured data.<sup>2962</sup> We agree that the inappropriate use of custom tags hinders the benefits of tagging. However, we do not believe the final rules will result in an excessive use of custom tags, because filers will be prohibited from using custom tags unless there is no suitable standard tag for their disclosure in the related climate taxonomy, which the Commission will publish before the tagging compliance date.<sup>2963</sup> The climate taxonomy will contain standard tags that cover each new disclosure provision, so we do not expect custom tagging for climate disclosures will be excessive. Also, as discussed above, the one-year transition period for tagging requirements will enable the climate taxonomy development process to leverage samples of climate disclosures in Commission filings to further build out the list of standard tags and adapt to common disclosure practices. This should further reduce the likelihood of excessive custom tags and thus improve data quality.<sup>2964</sup> Such improvement in data quality will come at the cost of data users having one less year of tagged climate disclosures, making the climate disclosures filed during that year more difficult to analyze efficiently.

### 3. Quantifiable Direct Costs on Registrants

In this section, we attempt to quantify the direct costs of compliance for registrants that will be impacted by the final rules.<sup>2965</sup> These costs could be incurred internally (*e.g.*, through employee hours or hiring additional staff) or externally (*e.g.*, via third-party service providers, such as auditors or consultants).

Our estimates are informed, in part, by feedback we received from public comment letters. As discussed below, however, commenters offered a wide range of cost estimates, suggesting that there is significant heterogeneity when it comes to expected compliance costs among registrants, and such estimates may not provide a representative view of the costs of compliance for all affected registrants.

The cost estimates submitted by commenters varied considerably depending on a given company’s size,

<sup>2962</sup> See letters from BHP; Morningstar; and Ethic.

<sup>2963</sup> See 17 CFR 232.405(c)(1)(iii)(B). Studies have found informational benefits resulting from the proper use of custom tags. See, e.g., Joseph Johnston, *Extended XBRL Tags and Financial Analysts’ Forecast Error and Dispersion*, 34 *J. of Info. Sys.* 105 (Sept. 2020) (finding custom tags to be “robustly negatively related to analysts’ forecast error and dispersion”).

<sup>2964</sup> See *supra* section II.O.

<sup>2965</sup> See *supra* section IV.C.1.b.

industry, complexity of operations, and other characteristics. This variability adds to the challenges in estimating compliance costs. Additionally, many commenters provided aggregate cost estimates that did not include certain elements required by the final rules, or included other elements that are not required in the final rules,<sup>2966</sup> without providing a breakdown of the component costs. Without a breakdown of component costs, it is difficult to use these cost estimates to quantify the direct cost of the final rules. Furthermore, changes from the proposal, often in response to commenter concerns about costs, will result in corresponding differences in the anticipated cost of the final rules as compared to the proposal.<sup>2967</sup> Nonetheless, we have endeavored below to factor these comments into our analysis to determine registrants' approximate cost of compliance with the final rules.

#### a. Comments and Data on Direct Cost Estimates of the Proposed Rules

In the Proposing Release, the Commission requested comment on all aspects of its economic analysis, including the potential costs and benefits of the proposed rules and alternatives, and whether the proposed rules, if adopted, will promote efficiency, competition, and capital formation or have an impact on investor protection.<sup>2968</sup> The Commission specifically requested empirical data, estimation methodologies, and other factual support for commenters' views, in particular, on costs and benefits estimates.<sup>2969</sup>

We received many comments asserting that the direct costs imposed by the proposed rules would be much greater than the Commission estimated.<sup>2970</sup> Many letters from

individual companies and industry groups provided quantitative estimates of the cost to comply with the proposed rules that were considerably higher than the estimates included in the Proposing Release.<sup>2971</sup> One commenter conducted a survey of 263 public companies between April and June 2022.<sup>2972</sup> Seventy-nine percent of non-SRC respondents in this survey asserted that the Commission under-estimated the costs of compliance with the proposed rules. Seventy-three percent of survey participants responded that their compliance costs under the proposed rules would exceed the Commission's estimates in the Proposing Release, with 41 percent of respondents stating that the compliance costs would exceed \$1 million on an ongoing basis.<sup>2973</sup> Another commenter, a biotechnology trade association, surveyed its members and found that 56 percent of respondents expected that the proposed rules would be more expensive than the Commission's estimates, with 40 percent indicating it would cost between \$0.5 and \$1.0 million.<sup>2974</sup> Additionally, a survey of corporate executives indicated that 61 percent of respondents expect that the proposed rules would impose \$750,000 or more in first year compliance costs.<sup>2975</sup> Some commenters specifically identified the GHG emissions reporting and Regulation S-X provisions of the proposed rules as likely to impose large cost burdens on both registrants and potentially on non-registrants.<sup>2976</sup>

To help assess the direct costs of the final rules, we conducted a detailed review of compliance cost estimates from commenters and other public sources. The nature of the cost information ranged from survey results, estimates directly from identifiable companies, estimates of anonymous

companies, and general estimates, either based on industry experience, fees for related services, or derived as part of similar rulemaking processes in other jurisdictions. We describe below the cost estimates provided in these letters and other sources.

One commenter provided cost information from seven large-cap companies in various industries on their current voluntary climate-reporting practices, which vary in their degrees of alignment with the proposed or final rules.<sup>2977</sup> The responses varied considerably regarding the reporting activities, disclosure elements, and costs. The number of staff required to produce the voluntary disclosures ranged from two to 20 full-time equivalents ("FTEs"). Reported employee hours for climate reporting (including TCFD reporting) ranged from 7,500 to 10,000 hours annually. One company reported spending 9 months to prepare its TCFD report and 4 months responding to the CDP questionnaire. Commonly cited external advisory services include environmental engineering consultants; emissions, climate science, and modeling consultants; outside counsel; and sustainability or sustainability reporting consultants, with costs ranging from \$50,000 to \$1.35 million annually. Third-party assurance costs ranged from \$10,000 to \$600,000. One company reported that it incurred initial costs of approximately \$1.3 million to establish a baseline for SASB and TCFD reporting, while another company estimated that new or enhanced systems, controls, audit, and other costs associated with any additional disclosure requirements would be over \$1 million.

The same commenter submitted another letter presenting detailed annual cost estimates from 13 companies (11 large-cap, 1 mid-cap, and 1 small-cap).<sup>2978</sup> Similar to their first comment, the responses displayed considerable variation with respect to

<sup>2966</sup> Commenters' estimates that include the cost of voluntarily undertaking a specific activity (e.g., the costs of setting targets or goals, formulating transition plans, or conducting scenario analysis) may not be indicative of the compliance costs of the final rules since the final rules do not necessarily require the undertaking of such activities, but rather require only the attendant disclosures in certain cases.

<sup>2967</sup> For example, as compared to the proposed rules, the final rules include a number of changes intended to reduce the burden of the Regulation S-X disclosure requirements and do not require Scope 3 emissions reporting.

<sup>2968</sup> See Proposing Release, section IV.G.

<sup>2969</sup> See *id.*

<sup>2970</sup> See, e.g., letters from Soc. Corp. Gov. (June 17, 2022); Chamber; Business Roundtable; S.P. Kothari, *et al.*; Biotechnology Innovation Organization; Committee on Corporate Reporting; American Automotive Leasing Association (AALA); America Car Rental Association; Truck Renting and Leasing Association (TRALA); AEPC. Some commenters also critiqued our PRA analysis,

asserting that it used the wrong cost of labor and did not include the costs to non-registrants. See letter from the Heritage Foundation.

<sup>2971</sup> See, e.g., letters from Soc. Corp. Gov. (June 17, 2022); RILA; NRF; ConocoPhillips; API; PPL Corporation; Nutrien; and Chamber.

<sup>2972</sup> See letter from Nasdaq.

<sup>2973</sup> *Id.* Twelve percent of the participants in the survey were SRCs.

<sup>2974</sup> See letter from Biotechnology Innovation Organization.

<sup>2975</sup> PwC, *Change in the Climate: How US business leaders are preparing for the SEC's climate disclosure rule* (2023), available at <https://www.pwc.com/us/en/services/esg/library/sec-climate-disclosure-survey.html> (discussing survey, conducted between Dec. 2022 and Jan. 2023, that solicits the views of 300 executives at U.S.-based public companies with at least \$500 million in annual revenue with respect to the proposed rules).

<sup>2976</sup> See, e.g., letter from Chamber. Concerns about burdens for non-registrants were mostly focused on the proposed rules' Scope 3 GHG emissions disclosure requirements. The final rules do not require disclosures of Scope 3 emissions.

<sup>2977</sup> See letter from Soc. Corp. Gov (June 11, 2022), referencing a comment it submitted in response to Acting Chair Allison Herren Lee's request for public input on climate disclosures. See Acting Chair Allison Herren Lee Public Statement, *Public Input Welcomed on Climate Change Disclosures*, available at <https://www.sec.gov/news/public-statement/lee-climate-change-disclosures>. Comment letters in response to this request are available at <https://www.sec.gov/comments/climate-disclosure/c112.htm>.

<sup>2978</sup> See letter from Soc. Corp. Gov (June 17, 2022). The commenter acknowledges that these companies are "not the norm. They represent a discrete subset of predominantly larger companies that have undertaken these reporting efforts voluntarily and generally reflect a much greater level of maturity in climate-related reporting than the average company."

current disclosure scope, granularity, and reported costs. Specific estimates of initial costs to comply with the proposed rules included \$5 to \$10 million,<sup>2979</sup> \$6 million (with \$4 to \$5 million in ongoing costs),<sup>2980</sup> \$10 million (with “much of it recurring”),<sup>2981</sup> and \$650,000 to \$1.5 million (with \$650,000 in ongoing costs).<sup>2982</sup> In many cases, the reported costs in this comment letter aggregated several different disclosure items and related activities without providing a cost breakdown. In other cases, costs were much more specific. For example, some companies reported their costs of measuring emissions. One small-cap company estimated \$300,000 annually in internal staff time for its Scope 1 emissions data collection and reporting. This letter also included the aggregate ongoing costs of measuring Scope 1, Scope 2, and some Scope 3 emissions<sup>2983</sup> from three different companies. These companies’ respective estimates are \$200,000,<sup>2984</sup> \$75,000,<sup>2985</sup> and 188 internal hours.<sup>2986</sup> Other specific cost estimates included assurance (ranging from \$10,000 to \$550,000, depending on the scope and level of assurance), external consultants (ranging from \$55,000 to \$990,000), and other activities related to sustainability reporting.

A public report presents detailed climate-related reporting cost estimates from three anonymous companies.<sup>2987</sup> One company, a large-cap financial institution, reported that the cost of issuing their first TCFD report was less than \$100,000 and that annual ongoing costs for responding to the CDP questionnaire is likewise less than \$100,000. Another company, a mid-cap waste management company, stated that

the cost of producing their first TCFD and SASB report were both less than \$10,000. This company reported that its total annual employee costs associated with climate disclosure are approximately \$12,600. It also reported incurring annual third-party costs between \$60,000 to \$160,000 to “develop [its] corporate sustainability report and microsite, both of which contain GHG climate-related information.” This company estimates the cost of producing voluntary climate-related disclosures to be less than 5 percent of its total SEC compliance-related costs. The remaining company, a large-cap industrial manufacturing company, reported that the combined cost of producing its first TCFD, SASB, and GRI disclosures amounted to between \$250,000 and \$350,000 (without providing a breakdown of component costs), while the cost of responding to its first CDP questionnaire was less than \$50,000. This company reported that it also spent \$400,000 annually for third-party auditors and consultants that provide support in the company’s climate disclosure efforts.

Another commenter provided the results of a survey, conducted from February to March 2022, of corporate issuers and institutional investors (“ERM survey”).<sup>2988</sup> The results reflect the responses of 39 issuers, of which 29 were LAFs.<sup>2989</sup> The ERM survey presents issuers’ average annual costs in seven categories: GHG analysis and/or disclosures (\$237,000);<sup>2990</sup> climate scenario analysis and/or disclosures (\$154,000);<sup>2991</sup> additional climate-related analysis and/or disclosures (\$130,000);<sup>2992</sup> internal climate risk

management controls (\$148,000);<sup>2993</sup> proxy responses to climate related proposals (\$80,000); assurance/audits related to climate (\$82,000); and other climate-related disclosure costs not covered by the previous six categories (\$76,000).

We also reviewed annual cost estimates associated with existing climate-related disclosure policies in the U.K. In 2021, the U.K. Financial Conduct Authority (“FCA”) adopted a comply-or-explain disclosure rule (“FCA rule”), which originally applied only to commercial companies with a U.K. premium listing<sup>2994</sup> but, effective 2022, was subsequently expanded to include issuers of standard listed shares.<sup>2995</sup> The U.K. Department for Business, Energy, and Industrial Strategy (“BEIS”) adopted a similar—albeit mandatory—disclosure rule (“BEIS rule”), also effective 2022,<sup>2996</sup>

<sup>2993</sup> This survey category includes costs for internal climate risk management controls, namely the costs related to integrating climate risk into enterprise risk management, oversight at the board level, strategic planning, internal audit, and other fundamental business processes. In addition, this category includes issuer costs related to climate-related data collection and aggregation, including IT costs and staff time; internal review of climate-related data collection by management, board committees, and the board; in-house counsel drafting; and review by outside counsel.

<sup>2994</sup> See FCA, Policy Statement PS20/17, *Proposals to Enhance Climate-related Disclosures by Listed Issuers and Clarification of Existing Disclosure Obligations* (Dec. 2020), available at <https://www.fca.org.uk/publication/policy/ps20-17.pdf>. This document states that the rule would apply to 480 companies that have a premium listing. A premium listed company is a company listed on the London Stock Exchange that is subject to more stringent compliance and disclosure requirements in addition to the minimum standards outlined in the UK provisions that implemented the EU Consolidated Admissions and Reporting Directive (CARD) and the EU Transparency Directive.

<sup>2995</sup> See FCA, Consultation Paper CP21/18, *Enhancing Climate-related Disclosures by Standard Listed Companies and Seeking Views on ESG Topics in Capital Markets* (June 2021), available at <https://www.fca.org.uk/publication/consultation/cp21-18.pdf>. Cost estimates of the FCA rule are sourced from this document. See also FCA, Policy Statement PS21/23, *Enhancing Climate-related Disclosures by Standard Listed Companies* (Dec. 2021). This rule applies to 244 issuers: 148 issuers of standard listed equity shares as well as 96 additional issuers (i.e., standard listed issuers of Global Depository Receipts and standard listed issuers of shares other than equity shares, excluding standard listed investment entities and shell companies). A standard listed company is a company listed on the London Stock Exchange that is subject to the minimum standards outlined in the UK provisions that implemented the EU Consolidated Admissions and Reporting Directive (CARD) and the EU Transparency Directive.

<sup>2996</sup> U.K. Final Stage Impact Assessment, *Mandating Climate-related Financial Disclosures By Publicly Quoted Companies, Large Private Companies and Limited Liability Partnerships (LLPs)* (2021), available at [https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment\\_data/file/1055931/tcfd-final](https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/1055931/tcfd-final)

<sup>2979</sup> *Id.* See Company 1 (large-cap company).

<sup>2980</sup> *Id.* See Company 2 (large-cap company). Throughout this release, “ongoing costs” refer to recurring costs on an annual basis.

<sup>2981</sup> *Id.* See Company 3 (large-cap company).

<sup>2982</sup> *Id.* See Company 4 (small-cap company).

<sup>2983</sup> Disclosing “some Scope 3 emissions” generally means that the commenter discloses some—but not all—categories of Scope 3 emissions. For example, one company “discloses Scope 1 and Scope 2 and some Scope 3 (fuel and energy-related activities, business travel, and use of sold products) GHG emissions . . .” See letter from Soc. Corp. Gov (June 17, 2022).

<sup>2984</sup> *Id.* See Company 9 (large-cap company).

<sup>2985</sup> *Id.* See Company 11 (large-cap company).

<sup>2986</sup> *Id.* See Company 10 (large-cap company).

<sup>2987</sup> See L. Reiners & K. Torrent, *The Cost of Climate Disclosure: Three Case Studies on the Cost of Voluntary Climate-Related Disclosure*, Climate Risk Disclosure Lab (2021), available at <https://econ.duke.edu/sites/econ.duke.edu/files/documents/The%20Cost%20of%20Climate%20Disclosure.pdf>. This source was also reviewed as part of the proposed rules. See Proposing Release, section IV.C.2.a.

<sup>2988</sup> See ERM survey, *supra* note 2670. The 39 issuers included the following industries: healthcare and pharmaceuticals; financials, insurance, and professional services; consumer discretionary products; communication services; transportation, construction, and industrials; consumer staples; oil, gas, and energy; utilities; real estate; metals, plastics, and other raw material; and information technology.

<sup>2989</sup> See *id.* Respondent market capitalizations ranged from less than \$300 million to more than \$200 billion, with the highest proportion of respondents (34%) having a market capitalization between \$10 billion and \$50 billion.

<sup>2990</sup> This survey category includes all costs relating to the development of GHG inventories with analysis and disclosure of Scope 1, Scope 2, and/or Scope 3 emissions.

<sup>2991</sup> This survey category includes all costs to issuers related to conducting assessments of the impact of climate risks in the short-, medium-, or long-term using scenario analysis as well as TCFD/CDP disclosure of risks and opportunities. Respondents were asked to exclude from this category any costs that they included in their costs of GHG emissions analysis and disclosures.

<sup>2992</sup> This survey category includes additional voluntary climate-related analyses and disclosures for processes largely disconnected from current and proposed climate-related disclosures such as outreach, engagement, and management.

that was previously used to inform the Commission's cost estimates of the proposed rules.<sup>2997</sup> The BEIS rule generally applies to companies that have over 500 employees and/or a turnover of more than £500 million.<sup>2998</sup> Both rules exhibit significant overlap as they are both largely based on the TCFD framework's major components, including disclosure on governance, strategy, and risk management, all of which have similar counterparts in the final rules. Both UK rules also include scenario analysis and metrics and targets; however, because undertaking these activities is not required under the final rules (only their disclosure in specific circumstances), we focus on the cost estimates of the other components that are more relevant to the final rules.<sup>2999</sup>

One-time implementation costs—which consist of “familiarization costs” and “legal review”—are estimated to be \$19,543<sup>3000</sup> by the BEIS and \$15,147 by the FCA. The BEIS rule presents first-year cost estimates of complying with climate-related disclosures associated with Governance (\$11,256),<sup>3001</sup> Strategy

*stage-ia.pdf* (“BEIS Final Stage Impact Assessment”). Cost estimates of the BEIS rule (with the exception of familiarization costs) are sourced from this document.

<sup>2997</sup> See Proposing Release, section IV.C.2.a, which also reviews the BEIS rule (referred to as the “UK Impact Assessment” in the Proposing Release). The estimated costs of the BEIS rule, as outlined in the following paragraphs, are the same as those presented in the proposed rules, with the exception of applying an updated exchange rate to convert the costs from GBP to USD.

<sup>2998</sup> Specifically, the BEIS rule applies to relevant Public Interest Entities (“PIEs”), including UK Premium and Standard listed companies with over 500 employees, UK registered companies with securities admitted to the Alternative Investment Market with more than 500 employees, limited liability partnerships with over 500 employees and a turnover of over £500 million, and UK registered companies that are not included in the categories above and that have over 500 employees and a turnover of over £500 million.

<sup>2999</sup> The following cost estimates from the BEIS and FCA reflect internal labor costs with the assumption that affected entities have no pre-existing climate-related disclosure practices that fulfill the stated requirements. The costs are converted from GBP to USD using the 2022 average exchange rate of \$1.2369 USD/GBP.

<sup>3000</sup> The familiarization cost component is sourced from the BEIS Consultation Stage Impact Assessment (as opposed to Final Stage), which assumes that scenario analysis requirements are not part of the familiarization process, and thus may be a relatively better representation of the corresponding cost with respect to the final rules. The familiarization cost is estimated to be £12,600. See BEIS Final Stage Impact Assessment<sup>2996</sup>. The other initial cost related to legal review (£3,200), as outlined in the BEIS Final Stage Impact Assessment, is added to obtain £15,800 (\$19,543). See *supra* note 2996.

<sup>3001</sup> Governance costs include the ongoing cost to those in scope to implement, document and disclose governance of their climate related risks and opportunities and to coordinate across internal business functions.

(\$16,080),<sup>3002</sup> and Risk Management (\$13,359),<sup>3003</sup> for a combined total of \$40,694, which is assumed to remain the same in subsequent years. This contrasts with the FCA's corresponding first-year costs of \$183,028 and ongoing costs of \$86,270 for larger issuers.<sup>3004</sup> The FCA rule also estimates costs for small and medium-sized issuers, with corresponding costs of \$137,271 in the first year and \$64,702 in subsequent years.

These estimates from the FCA and BEIS rules help to inform our assessment of the compliance costs of similar provisions of the final rules amending Regulation S–K, as our approach for these provisions is based, in part, on the TCFD recommendations. However, it is important to note that these estimates are intended to reflect compliance costs of the typical company within the designated sample of affected entities and are conditional upon several assumptions regarding the number of required staff, the rank or title of the staff, the required labor hours, and local wage data. Actual costs can vary significantly depending on company characteristics, such as company size, industry, business model, the complexity of the company's corporate structure, existing climate-related disclosure practices, and internal expertise, etc.

Another commenter provided cost estimates reported by an anonymous company, referred to as a “Well-known seasoned issuer.”<sup>3005</sup> This company, which has made TCFD-aligned disclosures public on its website (including Scope 1, Scope 2, and Scope 3 emissions disclosures) estimated that, combined with the amounts the company currently spends on voluntary

<sup>3002</sup> Strategy costs include the ongoing reporting costs to those entities in scope of internally coordinating, documenting and disclosing climate-related risks and opportunities the company has identified, as well as reporting the impact of these risks on the company's business, strategy, and financial planning. This estimate does not include scenario analysis, which is discussed separately in a later paragraph.

<sup>3003</sup> Risk management costs are the ongoing annual costs to those entities in scope to disclose the company's management of climate-related risks, including the coordination across functions internally, identification and assessment of risks and their integration into the company's overarching risk-management strategy. This also includes the time taken to identify and analyze major risk exposures in the context of the company's business strategy.

<sup>3004</sup> The FCA presents aggregated costs for governance, strategy, and risk management disclosure instead of individual costs for each of the aforementioned disclosure categories. The cost discrepancy relative to the BEIS rule is primarily driven by significantly different assumptions of internal labor requirements, such as the number of employees, salaries, and required hours.

<sup>3005</sup> See letter from Chamber.

climate disclosure, the company would need to spend a total of approximately \$35 million over five years to implement climate-related reporting in order to comply with the proposed rules, if adopted as proposed. Within this amount, the company estimates one-time expenses of \$19 million and recurring expenses averaging \$3.1 million per year. The primary categories of expenses are audit fees, professional services, subscriptions, labor, licenses, and training. The company estimates that compliance with the provisions amending Regulation S–X, as proposed, would have initial costs of \$1.5 million to \$2.0 million and subsequent ongoing costs of \$1.0 million to \$2.0 million annually. The company also estimated compliance costs for the proposed Scope 3 emissions disclosure to be \$15.6 million over five years, with a significant part of this cost attributable to attestation requirements and with “filing” Scope 3 information.<sup>3006</sup>

Several letters from professional trade or industry organization also provided cost estimates. One commenter stated that the “cost of registrants trying to report in alignment with just certain aspects of TCFD for their first time on a voluntarily basis can be around \$500,000. . . . The actual cost for complete alignment to TCFD could be up to \$1,000,000 per registrant over several years,” which does not include the annual cost associated with preparing for and conducting attestation.<sup>3007</sup> Another commenter said that based on member feedback, the “true initial set up and ongoing compliance costs for a typical retailer will be more than 35 times the amount that the SEC has estimated. . . .

Members estimate that the initial costs of implementing the proposed rules would be somewhere in the \$5 million to \$15 million range.”<sup>3008</sup> Other commenters estimated the initial cost of complying with the proposed amendments to Regulation S–X would exceed \$100 million.<sup>3009</sup> One commenter estimated that the combined costs of “complying with the reporting requirements under S–X and S–K would

<sup>3006</sup> See letter by API. We note that the proposed rules would not have imposed any attestation requirements with respect to Scope 3 emissions disclosure.

<sup>3007</sup> See letter from AEPC.

<sup>3008</sup> See letter from RILA.

<sup>3009</sup> See letters from Western Energy Alliance (suggesting initial compliance costs to be “over \$100 million for large companies when considering not just the new systems but the staff training required”) and API (without specifying whether the \$100 million figure reflects implementation costs or ongoing annual costs).

cost companies \$3 to \$7 million annually.”<sup>3010</sup>

One commenter included cost estimates provided by members of its trade association with respect to their on-going efforts, prior to the proposed rules, in measuring GHG emissions.<sup>3011</sup> One member reported that an average automated GHG measuring system would cost \$250,000 to purchase and set up, with ongoing annual costs of approximately \$100,000. Another member reported that “completing questionnaires and conducting emissions measurements through an automated GHG measuring program with applicable audits costs the company about \$15,000 per year to maintain.” Another member company’s mature Scope 1 and 2 emissions reporting programs resulted in 100 to 200 resource hours per year.

Several individual registrants also provided cost estimates of either their own current climate-reporting practices or expected practices if the proposed rules were adopted as proposed. One multinational registrant that engages in hydrocarbon exploration and production estimated that initial compliance costs with respect to the proposed rules would range from \$100 to \$500 million.<sup>3012</sup> This registrant expressed concerns about the burden of complying with the proposed rules, particularly with the proposed amendments to Regulation S–X. This registrant estimated ongoing costs to be \$10 to \$25 million annually. One energy company noted that it expected compliance costs to be at least four to five times the estimates provided in the Proposing Release, primarily due to the necessary increases in staff and the added costs in auditing and attestation fees.<sup>3013</sup> Other energy companies estimated that compliance with the proposed amendments to Regulation S–X and reporting Scope 3 emissions would likely exceed \$100 million<sup>3014</sup> and \$1 million,<sup>3015</sup> respectively.

Another commenter, a multinational energy company, estimated its internal burden hours for Scope 3 emissions reporting to be 650 hours in the first year and 100 hours annually in subsequent years.<sup>3016</sup> A different commenter reported that it allocates one full-time consultant and 20 employees working part time each year from November to March as part of its

process to measure Scope 1, Scope 2, and some Scope 3 emissions, collect and validate data, estimate and review emissions, and obtain third-party limited assurance for GHG-related data in its sustainability report.<sup>3017</sup> Another commenter that already tracks some Scope 1 emissions estimated that it may incur an additional cost of \$10,556,800 or more to track and report Scope 1 emissions from additional facilities as a result of the proposed rules.<sup>3018</sup> A multinational fertilizer company estimated that the direct and indirect costs of compliance with the proposed rules would be between \$35 million and \$55 million, with assurance costs related to financial statement metrics estimated to be \$70,000 to \$225,000 annually.<sup>3019</sup>

We also reviewed memoranda of staff meetings with external parties that further inform our assessment of the final rules’ compliance costs.<sup>3020</sup> One organization presented pricing information for the following relevant services provided: TCFD reporting, excluding measuring emissions and establishing targets (\$100,000 average); assessing Scopes 1, 2, and 3 emissions (\$75,000 to \$125,000); and target setting (\$20,000 to \$30,000).<sup>3021</sup> A different organization indicated fees would range from \$11,000 to \$105,000 for services related to GHG accounting (Scopes 1, 2,

<sup>3017</sup> See letter from Air Products and Chemicals, Inc.

<sup>3018</sup> See letter from Energy Transfer LP. This commenter derived this cost based on estimates from the EPA’s mandatory GHG reporting rule. See *Mandatory Reporting of Greenhouse Gases*, 74 FR 56, 260, 363 tbl. VII–2 (Oct. 30, 2009). This commenter estimated this cost to be \$7,000,000 in 2006 dollars, which was adjusted for inflation to obtain \$10,556,800 in 2023 dollars.

<sup>3019</sup> See letter from Nutrien. This estimate includes costs associated with conducting scenario analysis and including the related information in public disclosures; measuring and reporting Scope 1 and 2 emissions by each GHG, obtaining reasonable assurance on Scope 1 and 2 emissions by each GHG; measuring and reporting Scope 3 emissions by each GHG for public disclosure subject to DCP; and disclosure of the proposed Financial Impact Metrics within the audited financial statements, among other proposed disclosures. These costs include internal costs, external professional service fees, and additional systems and internal control processes that the commenter indicated would need to be designed and operating effectively for public disclosure of high-quality information.

<sup>3020</sup> The meeting memoranda are available at the same location as the comment letters in response to the Proposing Release. See *supra* note 19. Some of these meetings occurred prior to the Proposing Release and thus any data included in the memoranda do not reflect specific details of the proposed rules; however, we have considered these memoranda as part of this assessment as they contain relevant cost information.

<sup>3021</sup> See Memorandum Concerning Staff Meeting With Representatives of S&P Global (Feb. 4, 2022); see also Proposing Release, *supra* note 1027.

and 3 emissions).<sup>3022</sup> Another organization estimated that costs for assessing Scopes 1 and 2 emissions would range between \$25,000 and \$45,000 and assessing Scopes 1, 2, and 3 emissions would cost between \$50,000 and \$125,000, depending on whether a given company already has emissions-measuring systems and processes in place.<sup>3023</sup>

The cost information in the above sources indicates the variance and the scale of compliance costs the proposed rules would have imposed on registrants. We note, however, that many of the estimates combine the costs of multiple components without providing a breakdown of component costs, which makes it difficult to isolate only the components that are applicable to the proposed or final rules. Furthermore, these voluntary cost estimates may reflect some selection bias such that they may be skewed toward a certain demographic (*e.g.*, large-cap companies) and thus may not be representative of the broad sample of affected registrants. Finally, to the extent that the cost estimates are specific to the proposed rules, they do not account for the changes made to the final rules. For example, the final rules’ requirements with respect to financial statements have been narrowed relative to the proposed rules.<sup>3024</sup> In addition, the final rules do not require the disclosure of Scope 3 emissions. Nevertheless, we use this cost information to the extent possible to inform our assessment of the expected compliance costs of the final rules, as outlined in the following subsection.

#### b. Direct Cost Estimates for the Final Rules

The final rules will impose a number of new disclosure requirements on registrants. These requirements will result in additional compliance costs for registrants, and, depending on the nature of the registrant’s operations and its existing disclosure practices, these additional compliance costs could be significant. Using comment letters and other sources, we take a conservative approach (*i.e.*, erring on the side of overstating costs rather than understating them) to estimate approximate compliance costs for the final rules, which are discussed in

<sup>3022</sup> See South Pole Memo; see also Proposing Release, note 1037. These numbers have been converted from EUR based on the 2022 average exchange rate of \$1.0538 USD/EUR, rounded to the nearest \$100.

subsequent sections and summarized immediately below.

With respect to the Regulation S–K amendments pertaining to governance disclosure (Item 1501); disclosure regarding the impacts of climate-related risks on strategy, business model, and outlook (Items 1502(a) through (e) and (g)); and risk management disclosure (Item 1503), we estimate that compliance costs will be \$327,000 in the first year of compliance and \$183,000 annually in subsequent years.<sup>3025</sup> For those registrants that conduct scenario analysis and are required to provide attendant disclosures (Item 1502(f)), we estimate the reporting costs will be \$12,000 in the first year and \$6,000 in subsequent years.<sup>3026</sup> Some registrants will be required to disclose Scope 1 and 2 GHG emissions (Item 1505) after a specified phase in period. We estimate that the compliance costs for these disclosures will be \$151,000 in the first year of compliance and \$67,000 annually in subsequent years.<sup>3027</sup> After an additional phase in period, applicable registrants will be required to obtain assurance for their emissions disclosures (Item 1506). Limited assurance for emissions disclosures is estimated to cost \$50,000 while reasonable assurance is estimated to cost \$150,000.<sup>3028</sup> For registrants that voluntarily establish targets or goals and are required to provide attendant disclosures (Item 1504), we estimate the reporting costs will be \$10,000 in the first year of establishing the target and \$5,000 in subsequent years.<sup>3029</sup> With respect to amendments to Regulation S–X, we estimate an upper bound of \$500,000 in the first year of compliance, while the annual cost in subsequent years is estimated to have an upper bound of \$375,000.<sup>3030</sup> Incremental audit fees are estimated to have an upper bound of \$23,000 for all years.<sup>3031</sup>

We emphasize that there could be a considerable range in actual compliance costs given that not all costs listed above will apply to all registrants or during all measurement periods. Depending on the registrant, annual compliance costs (averaged over the first ten years of compliance) could range from less than \$197,000 to over \$739,000.<sup>3032</sup> A

registrant's compliance costs may be at the lower end of the cost range if, for example, it does not conduct scenario analysis, does not have material Scope 1 and 2 emissions, has no climate-related target or goal, and has no applicable expenditures or financial statement impacts that require disclosure, thereby avoiding the corresponding costs of the aforementioned disclosure items. However, this registrant may have exposures to material climate risks that necessitate governance disclosure; disclosure regarding climate-related risks that have material impacts on strategy, business model, and outlook; and risk management disclosure. In this case, the cost of these required disclosures—estimated to be \$327,000 in the first year of compliance and \$183,000 annually in subsequent years<sup>3033</sup>—would comprise the full compliance cost of the final rules. This corresponds with an average annual compliance cost of \$197,000 (rounded to the nearest \$1,000) over the first ten years of compliance.<sup>3034</sup> Incremental compliance costs would be even lower for registrants that already provide these disclosures (either voluntarily or as required by other laws or jurisdictions).<sup>3035</sup>

At the upper end of the cost range, for example, there may be other registrants for which all estimated compliance costs apply. In this example, these registrants could incur an estimated \$872,000<sup>3036</sup> in the first year of compliance and lower annual costs in subsequent years. After the respective phase in periods, these registrants would incur additional costs for GHG emissions disclosure, limited assurance, and subsequently reasonable assurance (assuming the registrant is an LAF). This registrant would incur an average annual compliance cost of \$739,000 (rounded to the nearest \$1,000) over the first ten years of compliance.<sup>3037</sup> These

are presented as the average annual compliance cost over the first ten years of compliance. See *infra* notes 3034 and 3036 for additional details.

<sup>3033</sup> See section IV.C.3.b.i.

<sup>3034</sup>  $(\$327,000 + \$183,000 * (9 \text{ years})) / 10 = \$197,400$ .

<sup>3035</sup> See *supra* section IV.A for a discussion on existing laws (domestic and foreign) that elicit similar disclosures and current market practices with respect to climate-related disclosures. See also *infra* section IV.C.3.c.

<sup>3036</sup>  $\$327,000$  (governance disclosure; disclosure regarding climate-related risks that have material impacts on strategy, business model, and outlook; and risk management disclosure) +  $\$12,000$  (reporting cost of scenario analysis) +  $\$10,000$  (reporting cost of target or goal) +  $\$500,000$  (disclosures related to amendments to Regulation S–X, upper bound) +  $\$23,000$  (audit fees, upper bound) =  $\$872,000$ .

<sup>3037</sup> Total compliance costs are calculated each year for the first ten years of compliance, taking into

examples highlight the potential range in compliance costs depending on a given registrant's circumstances, including (but not limited to) industry, size, existing climate-related disclosure practices, and whether the registrant's climate-risk exposure exceeds applicable materiality thresholds for disclosure.

Regarding assessing materiality to determine whether disclosure is required under the final rules, we acknowledge that some registrants may need to expend resources to first determine whether particular disclosure items are material, even in cases where registrants ultimately determine they do not need to make disclosure. While commenters provided estimates of the overall costs of measuring and assessing GHG emissions and making disclosure under TCFD disclosure frameworks, they did not provide a level of detail that would enable us to reliably disaggregate the materiality determination from the costs of disclosure more broadly. We also note that the cost of such a determination could vary depending on the registrant's facts and circumstances and may in some cases be de minimis. While we have not provided a standalone cost estimate of making such materiality determinations, our estimates of the costs of governance disclosure, disclosure regarding the impacts of climate-related risks on strategy, business model, and outlook, and risk management disclosure begin with TCFD disclosure as a starting point.<sup>3038</sup> Thus, to the extent that a materiality or similar assessment is included in TCFD disclosure, this cost is reflected in the Commission's compliance cost estimates with respect to the above disclosure items.

Moreover, the above estimates are conditional upon several factors. First, they depend on the sample of sources and commenters that voluntarily provided relevant cost information.<sup>3039</sup> To the extent that this sample is not representative of the broad set of affected registrants, the resulting estimates may similarly be less representative. In addition to company size and industry, another relevant factor may be the decision to engage third-party advisory services. Some registrants may determine that engaging such advisory services will better position them to comply with the final rules, while others may decide to use in-

account the various disclosure items and their respective phase in periods. The average of these annual costs is \$738,700.

<sup>3030</sup> See section IV.C.3.b.v.

<sup>3031</sup> *Id.*

<sup>3032</sup> Registrants will incur compliance costs for different disclosure items at different times due to applicable phase in periods. For ease of comprehension and comparability, these estimates

house resources.<sup>3040</sup> The above estimates incorporate information on both internal costs (e.g., employee hours) and external costs (e.g., hiring third parties or consultants), as provided by comment letters and other sources.<sup>3041</sup> Second, several analytical assumptions were incorporated in the estimation process. While we endeavored to apply them consistently and in a conservative manner throughout the analysis, actual compliance costs may differ to the extent that these assumptions do not reflect a given registrant's specific circumstances.

The above compliance cost estimates exhibit certain features that may make them conservative. First, the cost estimates from comment letters and other sources, which serve as inputs in our cost estimation process, are almost all from large-cap companies. To the extent that compliance costs increase with company size, smaller registrants can expect lower costs.<sup>3042</sup> Furthermore, there are numerous instances in which analytical assumptions were required due to insufficient information from the source material. Wherever possible, assumptions that tend to overstate actual costs were chosen over those that would tend to understate them. Certain registrants may nonetheless incur costs that exceed our estimates. However, we believe that due to the nature of our cost estimation process, the majority of registrants will incur costs that do not exceed our estimates. Furthermore, our estimates assume registrants have no pre-existing climate-related disclosure practices. As a result, those that already

<sup>3040</sup> For example, registrants that are required to disclose emissions may be more likely to rely on external services. Registrants facing climate-related risks that are complex or a myriad may also be more likely to engage third party services. We emphasize that the final rules impose no requirement with respect to the use of third-party services and that registrants are free to decide how best to meet compliance based on their specific circumstances.

<sup>3041</sup> Some commenters provided TCFD disclosure costs and separate costs for sustainability consultants. See, e.g., letters from Soc. Corp Gov (June 11, 2021, and June 17, 2022). However, the latter were often not explicitly tied to TCFD, but rather associated with sustainability reports or other disclosures and activities not necessarily required by the final rules. In these cases, we only used the TCFD disclosure costs due to their direct relevance while omitting the cost of sustainability consultants as we could not reliably determine what portion were directly attributable to the TCFD and the provisions of interest. For GHG emissions, some companies' estimates included both internal and external costs, some mentioned the use of external costs but did not provide dollar estimates, while others did not engage external services at all. We have incorporated all available information to the extent possible in our estimation process.

<sup>3042</sup> Nevertheless, we recognize that in some cases, certain components of compliance costs may not vary with size and may be higher in proportional terms for smaller registrants.

provide disclosures that meet some of the final rules' requirements will face lower incremental costs.<sup>3043</sup>

We recognize that some comment letters in response to the proposed rules contained compliance cost estimates that significantly exceed the Commission's estimates of the final rules.<sup>3044</sup> We reiterate that this discrepancy is likely attributable to a number of changes from the proposed rules that reduce compliance costs. For example, the final rules do not require Scope 3 emissions reporting and have less burdensome requirements with respect to the amendments to Regulation S-X, thereby resulting in reduced compliance costs.

Our compliance cost estimation process consists of five elements. First, we estimate the aggregate costs of complying with three specific provisions that have similar counterparts within the TCFD framework: governance disclosure; disclosure regarding climate-related risks that have material impacts on strategy, business model, and outlook; and risk management disclosure. Second, we estimate the cost of assessing and disclosing Scope 1 and 2 emissions. Third, we estimate the cost of obtaining third-party assurance for GHG emissions disclosures. Fourth, we estimate the reporting costs of scenario analysis and targets and goals. Fifth, we estimate the costs associated with complying with the amendments to Regulation S-X and incremental audit costs. We proceed with a review of each element that describes how we arrived at the above compliance cost estimates.

#### i. Cost Estimates of Governance Disclosure; Disclosure Regarding Impacts of Climate-Related Risks on Strategy, Business Model, and Outlook; and Risk Management Disclosure

We begin by reviewing estimates from commenters and other sources with respect to the costs of TCFD disclosure with the objective of informing our assessment on the costs of similar provisions of the final rules. Specifically, these provisions of interest include governance disclosure; disclosure regarding climate-related risks that have material impacts on strategy, business model, and outlook; and risk management disclosure. We begin by focusing on these specific provisions separate from other components (e.g., GHG emissions measurement or targets and goals) because these other components are not

necessarily required in all circumstances or by all registrants.

In many cases, however, commenters provided one aggregate cost for their TCFD disclosure that also included the costs of GHG emissions measurement or target and goals-related activities. Without a breakdown of component costs, we face challenges in isolating the costs of the relevant provisions. Moreover, some commenters provided only a single aggregate cost that, in addition to their TCFD disclosure, includes several other components not required by the final rules,<sup>3045</sup> which poses similar challenges in separately estimating the component costs.

To account for these challenges, we used an approach that takes these aggregate cost estimates and applies adjustments derived from specific estimates from other sources, allowing us to obtain a more targeted "adjusted cost." For example, some commenters provided their cost estimates specifically for measuring emissions, from which we can determine the median reported emissions-measurement cost. Thus, if a given commenter provided an aggregate cost of TCFD disclosure that includes the measuring of emissions, we applied an adjustment (i.e., subtracted the median reported emissions-measurement cost), which results in an adjusted cost estimate for the remaining portion of TCFD disclosures (i.e., the provisions of interest). We applied similar adjustments throughout the analysis, as described in detail below.

While this approach can help us arrive at more granular cost estimates, we also recognize its limitations. Primarily, the median reported cost of a given component may be different from the actual cost incurred by a specific registrant (due to differences in company size, industry, climate reporting practices, or other factors) such that applying the adjustment may not yield a true representation of that registrant's cost breakdown. However, we believe this issue is mitigated to some extent because almost all estimates used in this analysis are from large cap companies and thus of relatively comparable size. Furthermore, while a given cost adjustment may be overstated for some registrants and understated for others, these discrepancies should partially offset each other when we subsequently take

<sup>3045</sup> For example, an anonymous large-cap company "noted that combined costs for producing its first TCFD, SASB, and GRI disclosures were between \$200,00 and \$350,000." See *supra* note 2987.

<sup>3043</sup> See section IV.C.3.c.

<sup>3044</sup> See section IV.C.3.c.

the median<sup>3046</sup> of the resulting adjusted costs.

Table 8 presents an overview of the cost estimation methodology with respect to the provisions of interest. Column (1) specifies the commenter or other public source that contains cost estimates specific to TCFD disclosures. Some sources contained costs for multiple, anonymous companies. Where applicable, these company descriptions are provided in Column (2). Column (3) shows the ongoing costs of TCFD disclosures before cost adjustments are applied. Some costs are taken directly from the source, whereas in other cases, specific assumptions and calculations are applied to obtain an estimate (see

table footnotes for details). For example, if a source provided estimates in the form of FTEs or burden hours, we converted them to dollars according to hourly cost estimates consistent with the PRA.<sup>3047</sup> Some sources only provided an initial cost (*i.e.*, first-year startup cost) without providing ongoing, annual costs. In these cases, we estimate the ongoing cost by applying a percentage reduction derived from other sources. Furthermore, because the CDP questionnaire exhibits full alignment with the TCFD recommendations,<sup>3048</sup> we also included estimates for responding to the CDP questionnaire, from which we estimated the equivalent

cost for TCFD disclosures by applying a conversion factor.<sup>3049</sup>

We determined that some of the costs in Column (3) include the costs of setting targets and goals or measuring GHG emissions, as indicated in Columns (4) and (5), respectively. Where applicable, these costs are subtracted from Column (3) to obtain the adjusted cost in Column (6), which represents the aggregate, annual ongoing cost estimate for provisions of interest: governance disclosure; disclosure regarding climate-related risks that have material impacts on strategy, business model, and outlook; and risk management disclosure.

Median .....	.....	.....	.....	.....	<sup>16</sup> 183,135

<sup>1</sup> The adjustment factor for setting targets and goals is \$54,015, which is determined by relevant cost estimates presented in Table 9.

<sup>2</sup> The adjustment factor for assessing Scope 1, Scope 2, and some Scope 3 emissions is \$79,236, which is determined by relevant cost estimates presented in Table 10.

<sup>3</sup> The adjusted cost is calculated as Column (3) minus adjustment factors where applicable, as indicated by Columns (4) and (5). If Column (4) indicates "Included," then \$54,015 is subtracted from Column (3). Similarly, if Column (5) indicates "Included," then \$79,236 is subtracted from Column (3). The net result is the "adjusted cost," presented in Column (6).

<sup>4</sup> See letter from Soc. Corp. Gov (June 11, 2021). This company reported that three FTEs "plus others" spend nine months for TCFD reporting. (3 FTEs)\*(40 hrs/wk)\*(36 wks)\*(\$444/hr) = \$1,918,080. The source does not specify how many hours are contributed by the "others," thus the estimated cost may be understated.

<sup>5</sup> See *id.* This company reported TCFD-aligned reporting process involved 40 people from the company and took six months of nearly full-time participation by 20 core team members. (20 FTEs)\*(40 hrs/wk)\*(24 wks)\*(\$444/hr) = \$8,524,800. The source does not specify how many hours are contributed by those outside of the 20 core members, thus the estimated cost may be understated.

<sup>6</sup> See *id.* This company reported spending \$1.25 million on both CDP and TCFD disclosures, in addition to several other components. We first estimate the TCFD component by applying the 4-to-9 ratio. (\$1.25 million)\*(9/13) = \$865,385.

<sup>7</sup> See letter from Soc. Corp. Gov (June 17, 2022). This company reported spending "\$160,000 for CDP and other climate-related surveys, including supply chain surveys." To be conservative, we assume that the \$160,000 is the cost for CDP only, then apply the 4-to-9 ratio. \$160,000\*(9/4) = \$360,000.

<sup>8</sup> See *id.* This company reported that "two employees focus on climate change, including disclosure, and 1.5 employees focus on sustainability reporting overall," spending nine months on its TCFD report. (3.5 FTEs)\*(40 hrs/wk)\*(36 wks)\*(\$444/hr) = \$2,237,760.

<sup>9</sup> See *supra* note 2995. This is the ongoing cost of "coordination of disclosure inputs across functions" (£69,747 for larger issuers), which is in line with the TCFD disclosure categories of Governance, Strategy, and Risk Management. This cost is converted to USD based on the 2022 average exchange rate. (£69,747)\*(1.2369 USD/GBP) = \$86,270. This reflects a 56% reduction from initial to ongoing costs, which we consider in determining the appropriate percentage reduction in subsequent calculations.

<sup>3046</sup> Throughout the cost estimation process, we use medians instead of means since the former is less sensitive to outliers.

<sup>3047</sup> The PRA assumes that internal burden hours cost \$444/hour, while external burden hours cost \$600/hour. See section V.

<sup>3048</sup> For information on how the CDP questionnaire is fully aligned with the TCFD, see CDP, How CDP is aligned to the TCFD, *supra* note 52.

<sup>3049</sup> Two companies referenced in comment letters noted that it takes a designated number of

staff four months to complete the CDP questionnaire and nine months to complete TCFD disclosures. Based on these estimates, we incorporate the assumption that the CDP-to-TCFD cost ratio is 4 to 9 ("4-to-9 ratio"). See letters from Soc. Corp. Gov. (June 11, 2021 and June 17, 2022).

<sup>10</sup> See *supra* note 2996. This figure adds the ongoing costs of disclosure associated with Governance (£9,100), Strategy (£13,000), and Risk Management (£10,800). The total (£32,900) is converted to USD based on the 2022 average exchange rate. (£32,900)\*(1.2369 USD/GBP) = \$40,694. This reflects a 32% reduction from initial to ongoing costs, which we consider in determining the appropriate percentage reduction in subsequent calculations.

<sup>11</sup> See *supra* note 2987. This company reported that the cost of issuing its first TCFD report was less than \$100,000. To be conservative, we assume \$100,000 is the initial cost. To estimate ongoing costs, we refer to the percentage reduction from initial to ongoing costs as reflected by the FCA rule (56%) and the BEIS rule (32%), of which the median is 44%.  $(\$100,000) * (1 - 0.44) = \$56,000$ .

<sup>12</sup> See *id.* This company reported that the cost of producing its first TCFD report was less than \$10,000. To be conservative, we assume \$10,000 is the initial cost. In estimating ongoing costs, we refer to the percentage reduction from initial to ongoing costs as reflected by the FCA rule (56%) and the BEIS rule (32%), of which the median is 44%.  $\$10,000 * (1 - 0.44) = \$5,600$ .

<sup>13</sup> See *id.* This company reported that the combined cost for producing their first TCFD, SASB, and GRI disclosures was between \$200,000 and \$350,000 but did not provide the cost for TCFD only. However, it noted that the cost of preparing its first CDP questionnaire did not exceed \$50,000. To be conservative, we assume the initial CDP-related cost is \$50,000. We apply the 4-to-9 ratio to convert this to the initial costs of TCFD disclosure and then apply a 44% reduction to estimate the ongoing cost.  $\$50,000 * (9/4) * (1 - 0.44) = \$63,000$ .

<sup>14</sup> See letter from AEPC. This commenter stated that initial costs to report in alignment with certain aspects of the TCFD can be around \$500,000. To estimate ongoing costs, we refer to the percentage reduction from initial to ongoing costs as reflected by the FCA rule (56%) and the BEIS rule (32%), of which the median is 44%.  $\$500,000 * (1 - 0.44) = \$280,000$ .

<sup>15</sup> See *supra* note 3021. This source, which provided indicative fees for TCFD reporting services, noted that the average cost would be around \$100,000. To estimate ongoing costs, we refer to the percentage reduction from initial to ongoing costs as reflected by the FCA rule (56%) and the BEIS rule (32%), of which the median is 44%.  $\$100,000 * (1 - 0.44) = \$56,000$ .

<sup>16</sup> When there is an even number of data points, there is no single middle value. In such cases, the median is computed as the arithmetic mean of the two middle data points. Accordingly, the median of Column (6) is calculated as follows:  $(\$86,270 + \$280,000) / 2 = \$183,135$ .

We next discuss our estimation process and methodology involved in producing the numbers in Table 8, including which cost estimates were included versus excluded, what assumptions were incorporated, and how the adjustment factors for targets and goals and GHG emissions measurement were calculated and applied. Many commenters did not explicitly state whether the costs of measuring emissions or setting targets and goals were included in their TCFD costs. As a result, we assumed that such costs were included only if such activities were contained in their qualitative description of climate-related disclosure activities. Of the twelve cost estimates presented in Table 8, we assume that three included the cost of target-related activities, as indicated in Column (4).<sup>3050</sup> We also assume that five estimates included the costs of measuring Scope 1, Scope 2, and some Scope 3 emissions, as indicated in Column (5).<sup>3051</sup>

We next review cost estimates specific to setting targets and goals and assessing GHG emissions (Scope 1, Scope 2, and

some Scope 3) from other sources in order to obtain their adjustment factors (\$54,015 and \$79,236, respectively). We recognize that the final rules do not necessarily require registrants to incur costs associated with setting targets and goals or measuring all three scopes of GHG emissions. We review such cost estimates because we determined that some of the sources in Table 8 included them with their overall TCFD-related costs; however, they should not necessarily be interpreted as direct compliance costs resulting from the final rules. Instead, we use these cost estimates to obtain appropriate adjustment factors that are subsequently subtracted from the applicable estimates in Column (3).

The adjustment factor for setting targets and goals is \$54,015, as indicated in Column (4). To obtain this number, we begin by reviewing four sources that provided more specific cost estimates related to targets and goals,<sup>3052</sup> which are presented in Table 9. The BEIS rule estimated that Metrics and Targets (including the cost of data gathering and cost of reporting, unrelated to GHG

emissions) would have an ongoing cost of \$72,359, while the FCA rule estimated the ongoing cost to be \$53,507.

The remaining two sources only provided initial costs. Thus, to estimate the ongoing cost, we referred to the percent reduction from initial to ongoing costs reflected by the BEIS rule (23 percent reduction) and FCA rule (67 percent reduction), which yields a median percent reduction of 45 percent. One source estimated that setting targets would come with an initial cost ranging from \$20,000 to \$30,000.<sup>3053</sup> We apply the 45 percent reduction to arrive at an ongoing cost estimate of \$13,750. Another company reported that it spent \$1 million as an initial cost for target baseline and projections.<sup>3054</sup> We similarly apply the 45 percent reduction to arrive at an ongoing cost estimate of \$550,000. The median of the ongoing costs of setting targets in Table 9 is \$54,015, which is used as the adjustment factor for setting targets and goals (as indicated in Column (4) of Table 9).

<sup>3050</sup> The Financial Services company stated that it “reports on its progress towards its low-carbon financing and carbon-neutrality goals; the percentage of renewable energy sourced to support its operations and the percentage of energy reductions year over year.” The Communication Services company reports that it gathers metrics/data related to carbon abatement, renewable energy, water conservation, and incurs expenses for monitoring and data quality. (See letter from Soc. Corp. Gov (June 11, 2021)). Company 6 stated that it “gathers data and reports on progress towards the company’s low-carbon financing goal, progress toward the company’s carbon-neutrality goal, the percentage of renewable energy sourced to support the company’s operations, the percentage of energy reduction year-over-year.” (See letter from Soc. Corp. Gov (June 17, 2022)). Based on the description of these activities, we assume that these three companies included the costs of setting targets and goals in their reported costs. The Large-cap financial institution stated that it “is committed to

achieving net-zero emissions by 2050 and is in the process of implementing the Paris Agreement Capital Transition Assessment (PACTA) methodology to align its loan portfolio with the goals of the Paris Agreement.” See *supra* note 2987. However, given their relatively low reported costs, we assume that the cost of setting targets and goals is not included in order to remain conservative in our estimation.

<sup>3051</sup> The Financial Services company, Communications Services company, Company 5, and Company 6 all explicitly state that they measure and report Scopes 1, 2, and some Scope 3 emissions. The Energy company does not explicitly state that it measures emissions, however it states that it requires “consultants in emissions, climate science, and modeling,” “multiple engineering disciplines,” and “GHG emissions reporting expertise” as part of its disclosures. See letters from Soc. Corp. Gov (June 11, 2021 and June 17, 2022). Thus, we assume that these five companies included the costs of measuring Scope

1, 2, and some Scope 3 emissions within their reported costs. The Large-cap financial institution and Mid-cap company also report measuring the three scopes of emissions, however given their relatively low reported costs, we assume that the cost of measuring emissions is not included in order to remain conservative in our estimation.

<sup>3052</sup> These sources generally do not provide sufficient detail on precisely what the targets and goals disclosure would consist of; therefore, it is difficult to determine to what extent the corresponding cost estimates are applicable to the final rules’ requirements on targets and goals. We can nevertheless use these sources to help us arrive at better informed compliance cost estimates. Similar reasoning can be applied to the cost estimates of scenario analysis, discussed in section IV.C.3.b.iv.

<sup>3053</sup> See *supra* note 3021.

<sup>3054</sup> See letter from Soc. Corp. Gov. (June 17, 2022).

TABLE 9—ONGOING COSTS OF SETTING TARGETS AND GOALS

Commenter or source	Ongoing costs of setting targets and goals
BEIS rule .....	<sup>1</sup> \$72,359
FCA rule .....	<sup>2</sup> 35,671
Society for Corporate Governance (June 17, 2022) .....	<sup>3</sup> 550,000
S&P Global .....	<sup>4</sup> 13,750

<sup>1</sup> See *supra* note 2996. The BEIS rule estimated that the ongoing cost metrics and targets disclosure is £58,500 (£52,000 for annual data gathering and £6,500 for the cost of reporting). We apply the 2022 average exchange rate. (£58,500)\*(1.2369 USD/GBP) = \$72,359. This reflects a 23% reduction from initial to ongoing costs, which we consider in determining the appropriate percentage reduction in subsequent calculations.

<sup>2</sup> See *supra* note 2995. The FCA rule estimated that ongoing costs for metrics and targets disclosure is £43,259; however, this figure includes assessing Scopes 1 and 2 emissions. The corresponding initial cost disaggregates the cost, with two-thirds allocated to metrics and targets unrelated to Scopes 1 and 2 emissions. We assume the ongoing cost reflects the same proportional allocation and then we apply the 2022 average exchange rate. (£43,259)\*(2/3)\*(1.2369 USD/GBP) = \$35,671. This reflects a 67% reduction from initial to ongoing costs, which we consider in determining the appropriate percentage reduction in subsequent calculations.

<sup>3</sup> See letter from Soc. Corp. Gov (June 17, 2022). “Company 7” in this comment letter reported that it spent \$1 million on “building a database for target baseline and projections,” but did not provide the ongoing cost. To estimate the ongoing cost, we refer to the percentage reduction from initial to ongoing costs as reflected by the BEIS rule (23%) and the FCA rule (67%), of which the median is 45%. (\$1,000,000)\*(1 – 0.45) = \$550,000.

<sup>4</sup> See *supra* note 3021. The S&P Global meeting memorandum provides estimates on the initial cost of setting target (\$20,000–\$30,000) but does not provide estimates with respect to the ongoing cost. To estimate the ongoing cost, we refer to the percentage reduction from initial to ongoing costs as reflected by the BEIS rule (23%) and the FCA rule (67%), of which the median is 45%. We apply this median percentage reduction to the midpoint of the initial cost: (\$25,000)\*(1 – 0.45) = \$13,750.

Next, we focus on the adjustment factor for assessing Scope 1, Scope 2, and some Scope 3 emissions (as indicated in Column (5) of Table 8). To obtain this number, we review eight relevant estimates, which are presented in Table 10. Where necessary, modifications or assumptions are

applied to the estimates (see table footnotes for details). Lastly, we take the median of these eight data points to obtain the adjustment factor for measuring Scope 1, Scope 2, and some Scope 3 emissions: \$79,236. We reiterate that the final rules do not require the disclosure of Scope 1 and 2

emissions in all cases or from all registrants, and Scope 3 disclosures are not required. We reviewed these emissions cost in this section because we subtract them from applicable estimates in Column (3) of Table 8, which we have deemed to include emissions costs.

TABLE 10—ONGOING COSTS OF MEASURING SCOPE 1, SCOPE 2, AND SOME SCOPE 3 EMISSIONS

Commenter or source	Company (if specified)	Ongoing costs of measuring Scope 1, Scope 2, and some Scope 3 emissions
Society for Corporate Governance (June 17, 2022) .....	Company 9 .....	<sup>1</sup> \$200,000
	Company 10 .....	<sup>2</sup> 83,472
	Company .....	<sup>3</sup> 75,000
ERM Survey .....	.....	<sup>4</sup> 182,985
Air Products and Chemicals, Inc .....	.....	<sup>5</sup> 4,032,000
Persefoni .....	.....	<sup>6</sup> 50,000
S&P Global .....	.....	<sup>7</sup> 40,000
South Pole .....	.....	<sup>8</sup> 23,184

<sup>1</sup> See letter from Soc. Corp. Gov. (June 17, 2022). Company 9 discloses Scope 1 and Scope 2 and some Scope 3 GHG emissions but does not specify which categories of Scope 3 emissions are reported. The company “conducts the emissions inventory/data gathering in-house at an estimated cost of at least \$200,000 annually.” Thus, we assume that \$200,000 is the ongoing cost of measuring Scope 1, Scope 2, and some Scope 3 emissions. This estimate may be understated as it is presented as a minimum cost.

<sup>2</sup> See *id.* Company 10 discloses Scope 1 and Scope 2 and some Scope 3 (fuel and energy-related activities, business travel, and use of sold products) GHG emissions. Approximately five to seven staff members are involved with the emissions calculations and reporting to various agencies and for verification. The company estimates 188 hours for emissions gathering/annual operating reporting across the company’s utility and gas infrastructure business unit and preparing its final verification support. Thus, we assume the 188 burden hours is the ongoing costs of measuring the specified scopes of emissions. (188 hours)\*(\$444/hr) = \$83,472.

<sup>3</sup> See *id.* Company 11 discloses Scope 1, Scope 2, and some Scope 3 (business travel, commuting, waste, downstream leased assets) GHG emissions. The company estimated its internal time and external resources associated with emissions inventory/data gathering to be about \$75,000 annually.

<sup>4</sup> See ERM survey. The ERM survey indicated that the average spend for GHG analysis and/or disclosures is \$237,000 annually. This survey category included all costs related to developing GHG inventories, including analysis and disclosure of Scope 1, Scope 2, and/or Scope 3 emissions. This category also included preparation of GHG data for inclusion in public reporting, any analysis related to setting science-based targets, and other similar efforts to understand GHG emissions. Because this estimate includes targets, we subtract the median ongoing cost of targets (\$54,015), as reported in Table 9. \$237,000 – \$54,015 = \$182,985.

<sup>5</sup> See letter from Air Products and Chemicals, Inc. This company reports Scope 1, Scope 2, and Scope 3 emissions, but does not specify which categories of Scope 3. The company’s emissions reporting process requires one full-time consultant and 20 employees working part-time each year from Nov. to Mar. (1 full-time consultant)\*(40 hrs/wk)\*(20 weeks)\*(\$600/hr) + (20 employees)\*(20 hrs/wk)\*(20 wks)\*(\$444/hr) = \$4,032,000. However, this estimate may be overstated because it includes the cost of third-party limited assurance for GHG emissions.

<sup>6</sup> See *supra* note 3023. Persefoni estimates that the cost of assessing Scope 1, Scope 2, and Scope 3 emissions for companies of “high maturity” (*i.e.*, those that are already measuring/tracking Scope 1, Scope 2, and Scope 3 emissions, among other activities) is \$50,000, which we assume to reflect ongoing costs. The commenter further estimates that the corresponding cost for companies that do not already measure/track such emissions would be \$125,000. If this figure is assumed to represent initial costs, then the estimates reflect a 60% reduction from initial to ongoing costs, which we consider in determining the appropriate percentage reduction in subsequent calculations.

<sup>7</sup> See *supra* note 3021. S&P Global estimated that the cost of assessing Scope 1, Scope 2, and Scope 3 emissions for the first time is between \$75,000 and \$125,000. We take the midpoint of this range (\$100,000) and apply the same percent reduction (60%) reflected in the Persefoni meeting memorandum to estimate ongoing costs.  $\$100,000 \times (1 - 0.6) = \$40,000$ .

<sup>8</sup> See South Pole Memo. South Pole indicated that conducting a bottom-up assessment of Scope 1, Scope 2, and Scope 3 emissions for the first time can cost between €10,000 and €100,000. We take the midpoint (€55,000), apply the 2022 average exchange rate (\$1.0538 USD/€), and apply the same percent reduction (60% reduction) reflected in the Persefoni meeting memorandum to estimate ongoing costs.  $(€55,000) \times (1.0538 \text{ USD}/\text{€}) \times (1 - 0.6) = \$23,184$ .

There were other commenters and sources that contained individual cost estimates specific to only Scope 1,<sup>3055</sup> Scopes 1 and 2 combined,<sup>3056</sup> or only Scope 3 emissions measurement,<sup>3057</sup> as opposed to an aggregate cost that combines all three scopes. However, because we determined that all estimates indicated by Column (5) of Table 8 include the aggregate cost of all three scopes of emissions and to remain conservative in our estimation, we opted not to use estimates of individual scopes of emissions for comparability.<sup>3058</sup>

We have so far obtained the adjustment factors for setting targets and goals (\$54,015) and measuring Scope 1, Scope 2, and some Scope 3 emissions (\$79,236). We next subtract these amounts, where applicable, from Column (3), from which the result is presented as the adjusted cost in Column (6). The median of the adjusted costs is \$183,135. We next extrapolate the initial cost using the assumption of a 44 percent cost reduction<sup>3059</sup> from the first year to subsequent years of these corresponding disclosures. Thus, we estimate that the aggregate compliance costs for governance disclosure; disclosure regarding climate-related risks that have material impacts on

strategy, business model, and outlook; and risk management disclosure are \$327,000 for the first year and \$183,000 for subsequent years (rounded to the nearest \$1,000).<sup>3060</sup>

There were additional estimates associated with TCFD disclosure costs that were ultimately not included in this analysis, mainly due to the lack of details needed to obtain a quantitative estimate.<sup>3061</sup> For example, one commenter stated that their “Head of Corporate ESG Strategy and Reporting leads a team of employees that required seven months to gather data and draft disclosures for our 2021 TCFD Report in coordination with numerous subject matter experts across our entire organization.”<sup>3062</sup> However, the commenter did not specify how many staff or FTEs are involved, which precludes us from reliably calculating burden hours and associated costs. Another commenter asserted that the “actual cost for complete alignment to TCFD could be up to \$1,000,000 per registrant over several years.” Because the commenter did not provide the number of years, however, we are unable to obtain the annual costs.<sup>3063</sup> Other sources provided costs that had general descriptions (*e.g.*, “implementation costs” or “two FTEs

. . . dedicated to climate reporting”) that did not explicitly mention “TCFD” disclosures.<sup>3064</sup> We similarly did not include such estimates given that we cannot reliably infer whether these costs are reflective of TCFD disclosures and the specific provisions of interest.

ii. Cost Estimates of Scope 1 and 2 Emissions Disclosures

The final rules require the disclosure of Scope 1 and 2 emissions, if material, by LAFs and AFs, while SRCs and EGCs are exempt.<sup>3065</sup> To inform our assessment of the associated cost, we review comment letters and other sources that contain relevant estimates, presented in Table 11. We note that three of the estimates are specific to the cost of assessing Scope 1 emissions only.<sup>3066</sup> Nevertheless, we include them in Table 11 because (a) these Scope 1 emissions cost estimates are generally higher than other estimates that include both Scope 1 and 2 emissions, and (b) the costs can only increase if the Scope 1 emissions estimates are adjusted to also account for Scope 2 emissions (*i.e.*, they are understated with respect to the cost of both Scope 1 and 2 emissions). Thus, we include the Scope 1 emissions cost estimates to remain conservative in our estimation.

TABLE 11—COSTS OF ASSESSING SCOPE 1 AND 2 EMISSIONS

Commenter or Source	Company (if specified)	Ongoing cost
Persefoni .....	.....	<sup>1</sup> \$25,000
FCA rule .....	.....	<sup>2</sup> 17,836
S&P Global .....	.....	<sup>3</sup> 40,000
International Dairy Foods Association .....	.....	<sup>4</sup> 66,600
International Dairy Foods Association .....	.....	<sup>5</sup> 100,000
Energy Transfer LP .....	.....	<sup>6</sup> 10,162,035
Society for Corporate Governance (June 17, 2022) .....	Company 4 .....	7 300,000

<sup>3055</sup> See letters from Soc. Corp. Gov. (June 17, 2022); and IDFA.

<sup>3056</sup> See *supra* notes 3021, 3023, and 2995; see also letter from IDFA.

<sup>3057</sup> See letters from Williams, Inc.; and Ørsted.

<sup>3058</sup> In some cases, commenters’ estimates of assessing Scope 1 emissions are greater than other commenters’ combined estimates of assessing Scope 1, Scope 2, and some Scope 3 emissions. However, because the resulting adjustment factor will be subtracted from Column (3) of Table 8 to obtain compliance costs, we do not include the greater Scope 1 cost estimates in order to remain conservative and to avoid understating final compliance costs. In the following subsection, however, we include these cost estimates when

estimating the combined costs of Scopes 1 and 2 emissions in a similar bid to remain conservative.

<sup>3059</sup> As noted earlier in this subsection, the FCA rule and BEIS rule reflect a 56% and 32% reduction in cost, respectively, from initial year to subsequent years regarding the provisions of interest (*i.e.*, governance disclosure; disclosure regarding climate-related risks that have material impacts on strategy, business model, and outlook; and risk management disclosure). The median, 44%, is used to estimate the initial cost.

<sup>3060</sup> No commenters or sources offered estimates specific to the cost of the disclosure of material expenditures directly related to climate-related activities as part of a registrant’s strategy, transition plan and/or targets and goals. Nevertheless, the Commission’s estimates (*i.e.*, \$327,000 for the first year and \$183,000 annually in subsequent years)

should reflect this cost based on our application of conservative assumptions and because of the small expected incremental cost given that registrants will likely be tracking the material expenditures under the financial statement disclosure requirements.

<sup>3061</sup> See, *e.g.*, letters from Soc. Corp. Gov. (June 11, 2021); Nasdaq; Chamber; and AEP.

<sup>3062</sup> See letter from Nasdaq.

<sup>3063</sup> See letter from AEP.

<sup>3064</sup> See, *e.g.*, letters from RILA; Nutrien; and Soc. Corp. Gov. (June 11, 2021).

<sup>3065</sup> See 17 CFR 229.1505(a)(1).

<sup>3066</sup> The cost estimates that are specific to Scope 1 only are those from the Society for Corporate Governance (Company 4), Energy Transfer LP, and IDFA (\$100,000).

TABLE 11—COSTS OF ASSESSING SCOPE 1 AND 2 EMISSIONS—Continued

Commenter or Source	Company (if specified)	Ongoing cost
Median .....	.....	\$66,600

<sup>1</sup> See *supra* note 3023. Persefoni estimated that the ongoing cost is \$25,000. This reflects a 44% cost reduction from its initial cost estimate, which we consider in determining the appropriate percentage reduction in subsequent calculations.

<sup>2</sup> See *supra* note 2995. The FCA estimates initial costs to be £43,259, which is converted to dollars based on the 2022 average exchange rate. (£43,259)\*(1.2369 USD/GBP) = \$53,507. The ongoing costs, however, are not explicitly provided, but instead are grouped with another disclosure component. Because the initial costs make up one third of the total initial cost when combined with this other component, we assume that the same proportion holds with respect to ongoing costs. \$53,507/3 = \$17,836. This reflects a 67% cost reduction from its initial cost estimate, which we consider in determining the appropriate percentage reduction in subsequent calculations.

<sup>3</sup> See *supra* note 3021.

<sup>4</sup> See letter from IDFA. One unnamed company reported that it spends between 100 and 200 hours to maintain automated GHG aggregation and reporting software system for Scope 1 and Scope 2 emissions. We take the midpoint of the burden hours and convert to dollars based on \$444/hr. (150 hours)\*(\$444/hr) = \$66,600.

<sup>5</sup> See *id.* Another unnamed company reported that it spends about \$100,000 to maintain its GHG measuring system, with the context suggesting that this is specific to Scope 1 emissions. Although this estimate does not include the cost of assessing Scope 2, it is nevertheless included to remain conservative in our estimation.

<sup>6</sup> See letter from Energy Transfer LP. This company stated that although it already tracks Scope 1 emissions to some degree, the incremental costs to comply with the proposed rules would be approximately \$7 million in 2006 dollars, which is equivalent to \$10,162,035 in 2022 dollars. However, because this is only the incremental cost, it is presumably understated with respect to the full cost (i.e., incremental costs are a subset of the full cost of disclosure). It is further understated since the estimate is specific to Scope 1 emissions only, whereas we seek to estimate the costs of assessing Scope 1 and 2 emissions. Nevertheless, because this estimate is greater than the other estimates in Table 11, it is included to remain conservative in our estimation.

The median ongoing cost of assessing Scope 1 and 2 emissions in Table 11 is \$66,600. To estimate the initial cost, we refer to two sources that reported both initial and ongoing costs to inform our assessment of the percentage reduction between the two costs. One organization’s estimated costs reflect a reduction of 44 percent<sup>3067</sup> while another’s reflect a reduction of 67 percent.<sup>3068</sup> We use the median (56 percent) to extrapolate the initial cost. As a result, we estimate that the cost of assessing Scope 1 and 2 emissions is \$151,000<sup>3069</sup> for the first year and \$67,000 for subsequent years (rounded to the nearest \$1,000).

iii. Cost Estimates of Assurance for Scope 1 and 2 Emissions Disclosures

With respect to Scope 1 and 2 emissions disclosures, the final rules require assurance at different levels (limited or reasonable) with different phase in periods depending on whether the registrant is an LAF or AF, while SRCs and EGCs are exempt.<sup>3070</sup> To assess the costs of assurance, we reviewed comment letters that provided relevant, quantitative cost estimates, as presented in Table 12.

The estimates displayed varying degrees of assurance “coverage” (i.e., which specific disclosures were being assured). Some commenters reported assurance costs but did not explicitly define what climate-related disclosure items were being assured.<sup>3071</sup> In such cases, we applied the conservative assumption that the reported assurance costs were specific to their GHG emissions disclosures only. Other estimates were specifically attributed to Scope 1 and 2 emissions,<sup>3072</sup> consistent with the final rules’ requirements, where applicable. The majority of estimates, however, pertained to the combined assurance costs for all three scopes of emissions,<sup>3073</sup> which presumably overstate the assurance costs for Scope 1 and 2 emissions only. Nevertheless, we include these estimates for two reasons: first, we included them because we cannot reliably isolate the assurance costs for Scope 1 and 2 emissions only (i.e., by excluding Scope 3 emissions); and second, by including costs that are overstated relative to what the final rules require, we remain conservative in our estimation.

Other commenters, however, stated that their assurance cost estimates covered both their GHG emissions and the proposed financial statement disclosures.<sup>3074</sup> It is likely that a significant portion of these costs is attributable to the proposed financial statement disclosures, which several commenters stated would come with high costs.<sup>3075</sup> We therefore did not include these estimates as they are less likely to be representative of assurance costs for Scope 1 and 2 only compared to other aggregate estimates.

The estimates also varied in the level of assurance, with most estimates equally split between either limited assurance or not specifying the level assurance. To be conservative, any estimates that did not specify the level of assurance were assumed to be limited assurance. One commenter estimated only the incremental cost of switching from limited to reasonable assurance.<sup>3076</sup> While we cannot infer the actual costs of either limited or reasonable assurance in this case, we nevertheless include the incremental cost because it is relatively high, allowing us to remain conservative in our estimation.

<sup>3067</sup> See *supra* note 3023; see also footnote 1 in Table 11.

<sup>3068</sup> See *supra* note 2995; see also footnote 2 in Table 11.

<sup>3069</sup> (\$66,600)/(1 – 0.56) = \$151,364.

<sup>3075</sup> See letter from ERM CVS (stating that the “fees for the [attestation for climate-related data, including GHG emissions] may be small compared to the financial audit fees” associated with the proposed rules).

<sup>3076</sup> See letter from Salesforce.

TABLE 12—COSTS OF LIMITED ASSURANCE FOR GHG EMISSIONS DISCLOSURES

Commenter	Company (if specified)	Limited assurance cost
Society for Corporate Governance ..... (June 11, 2021)	Basic Materials .....	<sup>1</sup> \$30,000
	Comm. Services .....	<sup>2</sup> 600,000
	Health Care .....	<sup>3</sup> 22,000
Society for Corporate Governance ..... (June 17, 2022)	Company 1 .....	<sup>4</sup> 400,000
	Company 3 .....	<sup>5</sup> 13,000
	Company 5 .....	<sup>6</sup> 45,000
	Company 6 .....	<sup>7</sup> 15,000
	Company 7 .....	<sup>8</sup> 50,000
	Company 8 .....	<sup>9</sup> 12,500
	Company 9 .....	<sup>10</sup> 72,000
	Company 10 .....	<sup>11</sup> 15,000
	Company 11 .....	<sup>12</sup> 15,000
	Company 12 .....	<sup>13</sup> 75,000
	Company 13 .....	<sup>14</sup> 550,000
Persefoni .....		<sup>15</sup> 82,000
International Dairy Foods Association .....		<sup>16</sup> 62,500
Salesforce .....		<sup>17</sup> 800,000
Median .....		50,000

<sup>1</sup> See letter from Soc. Corp. Gov (June 11, 2021). The Basic Materials company reported spending \$30,000 for assurance over its Scope 1, 2, and 3 emissions without specifying the level of assurance.

<sup>2</sup> See *id.* The Communication Services (“Comm. Services”) company, which discloses Scope 1, 2, and 3 emissions (among other climate-related disclosures), reported that assurance costs are approximately \$600,000 annually without specifying the coverage or level of assurance.

<sup>3</sup> See *id.* The Health Care company, which discloses Scope 1, Scope 2, and Scope 3 (among other climate-related disclosures), reported that assurance costs are \$22,000 without specifying the coverage or level of assurance.

<sup>4</sup> See letter from Soc. Corp. Gov (June 17, 2022). Company 1 reported spending over \$400,000 for “limited assurance from a public company accounting firm over select environmental metrics disclosed in its sustainability report, including its Scope 1, 2 (location-based and market-based), and Scope 3 (including a comparison against the base year) GHG emissions; total energy consumed; percentage grid electricity; percentage renewable energy; and water usage.”

<sup>5</sup> See *id.* Company 3 currently pays \$13,000 annually for limited assurance over its Scope 1, Scope 2, and one category of Scope 3 emissions. The cost estimated may be understated given that this company believes that its current assurance may not be in compliance with the proposed rules and that costs may increase if the rule is adopted as proposed.

<sup>6</sup> See *id.* Company 5 reported spending over \$45,000 annually for “limited assurance from a professional audit firm for disclosure in its sustainability report of its Scope 1 and 2 GHG emissions and defined categories of its Scope 3 GHG emissions (exclusive of processing and use of, and end-of-life treatment for, sold products, and certain other downstream activities).”

<sup>7</sup> See *id.* Company 6 reported spending \$15,000 annually for assurance over its Scope 1 and 2 emissions and certain Scope 3 operational emissions (such as emissions associated with business travel and downstream leased assets) without specifying the level of assurance.

<sup>8</sup> See *id.* Company 7 reported spending \$50,000 annually for assurance over its Scope 1, Scope 2, and some categories of Scope 3 emissions without specifying the level of assurance.

<sup>9</sup> See *id.* Company 8 reported spending between \$10,000 and \$15,000 annually for assurance over its Scope 1 and 2 emissions. We include the midpoint of this range in the table (\$12,500).

<sup>10</sup> See *id.* Company 9 reported spending \$10,000 for reasonable assurance over its Scope 1, Scope 2, and some Scope 3 emissions. It also noted that another firm offered to do the same work for \$180,000. To be conservative, we use this higher estimate instead. Next, we extrapolate the cost of limited assurance based on a comment letter, which states that the cost of reasonable assurance could be 2–3 times higher than limited assurance. See letter from Center for Climate and Energy Solutions. By taking the midpoint (2.5), we estimate the cost of limited assurance: \$180,000/2.5 = \$72,000.

<sup>11</sup> See *id.* Company 10 reported spending \$15,000 annually for limited assurance over its Scope 1, Scope 2, and partial Scope 3 (fuel and energy-related activities and business travel) emissions.

<sup>12</sup> See *id.* Company 11 reported spending \$15,000 annually for limited assurance over its Scope 1, Scope 2, and some Scope 3 (business travel, commuting, waste, downstream leased assets) emissions.

<sup>13</sup> See *id.* Company 12 reported spending \$30,000 for limited assurance over its Scope 1, 2, and 3 emissions. It also noted that another firm offered to do the same work for \$75,000. To be conservative, we use this higher estimate instead.

<sup>14</sup> See *id.* Company 13 reported spending \$550,000 for limited assurance over its Scope 1, 2, and 3 emissions.

<sup>15</sup> See ERM survey. The ERM survey indicates that 28 respondents spend an average of \$82,000 for assurance/audits related to climate. According to the commenter, this “survey did not ask issuer respondents to include details of the specific level of assurance or the scope of business practices covered, whether assurance covered all locations or all business units, or whether it consisted of limited or reasonable assurance. The costs reported by issuer respondents may include third-party assurance of Scope 1 and/or 2 GHG emissions metrics, financial metrics, or both.” Although the level and coverage of assurance are unspecified, we apply the conservative assumption that the reported cost pertains to limited assurance of Scope 1 and 2 emissions.

<sup>16</sup> See letter from IDFA. An unnamed, privately held company reported that it discloses Scope 1 and 2 emissions. It further states that it spends between “\$50,000–\$75,000 or more that is necessary to periodically hire a 3rd party consultant to review and re-validate the company’s internal systems.” The level of assurance is unspecified. We include the midpoint of this range in the table (\$62,500).

<sup>17</sup> See letter from Salesforce. This commenter did not provide actual costs of limited or reasonable assurance, but it estimated that its *incremental* cost of switching from limited to reasonable assurance over its Scope 1, 2, and 3 emissions could range from \$1 to 3 million. We include this incremental cost since it serves as a lower bound for its reasonable assurance costs. We take the midpoint of this range (\$2 million) and convert to limited assurance (see footnote 10 of this table): (\$2 million)/2.5 = \$800,000. This estimate is understated considering that it is derived from the incremental cost as opposed to actual cost.

Table 12 presents the cost estimates of limited assurance from commenters, with any adjustments or assumptions explained in the table footnotes. The median of these estimates (\$50,000) is

subsequently used to extrapolate the cost of reasonable assurance. One commenter stated that reasonable assurance may cost two to three times more than limited assurance, based on

input from stakeholders with expertise in developing GHG inventories for companies.<sup>3077</sup> We use the upper end of

<sup>3077</sup> See letter from Center for Climate and Energy Solutions.

this range and assume that reasonable assurance is three times the cost of limited assurance. As a result, we estimate that the cost of limited assurance for Scope 1 and Scope 2 emissions disclosures is \$50,000, while the cost for reasonable assurance is \$150,000.

Costs may vary, however, depending on the type of assurance provider. Specifically, assurance provided by a registered public accounting firm may cost more than if it were provided by a different type of service provider. However, the final rules do not require assurance to be obtained from a registered public accounting firm.<sup>3078</sup> Conversely, costs may be lower if a registrant uses its auditor to also provide assurance over its GHG emissions disclosures rather than contracting with a different third-party. We also note that some of the companies listed in Table 12 indicated that they were unsure as to whether their current assurance practices would meet the proposed rules' requirements.<sup>3079</sup> We are likewise unable to make this determination without additional details on these

companies' assurance practices. If these companies were to incur additional costs to meet the final rules' assurance requirements, the Commissions' compliance cost estimates may be understated in this regard. However, we believe that our conservative approach in other aspects (e.g., incorporating assurance costs that cover all three scopes of emissions instead of just Scopes 1 and 2 emissions) mitigate this concern.

iv. Estimates of Reporting Costs for Scenario Analysis and Targets/Goals

While the final rules do not require any registrants to undertake activities related to scenario analysis or setting targets and goals, they may require the attendant disclosures under specific circumstances,<sup>3080</sup> which will result in affected registrants incurring associated reporting costs. To estimate this reporting cost, we first review comment letters and other sources that inform our assessment on the costs of undertaking scenario analysis and targets or goals, then apply the assumption that 10 percent of this cost comprise the reporting cost.<sup>3081</sup>

Table 13 presents the relevant sources of the costs of scenario analysis.<sup>3082</sup> The FCA rule estimates the ongoing cost to be \$40,688 for larger issuers. The BEIS rule contains ongoing cost estimates for two different types of scenario analysis: qualitative (\$32,190) and quantitative (\$79,706). Because the final rules allow for registrants to provide disclosures of either type, where applicable, we include the estimates of both. Finally, a survey indicates that the respondents' average annual expenditures is \$154,000. The median of these ongoing costs is \$60,197. We next extrapolate the initial cost. Some of the sources provide both the initial and ongoing cost of scenario analysis (see Table 13 footnotes), from which we determine the median percentage cost reduction (50 percent). This implies an initial cost of \$120,394. Assuming that 10 percent of these costs comprise the reporting costs, we estimate that the reporting costs of scenario analysis is \$12,000 in the initial year and \$6,000 annually in subsequent years (rounded to the nearest \$1,000).

TABLE 13—COSTS OF SCENARIO ANALYSIS

Commenter or source	Ongoing cost
FCA rule .....	1 40,688
BEIS rule: qualitative scenario analysis .....	2 32,190
BEIS rule: quantitative scenario analysis .....	3 79,706
ERM survey .....	4 154,000

<sup>1</sup> See *supra* note 2995. The FCA rule estimates ongoing costs to be £32,896 for larger issuers, which is converted to dollars based on the 2022 average exchange rate. (£32,896)\*(1.2369 USD/GBP) = \$40,688. This reflects a 50% reduction from the initial cost estimate (\$81,377), which we consider in determining the appropriate percentage reduction in subsequent calculations.

<sup>2</sup> See *supra* note 2996. The BEIS rule estimates ongoing costs of *qualitative* scenario analysis to be £26,025, which is converted to dollars based on the 2022 average exchange rate. (£26,025)\*(1.2369 USD/GBP) = \$32,190. This reflects a 25% reduction from the initial cost estimate (\$42,920), which we consider in determining the appropriate percentage reduction in subsequent calculations.

<sup>3</sup> See *id.* The BEIS rule estimates ongoing costs of *quantitative* scenario analysis to be £64,440 (£52,040 for writing or quantifying scenarios and £12,400 additional cost for quality assurance and internal verification). This is converted to dollars based on the 2022 average exchange rate. (£64,440)\*(1.2369 USD/GBP) = \$79,706. The initial cost estimate is \$240,194 (£112,400 for developing a model for conducting scenario analysis, £69,390 for writing and quantifying scenarios, and £12,400 additional cost for quality assurance and internal verification, converted to dollars based on the 2022 average exchange rate). This reflects a 67% reduction from initial to ongoing costs, which we consider in determining the appropriate percentage reduction in subsequent calculations.

<sup>4</sup> See ERM survey. The ERM survey indicates that \$154,000 is the average of respondents' expenditures with respect to scenario analysis, which "includes all costs to a company related to conducting assessments of the impact of climate in the short, medium, or long term using scenario analysis as well as TCFD/CDP disclosure of risks and opportunities." The survey does not include data on initial costs.

With respect to the reporting costs of targets and goals disclosure, we refer to Table 9, which presents the ongoing costs of undertaking targets and goals. The median ongoing cost of targets is \$54,015. Using the median percent cost reduction from the initial year (45 percent), we extrapolate the initial cost

to be \$98,209. We assume 10 percent comprise the reporting costs.<sup>3083</sup> Thus, we estimate that the reporting costs of targets and goals are \$10,000 in the initial year of disclosure and \$5,000 annually in subsequent years (rounded to the nearest \$1,000).

v. Cost Estimates of Amendments to Regulation S–X and Incremental Audit Fees

We reviewed comment letters that provided cost estimates pertaining to the amendments to Regulation S–X, which were often in the millions of dollars.<sup>3084</sup> We considered these

<sup>3078</sup> One commenter suggested that most registrants will nevertheless seek assurance from registered public accounting firms to comply with the proposed rules. See letter from Soc. Corp. Gov. (June 17, 2022). To the extent that this is also true of the final rules, registrants may incur higher assurance costs.

<sup>3079</sup> See letter from Soc. Corp. Gov (June 17, 2022).

<sup>3080</sup> See sections IL.G and II.D.3.

<sup>3081</sup> The BEIS rule estimates that in the first year of compliance, the reporting cost of metrics and targets disclosure is approximately 9.4% of the cost of the "annual data gathering" activity associated

with metrics and targets (see *supra* note 2996). We similarly assume that reporting costs are 10% of the cost of undertaking the associated activity.

<sup>3082</sup> See *supra* note 3052.

<sup>3083</sup> See *supra* note 3081.

<sup>3084</sup> See, e.g., letters from API; Chamber; NRF; WEA/USOGA; and Williams Cos.

estimates, presented in Table 14, when developing our cost estimates but made adjustments to reflect the changes made to the final rules,<sup>3085</sup> which we expect will substantially reduce the compliance burden compared to the proposal.

TABLE 14—ESTIMATED COSTS OF AMENDMENTS TO REGULATION S–X

Commenter	Cost
Chamber of Commerce <sup>1</sup> .....	\$1.5–2.5 million (initial); \$1–2 million (ongoing).
Williams Companies, Inc .....	“Millions of dollars” <sup>2</sup> (initial).
Western Energy Alliance and U.S. Oil and Gas Association .....	> \$100 million <sup>3</sup> (initial).
1. The Chamber of Commerce stated that this estimate was provided by one Well-Known Seasoned Issuer it consulted regarding the proposed amendments.	
2. Williams Cos. estimated the costs of implementing the proposed amendments to Regulation S–X would be in the “millions of dollars” without providing a more specific estimate.	
3. Western Energy Alliance and U.S. Oil and Gas Association stated that this estimate was based on discussions with public companies that estimated costs of over \$100 million for large companies when considering the need for new systems and staff training.	

We consider the “millions of dollars” estimate provided by Williams Companies, Inc. as the median<sup>3086</sup> cost estimate. Assuming the range “millions of dollars” refers to a number less than \$10 million but more than \$1 million,<sup>3087</sup> we take the midpoint of \$5 million as the starting point for our estimate of the costs of the proposed Regulation S–X amendments.

We believe the \$5 million, however, should be adjusted downward as the costs associated with the final rules should be significantly less than the proposed rules. Many of the concerns that commenters expressed about the proposed rules were primarily focused on the expected challenges and costs related to implementing the proposed Financial Impact Metrics, which would have constituted most of the costs associated with the proposed amendments to Regulation S–X. Specifically, these commenters expressed concerns about implementing new accounting processes, policies, controls, and IT systems to identify and distinguish activities related to climate-related risks and transition activities from normal routine business activities and then to calculate the disclosure threshold and track those impacts on a line-by-line basis.<sup>3088</sup> These commenters also highlighted challenges

posed by the significant number of estimates and assumptions that, in their view, would be required to prepare the proposed disclosures.<sup>3089</sup>

As discussed in greater detail above, the final rules have been significantly revised compared to the proposal to reduce burdens on registrants. The final rules do not include the proposed Financial Impact Metrics, which should result in a substantial reduction in compliance costs and burdens.<sup>3090</sup> For example, registrants will not be required to disclose any impacts to the Statement of Cash Flows. Moreover, registrants will not be required to disclose any impacts to revenues, costs savings, or cost reductions, which some commenters stated would be particularly difficult to disclose because such amounts are not currently captured in a registrant’s books and records.<sup>3091</sup> In addition, registrants will not be required to apply the 1% disclosure threshold on a line-by-line basis.

Instead, the final rules focus the financial statement disclosures on expenditures related to a narrower category of activities as compared to the proposal: severe weather events and other natural conditions and the purchase and use of carbon offsets and RECs (one type of transition activity).<sup>3092</sup> Commenters stated that

discrete expenditures of this type are captured in the books and records and would be feasible to disclose.<sup>3093</sup> Under the final rules, registrants will be required to apply the 1% disclosure threshold to severe weather events and other natural conditions. In addition, instead of applying the 1% disclosure threshold on a line-by-line basis throughout the financial statements as would have been required under the proposed rules, the 1% disclosure threshold will be applied only to two amounts under the final rules to determine if disclosure is required.<sup>3094</sup> Specifically, disclosure is required only if (1) the aggregate amount of expenditures expensed as incurred and losses equals or exceeds one percent of the absolute value of income or loss before income tax expense or benefit; and/or (2) the aggregate amount of the absolute value of capitalized costs and charges equals or exceeds one percent of the absolute value of stockholders’ equity or deficit, subject to de minimis thresholds.<sup>3095</sup> In addition, the final rules prescribe an attribution principle—significant contributing factor—in response to commenters’ concerns about their ability to isolate and attribute expenditures to severe

<sup>3085</sup> See section II.K.

<sup>3086</sup> See *supra* note 3046.

<sup>3087</sup> We recognize the possibility that the commenter’s language of “millions of dollars” may be referring to a number greater than \$10 million. However, if the commenter was referring to “tens of millions” or “hundreds of millions” of dollars, we assume that the commenter would have stated it as such. Without additional information, we believe it is reasonable to read this comment as meaning less than \$10 million.

<sup>3088</sup> See, e.g., letter from NRF (“Existing accounting systems are not designed for tracking and reporting such cost impacts, particularly with no meaningful cost threshold, across all line items,

because registrants do not have systems in place to collect, calculate, and report these line items, especially at such a granular level.”)

<sup>3089</sup> See, e.g., letter from Chamber (“[T]he Proposed Rules require untold estimates, assumptions and judgments against the backdrop of significant data limitations and speculative impacts.”)

<sup>3090</sup> See letter from Williams Cos. (“Accounting for climate impacts would require companies to write entirely new and significant accounting policies, design and implement new controls, and develop and potentially pay for new software.”)

<sup>3091</sup> See, e.g., letters from Chamber (stating that “GAAP financial statement line-items do not

include amounts for lost revenues, cost savings, or cost reductions”); and Williams Cos. (stating that “lost revenue” does not exist under GAAP).

<sup>3092</sup> See 17 CFR 210.14–02(c), (d), and (e).

<sup>3093</sup> See letters from Autodesk (noting that if a fire or storm destroys a registrant’s facilities, the associated costs, impairments, and contingencies would be accounted for and, if material, disclosed under U.S. GAAP); Crowe; Dow; and Nutrien (noting that it would be operationally possible to track specific costs incurred to mitigate transition risks or costs incurred due to severe weather events and natural conditions).

<sup>3094</sup> See 17 CFR 210.14–02(b).

<sup>3095</sup> See *id.*

weather events and other natural conditions.<sup>3096</sup>

The final rules require registrants to disclose costs, expenditures, and losses incurred in connection with the purchase and use of carbon offsets and RECs only if carbon offsets or RECs have been used as a material component of a registrant's plans to achieve its disclosed climate-related targets or goals.<sup>3097</sup> As explained above, this requirement is narrower than the proposed rules, which would have required registrants to disclose expenditures incurred to reduce GHG emissions or otherwise mitigate exposure to transition risks in the financial statements. Although registrants will not be required to disclose expenditures generally related to transition activities in the financial statements, under the final rules, registrants are required to disclose material expenditures incurred that directly result from: (1) disclosed activities to mitigate or adapt to climate-related risk (in management's assessment); (2) disclosed transition plans; and (3) disclosed targets and goals, as part of the final amendments to Regulation S–K. Since these disclosure requirements are no longer part of the amendments to Regulation S–X, the disclosures will fall outside the scope of the financial statement audit and a company's ICFR, which, along with the materiality qualifier, should further reduce costs and burdens as compared to the proposed rules.<sup>3098</sup>

In addition, the final rules limit the scope of the requirement to disclose estimates and assumptions in the financial statements to only those estimates and assumptions materially impacted by severe weather events and natural conditions and any climate-related targets or transition plans disclosed by the registrant, whereas under the proposed rules, registrants would have been required to disclose estimates and assumptions impacted by transition activities more generally.<sup>3099</sup>

Finally, the final rules require the disclosure for historical fiscal year(s) only to the extent the required information was previously disclosed or required to be disclosed (*i.e.*, on a

prospective basis).<sup>3100</sup> Commenters stated that the proposed requirement to provide disclosure for the historical fiscal year(s) included in the consolidated financial statements would be burdensome and costly because, among other things, it would require issuers to “retroactively estimate their historical data.”<sup>3101</sup> However, under the final rules, no registrants will be required to provide disclosure for fiscal periods in which they were not required to collect or report the data.

After taking into account the fact that the final rules eliminate many of the primary drivers of the costs identified by commenters, and based on staff knowledge of accounting practices, we are using \$500,000 as an estimated initial direct cost of compliance. While this represents a significant reduction from the median cost estimate provided by commenters, we view it as an upper bound estimate given the numerous changes from the proposal and the fact that discrete expenditures of this type are already captured in the books and records and therefore should be less costly to disclose.<sup>3102</sup> Thus, we expect that in many cases, based on staff knowledge of accounting practices, costs will be significantly lower.

Although we anticipate that the amendments to Regulation S–X we are adopting will be significantly less costly to apply than the proposed rules, registrants will incur some implementation costs related to adjustments in processes and systems, including systems of internal control. We expect these adjustments will be far fewer than would have been required under the proposed rules.

With respect to the final amendments to Regulation S–X, registrants may need to adjust their internal processes and systems to (1) identify, track, and disclose the costs, expenditures, charges, and losses incurred as a result of severe weather events and other natural conditions and related to the purchase and use of carbon offsets and RECs; (2) calculate the disclosure thresholds; (3) identify and disclose the amount of relevant recoveries; (4) evaluate and disclose financial estimates and assumptions materially impacted by severe weather events and other natural conditions or disclosed targets; and (5) to provide contextual information.

To calculate the upper bound of the range for ongoing costs, we used the

estimates for the initial and ongoing costs related to the proposed amendments to Regulation S–X provided by the Chamber of Commerce to determine that the expected ongoing costs would be approximately 75% of the initial cost.<sup>3103</sup> Applying that reduction to the upper bound of the Commission's initial cost estimate of \$500,000 results in an estimated upper bound of \$375,000 for compliance with the amendments to Regulation S–X on an ongoing, annual basis.<sup>3104</sup> As noted above, given the feedback from commenters that our cost estimates in the proposed rules were too low, we have considered the upper bound of the estimated range in evaluating the economic impact of the final rules. However, we acknowledge the precise amount of both the implementation costs and ongoing costs will vary depending on a number of factors including the size and complexity of the registrant (and its financial reporting systems), and the frequency in which the registrant is exposed to severe weather events and other natural conditions, among other factors.

We also consider incremental audit fees resulting from the final rules. To be clear, these incremental audit fees are separate from the fees associated with mandatory assurance over GHG emissions disclosure. In the Proposing Release, we estimated this incremental cost to be \$15,000 with respect to the proposed rules.<sup>3105</sup> Several commenters asserted that actual costs would be much higher.<sup>3106</sup> One commenter estimated incremental audit fees of \$70,000 to \$225,000 per year.<sup>3107</sup> Based on the final rules' significant reductions in the burden of complying with the amendments to Regulation S–X, we expect a corresponding reduction in the cost of the audit. As a result, we are using an upper bound cost estimate of \$23,000 in incremental audit fees per year (rounded to the nearest \$1,000).

### c. Factors that Influence Direct Costs

Incremental compliance costs may be relatively lower for registrants that

<sup>3103</sup> The initial range provided by the Chamber of Commerce was \$1.5–\$2.5 million while the ongoing estimate was \$1 million–\$2 million. To arrive at 75%, we take the midpoint of the two ranges (\$1.5 million ongoing cost to \$2 million initial cost).

<sup>3104</sup> This figure is based on the \$500,000 estimate for initial implementation costs multiplied by 75%. *See id.*

<sup>3105</sup> *See* Proposing Release, section IV.C.2.a.

<sup>3106</sup> *See, e.g.*, letters from Nutrien; Soc. Corp. Gov (June 17, 2022); National Association of Manufacturers; Edison Electric Institute; ConocoPhillips; Business Roundtable; Association of American Railroads; Ernst & Young LLP; and ABA.

<sup>3107</sup> *See* letter from Nutrien.

<sup>3096</sup> *See* 17 CFR 210.14–02(g). *See also* letter from NAM (“Companies would be required to count every single financial impact that could plausibly be attributable to climate risks, weather events, or transition activities, somehow determine the degree of climate causation associated with each, and then aggregate these impacts to determine if they meet the proposed 1% threshold—for each line item in the consolidated financial statements.”).

<sup>3097</sup> *See* 17 CFR 210.14–02(e).

<sup>3098</sup> *See* 17 CFR 229.1502(d)(2), (e)(2) and 17 CFR 229.1504(c)(2).

<sup>3099</sup> *See* 17 CFR 210.14–02(h).

<sup>3100</sup> *See* 17 CFR 210.14–01(d).

<sup>3101</sup> *See* letter from BlackRock; *see also* letter from Autodesk (stating that “it may be prohibitively costly” for registrants to accurately compile the necessary data, particularly for historical periods).

<sup>3102</sup> *See supra* note 3093.

already disclose any of the information required by the final rules. For instance, covered registrants that already disclose Scope 1 and 2 emissions will face lower incremental costs relative to those that have never previously disclosed such information, all else equal. As discussed in section A.5.a, the Commission staff found that 41 percent of annual reports on Form 10-K and Form 20-F filed in 2022 contained some degree of climate-related disclosures. To the extent that these disclosures meet some of the final rules' requirements, these registrants would face lower incremental costs.

Some industry reports also document how a sizeable portion of U.S. companies report climate-related information under one or more third-party frameworks that are either fully or partially aligned with the TCFD disclosure elements. Registrants with operations in foreign jurisdictions<sup>3108</sup> that have disclosure requirements based on the TCFD's framework for climate-related financial reporting may also face lower incremental costs.<sup>3109</sup> To the extent that the final rules overlap with the TCFD framework, we expect lower incremental compliance costs for registrants that already provide most or all disclosures according to the TCFD or related frameworks, including the CDP, which has fully integrated the TCFD disclosure elements into its disclosure questionnaire, and other frameworks and/or standards partly aligned with the TCFD framework.

Similarly, while registrants in the insurance industry may face higher compliance costs due to their complex exposure to climate-related risks, they have existing disclosure obligations that may effectively lower their incremental costs due to the final rules. As discussed in section IV.A.3, a large subset of insurance companies must, by state law, disclose their climate-related risk assessment and strategy via the NAIC Climate Risk Disclosure Survey. For example, a comment letter by a state insurance commissioner stated that because this survey overlaps extensively with the TCFD recommendations, these companies should be able to easily switch from their current reporting to

reporting via the TCFD framework,<sup>3110</sup> and accordingly, similar portions of the final rules.

We reiterate that not all quantifiable cost estimates will be applicable to all registrants. For instance, the final rules will not require SRCs and EGCs to incur costs of assessing their GHG emissions or obtaining the associated assurance. Other registrants may not have to provide certain disclosures due to materiality qualifiers. Risk management disclosure, for example, will only be required with respect to climate risks that are material. Other disclosures that may not apply to all registrants include scenario analysis and targets and goals. The final rules do not require any registrants to undertake such activities, but if registrants voluntarily do so, the related disclosures (and costs) would only be required following a materiality determination. As a result, while certain registrants may incur some costs in order to make the prerequisite materiality determination, those that subsequently deem a disclosure component to be non-material would accordingly avoid the remaining portions of the estimated compliance costs associated with the disclosure (e.g., drafting, vetting and review, other reporting costs, and assurance in cases where Scope 1 and 2 emissions are not material).

With regard to California state laws on climate-related disclosure, registrants that will be required to comply with the Climate Corporate Data Accountability Act and the Climate-Related Financial Risk Act may experience reduced costs of compliance with the final rules to the extent the California laws impose similar requirements for those registrants that are subject to them. Several commenters asserted that the recently enacted California laws, which reach some of the same entities and require some of the same types of disclosure as these final rules, could affect the benefits and costs of the final rules.<sup>3111</sup> Another commenter stated that the Commission could not rely on the California laws to reduce cost estimates because, based on the compliance dates in the Proposing Release, the final rules would precede the California laws in implementation.<sup>3112</sup> We disagree with that comment, in that enacted laws—even if not fully implemented—imply

future costs and benefits, and so we appropriately consider existing enacted laws as part of the baseline against which we consider the economic effects of the final rules.<sup>3113</sup> However, our estimates of the final rules' direct compliance costs do not reflect any adjustments with respect to the California laws because, as discussed below, the details of their implementation are uncertain.

We expect that entities subject to the California laws could have lower incremental information gathering costs with respect to the final rules to the extent that there is overlap in the information that is required to be collected and reported under the final rules and the California laws. For example, because both the Climate Corporate Data Accountability Act and the final rules require companies to collect information to disclose their Scope 1 and Scope 2 emissions and “obtain an assurance engagement of the disclosure,” to the extent that the information and reporting activities overlap, registrants subject to the final rules and the Climate Corporate Data Accountability Act may face lower incremental information gathering compliance costs.<sup>3114</sup> However, the extent and overall impact of overlapping disclosure obligations are unclear.<sup>3115</sup> The scope and requirements of the California laws differ from the final rules, such that compliance with the final rules could require information collection and reporting activities in addition to those performed to satisfy the California requirements.<sup>3116</sup>

<sup>3113</sup> See SEC Guidance on Economic Analysis (2012), *supra* note 2574 (describing the baseline as “the best assessment of how the world would look in the absence of the proposed action”).

<sup>3114</sup> One commenter agreed that compliance with the California laws could reduce the cost of compliance with the final rules, stating that “. . . the costs of compliance with other provisions of the proposed rule will be reduced substantially due to overlap with California's new laws.” Letter from Amer. for Fin. Reform, Public Citizen and Sierra Club (Oct. 26, 2023).

<sup>3115</sup> For example, the Climate Corporate Data Accountability Act directs a state agency to adopt implementing regulations by January 1, 2025 for reporting to begin in 2026. The details of those regulations are not yet available.

<sup>3116</sup> One commenter identified two differences in scope between the California laws and the proposed rules: (1) the Climate Corporate Data Accountability Act requires GHG emission disclosures “based on different organizational boundaries” than the proposed rules; and (2) Climate Related Financial Risk Act requires biennial reporting, instead of annual reporting. See letter from Chamber II. This commenter also stated there could be additional administrative costs related to coordinating compliance with different reporting regimes. *Id.* We agree that differences such as these reduce the potential for cost mitigation through overlapping requirements (although we note that, in a change from the proposal, the final rules allow the organizational boundaries to differ from those used

<sup>3108</sup> Morningstar reports that over 35% of S&P 500 revenues came from foreign markets, while this percentage is around 20% for the revenues coming from companies belonging to the Russell 2000 index. See Gabrielle Dibenedetto, *Your U.S. Equity Fund is More Global Than You Think*, Morningstar (Mar. 14, 2019), available at <https://www.morningstar.com/articles/918437/your-us-equity-fund-is-more-global-than-you-think>.

<sup>3109</sup> See section IV.A.4 for a discussion on International Disclosure Requirements.

<sup>3110</sup> See letter from Mike Kreidler, Office of the Insurance Commissioner, State of Washington (June 14, 2021).

<sup>3111</sup> See, e.g., letters from Amer. for Fin. Reform, Public Citizen and Sierra Club (Oct. 26, 2023); Institute for Policy Integrity et. al; and Rep. Maxine Waters.

<sup>3112</sup> Letter from Chamber II.

Additionally, one of the California laws allows the covered entity to satisfy certain California disclosure requirements with a disclosure prepared pursuant to another law or regulation.<sup>3117</sup> Therefore, while the California requirements may mitigate the costs of the final rules for some registrants, the degree of mitigation will depend on the regulations ultimately adopted and on the ways in which entities organize their compliance activities to satisfy reporting obligations in different jurisdictions.

One commenter suggested that the California laws could increase compliance costs by increasing demand, and thus the cost, for external consultants and services.<sup>3118</sup> We acknowledge this could occur in the short term; however, over the long-term, we expect that increased demand would cause new providers to enter the market, resulting in a corresponding increase in supply. An increase in the supply of providers would lead to greater competition among the external consultants, resulting in lower fees charged by consultants. To that end, the phased implementation of the final rules should mitigate most costs stemming from any shortage of consultants.

Registrants that have more exposure to material climate-related risks may face higher compliance costs to the extent that they must provide more extensive disclosures. However, we note that industries in which climate-risks are most likely to be material are also those that are already providing some degree of voluntary or mandatory disclosures.<sup>3119</sup>

The incremental costs of the financial statement disclosures may be somewhat higher for companies with exposure to severe weather events or other natural conditions that are difficult to assess, track, and disclose in the financial statements. For example, companies (e.g., banks) with complicated asset structures or with operations in many jurisdictions may incur more costs to identify the expenditures for which a severe weather event or other natural condition was a “significant contributing factor.”

Incremental costs, either proportionally or in dollar terms, may be higher for smaller registrants, such as SRCs and EGCs, considering that they are less likely to have climate-related

in the financial statements; *see supra* note 1034 and accompanying text).

<sup>3117</sup> *See* Climate Related Financial Risk Act, adding section 38533(b)(1)(A).

<sup>3118</sup> *See* letter from Chamber II; *see also supra* note 3125 and accompanying text.

<sup>3119</sup> *See* section IV.A.5.a.

disclosure systems and processes already in place.<sup>3120</sup> If smaller firms were to face higher proportional fixed costs in meeting the disclosure requirements, they may potentially be placed at a competitive disadvantage relative to larger firms.<sup>3121</sup> Conversely, incremental costs may be lower for smaller firms to the extent that their assets and operations are less complex, which may allow them to prepare responsive disclosures at lower cost. We recognize that a portion of the final rules’ compliance costs is “fixed” in the sense that the costs do not scale with registrant size or its level of resources. We therefore expect that smaller registrants will have more difficulty allocating resources to comply with the final rules as compared to larger firms.<sup>3122</sup> To mitigate these compliance burdens, the final rules provide SRCs and EGCs certain accommodations, including being exempt from the GHG emissions disclosure requirement and the accompanying assurance requirement, as well as an extended phased in compliance period, which will allow such issuers both more time to prepare for initial compliance, as well as the benefit of observing market practices prior to preparing their initial disclosures required in response to the final rules.

We expect compliance costs to decrease over time. For example, a registrant disclosing climate-related information for the first time is likely to incur initial fixed costs to develop and implement the necessary processes and controls.<sup>3123</sup> Once the company invests in the institutional knowledge and systems to prepare the disclosures, the procedural efficiency of these processes and controls should subsequently

<sup>3120</sup> Commission staff’s analysis of registrants’ annual filings indicate that SRCs and EGCs are less likely to have climate-related disclosures (as indicated by the presence of climate-related keywords) within their filings (*see* section IV.A.5.a); *see also* section IV.A.5.b.ii for another Commission staff analysis that finds that SRCs and EGCs are less likely to disclose GHG emissions.

<sup>3121</sup> *See, e.g.*, letters from Chamber and NAM.

<sup>3122</sup> *See, e.g.*, letter from CrowdCheck Law (“For example, for two companies we have worked with that recently became Exchange Act reporting companies, the estimated costs for the first year of compliance with the proposed rules would represent approximately 18.5% and 15%, respectively, of their entire gross revenues for the year prior to becoming a reporting company.”); *see also* letter from Independent Community Bankers (stating that “the compliance cost burden for the smallest community banks is double that of the largest community banks”).

<sup>3123</sup> *See* letter from Financial Executives International’s (“FEI”) Committee on Corporate Reporting (“CCR”) (June 10, 2021); *see also* Proposing Release section IV.C.4.c.

improve, leading to lower costs in subsequent years.

Mandated climate disclosures may heighten demand for third-party services related to preparing the required disclosures, especially if registrants’ current service providers cannot provide the specific services that registrants may seek to comply with the final rules.<sup>3124</sup> In the short term, there could be a potential increase in the prices of such services, leading to higher compliance costs. In the long term, however, this heightened demand is expected to spur competition, innovation, and economies of scale that could over time lower associated costs for such services and improve their availability.<sup>3125</sup> Moreover, the aggregate accumulation of institutional knowledge may lead to a broad convergence of disclosure-related best practices, which could further reduce the costs of the required disclosures.

Overall, the market effects deriving from competition and innovation could enhance the efficiency and availability of relevant services, thereby lowering compliance costs. These positive externalities from standard reporting practices can provide additional market-wide cost savings to the extent that they reduce duplicative effort in the production and acquisition of information.<sup>3126</sup>

#### D. Other Economic Effects

The analysis of benefits and costs in section IV.C is generally based on the assumption that the final rules will not cause registrants to change how they manage climate-related risks, but rather how they produce the associated disclosures. In this section, we consider the possibility that the rules may influence how some companies approach climate-related risks. For example, if agency conflicts currently prompt some managers to ignore long-run climate-related risks, in an effort to increase short-term cash flows, the additional transparency provided by the final rules may lead managers to focus more on long-run considerations if that is what their shareholders demand. Conversely, if some managers currently are over-prioritizing climate-related risks as compared to what investors view as optimal, the final rules may lead those managers to scale back their level of investment in managing climate-related risks. Generally, we expect that any resulting changes in behavior will

<sup>3124</sup> *See supra* note 1372 and accompanying text in section II.I.2.c.

<sup>3125</sup> *See also supra* notes 2873, 3118 and accompanying text.

<sup>3126</sup> *See* Christensen *et al.* (2021).

primarily stem from investors' improved ability to assess managerial decisions. That is, to the extent the final rules prompt managers to alter their approach to climate-related risks, it may be because they expect that failing to do so might prompt a negative stock price reaction to the disclosures.<sup>3127</sup>

Registrants may change their behavior in response to the proposed disclosure requirements by managing exposures to certain physical or transition risks. For example, empirical evidence shows that mandatory reporting of GHG emissions results in reduced aggregate reported emissions among affected firms.<sup>3128</sup> The final rules will require the disclosure of the location of company properties or operations subject to material physical risks (Item 1502(a)(1)), which could allow investors to better assess companies' exposures to such risks. It is possible that, in response to or anticipation of investor reactions, companies may relocate properties or operations to geographical areas less exposed to physical risks or give preference to such areas for future business activity. Any such changes to registrant behavior resulting from the final rules may come with the potential cost of lower productivity, profitability, or market share.<sup>3129</sup> In the case of relocation, for example, the alternate location may be more costly to operate. Similarly, we also recognize that some of the costs associated with the final rules may prompt some registrants to abandon or forgo adoption of material targets or goals relating to GHG emissions. To avoid direct costs of compliance or to simply report a lower emissions amount in their required disclosures, some registrants may take steps to reorganize their business in order to shift certain parts of their Scope 1 and Scope 2 emissions into the Scope 3 emissions category.<sup>3130</sup> This potential

response from registrants obscures the registrants' true risk exposure and therefore could diminish the benefits of the disclosure related to investors' ability to assess exposure to climate-related transition risks.

Some commenters asserted that the compliance costs of the rules might cause some registrants to reduce their voluntary oversight of climate-related risks. For example, according to one commenter, devoting "resources to meeting the requirements of any final rules the Commission adopts . . . will detract from other climate-related reporting efforts."<sup>3131</sup> This commenter also asserted that the proposed requirement to "disclose internal information, such as internal carbon pricing, scenario planning, and related information if a company has an emission reduction target, could discourage companies from setting such targets."<sup>3132</sup> We recognize that some companies may pursue such avoidance strategies in response to the final rules. Other companies, however, may find the existence of disclosure requirements around climate-related targets and goals to be beneficial for signaling credible value-enhancing commitments to investors and hence may be motivated to engage in setting targets.<sup>3133</sup> More reliable and standardized disclosures about climate-related targets and goals will facilitate investors' understanding of the impact of those targets and goals, and hence could affect registrants' incentives for making such commitments, but the magnitude and direction of any such effects would depend upon registrants' decisions and investors' assessments about the value of those commitments rather than stemming directly from the final rules.

#### *E. Effects on Efficiency, Competition, and Capital Formation*

##### 1. Efficiency

The final rules should have positive effects on market efficiency. As discussed above, the final rules should improve the informativeness and reliability of climate-related risks and financial disclosures. As a result of the disclosures required by the final rules, investors and other market participants should better understand the climate-related risks that registrants are facing,

their potential impact (e.g., on future cash flows), and registrants' ability to respond to and manage such risks. Investors and other market participants should thereby better evaluate registrants and make more informed investment and voting decisions. As a result, the required disclosures should reduce information asymmetry and mispricing in the market, improving market efficiency. More efficient prices should improve capital formation by increasing overall public trust in markets, leading to greater investor participation and market liquidity.<sup>3134</sup>

Currently, investors may seek information on registrant's climate-related risks from various sources, including those outside of Commission filings. For example, the necessary information may only be available from company websites or from third-party service providers that collect information and offer their analysis for a fee. Once investors locate relevant disclosures, they may need to spend time organizing and compiling information in ways that facilitate comparisons across companies. Because the final rules will make the required disclosures available from a consistent source (i.e., Commission filings) and because the disclosures will be standardized and tagged, we expect the final rules to improve efficiency by reducing the costs associated with compiling and organizing information on climate-related risks and oversight.<sup>3135</sup>

We expect the climate-related disclosures mandated by the final rules

<sup>3127</sup> See M. Kahn, J. Matsusaka & C. Shu, *Divestment and Engagement: The Effect of Green Investors on Corporate Carbon Emissions* (Oct. 3, 2023), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=4592023](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4592023) (retrieved from SSRN Elsevier database).

<sup>3128</sup> See Jeong-Bon Kim, et al., supra note 2586; B. Downar, et al., supra note 2776; S. Tomar, *Greenhouse Gas Disclosure and Emissions Benchmarking*, SMU Cox Sch. of Bus. Rsch. Jouvenot & P. Krueger, supra note 2775.

<sup>3129</sup> At the same time, we recognize that a registrant may optimize for both climate risks and productivity, as these factors are not necessarily mutually exclusive.

<sup>3130</sup> See Lucas Mahieux, Haresh Sapra & Gaoqing Zhang, *Climate-Related Disclosures: What Are the Economic Trade-Offs?* (Dec. 1, 2023), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=4507526](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4507526) (retrieved from SSRN Elsevier database).

<sup>3131</sup> See letter from API.

<sup>3132</sup> *Id.*

<sup>3133</sup> Disclosures filed with the Commission are subject to greater liability and thus may be viewed as more credible than similar disclosures provided via other avenues (e.g., company sustainability reports). In addition, the final rules will require disclosure of details or specifics that some registrants may otherwise not provide in the absence of the final rules.

<sup>3134</sup> See Grewal, et al., supra note 2653; M.E. Barth, et al., *Textual Dimensions of Non-Financial Information, Stock Price Informativeness, and Proprietary Costs: Evidence from Integrated Reports*, (July 27, 2023), available at [https://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=3857927](https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3857927); see also D.S. <sup>3135</sup> One commenter stated that "[t]he Commission offers no support for the view that a rule aimed at consistency should be a stand-alone goal that will promote competition, efficiency, and capital formation." See Overdahl exhibit to letter from Chamber. To the extent that the commenter is asserting that the consistency achieved by the final rules does not promote or is somehow at odds with competition, efficiency, and capital formation, we disagree for the reasons outlined in this paragraph. Moreover, the Commission considers benefits and costs of the final rules in addition to the economic effects associated with efficiency, competition, and capital formation. See SEC Guidance on Economic Analysis (2012), supra note 2574.

will cause differential asset price and financing cost responses across companies and settings, as investors are more easily able to factor this information into their valuation decisions. These expected improvements in market efficiency are broadly consistent with empirical research. For example, one academic study finds evidence that, among companies that voluntarily report emissions via the CDP questionnaire, those with higher emissions (relative to their size and industry peers) pay higher loan spreads.<sup>3136</sup> Another study examined more than 16,000 companies from 2016 through 2020 and found that investors were actively and directly pricing some transition risk into valuations, an action that resulted in a negative correlation between companies' CO<sub>2</sub> emissions and their price-to-earnings ratio.<sup>3137</sup>

Empirical research has also documented evidence of current market inefficiencies with respect to climate-related risks. For example, one study found that stock prices of food processing and agricultural companies may exhibit mispricing with respect to drought exposure.<sup>3138</sup> The study documented that drought-exposed companies report reduced future profitability, indicating that drought exposure is a financial risk.<sup>3139</sup> In an efficient market, this risk should result in trading activity that decreases the current stock price and increases the expected return (to compensate investors for bearing this risk). The study, however, found that drought-exposed companies deliver *lower* future returns relative to companies with less exposure, suggesting that the market initially under-reacts to drought exposure.<sup>3140</sup> In other words, the market fails to sufficiently incorporate the risk of drought exposure into the current stock price, resulting in investors holding mispriced assets and bearing

risk for which they are not appropriately compensated. Consistent with this finding, survey responses from institutional investors indicated that such investors believed that equity valuations do not fully reflect climate-related risks.<sup>3141</sup> The final rules may help address these market inefficiencies by eliciting more consistent and reliable information about climate-related risks so that those risks can be better incorporated into asset prices.

We also expect the final rules to increase efficiency by improving comparability of climate-related disclosures and requiring them to be filed in a machine-readable data language (*i.e.*, Inline XBRL).<sup>3142</sup> As discussed in section IV.C.2.i, efficiency gains from standardized reporting practices can provide market-wide cost savings to registrants in the long-term, to the extent that they reduce duplicative effort in registrants' production and acquisition of information (*e.g.*, certain data or third-party services related to preparing the required disclosures, including the reporting of emissions data, may become cheaper in the long run as heightened demand spurs competition, innovation, and economies of scale). Finally, more standardized reporting should also reduce investors' costs of acquiring and processing climate-related information by facilitating investors' analysis of a registrant's disclosure and assessing its management of climate-related risks against those of its competitors.

The inclusion of climate-related information in Commission filings using a machine-readable data language (*i.e.*, Inline XBRL), rather than external reports or company websites, should also make it easier for investors to find and compare this information. In that regard, XBRL requirements have been observed to reduce the informational advantages of informed traders and lead to lower cost of capital and higher stock liquidity for filers that provide tagged disclosures.<sup>3143</sup>

<sup>3141</sup> See Krueger, *et al.*, *supra* note 2790.

<sup>3142</sup> See letters from Impact Capital Managers (indicating that the Inline XBRL requirement will contribute toward the goal of eliciting more consistent, comparable, and reliable disclosure); and Climate Advisers (stating that tagging the new disclosures in Inline XBRL should, by allowing the disclosed information to be more readily incorporated into investors' analyses, promote the efficiency of the U.S. capital markets).

<sup>3143</sup> See, *e.g.*, N. Bhattacharya, Y.J. Cho & J.B. Kim, *Leveling the Playing Field Between Large and Small Institutions: Evidence from the SEC's XBRL Mandate*, 93 *Acct. Rev.* 51 (2018); B. Li, Z. Liu, W. Qiang & B. Zhang, *The Impact of XBRL Adoption on Local Bias: Evidence from Mandated U.S. Filers*, 39 *J. of Acct. and Pub. Policy* (2020); W. Sassi, H. Ben Othman & K. Hussainey, *The Impact of*

We acknowledge commenters who stated that proposed amendments could decrease efficiency by reducing the incentives for reporting companies to develop business strategies, transition plans, or goals, because the amendments would require disclosure of these strategies, plans or goals.<sup>3144</sup> According to these commenters, the benefits of developing these elements could be outweighed by the direct and indirect costs of disclosing them. While this may occur in some circumstances, the efficiency loss is expected to be relatively low as the required disclosures are not highly granular. Thus, in many cases, we believe the benefits of developing business strategies, transition plans or goals will exceed the costs of such disclosure. But we recognize that, more generally, the final rules may divert some resources away from what their best use would otherwise be. As explained above, by removing some of the more prescriptive elements of the proposed rules that could require disclosure of a registrant's competitively sensitive information, the final rules mitigate this concern.

Some commenters raised the more general concern that final rules could divert managers' attention from other types of risks that may be more urgent or important to investors.<sup>3145</sup> However, we expect this channel will be somewhat limited. First, the final rules will elicit more disclosures from those registrants for which climate-related risks have materially impacted or are reasonably likely to have material impacts on the registrants' financials or business strategy. Therefore, the final rules are unlikely to demand significant managerial attention in settings in which such attention is not warranted. Second, managers and directors have strong incentives to maximize the market value of the company (as reflected in the stock price). As a result, there is limited upside to selecting policies that prioritize climate over other concerns that investors view as more important determinants of company value.

<sup>3144</sup> See, *e.g.*, letter from Cato Inst.; Overdahl exhibit to letter from Chamber; and Motor & Equipment Manufacturers Association.

<sup>3145</sup> See, *e.g.*, letters from Chamber; Southside Bancshares; and BIO.

<sup>3136</sup> See S. Kleimeier & M. Viehs, *supra* note 3134.

<sup>3137</sup> See Lazard Climate Center, *Inaugural Research Findings of the Lazard Climate Center* (Dec. 2021), available at <https://www.lazard.com/research-insights/inaugural-research-findings-of-the-lazard-climate-center/>; see also <https://lazard.com/media/ge5oromo/lazard-climate-center-presentation-december-2021.pdf> (presentation). The Lazard presentation notes, however, that the effects vary significantly across different types of GHG emissions, market capitalization, and sectors. Large capitalization companies (>\$50 billion) experience greater valuation discounts, while larger emitters, such as energy companies, showed the most consistently negative correlation. On average, a 10% decrease in a large U.S. energy company's emissions corresponded with a 3.9% increase in its price-to-earnings ratio.

<sup>3138</sup> See H. Hong, *et al.*, *supra* note 2739.

<sup>3139</sup> See *id.*

<sup>3140</sup> See *id.*

## 2. Competition

Overall, we expect that by standardizing reporting practices, the final rules would level the playing field among firms, making it easier for investors to assess the climate-related risks of a registrant against those of its competitors. The effects of peer benchmarking can contribute to increased competition for companies in search for capital both across and within industries, whereby registrants can be more easily assessed and compared by investors against alternative options.

Some commenters raised concerns that the proposed rules would have increased competition among registrants for hiring individuals with climate-related expertise and/or GHG emissions attestation providers.<sup>3146</sup> These commenters asserted that the proposed rules could increase the costs of hiring key personnel with relevant experience, which could restrain a registrant's ability to produce climate disclosures and institute climate-related strategies.<sup>3147</sup> While the final rules do not completely eliminate concerns about the costs of hiring or engaging those with climate-related expertise, we have made several changes to mitigate these costs. With respect to GHG emissions assurance, for example, the final rules will permit assurance providers to use the ISO 14064-3 attestation standard, which should limit the circumstances in which registrants need to seek out different attestation engagements. In addition, the extended phase in periods for compliance with the GHG emissions disclosure and assurance requirements will provide additional time for registrants to seek out, and the markets to respond to increased demand for, climate-related professional services.

Some commenters stated that the proposed amendments would harm the competitive position of Commission registrants relative to their peers who do not face such disclosure requirements.<sup>3148</sup> In particular, these commenters stated that Commission registrants would face direct costs of compliance, and indirect costs such as the risk of disclosure of proprietary business information, while other companies would not face these costs.<sup>3149</sup> Relative to the proposed rules, the final rules take a number of steps to reduce the costs of complying with the

<sup>3146</sup> See, e.g., discussions in sections II.E.2.b and II.I.5.b.

<sup>3147</sup> See, e.g., letter from Can. Bankers.

<sup>3148</sup> See letters from API; Matthew Winden; and Southside Bancshares, Inc.

<sup>3149</sup> *Id.*

final rules.<sup>3150</sup> For example, we have eliminated the requirement to disclose Scope 3 emissions, we have significantly narrowed the Regulation S-X requirements, and the final rules for subpart 1500 of Regulation S-K include additional materiality qualifiers and less prescriptive disclosure requirements. Moreover, as discussed above, a number of these changes from the proposal will serve to limit the circumstances in which disclosure of potentially competitive business information will be required.

Similarly, one commenter noted that public companies could be placed at a competitive disadvantage when bidding to acquire a private target company because they would need to screen prospective targets for their ability to produce the disclosures required by the proposed rules.<sup>3151</sup> Any such competitive disadvantage will be mitigated under the final rules, as compared to the proposed rules, because we no longer are applying disclosure requirements to a private company that is a party to a business combination transaction, as defined by Securities Act Rule 165(f), involving securities offerings registered on Form S-4 or F-4.

Commenters also raised concerns about disproportionate effects for smaller companies, as discussed above in section IV.C.3.c. Any costs that disproportionately impact smaller companies—such as those that do not scale with the size of the registrant—may limit the ability of smaller registrants to compete with larger registrants. As discussed above, the final rules do not require SRCs and EGCs to provide GHG emissions disclosures and provide SRCs and EGCs with longer phase in periods to delay implementation costs. This delay may effectively lower implementation costs for SRCs and EGCs to the extent that, by the time they are required to report, SRCs and EGCs can look to the disclosure practices developed by other registrants to assist them in preparing their own disclosures.

## 3. Capital Formation

More consistent, comparable, and reliable disclosures could lead to capital market benefits in the form of improved liquidity and lower costs of capital.<sup>3152</sup>

<sup>3150</sup> See section IV.C.2.

<sup>3151</sup> Letter from Shearman Sterling. See also *supra* 2461 and accompanying text.

<sup>3152</sup> See D.W. Diamond & R.E. Verrecchia, *Disclosure, Liquidity, and the Cost of Capital*, 46 J. Fin. 1325 (1991) (finding that revealing public information to reduce information asymmetry can reduce a company's cost of capital through increased liquidity); see also C. Leuz & R.E.

These benefits would stem from reductions in information asymmetries brought about by the required disclosure of climate-related information.<sup>3153</sup> The reduction in information asymmetry between managers and investors could allow investors to better estimate future cash flows, which could reduce investors' uncertainty, thus lowering the costs of capital.<sup>3154</sup> In addition, less information asymmetry among investors could mitigate adverse selection problems by reducing the informational advantage of investors that have sufficient resources to become more informed about a registrant's exposure to and management of climate-related risks.<sup>3155</sup> This is likely to improve stock liquidity (*i.e.*, narrower bid-ask spreads), which could attract more investors and reduce the cost of capital overall.<sup>3156</sup>

Verrecchia, *The Economic Consequences of Increased Disclosure*, 38 J. Acct. Res. 91 (2000). Several studies provide both theoretical and empirical evidence of the link between information asymmetry and cost of capital. See, e.g., T.E. Copeland & D. Galai, *Information Effects on the Bid-Ask Spread*, 38 J. Fin. 1457 (1983) (proposing a theory of information effects on the bid-ask spread); Easley *et al.*, *supra* note 2753 (showing that differences in the composition of information between public and private information affect the cost of capital, with investors demanding a higher return to hold stocks with greater private information.).

<sup>3153</sup> See, e.g., Christensen *et al.* (2021), at 1147 (noting "[A] primary benefit of corporate disclosure is to mitigate information asymmetries between the firm and its investors as well as among investors . . . [T]he general takeaway from this large literature is that more and better disclosure can lead to tangible capital-market benefits in the form of improved liquidity, lower cost of capital, higher asset prices (or firm value), and potentially better corporate decisions . . . To the extent that mandatory CSR reporting and CSR standards improve the information available to investors, the same theories and many of the prior findings should apply when considering the economic effects of the mandate or standard.").

<sup>3154</sup> See Diamond *et al.*, *supra* note 3152; Lambert, *et al.*, *Accounting Information*, *supra* note 2753; Christopher Armstrong, John Core, Daniel Taylor & Robert Verrecchia, *When Does Information Asymmetry Affect the Cost of Capital?*, 49 J. of Acct. Rsch. 1 (2011). We note that these articles also detail limited theoretical circumstances under which more reliable disclosures could lead to a higher cost of capital, such as in the case where improved disclosure is sufficient to reduce incentives for market making.

<sup>3155</sup> See Verrecchia, *et al.*, *supra* note 2748.

<sup>3156</sup> One commenter asserted that this first channel does not apply to corporate disclosures, as it pertains only to bid-ask spreads set by market makers concerned with trading against parties with more information about order flow. See Overdahl exhibit to letter from Chamber. We disagree. Market makers concerned about trading against more informed parties will set larger bid-ask spreads regardless of the reason for the asymmetric information. In this setting, corporate disclosures of material climate-related information would reduce information asymmetries between market makers and other traders who have, for example, learned about a company's climate related risks through proprietary research. See letters from Calvert

There are two additional channels through which the disclosures could impact cost of capital. The first arises because some investors may have preferences to invest with companies that are more or less exposed to climate-related risks about which the final rules will elicit disclosure. To the extent the disclosures provide more complete and reliable information about a registrant's material climate-risks and how such risks are being managed, shifts in investor demand for the registrant's securities could increase or decrease (depending on investor preferences and how they factor this information into their investment decision-making).<sup>3157</sup> The second results from the fact that some aspects of climate risk may not be diversifiable and therefore could command a risk premium. Academic research suggests that investors demand a higher return to hold assets that are more exposed to non-diversifiable climate-related risk (including both transition and physical risks).<sup>3158</sup> If the

“Calvert purchases third party vendor data to support our ability to assess companies on their ESG factors and that provide specific data related to climate change, where available. Often vendor information is estimated when a company has not disclosed information on its climate-related risks. Sometimes the estimates are made across industries, based on what other more proactive peers have disclosed.”; Boston Trust Walden (reporting: “our analysts examine quantitative and qualitative climate-related corporate disclosure to enhance our understanding of the existing and potential financial outcomes associated, ranging from risks (e.g., losing the license to operate) to opportunities (e.g., generating new sources of revenue)”). We also note that corporate disclosures of material climate-related information reduce information asymmetries between affiliated investors and other investors. See also *Glosten et al.*, *supra* note 2748, for evidence that informed traders may take advantage of “private information or superior analysis” when making investment decisions). This commenter also asserted that the Commission must consider the potential efficiency losses that may result from investors no longer having the same incentives to invest in this type of proprietary research. We disagree with the commenter that there would be an efficiency loss. The primary benefit of proprietary research is more accurate prices. If disclosures obviate the need for proprietary research by achieving price discovery in the absence of that research, there is not an efficiency loss from the lack of research. This commenter also argues that voluntary disclosure regimes should enable corporate issuers to lower their cost of capital by reducing information asymmetry. See *supra* note 3154. We discuss shortcomings related to a voluntary disclosure regime in this context in section IV.B.2, and we cite to academic evidence in *supra* notes 2748 and 3153 that mandatory reporting that improves the information available to investors can lead to tangible capital market benefits.

<sup>3157</sup> See Yang, *supra* note 2827; Avramov, Cheng, Lioui & Tarelli, *Sustainable Investing with ESG Rating Uncertainty*, 145 J. of Fin. Econ. (Oct. 2022); L. Pastor, R. Stambaugh & L. Taylor, *Sustainable Investing in Equilibrium*, 142 J. Fin. Econ. 550 (2021); P. Bolton & M. Kacperczyk, *supra* note 2744; Li *et al.*, *supra* note 2657.

<sup>3158</sup> See, e.g., Bolton *et al.*, *supra* note 3157 (finding that investors demand compensation for

disclosures cause investors to update their expectations of a registrant's exposure to this type of risk, the cost of capital could adjust accordingly.

More generally, if compliance costs with the final rules are sufficiently high, this could influence the marginal company's decision to exit public markets or refrain from going public in the first place to avoid having to comply with the disclosure requirements. This concern was echoed by a number of commenters.<sup>3159</sup> Companies may choose this strategy if they believe the potential compliance costs from the final rules outweigh the benefits of being a registered public company including, for example, a more liquid market for the company's securities and the associated reduction in cost of capital. Uptake of this avoidance strategy may widen the transparency gap between public and private companies, negatively affecting capital markets' information efficiency, and potentially reducing the size of the public markets.<sup>3160</sup> However, we note that this avoidance strategy will come with significant disadvantages. For example, any companies deterred from registration because of the final rules would face more limited access to the capital markets, implying higher financing costs and debt-ratios.<sup>3161</sup> On balance, we believe the benefits of being a public registered company are sufficiently strong such that it is unlikely many companies will choose to avoid becoming or continuing as a public registered company as a result of the final rules. In this regard, we note that the final rules include a number of changes from the proposal intended to mitigate the compliance burden on registrants and lessen disproportionate impacts on smaller and emerging growth firms.

#### F. Reasonable Alternatives

##### 1. Adopt a More (or Less) Principles-Based Approach to Regulation S-K Disclosures

Many commenters recommended a more principles-based approach (either

exposure to carbon emissions risk); Acharya *et al.*, *supra* note 2905 (finding higher expected returns for exposure to physical risks); Huynh & Xia (2021).

<sup>3159</sup> See letters from Elaine Henry; API; Cunningham *et al.*; Matthew Winden; Southside Bancshares Inc.; David Burton; AEPC; CCMR; Chamber; Petrol. OK; and AGs of Cal. *et al.*

<sup>3160</sup> See Overdahl exhibit to letter from Chamber.

<sup>3161</sup> See Omer Brav, *Access to Capital, Capital Structure, and the Funding of the Firm*, 64 J. of Fin. 263 (2009); Anthony Saunders & Sascha Steffen, *The Costs of Being Private: Evidence from the Loan Market*, 24 Rev. of Fin. Stud. 4091 (2011); E.P. Gilj & J.P. Taillard, *Do Private Firms Invest Differently than Public Firms? Taking Cues from the Natural Gas Industry*, 71 J. of Fin. 1733 (2016).

overall or with respect to specific provisions) that would permit registrants to determine the type of climate-related information to disclose based on what they deem to be appropriate.<sup>3162</sup> Such an approach might reduce reporting costs because registrants would be required to report only information that they determine to be appropriate given their unique circumstances. To the extent that the more prescriptive elements of the final rules result in disclosure that is less useful for investors, a principles-based approach could benefit investors by reducing the incidence of less material or even boilerplate disclosure.<sup>3163</sup> A principles-based approach would also reduce the risk that the disclosure requirements could lead registrants to change their risk management strategies in ways that are less than optimal for the sake of achieving what they perceive to be more favorable climate-related disclosure.

On the other hand, a more principles-based approach would not fully achieve many of the intended benefits of the rules, which are focused on enhancing the consistency and comparability of existing voluntary disclosure arrangements. In addition, a principles-based approach could increase shareholder confusion because the choice of climate metrics and other details (e.g., time horizon) may vary significantly across registrants. Also, a principles-based approach may allow registrants to selectively choose the measures or time horizon that result in the most favorable disclosures. In the final rules, we elected to include prescriptive disclosure requirements (with certain modifications to address commenter concerns) to avoid such cherry-picking of information and to ensure that investors are provided with more consistent and comparable information about climate-related risks.

We similarly considered whether the final rules should be more prescriptive. This would generally improve investors' ability to compare disclosures across registrants since disclosures would be less tailored to each registrant's specific

<sup>3162</sup> See, e.g., letters from Beller, *et al.* and Microsoft; Sullivan Cromwell; Airlines for America; BOA; Business Roundtable; Soc. Corp. Gov; and Overdahl exhibit to letter from Chamber.

<sup>3163</sup> Similarly, one commenter described “(1) the ability of a principles-based approach to evolve in order to keep pace with emerging issues; and (2) the flexibility of a principles-based approach to correct deficiencies or excesses in disclosure without the need for the Commission to continuously add to or update the underlying disclosure rules as new issues arise.” Overdahl exhibit to letter from Chamber. We acknowledge that a principles-based approach can present these benefits and that prescriptive rules may need updates.

circumstances. A more prescriptive approach would also reduce the risk of boilerplate disclosures. However, we decided against this approach in light of commenters' concerns about the costs of compliance with the proposed rules, as well as the importance of allowing registrants the flexibility to provide investors with the most useful and relevant disclosures. Accordingly, in response to commenters, the final rules include additional materiality qualifiers and take a less prescriptive approach in a number of areas, which should help to mitigate some of the concerns expressed with respect to the proposed rules while continuing to elicit more decision-useful information for investors about climate-related risks.

## 2. Different Approaches to Assurance Over GHG Emissions Disclosures

We considered several alternative approaches to assurance over GHG emissions disclosure. For example, the Commission could not require that any GHG emissions disclosure be subject to assurance. Alternatively, the Commission could require reasonable assurance of all GHG emissions disclosures rather than only for LAFs. The Commission could also prescribe more restrictive requirements for attestation standards and assurance providers. Inherent in these choices is a tradeoff between compliance costs and the reliability of the disclosures. For example, while requiring reasonable assurance for all GHG emissions would have likely resulted in more reliable disclosures, it would have imposed considerable costs on registrants, based on feedback from commenters about the costs of obtaining reasonable assurance.<sup>3164</sup>

We also considered taking a less prescriptive approach to the independence requirements for assurance providers in the final rules. For example, we considered not adopting a requirement for the GHG emissions assurance provider to be independent with respect to the registrant and any of its affiliates and/or instead requiring disclosure about any potentially independence-impairing relationship.<sup>3165</sup> This approach would help to mitigate concerns commenters raised about a potential shortage of qualified GHG emissions assurance providers increasing the costs for

registrants<sup>3166</sup> and potential burdens on registrants related to the need to assess the independence of assurance providers.<sup>3167</sup> However, not imposing an independence requirement or only requiring disclosure about potential conflicts would not provide the same confidence to investors that the attestation provider will perform the engagement in an objective and impartial manner. This in turn would diminish one of the key benefits of requiring assurance over GHG emissions disclosures, which is to improve the reliability of such disclosures.

We acknowledge that the independence requirement in the final rules may result in some registrants that are already obtaining assurance voluntarily needing to retain a new GHG emissions assurance provider that meets the independence requirement or may make it more difficult for a registrant that has not obtained GHG assurance before to find an available provider. These costs are mitigated by the modifications in the final rules that provide registrants subject to the assurance requirement with a multi-year phase in period before they are required to obtain an attestation report. The phase in period will give registrants time to find a provider that meets the independence requirement or provide existing service providers time to unwind any existing conflicts in order to meet the independence requirement. It will also give non-accountant attestation providers time to familiarize themselves with the independence requirement and adapt their business practices accordingly.

## 3. Different Thresholds for Financial Statement Disclosures

We considered alternative criteria for disclosure under the amendments to Regulation S–X, such as using a more principles-based materiality approach. In general, materiality thresholds can help ensure that the disclosure elicited is most likely to factor into an investor's decision or voting decisions. While materiality is used as the threshold for disclosures in certain contexts, we believe that registrants will benefit from the certainty associated with a set of bright line quantitative thresholds. In doing so, investors will have disclosures that are more consistent across registrants due to the predictable application of quantitative thresholds. As discussed above, we have significantly modified the scope of the proposed disclosures and threshold and

have included de minimis exceptions to focus the requirements on providing material disclosure to investors.

However, we decided not to eliminate the bright-line thresholds entirely and move to a more principles-based disclosure standard because the quantitative disclosure threshold provides registrants with greater clarity in implementing the rules, reduces the risk of underreporting, and increases consistency and comparability. This approach is consistent with the feedback we received from some commenters that expressed concerns about the risks of underreporting in the context of the financial statements, as evidenced by the limited climate-related disclosure under current accounting standards despite increasing demand by investors for such disclosure.

We considered not including de minimis disclosure thresholds. A de minimis threshold is more likely to be triggered for smaller registrants; so, not including a de minimis threshold would have resulted in similar rates of disclosure from both large and small companies. However, this approach would have been more likely to elicit disclosures that are not decision-useful to investors. In particular, for some registrants, shareholders' equity and income or losses before taxes may not scale meaningfully with the magnitude of the registrant's operations, for example, if the registrant is highly leveraged or was not very profitable (or very unprofitable) during the period. Including de minimis thresholds will avoid triggering overly granular disclosure in such anomalous situations.

Following feedback from commenters, we also considered limiting the new Regulation S–X disclosures to registrants in certain sectors. While restricting disclosure to specific sectors would limit the costs of disclosure, it would result in a lack of information about other sectors, which can be affected by severe weather events or other natural conditions. By specifying disclosures for certain sectors, the Commission would also risk making a determination about which sectors to include and exclude that may become obsolete in the future if conditions change. For sectors that are not generally affected by severe weather events or other natural conditions, the costs associated with these disclosures are likely to be moot.

## 4. Permit Disclosures To Be Furnished Rather Than Filed

We considered the possibility of permitting some or all of the required disclosures to be furnished rather than

<sup>3164</sup> See, e.g., letter from Salesforce (estimating that obtaining reasonable assurance rather than limited assurance over their emissions disclosures would increase their expected costs by \$1–\$3 million).

<sup>3165</sup> See 17 CFR 229.1506(b)(2).

<sup>3166</sup> See, e.g., letters from AEPC; Climate Risk Consortia; and Soc. Corp. Gov.

<sup>3167</sup> See, e.g., letter from Soc. Corp. Gov.

filed. Although some commenters expressed a desire for furnished disclosures, stating that it would lower the legal liability for registrants who are required to provide climate-related disclosures under the final rules,<sup>3168</sup> furnished disclosures may also limit the benefit for investors who rely on complete and accurate information from registrants about their climate-related risks and their efforts to address these risks.<sup>3169</sup> By contrast, requiring registrants to file, rather than furnish, the climate-related disclosures provided pursuant to the final rules will give investors the ability to bring suit if registrants fail to comply with the new disclosure requirements, for instance under Exchange Act section 18.<sup>3170</sup> This will improve the avenues of redress available to investors in the case of false or misleading statements with respect to material facts and, in turn, provide benefits to investors to the extent they rely on the disclosures required under the final rules to make investment or voting decisions. Further, treating these disclosures as filed will help promote their accuracy and consistency to the extent registrants seek to avoid liability (under, for example, section 18) by taking additional care to ensure that disclosures are accurate. We believe, therefore, that information about climate-related risks should be subject to the same liability as other important business or financial information that the registrant includes in its registration statements and periodic reports.

We acknowledge that requiring these disclosures to be filed may increase registrants' litigation risks (and, therefore, their costs of complying with the final rules) relative to an alternative approach that would allow registrants to furnish the disclosures. The modifications we have made to the proposed rules, however, should help to mitigate those concerns. These modifications include: limiting the scope of the GHG emissions disclosure requirement;<sup>3171</sup> revising several provisions regarding the impacts of climate-related risks on strategy, targets and goals, and financial statement effects so that registrants will be required to provide the disclosures only in certain circumstances, such as when material to the registrant;<sup>3172</sup> and

adopting a provision stating that disclosures (other than historic facts) provided pursuant to certain of the new subpart 1500 provisions of Regulation S-K constitute "forward-looking statements" for the purposes of the PSLRA safe harbors.<sup>3173</sup> We also are providing registrants with a phase in period based on filer status to give them additional time to prepare to provide the climate-related disclosures, which will constrain registrants resources less over the short run, which could effectively lower implementation costs.<sup>3174</sup>

Finally, regardless of whether the information is filed or furnished, registrants may be subject to potential liability under Securities Act section 17(a), Exchange Act section 10(b), and/or Rule 10b-5, as applicable, for false or misleading material statements in the information disclosed pursuant to the final rules.

#### 5. Exempt SRCs/EGCs

We considered completely exempting SRCs and EGCs from the final rules. While such a broad exemption would avoid burdening newly public and/or smaller registrants with the costs of the final rules, which include some fixed costs that would disproportionately affect smaller registrants, such an alternative would leave significant gaps in the information set on climate-related risks faced by registrants, thereby significantly detracting from comparability and other informational benefits of the final rules. We have, however, made a number of changes from the proposal, such as generally reducing the prescriptiveness of the proposed rules, which should help to mitigate the compliance burden for all registrants, including SRCs and EGCs. We are also providing phase in periods based on filer status, which will provide registrants that are SRCs or EGCs with additional time to prepare to make disclosure under the final rules.

For emissions-related disclosures, there exists a similar trade-off between costs and benefits of exempting SRCs and EGCs. However, based in part on the analysis performed by Commission staff, which indicated extremely low rates of disclosure for SRCs and EGCs, we have exempted SRCs and EGCs from the requirement to disclose GHG emissions data given the significant compliance burden that such disclosure could impose on smaller registrants.<sup>3175</sup>

#### 6. Permit Registrants To Rely on Home-Country Disclosure Frameworks/ Substituted Compliance

In light of the fact that several other jurisdictions have adopted or are currently pursuing climate-related disclosure frameworks, some commenters suggested that that the Commission consider allowing registrants to comply with the proposed rules by using disclosures provided in these other jurisdictions.<sup>3176</sup> While this substituted compliance approach has the potential to reduce costs to the extent that there are overlapping disclosure requirements, we have determined, at this time, that it is premature to allow for substituted compliance with the final rules, given the current status of such requirements in other jurisdictions. Accordingly, the Commission intends to observe how reporting under international climate-related reporting requirements and practices develop before making any determination whether such an approach would result in consistent, reliable, and comparable information for investors. As noted above,<sup>3177</sup> the Commission may consider such accommodations in the future depending on developments in the international climate reporting practices and our experience with disclosures under the final rules.<sup>3178</sup>

Similarly, some commenters suggested that, in lieu of the proposed GHG emissions disclosure requirements, we should require registrants to submit GHG emissions data that they publicly report under other regulatory regimes, such as the GHGRP.<sup>3179</sup> Under such an approach, registrants would not need to track and report GHG emissions data that they are not already collecting for other regulatory purposes, and thus registrants would not incur certain direct compliance costs associated with disclosing this information under the final rules (although they would assume new securities law liability for including the information in Commission filings). However, as discussed in detail in section IV.C.2.e, reporting under other regulatory regimes, such as the GHGRP, serves different purposes than disclosure under the Federal securities laws, and the information reported is not always presented in ways that are decision-

<sup>3168</sup> See, e.g., letter from CCMR; see also section II.K.2.

<sup>3169</sup> See discussion in II.K.3.

<sup>3170</sup> Climate-related disclosures provided pursuant to the final rules also will be subject to section 11 liability if included in, or incorporated by reference into, a Securities Act registration statement.

<sup>3171</sup> See *supra* section II.H.3.

<sup>3172</sup> See *supra* sections II.D.3, II.G.3, and II.H.3.

<sup>3173</sup> See *supra* section II.J.3.

<sup>3174</sup> See *supra* section II.O.3.

<sup>3175</sup> See section II.L.3 and *supra* note 946 and accompanying text.

<sup>3176</sup> See letters from AllianceBernstein; Davis Polk; Linklaters L; PGIM; PwC; and SAP SE.

<sup>3177</sup> See *supra* section II.L.3.

<sup>3178</sup> See, e.g., section IV.A. discussing the domestic and international disclosure requirements that are still being developed and finalized at this time.

<sup>3179</sup> See letter from Grundfest; Memorandum of Meeting with Grundfest and Wilson (June 28, 2023).

useful for investors. Accordingly, we have decided not to adopt such an alternative.

#### 7. Alternative Tagging Requirements

With respect to Inline XBRL tagging, we considered changing the scope of disclosures required to be tagged, for example by removing the tagging requirements for climate-related disclosures for all or a subset of registrants (such as SRCs). As another example, we considered requiring only a subset of proposed climate-related disclosures, such as the quantitative climate-related disclosures, to be tagged in Inline XBRL. Narrowing the scope of climate-related disclosures to be tagged could have provided some incremental cost savings for registrants compared to the final rules, because incrementally less time would have been required to select and review the particular tags to apply to the climate-related disclosures.

However, we believe any such incremental cost savings would have been low because all affected registrants are required to tag certain of their disclosures (including both quantitative and qualitative disclosures) in Inline XBRL.<sup>3180</sup> Moreover, narrowing the scope of tagging requirements would have diminished the extent of informational benefits that would accrue to investors by reducing the volume of climate-related information that would become less costly to process and easier to compare across time and registrants. For example, an alternative whereby only quantitative climate-related disclosures would be tagged would have inhibited investors from efficiently extracting or searching climate-related disclosures about registrants' governance; strategy, business model, and outlook; risk management; and targets and goals, thus creating the need to manually run searches for these disclosures through entire documents. Such an alternative would also have inhibited the automatic comparison and redlining of these disclosures against prior periods, and the performance of targeted machine learning assessments (tonality, sentiment, risk words, etc.) of specific narrative climate-related disclosures outside the financial statements rather than the entire unstructured document.

### V. Paperwork Reduction Act

#### A. Summary of the Collections of Information

Certain provisions of our rules and forms that will be affected by the final rules contain "collection of

information" requirements within the meaning of the Paperwork Reduction Act of 1995 ("PRA").<sup>3181</sup> The Commission published a notice requesting comment on changes to these collections of information in the Proposing Release and submitted these requirements to the Office of Management and Budget ("OMB") for review in accordance with the PRA.<sup>3182</sup> The hours and costs associated with preparing and filing the forms and reports constitute reporting and cost burdens imposed by each collection of information.<sup>3183</sup> An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information requirement unless it displays a currently valid OMB control number. Compliance with the information collections is mandatory. Responses to the information collections are not kept confidential and there is no mandatory retention period for the information disclosed. The titles for the affected collections of information are:

- Form S-1 (OMB Control No. 3235-0065);
- Form F-1 (OMB Control No. 3235-0258);
- Form S-4 (OMB Control No. 3235-0324);
- Form F-4 (OMB Control No. 3235-0325);
- Form S-11 (OMB Control No. 3235-0067);
- Form 10 (OMB Control No. 3235-0064);
- Form 20-F (OMB Control No. 3235-0288); and
- Form 10-K (OMB Control No. 3235-0063).

The final rules will require registrants filing Securities Act registration statements on Forms S-1, F-1, S-4, F-4, and S-11 to include the climate-related disclosures required under subpart 1500 of Regulation S-K and Article 14 of Regulation S-X. The final rules will further require registrants filing Exchange Act annual reports on Forms 10-K and 20-F and Exchange Act registration statements on Forms 10 and 20-F to include the climate-related disclosures required under subpart 1500 of Regulation S-K and Article 14 of Regulation S-X. Registrants may include the climate-related disclosures required under subpart 1500 in a part of the registration statement or annual report that is separately captioned as

Climate-Related Disclosure or in another appropriate section, such as Risk Factors, MD&A, or Description of Business. Registrants will be required to include the climate-related disclosures required under Article 14 in a note to the financial statements.

In addition, if a registrant is an LAF or AF that is not an SRC or EGC, the final rules may require the registrant to disclose its Scope 1 and/or Scope 2 emissions. Such registrant will also be required to file an attestation report in connection with its Scope 1 and/or Scope 2 emissions disclosure. For purposes of Exchange Act reporting on domestic forms, although a U.S. registrant may incorporate by reference such disclosure from its Form 10-Q for the second fiscal quarter in the fiscal year immediately following the year to which the GHG emissions metrics disclosure relates, we have attributed the paperwork burden associated with the GHG emissions disclosure requirement and the related attestation report to the Form 10-K annual report. This is because the GHG emissions disclosure and related attestation report are requirements of, and relate to the same fiscal year-end as, the Form 10-K.

A description of the final rules including the need for the climate-related information and its intended use, as well as a description of the likely respondents, can be found in section II above, and a discussion of the economic effects of the final rules can be found in section IV above.

#### B. Current Inventory Update To Reflect \$600 per Hour Rather Than \$400 per Hour Outside Professional Costs Rate

At the outset, we note that the current OMB inventory for the above-referenced collections of information reflect an average hourly rate of \$400 per burden hour borne by outside professionals. Similarly, in the Proposing Release, the Commission used an estimated cost of \$400 per hour, recognizing that the costs of retaining outside professionals may vary depending on the nature of the professional services.<sup>3184</sup> The Commission recently determined to increase the estimated costs of such hourly rate to \$600 per hour<sup>3185</sup> to adjust the estimate for inflation from Aug. 2006.<sup>3186</sup> In order to more accurately present the burden changes

<sup>3184</sup> See Proposing Release, section V.C.

<sup>3185</sup> We recognize that the costs of retaining outside professionals may vary depending on the nature of the professional services, but for purposes of this PRA analysis, we estimate that such costs would be an average of \$600 per hour.

<sup>3186</sup> See Listing Standards for Recovery of Erroneously Awarded Compensation, Rel. No. 33-11126 (Oct. 26, 2022) [87 FR 73076 (Nov. 28, 2022)].

<sup>3181</sup> 44 U.S.C. 3501 *et seq.*

<sup>3182</sup> 44 U.S.C. 3507(d) and 5 CFR 1320.11.

<sup>3183</sup> The paperwork burdens for Regulation S-X, Regulation S-K, Regulation C, and Regulation S-T are imposed through the forms, schedules, and reports that are subject to the requirements in these regulations and are reflected in the analysis of those documents.

<sup>3180</sup> See *supra* section IV.c.2.ix.

as a result of the final rules in the context of the current burden inventory, we are presenting updated numbers for the current inventory for professional cost burden for each of the affected

collections of information to reflect the updated \$600 per hour rate where it has not yet been reflected in the current burden inventory last approved by OMB. This update is solely derived

from the change in the hourly rate; it is not a new burden imposed by the final rules. The updated cost estimates using the \$600 per hour rate are set out in the following PRA Table 1:<sup>3187</sup>

PRA TABLE 1—CHANGE IN PRA BURDEN DUE TO UPDATED OUTSIDE PROFESSIONAL COST ESTIMATE

Collection of information	Current inventory professional cost burden (@\$400/hr.)	Updated professional cost burden (@600/hr.)	Increased burden due to update
	(A)	(B)	(C) = (B) – (A)
Form S–1 .....	\$174,015,643	\$261,023,465	\$87,007,822
Form F–1 .....	32,130,375	48,195,563	16,065,188
Form S–4 .....	675,605,379	1,013,408,069	337,802,690
Form F–4 .....	17,013,425	25,520,138	8,506,713
Form S–11 .....	14,790,168	22,185,252	7,395,084
Form 10 .....	12,851,488	19,277,232	6,425,744
Form 20–F .....	576,533,425	864,800,138	288,266,713
Form 10–K .....	1,835,594,519	2,753,391,779	917,797,260

### C. Summary of Comment Letters

In the Proposing Release, the Commission requested comment on the PRA burden hour and cost estimates and the analysis used to derive the estimates.<sup>3188</sup> While a number of parties commented on the potential costs of the proposed rules, only a few commenters mentioned the PRA analysis.<sup>3189</sup> One commenter stated that it opposed the rule proposal in part because, in its view, it would “more than doubl[e] the total paper-work compliance costs to public corporations.”<sup>3190</sup> Two commenters stated that the Commission had underestimated the compliance burden and costs of the proposed rules.<sup>3191</sup> One of the commenters stated that “besides failing to monetize the internal compliance burden hours, the PRA Table ignores: 1. litigation costs; 2. cost not easily and directly allocable to filling out the forms listed in [the PRA Table]; 3. costs imposed on non-issuers; and 4. [t]he cost to investors, issuers and workers caused by adverse economic effects of the rule.”<sup>3192</sup>

While we acknowledge the commenters’ concerns about costs of the proposal, for the reasons discussed in section II and elsewhere throughout this release, we believe the information required by the final rules is necessary and appropriate in the public interest and for the protection of investors. Further, a discussion of the economic

effects of the final rules, including consideration of comments that expressed concern about the expected costs associated with the proposed rules, can be found in section IV above. With regard to the calculation of paperwork burdens, we note that both the Proposing Release’s PRA analysis and our PRA analysis of the final rules estimate the incremental burden of each new or revised disclosure requirement individually and fully comport with the requirements of the PRA. We further note that the costs that one commenter stated we had not included are not costs that are required to be considered or typically included in a PRA analysis.<sup>3193</sup> Further, our estimates reflect the modifications to the proposed rules that we are adopting in response to commenter concerns, including streamlining some of the proposed rule’s elements to address concerns regarding the level of detail required and the anticipated costs of compliance.

### D. Sources of Cost Estimates

We based the paperwork burden of the proposed rules in part on the BEIS impact assessment for the UK climate disclosure rules as well as the input from commenters to a request for public input.<sup>3194</sup> Our estimates of the paperwork burden associated with the final rules are based on the direct cost estimates discussed in the Economic

Analysis.<sup>3195</sup> As discussed above in more detail in section IV.C.3.b, those direct cost estimates are based primarily on two cost estimates for similar UK climate disclosure rules (*i.e.*, the 2021 BEIS impact assessment and the 2021 FCA cost-benefit analysis)<sup>3196</sup> and on cost estimates provided by several commenters.<sup>3197</sup> While we believe that the direct cost estimates provide a reasonable means of determining the estimated collection of information burden associated with the final rules, they likely represent an upper bound of the paperwork burden of the final rules as they reflect a conservative approach (*i.e.*, erring on the side of overstating costs rather than understating them) to estimate approximate compliance costs for the final rules.

### E. Incremental and Aggregate Burden and Cost Estimates of the Final Rules

Below we estimate the incremental and aggregate increase in paperwork burden resulting from the final rules. These estimates represent an average multi-year burden for all issuers, both large and small. While we typically calculate a three-year average for PRA purposes, because one of the amendment’s requirements will not be phased in until the ninth year of initially providing the disclosures required by the amendments,<sup>3198</sup> we have estimated a nine-year average PRA

<sup>3187</sup> The table uses the percentage estimates we typically use for the burden allocation for each response. See *infra* PRA Table 2.

<sup>3188</sup> See Proposing Release at section V.D.

<sup>3189</sup> See letters from D. Burton, Heritage Fdn.; Institute for Energy Research (June 17, 2022) (“IER”); and Gregory Lau (June 16, 2022) (“G. Lau”).

<sup>3197</sup> See *supra* section IV.C.3.b.

<sup>3198</sup> See *supra* sections II.I and O (regarding the requirement for LAFs to obtain a reasonable assurance attestation report in fiscal 2033 when the initial compliance date for most other disclosures required by LAFs is in fiscal year 2026).

burden. In deriving our estimates, we recognize that the burdens will likely vary among individual registrants based on a number of factors, including the nature of their business, the size and complexity of their operations, and

whether they are subject to similar climate-related disclosure requirements in other jurisdictions or already preparing similar disclosures on a voluntary basis. For purposes of the PRA, the burden is to be allocated

between internal burden hours and outside professional costs.

PRA Table 2 below sets forth the percentage estimates we typically use for the burden allocation for each affected collection of information.

PRA TABLE 2—STANDARD ESTIMATED BURDEN ALLOCATION FOR SPECIFIED COLLECTIONS OF INFORMATION

Collection of information	Internal (%)	Outside professionals (%)
Forms S–1, F–1, S–4, F–4, S–11, 10, and 20–F .....	25	75
Form 10–K .....	75	25

1. Calculation of the Paperwork Burden Estimates of the Final Rules

When estimating the paperwork burden of the proposed rules, we considered the effects of three sets of climate-related information that would be required to be filed on the Commission’s forms under those rules: climate-related disclosures regarding governance, strategy, and risk management; GHG emissions metrics and targets; and financial statement metrics. When estimating the paperwork burden of the final rules, we have modified the sets of information considered to reflect changes made from the proposed rules. First, we have separated disclosures related to targets from disclosures related to metrics. Second, we have replaced “financial statement metrics” with “financial statement disclosures.” This modification reflects the fact that the final rules do not use the term “metrics” to describe the amendments to

Regulation S–X because it is more accurate to characterize the disclosures as financial statement effects.<sup>3199</sup>

The estimated burden hours and costs of the final rules are generally lower than the estimated burden hours and costs of the proposed rules. This is due to changes from the proposed rules that we are adopting in the final rules. For example, the final rules include materiality qualifiers and other revisions in the disclosure categories regarding governance, risk management, and strategy, including transition plans, scenario analysis, targets and goals, and GHG emissions metrics. In addition, we have revised the average salary rate from that used for the proposed PRA estimates to convert some of commenters’ cost estimates into burden hours, consistent with existing OMB guidance.<sup>3200</sup>

The following PRA Table 3 shows the estimated number of total burden hours resulting from the final rules based on the initial and ongoing cost estimates for

the above-described sets of information as discussed in section IV above. To derive the estimated total number of burden hours, we first applied the appropriate percentage estimate from PRA Table 2 to allocate the portion of the cost estimate for each set of information pertaining to the internal burden and the portion pertaining to external professional costs. We then converted the costs to internal burden hours using a conversion rate of \$441/hr. for governance, strategy, and risk management, scenario analysis, Scopes 1 and 2 emissions, targets and goals, and financial statement disclosures.<sup>3201</sup> We similarly converted external professional costs into burden hours using a conversion rate of \$600/hr. We then added internal and external burden hours to obtain the total number of estimated burden hours for each set of information. All numbers have been rounded to the nearest whole number.

**BILLING CODE 8011–01–P**

<sup>3199</sup> See *supra* note 1705.

<sup>3200</sup> The PRA estimates for the proposed rules used an hourly rate that was based on an average annual salary of a climate specialist, according to Glassdoor, but which did not reflect additional labor costs. See Proposing Release, section V.B. We have based the PRA estimates for the Regulation S–K subpart 1500 disclosure requirements on average salary rates according to SIFMA Management and Professional Salaries Data, which the staff has updated to account for inflation through September 2023 and which includes overall costs and overhead associated with the reported professional and management positions. The SIFMA data

provides a more realistic cost basis for determining the PRA burdens associated with the final rules because of this additional information, and is consistent with OMB guidance that, when determining burden hours, “all wages need to be fully-loaded, meaning they reflect the full cost of labor.” OMB, *A Guide to the Paperwork Reduction Act*, available at <https://pra.digital.gov/burden/>. In addition, unlike the PRA estimates for the proposed rules, which were based solely on the average annual salary of a climate specialist, we have based the PRA burden hour estimates of the subpart 1500 rules on the median salary rates of in-house legal counsel and systems analyst/database

administrators, whom we believe in conjunction with each other will most likely perform the work underlying the disclosures of governance, strategy, risk management, targets and goals, and Scope 1 and 2 GHG emissions metrics. We therefore have taken the average of the median salary rates for SIFMA-listed attorney positions (Attorney and Assistant General Counsel, which average \$525/hr.) and SIFMA-listed system analyst/database administrator positions (Systems Analyst, Sr. Systems Analyst, and Sr. Database Administrator, which average \$356/hr.) calculated as follows: \$525/hr. + \$356/hr. = \$881/hr. \$881/2 = \$441/hr.

The next three tables summarize the paperwork burden effects for three

groups of registrants: (1) LAFs; (2) AFs that are not SRGs or EGCs ("non-exempt

AFs") and (3) SRGs, EGCs, and NAFs. The first two tables summarize,

respectively, the estimated internal burden hour (PRA Table 4A) and external professional cost effects (PRA Table 4B) of the final rules. Both tables show the phase in for the Scopes 1 and 2 emissions disclosure requirements. Both LAFs and non-exempt AFs are subject to the requirement to disclose their Scopes 1 and 2 emissions if material. LAFs must comply with the GHG emissions disclosure requirement beginning with their second fiscal year of compliance with the final rules, while non-exempt AFs must comply beginning with their third fiscal year of compliance.<sup>3202</sup>

<sup>3202</sup> The final rules provide a phase in for another set of information—the material expenditures disclosure requirement, which will be provided pursuant to either Item 1502, as part of a registrant’s strategy disclosure, or Item 1504 of Regulation S–K, as part of a registrant’s targets and goals disclosure. All three groups of registrants must comply with the material expenditures disclosure requirement in the fiscal year immediately following the fiscal year of their initial compliance

The tables span the first nine years of compliance in order to cover the first year of the paperwork burden associated with the requirement to obtain a reasonable assurance attestation report, which LAFs must comply with in their ninth year of compliance. For comparability purposes, we have also estimated the paperwork burden effects for non-exempt AFs and SRCs, EGCs, and NAFs over a nine-year span, and have taken a nine-year average for each of the three groups of registrants.<sup>3203</sup>

date for the final rules based on their filer status. As explained in section IV.C.3, we have assumed that costs for the material expenditures disclosure have been included in the cost estimates considered for strategy or targets and goals disclosures. See *supra* note 3060 and accompanying text. Because the material expenditures disclosure will comprise only part of a registrant’s strategy or targets and goals disclosure and because most of the disclosure requirements pursuant to Item 1502 and Item 1504 are not subject to a phase in, the tables below do not account for the material expenditures phase in.

<sup>3203</sup> In each table, all numbers have been rounded to the nearest whole number.

After a three-year phased in compliance period of reporting their GHG emissions, both LAFs and non-exempt AFs will be required to obtain an attestation report to verify their GHG emissions disclosure. While LAFs will initially be required to obtain an attestation report at the limited assurance level, after a four-year transition period, they will be required to obtain an attestation report at the reasonable assurance level. We estimate that a reasonable assurance attestation report will be more costly than a limited assurance report. PRA Table 4C summarizes the paperwork burden effects estimated to result from the attestation report requirement for these two groups of registrants over a nine-year span.<sup>3204</sup>

<sup>3204</sup> See *supra* section IV.C.3.b.iii for further discussion of these attestation report estimates.

## 2. Estimated Number of Affected Respondents

We estimate that the final rules will change the paperwork burden per response for each affected collection of information. However, we do not believe that the above-described paperwork burdens will affect all the filers for each collection of information. Because the final rules include materiality qualifiers and otherwise will not require disclosure in all instances from all registrants, but rather depend on the registrant's particular facts and circumstances, we estimate that only a certain percentage of filers of each form will be required to provide the climate-

related disclosures. We have based the estimated percentages on third-party surveys of current climate-related disclosure practices, commenters' estimates of companies likely to disclose climate-related risks and metrics, and staff estimates of current climate-related disclosure practices.<sup>3205</sup>

<sup>3205</sup> In particular, we have considered the percentages of surveyed companies, both issuers with larger market capitalization and all other registrants, providing climate-related disclosures as reported by the TCFD in TCFD, 2022 Status Report (Oct. 2022). That report included climate-related data from companies with a market capitalization ranging from greater than \$12.2 billion to less than \$3.4 billion. In addition, we have considered aspects of the third-party surveys discussed in section IV, such as the 2021 S&P Global Corporate

The following PRA Table 5 provides the percentage of filers for each collection of information that we estimate will be affected by the final rules.

Sustainability Assessment and estimates of climate-related risk and metrics reporting provided by commenters, such as Amer. for Fin. Reform and Public Citizen (Oct. 26, 2023). That commenter included climate-related data pertaining to Fortune 1000 companies with individual annual revenues over \$2 billion. However, none of the estimates considered included companies that directly matched the registrants that will be affected by the final rules. Therefore, the estimated percentages of LAFs, AFs, and all other registrants affected by the final rules, as provided in the table below, may underestimate or overestimate the actual number of affected respondents.

**PRA Table 5. Estimated Percentage of Filers for Each Collection of Information That Will Be Affected By the Final Rules**

## Notes:

<sup>1</sup> The number of respondents for each group of registrants is based on the approximate percentage of respondents in 2022 that were LAFs, non-exempt AFs, and all other registrants (SRCs, EGCs, and NAFs). As discussed in Section IV, the number of domestic registrants and foreign private issuers affected by the final rules is estimated as the number of companies that filed a unique Form 10-K or Form 20-F during calendar year 2022, excluding asset-backed securities issuers. Of domestic respondents, approximately 33% were LAFs, 5% were non-exempt AFs, and 62% were all other registrants (SRCs, EGCs, and NAFs). Of foreign respondents, approximately 33% were LAFs, 11% were non-exempt AFs, and 56% were all other registrants (SRCs, EGCs, and NAFs).

<sup>2</sup> All percentages for LAFs, non-exempt AFs, and all other registrants (SRCs, EGCs, and NAFs) rounded to nearest 5%.

<sup>3</sup> For example, according to the TCFD 2022 Status Report, an average of 48% of the largest companies provided disclosures related to governance, strategy, and risk management (excluding scenario analysis), 68% of LAFs provided some climate-related disclosures in Commission filings in 2022 as discussed in Section IV above, and 73% of Fortune 1000 companies will likely be required to disclose their climate risks and strategies pursuant to recent California law, according to one commenter. See letter from Amer. for Fin. Reform, Public Citizen, and Sierra Club (Oct. 26, 2023).  $48 + 68 + 73 = 189$ ;  $189/3 = 63$ , which we have rounded up to 65%.

3. Summary of the Estimated Burden Hour and Cost Increases Resulting From the Final Rules

The following two tables provide:

- The calculation of the incremental and aggregate change in burden hour and professional cost estimates of current responses resulting from the final rules (PRA Table 6); and

- The program change and total requested change in paperwork burden for the final rules (PRA Table 7).

## VI. Final Regulatory Flexibility Act Analysis

The Regulatory Flexibility Act (“RFA”) requires the Commission, in promulgating rules under section 553 of the Administrative Procedure Act,<sup>3206</sup> to consider the impact of those rules on small entities. We have prepared this Final Regulatory Flexibility Analysis (“FRFA”) in accordance with section 604 of the RFA.<sup>3207</sup> An Initial Regulatory Flexibility Analysis (“IRFA”) was prepared in accordance with the RFA and was included in the Proposing Release.<sup>3208</sup>

### A. Need for, and Objectives of, the Final Amendments

The final amendments add a new subpart 1500 to Regulation S–K and a new Article 14 to Regulation S–X, which will require registrants to provide certain climate-related disclosures in their Securities Act and Exchange Act registration statements and Exchange Act reports. These requirements will elicit more complete and useful information about the impacts of climate-related risks on registrants to improve the consistency, comparability, and reliability of climate-related information for investors. As required by the RFA, this FRFA describes the impact of the final amendments on small entities. The need for, and objectives of, the final rules are described in sections I and II above. We discuss the economic impact and potential alternatives to the amendments in section IV, and the estimated compliance costs and burdens of the amendments for purposes of the PRA in section V.

### B. Significant Issues Raised by Public Comments

In the Proposing Release, the Commission requested comment on any aspect of the IRFA, and particularly on the number of small entities that would be affected by the proposed amendments, the existence or nature of the potential impact of the proposed amendments on small entities discussed in the analysis, how the proposed amendments could further lower the burden on small entities, and how to quantify the impact of the proposed amendments.

We received one comment letter on the IRFA from the U.S. Small Business Administration’s Office of Advocacy

(“Advocacy”).<sup>3209</sup> Advocacy’s letter expressed concern that “the IRFA does not adequately describe the regulated small entities and potential impacts on those entities.”<sup>3210</sup> In the Proposing Release, the Commission estimated that the proposed amendments would apply to 1,004 registrants that may be considered small entities.<sup>3211</sup> Advocacy’s comment letter stated that this estimate did “not provide additional information, such as the North American Industry Classification System (“NAICS”) classifications of the affected entities” and did not “break down the affected entities into smaller size groups (e.g., based on total assets).”<sup>3212</sup>

The comment letter from Advocacy also addressed the discussion of alternatives within the IRFA and the Commission’s explanation of why it did not ultimately propose such alternatives. Advocacy also stated that “[t]he RFA requires that an IRFA provide significant, feasible alternatives that accomplish an agency’s objectives,” and stated that the IRFA did not satisfy this requirement because it listed “broad categories of potential alternatives to the proposed rules but [did] not analyze specific alternatives that w[ere] considered by the SEC” and because it did not “contain a description of any additional regulatory alternatives which accomplish the SEC’s stated objectives and which would further minimize the significant economic impact of the proposal on small entities.”<sup>3213</sup> Finally, Advocacy stated that the Commission had not “considered the impacts of the proposal to indirectly regulated small entities” as a result of the proposed requirement for Scope 3 emissions data from certain registrants.<sup>3214</sup> Advocacy stated that “[m]any of these upstream and downstream parties will be small, privately-owned companies that do not have public reporting requirements,” and as result such “small businesses are unsure what information they would be expected to provide to public companies, how to collect the necessary information, and whether their

businesses would be able to absorb the associated costs.”<sup>3215</sup>

### 1. Estimate of Affected Small Entities and Impact to Those Entities

With respect to the adequacy of the Proposing Release’s estimate of affected small entities, the RFA requires “a description of and, where feasible, an estimate of the number of small entities to which the proposed rule will apply.”<sup>3216</sup> Advocacy’s published guidance recommends agencies use NAICS classifications to help in “identifying the industry, governmental and nonprofit sectors they intend to regulate.”<sup>3217</sup> Here, given that the rulemaking applies to and impacts all public company registrants, regardless of industry or sector, we do not believe that further breakout of such registrants by industry classification is necessary or would otherwise be helpful to such entities in understanding the impact of the proposed or final rules. In this case, small entities in certain industries and sectors are not necessarily more affected than others, as climate-related risks may exist across all industries and sectors, and may or may not exist for a particular registrant irrespective of the industry classification.<sup>3218</sup> For the same reasons, we are not breaking down the affected entities into smaller size groups (e.g., based on total assets), as recommended by Advocacy. Given the nature of the final rules, we believe that our estimate below of the number of small entities to which the final rules will apply adequately describes and estimates the small entities that will be affected.<sup>3219</sup>

We disagree with the statement in Advocacy’s comment letter that “SEC expects that the costs associated with the proposed amendments to be similar for large and small entities.” The Commission explained in the IRFA that the proposed amendments would apply to small entities to the same extent as other entities, irrespective of size, and that therefore, the Commission expected that “the *nature* of any benefits and costs associated with the proposed amendments to be similar for large and

<sup>3209</sup> See letter from U.S. Small Business Administration Office of Advocacy (June 17, 2022) (“Advocacy”). Some commenters, while not specifically addressing the IRFA, did address the impact of the proposed rules on SRCs. See letters from Soc. Corp. Gov. (Nov. 11, 2022); BIO; FFAC; CCR; HDA; ICI; Jones Day; NACCO; NAHB; Rho Impact; CBD; Grant Eisenhofer; ICBA; and Williams Cos.

<sup>3206</sup> 5 U.S.C. 553.

<sup>3207</sup> 5 U.S.C. 604.

<sup>3208</sup> Proposing Release at section VI.

small entities” (emphasis added).<sup>3220</sup> The analysis with respect to the *nature* of the costs (and benefits) of the proposed rules detailed in the Economic Analysis of the Proposing Release was referenced in the IRFA to help small entities understand such impacts, not to imply that small entities face the same proportional costs as large entities. Indeed, the Commission went on to state in both the IRFA and the Economic Analysis of the Proposing Release that costs “can vary significantly depending on firm characteristics, such as firm size, industry, business model, the complexity of the firm’s corporate structure, starting level of internal expertise, etc.”<sup>3221</sup>

The Commission solicited comments on the proposal’s potential effect on small entities, and specifically acknowledged that their varied characteristics, including “the nature and conduct of their businesses make[s] it difficult to project the economic impact on small entities with precision.”<sup>3222</sup> We note that the proposal, while not exempting small entities from the full scope of the proposed amendments, did exempt SRCs, which would generally include all estimated small entities that would be subject to the proposed rules, from the proposed Scope 3 emissions disclosure requirements and from the proposed GHG attestation requirements. Under the proposal, SRCs also were afforded a longer transition period to comply with the proposed rules than other registrants.

We nonetheless recognize the concerns raised by Advocacy and others regarding the costs to small entities subject to the proposed rules, as well as the concerns about the indirect impact to small entities not subject to the proposed rules. We discuss the economic effects, including costs, of the final rules across all entities in section IV above. We recognize that, to the extent the costs of the final rules are generally fixed across entities, they would be proportionally more costly for smaller companies. However, as discussed both above and below, to help mitigate that relatively greater burden to smaller companies and to respond to commenter concerns, we have made a number of changes in the final rules to ease these burdens, including providing SRCs, EGCs and NAFs with the longest phase in periods for compliance as well as excluding them entirely from some of the requirements, such as the GHG emissions disclosure and related

assurance requirements. Additionally, certain changes from the proposal, including streamlining the requirements, making them less prescriptive and adding materiality qualifiers, will reduce the overall burden of the final rules for all registrants, including small entities. Accordingly, we believe that both this FRFA and our prior IRFA adequately describe and analyze the relative impact of costs to small entities.

## 2. Consideration of Alternatives

The IRFA’s discussion of significant alternatives, and our discussion of alternatives below, satisfy the RFA. The relevant RFA requirement provides that an IRFA “shall also contain a description of any significant alternatives to the proposed rule *which accomplish* the stated objectives of applicable statutes and which minimize any significant economic impact of the proposed rule on small entities.”<sup>3223</sup> In the Proposing Release, the Commission discussed each of the types of significant alternatives noted in section 603 of the RFA and concluded that none of these alternatives would accomplish the stated objectives of the rulemaking while minimizing any significant impact on small entities. In addition, section IV.F of the Proposing Release discussed reasonable alternatives to the proposed rules and their economic impacts. Similarly, in addition to the discussion in section VI.E below, in section IV.F of this release we also discuss reasonable alternatives of the final rules and their economic impacts.

While not commenting on the alternatives raised in the IRFA specifically, several commenters asked the Commission to provide further exemptions not only for SRCs as proposed, but also for other small businesses without reporting obligations that may have faced upstream or downstream reporting obligations under the proposed rules.<sup>3224</sup> One of these commenters stated that while “appreciat[ive] that the Commission proposes to exempt small companies from a portion of the reporting requirements (Scope 3)” small companies in the biotechnology industry “will be disproportionately affected by the proposed rule while providing limited benefit to investors.”<sup>3225</sup> This commenter also

asserted that the proposed exemptions would not provide relief to smaller companies that “have no product revenues but often fall outside of the scope of smaller reporting companies due to existing public float threshold.”<sup>3226</sup> Failure to consider these companies, it argued, could lead to “diminishing incentives” to go public and potentially duplicative regulation.<sup>3227</sup> Another commenter reiterated this concern, stating that Scope 3 emission requirements extend beyond registrants to privately owned entities, specifically those without the resources to comply with the proposed disclosures.<sup>3228</sup>

Advocacy stated it was concerned about the potential upstream and downstream effects of Scope 3 emissions disclosure requirements on non-regulated small businesses.<sup>3229</sup> Several commenters raised similar concerns.<sup>3230</sup> While small businesses without reporting requirements were not obligated under the proposed rules to provide this information, several commenters expressed concerns that companies with reporting obligations would compel the collection of this information as a condition of doing business with these businesses.<sup>3231</sup>

The Commission also received comments that explicitly opposed a wholesale exemption for smaller companies, pointing to the need for greater transparency about climate-related risks irrespective of a registrant’s size.<sup>3232</sup> Some of these commenters

unsupported by the extensive research, discussed throughout these comments, showing that climate-related financial risks are widely dispersed throughout the economy and not limited to large registrants. In addition, given their smaller size, SRCs are likely to have significantly less costs in assessing and disclosing Scope 3 emissions than large registrants.”)

<sup>3225</sup> Letter from BIO. However, some commenters disputed this characterization. See letter from Amer. for Fin. Reform, Sunrise Project *et al.*, (stating that “[o]ffering a wholesale exemption is

explained their opposition to a wholesale exemption by stating that smaller companies may face disproportionately greater climate-related risks, and asserted that the additional proposed phase in period was adequate to ensure smaller companies had time to comply with the proposed rules.<sup>3233</sup>

Another commenter stated that, with respect to the proposal to require disclosure about the climate expertise of board members, small companies' "operations and limited resources do not naturally lend themselves to requiring discrete board expertise for every risk, including climate-related risk."<sup>3234</sup> This commenter also stated that requiring the disclosure of board expertise for a smaller company could lead to the selection of board members without other requisite skills.

The Commission considered the comments on the Proposing Release, including those addressing the impact of the proposed reporting obligations on small entities. The final rules address several concerns raised by Advocacy and other commenters and modify the proposal in ways that will significantly reduce costs to smaller reporting companies, including small entities that meet the definition of SRCs, EGCs, and NAFs. For example, SRCs, EGCs and NAFs are not subject to the requirement to disclose Scope 1 and 2 emissions, as discussed above. Additionally, the Commission is not adopting the proposal to require disclosure of Scope 3 emissions for any entities. This will address any concerns about the possible impacts of the proposed Scope 3 requirements on small entities, including private companies, in a reporting company's value chain. Additionally, as a result of eliminating the reference to negative climate-related impacts on a registrant's value chain from the proposed definition of climate-related risks, the final rules further limit the burdens of climate risk assessment on parties in a registrant's value chain that might have occurred under the rule proposal.

We agree with commenters that stated that smaller companies should not be

<sup>3233</sup> See letter from ICI ("In addition, we support the Commission not proposing generally to exempt SRCs or EGCs from the entire scope of the proposed climate-related disclosure rules because climate-related risks may pose a significant risk to the operations and financial condition of smaller companies. At the same time, providing them with more time than other companies to comply with any new requirements could mitigate the Proposal's compliance burden for smaller companies by giving them additional time to allocate the resources necessary to compile and prepare climate-related disclosures.").

<sup>3234</sup> See letter from NRP.

fully exempted from the final rules because they could face material climate risks about which investors need information to make informed voting and investment decisions.<sup>3235</sup> As with other sized entities, many of the changes we have made to streamline the rules and provide additional flexibility to registrants to tailor their disclosures based on their particular facts and circumstances will similarly benefit smaller companies. For example, the changes made to the governance and risk management sections are less prescriptive and more principles-based, which will allow smaller companies to avoid disclosure requirements that are not compatible with their business. Additionally, as discussed in section I.O, we are providing SRCs, EGCs, and NAFs with significant additional time to comply with the final rules, with the earliest disclosures being required no sooner than the filings that are required to include financial information for fiscal year 2027.

#### C. Small Entities Subject to the Final Amendments

The final rules apply to registrants that are small entities. The RFA defines "small entity" to mean "small business," "small organization," or "small governmental jurisdiction."<sup>3236</sup> For purposes of the RFA, under our rules, a registrant, other than an investment company, is a "small business" or "small organization" if it had total assets of \$5 million or less on the last day of its most recent fiscal year and is engaged or proposing to engage in an offering of securities that does not exceed \$5 million.<sup>3237</sup> An investment company, including a business development company,<sup>3238</sup> is considered to be a "small business" if it, together with other investment companies in the same group of related investment companies, has net assets of \$50 million or less as of the end of its most recent fiscal year.<sup>3239</sup> We estimate that, as of December 31, 2022, there were approximately 800 issuers and 10 business development companies that may be considered small entities that would be subject to the final amendments.

<sup>3235</sup> See, e.g., *supra* notes 2410–2413.

<sup>3236</sup> 5 U.S.C. 601(6).

<sup>3237</sup> See 17 CFR 240.0–10(a).

<sup>3238</sup> Business development companies are a category of closed-end investment company that are not registered under the Investment Company Act [15 U.S.C. 80a–2(a)(48) and 80a–53 through 64].

<sup>3239</sup> 17 CFR 270.0–10(a).

#### D. Projected Reporting, Recordkeeping, and Other Compliance Requirements

As noted above, requirements to disclose material GHG emissions information and obtain assurance over that information will not apply to SRCs, EGCs, or NAFs in response to concerns raised by commenters. For the remainder of the requirements, we continue to expect that the nature of any benefits and costs associated with the amendments to be similar for large and small entities, and so we refer to the discussion of the amendments' economic effects on all affected parties, including small entities, in section IV above. Also consistent with the discussion in sections II and IV above, we acknowledge that, to the extent that a smaller entity would be required to provide disclosure under the final rules, it may face costs that are proportionally greater as it may be less able to bear such costs relative to larger entities.<sup>3240</sup> The costs of preparing the disclosure would be a primary contributing factor given that compliance with certain provisions of the final amendments may require the use of professional skills, including legal, accounting, and technical skills. We also anticipate that the economic benefits and costs likely could vary widely among small entities based on a number of factors, such as the nature and conduct of their businesses, including whether and how they managed any material climate-related risks, which makes it difficult to project the economic impact on small entities with precision. To the extent that the disclosure requirements have a greater effect on smaller registrants relative to large registrants, they could result in adverse effects on competition.

#### E. Agency Action To Minimize Effect on Small Entities

The RFA directs us to consider alternatives that would accomplish our stated objectives, while minimizing any significant adverse impact on small entities. Accordingly, we considered the following alternatives:

1. Exempting small entities from all or part of the requirements;
2. Establishing different compliance or reporting requirements that consider the resources available to small entities;
3. Using performance rather than design standards; and
4. Clarifying, consolidating, or simplifying compliance and reporting requirements under the rules for small entities.

<sup>3240</sup> We note that some commenters stated that SRCs may have proportionally lower expenses. See letter from Amer. for Fin. Reform, Sunrise Project *et al.*

The rules are intended to allow investors to make more informed investment and voting decisions about the impact of climate-related risks on registrants' business and financial condition. As explained in section I.A. above, current requirements are not yielding consistent and comparable disclosure sufficient to meet investors' needs. The disclosure that does exist is scattered in various parts of registrants' filings and public disclosures and provided at different intervals, making it difficult for investors to locate, analyze, and compare across registrants.

Given the current disclosure landscape, exempting small entities entirely from the rules or otherwise clarifying, consolidating, or simplifying compliance and reporting requirements under the rules for small entities would frustrate the rulemaking's goal of providing investors with more consistent, comparable and timely disclosure about climate-related risks across all registrants. However, as discussed in section II above, we have consolidated and simplified the disclosure requirements for all entities, which should ease small entities' compliance as well. Further, as some commenters noted, smaller companies may face equal or greater climate-related risk than larger companies, making the disclosures important for investors in these companies.<sup>3241</sup> However, we have determined to require the disclosure of Scope 1 and Scope 2 GHG emissions only in certain circumstances from the largest filers, thereby excluding smaller companies from these provisions. We believe that this strikes an appropriate balance between the needs of investors in smaller companies, including small entities, to understand the likely impacts of material climate-related risks and the costs associated with compliance.

We also believe the rulemaking's stated objectives can be achieved by providing smaller companies with additional time to comply. Therefore, smaller companies, including small entities that are SRCs, EGCs and NAFs, will be provided with more than two years from the effective date of the final rules before compliance is required; specifically, these entities must begin to comply in filings that are required to include financial information for fiscal year 2027. These changes will benefit small entities and other small companies, both by giving them an extended compliance period to establish disclosure controls and procedures and by allowing them to observe and learn

from best practices as they develop among larger registrants.

Similarly, the final rules incorporate a combination of performance and design standards with respect to all affected registrants, including small entities, in order to balance the objectives and compliance burdens of the final rules. While the final rules use design standards to promote uniform compliance requirements for all registrants and to address the disclosure concerns underlying the amendments, which apply to entities of all sizes, they also incorporate elements of performance standards to give registrants sufficient flexibility to craft meaningful disclosure that is tailored to their particular facts and circumstances. For example, the final rules require a registrant to describe the actual and potential material impacts of any material climate-related risk on the registrant's strategy, business model, and outlook. The rules also provide a non-exhaustive list of examples of disclosure items that a registrant should include, if applicable, in providing responsive disclosure rather than specifying more prescriptive set of disclosures, as in the proposal.

**Statutory Authority**

The amendments contained in this release are being adopted under the authority set forth in sections 7, 10, 19(a), and 28 of the Securities Act, as amended, and sections 3(b), 12, 13, 15, 23(a), and 36 of the Exchange Act, as amended.

**List of Subjects in 17 CFR Parts 210, 229, 230, 232, 239, and 249**

Accountants; Accounting; Administrative practice and procedure, Reporting and recordkeeping requirements, Securities.

**Text of Amendments**

For the reasons set out in the preamble, the Commission is adopting amendments to title 17, chapter II of the Code of Federal Regulations as follows:

**PART 210—FORM AND CONTENT OF AND REQUIREMENTS FOR FINANCIAL STATEMENTS, SECURITIES ACT OF 1933, SECURITIES EXCHANGE ACT OF 1934, INVESTMENT COMPANY ACT OF 1940, INVESTMENT ADVISERS ACT OF 1940, AND ENERGY POLICY AND CONSERVATION ACT OF 1975**

■ 1. The authority citation for part 210 continues to read as follows:

**Authority:** 15 U.S.C. 77f, 77g, 77h, 77j, 77s, 77z-2, 77z-3, 77aa(25), 77aa(26), 77nn(25), 77nn(26), 78c, 78j-1, 78l, 78m, 78n, 78o(d), 78q, 78u-5, 78w, 78ll, 78mm, 80a-8, 80a20,

80a-29, 80a-30, 80a-31, 80a-37(a), 80b-3, 80b-11, 7202 and 7262, and sec. 102(c), Pub. L. 112-106, 126 Stat. 310 (2012), unless otherwise noted.

■ 2. Amend § 210.8-01 by revising paragraph (b) to read as follows:

**§ 210.8-01 General requirements for Article 8.**

\* \* \* \* \*

(b) Smaller reporting companies electing to prepare their financial statements with the form and content required in Article 8 need not apply the other form and content requirements in 17 CFR part 210 (Regulation S-X) with the exception of the following:

(1) The report and qualifications of the independent accountant shall comply with the requirements of §§ 210.2-01 through 210.2-07 (Article 2); and

(2) The description of accounting policies shall comply with § 210.4-08(n); and

(3) Smaller reporting companies engaged in oil and gas producing activities shall follow the financial accounting and reporting standards specified in § 210.4-10 with respect to such activities; and

(4) Sections 210.14-01 and 210.14-02 (Article 14).

\* \* \* \* \*

■ 3. Add an undesignated center heading and §§ 210.14-01 and 210.14-02 to read as follows:

**Article 14 Disclosure of Severe Weather Events and Other Information**

**§ 210.14-01 Instructions related to disclosure of severe weather events and other information.**

(a) *General.* A registrant must include disclosure pursuant to § 210.14-02 in any filing that is required to include disclosure pursuant to subpart 229.1500 of this chapter and that also requires the registrant to include its audited financial statements. The disclosure pursuant to § 210.14-02 must be included in a note to the financial statements included in such filing.

(b) *Definitions.* The definitions in § 229.1500 of this chapter (Item 1500 of Regulation S-K) apply to §§ 210.14-01 and 210.14-02 (Article 14) except where otherwise indicated.

(c) *Basis of calculation.* When calculating the financial statement effects in this Article 14, except where otherwise indicated, a registrant must:

(1) Use financial information that is consistent with the scope of its consolidated financial statements included in the filing; and

(2) Apply the same accounting principles that it is required to apply in

<sup>3241</sup> See *supra* note 3233.

the preparation of its consolidated financial statements included in the filing.

(d) *Periods to be disclosed.* Disclosure must be provided for the registrant's most recently completed fiscal year, and to the extent previously disclosed or required to be disclosed, for the historical fiscal year(s), for which audited consolidated financial statements are included in the filing.

**§ 210.14-02 Disclosures related to severe weather events and other information.**

(a) *Contextual information.* Provide contextual information, describing how each specified financial statement effect disclosed under § 210.14-02(b) through (h) was derived, including a description of significant inputs and assumptions used, significant judgments made, other information that is important to understand the financial statement effect and, if applicable, policy decisions made by the registrant to calculate the specified disclosures.

(b) *Disclosure thresholds.* (1) Disclosure of the aggregate amount of expenditures expensed as incurred and losses pursuant to paragraph (c) of this section is required if the aggregate amount of expenditures expensed as incurred and losses equals or exceeds one percent of the absolute value of income or loss before income tax expense or benefit for the relevant fiscal year. Such disclosure is not required, however, if the aggregate amount of expenditures expensed as incurred and losses is less than \$100,000 for the relevant fiscal year.

(2) Disclosure of the aggregate amount of capitalized costs and charges incurred pursuant to paragraph (d) of this section is required if the aggregate amount of the absolute value of capitalized costs and charges equals or exceeds one percent of the absolute value of stockholders' equity or deficit at the end of the relevant fiscal year. Such disclosure is not required, however, if the aggregate amount of the absolute value of capitalized costs and charges is less than \$500,000 for the relevant fiscal year.

(c) *Expenditures expensed as incurred and losses resulting from severe weather events and other natural conditions.* Disclose the aggregate amount of expenditures expensed as incurred and losses, excluding recoveries, incurred during the fiscal year as a result of severe weather events and other natural conditions, such as hurricanes, tornadoes, flooding, drought, wildfires, extreme temperatures, and sea level rise. For example, a registrant may be required to disclose the amount of expense or loss, as applicable, to restore

operations, relocate assets or operations affected by the event or other natural condition, retire affected assets, repair affected assets, recognize impairment loss on affected assets, or otherwise respond to the effect that severe weather events and other natural conditions had on business operations. Disclosure pursuant to this paragraph must separately identify where the expenditures expensed as incurred and losses are presented in the income statement.

(d) *Capitalized costs and charges resulting from severe weather events and other natural conditions.* Disclose the aggregate amount of capitalized costs and charges, excluding recoveries, incurred during the fiscal year as a result of severe weather events and other natural conditions, such as hurricanes, tornadoes, flooding, drought, wildfires, extreme temperatures, and sea level rise. For example, a registrant may be required to disclose the amount of capitalized costs or charges, as applicable, to restore operations, retire affected assets, replace or repair affected assets, recognize an impairment charge for affected assets, or otherwise respond to the effect that severe weather events and other natural conditions had on business operations. Disclosure pursuant to this paragraph must separately identify where the capitalized costs and charges are presented in the balance sheet.

(e) *Carbon offsets and RECs.* (1) If carbon offsets or RECs have been used as a material component of a registrant's plans to achieve its disclosed climate-related targets or goals, disclose the aggregate amount of carbon offsets and RECs expensed, the aggregate amount of capitalized carbon offsets and RECs recognized, and the aggregate amount of losses incurred on the capitalized carbon offsets and RECs, during the fiscal year. In addition, disclose the beginning and ending balances of the capitalized carbon offsets and RECs for the fiscal year. Disclosure pursuant to this paragraph must separately identify where the expenditures expensed, capitalized costs, and losses are presented in the income statement and the balance sheet.

(2) If a registrant is required to provide disclosure pursuant to paragraph (e)(1) of this section, then a registrant must state its accounting policy for carbon offsets and RECs as part of the contextual information required by paragraph (a) of this section.

(f) *Recoveries.* If a registrant is required to provide disclosure pursuant to paragraphs (c) or (d) of this section, then as part of the contextual information required by paragraph (a) of

this section, a registrant must state separately the aggregate amount of any recoveries recognized during the fiscal year as a result of severe weather events and other natural conditions for which capitalized costs, expenditures expensed, charges, or losses are disclosed pursuant to paragraphs (c) or (d) of this section. Disclosure pursuant to this paragraph must separately identify where the recoveries are presented in the income statement and the balance sheet.

(g) *Attribution.* For purposes of providing disclosure pursuant to paragraphs (c), (d), and (f) of this section, a capitalized cost, expenditure expensed, charge, loss, or recovery results from a severe weather event or other natural condition when the event or condition is a significant contributing factor in incurring the capitalized cost, expenditure expensed, charge, loss, or recovery. If an event or condition is a significant contributing factor in incurring a cost, expenditure, charge, loss, or recovery, then the entire amount of such cost, expenditure, charge, loss, or recovery must be included in the disclosure pursuant to paragraphs (c), (d), and (f) of this section.

(h) *Financial estimates and assumptions materially impacted by severe weather events and other natural conditions or disclosed targets or transition plans.* Disclose whether the estimates and assumptions the registrant used to produce the consolidated financial statements were materially impacted by exposures to risks and uncertainties associated with, or known impacts from, severe weather events and other natural conditions, such as hurricanes, tornadoes, flooding, drought, wildfires, extreme temperatures, and sea level rise, or any climate-related targets or transition plans disclosed by the registrant. If yes, provide a qualitative description of how the development of such estimates and assumptions were impacted by such events, conditions, targets, or transition plans.

**PART 229—STANDARD INSTRUCTIONS FOR FILING FORMS UNDER SECURITIES ACT OF 1933, SECURITIES EXCHANGE ACT OF 1934 AND ENERGY POLICY AND CONSERVATION ACT OF 1975—REGULATION S-K**

■ 4. The authority citation for part 229 continues to read as follows:

**Authority:** 15 U.S.C. 77e, 77f, 77g, 77h, 77j, 77k, 77s, 77z-2, 77z-3, 77aa(25), 77aa(26), 77ddd, 77eee, 77ggg, 77hhh, 77iii, 77jjj, 77nnn, 77sss, 78c, 78i, 78j, 78j-3, 78l, 78m, 78n, 78n-1, 78o, 78u-5, 78w, 78ll, 78

mm, 80a-8, 80a-9, 80a-20, 80a-29, 80a-30, 80a-31(c), 80a37, 80a-38(a), 80a-39, 80b-11 and 7201 *et seq.*; 18 U.S.C. 1350; sec. 953(b), Pub. L. 111-203, 124 Stat. 1904 (2010); and sec. 102(c), Pub. L. 112-106, 126 Stat. 310 (2012).

- 5. Amend § 229.601 by:
  - a. In the exhibit table in paragraph (a), revising entry 27; and
  - b. Adding paragraph (b)(27).

The revision and addition read as follows:

**§ 229.601 (Item 601) Exhibits.**

(a) \* \* \*

**EXHIBIT TABLE**

	Securities Act forms										Exchange Act forms						
	S-1	S-3	SF-1	SF-3	S-4 <sup>1</sup>	S-8	S-11	F-1	F-3	F-4 <sup>1</sup>	10	8-K <sup>2</sup>	10-D	10-Q	10-K	ABS-EE	
(27) Letter re GHG emissions attestation provider .....		X	X	.....	.....	X	.....	X	X	X	X	.....	.....	.....	X	X	.....

<sup>1</sup> An exhibit need not be provided about a company if: (1) With respect to such company an election has been made under Form S-4 or F-4 to provide information about such company at a level prescribed by Form S-3 or F-3; and (2) the form, the level of which has been elected under Form S-4 or F-4, would not require such company to provide such exhibit if it were registering a primary offering.

<sup>2</sup> A Form 8-K exhibit is required only if relevant to the subject matter reported on the Form 8-K report. For example, if the Form 8-K pertains to the departure of a director, only the exhibit described in paragraph (b)(17) of this section need be filed. A required exhibit may be incorporated by reference from a previous filing.

\* \* \* \* \*

(b) \* \* \*

(27) *Letter re GHG emissions attestation report.* A letter, where applicable, from the attestation provider that acknowledges awareness of the use in a registration statement of a GHG emissions attestation report that pursuant to 17 CFR 230.436(i)(1) (Rule 436(i)(1)) under the Securities Act is not considered a part of a registration statement prepared or certified by a person within the meaning of sections 7 and 11 of the Securities Act. Such letter may be filed with the registration statement, an amendment thereto, or a report on Form 10-K (§ 249.310), Form 10-Q (§ 249.308a), or Form 20-F (§ 249.220f), which is incorporated by reference into the registration statement.

\* \* \* \* \*

■ 6. Add subpart 229.1500, consisting of §§ 229.1500 through 229.1508, to read as follows:

**Subpart 229.1500—Climate-Related Disclosure**

- Sec.
- 229.1500 (Item 1500) Definitions.
- 229.1501 (Item 1501) Governance.
- 229.1502 (Item 1502) Strategy.
- 229.1503 (Item 1503) Risk management.
- 229.1504 (Item 1504) Targets and goals.
- 229.1505 (Item 1505) GHG emissions metrics.
- 229.1506 (Item 1506) Attestation of Scope 1 and Scope 2 emissions disclosure.
- 229.1507 (Item 1507) Safe harbor for certain climate-related disclosures.
- 229.1508 (Item 1508) Interactive data requirement.

**Subpart 229.1500—Climate-Related Disclosure**

**§ 229.1500 (Item 1500) Definitions.**

As used in this subpart, these terms have the following meanings:

*Carbon offsets* represents an emissions reduction, removal, or avoidance of greenhouse gases (“GHG”) in a manner calculated and traced for the purpose of offsetting an entity’s GHG emissions.

*Climate-related risks* means the actual or potential negative impacts of climate-related conditions and events on a registrant’s business, results of operations, or financial condition. Climate-related risks include the following:

(1) *Physical risks* include both acute risks and chronic risks to the registrant’s business operations.

(2) *Acute risks* are event-driven and may relate to shorter term severe weather events, such as hurricanes, floods, tornadoes, and wildfires, among other events.

(3) *Chronic risks* relate to longer term weather patterns, such as sustained higher temperatures, sea level rise, and drought, as well as related effects such as decreased arability of farmland, decreased habitability of land, and decreased availability of fresh water.

(4) *Transition risks* are the actual or potential negative impacts on a registrant’s business, results of operations, or financial condition attributable to regulatory, technological, and market changes to address the mitigation of, or adaptation to, climate-related risks, including such non-exclusive examples as increased costs attributable to changes in law or policy, reduced market demand for carbon-intensive products leading to decreased prices or profits for such products, the devaluation or abandonment of assets, risk of legal liability and litigation defense costs, competitive pressures associated with the adoption of new technologies, and reputational impacts (including those stemming from a

registrant’s customers or business counterparties) that might trigger changes to market behavior, consumer preferences or behavior, and registrant behavior.

*Carbon dioxide equivalent* or *CO2e* means the common unit of measurement to indicate the global warming potential (“GWP”) of each greenhouse gas, expressed in terms of the GWP of one unit of carbon dioxide.

*Emission factor* means a multiplication factor allowing actual GHG emissions to be calculated from available activity data or, if no activity data are available, economic data, to derive absolute GHG emissions. Examples of activity data include kilowatt-hours of electricity used, quantity of fuel used, output of a process, hours of operation of equipment, distance travelled, and floor area of a building.

*GHG* or *Greenhouse gases* means carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), nitrous oxide (N<sub>2</sub>O), nitrogen trifluoride (NF<sub>3</sub>), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF<sub>6</sub>).

*GHG emissions* means direct and indirect emissions of greenhouse gases expressed in metric tons of carbon dioxide equivalent (CO<sub>2</sub>e), of which:

(1) Direct emissions are GHG emissions from sources that are owned or controlled by a registrant.

(2) Indirect emissions are GHG emissions that result from the activities of the registrant but occur at sources not owned or controlled by the registrant.

*Internal carbon price* means an estimated cost of carbon emissions used internally within an organization.

*Operational boundaries* means the boundaries that determine the direct and indirect emissions associated with

the business operations owned or controlled by a registrant.

*Organizational boundaries* means the boundaries that determine the operations owned or controlled by a registrant for the purpose of calculating its GHG emissions.

*Renewable energy credit or certificate or REC* means a credit or certificate representing each megawatt-hour (1 MWh or 1,000 kilowatt-hours) of renewable electricity generated and delivered to a power grid.

*Scenario analysis* means a process for identifying and assessing a potential range of outcomes of various possible future climate scenarios, and how climate-related risks may impact a registrant's business strategy, results of operations, or financial condition over time.

*Scope 1 emissions* are direct GHG emissions from operations that are owned or controlled by a registrant.

*Scope 2 emissions* are indirect GHG emissions from the generation of purchased or acquired electricity, steam, heat, or cooling that is consumed by operations owned or controlled by a registrant.

*Transition plan* means a registrant's strategy and implementation plan to reduce climate-related risks, which may include a plan to reduce its GHG emissions in line with its own commitments or commitments of jurisdictions within which it has significant operations.

#### **§ 229.1501 (Item 1501) Governance.**

(a) Describe the board of directors' oversight of climate-related risks. If applicable, identify any board committee or subcommittee responsible for the oversight of climate-related risks and describe the processes by which the board or such committee or subcommittee is informed about such risks. If there is a climate-related target or goal disclosed pursuant to § 229.1504 or transition plan disclosed pursuant to § 229.1502(e)(1), describe whether and how the board of directors oversees progress against the target or goal or transition plan.

(b) Describe management's role in assessing and managing the registrant's material climate-related risks. In providing such disclosure, a registrant should address, as applicable, the following non-exclusive list of disclosure items:

(1) Whether and which management positions or committees are responsible for assessing and managing climate-related risks and the relevant expertise of such position holders or committee members in such detail as necessary to

fully describe the nature of the expertise;

(2) The processes by which such positions or committees assess and manage climate-related risks; and

(3) Whether such positions or committees report information about such risks to the board of directors or a committee or subcommittee of the board of directors.

*Instruction 1 to Item 1501:* In the case of a foreign private issuer with a two-tier board of directors, for purposes of paragraph (a) of this section, the term "board of directors" means the supervisory or non-management board. In the case of a foreign private issuer meeting the requirements of § 240.10A-3(c)(3) of this chapter, for purposes of paragraph (a) of this section, the term "board of directors" means the issuer's board of auditors (or similar body) or statutory auditors, as applicable.

*Instruction 2 to Item 1501:* Relevant expertise of management in paragraph (b)(1) of this section may include, for example: Prior work experience in climate-related matters; any relevant degrees or certifications; any knowledge, skills, or other background in climate-related matters.

#### **§ 229.1502 (Item 1502) Strategy.**

(a) Describe any climate-related risks that have materially impacted or are reasonably likely to have a material impact on the registrant, including on its strategy, results of operations, or financial condition. In describing these material risks, a registrant must describe whether such risks are reasonably likely to manifest in the short-term (*i.e.*, the next 12 months) and separately in the long-term (*i.e.*, beyond the next 12 months). A registrant must disclose whether the risk is a physical or transition risk, providing information necessary to an understanding of the nature of the risk presented and the extent of the registrant's exposure to the risk, including the following non-exclusive list of disclosures, as applicable:

(1) If a physical risk, whether it may be categorized as an acute or chronic risk, and the geographic location and nature of the properties, processes, or operations subject to the physical risk.

(2) If a transition risk, whether it relates to regulatory, technological, market (including changing consumer, business counterparty, and investor preferences), or other transition-related factors, and how those factors impact the registrant. A registrant that has significant operations in a jurisdiction that has made a GHG emissions reduction commitment should consider whether it may be exposed to a material

transition risk related to the implementation of the commitment.

(b) Describe the actual and potential material impacts of any climate-related risk identified in response to paragraph (a) of this section on the registrant's strategy, business model, and outlook, including, as applicable, any material impacts on the following non-exclusive list of items:

(1) Business operations, including the types and locations of its operations;

(2) Products or services;

(3) Suppliers, purchasers, or counterparties to material contracts, to the extent known or reasonably available;

(4) Activities to mitigate or adapt to climate-related risks, including adoption of new technologies or processes; and

(5) Expenditure for research and development.

(c) Discuss whether and how the registrant considers any impacts described in response to paragraph (b) of this section as part of its strategy, financial planning, and capital allocation, including, as applicable:

(1) Whether the impacts of the climate-related risks described in response to paragraph (b) have been integrated into the registrant's business model or strategy, including whether and how resources are being used to mitigate climate-related risks; and

(2) How any of the targets referenced in § 229.1504 or transition plans referenced in paragraph (e) of this section relate to the registrant's business model or strategy.

(d)(1) Discuss how any climate-related risks described in response to paragraph (a) of this section have materially impacted or are reasonably likely to materially impact the registrant's business, results of operations, or financial condition.

(2) Describe quantitatively and qualitatively the material expenditures incurred and material impacts on financial estimates and assumptions that, in management's assessment, directly result from activities disclosed under paragraph (b)(4) of this section.

(e)(1) If a registrant has adopted a transition plan to manage a material transition risk, describe the plan. To allow for an understanding of the registrant's progress under the plan over time, a registrant must update its annual report disclosure about the transition plan each fiscal year by describing any actions taken during the year under the plan, including how such actions have impacted the registrant's business, results of operations, or financial condition.

(2) Include quantitative and qualitative disclosure of material expenditures incurred and material impacts on financial estimates and assumptions as a direct result of the transition plan disclosed under paragraph (e)(1) of this section.

(f) If a registrant uses scenario analysis to assess the impact of climate-related risks on its business, results of operations, or financial condition, and if, based on the results of such scenario analysis, the registrant determines that a climate-related risk is reasonably likely to have a material impact on its business, results of operations, or financial condition, the registrant must describe each such scenario including a brief description of the parameters, assumptions, and analytical choices used, as well as the expected material impacts, including financial impacts, on the registrant under each such scenario.

(g)(1) If a registrant's use of an internal carbon price is material to how it evaluates and manages a climate-related risk identified in response to paragraph (a) of this section, disclose in units of the registrant's reporting currency:

(i) The price per metric ton of CO<sub>2</sub>e; and

(ii) The total price, including how the total price is estimated to change over the time periods referenced in paragraph (a) of this section, as applicable.

(2) If a registrant uses more than one internal carbon price to evaluate and manage a material climate-related risk, it must provide the disclosures required by this section for each internal carbon price and disclose its reasons for using different prices.

(3) If the scope of entities and operations involved in the use of an internal carbon price described pursuant to this section is materially different from the organizational boundaries used for the purpose of calculating a registrant's GHG emissions pursuant to § 229.1505, briefly describe this difference.

**§ 229.1503 (Item 1503) Risk management.**

(a) Describe any processes the registrant has for identifying, assessing, and managing material climate-related risks. In providing such disclosure, registrants should address, as applicable, the following non-exclusive list of disclosure items regarding how the registrant:

(1) Identifies whether it has incurred or is reasonably likely to incur a material physical or transition risk;

(2) Decides whether to mitigate, accept, or adapt to the particular risk; and

(3) Prioritizes whether to address the climate-related risk.

(b) If managing a material climate-related risk, the registrant must disclose whether and how any processes described in response to paragraph (a) of this section have been integrated into the registrant's overall risk management system or processes.

**§ 229.1504 (Item 1504) Targets and goals.**

(a) A registrant must disclose any climate-related target or goal if such target or goal has materially affected or is reasonably likely to materially affect the registrant's business, results of operations, or financial condition. A registrant may provide the disclosure required by this section as part of its disclosure in response to §§ 229.1502 or 229.1503.

(b) In providing disclosure required by paragraph (a) of this section, a registrant must provide any additional information or explanation necessary to an understanding of the material impact or reasonably likely material impact of the target or goal, including, as applicable, but not limited to, a description of:

(1) The scope of activities included in the target;

(2) The unit of measurement;

(3) The defined time horizon by which the target is intended to be achieved, and whether the time horizon is based on one or more goals established by a climate-related treaty, law, regulation, policy, or organization;

(4) If the registrant has established a baseline for the target or goal, the defined baseline time period and the means by which progress will be tracked; and

(5) A qualitative description of how the registrant intends to meet its climate-related targets or goals.

(c) Disclose any progress made toward meeting the target or goal and how any such progress has been achieved. A registrant must update this disclosure each fiscal year by describing the actions taken during the year to achieve its targets or goals.

(1) Include a discussion of any material impacts to the registrant's business, results of operations, or financial condition as a direct result of the target or goal or the actions taken to make progress toward meeting the target or goal.

(2) Include quantitative and qualitative disclosure of any material expenditures and material impacts on financial estimates and assumptions as a direct result of the target or goal or the actions taken to make progress toward meeting the target or goal.

(d) If carbon offsets or RECs have been used as a material component of a registrant's plan to achieve climate-related targets or goals, separately disclose the amount of carbon avoidance, reduction or removal represented by the offsets or the amount of generated renewable energy represented by the RECs, the nature and source of the offsets or RECs, a description and location of the underlying projects, any registries or other authentication of the offsets or RECs, and the cost of the offsets or RECs.

**§ 229.1505 (Item 1505) GHG emissions metrics.**

(a)(1) A registrant that is a large accelerated filer or an accelerated filer, each as defined in § 240.12b-2 of this chapter, must disclose its Scope 1 emissions and/or its Scope 2 emissions, if such emissions are material, for its most recently completed fiscal year and, to the extent previously disclosed in a Commission filing, for the historical fiscal year(s) included in the consolidated financial statements in the filing.

(2) For any GHG emissions required to be disclosed pursuant to paragraph (a)(1) of this section:

(i) Disclose the registrant's Scope 1 emissions and/or Scope 2 emissions separately, each expressed in the aggregate, in terms of CO<sub>2</sub>e. In addition, if any constituent gas of the disclosed emissions is individually material, disclose such constituent gas disaggregated from the other gases.

(ii) Disclose the registrant's Scope 1 emissions and/or Scope 2 emissions in gross terms by excluding the impact of any purchased or generated offsets.

(3)(i) A smaller reporting company, as defined by §§ 229.10(f)(1), 230.405, and 240.12b-2 of this chapter, and an emerging growth company, as defined by §§ 230.405 and 240.12b-2 of this chapter, are exempt from, and need not comply with, the disclosure requirements of this section.

(ii) A registrant is not required to include GHG emissions from a manure management system when disclosing its overall Scopes 1 and 2 emissions pursuant to paragraph (a)(1) of this section so long as implementation of such a provision is subject to restrictions on appropriated funds or otherwise prohibited under federal law.

(b)(1) Describe the methodology, significant inputs, and significant assumptions used to calculate the registrant's GHG emissions disclosed pursuant to this section. This description must include:

(i) The organizational boundaries used when calculating the registrant's disclosed GHG emissions, including the method used to determine those boundaries. If the organizational boundaries materially differ from the scope of entities and operations included in the registrant's consolidated financial statements, provide a brief explanation of this difference in sufficient detail for a reasonable investor to understand;

(ii) A brief discussion of, in sufficient detail for a reasonable investor to understand, the operational boundaries used, including the approach to categorization of emissions and emissions sources; and

(iii) A brief description of, in sufficient detail for a reasonable investor to understand, the protocol or standard used to report the GHG emissions, including the calculation approach, the type and source of any emission factors used, and any calculation tools used to calculate the GHG emissions.

(2) A registrant may use reasonable estimates when disclosing its GHG emissions as long as it also describes the underlying assumptions, and its reasons for using, the estimates.

(c)(1) Any GHG emissions metrics required to be disclosed pursuant to this section in a registrant's annual report on Form 10-K filed with the Commission may be incorporated by reference from the registrant's Form 10-Q for the second fiscal quarter in the fiscal year immediately following the year to which the GHG emissions metrics disclosure relates, or may be included in an amended annual report on Form 10-K no later than the due date for such Form 10-Q. If the registrant is a foreign private issuer, as defined in §§ 230.405 and 240.3b-4(c) of this chapter, such information may be disclosed in an amendment to its annual report on Form 20-F (§ 249.220f of this chapter), which shall be due no later than 225 days after the end of the fiscal year to which the GHG emissions metrics disclosure relates. In either case, the registrant must include an express statement in its annual report indicating its intention to incorporate by reference this information from either a quarterly report on Form 10-Q or amend its annual report on Form 10-K or Form 20-F to provide this information by the due date specified by this section.

(2) In the case of a registration statement filed under the Securities Act of 1933 [15 U.S.C. 77a *et seq.*] or filed on Form 10 (§ 249.210 of this chapter) or Form 20-F (§ 249.220f of this chapter) under the Securities Exchange Act of 1934 [15 U.S.C. 78a *et seq.*], any

GHG emissions metrics required to be disclosed pursuant to paragraph (a) of this section must be provided as of the most recently completed fiscal year that is at least 225 days prior to the date of effectiveness of the registration statement.

**§ 229.1506 (Item 1506) Attestation of Scope 1 and Scope 2 emissions disclosure.**

(a) *Attestation.* (1) A registrant that is required to provide Scope 1 and/or Scope 2 emissions disclosure pursuant to § 229.1505 must include an attestation report covering such disclosure in the relevant filing, subject to the following provisions:

(i) For filings made by an accelerated filer beginning the third fiscal year after the compliance date for § 229.1505 and thereafter, the attestation engagement must, at a minimum, be at a limited assurance level and cover the registrant's Scope 1 and/or Scope 2 emissions disclosure;

(ii) For filings made by a large accelerated filer beginning the third fiscal year after the compliance date for § 229.1505, the attestation engagement must, at a minimum, be at a limited assurance level and cover the registrant's Scope 1 and/or Scope 2 emissions disclosure; and

(iii) For filings made by a large accelerated filer beginning the seventh fiscal year after the compliance date for § 229.1505 and thereafter, the attestation engagement must be at a reasonable assurance level and cover the registrant's Scope 1 and/or Scope 2 emissions disclosure.

(2) Any attestation report required under this section must be provided pursuant to standards that are:

(i) Publicly available at no cost or that are widely used for GHG emissions assurance; and

(ii) Established by a body or group that has followed due process procedures, including the broad distribution of the framework for public comment.

(3) A registrant that is required to provide Scope 1 and/or Scope 2 emissions disclosure pursuant to § 229.1505 that obtains voluntary assurance over its GHG emissions disclosure prior to the first required fiscal year for assurance must comply with paragraph (e) of this section. Voluntary assurance obtained by such registrant after the first required fiscal year that is in addition to any required assurance must follow the requirements of paragraphs (b) through (d) of this section and must use the same attestation standard as the required assurance over Scope 1 and/or Scope 2 emissions disclosure.

(b) *GHG emissions attestation provider.* The GHG emissions attestation report required by paragraph (a) of this section must be prepared and signed by a GHG emissions attestation provider. A GHG emissions attestation provider means a person or a firm that has all of the following characteristics:

(1) Is an expert in GHG emissions by virtue of having significant experience in measuring, analyzing, reporting, or attesting to GHG emissions. Significant experience means having sufficient competence and capabilities necessary to:

(i) Perform engagements in accordance with attestation standards and applicable legal and regulatory requirements; and

(ii) Enable the service provider to issue reports that are appropriate under the circumstances.

(2) Is independent with respect to the registrant, and any of its affiliates, for whom it is providing the attestation report, during the attestation and professional engagement period.

(i) A GHG emissions attestation provider is not independent if such attestation provider is not, or a reasonable investor with knowledge of all relevant facts and circumstances would conclude that such attestation provider is not, capable of exercising objective and impartial judgment on all issues encompassed within the attestation provider's engagement.

(ii) In determining whether a GHG emissions attestation provider is independent, the Commission will consider:

(A) Whether a relationship or the provision of a service creates a mutual or conflicting interest between the attestation provider and the registrant (or any of its affiliates), places the attestation provider in the position of attesting to such attestation provider's own work, results in the attestation provider acting as management or an employee of the registrant (or any of its affiliates), or places the attestation provider in a position of being an advocate for the registrant (or any of its affiliates); and

(B) All relevant circumstances, including all financial or other relationships between the attestation provider and the registrant (or any of its affiliates), and not just those relating to reports filed with the Commission.

(iii) The term "affiliate" as used in this section has the meaning provided in § 210.2-01 of this chapter, except that references to "audit" are deemed to be references to the attestation services provided pursuant to this section.

(iv) The term “attestation and professional engagement period” as used in this section means both:

(A) The period covered by the attestation report; and

(B) The period of the engagement to attest to the registrant’s GHG emissions or to prepare a report filed with the Commission (“the professional engagement period”). The professional engagement period begins when the GHG attestation service provider either signs an initial engagement letter (or other agreement to attest to a registrant’s GHG emissions) or begins attest procedures, whichever is earlier.

(c) *Attestation report requirements.* The form and content of the attestation report must follow the requirements set forth by the attestation standard (or standards) used by the GHG emissions attestation provider.

(d) *Additional disclosure by the registrant.* In addition to including the GHG emissions attestation report required by paragraph (a) of this section, a large accelerated filer and an accelerated filer must disclose, alongside the GHG emissions disclosure to which the attestation report relates, after requesting relevant information from any GHG emissions attestation provider as necessary:

(1) Whether the GHG emissions attestation provider is subject to any oversight inspection program, and if so, which program (or programs), and whether the GHG emissions attestation engagement is included within the scope of authority of such oversight inspection program.

(2)(i) Whether any GHG emissions attestation provider that was previously engaged to provide attestation over the registrant’s GHG emissions disclosure pursuant to paragraph (a) of this section for the fiscal year period covered by the attestation report resigned (or indicated that it declined to stand for re-appointment after the completion of the attestation engagement) or was dismissed. If so,

(A) State whether the former GHG emissions attestation provider resigned, declined to stand for re-appointment, or was dismissed and the date thereof; and

(B) State whether during the performance of the attestation engagement for the fiscal year period covered by the attestation report there were any disagreements with the former GHG emissions attestation provider on any matter of measurement or disclosure of GHG emissions or attestation scope of procedures. Also,

(1) Describe each such disagreement; and

(2) State whether the registrant has authorized the former GHG emissions

attestation provider to respond fully to the inquiries of the successor GHG emissions attestation provider concerning the subject matter of each such disagreement.

(ii) The term “disagreements” as used in this section shall be interpreted broadly, to include any difference of opinion concerning any matter of measurement or disclosure of GHG emissions or attestation scope or procedures that (if not resolved to the satisfaction of the former GHG emissions attestation provider) would have caused it to make reference to the subject matter of the disagreement in connection with its report. It is not necessary for there to have been an argument to have had a disagreement, merely a difference of opinion. For purposes of this section, however, the term disagreements does not include initial differences of opinion based on incomplete facts or preliminary information that were later resolved to the former GHG emissions attestation provider’s satisfaction by, and providing the registrant and the GHG emissions attestation provider do not continue to have a difference of opinion upon, obtaining additional relevant facts or information. The disagreements required to be reported in response to this section include both those resolved to the former GHG emissions attestation provider’s satisfaction and those not resolved to the former provider’s satisfaction. Disagreements contemplated by this section are those that occur at the decision-making level, *i.e.*, between personnel of the registrant responsible for presentation of its GHG emissions disclosure and personnel of the GHG emissions attestation provider responsible for rendering its report.

(iii) In determining whether any disagreement has occurred, an oral communication from the engagement partner or another person responsible for rendering the GHG emissions attestation provider’s opinion or conclusion (or their designee) will generally suffice as a statement of a disagreement at the “decision-making level” within the GHG emissions attestation provider and require disclosure under this section.

(e) *Disclosure of voluntary assurance.* A registrant that is not required to include a GHG emissions attestation report pursuant to paragraph (a) of this section must disclose in the filing the following information if the registrant’s GHG emissions disclosure in the filing were subject to third-party assurance:

(1) Identification of the service provider of such assurance;

(2) Description of the assurance standard used;

(3) Description of the level and scope of assurance services provided;

(4) Brief description of the results of the assurance services;

(5) Whether the service provider has any material business relationships with or has provided any material professional services to the registrant; and

(6) Whether the service provider is subject to any oversight inspection program, and if so, which program (or programs) and whether the assurance services over GHG emissions are included within the scope of authority of such oversight inspection program.

(f) *Location of disclosure.* A registrant must include the attestation report and disclosure required by this section in the filing that contains the GHG emissions disclosure to which the report and disclosure relate. If, in accordance with the requirements in § 229.1505, a registrant elects to incorporate by reference its GHG emissions disclosure from its Form 10-Q (§ 249.308a of this chapter) for the second fiscal quarter in the fiscal year immediately following the year to which the GHG emissions disclosure relates or to provide this information in an amended annual report on Form 10-K (§ 249.310 of this chapter) or 20-F (§ 249.220f of this chapter), then the registrant must include an express statement in its annual report indicating its intention to incorporate by reference the attestation report from either a quarterly report on Form 10-Q or amend its annual report on Form 10-K or Form 20-F to provide the attestation report by the due date specified in § 229.1505.

*Instruction 1 to Item 1506:* A registrant that obtains assurance from an attestation provider at the limited assurance level should refer to § 229.601(b)(27) and paragraph 18 of Form 20-F’s Instructions as to Exhibits.

**§ 229.1507 (Item 1507) Safe harbor for certain climate-related disclosures.**

(a)(1) The safe harbors for forward-looking statements in section 27A of the Securities Act of 1933 (15 U.S.C. 77z–2) and section 21E of the Securities Exchange Act of 1934 (15 U.S.C. 78u–5) (“statutory safe harbors”) apply as provided in this section to information provided pursuant to §§ 229.1502(e), 229.1502(f), 229.1502(g), and 229.1504.

(2) The safe harbor provided by this section applies to a forward-looking statement specified in the statutory safe harbors:

(i) Made in connection with an offering of securities by a blank check company, as specified in 15 U.S.C. 77z–2(b)(1)(B) and 15 U.S.C. 78u–5(b)(1)(B);

(ii) Made with respect to the business or operations of an issuer of penny stock, as specified in 15 U.S.C. 77z–2(b)(1)(C) and 15 U.S.C. 78u–5(b)(1)(C);

(iii) Made in connection with a rollup transaction, as specified in 15 U.S.C. 77z–2(b)(1)(D) and 15 U.S.C. 78u–5(b)(1)(D);

(iv) Made in connection with an initial public offering, as specified in 15 U.S.C. 77z–2(b)(2)(D) and 15 U.S.C. 78u–5(b)(2)(D); and

(v) Made in connection with an offering by, or relating to the operations of, a partnership, limited liability company, or a direct participation investment program, as specified in 15 U.S.C. 77z–2(b)(2)(E) and 15 U.S.C. 78u–5(b)(2)(E).

(3) Notwithstanding 15 U.S.C. 77z–2(a)(1) and 15 U.S.C. 78–u(a)(1), the safe harbor provided by this section will apply where an issuer that, at the time that the statement is made, is not subject to the reporting requirements of section 13(a) or section 15(d) of the Securities Exchange Act of 1934.

(b) For purposes of paragraph (a) of this section, all information required by §§ 229.1502(e), 229.1502(f), 229.1502(g), and 229.1504 is considered a *forward-looking statement* for purposes of the statutory safe harbors, except for historical facts, including, as non-exclusive examples, terms related to carbon offsets or RECs described pursuant to § 229.1504 and statements in response to §§ 229.1502(e) or 229.1504 about material expenditures actually incurred.

#### § 229.1508 (Item 1508) Interactive data requirement.

Provide the disclosure required by this subpart 1500 in an Interactive Data File as required by § 232.405 of this chapter (Rule 405 of Regulation S–T) in accordance with the EDGAR Filer Manual (see § 232.301 of this chapter).

### PART 230—GENERAL RULES AND REGULATIONS, SECURITIES ACT OF 1933

■ 7. The authority citation for part 230 continues to read, in part, as follows:

**Authority:** 15 U.S.C. 77b, 77b note, 77c, 77d, 77f, 77g, 77h, 77j, 77r, 77s, 77z–3, 77sss, 78c, 78d, 78j, 78l, 78m, 78n, 78o, 78o–7 note, 78t, 78w, 78ll(d), 78mm, 80a–8, 80a–24, 80a–28, 80a–29, 80a–30, and 80a–37, and Pub. L. 112–106, sec. 201(a), sec. 401, 126 Stat. 313 (2012), unless otherwise noted.

\* \* \* \* \*

Sections 230.400 to 230.499 issued under secs. 6, 8, 10, 19, 48 Stat. 78, 79, 81, and 85, as amended (15 U.S.C. 77f, 77h, 77j, 77s).

\* \* \* \* \*

■ 8. Amend § 230.436 by adding paragraph (i) to read as follows:

#### § 230.436 Consents required in special cases.

\* \* \* \* \*

(i) Notwithstanding the provisions of paragraphs (a) and (b) of this section, the following shall not be considered part of the registration statement prepared or certified by a person within the meaning of sections 7 and 11 of the Act:

(1) A report by an attestation provider covering Scope 1, Scope 2, and/or Scope 3 GHG emissions at a limited assurance level; and

(2) Any description of assurance regarding a registrant’s GHG emissions disclosure provided in accordance with § 229.1506(e) of this chapter.

### PART 232—REGULATION S–T—GENERAL RULES AND REGULATIONS FOR ELECTRONIC FILINGS

■ 9. The general authority citation for part 232 continues to read as follows:

**Authority:** 15 U.S.C. 77c, 77f, 77g, 77h, 77j, 77s(a), 77z–3, 77sss(a), 78c(b), 78l, 78m, 78n, 78o(d), 78w(a), 78ll, 80a–6(c), 80a–8, 80a–29, 80a–30, 80a–37, 80b–4, 80b–6a, 80b–10, 80b–11, 7201 *et seq.*; and 18 U.S.C. 1350, unless otherwise noted.

\* \* \* \* \*

■ 10. Amend § 232.405 by adding paragraphs (b)(4)(vi) and (vii) to read as follows:

#### § 232.405 Interactive Data File submissions.

\* \* \* \* \*

(b) \* \* \*

(4) \* \* \*

(vi) [Reserved]

(vii) The climate-related information required by §§ 229.1500 through 229.1507 of this chapter (subpart 1500 of Regulation S–K).

\* \* \* \* \*

### PART 239—FORMS PRESCRIBED UNDER THE SECURITIES ACT OF 1933

■ 11. The general authority citation for part 239 continues to read as follows:

**Authority:** 15 U.S.C. 77c, 77f, 77g, 77h, 77j, 77s, 77z–2, 77z–3, 77sss, 78c, 78l, 78m, 78n, 78o(d), 78o–7 note, 78u–5, 78w(a), 78ll, 78mm, 80a–2(a), 80a–3, 80a–8, 80a–9, 80a–10, 80a–13, 80a–24, 80a–26, 80a–29, 80a–30, 80a–37, and sec. 71003 and sec. 84001, Pub. L. 114–94, 129 Stat. 1321, unless otherwise noted.

\* \* \* \* \*

■ 12. Amend Form S–1 (referenced in § 239.11) by adding Item 11(o) to Part I.

**Note:** Form S–1 is attached as Appendix A to this document. Form S–1 will not appear in the Code of Federal Regulations.

■ 13. Amend Form S–3 (referenced in § 239.13) by adding Item 12(e) to Part I.

**Note:** Form S–3 is attached as Appendix B to this document. Form S–3 will not appear in the Code of Federal Regulations.

■ 14. Amend Form S–11 (referenced in § 239.18) by replacing Item 9 to Part I.

**Note:** Form S–11 is attached as Appendix C to this document. Form S–11 will not appear in the Code of Federal Regulations.

■ 15. Amend Form S–4 (referenced in § 239.25) by adding General Instructions B.3 and C.3.

**Note:** Form S–4 is attached as Appendix D to this document. Form S–4 will not appear in the Code of Federal Regulations.

■ 16. Amend Form F–3 (referenced in § 239.33) by adding paragraph (g) to Item 6 to Part I.

**Note:** Form F–3 is attached as Appendix E to this document. Form F–3 will not appear in the Code of Federal Regulations.

■ 17. Amend Form F–4 (referenced in § 239.34) by adding General Instructions B.3 and C.3.

**Note:** Form F–4 is attached as Appendix F to this document. Form F–4 will not appear in the Code of Federal Regulations.

### PART 249—FORMS, SECURITIES EXCHANGE ACT OF 1934

■ 18. The authority citation for part 249 continues to read, in part, as follows:

**Authority:** 15 U.S.C. 78a *et seq.* and 7201 *et seq.*; 12 U.S.C. 5461 *et seq.*; 18 U.S.C. 1350; Sec. 953(b) Pub. L. 111–203, 124 Stat. 1904; Sec. 102(a)(3) Pub. L. 112–106, 126 Stat. 309 (2012), Sec. 107 Pub. L. 112–106, 126 Stat. 313 (2012), Sec. 72001 Pub. L. 114–94, 129 Stat. 1312 (2015), and secs. 2 and 3 Pub. L. 116–222, 134 Stat. 1063 (2020), unless otherwise noted.

\* \* \* \* \*

Section 249.220f is also issued under secs. 3(a), 202, 208, 302, 306(a), 401(a), 401(b), 406 and 407, Pub. L. 107–204, 116 Stat. 745, and secs. 2 and 3, Pub. L. 116–222, 134 Stat. 1063.

\* \* \* \* \*

Section 249.308a is also issued under secs. 3(a) and 302, Pub. L. 107–204, 116 Stat. 745.

\* \* \* \* \*

Section 249.310 is also issued under secs. 3(a), 202, 208, 302, 406 and 407, Pub. L. 107–204, 116 Stat. 745.

\* \* \* \* \*

■ 19. Amend Form 10 (referenced in § 249.210) by adding Item 3.A (“Climate-Related Disclosure”).

**Note:** Form 10 is attached as Appendix G to this document. Form 10 will not appear in the Code of Federal Regulations.

■ 20. Amend Form 20–F (referenced in § 249.220f) by:

■ a. Adding Item 3.E (“Climate-related disclosure”); and

■ b. Revising the Instructions as to Exhibits.

Note: Form 20-F is attached as Appendix H to this document. Form 20-F will not appear in the Code of Federal Regulations.

21. Amend Form 10-Q (referenced in § 249.308a) by adding Item 1.B ("Climate-Related disclosure") to Part II ("Other Information").

Note: Form 10-Q is attached as Appendix I to this document. Form 10-Q will not appear in the Code of Federal Regulations.

22. Amend Form 10-K (referenced in § 249.310) by:

a. Revising paragraph (1)(g) of General Instruction J ("Use of this Form by Asset-backed Issuers"); and

b. Adding Item 6 ("Climate-Related Disclosure") to Part II.

Note: Form 10-K is attached as Appendix J to this document. Form 10-K will not appear in the Code of Federal Regulations.

By the Commission.

Dated: March 6, 2024.

Vanessa A. Countryman, Secretary.

Note: The following appendices will not appear in the Code of Federal Regulations.

Appendix A—Form S-1

FORM S-1

\* \* \* \* \*

Part I—Information Required in Prospectus

\* \* \* \* \*

Item 11. Information with Respect to the Registrant.

\* \* \* \* \*

(o) Information required by subpart 1500 of Regulation S-K (17 CFR 229.1500 through 229.1507), in a part of the registration statement that is separately captioned as Climate-Related Disclosure. A registrant may include disclosure that is responsive to the topics specified in Items 1500 through 1507 of Regulation S-K in other parts of the registration statement (e.g., Risk Factors, Business, or Management's Discussion and Analysis), in which case it should consider whether cross-referencing the other disclosures in the separately captioned section would enhance the presentation of the climate-related disclosures for investors.

\* \* \* \* \*

Appendix B—Form S-3

FORM S-3

\* \* \* \* \*

Part I—Information Required in Prospectus

\* \* \* \* \*

Item 12. Incorporation of Certain Information by Reference.

\* \* \* \* \*

(e) If a registrant is required to disclose its Scope 1 emissions and/or its Scope 2 emissions pursuant to 17 CFR 229.1505(a), the GHG emissions metrics disclosure that would be incorporated by reference must be as of the most recently completed fiscal year

that is at least 225 days prior to the date of effectiveness of the registration statement. Accordingly, if a registrant has filed its annual report on Form 10-K for the most recently completed fiscal year and, in reliance on 17 CFR 229.1505(c)(1) has not yet filed its Form 10-Q for the second fiscal quarter containing the disclosure required by 17 CFR 229.1505(a), it must incorporate by reference its GHG emissions metrics disclosure for the fiscal year that is immediately prior to its most recently completed fiscal year.

Appendix C—Form S-11

FORM S-11

\* \* \* \* \*

Part I—Information Required in Prospectus

\* \* \* \* \*

Item 9. Climate-related disclosure. Provide the information required by subpart 1500 of Regulation S-K (17 CFR 229.1500 through 229.1507), in a part of the registration statement that is separately captioned as Climate-Related Disclosure. A registrant may include disclosure that is responsive to the topics specified in Items 1500 through 1507 of Regulation S-K in other parts of the registration statement (e.g., Risk Factors, Business, or Management's Discussion and Analysis), in which case it should consider whether cross-referencing the other disclosures in the separately captioned section would enhance the presentation of the climate-related disclosures for investors.

FORM S-4

\* \* \* \* \*

General Instructions

\* \* \* \* \*

B. Information With Respect to the Registrant

\* \* \* \* \*

3. If the registrant is subject to the reporting requirements of Section 13(a) or 15(d) of the Exchange Act, then, in addition to the information otherwise required to be provided by this Form, the information required by subpart 1500 of Regulation S-K (17 CFR 229.1500 through 229.1507) must be provided with respect to the registrant, in a part of the registration statement that is separately captioned as Climate-Related Disclosure. A registrant may include disclosure that is responsive to the topics specified in Items 1500 through 1507 of Regulation S-K in other parts of the registration statement (e.g., Risk Factors, Business, or Management's Discussion and Analysis), in which case it should consider whether cross-referencing the other disclosures in the separately captioned section would enhance the presentation of the climate-related disclosures for investors. A registrant may incorporate by reference the information required by Items 1500 through 1507 of Regulation S-K to the extent it is permitted to incorporate by reference the

other information required by this Form and by the same means provided by this Form.

\* \* \* \* \*

C. Information With Respect to the Company Being Acquired

\* \* \* \* \*

3. If the company being acquired is subject to the reporting requirements of Section 13(a) or 15(d) of the Exchange Act, then, in addition to the information otherwise required to be provided by this Form, the information required by subpart 1500 of Regulation S-K (17 CFR 229.1500 through 229.1507) must be provided with respect to the company being acquired, in a part of the registration statement that is separately captioned as Climate-Related Disclosure. Disclosure with respect to the company being acquired that is responsive to the topics specified in Items 1500 through 1507 of Regulation S-K may be included in other parts of the registration statement (e.g., Risk Factors, Business, or Management's Discussion and Analysis), in which case it should be considered whether cross-referencing the other disclosures in the separately captioned section would enhance the presentation of the climate-related disclosures for investors. The information required by Items 1500 through 1507 of Regulation S-K may be incorporated by reference to the extent the other information required by this Form with respect to the company being required is permitted to be incorporated by reference and by the same means provided by this Form.

Part I—Information Required in the Prospectus

\* \* \* \* \*

Item 6. Incorporation of Certain Information by Reference.

\* \* \* \* \*

(g) If a registrant is required to disclose its Scope 1 emissions and/or its Scope 2 emissions pursuant to 17 CFR 229.1505(a), the GHG emissions metrics disclosure that would be incorporated by reference must be as of the most recently completed fiscal year that is at least 225 days prior to the date of effectiveness of the registration statement. Accordingly, if a registrant has filed its annual report on Form 20-F for the most recently completed fiscal year and, in reliance on 17 CFR 229.1505(c)(1), has not yet filed an amended Form 20-F containing the disclosure required by 17 CFR 229.1505(a), it must incorporate by reference its GHG emissions metrics disclosure for the fiscal year that is immediately prior to its most recently completed fiscal year.

\* \* \* \* \*

B. Information With Respect to the Registrant

\* \* \* \* \*

3. If the registrant is subject to the reporting requirements of Section 13(a) or 15(d) of the Exchange Act, then, in addition to the information otherwise required to be provided by this Form, the information required by subpart 1500 of Regulation S-K (17 CFR 229.1500 through 229.1507) must be provided with respect to the registrant, in a part of the registration statement that is separately captioned as Climate-Related Disclosure. A registrant may include disclosure that is responsive to the topics specified in Items 1500 through 1507 of Regulation S-K in other parts of the registration statement (e.g., Risk Factors, Business, or Management's Discussion and Analysis), in which case it should consider whether cross-referencing the other disclosures in the separately captioned section would enhance the presentation of the climate-related disclosures for investors. A registrant may incorporate by reference the information required by Items 1500 through 1507 of Regulation S-K to the extent it is permitted to incorporate by reference the other information required by this Form and by the same means provided by this Form.

C. Information With Respect to the Company Being Acquired.

\* \* \* \* \*

3. If the company being acquired is subject to the reporting requirements of Section 13(a) or 15(d) of the Exchange Act, then, in addition to the information otherwise required to be provided by this Form, the information required by subpart 1500 of Regulation S-K (17 CFR 229.1500 through 229.1507) must be provided with respect to the company being acquired, in a part of the registration statement that is separately captioned as Climate-Related Disclosure. Disclosure that is responsive to the topics specified in Items 1500 through 1507 of Regulation S-K may be included in other parts of the registration statement (e.g., Risk Factors, Business, or Management's Discussion and Analysis), in which case it should be considered whether cross-referencing the other disclosures in the separately captioned section would enhance the presentation of the climate-related disclosures for investors. The information required by Items 1500 through 1507 of Regulation S-K may be incorporated by reference to the extent the other information required by this Form with respect to the company being required is permitted to be incorporated by reference and by the same means provided by this Form.

\* \* \* \* \*

Appendix G—Form 10

FORM 10

\* \* \* \* \*

Item 3.A Climate-Related Disclosure. Provide the information required by subpart 1500 of Regulation S-K (17 CFR 229.1500 through 229.1507), in a part of the registration statement that is separately captioned as Climate-Related Disclosure. A registrant may include disclosure that is responsive to the topics specified in Items 1500 through 1507 of Regulation S-K in other parts of the registration statement (e.g., Risk Factors, Business, or Management's Discussion and Analysis), in which case it should consider whether cross-referencing the other disclosures in the separately captioned section would enhance the presentation of the climate-related disclosures for investors.

FORM 20-F

\* \* \* \* \*

Part I

\* \* \* \* \*

Item 3. Key Information

\* \* \* \* \*

E. Climate-Related Disclosure

The company must provide disclosure responsive to the topics specified in subpart 1500 of Regulation S-K (17 CFR 229.1500 through 229.1507) in a part of the registration statement or annual report that is separately captioned as Climate-Related Disclosure. A registrant may include disclosure that is responsive to the topics specified in Items 1500 through 1507 of Regulation S-K in other parts of the registration statement or annual report (e.g., Risk Factors, Business, or Management's Discussion and Analysis), in which case it should consider whether cross-referencing the other disclosures in the separately captioned section would enhance the presentation of the climate-related disclosures for investors.

\* \* \* \* \*

Instructions as to Exhibits

\* \* \* \* \*

18. Letter re GHG emissions attestation report. A letter, where applicable, from the GHG emissions attestation provider that acknowledges awareness of the use in a registration statement of a GHG emissions attestation report that pursuant to Rule 436(i)(1) (17 CFR 230.436(i)(1)) under the Securities Act is not considered a part of a

registration statement prepared or certified by a person within the meaning of sections 7 and 11 of the Securities Act. Such letter may be filed with the Form 20-F if the Form 20-F is incorporated by reference into a Securities Act registration statement.

19 through 96 [Reserved]

BILLING CODE 8011-01-P

# EXHIBIT B

UNITED STATES JUDICIAL PANEL  
on  
MULTIDISTRICT LITIGATION

**FILED**

MAR 22 2024

MICHAEL GANS  
CLERK OF COURT

IN RE: SECURITIES AND EXCHANGE COMMISSION,  
THE ENHANCEMENT AND STANDARDIZATION  
OF CLIMATE-RELATED DISCLOSURES FOR  
INVESTORS, ISSUED ON MARCH 6, 2024

MCP No. 180

(SEE ATTACHED SCHEDULE)

**CONSOLIDATION ORDER**

The Securities and Exchange Commission, issued an amendment to its rules on March 6, 2024. On March 19, 2024, the Panel received, pursuant to 28 U.S.C. § 2112(a)(3), a notice of multicircuit petitions for review of that order. The notice included petitions for review pending in six circuit courts of appeal as follows: Second Circuit Court, Fifth Circuit Court, Sixth Circuit Court, Eighth Circuit Court, Eleventh Circuit Court, and District of Columbia Circuit Court.

The Panel has randomly selected the United States Court of Appeals for the Eighth Circuit in which to consolidate these petitions for review.

IT IS THEREFORE ORDERED that, pursuant to 28 U.S.C. § 2112(a)(3), the petitions on the attached schedule are consolidated in the United States Court of Appeals for the Eighth Circuit and that this circuit is designated as the circuit in which the record is to be filed pursuant to Rules 16 and 17 of the Federal Rules of Appellate Procedure.

FOR THE PANEL:

  
Chelsea Thomas; Case Administrator  
Random Selector

  
Ajonee Miller; Case Administrator  
Witness

**RECEIVED**

MAR 22 2024

U.S. COURT OF APPEALS  
EIGHTH CIRCUIT
